|                                   |         | <ul style="list-style-type: none"> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                          |                   |
| <code>modifiedDate</code>         | String  | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Small, 33.0              | 33.0              |
| <code>requestBody</code>          | String  | The request body for <code>Api</code> and <code>ApiAsync</code> action link types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Big, 33.0                | 33.0              |
| <code>requiresConfirmation</code> | Boolean | <code>true</code> to require the user to confirm the action; <code>false</code> otherwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 33.0              | 33.0              |
| <code>templateId</code>           | String  | The ID of the action link template from which to instantiate this action link. If the action link isn't associated with a template, the value is <code>null</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Medium, 33.0             | 33.0              |
| <code>type</code>                 | String  | <p>Defines the type of action link. Values are:</p> <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<b>actionLinkId</b></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><code>Download</code>—The action link downloads a file from the action URL.</li> <li><code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul> | Small, 33.0              | 33.0              |

| Property Name | Type   | Description                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| userId        | String | The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> . | Small, 33.0              | 33.0              |

## Action Link Diagnostic

Any diagnostic information that is returned from the REST endpoint when an action link has been executed. Diagnostic information is given only for users who can access the action link.

| Property Name  | Type   | Description                                                                                                                                                                              | Filter Group and Version | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| diagnosticInfo | String | Any diagnostic information that is returned from the REST endpoint when an action link has been executed. Diagnostic information is given only for users who can access the action link. | Small, 33.0              | 33.0              |
| url            | String | Connect REST API URL for this action link diagnostic.                                                                                                                                    | Small, 33.0              | 33.0              |

## Action Link Group Definition

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define standalone actions in their own action group.

| Property Name | Type                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|---------------|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| actionLinks   | <a href="#">Action Link Definition</a> [] | <p>A collection of action link definitions that make up the action link group.</p> <p>Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the Action Link Group Definition Input request body.</p> <p>Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the Associated Actions Capability Input request body.</p> | Medium, 33.0             | 33.0              |

| Property Name      | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|--------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| category           | String | Indicates the priority and location of the action links. Values are: <ul style="list-style-type: none"> <li><b>Primary</b>—The action link group is displayed in the body of the feed element.</li> <li><b>Overflow</b>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>                                                                                                                                                                                                       | Medium, 33.0             | 33.0              |
| createdDate        | String | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 33.0              | 33.0              |
| executions Allowed | String | Defines the number of times an action link can be executed. Values are: <ul style="list-style-type: none"> <li><b>Once</b>—An action link can be executed only one time across all users.</li> <li><b>OncePerUser</b>—An action link can be executed only one time for each user.</li> <li><b>Unlimited</b>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul> | Medium, 33.0             | 33.0              |
| expirationDate     | String | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action group expires and can no longer be executed. If the value is <code>null</code> , there isn't an expiration date.                                                                                                                                                                                                                                                                                           | Medium, 33.0             | 33.0              |
| id                 | String | 18-character ID of the action link group definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 33.0              | 33.0              |
| modifiedDate       | String | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 33.0              | 33.0              |
| templateId         | String | The ID of the action link group template from which to instantiate this action link group, or <code>null</code> if this group isn't associated with a template.                                                                                                                                                                                                                                                                                                                                                       | Medium, 33.0             | 33.0              |
| url                | String | Connect REST API URL for this action link group definition.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 33.0              | 33.0              |

## Activity Reminder

An activity reminder in Salesforce Classic.

| Property Name        | Type                                    | Description                                                                  | Filter Group and Version | Available Version |
|----------------------|-----------------------------------------|------------------------------------------------------------------------------|--------------------------|-------------------|
| entityId             | String                                  | Activity (task or event) ID.                                                 | Small, 39.0              | 39.0              |
| isReminderDisplayed  | Boolean                                 | Indicates if the reminder is displayed to the user.                          | Small, 39.0              | 39.0              |
| message              | String                                  | Activity subject.                                                            | Small, 39.0              | 39.0              |
| platformActionGroups | <a href="#">Platform Action Group[]</a> | List of action groups with action links available for the activity reminder. | Medium, 39.0             | 39.0              |
| reminderDate         | String                                  | Reminder due date and time in ISO 8601 format.                               | Small, 39.0              | 39.0              |

## Activity Reminders Collection

A collection of activity reminders in Salesforce Classic.

| Property Name | Type                                | Description                          | Filter Group and Version | Available Version |
|---------------|-------------------------------------|--------------------------------------|--------------------------|-------------------|
| reminders     | <a href="#">Activity Reminder[]</a> | List of upcoming activity reminders. | Small, 39.0              | 39.0              |

## Activity Timeline

Output representation of the event details of the payment activity timeline.

### JSON example

```
{
  "activityCode": "payment_created",
  "amount": 18,
  "createDate": "Thu May 16 22:12:36 GMT 2024",
  "eventStatus": "Created",
  "eventType": "INTENT",
  "guid": "82b55da2-e32c-4c4e-982c-",
  "providerGateway": "STRIPE"
}
```

| Property Name | Type   | Description                               | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------|--------------------------|-------------------|
| activityCode  | String | Code of the payment event.                | Big, 62.0                | 62.0              |
| amount        | Double | Amount associated with the payment event. | Big, 60.0                | 60.0              |

| Property Name   | Type   | Description                                                                                                                                                                                        | Filter Group and Version | Available Version |
|-----------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| createDate      | String | Date and time of creation of the payment event.                                                                                                                                                    | Big, 60.0                | 60.0              |
| currency        | String | Currency of the payment event.                                                                                                                                                                     | Big, 60.0                | 60.0              |
| eventStatus     | String | Status of the transaction event. Valid values are: <ul style="list-style-type: none"> <li>• CREATED</li> <li>• FAILED</li> <li>• INCOMPLETE</li> <li>• SUCCESSFUL</li> <li>• UPDATED</li> </ul>    | Big, 60.0                | 60.0              |
| eventType       | String | Type of payment event that has occurred. Valid values are: <ul style="list-style-type: none"> <li>• AUTHORIZE</li> <li>• CAPTURE</li> <li>• INTENT</li> <li>• MANDATE</li> <li>• REFUND</li> </ul> | Big, 60.0                | 60.0              |
| guid            | String | Unique identifier of the payment intent.                                                                                                                                                           | Big, 60.0                | 60.0              |
| providerGateway | String | Payment service provider, such as Stripe, Adyen, or Paypal.                                                                                                                                        | Big, 62.0                | 62.0              |

## Adjust Order Summary Output

Output representation of the financial changes for an adjust items action. For a preview action, these values are the expected output. For a submit action, these values are the actual output.

| Property Name                    | Type                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|----------------------------------|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| changeBalances                   | <a href="#">Change Item Output</a>      | Expected (for preview) or actual (for submit) financial values for the price adjustment action. Most of the values match the change order values. If two change orders are returned, then these values combine them. The sign of a value in this output is the opposite of the corresponding value on a change order record. For example, a discount is a positive value in <code>changeBalances</code> and a negative value on a change order record. | Big, 49.0                | 49.0              |
| inFulfillment<br>ChangeOrderId   | String                                  | ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that are in the process of being fulfilled. This change Order is only created for a request that specified an <code>allocatedItems</code> <code>ChangeOrderType</code> of <code>InFulfillment</code> . For an <code>adjustPreview</code> call, this value is always null.                                                                            | Big, 55.0                | 55.0              |
| errors                           | <a href="#">Error Response Output[]</a> | Any errors that were returned.                                                                                                                                                                                                                                                                                                                                                                                                                         | Big, 49.0                | 49.0              |
| orderSummaryId                   | String                                  | ID of the OrderSummary.                                                                                                                                                                                                                                                                                                                                                                                                                                | Big, 49.0                | 49.0              |
| postFulfillment<br>ChangeOrderId | String                                  | ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that have                                                                                                                                                                                                                                                                                                                                            | Big, 49.0                | 49.0              |

| Property Name                   | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|---------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                                 |         | been fulfilled. For an adjustPreview call, this value is always null.                                                                                                                                                                                                                                                                                                                                 |                          |                   |
| preFulfillment<br>ChangeOrderId | String  | ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that have not been fulfilled. If the request specified an allocatedItems ChangeOrderType of PreFulfillment, this change Order also includes the changes applicable to OrderItemSummary quantities that are in the process of being fulfilled. For an adjustPreview call, this value is always null. | Big, 49.0                | 49.0              |
| success                         | Boolean | Indicates whether the transaction was successful.                                                                                                                                                                                                                                                                                                                                                     | Big, 49.0                | 49.0              |

## Alternative

Alternative representation for an extension on a feed element.

| Property Name          | Type   | Description                           | Filter Group and Version | Available Version |
|------------------------|--------|---------------------------------------|--------------------------|-------------------|
| text<br>Representation | String | Text representation of the extension. | Small, 40.0              | 40.0              |
| thumbnailUrl           | String | Thumbnail URL to the extension.       | Small, 40.0              | 40.0              |
| title                  | String | Title of the extension.               | Small, 40.0              | 40.0              |

## Alternative Payment Method Output

Alternative payment method details.

| Property Name | Type   | Description                                                          | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------|--------------------------|-------------------|
| accountId     | String | Salesforce Payments account to which this payment method is linked.  | Big, 48.0                | 56.0              |
| comments      | String | Details about a record added by a user. Maximum of 1,000 characters. | Big, 48.0                | 56.0              |
| email         | String | Email address of the card holder.                                    | Big, 48.0                | 56.0              |

| Property Name       | Type   | Description                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| gatewayToken        | String | A unique, alphanumeric ID, called a token, that a payment gateway generates when it first processes a payment. The token replaces the actual payment data so that the data is kept secure. This token is stored as encrypted text, and can be used for recurring payments. | Big, 48.0                | 56.0              |
| gatewayTokenDetails | String | Detailed information about the gateway token.                                                                                                                                                                                                                              | Big, 48.0                | 56.0              |
| name                | String | Name that you assign to the payment method object.                                                                                                                                                                                                                         | Big, 48.0                | 56.0              |

## Announcement

An announcement.

| Property Name  | Type                      | Description                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|----------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| expirationDate | String                    | Date time in ISO 8601 format. The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI. | Small, 31.0              | 31.0              |
| feedElement    | <a href="#">Feed Item</a> | The feed element that contains the body of the announcement and its associated comments, likes, and so on.                                                                                                                                                                                                             | Small, 31.0              | 31.0              |
| id             | String                    | 18-character ID of the announcement.                                                                                                                                                                                                                                                                                   | Small, 31.0              | 31.0              |
| isArchived     | Boolean                   | Specifies whether the announcement is archived.                                                                                                                                                                                                                                                                        | Small, 36.0              | 36.0              |
| sendEmails     | Boolean                   | Specifies whether the announcement is sent as an email to all group members.                                                                                                                                                                                                                                           | Medium, 36.0             | 36.0              |
| url            | String                    | The URL to the announcement.                                                                                                                                                                                                                                                                                           | Small, 33.0              | 33.0              |

## Announcement Page

A paginated collection of Announcement response bodies.

| Property Name   | Type                           | Description                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|-----------------|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| announcements   | <a href="#">Announcement[]</a> | A collection of Announcement response bodies. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement. | Small, 31.0              | 31.0              |
| currentPageUrl  | String                         | Connect REST API URL identifying the current page.                                                                                                                                                                     | Medium, 31.0             | 31.0              |
| nextPageUrl     | String                         | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.                                                                                                                       | Small, 31.0              | 31.0              |
| previousPageUrl | String                         | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.                                                                                                               | Medium, 31.0             | 31.0              |

## App OAuth Credentials

Represents the primary and staged credentials of a single OAuth consumer.

| Property Name        | Type   | Description                                               | Filter Group and Version | Available Version |
|----------------------|--------|-----------------------------------------------------------|--------------------------|-------------------|
| id                   | String | The OAuth consumer's identifier                           | Small, 60.0              | 60.0              |
| key                  | String | The OAuth consumer's key                                  | Small, 60.0              | 60.0              |
| name                 | String | The application's name                                    | Small, 60.0              | 60.0              |
| secret               | String | The OAuth consumer's secret                               | Small, 60.0              | 60.0              |
| stagedCredentialsUrl | String | The URL for the staged credentials of the OAuth consumer  | Small, 65.0              | 65.0              |
| url                  | String | The URL for the primary credentials of the OAuth consumer | Small, 60.0              | 60.0              |

## App OAuth Credentials Collection

List of OAuth consumers associated with the external client app.

| Property Name  | Type                                  | Description                                 | Filter Group and Version | Available Version |
|----------------|---------------------------------------|---------------------------------------------|--------------------------|-------------------|
| consumers      | <a href="#">App OAuth Credentials</a> | Collection of OAuth consumers' credentials. | Small, 60.0              | 60.0              |
| currentPageUrl | String                                | URL to the current collection of assets     | Small, 60.0              | 60.0              |

## App OAuth Staged Credentials

Information about an OAuth consumer's primary and staged credentials. Staged credentials are valid for 30 days unless they're deleted before then.

| Property Name        | Type   | Description                                                                                                                                                      | Filter Group and Version | Available Version |
|----------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| createdBy            | String | User who created the OAuth consumer's staged credentials.                                                                                                        | Small, 65.0              | 65.0              |
| createdDate          | String | Date when the OAuth consumer's staged credentials were created.                                                                                                  | Small, 65.0              | 65.0              |
| expirationDate       | String | Expiration date of the OAuth consumer's staged credentials.                                                                                                      | Small, 65.0              | 65.0              |
| id                   | String | OAuth consumer's staged credentials' identifier.                                                                                                                 | Small, 65.0              | 65.0              |
| key                  | String | OAuth consumer's staged credentials' key.                                                                                                                        | Small, 65.0              | 65.0              |
| secret               | String | OAuth consumer's staged credentials' secret.                                                                                                                     | Small, 65.0              | 65.0              |
| stagedCredentialsUrl | String | URL for the staged credentials of the OAuth consumer.                                                                                                            | Small, 65.0              | 65.0              |
| state                | String | Current state of the OAuth consumer's staged credentials. Values are: <ul style="list-style-type: none"> <li>Active</li> <li>Expired</li> <li>Rotated</li> </ul> | Small, 65.0              | 65.0              |
| url                  | String | URL for the primary credentials of the OAuth consumer.                                                                                                           | Small, 65.0              | 65.0              |

## App OAuth Staged Credentials Collection

List of OAuth consumer's staged credentials associated with the app.

| Property Name     | Type                                            | Description                                          | Filter Group and Version | Available Version |
|-------------------|-------------------------------------------------|------------------------------------------------------|--------------------------|-------------------|
| stagedCredentials | <a href="#">App OAuth Staged Credentials</a> [] | Collection of OAuth Consumers' staged credentials.   | Small, 65.0              | 65.0              |
| url               | String                                          | URL to the current collection of staged credentials. | Small, 65.0              | 65.0              |

## App OAuth Usage

OAuth usage information for an external client app.

| Property Name     | Type    | Description                                                                                                 | Filter Group and Version | Available Version |
|-------------------|---------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accessTokenFormat | String  | OAuth token format that the app issues, for example JWT or Opaque.                                          | Small, 59.0              | 59.0              |
| availableActions  | String  | Available actions for this app.                                                                             | Small, 59.0              | 59.0              |
| description       | String  | External client app description.                                                                            | Small, 59.0              | 59.0              |
| developerName     | String  | External client app developer name.                                                                         | Small, 59.0              | 59.0              |
| identifier        | String  | External client app identifier.                                                                             | Small, 59.0              | 59.0              |
| isFromPackage     | Boolean | Indicates whether the app was installed from a package ( <code>true</code> ) or not ( <code>false</code> ). | Small, 59.0              | 59.0              |
| usageDetailsUrl   | String  | URL to the usage details for the external client app.                                                       | Small, 59.0              | 59.0              |

## App OAuth Usage Collection

OAuth usage information for a list of apps.

| Property Name  | Type                               | Description                                 | Filter Group and Version | Available Version |
|----------------|------------------------------------|---------------------------------------------|--------------------------|-------------------|
| apps           | <a href="#">App OAuth Usage</a> [] | Collection of OAuth apps.                   | Small, 59.0              | 59.0              |
| currentPageUrl | String                             | URL to get the collection.                  | Small, 59.0              | 59.0              |
| nextPageUrl    | String                             | URL to get the next page of the collection. | Small, 59.0              | 59.0              |

## App OAuth Usage Token

Refresh token.

| Property Name       | Type    | Description                                                                                                                           | Filter Group and Version | Available Version |
|---------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accessTokenFormat   | String  | OAuth token format that the app issues (JWT or Opaque)                                                                                | Small, 59.0              | 59.0              |
| appDeveloperName    | String  | App developer name.                                                                                                                   | Small, 59.0              | 59.0              |
| appIdentifier       | String  | App identifier.                                                                                                                       | Small, 59.0              | 59.0              |
| initialConnectionAt | String  | Date and time of the refresh token row creation.                                                                                      | Small, 59.0              | 59.0              |
| lastUsedAt          | String  | Date and time of the last token issuance.                                                                                             | Small, 59.0              | 59.0              |
| revocationUrl       | String  | URL for the GET request to the OAuth Usage API for the app. This URL includes the token identifier and can be used to revoke a token. | Small, 59.0              | 59.0              |
| useCount            | Integer | Number of access tokens issued by this refresh token.                                                                                 | Small, 59.0              | 59.0              |
| userIdentifier      | String  | Token owner's user identifier.                                                                                                        | Small, 59.0              | 59.0              |
| username            | String  | Token owner's username.                                                                                                               | Small, 59.0              | 59.0              |

## App OAuth Usage Token Collection

A collection of tokens.

| Property Name  | Type                                    | Description                 | Filter Group and Version | Available Version |
|----------------|-----------------------------------------|-----------------------------|--------------------------|-------------------|
| currentPageUrl | String                                  | URL to get the collection.  | Small, 59.0              | 59.0              |
| tokens         | <a href="#">App OAuth Usage Token[]</a> | Collection of OAuth tokens. | Small, 59.0              | 59.0              |

## App OAuth Usage User

OAuth user.

| Property Name       | Type   | Description                                                         | Filter Group and Version | Available Version |
|---------------------|--------|---------------------------------------------------------------------|--------------------------|-------------------|
| accessTokenFormat   | String | OAuth token format that the app issues (for example, JWT or Opaque) | Small, 59.0              | 59.0              |
| appDeveloperName    | String | App developer name.                                                 | Small, 59.0              | 59.0              |
| appIdentifier       | String | App identifier.                                                     | Small, 59.0              | 59.0              |
| initialConnectionAt | String | Date and time of the refresh token row creation.                    | Small, 59.0              | 59.0              |

| Property Name  | Type    | Description                                                 | Filter Group and Version | Available Version |
|----------------|---------|-------------------------------------------------------------|--------------------------|-------------------|
| lastUsedAt     | String  | Date and time of the last token issuance.                   | Small, 59.0              | 59.0              |
| revocationUrl  | String  | URL for the GET request to the OAuth Usage API for the app. | Small, 59.0              | 59.0              |
| useCount       | Integer | Number of access tokens issued by this refresh token.       | Small, 59.0              | 59.0              |
| userIdentifier | String  | Token owner's user identifier.                              | Small, 59.0              | 59.0              |
| username       | String  | Token owner's username.                                     | Small, 59.0              | 59.0              |

## App OAuth Usage User Collection

List of OAuth app users.

| Property Name  | Type                                   | Description                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|----------------|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl | String                                 | URL identifying the current page.                                                                                                                                                                                       | Small, 59.0              | 59.0              |
| nextPageUrl    | String                                 | URL identifying the next page of the collection.<br><br>This URL is returned with every page, even the last page of items. If you enter nextPageUrl that comes with the last page of items, an empty array is returned. | Small, 59.0              | 59.0              |
| users          | <a href="#">App OAuth Usage User[]</a> | Collection of OAuth users.                                                                                                                                                                                              | Small, 59.0              | 59.0              |

## Apple Pay Domain

Information retrieved from an Apple Pay domain registration.

### JSON example

```
{
  "createdDate": 1710860834000,
  "domainName": "alpine100.my.site-com.s-boggarapu-w-15077821.wb.crm.dev",
  "id": "apwc_1Ow4FyRBJ3juuXWQLK1d7EKs"
}
```

| Property Name | Type   | Description                             | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------|--------------------------|-------------------|
| createdDate   | Long   | Date when the domain name is registered | Big, 58.0                | 58.0              |
| domainName    | String | Domain name of the Apple Pay domain.    | Big, 58.0                | 58.0              |

| Property Name | Type   | Description                                                                | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------|--------------------------|-------------------|
| id            | String | Unique ID for the domain name, which is generated by the payment provider. | Small, 58.0              | 58.0              |

## Application Context

Application context for a Commerce store.

### JSON example

```
{
  "cartCalculateEnabled": true,

|---------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| articleType               | String    | Type of the knowledge article.                                                                                                                                                         | Small, 37.0              | 37.0              |
| knowledgeArticleVersionId | String    | ID of the knowledge article version.                                                                                                                                                   | Small, 39.0              | 39.0              |
| id                        | String    | 18-character ID of the knowledge article.                                                                                                                                              | Small, 37.0              | 37.0              |
| lastPublishedDate         | String    | Last published date of the knowledge article. Format is ISO 8601.                                                                                                                      | Small, 37.0              | 37.0              |
| motif                     | Motif     | Small, medium, and large icons indicating that the object is a knowledge article. The motif can also contain the object's base color.<br><br>The icon is not a preview of the article. | Small, 37.0              | 37.0              |
| mySubscription            | Reference | If the context user is following this article, it contains information about the subscription. Otherwise, it returns <code>null</code> .                                               | Medium, 37.0             | 37.0              |
| name                      | String    | Name of the article.                                                                                                                                                                   | Small, 37.0              | 37.0              |
| rating                    | Double    | The rating of the article.                                                                                                                                                             | Small, 37.0              | 37.0              |
| summary                   | String    | Summary of the knowledge article contents.                                                                                                                                             | Small, 37.0              | 37.0              |
| title                     | String    | Title of the knowledge article.                                                                                                                                                        | Small, 37.0              | 37.0              |
| type                      | String    | Value is <code>KnowledgeArticle</code> .                                                                                                                                               | Small, 37.0              | 37.0              |
| url                       | String    | URL to the knowledge article.                                                                                                                                                          | Small, 37.0              | 37.0              |
| urlName                   | String    | URL name of the knowledge article.                                                                                                                                                     | Small, 37.0              | 37.0              |
| viewCount                 | Integer   | Number of times the knowledge article has been viewed.                                                                                                                                 | Small, 38.0              | 38.0              |

## Asset Action Output

Asset action output representation for a lifecycle-managed asset.

| Property Name | Type   | Description             | Filter Group and Version | Available Version |
|---------------|--------|-------------------------|--------------------------|-------------------|
| id            | String | ID of the asset action. | Big, 50.0                | 50.0              |

## Asset Action Source Output

Response received from an asset action source for a lifecycle-managed asset.

| Property Name | Type   | Description                                                                  | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------|--------------------------|-------------------|
| id            | String | ID of the asset action source.                                               | Big, 50.0                | 50.0              |
| referenceId   | String | ID of the salesforce entity or external entity that caused the asset action. | Big, 50.0                | 50.0              |

## Asset File

An asset file.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

| Property Name               | Type    | Description                                                                                                                                            | Filter Group and Version | Available Version |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| baseAssetUrl                | String  | Base download URL of the asset.                                                                                                                        | Small, 38.0              | 38.0              |
| baseUnauthenticatedAssetUrl | String  | Base download URL of the asset for unauthenticated users if <code>isVisibleByExternalUsers</code> is <code>true</code> , otherwise <code>null</code> . | Small, 43.0              | 43.0              |
| id                          | String  | ID of the asset.                                                                                                                                       | Small, 38.0              | 38.0              |
| isVisibleByExternalUsers    | Boolean | Indicates whether unauthenticated users can see the asset file ( <code>true</code> ) or not ( <code>false</code> ).                                    | Small, 43.0              | 43.0              |
| masterLabel                 | String  | Label of the asset.                                                                                                                                    | Small, 38.0              | 38.0              |
| name                        | String  | Unique name of the asset.                                                                                                                              | Small, 38.0              | 38.0              |
| namespacePrefix             | String  | Namespace prefix of the package containing the asset.                                                                                                  | Small, 38.0              | 38.0              |
| type                        | String  | Type of asset.                                                                                                                                         | Small, 38.0              | 38.0              |

## Asset Output

Asset output representation for a lifecycle-managed asset.

| Property Name | Type   | Description      | Filter Group and Version | Available Version |
|---------------|--------|------------------|--------------------------|-------------------|
| id            | String | ID of the asset. | Big, 50.0                | 50.0              |

## Asset Result Output

Connect REST API output representation for lifecycle-managed assets.

| Property Name      | Type                                         | Description                                                 | Filter Group and Version | Available Version |
|--------------------|----------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| asset              | <a href="#">Asset Output</a>                 | ID of the asset on which the API was called.                | Big, 50.0                | 50.0              |
| assetAction        | <a href="#">Asset Action Output</a>          | ID of the asset action created as a result of the API call. | Big, 50.0                | 50.0              |
| assetActionSources | <a href="#">Asset Action Source Output[]</a> | Asset action sources.                                       | Big, 50.0                | 50.0              |
| assetStatePeriods  | <a href="#">Asset State Period Output[]</a>  | Asset state periods.                                        | Big, 50.0                | 50.0              |

## Asset State Period Output

Response received from an asset state period for a lifecycle-managed asset.

| Property Name | Type   | Description                   | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------|--------------------------|-------------------|
| id            | String | ID of the asset state period. | Big, 50.0                | 50.0              |

## Associated Actions Capability

If a feed element has this capability, it has platform actions associated with it.

| Property Name         | Type                                    | Description                                                                                                                                                                    | Filter Group and Version | Available Version |
|-----------------------|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| platformAction Groups | <a href="#">Platform Action Group[]</a> | The platform action groups associated with a feed element. Platform action groups are returned in the order specified in the Associated Actions Capability Input request body. | Medium, 33.0             | 33.0              |

## Audience Target Assignment

Target assignments for an audience.

| Property Name | Type                          | Description                                                                                                                      | Filter Group and Version | Available Version |
|---------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| formulaScope  | <a href="#">Formula Scope</a> | Formula scope of the target.                                                                                                     | Small, 51.0              | 51.0              |
| groupName     | String                        | Group name of the target. Groups bundle related target and audience pairs.                                                       | Small, 47.0              | 47.0              |
| id            | String                        | ID of the target.                                                                                                                | Small, 48.0              | 48.0              |
| isMatch       | Boolean                       | Specifies whether the target matches the current context ( <code>true</code> ) or doesn't ( <code>false</code> ).                | Small, 47.0              | 47.0              |
| priority      | Integer                       | Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience. | Small, 48.0              | 48.0              |
| publishStatus | String                        | Publish status of the target. Values are: <ul style="list-style-type: none"><li>• Draft</li><li>• Live</li></ul>                 | Small, 48.0              | 48.0              |
| targetType    | String                        | Type of target, indicating the nature of the data being targeted.                                                                | Small, 47.0              | 47.0              |
| targetValue   | String                        | Value of the target.                                                                                                             | Small, 47.0              | 47.0              |
| url           | String                        | URL to the target.                                                                                                               | Small, 48.0              | 48.0              |

| accountId              | String | ID of the account containing the payment authorization being adjusted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Big, 51.0                | 51.0              |
| amount                 | Double | Amount of the payment authorization adjustment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Big, 51.0                | 51.0              |
| currencyIsoCode        | String | Three-letter ISO 4217 currency code associated with the payment authorization adjustment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Big, 51.0                | 51.0              |
| effectiveDate          | String | Date when the authorization adjustment becomes effective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Big, 51.0                | 51.0              |
| id                     | String | ID of the PaymentAuthAdjustment record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Big, 51.0                | 51.0              |
| parentAuthAdjustmentId | String | System-defined reference number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Big, 51.0                | 51.0              |
| requestDate            | String | Date when the authorization adjustment transaction occurred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Big, 51.0                | 51.0              |
| status                 | String | <p>Status of the payment authorization adjustment. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Canceled</b>: The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance.</li> <li>• <b>Draft</b>: The payment authorization reversal can be edited before applying it against the parent authorization.</li> <li>• <b>Processed</b>: The payment authorization reversal has been finalized.</li> </ul> <p>Users can change the status as follows:</p> <ul style="list-style-type: none"> <li>• Draft to Processed</li> <li>• Processed to Canceled</li> <li>• Draft to Canceled</li> </ul> | Big, 51.0                | 51.0              |

## Authorization Gateway Response Output

Response returned by the payment gateway following an authorization request from the payment gateway adapter.

| Property Name            | Type   | Description                                 | Filter Group and Version | Available Version |
|--------------------------|--------|---------------------------------------------|--------------------------|-------------------|
| gatewayAuthorizationCode | String | Authorization code for the payment gateway. | Big, 49.0                | 49.0              |

| Property Name                | Type   | Description                                                                                                                                                                                    | Filter Group and Version | Available Version |
|------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| gatewayAvsCode               | String | Address verification system used for tokenization in the payment gateway.                                                                                                                      | Big, 49.0                | 49.0              |
| gatewayDate                  | String | The date that the payment gateway processed the payment transaction.                                                                                                                           | Big, 49.0                | 49.0              |
| gatewayMessage               | String | Optional method that the payment gateway returns to provide more information on the status of a payment transaction.                                                                           | Big, 49.0                | 49.0              |
| gatewayReferenceDetails      | String | Gateway reference details.                                                                                                                                                                     | Big, 49.0                | 49.0              |
| gatewayReferenceNumber       | String | Gateway reference number.                                                                                                                                                                      | Big, 49.0                | 49.0              |
| gatewayResultCode            | String | Gateway result code. Indicates the result of the gateway processing the payment transaction. Result codes for between different gateway providers. Must be mapped to a Salesforce result code. | Big, 49.0                | 49.0              |
| gatewayResultCodeDescription | String | Provides more information about the result code.                                                                                                                                               | Big, 49.0                | 49.0              |
| salesforceResultCode         | String | Salesforce result code. Must be set based on the value of the gateway result code.                                                                                                             | Big, 49.0                | 49.0              |

## Authorization Output

Payment authorization output representation.

| Property Name        | Type                                                  | Description                                                    | Filter Group and Version | Available Version |
|----------------------|-------------------------------------------------------|----------------------------------------------------------------|--------------------------|-------------------|
| error                | <a href="#">Error Response Output</a>                 | Error representation for Payment Authorization                 | Big, 49.0                | 49.0              |
| gatewayResponse      | <a href="#">Authorization Gateway Response Output</a> | Gateway response representation for payment authorization.     | Big, 49.0                | 49.0              |
| paymentAuthorization | <a href="#">Payment Authorization Output</a>          | Payment authorization representation.                          | Big, 49.0                | 49.0              |
| paymentGatewayLogs   | <a href="#">Gateway Log Output[]</a>                  | Gateway log list representation for the payment authorization. | Big, 49.0                | 49.0              |
| paymentGroup         | <a href="#">Payment Group Output</a>                  | Payment group representation for the payment authorization.    | Big, 49.0                | 49.0              |

| Property Name | Type                                  | Description                                                  | Filter Group and Version | Available Version |
|---------------|---------------------------------------|--------------------------------------------------------------|--------------------------|-------------------|
| paymentMethod | <a href="#">Payment Method Output</a> | Payment method representation for the payment authorization. | Big, 49.0                | 49.0              |

## Authorization Reversal Gateway Response Output

Authorization reversal gateway response representation.

| Property Name                | Type   | Description                      | Filter Group and Version | Available Version |
|------------------------------|--------|----------------------------------|--------------------------|-------------------|
| gatewayAvsCode               | String | Gateway AVS code.                | Big, 51.0                | 51.0              |
| gatewayDate                  | String | Gateway date.                    | Big, 51.0                | 51.0              |
| gatewayMessage               | String | Message returned by the gateway. | Big, 51.0                | 51.0              |
| gatewayReferenceDetails      | String | Gateway reference details.       | Big, 51.0                | 51.0              |
| gatewayReferenceNumber       | String | Gateway reference number.        | Big, 51.0                | 51.0              |
| gatewayResultCode            | String | Gateway result code.             | Big, 51.0                | 51.0              |
| gatewayResultCodeDescription | String | Gateway result code description. | Big, 51.0                | 51.0              |
| salesforceResultCode         | String | Salesforce result code.          | Big, 51.0                | 51.0              |

## Authorization Reversal Output

Authorization reversal output representation.

| Property Name         | Type                                                           | Description                                                                              | Filter Group and Version | Available Version |
|-----------------------|----------------------------------------------------------------|------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error                 | <a href="#">Error Response Output</a>                          | Error response representation for the authorization reversal.                            | Big, 51.0                | 51.0              |
| gatewayResponse       | <a href="#">Authorization Reversal Gateway Response Output</a> | Gateway response representation for the authorization reversal.                          | Big, 51.0                | 51.0              |
| paymentAuthAdjustment | <a href="#">Authorization Adjustment Output</a>                | Payment authorization adjustment response representation for the authorization reversal. | Big, 51.0                | 51.0              |
| paymentGatewayLogs    | <a href="#">Gateway Log Output[]</a>                           | Gateway log collection representation for the authorization reversal.                    | Big, 51.0                | 51.0              |

## Available Location Output

A set of inventory locations that can combine to fulfill an order.

| Property Name | Type     | Description                    | Filter Group and Version | Available Version |
|---------------|----------|--------------------------------|--------------------------|-------------------|
| locations     | String[] | A list of inventory locations. | Big, 51.0                | 51.0              |

## Available Territory Slots

Slot's start and end time and available resources in the specified territory.

| Property Name            | Type     | Description                                                           | Filter Group and Version | Available Version |
|--------------------------|----------|-----------------------------------------------------------------------|--------------------------|-------------------|
| endTime                  | String   | End time of the appointment.                                          | Small, 49.0              | 49.0              |
| engagementChannelTypeIds | String[] | List of IDs of the engagement channel types for the service resource. | Small, 56.0              | 56.0              |
| resources                | String[] | List of resources available in the specified territory.               | Small, 49.0              | 49.0              |
| startTime                | String   | Start time of the appointment.                                        | Small, 49.0              | 49.0              |

 **Note:** The API returns time slots up to 31 days from the `startTime`

## Available Territory Slots List

Available territory slots.

| Property Name  | Type                                        | Description                          | Filter Group and Version | Available Version |
|----------------|---------------------------------------------|--------------------------------------|--------------------------|-------------------|
| territorySlots | <a href="#">Available Territory Slots[]</a> | List of appointment territory slots. | Small, 49.0              | 49.0              |

## Available Territory Slots Output

Available territory slots result.

## Boost and Bury Rule

Boost and bury rule information.

| Property Name    | Type                                                  | Description                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|------------------|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| action           | String                                                | Action of the boost and bury rule. Values are: <ul style="list-style-type: none"> <li><b>Boost</b>—Boost rule. Increases search result rankings for targeted products.</li> <li><b>Bury</b>—Bury rule. Decreases search result rankings for targeted products.</li> </ul> | Small, 59.0              | 59.0              |
| endDate          | String                                                | End date and time of the boost and bury rule.                                                                                                                                                                                                                             | Small, 59.0              | 59.0              |
| id               | String                                                | ID of the boost and bury rule.                                                                                                                                                                                                                                            | Small, 59.0              | 59.0              |
| level            | Integer                                               | Level of the boost and bury rule. Values are from 1-100. The level determines the degree to which a boost and bury rule influences search result rankings for the targeted products.                                                                                      | Small, 59.0              | 59.0              |
| name             | String                                                | Name of the boost and bury rule.                                                                                                                                                                                                                                          | Small, 59.0              | 59.0              |
| startDate        | String                                                | Start date and time of the boost and bury rule.                                                                                                                                                                                                                           | Small, 59.0              | 59.0              |
| targetExpression | <a href="#">Boost and Bury Rule Target Expression</a> | Target expression for a boost and bury rule. The target expression specifies which products a boost and bury rule applies to.                                                                                                                                             | Small, 59.0              | 59.0              |

## Boost and Bury Rules Collection

Collection of boost and bury rules.

| Property Name  | Type                                  | Description                                                             | Filter Group and Version | Available Version |
|----------------|---------------------------------------|-------------------------------------------------------------------------|--------------------------|-------------------|
| boostBuryRules | <a href="#">Boost and Bury Rule[]</a> | Collection of boost and bury rules. A webstore can have up to 25 rules. | Medium, 59.0             | 59.0              |

## Boost and Bury Rule Condition

Condition for a boost and bury rule.

| Property Name     | Type     | Description                                                 | Filter Group and Version | Available Version |
|-------------------|----------|-------------------------------------------------------------|--------------------------|-------------------|
| attributeNameOrId | String   | Identifier of the attribute for the condition. Value is ID. | Small, 59.0              | 59.0              |
| attributeType     | String   | Search attribute type. Value is Product2.                   | Small, 59.0              | 59.0              |
| values            | String[] | List of up to 100 attribute values for the condition.       | Small, 59.0              | 59.0              |

## Boost and Bury Rule Target Expression

Target expression for a boost and bury rule.

| Property Name | Type                                            | Description                                                       | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| conditions    | <a href="#">Boost and Bury Rule Condition[]</a> | List of conditions for the boost and bury rule target expression. | Small, 59.0              | 59.0              |

## Bot Info

Information about the bot associated with the conversation application.

| Property Name    | Type   | Description                               | Filter Group and Version | Available Version |
|------------------|--------|-------------------------------------------|--------------------------|-------------------|
| botId            | String | ID of the bot.                            | Small, 54.0              | 54.0              |
| botName          | String | Name of the bot.                          | Small, 54.0              | 54.0              |
| lastModifiedDate | String | Last modified date of the bot definition. | Small, 54.0              | 54.0              |

## Bot Version Activation Info

Success or failure information of the bot version activation.

| Property Name | Type     | Description                                             | Filter Group and Version | Available Version |
|---------------|----------|---------------------------------------------------------|--------------------------|-------------------|
| isActive      | Boolean  | Indicates whether the bot is active or not.             | Small, 51.0              | 51.0              |
| messages      | String[] | Failure messages.                                       | Small, 50.0              | 50.0              |
| success       | Boolean  | Indicates whether the activation was successful or not. | Small, 50.0              | 50.0              |

## Business Objective Associations

Association details of a business objective

| Property Name | Type   | Description                                                                                                                  | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id            | String | 18-character unique identifier for the business objective association.                                                       | Small, 59.0              | 59.0              |
| type          | String | Definition category of the business objective, or goal. Values are: <ul style="list-style-type: none"><li>Webstore</li></ul> | Small, 59.0              | 59.0              |

## Business Objective Insights

Insights related to a business objective, or goal.

| Property Name   | Type                                                       | Description                                                                                                                                            | Filter Group and Version | Available Version |
|-----------------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currencyIsoCode | String                                                     | The three-letter ISO currency code associated with the KPI values. For example, 'USD' for US dollars or 'EUR' for euros.                               | Small, 62.0              | 62.0              |
| current         | Double                                                     | The current value of the KPI metric. This represents the most recent measurement or calculation of the business objective's key performance indicator. | Small, 59.0              | 59.0              |
| insights        | <a href="#">Business Objective Insights</a> on page 1442[] | A collection of insights related to the business objective.                                                                                            | Small, 62.0              | 62.0              |
| kpiDashboardUrl | String                                                     | The URL to the dashboard where the KPI details and visualizations can be viewed.                                                                       | Small, 62.0              | 62.0              |
| kpiSummaryText  | String                                                     | A human-readable summary of the KPI's performance, including the change from the previous value.                                                       | Small, 62.0              | 62.0              |

| Property Name        | Type   | Description                                                                                                                                                  | Filter Group and Version | Available Version |
|----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| last                 | Double | The previous value of the KPI metric, used for comparison with the current value to track progress or changes over time.                                     | Small, 59.0              | 59.0              |
| period               | String | The time period between the current and last values, such as 'Daily', 'Weekly', 'Monthly', or 'Quarterly'. This indicates the frequency of KPI measurements. | Small, 59.0              | 59.0              |
| targetCompletionDate | String | Target date for completion of the goal.                                                                                                                      | Small, 62.0              | 62.0              |
| targetValue          | Double | Target value for the goal.                                                                                                                                   | Small, 62.0              | 62.0              |
| unit                 | String | Unit for an insight. Values are: <ul style="list-style-type: none"><li>Count</li><li>Currency</li><li>Dollar</li><li>Number</li><li>Percent</li></ul>        | Small, 59.0              | 59.0              |

## Business Objective

Business objective, or goal.

| Property Name | Type                                                           | Description                              | Filter Group and Version | Available Version |
|---------------|----------------------------------------------------------------|------------------------------------------|--------------------------|-------------------|
| associations  | <a href="#">Business Objective Associations</a> on page 1442[] | List of business objective associations. | Small, 59.0              | 59.0              |
| description   | String                                                         | Description of the business objective.   | Small, 59.0              | 59.0              |
| displayName   | String                                                         | Display name of the business objective.  | Small, 59.0              | 59.0              |
| id            | String                                                         | ID of the business objective.            | Small, 59.0              | 59.0              |

## Business Objective Recommendations

Details of the recommended actions for a business objective, or goal.

| Property Name | Type    | Description                             | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------|--------------------------|-------------------|
| active        | Integer | Count of active recommended actions.    | Small, 59.0              | 59.0              |
| complete      | Integer | Count of completed recommended actions. | Small, 59.0              | 59.0              |

| Property Name | Type    | Description                                                              | Filter Group and Version | Available Version |
|---------------|---------|--------------------------------------------------------------------------|--------------------------|-------------------|
| total         | Integer | Count of total recommended actions, including both completed and active. | Small, 59.0              | 59.0              |

## Business Objective Summary

Summary of a business objective, or goal.

| Property Name         | Type                                                            | Description                                                       | Filter Group and Version | Available Version |
|-----------------------|-----------------------------------------------------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| description           | String                                                          | Description of the business objective.                            | Small, 59.0              | 59.0              |
| id                    | String                                                          | ID of the business objective.                                     | Small, 59.0              | 59.0              |
| insightSummary        | <a href="#">Business Objective Insights</a> on page 1442        | Summary of insights related to the business objective.            | Small, 59.0              | 59.0              |
| kpi                   | String                                                          | Key performance indicator associated with the business objective. | Small, 61.0              | 61.0              |
| labelName             | String                                                          | Display name of the business objective.                           | Small, 59.0              | 59.0              |
| recommendationSummary | <a href="#">Business Objective Recommendations</a> on page 1443 | Summary of recommended actions for the business objective.        | Small, 59.0              | 59.0              |

## Business Objectives

List of business objectives, or goals.

| Property Name      | Type                                              | Description                          | Filter Group and Version | Available Version |
|--------------------|---------------------------------------------------|--------------------------------------|--------------------------|-------------------|
| businessObjectives | <a href="#">Business Objective</a> on page 1443[] | List of created business objectives. | Small, 59.0              | 59.0              |

## Business Objectives Summary

List of summaries for business objectives, or goals.

| Property Name             | Type                                                      | Description                           | Filter Group and Version | Available Version |
|---------------------------|-----------------------------------------------------------|---------------------------------------|--------------------------|-------------------|
| businessObjectivesSummary | <a href="#">Business Objective Summary</a> on page 1444[] | List of business objective summaries. | Small, 59.0              | 59.0              |

## Buyer Group

Buyer group details.

| Property Name | Type   | Description                           | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------|--------------------------|-------------------|
| id            | String | ID of the buyer group.                | Small, 58.0              | 58.0              |
| name          | String | Name associated with the buyer group. | Small, 58.0              | 58.0              |

## Buyer Profile Update

Output details for a buyer profile update request.

**JSON example**

Here's an example of a response when two-factor authentication is disabled:

```
{
  "firstName": "Morton",
  "isEmailVerified": "true",
  "isPhoneVerified": "true",
  "lastName": "Strosin",
  "email": "Ma*****@vi*****.info",
  "phoneNumber": "*****7740",
  "userName": "morton.Strosin10@salesforce.com",
  "verificationResponse": {}
}
```

Here's an example of a response when two-factor authentication is enabled:

```
{
  "firstName": "Morton",
  "isEmailVerified": "true",
  "isPhoneVerified": "true",
  "lastName": "Strosin",
  "email": "Ma*****@vi*****.info",
  "phoneNumber": "*****7740",
  "userName": "morton.Strosin10@salesforce.com",
  "verificationResponse": {
    "identifier": "z9jOsN8Buj8bRISupnbg",
    "message": "Ok",
    "method": "Sms",
    "recipient": "(**) ***-6705",
    "status": "Success"
  }
}
```

| Property Name        | Type                                                | Description                                                                                                            | Filter Group and Version | Available Version |

## Calculate Taxes Info

List of calculated tax output.

| Property Name               | Type    | Description                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| taxLineAmount               | String  | Represents tax for particular country or state if present.                                                                                                                                                    | Small, 58.0              | 58.0              |
| taxRate<br>Percentage       | String  | Tax rate percentage for the store.                                                                                                                                                                            | Small, 56.0              | 56.0              |
| taxTreatment<br>Description | String  | Description of the tax treatment for the store.                                                                                                                                                               | Small, 56.0              | 56.0              |
| taxTreatmentName            | String  | Name of the tax treatment for the store.                                                                                                                                                                      | Small, 56.0              | 56.0              |
| countryIsoCode              | String  | ISO code of the country. Must match one of the valid ISO codes defined within the org's State-Country picklist. If unspecified, the default value is the default country for the webstore.                    | Small, 57.0              | 57.0              |
| stateIsoCode                | String  | ISO code of the state. Must match one of the valid ISO codes defined within the org's State-Country picklist. If unspecified, the default value is the default country for the webstore.                      | Small, 57.0              | 57.0              |
| priority                    | Integer | Priority of the tax treatment. Indicates the priority order for tax calculation when there are both country and state level tax treatments present. Taxes are calculated in the decreasing order of priority. | Small, 57.0              | 57.0              |

## Calculate Taxes Line Item

Calculate tax line item.

| Property Name  | Type                                   | Description                                                           | Filter Group and Version | Available Version |
|----------------|----------------------------------------|-----------------------------------------------------------------------|--------------------------|-------------------|
| error          | <a href="#">Error Response Output</a>  | Error code and message.                                               | Big, 58.0                | 58.0              |
| lineId         | String                                 | Line ID for the product.                                              | Small, 58.0              | 58.0              |
| netUnitPrice   | String                                 | Net unit price for the product.                                       | Small, 58.0              | 58.0              |
| productId      | String                                 | ID of the product.                                                    | Small, 58.0              | 58.0              |
| success        | Boolean                                | Specifies whether the execution was successful (true) or not (false). | Small, 58.0              | 58.0              |
| taxAdjustments | <a href="#">Tax Adjustment[]</a>       | List of tax adjustments.                                              | Small, 58.0              | 58.0              |
| taxInfoList    | <a href="#">Calculate Taxes Info[]</a> | List of calculated tax output.                                        | Small, 58.0              | 58.0              |

| Property Name                  | Type   | Description                                     | Filter Group and Version | Available Version |
|--------------------------------|--------|-------------------------------------------------|--------------------------|-------------------|
| totalAdjustmentTaxAmount       | String | Total adjustment tax amount.                    | Small, 58.0              | 58.0              |
| totalLineTaxAmount             | String | Total line item tax excluding adjustment taxes. | Small, 58.0              | 58.0              |
| totalPriceTaxAmount            | String | Total tax amount including adjustment taxes.    | Small, 58.0              | 58.0              |
| totalTieredAdjustmentTaxAmount | String | Total tax amount for tiered adjustments.        | Small, 58.0              | 58.0              |

## Call Collaboration Capability

If a feed element has this capability, it has a recording comment.

| Property Name    | Type    | Description                                                | Filter Group and Version | Available Version |
|------------------|---------|------------------------------------------------------------|--------------------------|-------------------|
| commentEndTime   | Integer | End time of the comment on the media player, in seconds.   | Small, 51.0              | 51.0              |
| commentStartTime | Integer | Start time of the comment on the media player, in seconds. | Small, 51.0              | 51.0              |

## Cancel All Order Items Async Output

ID of the asynchronous background operation.

| Property Name       | Type   | Description                     | Filter Group and Version | Available Version |
|---------------------|--------|---------------------------------|--------------------------|-------------------|
| asyncOperationLogId | String | ID of the background operation. | Big, 63.0                | 63.0              |

## Candidate Answers Status

The status of candidate answers on a feed element.

| Property Name        | Type    | Description                                                       | Filter Group and Version | Available Version |
|----------------------|---------|-------------------------------------------------------------------|--------------------------|-------------------|
| hasCandidate Answers | Boolean | Indicates whether candidate answers are available for a question. | Small, 41.0              | 41.0              |

| Property Name                | Type    | Description                                            | Filter Group and Version | Available Version |
|------------------------------|---------|--------------------------------------------------------|--------------------------|-------------------|
| hasCandidateAnswersPublished | Boolean | Indicates whether any candidate answers are published. | Small, 41.0              | 41.0              |
| hasCandidateAnswersRated     | Boolean | Indicates whether any candidate answers are rated.     | Small, 41.0              | 41.0              |

## Canvas Capability

If a feed element has this capability, it renders a canvas app.

| Property Name   | Type                 | Description                                                                                 | Filter Group and Version | Available Version |
|-----------------|----------------------|---------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description     | String               | A description of the canvas app. The maximum size is 255 characters.                        | Small, 32.0              | 32.0              |
| developerName   | String               | The API name (developer name) of the connected app.                                         | Small, 32.0              | 32.0              |
| height          | String               | The height of the canvas app in pixels.                                                     | Small, 32.0              | 32.0              |
| icon            | <a href="#">Icon</a> | The icon for the canvas app.                                                                | Small, 32.0              | 32.0              |
| namespacePrefix | String               | A unique namespace prefix for the canvas app.                                               | Small, 32.0              | 32.0              |
| parameters      | String               | JSON parameters passed to the canvas app.                                                   | Small, 32.0              | 32.0              |
| thumbnailUrl    | String               | A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels. | Small, 32.0              | 32.0              |
| title           | String               | A title for the canvas link.                                                                | Small, 32.0              | 32.0              |

## Capacity Response Output

Response to a request related to a location's fulfillment capacity.

| Property Name   | Type                                  | Description                                                  | Filter Group and Version | Available Version |
|-----------------|---------------------------------------|--------------------------------------------------------------|--------------------------|-------------------|
| actionRequestId | String                                | Unique string that identifies the original capacity request. | Big, 55.0                | 55.0              |
| error           | <a href="#">Error Response Output</a> | Error returned by the request, if any.                       | Big, 55.0                | 55.0              |
| success         | Boolean                               | Indicates whether the request was successful.                | Big, 55.0                | 55.0              |

## Capture Gateway Response Output

Capture Gateway Response representation.

| Property Name                    | Type   | Description                      | Filter Group and Version | Available Version |
|----------------------------------|--------|----------------------------------|--------------------------|-------------------|
| gatewayAvsCode                   | String | Gateway AVS code.                | Big, 48.0                | 48.0              |
| gatewayDate                      | String | Gateway date.                    | Big, 48.0                | 48.0              |
| gatewayMessage                   | String | Message returned by the gateway. | Big, 48.0                | 48.0              |
| gatewayReference<br>Details      | String | Gateway reference details.       | Big, 48.0                | 48.0              |
| gatewayReference<br>Number       | String | Gateway reference number.        | Big, 48.0                | 48.0              |
| gatewayResult<br>Code            | String | Gateway result code.             | Big, 48.0                | 48.0              |
| gatewayResult<br>CodeDescription | String | Gateway result code description. | Big, 48.0                | 48.0              |
| salesforceResult<br>Code         | String | Salesforce result code.          | Big, 48.0                | 48.0              |

## Capture Output

Capture output representation.

| Property Name   | Type                                            | Description                                                                                                      | Filter Group and Version | Available Version |
|-----------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error           | <a href="#">Error Response Output</a>           | Error response representation for capture.                                                                       | Big, 48.0                | 48.0              |
| gatewayResponse | <a href="#">Capture Gateway Response Output</a> | Gateway log response containing details about gateway logs created during the processing of the capture request. | Big, 48.0                | 48.0              |

| Property Name      | Type                                 | Description                                                                                                                                   | Filter Group and Version | Available Version |
|--------------------|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| payment            | <a href="#">Payment Output</a>       | Payment response object for the capture request. Contains the information related to a payment object created during request processing.      | Big, 48.0                | 48.0              |
| paymentGatewayLogs | <a href="#">Gateway Log Output[]</a> | Payment gateway log response containing details of the PaymentGatewayLog entity records created during the processing of the capture request. | Big, 48.0                | 48.0              |
| paymentGroup       | <a href="#">Payment Group Output</a> | Contains details related to the payment group record.                                                                                         | Big, 48.0                | 48.0              |

## Card Payment Method Output

Details about the card payment method.

| Property Name       | Type    | Description                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accountId           | String  | Salesforce Payments account to which this payment method is linked.                                                                                                                        | Big, 48.0                | 56.0              |
| autoPay             | Boolean | Indicates whether a token for recurring payments is being requested ( <code>true</code> ) or not ( <code>false</code> ). The token lets the payment method be used for recurring payments. | Big, 48.0                | 56.0              |
| cardBin             | String  | Bank Identification Number (BIN). The BIN is the first 4-6 numbers on a payment card that identifies the card issuer.                                                                      | Big, 48.0                | 56.0              |
| cardCategory        | Enum    | Indicates a credit card or debit card. <ul style="list-style-type: none"> <li>• <code>CreditCard</code></li> <li>• <code>DebitCard</code></li> </ul>                                       | Big, 48.0                | 56.0              |
| cardHolderFirstName | String  | Card holder first name                                                                                                                                                                     | Big, 48.0                | 56.0              |

## Cart Adjustment Group

Price adjustment that applies to the cart. During checkout, this adjustment is prorated across all eligible items.

| Property Name           | Type    | Description                                                                                                                            | Filter Group and Version | Available Version |
|-------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustmentBaseReference | String  | Reference to coupon, if applicable.                                                                                                    | Small, 56.0              | 56.0              |
| adjustmentDescription   | String  | Description of the adjustment.                                                                                                         | Small, 56.0              | 56.0              |
| adjustmentType          | String  | Adjustment type. Possible values are: <ul style="list-style-type: none"> <li>AdjustmentAmount</li> <li>AdjustmentPercentage</li> </ul> | Small, 56.0              | 56.0              |
| adjustmentValue         | String  | Value of the adjustment.                                                                                                               | Small, 56.0              | 56.0              |
| baseAmount              | String  | Base amount of the adjustment.                                                                                                         | Small, 56.0              | 56.0              |
| cartId                  | String  | Cart ID associated with the adjustment.                                                                                                | Small, 56.0              | 56.0              |
| id                      | String  | ID of the adjustment.                                                                                                                  | Small, 56.0              | 56.0              |
| priceAdjustmentCauseId  | String  | ID of the promotion that triggered this adjustment.                                                                                    | Small, 56.0              | 56.0              |
| priority                | Integer | Sequence in which the adjustments are applied.                                                                                         | Small, 56.0              | 56.0              |

## Cart Compact Summary

A compact cart summary for an existing cart. Includes a subset of fields from the cart summary, including the total and unique product counts.

| Property Name      | Type    | Description                                                   | Filter Group and Version | Available Version |
|--------------------|---------|---------------------------------------------------------------|--------------------------|-------------------|
| cartId             | String  | ID of the Cart.                                               | Small, 64.0              | 64.0              |
| currencyIsoCode    | String  | Three-letter ISO 4217 currency code associated with the cart. | Small, 64.0              | 64.0              |
| totalProductCount  | String  | Total count of items in the cart.                             | Small, 64.0              | 64.0              |
| uniqueProductCount | Integer | Total count of unique items, or SKUs, in the cart.            | Small, 64.0              | 64.0              |

| billingFrequency        | String                               | Reserved for future use.                                                                                                                                                                                                                                                                                                                           | Small, 59.0              | 59.0              |
| cartData                | <a href="#">Cart Item Collection</a> | Collection of items in the cart.                                                                                                                                                                                                                                                                                                                   | Small, 64.0              | 64.0              |
| cartDeliveryGroupId     | String                               | ID of the cart delivery group.                                                                                                                                                                                                                                                                                                                     | Small, 60.0              | 60.0              |
| cartId                  | String                               | ID of the cart.                                                                                                                                                                                                                                                                                                                                    | Small, 49.0              | 49.0              |
| cartItemId              | String                               | ID of the item. If asynchronous cart processing is enabled, this value returns null for POST requests.                                                                                                                                                                                                                                             | Small, 49.0              | 49.0              |
| childProductCount       | Integer                              | Number of child products in the cart that are associated with the item. A cart item can have child products if the <code>productClass</code> of the item is <code>Bundle</code> . For nested bundles, which include a child product that's also a bundle, <code>childProductCount</code> includes all child products.                              | Small, 62.0              | 62.0              |
| currencyIsoCode         | String                               | Currency ISO code of the cart.                                                                                                                                                                                                                                                                                                                     | Small, 57.0              | 57.0              |
| customFields            | sObject[]                            | Array of sObjects and viewable custom fields for the sObjects. Standard fields are ignored. Currently, only the <code>CartItem</code> sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. | Small, 61.0              | 61.0              |
| firstPymtTotalAmount    | String                               | For subscription items, the first payment amount after adjustments and taxes. For non-subscription products, the value is the same as <code>totalAmount</code> .                                                                                                                                                                                   | Small, 60.0              | 60.0              |
| firstPymtTotalListPrice | String                               | For subscription items, the total list price of the first payment. For non-subscription items, the value is the same as <code>totalListPrice</code> .                                                                                                                                                                                              | Small, 63.0              | 63.0              |
| firstPymtTotalPrice     | String                               | For subscription items, the first term price, including adjustments but excluding taxes. For non-subscription items, the total price, including adjustments but excluding taxes.                                                                                                                                                                   | Small, 60.0              | 60.0              |
| firstPymtTotalTax       | String                               | For subscription items, the tax amount on the first payment. For non-subscription                                                                                                                                                                                                                                                                  | Small, 60.0              | 60.0              |

| Property Name                              | Type                                  | Description                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |

## Cart Item Basic

Represents limited details about a cart item.

| Property Name | Type   | Description                                      | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------|--------------------------|-------------------|
| cartItemId    | String | ID of the cart item.                             | Small, 60.0              | 60.0              |
| name          | String | Name of the cart item.                           | Small, 60.0              | 60.0              |
| productId     | String | ID of the product associated with the cart item. | Small, 60.0              | 60.0              |
| quantity      | String | Quantity of the cart item.                       | Small, 60.0              | 60.0              |
| type          | String | Type of cart item. Value is Product.             | Small, 60.0              | 60.0              |

## Cart Item Basic Result

Represents the result of a cart request.

| Property Name | Type   | Description                                       | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------|--------------------------|-------------------|
| cartItem      | String | Item in a cart.                                   | Small, 60.0              | 60.0              |
| message       | String | Error message when the request is not successful. | Small, 60.0              | 60.0              |
| status        | String | Status of the request.                            | Small, 60.0              | 60.0              |

## Cart Item Collection

A collection of items in a cart.

| Property Name         | Type                                      | Description                                       | Filter Group and Version | Available Version |
|-----------------------|-------------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| approaching Discounts | String[]                                  | List of approaching discounts for the cart items. | Small, 64.0              | 64.0              |
| cartCoupons           | <a href="#">Cart Coupon Collection</a>    | Collection of coupons in the cart.                | Small, 59.0              | 59.0              |
| cartItems             | <a href="#">Cart Item Result[]</a>        | Collection of cart item results.                  | Big, 49.0                | 49.0              |
| cartPromotions        | <a href="#">Cart Promotion Collection</a> | Collection of promotions in the cart.             | Small, 59.0              | 59.0              |
| cartSummary           | <a href="#">Cart Summary</a>              | Summary of the cart.                              | Small, 49.0              | 49.0              |

| Property Name      | Type    | Description                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPage        | Integer | Current page of cart items. The value matches the requested page number, unless the requested page number exceeds the total number of pages. In this scenario, the current page is the highest available page number. | Small, 60.0              | 60.0              |
| currentPageToken   | String  | Token identifying the current page.                                                                                                                                                                                   | Small, 49.0              | 49.0              |
| currentPageUrl     | String  | Connect REST API URL identifying the current page.                                                                                                                                                                    | Small, 49.0              | 49.0              |
| hasErrors          | Boolean | Specifies whether at least one of the results contains an error.                                                                                                                                                      | Small, 49.0              | 49.0              |
| nextPageToken      | String  | Token identifying the next page, or <code>null</code> if there isn't a next page.                                                                                                                                     | Small, 49.0              | 49.0              |
| nextPageUrl        | String  | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.                                                                                                                      | Small, 49.0              | 49.0              |
| previousPageToken  | String  | Token identifying the previous page, or <code>null</code> if there isn't a previous page.                                                                                                                             | Small, 49.0              | 49.0              |
| previousPageUrl    | String  | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.                                                                                                              | Small, 49.0              | 49.0              |
| totalItemCount     | Integer | Total number of unique products in the cart.                                                                                                                                                                          | Small, 60.0              | 60.0              |
| totalNumberOfPages | Integer | Total number of pages for the given page size.                                                                                                                                                                        | Small, 60.0              | 60.0              |

## Cart Item Output

Item in a cart.

| Property Name            | Type                                         | Description                                   | Filter Group and Version | Available Version |
|--------------------------|----------------------------------------------|-----------------------------------------------|--------------------------|-------------------|
| cartId                   | String                                       | ID of the cart associated with the cart item. | Small, 56.0              | 56.0              |
| cartItemPriceAdjustments | <a href="#">Cart Item Price Adjustment[]</a> | List of adjustments for the cart item.        | Small, 56.0              | 56.0              |
| id                       | String                                       | ID of the cart item.                          | Small, 56.0              | 56.0              |
| itemDescription          | String                                       | Description of the cart item.                 | Small, 56.0              | 56.0              |
| itemName                 | String                                       | Name of the cart item.                        | Small, 56.0              | 56.0              |
| listPrice                | String                                       | List price of the cart item.                  | Small, 56.0              | 56.0              |

| Property Name         | Type   | Description                                                                                                                  | Filter Group and Version | Available Version |
|-----------------------|--------|------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| product2Id            | String | Product ID of the cart item.                                                                                                 | Small, 56.0              | 56.0              |
| quantity              | String | Quantity of cart items.                                                                                                      | Small, 56.0              | 56.0              |
| salesPrice            | String | Sales price of the cart item. This is the price per quantity and the value used to compute the discount.                     | Small, 56.0              | 56.0              |
| sku                   | String | Stock keeping unit of the cart item.                                                                                         | Small, 56.0              | 56.0              |
| totalAdjustmentAmount | String | Total adjustment for the cart item.                                                                                          | Small, 56.0              | 56.0              |
| totalLineBaseAmount   | String | Total amount for the cart item, equal to sales price multiplied by quantity. This is the value used to compute the discount. | Small, 56.0              | 56.0              |
| totalListBaseAmount   | String | Total amount for the cart item, based on list price and quantity.                                                            | Small, 56.0              | 56.0              |
| totalNetAmount        | String | Total amount for the cart item including all adjustments.                                                                    | Small, 56.0              | 56.0              |

## Cart Item Price Adjustment

Price adjustment that applies to an item in the cart.

| Property Name            | Type   | Description                                                                                                                                                                                                | Filter Group and Version | Available Version |
|--------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustmentAmountScope    | String | Scope of the adjustment amount. Value is <code>Total</code> .                                                                                                                                              | Small, 56.0              | 56.0              |
| adjustmentBasisReference | String | Reference to coupon, if applicable.                                                                                                                                                                        | Small, 56.0              | 56.0              |
| adjustmentDescription    | String | Description of the adjustment.                                                                                                                                                                             | Small, 56.0              | 56.0              |
| adjustmentTargetType     | String | Target type of the promotion discount. Possible values are: <ul style="list-style-type: none"> <li>• <code>Cart</code></li> <li>• <code>Item</code></li> </ul>                                             | Small, 56.0              | 56.0              |
| adjustmentType           | String | Adjustment type of the promotion discount. Possible values are: <ul style="list-style-type: none"> <li>• <code>AdjustmentAmount</code></li> <li>• <code>AdjustmentPercentage</code></li> <li>• </li> </ul> | Small, 56.0              | 56.0              |
| adjustmentValue          | String | Value of the adjustment.                                                                                                                                                                                   | Small, 56.0              | 56.0              |

| Property Name         | Type    | Description                                         | Filter Group and Version | Available Version |
|-----------------------|---------|-----------------------------------------------------|--------------------------|-------------------|
| baseAmount            | String  | Base adjustment amount.                             | Small, 56.0              | 56.0              |
| cartAdjustmentGroupId | String  | Adjustment group ID.                                | Small, 56.0              | 56.0              |
| cartItemId            | String  | ID of the cart item.                                | Small, 56.0              | 56.0              |
| id                    | String  | ID of the cart item price adjustment.               | Small, 56.0              |                   |
| priceAdjustmentCaseId | String  | ID of the promotion that triggered this adjustment. | Small, 56.0              | 56.0              |
| priority              | Integer | Sequence in which adjustments are applied.          | Small, 56.0              | 56.0              |

## Cart Item Product

Product summary for a cart item.

| Property Name                   | Type                                   | Description                                                                                                                                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|---------------------------------|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| fields                          | Map<String, String>                    | Map of product fields and values.                                                                                                                                                                                                                                                                                                                                           | Small, 49.0              | 49.0              |
| isConfiguration Allowed         | Boolean                                | Indicates whether the product supports configuration ( <code>true</code> ) or not ( <code>false</code> ). For dynamic bundles, this field is always <code>true</code> , and for static bundles, it is <code>false</code> . When <code>true</code> , buyers can configure the bundle by selecting which child components to include or exclude before adding it to the cart. | Small, 65.0              | 65.0              |
| name                            | String                                 | Name of the product.                                                                                                                                                                                                                                                                                                                                                        | Small, 49.0              | 49.0              |
| productClass                    | String                                 | Class of product. Result of calculating a cart.

| Property Name | Type                         | Description                                                                                      | Filter Group and Version | Available Version |
|---------------|------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| data          | <a href="#">Cart Summary</a> | Summary of the cart after calculations.                                                          | Medium, 62.0             | 62.0              |
| message       | String                       | Message related to the request.                                                                  | Small, 62.0              | 62.0              |
| status        | String                       | Asynchronous processing status of the cart, if asynchronous processing is enabled for the store. | Small, 62.0              | 62.0              |

## Cart to Wishlist Result

Result of copying products from a cart to a wishlist.

| Property Name      | Type    | Description                                              | Filter Group and Version | Available Version |
|--------------------|---------|----------------------------------------------------------|--------------------------|-------------------|
| productsAddedCount | Integer | Number of products copied from the cart to the wishlist. | Small, 50.0              | 50.0              |
| wishlistId         | String  | ID of the wishlist that cart products were copied to.    | Small, 50.0              | 50.0              |

## Case Comment Capability

If a feed element has this capability, it has a case comment on the case feed.

| Property Name | Type                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| actorType     | String                                                      | Specifies the type of user who made the comment. <ul style="list-style-type: none"> <li>Customer—if a Chatter customer made the comment</li> <li>CustomerService—if a service representative made the comment</li> </ul>                                                                                                                                                                                                                                                                                                                                                                              | Small, 32.0              | 32.0              |
| createdBy     | <a href="#">User Detail</a> or <a href="#">User Summary</a> | Information about the user who created the comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 32.0              | 32.0              |
| createdDate   | String                                                      | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Small, 32.0              | 32.0              |
| eventType     | String                                                      | Specifies an event type for a comment in the case feed. <ul style="list-style-type: none"> <li>NewInternal—A case comment that has newly been marked Internal Only.</li> <li>NewPublished—A newly published case comment.</li> <li>NewPublishedByCustomer—A case comment by a customer that was newly published.</li> <li>PublishExisting—An existing case comment that was republished.</li> <li>PublishExistingByCustomer—An existing case comment by a customer that was republished.</li> <li>UnpublishExistingByCustomer—An existing case comment by a customer that was unpublished.</li> </ul> | Small, 32.0              | 32.0              |

| Property Name | Type    | Description                                                                                                                                                                                                                                                                                                              | Filter Group and Version | Available Version |

## Category Import

Information about a category import job.

| Property Name          | Type               | Description                                         | Filter Group and Version | Available Version |
|------------------------|--------------------|-----------------------------------------------------|--------------------------|-------------------|
| categoriesCreated      | Integer            | Number of product categories created by the import. | Small, 59.0              | 59.0              |
| categoriesUpdated      | Integer            | Number of product categories updated by the import. | Small, 59.0              | 59.0              |
| categoriesSlugsCreated | Integer            | Number of category URL slugs created by the import. | Medium, 59.0             | 59.0              |
| categoriesSlugsUpdated | Integer            | Number of category URL slugs updated by the import. | Medium, 59.0             | 59.0              |
| contentVersionId       | String             | ID of the .csv file that was imported.              | Small, 59.0              | 59.0              |
| endTime                | Long               | Unix epoch timestamp when the import finished.      | Small, 59.0              | 59.0              |
| errorMessages          | Map<String,String> | Map of .csv file record number to error message.    | Small, 59.0              | 59.0              |
| jobId                  | String             | ID of the import job.                               | Medium, 59.0             | 59.0              |
| numberError            | Integer            | Number of .csv records that failed to process.      | Small, 59.0              | 59.0              |

| Property Name    | Type                 | Description                                                  | Filter Group and Version | Available Version |
|------------------|----------------------|--------------------------------------------------------------|--------------------------|-------------------|
| numberSuccess    | Integer              | Number of .csv records that processed successfully.          | Small, 59.0              | 59.0              |
| numberToProcess  | Integer              | Number of .csv records in the data source.                   | Small, 59.0              | 59.0              |
| processTime      | Long                 | Unix epoch timestamp of how long the import process took.    | Small, 59.0              | 59.0              |
| productCatalogId | String               | ID of the product catalog imported to.                       | Small, 59.0              | 59.0              |
| startTime        | Long                 | Unix epoch timestamp when the import started.                | Small, 59.0              | 59.0              |
| startedBy        | String               | ID of the user who started the import.                       | Small, 59.0              | 59.0              |
| status           | String               | Status of the import.                                        | Small, 59.0              | 59.0              |
| warningMessages  | Map<String, String>> | Map of record number to associated list of warning messages. | Small, 59.0              | 59.0              |

## Change Item Output

The financial changes resulting from a change to one or more OrderItemSummaries. Most of the values represent the deltas of the values on the associated OrderSummary. The sign of each value is the opposite of the corresponding value on a change order record. For example, a discount is a positive value here and a negative value on a change order record.

| Property Name                  | Type   | Description                                         | Filter Group and Version | Available Version |
|--------------------------------|--------|-----------------------------------------------------|--------------------------|-------------------|
| grandTotalAmount               | Double | Change to the GrandTotalAmount field.               | Big, 48.0                | 48.0              |
| totalAdjDeliveryAmtWithTax     | Double | Change to the TotalAdjDeliveryAmtWithTax field.     | Big, 49.0                | 49.0              |
| totalAdjDistAmountWithTax      | Double | Change to the TotalAdjDistAmountWithTax field.      | Big, 49.0                | 49.0              |
| totalAdjProductAmtWithTax      | Double | Change to the TotalAdjProductAmtWithTax field.      | Big, 49.0                | 49.0              |
| totalAdjustedDeliveryAmount    | Double | Change to the TotalAdjustedDeliveryAmount field.    | Big, 48.0                | 48.0              |
| totalAdjustedDeliveryTaxAmount | Double | Change to the TotalAdjustedDeliveryTaxAmount field. | Big, 48.0                | 48.0              |
| totalAdjustedProductAmount     | Double | Change to the TotalAdjustedProductAmount field.     | Big, 48.0                | 48.0              |

| Property Name                       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |

| totalAdjustedProductTaxAmount       | Double | Change to the TotalAdjustedProductTaxAmount field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Big, 48.0                | 48.0              |
| totalAdjustmentDistributedAmount    | Double | Change to the TotalAdjustmentDistributedAmount field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Big, 48.0                | 48.0              |
| totalAdjustmentDistributedTaxAmount | Double | Change to the TotalAdjustmentDistributedTaxAmount field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Big, 48.0                | 48.0              |
| totalAmount                         | Double | Change to the TotalAmount field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Big, 48.0                | 48.0              |
| totalExcessFundsAmount              | Double | Amount of excess funds available on the OrderPaymentSummaries related to the OrderSummary. It is equal to the captured amount that is owed as a refund but is not associated with an invoice or credit memo. Excess funds normally occur when order items are canceled before fulfillment but after payment has been captured. This situation is not common in the US, where funds are normally authorized but not captured until the fulfillment process begins. This value includes all current excess funds related to the OrderSummary, not only the funds related to the current change. | Big, 48.0                | 48.0              |
| totalFeeAmount                      | Double | Total amount of the fees charged for the change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Big, 57.0                | 57.0              |
| totalFeeTaxAmount                   | Double | Total amount of tax on the fees charged for the change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Big, 57.0                | 57.0              |
| totalRefundableAmount               | Double | Total amount available to be refunded. It is the sum of the excess funds and any outstanding change order grand total amounts that apply to post-fulfillment changes. This value includes all current refundable amounts related to the OrderSummary, not only the amount related to the current change.                                                                                                                                                                                                                                                                                      | Big, 48.0                | 48.0              |
| totalRequiredFundsAmount            | Double | The required funds associated with added order items.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Big, 54.0                | 54.0              |

| Property Name  | Type   | Description                         | Filter Group and Version | Available Version |
|----------------|--------|-------------------------------------|--------------------------|-------------------|
| totalTaxAmount | Double | Change to the TotalTaxAmount field. | Big, 48.0                | 48.0              |

## Chatter Likes Capability

If a feed element has this capability, the context user can like it. Exposes information about existing likes.

| Property Name        | Type                              | Description                                                                                                               | Filter Group and Version | Available Version |
|----------------------|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isLikedByCurrentUser | Boolean                           | Indicates whether the feed element is liked by the context user ( <b>true</b> ) or not ( <b>false</b> ).                  | Small, 32.0              | 32.0              |
| page                 | <a href="#">Like Page</a>         | Likes information for this feed element.                                                                                  | Small, 32.0              | 32.0              |
| likesMessage         | <a href="#">Like Message Body</a> | A message body that describes who likes the feed element.                                                                 | Small, 32.0              | 32.0              |
| myLike               | <a href="#">Reference</a>         | If the context user has liked the feed element, this property is a reference to the specific like, <b>null</b> otherwise. | Medium, 32.0             | 32.0              |

| statusCode           | String                                    | HTTP response code for the request.                                                                                | Small, 57.0              | 57.0              |

## Checkout Address

Contact address for a Commerce store checkout.

| Property Name | Type    | Description                                                                                                                                          | Filter Group and Version | Available Version |
|---------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| city          | String  | City of the address.                                                                                                                                 | Small, 55.0              | 55.0              |
| country       | String  | ISO code of the address country. Must match one of the valid ISO codes defined within the org's State-Country picklist.                              | Small, 55.0              | 55.0              |
| firstName     | String  | First name of the contact.                                                                                                                           | Small, 57.0              | 57.0              |
| id            | String  | ID of the address.                                                                                                                                   | Small, 55.0              | 55.0              |
| isDefault     | Boolean | Indicates if the address is the contact's default address ( <code>true</code> ) or not ( <code>false</code> ). Default value is <code>false</code> . | Small, 55.0              | 55.0              |
| lastName      | String  | Last name of the contact.                                                                                                                            | Small, 57.0              | 57.0              |
| name          | String  | Name of the contact.                                                                                                                                 | Small, 55.0              | 55.0              |
| postalCode    | String  | ZIP code of the address.                                                                                                                             | Small, 55.0              | 55.0              |

| Property Name     | Type   | Description                                                                                                            | Filter Group and Version | Available Version |
|-------------------|--------|------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| region            | String | ISO code of the address region. Must match one of the valid ISO codes defined within the org's State-Country picklist. | Small, 55.0              | 55.0              |
| shipToPhoneNumber | String | Phone number of the contact.                                                                                           | Small, 63.0              | 63.0              |
| street            | String | Street of the address.                                                                                                 | Small, 55.0              | 55.0              |

## Checkout Coupon

Coupon associated with a checkout.

| Property Name | Type                                          | Description                                                                   | Filter Group and Version | Available Version |
|---------------|-----------------------------------------------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| cartCouponIds | String[]                                      | List of IDs of checkout coupon codes. Only a single coupon code is supported. | Small, 61.0              | 61.0              |
| errors        | <a href="#">Checkout Error</a> on page 1491[] | List of errors during a Commerce store checkout, if any.                      | Small, 61.0              | 61.0              |

## Checkout Error

Error during a Commerce store checkout.

| Property Name     | Type                                 | Description                                                             | Filter Group and Version | Available Version |
|-------------------|--------------------------------------|-------------------------------------------------------------------------|--------------------------|-------------------|
| detail            | String                               | Detailed information about the error.                                   | Small, 55.0              | 55.0              |
| instance          | String                               | A URI reference that identifies the specific occurrence of the problem. | Small, 55.0              | 55.0              |
| invalidParameters | <a href="#">Invalid Parameter</a> [] | List of invalid parameters, if any.                                     | Big, 55.0                | 55.0              |
| title             | String                               | Brief summary of the error.                                             | Small, 55.0              | 55.0              |
| type              | String                               | Type of error.                                                          | Small, 55.0              | 55.0              |

## Checkout Order

Order for a Commerce store checkout.

**JSON example**

```
{
  "orderReferenceNumber": "ER37G-VYS2M-6GPHH-HG4DE"
}
```

**JSON example (with errors)**

```
{
  "errors": [
    {
      "type": "/commerce/errors/shipping-failure",
      "title": "We are unable to place the order. Please correct the error and try again.",
      "detail": "There are no configured Order Delivery Methods."
    }
  ],
  "orderReferenceNumber": "ER37G-VYS2M-6GPHH-HG4DE"
}
```

| Property Name        | Type                             | Description                     | Filter Group and Version | Available Version |
|----------------------|----------------------------------|---------------------------------|--------------------------|-------------------|
| errors               | <a href="#">Checkout Error[]</a> | List of errors, if any.         | Small, 55.0              | 55.0              |
| orderReferenceNumber | String                           | Reference number for the order. | Small, 55.0              | 55.0              |

## Checkout Order Action

Order action for a Commerce store checkout.

| Property Name        | Type   | Description                                                            | Filter Group and Version | Available Version |
|----------------------|--------|------------------------------------------------------------------------|--------------------------|-------------------|
| action               | String | Name of the action.                                                    | Small, 64.0              | 64.0              |
| orderReferenceNumber | String | Unique reference number generated after successfully placing an order. | Small, 64.0              | 64.0              |

## Checkout Order Action Collection

Output representation of the Commerce store checkout request.

| Property Name | Type                                    | Description                                                      | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|------------------------------------------------------------------|--------------------------|-------------------|
| actions       | <a href="#">Checkout Order Action[]</a> | Details of the action and the associated order reference number. | Small, 64.0              | 64.0              |

| Property Name | Type                             | Description             | Filter Group and Version | Available Version |
|---------------|----------------------------------|-------------------------|--------------------------|-------------------|
| errors        | <a href="#">Checkout Error[]</a> | List of errors, if any. | Small, 64.0              | 64.0              |

## Checkout Payment

Payment response for a Commerce store checkout.

| Property Name            | Type                             | Description                                                                                                                                                                                                                                                                                                              | Filter Group and Version | Available Version |
|--------------------------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors                   | <a href="#">Checkout Error[]</a> | A list of errors, if any.                                                                                                                                                                                                                                                                                                | Small, 55.0              | 55.0              |
| paymentData              | String                           | Additional data from a payment request for custom checkout implementations. Supports up to four key-value pairs. <code>paymentData</code> is only applicable to requests with a <code>requestType</code> of <code>Auth</code> or <code>PostAuth</code> . Simple purchase orders don't support <code>paymentData</code> . | Small, 55.0              | 55.0              |
| salesforce<br>ResultCode | String                           | Salesforce payment result code. Valid values are: <ul style="list-style-type: none"> <li>• <code>Decline</code>—Payment was declined</li> <li>• <code>Success</code>—Payment succeeded.</li> <li>• <code>SystemError</code>—System error.</li> <li>• <code>ValidationError</code>—Validation error.</li> </ul>           | Small, 55.0              | 55.0              |

## Checkout Settings

Settings for Salesforce Checkout.

| Property Name                | Type                                  | Description                                                                                           | Filter Group and Version | Available Version |
|------------------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isManaged<br>CheckoutEnabled | Boolean                               | Indicates whether Salesforce Checkout is enabled ( <code>true</code> ) or not ( <code>false</code> ). | Small, 61.0              | 61.0              |
| payment<br>Configuration     | <a href="#">Payment Configuration</a> | Payment configuration for Salesforce Checkout.                                                        | Small, 61.0              | 61.0              |

| Property Name          | Type    | Description                                                                                                                          | Filter Group and Version | Available Version |
|------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| shippingMethodsEnabled | Boolean | Indicates whether the shipping method calculation is enabled ( <code>true</code> ) or not ( <code>false</code> ) for your web store. | Small, 62.0              | 62.0              |

## Chunk

Content chunk for the search result.

| Property Name | Type   | Description                                | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------|--------------------------|-------------------|
| text          | String | Text extract relevant to the search query. | Small, 63.0              | 63.0              |

## Class Taxes

A tax class.

| Property Name  | Type                       | Description                                    | Filter Group and Version | Available Version |
|----------------|----------------------------|------------------------------------------------|--------------------------|-------------------|
| productsIds    | String[]                   | List of product IDs that belong to this class. | Small, 58.0              | 58.0              |
| storeTaxesInfo | <a href="#">Taxes Info</a> | Details about the calculated tax output.       | Small, 58.0              | 58.0              |
| totalAmount    | String                     | Total amount for this tax class.               | Small, 58.0              | 58.0              |
| totalTaxAmount | String                     | Total tax amount for this tax class.           | Small, 58.0              | 58.0              |

## Clean Record Result

Results of updating a record with an active data integration rule.

| Property Name | Type   | Description                                                    | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------|--------------------------|-------------------|
| cleanStatus   | String | Status of the data integration rule used to update the record. | Small, 37.0              | 37.0              |
| datasourceKey | String | Key for the external data source used to update the record.    | Small, 37.0              | 37.0              |

|--------------------|---------------------------------------------------|---------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| cleanMetricRecords | <a href="#">Clean Rule Data Service Metrics[]</a> | List of metrics for data services associated with all active data integration rules in an organization. | Small, 37.0              | 37.0              |
| metricDate         | String                                            | Date when metrics were generated in ISO 8601 format.                                                    | Small, 37.0              | 37.0              |
| metricUri          | String                                            | URL for the Clean Metric API.                                                                           | Medium, 37.0             | 37.0              |

## Clean Rule Status

Status of an active data integration rule for a record.

| Property Name   | Type    | Description                                                                                                                             | Filter Group and Version | Available Version |
|-----------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| dataServiceName | String  | Data service associated with the data integration rule.                                                                                 | Small, 37.0              | 37.0              |
| lastCleanDate   | String  | Date when the record was last updated with the data integration rule in ISO 8601 format.                                                | Small, 37.0              | 37.0              |
| needCompare     | Boolean | Indicates whether there are field value differences between the Salesforce record and the matching record in the data service.          | Small, 37.0              | 37.0              |
| ruleId          | String  | ID of the data integration rule.                                                                                                        | Small, 37.0              | 37.0              |
| ruleName        | String  | Name of the data integration rule.                                                                                                      | Small, 37.0              | 37.0              |
| status          | String  | Status of the data integration rule. For more information and available values, see “Statuses for Data Integration” in Salesforce Help. | Small, 37.0              | 37.0              |
| statusId        | String  | ID of the status for the data integration rule.                                                                                         | Small, 37.0              | 37.0              |

## Client-Side Payment Configuration

Client-side payment configuration for a Commerce store.

| Property Name | Type                | Description                                 | Filter Group and Version | Available Version |
|---------------|---------------------|---------------------------------------------|--------------------------|-------------------|
| componentName | String              | Name of the client-side payment component.  | Small, 54.0              | 54.0              |
| config        | Map<String, String> | Map of configuration attributes and values. | Small, 54.0              | 54.0              |
| error         | String              | Error message, if any.                      | Small, 54.0              | 54.0              |

## Close Capability

If a feed element has this capability, users with permission can close it.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

| Property Name                | Type    | Description                                                                                                                              | Filter Group and Version | Available Version |
|------------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| canContextUserUpdateIsClosed | Boolean | Specifies whether the context user has permission to set the feed element to closed ( <code>true</code> ) or not ( <code>false</code> ). | Small, 43.0              | 43.0              |
| isClosed                     | Boolean | Specifies whether the feed element is closed ( <code>true</code> ) or not ( <code>false</code> ).                                        | Small, 43.0              | 43.0              |

## Commerce Action Result

Result of executing a commerce action.

| Property Name | Type    | Description                                                                                          | Filter Group and Version | Available Version |
|---------------|---------|------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isSuccess     | Boolean | Specifies whether the action is a success ( <a href="#">true</a> ) or not ( <a href="#">false</a> ). | Small, 53.0              | 53.0              |
| message       | String  | Action result message.                                                                               | Small, 53.0              | 53.0              |

## Commerce Address

Address for a Commerce account.

| Property Name | Type   | Description                                             | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------|--------------------------|-------------------|
| addressId     | String | ID of the address.                                      | Small, 54.0              | 54.0              |
| addressType   | String | Type of address (for example, "Shipping" or "Billing"). | Small, 54.0              | 54.0              |

| Property Name | Type                                       | Description                                                                                                                                                                   | Filter Group and Version | Available Version |
|---------------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| city          | String                                     | The address city.                                                                                                                                                             | Small, 54.0              | 54.0              |
| companyName   | String                                     | The address company name.                                                                                                                                                     | Small, 57.0              | 57.0              |
| country       | String                                     | The address country.                                                                                                                                                          | Small, 54.0              | 54.0              |
| countryCode   | String                                     | Two-character country code.                                                                                                                                                   | Small, 54.0              | 54.0–58.0         |
| fields        | Map<String, <a href="#">Record Field</a> > | Custom fields for the address.                                                                                                                                                | Small, 54.0              | 54.0              |
| firstName     | String                                     | The address first name.                                                                                                                                                       | Small, 57.0              | 57.0              |
| isDefault     | Boolean                                    | Indicates whether a contact's address is the preferred method of communication ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Small, 54.0              | 54.0              |
| lastName      | String                                     | The address last name.                                                                                                                                                        | Small, 57.0              | 57.0              |
| middleName    | String                                     | The address middle name.                                                                                                                                                      | Small, 57.0              | 57.0              |
| name          | String                                     | Name of the contact.                                                                                                                                                          | Small, 54.0              | 54.0              |
| phoneNumber   | String                                     | The address phone number.                                                                                                                                                     | Small, 57.0              | 57.0              |
| postalCode    | String                                     | Zip code or postal code for the address.                                                                                                                                      | Small, 54.0              | 54.0              |
| region        | String                                     | The address state.                                                                                                                                                            | Small, 54.0              | 54.0              |
| regionCode    | String                                     | The address state code.                                                                                                                                                       | Small, 54.0              | 54.0–58.0         |
| street        | String                                     | The address street.                                                                                                                                                           | Small, 54.0              | 54.0              |

| url           | String | URL to the job resource.                                                                                                                                                                                | Small, 52.0              | 52.0              |

## Commerce Einstein Configuration

Commerce Einstein configuration.

| Property Name           | Type    | Description                                                                                                                                                                   | Filter Group and Version | Available Version |
|-------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| activityTrackingEnabled | Boolean | Specifies whether activity tracking is enabled for the site ( <code>true</code> ) or not ( <code>false</code> ).                                                              | Small, 52.0              | 52.0              |
| catalogExists           | Boolean | Specifies if the storefront catalog is deployed and finished uploading successfully ( <code>true</code> ) or not ( <code>false</code> ).                                      | Small, 54.0              | 54.0              |
| deploymentEnabled       | Boolean | Specifies if the Deploy Commerce Einstein toggle is enabled on the Commerce Einstein tab in the Administration Workspace ( <code>true</code> ) or not ( <code>false</code> ). | Small, 55.0              | 55.0              |
| host                    | String  | Host name for Commerce Einstein APIs.                                                                                                                                         | Small, 52.0              | 52.0              |
| isDeployed              | Boolean | Specifies if Commerce Einstein is deployed successfully ( <code>true</code> ) or not ( <code>false</code> ).                                                                  | Small, 54.0              | 54.0              |
| siteId                  | String  | Site ID for Commerce Einstein.                                                                                                                                                | Small, 52.0              | 52.0              |
| tenant                  | String  | Tenant identifier for Commerce Einstein.                                                                                                                                      | Small, 52.0              | 52.0              |

## Commerce Einstein Recommendation Results

Commerce Einstein recommendations.

| Property Name | Type                                       | Description                 | Filter Group and Version | Available Version |
|---------------|--------------------------------------------|-----------------------------|--------------------------|-------------------|
| productPage   | <a href="#">Product Summary Collection</a> | Products being recommended. | Small, 55.0              | 55.0              |

| Property Name | Type   | Description                                                                     | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------|--------------------------|-------------------|
| uuid          | String | Recommendations identifier. This value is passed back to the viewReco activity. | Small, 55.0              | 55.0              |

## Commerce Einstein Status

Commerce Einstein deployment status.

| Property Name | Type   | Description                                                                                                                                                                                                                                                         | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| statusCode    | String | Status code for the deployment. Values are: <ul style="list-style-type: none"> <li>• <code>DataError</code></li> <li>• <code>InProgress</code></li> <li>• <code>InternalError</code></li> <li>• <code>NotDeployed</code></li> <li>• <code>Success</code></li> </ul> | Small, 52.0              | 52.0              |
| url           | String | URL to the status resource.                                                                                                                                                                                                                                         | Small, 52.0              | 52.0              |

## Commerce Extension

A Commerce extension.

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| domain        | String | Service domain to which the extension belongs. By convention, this is the third portion of the extension point name (epn). For example, if the epn is <code>Commerce_Domain_Cart_Calculate</code> , the service domain is <code>Cart</code> ; and if the epn is <code>Commerce_Endpoint_Account_Address</code> , the service domain is <code>Account</code> . | Big, 58.0                | 58.0              |
| epn           | String | Extension point name (unique identifier for an extension). For valid values, see the <a href="#">RegisteredExternalService</a> object's <code>ExtensionPointName</code> field.                                                                                                                                                                                | Big, 58.0                | 58.0              |
| name          | String | Name of the extension. By convention, this is the fourth portion of the extension point name (epn). For example, if the epn is                                                                                                                                                                                                                                | Big, 58.0                | 58.0              |

| Property Name | Type   | Description                                                                                                                                                                                          | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |        | Commerce_Domain_Cart_Calculate, the name is Calculate.                                                                                                                                               |                          |                   |
| product       | String | Extension family name. By convention, this is the first portion of the extension point name (epn). For example, if the epn is Commerce_Domain_Cart_Calculate, the extension family name is Commerce. | Big, 58.0                | 58.0              |
| type          | String | Type of extension. Valid values are: <ul style="list-style-type: none"> <li>Domain</li> <li>Endpoint</li> </ul>                                                                                      | Big, 58.0                | 58.0              |

## Commerce Extension Collection

Collection of Commerce extensions.

| Property Name | Type                                 | Description                 | Filter Group and Version | Available Version |
|---------------|--------------------------------------|-----------------------------|--------------------------|-------------------|
| count         | Integer                              | Total number of extensions. | Big, 58.0                | 58.0              |
| items         | <a href="#">Commerce Extension[]</a> | Collection of extensions.   | Big, 58.0                | 58.0              |

## Commerce Extension Mapping

Mapping of a Commerce extension provider to a webstore.

| Property Name | Type   | Description                                                                                                                                                  | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| epn           | String | Extension point name (unique identifier for an extension). For valid values, see the ExtensionPointName field of <a href="#">RegisteredExternalService</a> . | Big, 58.0                | 58.0              |
| id            | String | Mapping ID.                                                                                                                                                  | Big, 58.0                | 58.0              |
| providerName  | String | Unique name of the extension provider.                                                                                                                       | Big, 58.0                | 58.0              |
| webstoreId    | String | ID of the webstore.                                                                                                                                          | Big, 58.0                | 58.0              |

## Commerce Extension Mappings Collection

Collection of Commerce extension mappings.

| Property Name | Type                                       | Description                       | Filter Group and Version | Available Version |
|---------------|--------------------------------------------|-----------------------------------|--------------------------|-------------------|
| count         | Integer                                    | Total number of extensions.       | Big, 58.0                | 58.0              |
| items         | <a href="#">Commerce Extension Mapping</a> | Collection of extension mappings. | Big, 58.0                | 58.0              |

## Commerce Extension Provider

A Commerce extension provider.

| Property Name     | Type                                                   | Description                                                                                                                                                                    | Filter Group and Version | Available Version |
|-------------------|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| apexClass         | <a href="#">Commerce Extension Provider Apex Class</a> | Commerce extension provider Apex class. This class extends an Apex base class and provides a custom implementation for an extension point.                                     | Big, 58.0                | 58.0              |
| configUrl         | String                                                 | Reserved for future use.                                                                                                                                                       | Big, 59.0                | 59.0              |
| description       | String                                                 | Description of the extension provider.                                                                                                                                         | Big, 59.0                | 59.0              |
| effectiveMappings | <a href="#">Commerce Webstore Extension Mapping</a>    | Collection of mappings associated with the extension provider.                                                                                                                 | Big, 58.0                | 58.0              |
| epn               | String                                                 | Extension point name (unique identifier for an extension). For valid values, see the <a href="#">RegisteredExternalService</a> object's <code>ExtensionPointName</code> field. | Big, 58.0                | 58.0              |
| iconUri           | String                                                 | Reserved for future use.                                                                                                                                                       | Big, 59.0                | 59.0              |
| id                | String                                                 | ID of the extension provider.                                                                                                                                                  | Big, 59.0                | 59.0              |
| isApplication     | Boolean                                                | Indicates if the extension provider is contained within a managed package. ( <code>true</code> ) or not ( <code>false</code> ).                                                | Big, 59.0                | 59.0              |
| name              | String                                                 | Unique name of the extension provider.                                                                                                                                         | Big, 58.0                | 58.0              |
| type              | String                                                 | Type of extension (for example, <code>apexClass</code> ).                                                                                                                      | Big, 58.0                | 58.0              |

## Commerce Extension Provider Apex Class

Apex class for a Commerce extension provider.

| Property Name | Type   | Description                                                        | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------|--------------------------|-------------------|
| classId       | String | ID of an Apex class extending a base class for an extension point. | Big, 58.0                | 58.0              |

| Property Name | Type   | Description                                                            | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------|--------------------------|-------------------|
| className     | String | Name of the Apex extension provider class, without the file extension. | Big, 58.0                | 58.0              |
| namespace     | String | Unique namespace of the company or party providing the extension.      | Big, 58.0                | 58.0              |
| version       | String | Apex class version.                                                    | Big, 58.0                | 58.0              |

## Commerce Extension Provider Collection

Collection of Commerce extension providers.

| Property Name | Type                                           | Description                  | Filter Group and Version | Available Version |
|---------------|------------------------------------------------|------------------------------|--------------------------|-------------------|
| count         | Integer                                        | Total number of extensions.  | Big, 58.0                | 58.0              |
| items         | <a href="#">Commerce Extension Provider</a> [] | List of extension providers. | Big, 58.0                | 58.0              |

## Commerce Product Search Results

Product search results.

| Property Name | Type                                                | Description                               | Filter Group and Version | Available Version |
|---------------|-----------------------------------------------------|-------------------------------------------|--------------------------|-------------------|
| categories    | <a href="#">Search Category</a>                     | Categories from the search results.       | Small, 55.0              | 55.0              |
| correlationId | String                                              | Reserved for future use.                  | Small, 55.0              | 55.0              |
| facets        | <a href="#">Distinct Value Search Facet</a> []      | Facets from the search results.           | Medium, 55.0             | 55.0              |
| locale        | String                                              | Locale of the search results.             | Small, 55.0              | 55.0              |
| productsPage  | <a href="#">Commerce Product Summary Collection</a> | Page of products from the search results. | Medium, 55.0             | 55.0              |

## Commerce Product Selling Model Information

Product selling model information.

| Property Name         | Type    | Description                                                                                         | Filter Group and Version | Available Version |
|-----------------------|---------|-----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isSubscriptionProduct | Boolean | Indicates whether it is a subscription product ( <code>true</code> ) or not ( <code>false</code> ). | Small, 59.0              | 59.0              |

## Commerce Product Summary

Summary representation of a product in product search results.

| Property Name                  | Type                                                       | Description                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|--------------------------------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| defaultImage                   | <a href="#">Product Media</a>                              | Default image of the product.                                                                                                                                                                                                              | Small, 55.0              | 55.0              |

| productClass                   | String                                                     | Class of product. Values are: <ul style="list-style-type: none"> <li>• <code>Bundle</code></li> <li>• <code>Set</code></li> <li>• <code>Simple</code></li> <li>• <code>Variation</code></li> <li>• <code>VariationParent</code></li> </ul> | Small, 55.0              | 55.0              |
| productSellingModelInformation | <a href="#">Commerce Product Selling Model Information</a> | Product selling model information for the product.                                                                                                                                                                                         | Small, 59.0              | 59.0              |
| productVariationInfo           | <a href="#">Product Variation Info</a>                     | Product variation attributes, metadata, and mappings of attribute combinations to variation product IDs. This field isn't available in stores with displayable fields enabled.                                                             | Small, 63.0              | 63.0              |
| purchaseQuantityRule           | <a href="#">Purchase Quantity Rule</a>                     | If one exists, purchase quantity rule for the product.                                                                                                                                                                                     | Small, 58.0              | 58.0              |
| urlName                        | String                                                     | SEO-friendly URL name for the product.                                                                                                                                                                                                     | Small, 59.0              | 59.0              |
| variationAttributeSet          | <a href="#">Product Attribute Set Summary</a>              | Variation attribute set that's associated with the product.                                                                                                                                                                                | Small, 55.0              | 55.0              |

## Commerce Product Summary Collection

Collection of product summary representations in product search results.

| Property Name | Type                                        | Description                                                     | Filter Group and Version | Available Version |
|---------------|---------------------------------------------|-----------------------------------------------------------------|--------------------------|-------------------|
| pageSize      | Integer                                     | Number of products per page in search result                    | Small, 55.0              | 55.0              |
| products      | <a href="#">Commerce Product Summary</a> [] | Collection of product summaries.                                | Medium, 55.0             | 55.0              |
| total         | Long                                        | Total number of products in the search result across all pages. | Small, 55.0              | 55.0              |

## Commerce Search Index

Index information.

| Property Name           | Type    | Description                                                                                                                      | Filter Group and Version | Available Version |
|-------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| completionDate          | String  | Completion date and time of the index.                                                                                           | Small, 49.0              | 49.0              |
| createdDate             | String  | Creation date of the index.                                                                                                      | Small, 49.0              | 49.0              |
| creationType            | String  | Creation type of the index. Values are: <ul style="list-style-type: none"> <li>Manual</li> <li>Scheduled</li> </ul>              | Small, 49.0              | 49.0              |
| id                      | String  | ID of the index.                                                                                                                 | Small, 49.0              | 49.0              |
| indexBuildType          | String  | Build type of the index. Values are: <ul style="list-style-type: none"> <li>Full</li> <li>Incremental</li> </ul>                 | Small, 57.0              | 57.0              |
| indexStatus             | String  | Status of the index. Values are: <ul style="list-style-type: none"> <li>Completed</li> <li>Failed</li> <li>InProgress</li> </ul> | Small, 49.0              | 49.0              |
| indexUsage              | String  | Usage of the index. Values are: <ul style="list-style-type: none"> <li>Live</li> <li>OutOfUse</li> </ul>                         | Small, 49.0              | 49.0              |
| isIncrementable         | Boolean | Specifies whether the index allows incremental indexing ( <code>true</code> ) or not ( <code>false</code> ).                     | Small, 57.0              | 57.0              |
| lastCatalogSnapshotTime | String  | Catalog snapshot time of the index.                                                                                              | Small, 57.0              | 57.0              |

| Property Name | Type   | Description                            | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------|--------------------------|-------------------|
| message       | String | Detailed message for the index status. | Small, 49.0              | 49.0              |

| createdById             | String  | ID of the user who initiated the index build.                                                                                | Small, 57.0              | 57.0              |
| index<br>BuildStatus    | String  | Status of the index. Values are: <ul style="list-style-type: none"><li>Completed</li><li>Failed</li><li>InProgress</li></ul> | Small, 57.0              | 57.0              |
| indexBuildType          | String  | Build type of the index. Values are: <ul style="list-style-type: none"><li>Full</li><li>Incremental</li></ul>                | Small, 57.0              | 57.0              |
| indexId                 | String  | ID of the index build.                                                                                                       | Small, 57.0              | 57.0              |
| message                 | String  | Detailed message for the index build status.                                                                                 | Small, 57.0              | 57.0              |
| number<br>OfProducts    | Integer | Number of new or changed products in the index build.                                                                        | Small, 57.0              | 57.0              |

## Commerce Search Index Log Collection

Collection of search index logs for a webstore.

| Property Name | Type                                      | Description                                                                            | Filter Group and Version | Available Version |
|---------------|-------------------------------------------|----------------------------------------------------------------------------------------|--------------------------|-------------------|
| indexLogs     | <a href="#">Commerce Search Index Log</a> | List of up to 100 index logs sorted by most recent catalog snapshot time of the index. | Small, 57.0              | 57.0              |

## Commerce Subscription Action

Output representation of the most recent action performed on the subscription.

| Property Name     | Type                           | Description                                                                                       | Filter Group and Version | Available Version |
|-------------------|--------------------------------|---------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| details           | <a href="#">Action Details</a> | Details of the action performed on the subscription.                                              | Small, 65.0              | 65.0              |
| effectiveDateTime | String                         | Date and time when the subscription action takes effect. For example 2025-09-29T11:41:45.040Z.    | Small, 65.0              | 65.0              |
| performedDateTime | String                         | Date and time when the subscription action was performed. For example 2025-08-29T11:41:45.040Z.   | Small, 65.0              | 65.0              |
| type              | String                         | Specifies the type of action performed on the subscription. For example, Amend, Cancel, or Renew. | Small, 65.0              | 65.0              |

## Commerce Subscription Action Details

Details of the subscription action.

| Property Name | Type                         | Description                                                                                                                        | Filter Group and Version | Available Version |
|---------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| changes       | <a href="#">Field Change</a> | Details the changes made during a subscription action, including the affected fields along with their previous and updated values. | Small, 65.0              | 65.0              |
| errors        | Error Response               | Reserved for future use.                                                                                                           | Small, 65.0              | 65.0              |
| status        | String                       | Status of the most recent subscription action. For example, Success or Failed.                                                     | Small, 65.0              | 65.0              |

## Field Changes

Details of field-level changes made during the most recent subscription action.

| Property Name | Type   | Description                                                                                                                                 | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| field         | String | Name of the field. Possible values are: <ul style="list-style-type: none"> <li>quantity</li> <li>price</li> <li>subscriptionTerm</li> </ul> | Small, 65.0              | 65.0              |
| previousValue | String | Previous value of the field. For example, 1, 1000, or Monthly.                                                                              | Small, 65.0              | 65.0              |
| newValue      | String | New value of the field. For example, 3, 900, or Yearly.                                                                                     | Small, 65.0              | 65.0              |

## Commerce Subscription Billing Summary

Representation for the Commerce subscription billing summary.

| Property Name        | Type    | Description                                                                                                                                     | Filter Group and Version | Available Version |
|----------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| billingMethod        | String  | Billing method associated with billing schedules.                                                                                               | Small, 63.0              | 63.0              |
| billingPeriod Amount | String  | Billing period amount associated with billing schedules.                                                                                        | Small, 63.0              | 63.0              |
| billingTerm          | Integer | Billing term associated with billing schedules. For example, use the value "1" for a one-year or one-month billing term.                        | Small, 63.0              | 63.0              |
| billingTerm Unit     | String  | Billing term unit associated with billing schedules. Possible values are: <ul style="list-style-type: none"> <li>Year</li> <li>Month</li> </ul> | Small, 63.0              | 63.0              |
| billingType          | String  | Billing type associated with billing schedules. Possible values are: <ul style="list-style-type: none"> <li>Advance</li> <li>Arrear</li> </ul>  | Small, 63.0              | 63.0              |
| cancellationDate     | String  | Cancellation date associated with billing schedules.                                                                                            | Small, 63.0              | 63.0              |
| currencyIso Code     | String  | Currency ISO Code associated with billing schedules.                                                                                            | Small, 63.0              | 63.0              |

| Property Name      | Type                                 | Description                                             | Filter Group and Version | Available Version |
|--------------------|--------------------------------------|---------------------------------------------------------|--------------------------|-------------------|
| nextBillingDate    | String                               | Next billing date associated with billing schedules.    | Small, 63.0              | 63.0              |
| savedPaymentMethod | <a href="#">Saved Payment Method</a> | Saved payment method associated with billing schedules. | Small, 63.0              | 63.0              |

## Commerce Subscription Cancel Output

Representation for the Commerce subscription cancellation request.

### JSON example

```
{
  "orderId": "8015i000000obwHAAQ"
}
```

| Property Name | Type   | Description                                                          | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------|--------------------------|-------------------|
| orderId       | String | Order ID created for the Commerce subscription cancellation request. | Small, 63.0              | 63.0              |

## Commerce Subscription Amend

Representation for the Commerce subscription amend request.

### JSON example

```
{
  "orderId": "8015i000000obwHAAQ"
}
```

| Property Name | Type   | Description                                                   | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------|--------------------------|-------------------|
| orderId       | String | Order ID created for the Commerce subscription amend request. | Small, 65.0              | 65.0              |

## Commerce Subscription Renew

Representation for the Commerce subscription renew request.

JSON example

```
{
  "orderId": "8015i000000obwHAAQ"
}
```

| Property Name | Type   | Description                                                   | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------|--------------------------|-------------------|
| orderId       | String | Order ID created for the Commerce subscription renew request. | Small, 65.0              | 65.0              |

## Community Create

Result of creating an Experience Cloud site.

| Property Name | Type   | Description                                                                                                                      | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| jobId         | String | ID of the <a href="#">BackgroundOperation</a> record for the create job. Query this ID to track the creation status of the site. | Small, 58.0              | 58.0              |
| message       | String | Message saying that create is in progress.                                                                                       | Small, 46.0              | 46.0              |
| name          | String | Name of the site.                                                                                                                | Small, 46.0              | 46.0              |

## Community Page

Page of Experience Cloud sites.

| Property    | Type                         | Description                                  | Filter Group and Version | Available Version |
|-------------|------------------------------|----------------------------------------------|--------------------------|-------------------|
| communities | <a href="#">Community</a> [] | List of sites available to the context user. | Small, 29.0              | 26.0              |
| total       | Integer                      | Total number of sites.                       | Small, 29.0              | 26.0              |

## Community Preview URL

Preview URL for an Experience Cloud site page.

| Property Name | Type   | Description  | Filter Group and Version | Available Version |
|---------------|--------|--------------|--------------------------|-------------------|
| previewUrl    | String | Preview URL. | Small, 61.0              | 61.0              |

## Community Publish

Result of publishing an Experience Cloud site.

| Property Name | Type   | Description                                                                                                                      | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id            | String | ID of the site.                                                                                                                  | Small, 46.0              | 46.0              |
| jobId         | String | ID of the <a href="#">BackgroundOperation</a> record for the publish job. Query this ID to track the publish status of the site. | Small, 58.0              | 58.0              |
| message       | String | Message describing the result of publishing the site.                                                                            | Small, 46.0              | 46.0              |
| name          | String | Name of the site.                                                                                                                | Small, 46.0              | 46.0              |
| url           | String | Connect REST API URL to the site.                                                                                                | Small, 46.0              | 46.0              |

## Community Summary

Summary of an Experience Cloud site.

| Property Name | Type   | Description                  | Filter Group and Version | Available Version |
|---------------|--------|------------------------------|--------------------------|-------------------|
| id            | String | 18-character ID of the site. | Small, 41.0              | 41.0              |
| name          | String | Localized name of the site.  | Small, 41.0              | 41.0              |

## Composite Product

Representation of the composite product create or upsert request.

### JSON example

Here's an example if the request is successful:

```
{
  "productId": "generatedProductId123",
  "success": true,
  "error": []
}
```

Here's an example if the request has errors:

```
{
  "productId": null,
  "success": false,
  "errors": [
    {
      "errorCode": "Invalid_Input",
      "message": "Failed to create/update the product"
    },
  ],
}
```

```
{
  {
    "errorCode": "Invalid_Input",
    "message": "Failed to create/update the price"
  }
}
```

| Property Name | Type                             | Description                                                                                                 | Filter Group and Version | Available Version |
|---------------|----------------------------------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response[]</a> | The list of errors that were returned, including the error code and error message.                          | Small, 61.0              | 61.0              |
| productId     | String                           | The Salesforce ID of the product record created after the request was successful.                           | Small, 61.0              | 61.0              |
| success       | Boolean                          | Indicates whether the product was successfully created ( <code>true</code> ) or not ( <code>false</code> ). | Small, 61.0              | 61.0              |

## Composite Product Variation

Composite product variation create request response.

| Property Name | Type                                    | Description                                                                                                             | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | List of any errors that were returned, including the error code and error message.                                      | Small, 62.0              | 62.0              |
| productIds    | String[]                                | IDs of the created product variations.                                                                                  | Small, 62.0              | 62.0              |
| success       | Boolean                                 | Indicates whether the product variations were successfully created ( <code>true</code> ) or not ( <code>false</code> ). | Small, 62.0              | 62.0              |

## Composite Promotion

Output representation of the composite promotion information.

## Composite Promotion Coupon

Output representation of a promotion coupon.

| Property Name | Type   | Description                                     | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------|--------------------------|-------------------|
| couponCode    | String | Coupon code.                                    | Small, 63.0              | 63.0              |
| couponId      | String | ID of the coupon.                               | Small, 63.0              | 63.0              |
| description   | String | Localized display name of the promotion coupon. | Small, 63.0              | 63.0              |

| Property Name            | Type    | Description                                                                                           | Filter Group and Version | Available Version |
|--------------------------|---------|-------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| endDateTime              | String  | The date time the promotion coupon ends.                                                              | Small, 63.0              | 63.0              |
| isActive                 | Boolean | Indicates whether the promotion coupon is active ( <code>true</code> ) or not ( <code>false</code> ). | Small, 63.0              | 63.0              |
| redemptionLimitAllBuyers | Integer | Promotion coupon redemption limit for all buyers.                                                     | Small, 63.0              | 63.0              |
| redemptionLimitPerBuyer  | Integer | Promotion coupon redemption limit per buyer.                                                          | Small, 63.0              | 63.0              |
| startDateTime            | String  | The date time the promotion coupon starts.                                                            | Small, 63.0              | 63.0              |

## Composite Promotion Qualifier

Output representation of the promotion qualifier.

| Property Name                | Type                              | Description                                                                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|------------------------------|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| approachingDiscountThreshold | String                            | The cart amount that a customer has to reach before seeing an approaching discount message. For example, if a promotion qualifier minimum is set at \$150 and this field is set at \$50, then a customer receives a banner notification that they're approaching the discount when they have at least \$50 in their cart. | Small, 64.0              | 64.0              |
| currencyIsoCode              | String                            | Three-letter ISO 4217 currency code associated with the promotion qualifier.                                                                                                                                                                                                                                              | Small, 62.0              | 62.0              |
| qualifierReferences          | <a href="#">Item Reference</a> [] | List of products and categories that qualifies for the promotion.                                                                                                                                                                                                                                                         | Small, 62.0              | 62.0              |
| qualifierType                | String                            | Type of the promotion qualifier. Possible values are: <ul style="list-style-type: none"> <li><code>Amount</code>—Minimum spend amount.</li> <li><code>Quantity</code>—Minimum quantity.</li> </ul>                                                                                                                        | Small, 62.0              | 62.0              |
| qualifierValue               | Double                            | Value for the promotion qualifier. For example, if qualifier type is <code>Quality</code> , the value can be "3".                                                                                                                                                                                                         | Small, 62.0              | 62.0              |

## Composite Promotion Result

Output representation of composite promotion create request.

**JSON example**

```
{
  "promotionId": "0c8RO0000000veWYAQ",
  "success": true,
  "errors": []
}
```

| Property Name | Type     | Description                                                                                           | Filter Group and Version | Available Version |
|---------------|----------|-------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors        | String[] | Any error messages that were returned by the API.                                                     | Small, 62.0              | 62.0              |
| promotionId   | String   | ID of the promotion record created after the API request is successful.                               | Small, 62.0              | 62.0              |
| success       | Boolean  | Indicates whether the API request was successful ( <code>true</code> ) or not ( <code>false</code> ). | Small, 62.0              | 62.0              |

## Content Capability

If a comment has this capability, it has a file attachment.

For files attached to a feed post (instead of a comment) in version 36.0 and later, use [Files Capability](#).

If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the Content Capability exists, however most of its properties are null.

| Property Name        | Type                                     | Description                                                                                                                                         | Filter Group and Version | Available Version |
|----------------------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| checksum             | String                                   | MD5 checksum for the file.                                                                                                                          | Small, 32.0              | 32.0              |
| contentHubRepository | <a href="#">Files Connect Repository</a> | The external data source associated with this file, or <code>null</code> if it doesn't point to an external file.                                   | Small, 32.0              | 32.0              |
| contentUrl           | String                                   | URL of the content for links and Google docs.                                                                                                       | Small, 32.0              | 32.0              |

## Conversation Summary Collection

Conversation summary collection.

| Property                      | Type                                   | Description                                                                       | Filter Group and Version | Available Version |
|-------------------------------|----------------------------------------|-----------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>conversations</code>    | <a href="#">Conversation Summary[]</a> | Collection of zero or more conversations.                                         | Small, 29.0              | 23.0              |
| <code>currentPageToken</code> | String                                 | Token identifying the current page.                                               | Medium, 37.0             | 37.0              |
| <code>currentPageUrl</code>   | String                                 | URL to the current page of conversations.                                         | Medium, 29.0             | 23.0              |
| <code>nextPageToken</code>    | String                                 | Token identifying the next page, or <code>null</code> if there isn't a next page. | Small, 37.0              | 37.0              |
| <code>nextPageUrl</code>      | String                                 | URL to the next page of messages, that is, older conversations.                   | Small, 29.0              | 23.0              |

## Conversation Unread Count

Conversation unread count.

| Property                 | Type    | Description                                                                                                                                                               | Filter Group and Version | Available Version |
|--------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>hasMore</code>     | Boolean | <code>true</code> if the actual number of unread conversations is greater than 50, <code>false</code> otherwise                                                           | Small, 29.0              | 23.0              |
| <code>unreadCount</code> | Integer | Number of unread conversations, that is, conversations that have unread messages. Is an exact value up to the maximum of 50, and is capped at 50 if the value is greater. | Small, 29.0              | 23.0              |

## Country

Output representation of a country.

**JSON example**

```
[
  {
    "isoCode": "US",
    "label": "United States"
  },
  {
    "isoCode": "CA",
    "label": "Canada"
  }
]
```

| Property Name | Type   | Description              | Filter Group and Version | Available Version |
|---------------|--------|--------------------------|--------------------------|-------------------|
| isoCode       | String | Iso code of the country. | Small, 60.0              | 60.0              |
| label         | String | Name of the country.     | Small, 60.0              | 60.0              |

## Coupon

A coupon for a promotion.

| Property Name   | Type    | Description                                                                                    | Filter Group and Version | Available Version |
|-----------------|---------|------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| couponCode      | String  | Coupon code for the coupon.                                                                    | Small, 54.0              | 54.0              |
| couponErrorCode | String  | Error code if the coupon is invalid.                                                           | Small, 54.0              | 54.0              |
| id              | String  | ID of the coupon.                                                                              | Small, 54.0              | 54.0              |
| isValidCoupon   | Boolean | Indicates whether the coupon is valid ( <code>true</code> ) or invalid ( <code>false</code> ). | Small, 54.0              | 54.0              |

## Coupon Code Redemption Collection

Collection of coupon code redemption results.

| Property Name                   | Type                                                               | Description                             | Filter Group and Version | Available Version |
|---------------------------------|--------------------------------------------------------------------|-----------------------------------------|--------------------------|-------------------|
| couponCode<br>RedemptionResults | <a href="#">Coupon Code</a><br><a href="#">Redemption Result[]</a> | List of coupon code redemption results. | Small, 58.0              | 58.0              |

## Coupon Code Redemption Result

Coupon code redemption result.

| Property Name        | Type    | Description                                                                                                                              | Filter Group and Version | Available Version |
|----------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| availableRedemptions | Integer | Number of coupon code redemptions available.                                                                                             | Small, 58.0              | 58.0              |
| couponCode           | String  | Coupon code.                                                                                                                             | Small, 58.0              | 58.0              |
| errorMsg             | String  | Error message when coupon code redemption isn't successful.                                                                              | Small, 58.0              | 58.0              |
| isSuccess            | Boolean | Specifies whether increasing or decreasing the coupon code redemption is successful ( <code>true</code> ) or not ( <code>false</code> ). | Small, 58.0              | 58.0              |
| redemptionLimit      | Integer | Number of coupon code redemptions allowed.                                                                                               | Small, 58.0              | 58.0              |

## Create Credit Memo Output

ID of a created Credit Memo.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| creditMemoId  | String                                  | ID of the created Credit Memo.                    | Big, 48.0                | 48.0              |
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Create Invoice From Change Orders Output

List of IDs of invoices created for change orders.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 56.0                | 56.0              |
| invoiceId     | String                                  | ID of the created invoice.                        | Big, 56.0                | 56.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 56.0                | 56.0              |

## Create Order Payment Summary Output

ID of the created Order Payment Summary.

| Property Name         | Type                                    | Description                                       | Filter Group and Version | Available Version |
|-----------------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors                | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| orderPaymentSummaryId | String                                  | ID of the Order Payment Summary.                  | Big, 48.0                | 48.0              |
| success               | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Create Social Named Credential Result

Result of a creating a named credential for a social external channel.

| Property Name                   | Type   | Description                                                 | Filter Group and Version | Available Version |
|---------------------------------|--------|-------------------------------------------------------------|--------------------------|-------------------|
| authUrl                         | String | Authentication URL.                                         | Small, 64.0              | 64.0              |
| externalCredentialDeveloperName | String | Developer name of the external credential that was created. | Small, 64.0              | 64.0              |
| namedCredentialDeveloperName    | String | Developer name of the named credential that was created.    | Small, 64.0              | 64.0              |

| Property Name | Type                                   | Description                                                                                           | Filter Group and Version | Available Version |
|---------------|----------------------------------------|-------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| status        | <a href="#">Social Status Response</a> | Status response specifying whether the <a href="#">Webstore Meta Config</a> was successfully created. | Small, 64.0              | 64.0              |

## Create Webstore Meta Config Result

Result of creating a webstore Meta configuration.

| Property Name      | Type                                   | Description                                                                                                                     | Filter Group and Version | Available Version |
|--------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| status             | <a href="#">Social Status Response</a> | Specifies whether the Webstore Meta Config entity was successfully created ( <code>true</code> ) or not ( <code>false</code> ). | Small, 64.0              | 64.0              |
| webStoreMetaConfig | <a href="#">Webstore Meta Config</a>   | Details of a webstore Meta configuration.                                                                                       | Small, 64.0              | 64.0              |

## Credential

Credential.

| Property Name                 | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|-------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| authenticationProtocol        | String | Authentication protocol of the external credential. Values are: <ul style="list-style-type: none"> <li>• <code>AwsSv4</code></li> <li>• <code>Basic</code></li> <li>• <code>Custom</code></li> <li>• <code>Jwt</code></li> <li>• <code>OAuth</code></li> </ul>                                                                                                                                                                                                                                                                                                    | Small, 56.0              | 56.0              |
| authenticationProtocolVariant | String | Authentication protocol variant of the external credential. Values are: <ul style="list-style-type: none"> <li>• <code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li>• <del><code>ClientCredentialsClientSecret</code></del>—<code>OAuth</code> 2.0 Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li>• <del><code>ClientCredentialsClientSecretBasic</code></del>—<code>OAuth</code> 2.0 Client Credentials client secret. Client secrets are sent in the callout's</li> </ul> | Small, 57.0              | 57.0              |

| Property Name                     | Type                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|-----------------------------------|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                                   |                                                | <p>authorization header, as with Basic authentication.</p> <ul style="list-style-type: none"> <li><code>ClientCredentialsJwtAssertion</code>—OAuth 2.0 Client Credentials JSON Web Token assertion.</li> <li><code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> <li><code>NoAuthentication</code>—No authentication.</li> <li><code>RolesAnywhere</code>—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul> |                          |                   |
| <code>authenticationStatus</code> | String                                         | <p>Status of the credential authentication. Values are:</p> <ul style="list-style-type: none"> <li><code>Configured</code>—Credential has all required credentials for at least one principal.</li> <li><code>NotConfigured</code>—Credential isn't configured.</li> <li><code>Unknown</code>—Credential status can't be determined because the authentication protocol is custom.</li> </ul>                                                                        | Small, 56.0              | 56.0              |
| <code>credentials</code>          | Map<String, <a href="#">Credential Value</a> > | Map of protocol-specific credentials.                                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 56.0              | 56.0              |
| <code>externalCredential</code>   | String                                         | Fully qualified developer name of the external credential.                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 56.0              | 56.0              |
| <code>principalName</code>        | String                                         | Name of the external credential named principal.                                                                                                                                                                                                                                                                                                                                                                                                                     | Small, 56.0              | 56.0              |
| <code>principalType</code>        | String                                         | <p>Type of credential principal. Values are:</p> <ul style="list-style-type: none"> <li><code>AwsStsPrincipal</code></li> <li><code>NamedPrincipal</code></li> <li><code>PerUserPrincipal</code></li> </ul>                                                                                                                                                                                                                                                          | Small, 56.0              | 56.0              |

## Credential Custom Header

Credential custom header.

| Property Name  | Type    | Description                                                                            | Filter Group and Version | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------|--------------------------|-------------------|
| headerName     | String  | Header name.                                                                           | Small, 57.0              | 57.0              |
| headerValue    | String  | Header value that can contain formulas.                                                | Small, 57.0              | 57.0              |
| id             | String  | ID of the customer header parameter.                                                   | Small, 58.0              | 58.0              |
| sequenceNumber | Integer | Sequence number of the header. The sequence number determines the order of the header. | Small, 57.0              | 57.0              |

## Credential Value

Credential value.

| Property Name | Type    | Description                                                                                              | Filter Group and Version | Available Version |
|---------------|---------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| encrypted     | Boolean | Specifies whether the credential value is encrypted ( <code>true</code> ) or not ( <code>false</code> ). | Small, 56.0              | 56.0              |
| revision      | Integer | Revision number of a short-lived credential.                                                             | Big, 58.0                | 58.0              |
| value         | String  | Value of the credential.                                                                                 | Small, 56.0              | 56.0              |

## Custom Domain

Definition of a custom domain.

| Property Name | Type   | Description                                                                   | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| domainId      | String | ID of the custom domain.                                                      | Small, 60.0              | 60.0              |
| domainName    | String | Domain name of the custom domain. For example, <code>www.example.com</code> . | Small, 60.0              | 60.0              |

## Custom Domain CNAME for Domain Verification

The canonical name (CNAME) record that's used to verify ownership of a custom domain.

| Property Name | Type   | Description                                                                           | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------|--------------------------|-------------------|
| alias         | String | Alias hostname to use in the name element of the CNAME record for this custom domain. | Small, 63.0              | 63.0              |
| value         | String | String to use in the value element of the CNAME record for this custom domain.        | Small, 63.0              | 63.0              |

## Custom Domain CNAME for the Salesforce CDN

The canonical name (CNAME) that's required for custom domains that use the Salesforce CDN.

| Property Name | Type   | Description                                                                                                                   | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| alias         | String | Alias hostname to use in the name element of the additional CNAME record for this custom domain that uses the Salesforce CDN. | Small, 63.0              | 63.0              |
| value         | String | String to use in the value element of the additional CNAME record for this custom domain that uses the Salesforce CDN.        | Small, 63.0              | 63.0              |

## Custom Domain Collection

List of custom domains for the org. A custom domain is a domain that you own, such as `https://www.example.com`, that serves content from your Experience Cloud sites or Salesforce Sites.

| Property Name | Type                             | Description                                                                                      | Filter Group and Version | Available Version |
|---------------|----------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| domains       | <a href="#">Custom Domain</a> [] | List of custom domains.<br><br>If no custom domains exist in the org, an empty list is returned. | Small, 60.0              | 60.0              |

## Custom Domain Custom URL Collection

List of custom URLs for a custom domain. A custom URL consists of a domain, a custom path prefix, and a unique site path. For a domain to serve content from a site, at least one custom URL is required.

| Property Name | Type                                 | Description                                                                                                             | Filter Group and Version | Available Version |
|---------------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| customUrls    | <a href="#">Custom URL Detail</a> [] | List of custom URLs for a specific domain.<br><br>If no custom domains exist for the domain, an empty list is returned. | Small, 62.0              | 62.0              |

## Custom Domain Detail

Detailed description of a custom domain.

| Property Name   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| associationType | String | Type of org that contains the Experience Cloud site or Salesforce Site content that the custom domain serves. Custom domains exist only in production orgs. <ul style="list-style-type: none"><li>• <b>Production</b>—The custom domain serves content from a site on the same org.</li><li>• <b>Sandbox</b>—The custom domain serves content from a site on a sandbox.</li></ul> | Small, 60.0              | 60.0              |
| cnameTarget     | String | Canonical name (CNAME) of the external host or server for the custom domain. If                                                                                                                                                                                                                                                                                                   | Small, 60.0              | 60.0              |

## Custom Recommendation Definition Collection

Represents a list of custom recommendation definitions.

| Property Name             | Type                                               | Description                                                                        | Filter Group and Version | Available Version |
|---------------------------|----------------------------------------------------|------------------------------------------------------------------------------------|--------------------------|-------------------|
| recommendationDefinitions | <a href="#">Custom Recommendation Definition[]</a> | A list of custom recommendation definitions.                                       | Small, 33.0              | 33.0              |
| url                       | String                                             | URL to the Connect REST API resource for the recommendation definition collection. | Small, 33.0              | 33.0              |

## Custom URL Detail

Detailed description of a custom URL.

| Property Name               | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|-----------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>customUrlId</code>    | String  | ID of the custom URL.                                                                                                                                                                                                                                                                                                                                                                                             | Small, 62.0              | 62.0              |
| <code>domainId</code>       | String  | ID of the custom domain.                                                                                                                                                                                                                                                                                                                                                                                          | Small, 62.0              | 62.0              |
| <code>domainName</code>     | String  | Domain Name                                                                                                                                                                                                                                                                                                                                                                                                       | Small, 62.0              | 62.0              |
| <code>lastModified</code>   | String  | Date when the custom URL was last modified.                                                                                                                                                                                                                                                                                                                                                                       | Small, 63.0              | 63.0              |
| <code>path</code>           | String  | <p>The path on the domain, starting with a slash (/).</p> <p>A slash (/) with no subsequent characters represents the root path, such as <code>https://www.example.com</code>.</p> <p>You can use the same path for more than one domain, but you can use each path only once within the same domain.</p>                                                                                                         | Small, 62.0              | 62.0              |
| <code>primarySiteUrl</code> | Boolean | <p>Indicates whether this custom URL is the preferred URL for authenticated pages and email (<code>true</code>) or not (<code>false</code>).</p> <p>This property applies only when the <code>siteType</code> is <code>Community</code> or <code>SalesforceSite</code>.</p> <p>Each site can have only one primary custom URL. For more information, see <a href="#">Add a Custom URL</a> in Salesforce Help.</p> | Small, 62.0              | 62.0              |
| <code>siteId</code>         | String  | ID of the site that this custom URL serves.                                                                                                                                                                                                                                                                                                                                                                       | Small, 62.0              | 62.0              |
| <code>siteName</code>       | String  | Name of the site that this custom URL serves.                                                                                                                                                                                                                                                                                                                                                                     | Small, 62.0              | 62.0              |
| <code>siteType</code>       | String  | <p>Type of site that this custom URL serves.</p> <ul style="list-style-type: none"> <li>• <code>Community</code>—An <a href="#">Experience Cloud Site</a>.</li> <li>• <code>SalesforceSite</code>—A Salesforce Site.</li> <li>• <code>LegacySite</code>—A legacy site type, such as legacy Site.com sites.</li> </ul>                                                                                             | Small, 62.0              | 62.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| status        | String | <p>Custom URL status. Values are:</p> <ul style="list-style-type: none"> <li>• <b>AwaitingPublish</b>—The custom URL is ready to be published from within Site.com Studio. This status applies only to custom URLs with a <code>siteType</code> of <code>LegacySite</code> when no sites of other types exist on the same domain.</li> <li>• <b>AwaitingUnpublish</b>—The custom URL was removed but is still published. To finish deleting the custom URL, click Unpublish in Site.com Studio. This status applies only to custom URLs with a <code>siteType</code> of <code>LegacySite</code>.</li> <li>• <b>InDevelopment</b>—The custom URL is ready to be published. This status applies only to custom URLs with a <code>siteType</code> of <code>LegacySite</code> when no sites of other types exist on the same domain.</li> <li>• <b>Offline</b>—The custom URL is associated with an inactive site.</li> <li>• <b>Preview</b>—The custom URL is active for an Experience Cloud site with a status of Preview.</li> <li>• <b>PublishFailed</b>—There was an unexpected issue with the background publishing operation for a site associated with the custom URL. This status is assigned to the custom URL after the background publishing operation is attempted every hour for two weeks without success.</li> <li>• <b>Published</b>—The custom URL is active and is associated with a site that is live.</li> <li>• <b>Publishing</b>—Salesforce is publishing the custom URL in the background. If this custom URL was previously published, the custom URL remains available throughout the publishing process.</li> </ul> | Small, 63.0              | 63.0              |

## Dashboard Component Snapshot

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

| Property Name                  | Type                         | Description                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|--------------------------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| componentId                    | String                       | 18-character ID of the dashboard component.                                                                                                                                                                             | Small, 32.0              | 32.0              |
| componentName                  | String                       | The dashboard component name.                                                                                                                                                                                           | Small, 32.0              | 32.0              |
| dashboardBodyText              | String                       | Display this text next to the actor in the feed element. Use this text in place of the default body text.                                                                                                               | Small, 32.0              | 32.0              |
| dashboardId                    | String                       | 18-character ID of the dashboard.                                                                                                                                                                                       | Small, 32.0              | 32.0              |
| dashboardName                  | String                       | The name of the dashboard.                                                                                                                                                                                              | Small, 32.0              | 32.0              |
| fullSizeImageUrl               | String                       | The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.                                                                                                                   | Small, 32.0              | 32.0              |
| lastRefreshDate                | String                       | ISO 8601 date specifying when this dashboard component was last refreshed.                                                                                                                                              | Small, 32.0              | 32.0              |
| lastRefreshDate<br>DisplayText | String                       | Display text for the last refresh date, for example, "Last Refreshed on October 31, 2013."                                                                                                                              | Small, 32.0              | 32.0              |
| runningUser                    | <a href="#">User Summary</a> | The running user of the dashboard at the time the snapshot was posted. This value may be <code>null</code> . Each dashboard has a running user, whose security settings determine which data to display in a dashboard. | Small, 32.0              | 32.0              |
| thumbnailUrl                   | String                       | The source URL to retrieve the thumbnail image of a snapshot. Access this URL with OAuth credentials.                                                                                                                   | Small, 32.0              | 32.0              |

## Data Integration Credit

Contract credit information.

| Property Name | Type   | Description                                | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------|--------------------------|-------------------|
| endDate       | String | End date of a contract in ISO 8601 format. | Small, 42.0              | 42.0              |

| Property Name    | Type   | Description                                                                                | Filter Group and Version | Available Version |
|------------------|--------|--------------------------------------------------------------------------------------------|--------------------------|-------------------|
| orgCreditsTotal  | Long   | Total credits granted to an org for use during a contract period.                          | Small, 42.0              | 42.0              |
| orgCreditsUsed   | Long   | Of the total credits granted to an org, credits used during a contract period.             | Small, 42.0              | 42.0              |
| sourceObjectName | String | External object name.                                                                      | Small, 42.0              | 42.0              |
| startDate        | String | Start date of a contract in ISO 8601.                                                      | Small, 42.0              | 42.0              |
| userCreditsTotal | Long   | The maximum number of records that a user can import.                                      | Small, 43.0              | 43.0              |
| userCreditsUsed  | Long   | The number of credits for importing records that a user has used during a contract period. | Small, 43.0              | 43.0              |

## Data Integration Credit Objects

External object names of active packages.

| Property Name     | Type     | Description                                           | Filter Group and Version | Available Version |
|-------------------|----------|-------------------------------------------------------|--------------------------|-------------------|
| sourceObjectNames | String[] | List of external object names of the active packages. | Small, 42.0              | 42.0              |

## Date Estimation

Date estimation for product delivery.

| Property Name | Type   | Description                          | Available Version |
|---------------|--------|--------------------------------------|-------------------|
| max           | String | Maximum estimated date for delivery. | 63.0              |
| min           | String | Minimum estimated date for delivery. | 63.0              |
| type          | String | Estimation type.                     | 63.0              |

## Delete Intent

Delete intent for a social post.

| Property Name        | Type                                   | Description                                          | Filter Group and Version | Available Version |
|----------------------|----------------------------------------|------------------------------------------------------|--------------------------|-------------------|
| managedSocialAccount | <a href="#">Managed Social Account</a> | Managed social account that deletes the social post. | Small, 45.0              | 45.0              |

| giftMessage                      | String                               | Personalized gift message for the delivery group.                                                                                                  | Small, 64.0              | 64.0              |
| giftToName                       | String                               | The name of the recipient for a gift delivery group.                                                                                               | Small, 64.0              | 64.0              |
| id                               | String                               | ID for the delivery group.                                                                                                                         | Small, 55.0              | 55.0              |
| isAllDigital<br>CartItems        | Boolean                              | Indicates whether the delivery group contains only digital products.                                                                               | Small, 64.0              | 64.0              |
| isAllDigitalCartItems            | Boolean                              | Indicates whether the delivery group contains digital goods ( <code>true</code> ) or not ( <code>false</code> ).                                   | Small, 64.0              | 64.0              |
| isDefault                        | Boolean                              | Indicates whether the delivery group is the default ( <code>True</code> ) or not ( <code>False</code> ). The default value is <code>False</code> . | Small, 59.0              | 59.0              |
| isGift                           | Boolean                              | Indicates if the delivery group is a gift ( <code>true</code> ) or not ( <code>false</code> ).                                                     | Small, 64.0              | 64.0              |

| Property Name                  | Type                            | Description                                                                                                                           | Filter Group and Version | Available Version |
|--------------------------------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name                           | String                          | Name of the delivery group.                                                                                                           | Small, 59.0              | 59.0              |
| selected<br>Delivery<br>Method | <a href="#">Delivery Method</a> | Selected delivery method.<br><br>When Shipping is disabled for your web store, the delivery methods aren't generated during checkout. | Medium, 55.0             | 55.0              |
| shipping<br>Instructions       | String                          | Special shipping and handling instructions.                                                                                           | Small, 55.0              | 55.0              |
| totalCart<br>ItemCount         | Integer                         | Number of cart items, including their quantities, of the type <code>Product</code> in the delivery group.                             | Small, 63.0              | 63.0              |
| totalProduct<br>Amount         | String                          | The sum of all the cart items' <code>TotalPrice</code> for cart items of the type <code>Product</code> in the delivery group.         | Small, 62.0              | 62.0              |

## Delivery Group Collection

Collection of delivery groups for a Commerce store checkout.

| Property Name | Type                             | Description                                         | Filter Group and Version | Available Version |
|---------------|----------------------------------|-----------------------------------------------------|--------------------------|-------------------|
| count         | Integer                          | Number of delivery group items returned.            | Small, 55.0              | 55.0              |
| items         | <a href="#">Delivery Group[]</a> | List of delivery groups available for the checkout. | Medium, 55.0             | 55.0              |

## Delivery Method

Delivery method for a Commerce store checkout.

| Property Name       | Type   | Description                                                                    | Filter Group and Version | Available Version |
|---------------------|--------|--------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustedShippingFee | String | Shipping fee, including <code>totalAdjustmentAmount</code> , for the delivery. | Small, 60.0              | 60.0              |
| carrier             | String | Carrier for the delivery.                                                      | Small, 55.0              | 55.0              |
| classOf<br>Service  | String | Class of service for the delivery.                                             | Small, 55.0              | 55.0              |
| currency<br>IsoCode | String | Three-letter ISO 4217 currency code associated with the delivery.              | Small, 55.0              | 55.0              |

| Property Name                         | Type    | Description                                                                                                                                                                                  | Filter Group and Version | Available Version |
|---------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| earliest<br>Estimated<br>DeliveryTime | String  | Earliest estimated delivery date and time for the delivery in ISO 8601 format. Determined by the time at checkout, plus <code>processTime</code> , plus <code>transitTimeMin</code> .        | Small, 61.0              | 61.0              |
| id                                    | String  | ID of the delivery method.                                                                                                                                                                   | Small, 55.0              | 55.0              |
| latest<br>Estimated<br>DeliveryTime   | String  | Latest estimated delivery date and time for the delivery in ISO 8601 format. Determined by the time at checkout, plus <code>processTime</code> , plus <code>transitTimeMax</code> .          | Small, 61.0              | 61.0              |
| name                                  | String  | Name of the delivery method.                                                                                                                                                                 | Small, 55.0              | 55.0              |
| processTime                           | Integer | Merchant-specified process time for the delivery. Process time includes the time between when an order is placed and when the shipment is given to the shipping carrier.                     | Small, 61.0              | 61.0              |
| processTime<br>Unit                   | String  | Unit of time used to define <code>processTime</code> . Values are: <ul style="list-style-type: none"> <li>• Hours</li> <li>• Days</li> <li>• Weeks</li> </ul>                                | Small, 61.0              | 61.0              |
| shippingFee                           | String  | Shipping fee for the delivery.                                                                                                                                                               | Small, 55.0              | 55.0              |
| totalAdjustmentAmount                 | String  | The adjustment amount of a promotion applicable to the delivery method.                                                                                                                      | Small, 60.0              | 60.0              |
| transit<br>TimeMax                    | Integer | Maximum estimate of transit time for the delivery. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address. | Small, 61.0              | 61.0              |
| transit<br>TimeMin                    | Integer | Minimum estimate of transit time for the delivery. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address. | Small, 61.0              | 61.0              |
| transit<br>TimeUnit                   | String  | Unit of time used to define <code>transitTimeMax</code> and <code>transitTimeMin</code> . Values are: <ul style="list-style-type: none"> <li>• Hours</li> <li>• Days</li> </ul>              | Small, 61.0              | 61.0              |

| Property Name | Type | Description                                                            | Filter Group and Version | Available Version |
|---------------|------|------------------------------------------------------------------------|--------------------------|-------------------|
|               |      | <ul style="list-style-type: none"> <li>• <code>Weeks</code></li> </ul> |                          |                   |

## Digest Job

Represents a successfully enqueued API digest job request.

| Property Name       | Type   | Description                                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|---------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>period</code> | String | <p>Time period that's included in a Chatter email digest. Values are:</p> <ul style="list-style-type: none"> <li>• <code>DailyDigest</code>—The email includes up to the 50 latest posts from the previous day.</li> <li>• <code>WeeklyDigest</code>—The email includes up to the 50 latest posts from the previous week.</li> </ul> | Small, 37.0              | 37.0              |

## Direct Message Capability

If a feed element has this capability, it's a direct message.

| Property Name                | Type                                                          | Description                                                                   | Filter Group and Version | Available Version |
|------------------------------|---------------------------------------------------------------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>memberChanges</code>   | <a href="#">Direct Message Membership Activity Collection</a> | Member activities of the direct message, with the most recent activity first. | Big, 40.0                | 40.0              |
| <code>members</code>         | <a href="#">Direct Message Member Collection</a>              | Members included in the direct message.                                       | Small, 39.0              | 39.0              |
| <code>originalMembers</code> | <a href="#">Direct Message Member Collection</a>              | Original members of the direct message.                                       | Big, 40.0                | 40.0              |
| <code>subject</code>         | String                                                        | Subject of the direct message.                                                | Small, 39.0              | 39.0              |

## Distance Calculation Output

Shipping distance data for a set of inventory locations.

| Property Name   | Type                              | Description                                                                      | Filter Group and Version | Available Version |
|-----------------|-----------------------------------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| averageDistance | Double                            | The average distance from the locations to the order recipient.                  | Big, 51.0                | 51.0              |
| locations       | <a href="#">Location Output[]</a> | The list of locations and their distances to the order recipient.                | Big, 51.0                | 51.0              |
| rank            | Integer                           | This result's rank among all results by average distance to the order recipient. | Big, 51.0                | 51.0              |

## Distinct Facet Value

Distinct facet value.

| Property Name   | Type                                                               | Description                                             | Filter Group and Version | Available Version |
|-----------------|--------------------------------------------------------------------|---------------------------------------------------------|--------------------------|-------------------|
| displayMetadata | <a href="#">Distinct Facet Value Display Metadata</a> on page 1578 | Map of metadata required for rendering the facet value. | Small, 64.0              | 64.0              |
| displayName     | String                                                             | Display name of the facet value.                        | Small, 49.0              | 49.0              |
| nameOrId        | String                                                             | Reserved for internal use.                              | Small, 49.0              | 49.0              |

| Property Name | Type   | Description                                                                                                  | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| productCount  | Long   | Number of products in the search result that match the facet value.                                          | Small, 49.0              | 49.0              |
| type          | String | Search facet type. Value is: <ul style="list-style-type: none"><li>• DistinctValue</li><li>• Range</li></ul> | Small, 49.0              | 49.0              |

## Distinct Facet Value Display Metadata

Display metadata representation for a distinct facet value.

| Property Name | Type               | Description                                                  | Filter Group and Version | Available Version |
|---------------|--------------------|--------------------------------------------------------------|--------------------------|-------------------|
| swatch        | Map<String,String> | Map of swatch display metadata for the distinct facet value. | Medium, 64.0             | 64.0              |

## Distinct Value Search Facet

Facet with distinct values in product search results.

| Property Name | Type    | Description                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| attributeType | String  | Search attribute type. Values are: <ul style="list-style-type: none"><li>• Custom</li><li>• PricebookEntry</li><li>• ProductAttribute</li><li>• ProductCategory</li><li>• Product2</li><li>• Standard</li></ul> | Small, 49.0              | 49.0              |
| displayName   | String  | Display name of the facet.                                                                                                                                                                                      | Small, 49.0              | 49.0              |
| displayRank   | Integer | Display rank of the facet. Valid values are from 1 through 50.                                                                                                                                                  | Small, 49.0              | 49.0              |
| displayType   | String  | Display type of the facet. Values are: <ul style="list-style-type: none"><li>• CategoryTree</li><li>• DatePicker</li></ul>                                                                                      | Small, 49.0              | 49.0              |

| Property Name | Type                                   | Description                                                                                                 | Filter Group and Version | Available Version |
|---------------|----------------------------------------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |                                        | <ul style="list-style-type: none"> <li>MultiSelect</li> <li>SingleSelect</li> </ul>                         |                          |                   |
| facetType     | String                                 | Search facet type. Value is: <ul style="list-style-type: none"> <li>DistinctValue</li> <li>Range</li> </ul> | Small, 49.0              | 49.0              |
| nameOrId      | String                                 | Reserved for internal use.                                                                                  | Small, 49.0              | 49.0              |
| values        | <a href="#">Distinct Facet Value[]</a> | Values of the facet found in the search result. Sorted by display name in alphabetical order.               | Medium, 49.0             | 49.0              |

| link                     | String | URL for the source that is cited in a generated response.            | Small, 62.0              | 62.0              |
| sourceObject<br>ApiName  | String | API name of the source record that is cited in a generated response. | Small, 62.0              | 62.0              |
| sourceObject<br>RecordId | String | ID of the source record that is cited in a generated response.       | Small, 62.0              | 62.0              |

## Einstein LLM Generation Gen AI Source Content Info

Values from a source that is cited in a generated response.

| Property Name | Type   | Description                                                                                              | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| content       | String | Text from the source that is cited in the generated response.                                            | Small, 62.0              | 62.0              |
| fieldName     | String | API name of the field that is cited in the generated response, such as <code>Opportunity.Amount</code> . | Small, 62.0              | 62.0              |
| objectName    | String | API name of the object that is cited in the generated response, such as <code>Opportunity</code> .       | Small, 62.0              | 62.0              |

## Einstein LLM Generation Gen AI Source Reference Info

Metadata from a source from a data provider.

| Property Name            | Type   | Description                                | Filter Group and Version | Available Version |
|--------------------------|--------|--------------------------------------------|--------------------------|-------------------|
| link                     | String | URL for the source from the data provider. | Small, 62.0              | 62.0              |
| sourceObject<br>ApiName  | String | API name of the source record.             | Small, 62.0              | 62.0              |
| sourceObject<br>RecordId | String | ID of the source record.                   | Small, 62.0              | 62.0              |

## Einstein LLM Generation Item

Generated response from the LLM provider.

| Property Name                    | Type                                                     | Description                                                                                                           | Filter Group and Version | Available Version |
|----------------------------------|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| contentQuality<br>Representation | <a href="#">Einstein LLM Generations Content Quality</a> | Specifies whether the generated response contains toxic language ( <code>true</code> ) or not ( <code>false</code> ). | Medium, 61.0             | 61.0              |
| parameters                       | String                                                   | Parameter values for the LLM provider.                                                                                | Medium, 60.0             | 60.0              |
| responseId                       | String                                                   | ID of the generated response.                                                                                         | Medium, 60.0             | 60.0              |
| safetyScore<br>Representation    | <a href="#">Einstein LLM Generations Safety Score</a>    | Safety score information related to the generated response.                                                           | Medium, 60.0             | 60.0              |
| text                             | String                                                   | Text of generated response.                                                                                           | Small, 60.0              | 60.0              |

## Einstein LLM Generations Content Quality Representation

Quality information about the generated response.

| Property Name          | Type    | Description                                                                                                           | Filter Group and Version | Available Version |
|------------------------|---------|-----------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isToxicity<br>Detected | Boolean | Specifies whether the generated response contains toxic language ( <code>true</code> ) or not ( <code>false</code> ). | Medium, 61.0             | 61.0              |

## Einstein LLM Generations Safety Score

Safety score information related to the LLM response.

| Property Name  | Type   | Description                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| hateScore      | Double | A higher value means the generated response is more likely to contain text that expresses, incites, or promotes hatred, violence, or severe harm towards the targeted group. Minimum value of 0 . 0. Maximum value of 1 . 0.                                | Medium, 60.0             | 60.0              |
| physicalScore  | Double | A higher value means the generated response is more likely to contain text with unsafe advice that may harm the user or others physically, or text that promotes, encourages, or depicts acts of self-harm. Minimum value of 0 . 0. Maximum value of 1 . 0. | Medium, 60.0             | 60.0              |
| profanityScore | Double | A higher value means the generated response is more likely to contain swear words, curse words, or obscene or profane language. Minimum value of 0 . 0. Maximum value of 1 . 0.                                                                             | Medium, 60.0             | 60.0              |
| safetyScore    | Double | Overall safety score based on the hateScore, physicalScore, profanityScore, sexualScore, toxicityScore, and violenceScore. A higher value means the generated response is more likely to be safe. Minimum value of 0 . 0. Maximum value of 1 . 0.           | Medium, 60.0             | 60.0              |
| sexualScore    | Double | A higher value means the generated response is more likely to contain text meant to arouse sexual excitement or promote sexual services. Minimum value of 0 . 0. Maximum value of 1 . 0.                                                                    | Medium, 60.0             | 60.0              |
| toxicityScore  | Double | A higher value means the generated response is more likely to contain text that is rude, disrespectful, or unreasonable. Minimum value of 0 . 0. Maximum value of 1 . 0.                                                                                    | Medium, 60.0             | 60.0              |
| violenceScore  | Double | A higher value means the generated response is more likely to contain text that promotes or glorifies violence or celebrates the suffering or humiliation of others. Minimum value of 0 . 0. Maximum value of 1 . 0.                                        | Medium, 60.0             | 60.0              |

## Einstein Prompt Record

Prompt template record.

| Property Name      | Type                                                                      | Description                                                                                                                                              | Filter Group and Version | Available Version |

| isStandard         | Boolean                                                                   | Specifies whether the prompt template record is a standard prompt template ( <code>true</code> ) or user-created prompt template ( <code>false</code> ). | Medium, 62.0             | 62.0              |

## Einstein Prompt Record Collection

List of prompt template records.

| Property Name      | Type                                                     | Description                                                                                                            | Filter Group and Version | Available Version |
|--------------------|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| hasMoreRecords     | Boolean                                                  | Specifies whether the query returned more prompt template records ( <code>true</code> ) or not ( <code>false</code> ). | Medium, 62.0             | 62.0              |
| promptRecords      | <a href="#">Einstein Prompt Record Representation</a> [] | List of prompt template records returned.                                                                              | Small, 62.0              | 62.0              |
| totalPromptRecords | Integer                                                  | Number of prompt template records returned.                                                                            | Medium, 62.0             | 62.0              |

## Einstein Prompt Record Field

Field values for the specified prompt template record field.

| Property Name | Type   | Description                                      | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------|--------------------------|-------------------|
| displayValue  | String | Visible value of a prompt template record field. | Small, 62.0              | 62.0              |

| Property Name | Type   | Description                                       | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------|--------------------------|-------------------|
| value         | Object | Raw data value of a prompt template record field. | Small, 62.0              | 62.0              |

## Einstein Prompt Template Attachment

Data for file attachments to prompts.

| Property Name           | Type   | Description                                 | Filter Group and Version | Available Version |
|-------------------------|--------|---------------------------------------------|--------------------------|-------------------|
| fileExtension           | String | Extension of the file attachment.           | Small, 63.0              | 63.0              |
| id                      | String | Content document ID of the file attachment. | Small, 63.0              | 63.0              |
| latestPublished Version | String | Content version ID of the file attachment.  | Small, 63.0              | 63.0              |
| title                   | String | Title of the file attachment.               | Small, 63.0              | 63.0              |

## Einstein Prompt Template Generations

Generated response from the specified LLM provider and resolved prompt template text.

| Property Name     | Type                                                         | Description                                                                                                            | Filter Group and Version | Available Version |
|-------------------|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| citations         | <a href="#">Einstein LLM Generation Citation</a>             | Source information associated with the generated responses.                                                            | Medium, 62.0             | 62.0              |
| fileData          | <a href="#">Einstein Prompt Template Attachment[]</a>        | File data of the input files used in generation.                                                                       | Medium, 63.0             | 63.0              |
| generation Errors | <a href="#">Einstein Prompt Template Generations Error[]</a> | List of errors associated with the generated responses, if any.                                                        | Medium, 60.0             | 60.0              |
| generations       | <a href="#">Einstein LLM Generation Item[]</a>               | List of generated responses from the LLM provider.                                                                     | Small, 60.0              | 60.0              |

## Einstein Prompt Template Generations Error

Error response to a prompt template generation request.

| Property Name         | Type   | Description                                             | Filter Group and Version | Available Version |
|-----------------------|--------|---------------------------------------------------------|--------------------------|-------------------|
| errorMessage          | String | Message stating the reason for the error, if any.       | Medium, 60.0             | 60.0              |
| httpErrorCode         | String | HTTP status code, if any.                               | Medium, 60.0             | 60.0              |
| localizedErrorMessage | String | Translated error message, if available.                 | Medium, 60.0             | 60.0              |
| messageCode           | String | Message code associated with the error message, if any. | Medium, 60.0             | 60.0              |

## Einstein Prompt Template Mask Content Representation

Generated response for a prompt template or resolved prompt template with masked data and masking information.

| Property Name       | Type                                                                  | Description                                                                      | Filter Group and Version | Available Version |
|---------------------|-----------------------------------------------------------------------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| content             | String                                                                | Text of generated response or resolved prompt template with masked data.         | Medium, 61.0             | 61.0              |
| moderation Settings | <a href="#">Einstein Prompt Template Mask Settings Representation</a> | Data masking settings for the specified prompt template.                         | Medium, 61.0             | 61.0              |
| role                | String                                                                | Role in the Salesforce role hierarchy of the user executing the prompt template. | Medium, 61.0             | 61.0              |

## Einstein Prompt Template Mask Data Representation

Information about masked data for a prompt template.

| Property Name | Type     | Description                           | Filter Group and Version | Available Version |
|---------------|----------|---------------------------------------|--------------------------|-------------------|
| originalValue | String   | Original value of the masked data.    | Medium, 61.0             | 61.0              |
| placeholder   | String   | Placeholder value of the masked data. | Medium, 61.0             | 61.0              |
| recognizers   | String[] | Reserved for internal use.            | Medium, 61.0             | 61.0              |

## Einstein Prompt Template Mask Settings Representation

Data masking settings for a prompt template.

| Property Name    | Type    | Description                                                                                    | Filter Group and Version | Available Version |
|------------------|---------|------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| enableModeration | Boolean | Specifies whether data masking is enabled ( <code>true</code> ) or not ( <code>false</code> ). | Medium, 61.0             | 61.0              |

## Email Address

An email address for an email message sent from a case record in Case Feed.

| Property     | Type   | Description                       | Filter Group and Version | Available Version |
|--------------|--------|-----------------------------------|--------------------------|-------------------|
| displayName  | String | Display name for an email address | Small, 29.0              | 29.0              |
| emailAddress | String | Email address                     | Small, 29.0              | 29.0              |

| Property      | Type                           | Description                                                              | Filter Group and Version | Available Version |
|---------------|--------------------------------|--------------------------------------------------------------------------|--------------------------|-------------------|
| relatedRecord | <a href="#">Record Summary</a> | The summary of a related record, for example, a contact or user summary. | Small, 36.0              | 36.0              |

## Email Merge Field

The map for objects and their merge fields.

| Property Name          | Type                                                       | Description                                                 | Filter Group and Version | Available Version |
|------------------------|------------------------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| entityToMergeFieldsMap | Map<String, <a href="#">Email Merge Field Collection</a> > | Map for multiple objects and their merge field collections. | Small, 39.0              | 39.0              |

## Email Merge Field Collection

The merge fields for an object.

| Property Name | Type     | Description                               | Filter Group and Version | Available Version |
|---------------|----------|-------------------------------------------|--------------------------|-------------------|
| mergeFields   | String[] | List of merge fields for a single object. | Small, 39.0              | 39.0              |

## Email Message Capability

If a feed element has this capability, it has an email message from a case.

| Property Name         | Type                               | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|-----------------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| attachments           | <a href="#">Email Attachment[]</a> | Attachments in the email message.                                                                                                                                                                                                                  | Big, 36.0                | 36.0              |
| automationType        | String                             | Automation type of the email message.<br>Values are: <ul style="list-style-type: none"> <li>aiAssisted—The email message was created with the assistance of AI.</li> <li>aiAutomated—The email message was created automatically by AI.</li> </ul> | Small, 63.0              | 63.0              |
| bccAddresses          | <a href="#">Email Address[]</a>    | BCC addresses for the email message.                                                                                                                                                                                                               | Small, 36.0              | 36.0              |
| body                  | String                             | Body of the email message.                                                                                                                                                                                                                         | Big, 36.0                | 36.0              |
| ccAddresses           | <a href="#">Email Address[]</a>    | CC addresses for the email message.                                                                                                                                                                                                                | Small, 36.0              | 36.0              |
| direction             | String                             | Direction of the email message. Values are: <ul style="list-style-type: none"> <li>Inbound—An inbound message (sent by a customer).</li> <li>Outbound—An outbound message (sent to a customer by a support agent).</li> </ul>                      | Small, 32.0              | 32.0              |
| emailMessageId        | String                             | ID of the email message.                                                                                                                                                                                                                           | Small, 32.0              | 32.0              |
| fromAddress           | <a href="#">Email Address</a>      | From address for the email message.                                                                                                                                                                                                                | Small, 36.0              | 36.0              |
| htmlExpandEmailThread | Integer                            | Start location of previous email thread.                                                                                                                                                                                                           | Small, 47.0              | 47.0              |
| isRichText            | Boolean                            | Indicates whether the body of the email message is in rich text format.                                                                                                                                                                            | Small, 36.0              | 36.0              |
| status                | String                             | Status of an email message on a case. Values are: <ul style="list-style-type: none"> <li>DraftStatus</li> <li>ForwardedStatus</li> <li>NewStatus</li> <li>ReadStatus</li> <li>RepliedStatus</li> <li>SentStatus</li> </ul>                         | Small, 47.0              | 47.0              |
| subject               | String                             | Subject of the email message.                                                                                                                                                                                                                      | Small, 32.0              | 32.0              |

| Property Name    | Type                            | Description                                                                                                                                                                                      | Filter Group and Version | Available Version |
|------------------|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| textBody         | String                          | Body of the email message.<br> <b>Important:</b> In version 36.0 and later, use the <code>body</code> property. | Big, 32.0                | 32.0–35.0         |
| toAddresses      | <a href="#">Email Address[]</a> | To addresses of the email message.                                                                                                                                                               | Small, 32.0              | 32.0              |
| totalAttachments | Integer                         | Total number of attachments in the email message.                                                                                                                                                | Small, 38.0              | 38.0              |

## Engagement Channel Type Result

Output representation of the details of the engagement channel type.

| Property Name    | Type     | Description                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| contactPoint     | String   | The contact point for the engagement channel type.                                                                                                                                                                                                                              | Small, 56.0              | 56.0              |
| contactPointType | String   | The contact point type for the engagement channel type.<br><br>Possible values are: <ul style="list-style-type: none"><li>• InPerson</li><li>• None</li><li>• Phone—Available in API version 57.0 and later.</li><li>• Video—Available in API version 57.0 and later.</li></ul> | Small, 56.0              | 56.0              |
| id               | String   | The ID of the engagement channel type record.                                                                                                                                                                                                                                   | Small, 56.0              | 56.0              |
| name             | String   | The name of the engagement channel type.                                                                                                                                                                                                                                        | Small, 56.0              | 56.0              |
| workTypeGroupIds | String[] | The work type group IDs for the engagement channel type.<br><br> <b>Note:</b> When <code>workTypeID</code> is specified in the API request, this property is unspecified.                    | Small, 56.0              | 56.0              |
| workTypeIds      | String[] | The work type IDs for the engagement channel type.<br><br> <b>Note:</b> When <code>workTypeGroupID</code> is specified in the API request, this property is unspecified.                     | Small, 56.0              | 56.0              |

## Gifting Config

Gifting configuration settings for the application context.

| Property Name                     | Type    | Description                                                                                                               | Filter Group and Version | Available Version |
|-----------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isGiftMessageEnabled</code> | Boolean | Indicates whether sending a gift message is enabled ( <code>true</code> ) or not ( <code>false</code> ) for a web store.  | Small, 64.0              | 64.0              |
| <code>isGiftWrapEnabled</code>    | Boolean | Indicates whether gift wrapping the order is enabled ( <code>true</code> ) or not ( <code>false</code> ) for a web store. | Small, 64.0              | 64.0              |
| <code>isGiftingEnabled</code>     | Boolean | Indicates whether gifting is enabled ( <code>true</code> ) or not ( <code>false</code> ) for a web store.                 | Small, 64.0              | 64.0              |

## Enhanced Link Capability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.

| Property Name             | Type                 | Description                                                                  | Filter Group and Version | Available Version |
|---------------------------|----------------------|------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>description</code>  | String               | A description with a 500 character limit.                                    | Small, 32.0              | 32.0              |
| <code>icon</code>         | <a href="#">Icon</a> | A icon.                                                                      | Small, 32.0              | 32.0              |
| <code>linkRecordId</code> | String               | A ID associated with the link if the link URL refers to a Salesforce record. | Small, 32.0              | 32.0              |
| <code>linkUrl</code>      | String               | A link URL to a detail page if available content can't display inline.       | Small, 32.0              | 32.0              |
| <code>title</code>        | String               | A title to a detail page.                                                    | Small, 32.0              | 32.0              |

## Ensure Funds Async Output

ID of the asynchronous background operation. This output only includes the operation ID, regardless of whether a call is made to an external payment gateway. It doesn't include any errors from the operation.

| Property Name                      | Type   | Description                     | Filter Group and Version | Available Version |
|------------------------------------|--------|---------------------------------|--------------------------|-------------------|
| <code>backgroundOperationId</code> | String | ID of the background operation. | Big, 48.0                | 48.0              |

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Environment Hub Sign-up Member Validation

The results from validation of the input parameters used to create an Environment Hub member org.

| Property Name | Type   | Description                                                                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------|--------------------------|-------------------|
| errorMessage  | String | If the parameters were invalid, this property contains the error string.            | Small, 36.0              | 36.0              |
| orgEdition    | String | If the parameters were valid, this property contains the edition of the member org. | Small, 36.0              | 36.0              |

| Property Name      | Type    | Description                                                                              | Filter Group and Version | Available Version |
|--------------------|---------|------------------------------------------------------------------------------------------|--------------------------|-------------------|
| trialMaxLengthDays | Integer | If the parameters were valid, this property contains the trial length of the member org. | Small, 36.0              | 36.0              |

## Environment Hub SSO User Mapping Validation

Results from validating a potential SSO user mapping between a user in an Environment Hub and a user in a hub member org.

| Property Name   | Type     | Description                                                                             | Filter Group and Version | Available Version |
|-----------------|----------|-----------------------------------------------------------------------------------------|--------------------------|-------------------|
| errorFieldNames | String[] | If the parameters were invalid, this property contains the names of fields with errors. | Small, 36.0              | 36.0              |
| errorMessage    | String   | If the parameters were invalid, this property contains the error string.                | Small, 36.0              | 36.0              |
| hubUserId       | String   | The ID of a user in an Environment Hub organization.                                    | Small, 36.0              | 36.0              |
| memberUsername  | String   | The username of a user in an Environment Hub member organization.                       | Small, 36.0              | 36.0              |
| userMappingId   | String   | The ID of the new SSO user mapping.                                                     | Small, 36.0              | 36.0              |

## Error Message

Output representation of the details of errors encountered during an API request execution.

| Property  | Type   | Description                                                                                             | Filter Group and Version | Available Version |
|-----------|--------|---------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errorCode | String | An error code with the information about the error, for example, <code>INSUFFICIENT_PRIVILEGES</code> . | Small, 29.0              | 23.0              |
| message   | String | Description of the error.                                                                               | Small, 29.0              | 23.0              |

## Error Response Output

Error response output.

| Property Name | Type   | Description                                   | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------|--------------------------|-------------------|
| errorCode     | String | Error code.                                   | Small, 48.0              | 48.0              |
| message       | String | Message stating the reason for error, if any. | Small, 48.0              | 48.0              |

## Error with Output

Contains extra information about errors. In rare cases, an error message isn't enough to describe the reason for a failure. For example, when a conflicting precondition exists, the error result can include the information about the cause of the conflict.

| Property          | Type              | Description                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|-------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| enhancedErrorType | String            | Indicates the type of the <code>output</code> property. This value is either <code>null</code> or: <ul style="list-style-type: none"> <li><code>GroupMembershipRequestError-A</code> nested <a href="#">Group Membership Request</a>.</li> </ul>                          | Small, 39.0              | 39.0              |
| message           | String            | Description of the error                                                                                                                                                                                                                                                  | Small, 29.0              | 27.0              |
| output            | Any response body | The response body returned by the requested resource. For example, if a successful request returns a <a href="#">Like</a> response body but an error triggers the Error with Output response body, the value of the <code>output</code> property is a Like response body. | Small, 29.0              | 27.0              |

## Estimate Delivery Date

Estimated delivery dates.

| Property Name              | Type         | Description                                                                                | Available Version |
|----------------------------|--------------|--------------------------------------------------------------------------------------------|-------------------|
| deliveryEstimates          | Complex type | List of delivery estimations.                                                              | 63.0              |
| estimatedDeliveryReference | String       | Unique code, reference, or identifier for the estimated delivery used by external systems. | 63.0              |

## Experience Model Property Type Collection

Collection of property types.

| Property Name  | Type    | Description               | Filter Group and Version | Available Version |
|----------------|---------|---------------------------|--------------------------|-------------------|
| count          | Integer | Number of types returned. | Small, 58.0              | 58.0              |
| currentPageUrl | String  | URL to the page of types. | Medium, 58.0             | 58.0              |

| Property Name   | Type                                                     | Description                                             | Filter Group and Version | Available Version |
|-----------------|----------------------------------------------------------|---------------------------------------------------------|--------------------------|-------------------|
| nextPageUrl     | String                                                   | URL to the next page of types.                          | Small, 58.0              | 58.0              |
| previousPageUrl | String                                                   | URL to the previous page of types.                      | Medium, 58.0             | 58.0              |
| propertyTypes   | <a href="#">Experience Model Property Type Summary[]</a> | List of property types ordered alphabetically by title. | Small, 58.0              | 58.0              |

## Experience Model Property Type Detail

Property type detail.

| Property Name   | Type                | Description                                                                                                                           | Filter Group and Version | Available Version |
|-----------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description     | String              | Description of the type in its schema.json.                                                                                           | Small, 58.0              | 58.0              |
| designConfig    | Map<String, Object> | Design configuration for the specified target.                                                                                        | Big, 58.0                | 58.0              |
| developerName   | String              | Developer name, or apiName, of the type.                                                                                              | Small, 58.0              | 58.0              |
| id              | String              | ID of the type, returned only for database-based (custom) types.                                                                      | Small, 58.0              | 58.0              |
| namespacePrefix | String              | Namespace prefix associated with the type. Refer to a type using the namespacePrefix__developerName notation, or fullyQualified_name. | Small, 58.0              | 58.0              |
| renditionConfig | Map<String, Object> | Rendition configuration for the specified target.                                                                                     | Big, 58.0                | 58.0              |
| schema          | Map<String, Object> | JSON schema definition, or schema.json, of the type.                                                                                  | Big, 58.0                | 58.0              |
| title           | String              | The title of the type in its schema.json.                                                                                             | Small, 58.0              | 58.0              |

## Experience Model Property Type Summary

Property type summary.

| Property Name | Type   | Description                                 | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------|--------------------------|-------------------|
| description   | String | Description of the type in its schema.json. | Small, 58.0              | 58.0              |
| detailUrl     | String | Individual detail resource URL to the type. | Small, 58.0              | 58.0              |
| developerName | String | Developer name, or apiName, of the type.    | Medium, 58.0             | 58.0              |

| Property Name   | Type   | Description                                                                                                                                   | Filter Group and Version | Available Version |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id              | String | ID of the type, returned only for the database-based (custom) types.                                                                          | Medium, 58.0             | 58.0              |
| namespacePrefix | String | Namespace prefix that is associated with the type. Refer to a type using the namespacePrefix__developerName notation, or fullyQualified_name. | Medium, 58.0             | 58.0              |
| title           | String | Title of the type in its schema.json.                                                                                                         | Small, 58.0              | 58.0              |

## External Auth Identity Provider Parameter

External auth identity provider parameter.

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| parameterName | String | The name of the external auth identity provider parameter.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Small, 63.0              | 63.0              |
| parameterType | String | Parameter type for an external auth identity provider. Values are: <ul style="list-style-type: none"> <li>• <code>AuthorizeRequestQueryParameter</code></li> <li>• <code>IdentityProviderOptions</code></li> <li>• <code>ManagedByComponent</code></li> <li>• <code>ManagedByFeature</code></li> <li>• <code>RefreshRequestBodyParameter</code></li> <li>• <code>RefreshRequestHttpHeader</code></li> <li>• <code>RefreshRequestQueryParameter</code></li> <li>• <code>TokenRequestBodyParameter</code></li> </ul> | Small, 63.0              | 63.0              |

| Property Name  | Type    | Description                                                                                                                                                                                       | Filter Group and Version | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                |         | <ul style="list-style-type: none"> <li>TokenRequestHttpHeader</li> <li>TokenRequestQueryParameter</li> </ul>                                                                                      |                          |                   |
| parameterValue | String  | If <code>parameterType</code> describes a literal value then the literal value is stored in this property.                                                                                        | Small, 63.0              | 63.0              |
| sequenceNumber | Integer | Specifies the order of parameters to apply when an external auth identity provider has more than one parameter. Priority is from lower to higher numbers, for example, 1 is the highest priority. | Small, 63.0              | 63.0              |

## Facetable Attributes Collection

Collection of facetable attributes.

| Property Name                      | Type                                  | Description                         | Filter Group and Version | Available Version |
|------------------------------------|---------------------------------------|-------------------------------------|--------------------------|-------------------|
| facetable<br>Attribute<br>Settings | <a href="#">Facetable Attribute[]</a> | Collection of facetable attributes. | Small, 49.0              | 49.0              |

## Favorite

Chatter favorite.

| Property     | Type                         | Description                                                                                                                                                  | Filter Group and Version | Available Version |
|--------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| community    | <a href="#">Reference</a>    | Information about the Experience Cloud site. Returns <code>null</code> if the favorite exists in the default community or digital experiences isn't enabled. | Medium, 29.0             | 26.0              |
| createdBy    | <a href="#">User Summary</a> | Information about the original creator of the favorite.                                                                                                      | Medium, 29.0             | 24.0              |
| feedUrl      | String                       | URL to the feed item for the favorite.                                                                                                                       | Small, 29.0              | 24.0              |
| id           | String                       | 18-character ID of the favorite.                                                                                                                             | Small, 29.0              | 24.0              |
| lastViewDate | String                       | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z                                                                                                  | Medium, 29.0             | 24.0              |
| name         | String                       | Name of the favorite.                                                                                                                                        | Small, 29.0              | 24.0              |
| searchText   | String                       | If the favorite is from a search, contains the search text, if not, contains <code>null</code> .                                                             | Medium, 29.0             | 24.0              |
| target       | <a href="#">Reference</a>    | A reference to the topic if applicable, <code>null</code> otherwise.                                                                                         | Small, 29.0              | 28.0              |

| Property | Type                         | Description                                                                                                                                                         | Filter Group and Version | Available Version |
|----------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| type     | String                       | One of the following values: <ul style="list-style-type: none"> <li>• <code>ListView</code></li> <li>• <code>Search</code></li> <li>• <code>Topic</code></li> </ul> | Small, 29.0              | 24.0              |
| url      | String                       | URL to the favorite.                                                                                                                                                | Small, 29.0              | 24.0              |
| user     | <a href="#">User Summary</a> | Information about the user who saved the favorite.                                                                                                                  | Medium, 29.0             | 24.0              |

| chatterAnswers                                                                                                                                                                                                                      | Boolean | Specifies whether Chatter Answers is enabled.                              | Small, 29.0              | 29.0              |
|  <b>Note:</b> With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or |         |                                                                            |                          |                   |

| Property                    | Type    | Description                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                             |         | view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see <a href="#">End of Support for Chatter Answers in Spring '18</a> . |                          |                   |
| chatterGlobalInfluence      | Boolean | Specifies whether user details include global Chatter activity.                                                                                                                                                                 | Small, 29.0              | 24.0              |
| chatterGroupRecords         | Boolean | Specifies whether Chatter groups can have records associated with them.                                                                                                                                                         | Small, 33.0              | 33.0              |
| chatterGroupRecordSharing   | Boolean | Specifies whether Chatter records are implicitly shared among group members when records are added to groups.                                                                                                                   | Small, 33.0              | 33.0              |
| chatterMessages             | Boolean | Specifies whether Chatter messages are enabled.                                                                                                                                                                                 | Small, 29.0              | 24.0              |
| chatterTopics               | Boolean | Specifies whether topics are enabled.                                                                                                                                                                                           | Small, 29.0              | 28.0              |
| communitiesEnabled          | Boolean | Specifies whether digital experiences is enabled.                                                                                                                                                                               | Small, 31.0              | 31.0              |
| communityModeration         | Boolean | Specifies whether moderation is enabled.                                                                                                                                                                                        | Small, 29.0              | 29.0              |
| communityReputation         | Boolean | Specifies whether reputation is enabled.                                                                                                                                                                                        | Small, 32.0              | 32.0              |
| customFiscalCalendarEnabled | Boolean | Specifies whether custom fiscal calendar is enabled.                                                                                                                                                                            | Small, 63.0              | 63.0              |
| dashboardComponentSnapshots | Boolean | Specifies whether the user can post dashboard component snapshots.                                                                                                                                                              | Small, 29.0              | 24.0              |
| defaultCurrencyIsoCode      | String  | ISO code of the default currency. Applicable only when <code>multiCurrency</code> is <code>false</code> .                                                                                                                       | Small, 29.0              | 28.0              |
| defaultLocale               | String  | Specifies the Default locale.                                                                                                                                                                                                   | Small, 63.0              | 63                |
| einsteinVoiceEnabled        | Boolean | Reserved for future use.                                                                                                                                                                                                        | Small, 46.0              | 46.0              |
| einsteinVoiceInPilotEnabled | Boolean | Reserved for future use.                                                                                                                                                                                                        | Small, 46.0              | 46.0              |

| Property                      | Type    | Description                                                                                                                                                           | Filter Group and Version | Available Version |
|-------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| einsteinVoiceLoggingEnabled   | Boolean | Reserved for future use.                                                                                                                                              | Small, 46.0              | 46.0              |
| einsteinVoiceProviderId       | Integer | Reserved for future use.                                                                                                                                              | Small, 46.0              | 46.0              |
| favoritesEnabled              | Boolean | Specifies whether favorites in Lightning are enabled.                                                                                                                 | Small, 41.0              | 41.0              |
| feedPolling                   | Boolean | Reserved for future use.                                                                                                                                              | Small, 29.0              | 24.0              |
| feedStreamEnabled             | Boolean | Specifies whether Chatter feed streams are enabled.                                                                                                                   | Small, 39.0              | 39.0              |
| files                         | Boolean | Specifies whether files can act as resources for Connect REST API.                                                                                                    | Small, 29.0              | 24.0              |
| filesOnComments               | Boolean | Specifies whether files can be attached to comments.                                                                                                                  | Small, 29.0              | 24.0              |
| fiscalYearStartMonth          | Integer | Specifies the number that corresponds to the month that starts the fiscal year for the org. For example, if the org's fiscal year starts in February, the value is 2. | Small, 63.0              | 63.0              |
| forecasting3AggregatedEnabled | Boolean | Specifies whether aggregated forecasting is enabled for mobile clients.                                                                                               | Small, 38.0              | 38.0              |
| forecastingEnabled            | Boolean | Specifies whether forecasting is enabled.                                                                                                                             | Small, 38.0              | 38.0              |
| forecastingPeriodRange        | Integer | Range of the forecasting period.                                                                                                                                      | Small, 38.0              | 38.0              |
| forecastingPeriodStart        | Integer | Start index for the forecasting period.                                                                                                                               | Small, 38.0              | 38.0              |
| forecastingPeriodType         | String  | Time period used for forecasting. Values are: <ul style="list-style-type: none"> <li>Month</li> <li>Quarter</li> <li>Week</li> <li>Year</li> </ul>                    | Small, 38.0              | 38.0              |
| groupsCanFollow               | Boolean | Reserved for future use.                                                                                                                                              | Small, 29.0              | 28.0–29.0         |
| ideas                         | Boolean | Specifies whether Ideas is enabled.                                                                                                                                   | Small, 29.0              | 29.0              |
| liveAgentHostName             | String  | Live Agent host name configured for the org.                                                                                                                          | Small, 41.0              | 41.0              |
| managedTopicsEnabled          | Boolean | Specifies whether managed topics are enabled.                                                                                                                         | Small, 32.0              | 32.0              |

| Property                        | Type    | Description                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|---------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| maxEntitySubscriptionsPerStream | Integer | Specifies the maximum number of feed-enabled entities that can be subscribed to in a Chatter stream.                                                                                                                                                        | Small, 39.0              | 39.0              |
| maxFilesPerFeedItem             | Integer | Specifies the maximum number of files that can be added to a feed item.                                                                                                                                                                                     | Small, 36.0              | 36.0              |
| maxStreamsPerPerson             | Integer | Specifies the maximum number of Chatter streams that a user can have.                                                                                                                                                                                       | Small, 39.0              | 39.0              |
| mobileNotificationsEnabled      | Boolean | Reserved for future use.                                                                                                                                                                                                                                    | Small, 29.0              | 29.0              |
| multiCurrency                   | Boolean | Specifies whether the org uses multiple currencies ( <code>true</code> ) or not ( <code>false</code> ). When <code>false</code> , the <code>defaultCurrencyIsoCode</code> indicates the ISO code of the default currency.                                   | Small, 29.0              | 28.0              |
| offlineEditEnabled              | Boolean | Specifies whether the offline object permissions are enabled for Salesforce for Android and Salesforce for iOS mobile clients.                                                                                                                              | Small, 37.0              | 37.0              |
| publisherActions                | Boolean | Specifies whether actions in the publisher are enabled.                                                                                                                                                                                                     | Small, 29.0              | 28.0              |
| storeDataOnDevicesEnabled       | Boolean | Specifies whether the Salesforce for Android and Salesforce for iOS can use secure, persistent storage on mobile devices to cache data.                                                                                                                     | Small, 30.0              | 30.0              |
| trendingTopics                  | Boolean | Specifies whether trending topics are enabled.                                                                                                                                                                                                              | Small, 29.0              | 24.0              |
| userNavItemsEnabled             | Boolean | Specifies whether users can customize the navigation bar in Lightning.                                                                                                                                                                                      | Small, 41.0              | 41.0              |
| useStartDateAsFiscalYear        | Boolean | Specifies whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year. For example, if the fiscal year begins in November 2025, but is referred to as fiscal year 2026, the value is <code>false</code> . | Small, 63.0              | 63.0              |
| viralInvitesAllowed             | Boolean | Specifies whether existing Chatter users can invite people in their company to use Chatter.                                                                                                                                                                 | Small, 29.0              | 24.0              |
| wave                            | Boolean | Specifies whether CRM Analytics is enabled.                                                                                                                                                                                                                 | Small, 36.0              | 36.0              |

| feedElements          | <a href="#">Feed Element Page</a> | Page of feed elements for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .                                                                                                                                                                                                                                                                                                                                                             | Small, 40.0              | 40.0              |
| feedElementsUrl       | String                            | URL to feed elements.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Small, 31.0              | 31.0              |
| feedItemsUrl          | String                            | URL to feed items.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 29.0              | 23.0–31.0         |
| isModifiedUrl         | String                            | A <a href="#">News Feed Is-Modified</a> resource with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if feed is not a news feed.<br><br> <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants. | Small, 29.0              | 23.0              |
| pinnedFeedElementsUrl | String                            | URL to pinned feed items.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Small, 41.0              | 41.0              |
| redirectedFeedFilter  | String                            | Filter for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .                                                                                                                                                                                                                                                                                                                                                                            | Small, 42.0              | 42.0              |
| redirectedFeedSort    | String                            | Sort order for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .                                                                                                                                                                                                                                                                                                                                                                        | Small, 42.0              | 42.0              |
| redirectedFeedType    | String                            | Specifies which feed is returned if <code>pageSize</code> is specified. Otherwise, <code>null</code> .                                                                                                                                                                                                                                                                                                                                                                       | Small, 40.0              | 40.0              |
| respectsMute          | Boolean                           | Indicates whether the feed respects the mute feature. If <code>true</code> , the feed shows the ability to mute or unmute each element, depending on the value of <code>isMutedByMe</code> ; <code>null</code> if the mute feature is disabled for the organization.                                                                                                                                                                                                         | Small, 35.0              | 35.0              |

## Feed Directory

Feed directory.

| Property  | Type                                  | Description                                                                 | Filter Group and Version | Available Version |
|-----------|---------------------------------------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| favorites | <a href="#">Favorite[]</a>            | Collection of favorites that the context user has saved.                    | Small, 29.0              | 24.0              |
| feeds     | <a href="#">Feed Directory Item[]</a> | Collection of feed directory items that the context user is allowed to view | Small, 29.0              | 23.0              |

## Feed Directory Item

The definition of a feed.

| Property        | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |

|          |        | <p>The moderation feed is available only to users with Moderate Experiences Feeds permissions.</p> <ul style="list-style-type: none"> <li>• <b>Mute</b>—Contains all feed items that the context user muted.</li> <li>• <b>News</b>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</li> <li>• <b>PendingReview</b>—Contains all feed items and comments that are pending review.</li> <li>• <b>People</b>—Contains all feed items posted by all people the context user follows.</li> <li>• <b>Record</b>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> <li>• <b>Streams</b>—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records,</li> <li>• <b>To</b>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li>• <b>Topics</b>—Contains all feed items that include the specified topic.</li> <li>• <b>UserProfile</b>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul> |                          |                   |
| feedUrl  | String | <p>URL to the resource of a specific feed. For example:</p> <pre>/services/data/v65.0/chatter/feeds/files/me</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Small, 29.0              | 23.0              |

| Property  | Type   | Description                                                                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| keyPrefix | String | For filter feeds, this value is the key prefix associated with the object type used to filter this feed. All feed items in this feed have a parent whose object type matches this key prefix value. For non-filter feeds, this value is <code>null</code> .<br><br>A <i>key prefix</i> is the first three characters of a record ID, which specifies the object type. | Big, 30.0                | 30.0              |
| label     | String | Name of the feed, such as, Groups, People, Company, and so on                                                                                                                                                                                                                                                                                                         | Small, 29.0              | 23.0              |

## Feed Element Capabilities

A container for all capabilities that can be included with a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

| Property Name     | Type                                                                                                | Description                                                                                                       | Filter Group and Version | Available Version |
|-------------------|-----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| approval          | <a href="#">Approval Capability</a>                                                                 | If a feed element has this capability, it includes information about an approval.                                 | Small, 32.0              | 32.0              |
| associatedActions | <a href="#">Associated Actions Capability</a>                                                       | If a feed element has this capability, it has platform actions associated with it.                                | Small, 31.0              | 31.0              |
| banner            | <a href="#">Banner Capability</a>                                                                   | If this feed element has this capability, it has a banner motif and style.                                        | Small, 31.0              | 31.0              |
| bookmarks         | <a href="#">Bookmarks Capability</a>                                                                | If a feed element has this capability, the context user can bookmark it.                                          | Small, 31.0              | 31.0              |
| bundle            | <a href="#">Generic Bundle Capability</a><br>or<br><a href="#">Tracked Change Bundle Capability</a> | If a feed element has this capability, the feed element may be a group of other feed elements condensed into one. | Small, 31.0              | 31.0              |

| Property Name              | Type                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|----------------------------|---------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| callCollaboration          | <a href="#">Call Collaboration Capability</a>           | If a feed element has this capability, it has a recording comment.                                                                                                                                                                                                                                                                                                                                | Small, 51.0              | 51.0              |
| canvas                     | <a href="#">Canvas Capability</a>                       | If a feed element has this capability, it renders a canvas app.                                                                                                                                                                                                                                                                                                                                   | Small, 32.0              | 32.0              |
| caseComment                | <a href="#">Case Comment Capability</a>                 | If a feed element has this capability, it has a case comment on the case feed.                                                                                                                                                                                                                                                                                                                    | Small, 32.0              | 32.0              |
| chatterLikes               | <a href="#">Chatter Likes Capability</a>                | If a feed element has this capability, the context user can like it. Exposes information about existing likes.                                                                                                                                                                                                                                                                                    | Small, 31.0              | 31.0              |
| close                      | <a href="#">Close Capability</a>                        | If a feed element has this capability, users with permission can close it.                                                                                                                                                                                                                                                                                                                        | Small, 43.0              | 43.0              |
| comments                   | <a href="#">Comments Capability</a>                     | If a feed element or comment has this capability, the context user can add a comment.                                                                                                                                                                                                                                                                                                             | Small, 31.0              | 31.0              |
| content                    | <a href="#">Content Capability</a>                      | <p>If a comment has this capability, it has a file attachment.</p> <p>Most Content Capability properties are null if the content has been deleted from the feed element or if the access has changed to private.</p> <p> <b>Important:</b> In version 36.0 and later, use the <code>files</code> property.</p> | Small, 32.0              | 32.0–35.0         |
| dashboardComponentSnapshot | <a href="#">Dashboard Component Snapshot Capability</a> | If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.                                                                                                                                                                                                                                  | Small, 32.0              | 32.0              |
| directMessage              | <a href="#">Direct Message Capability</a>               | If a feed element has this capability, it's a direct message.                                                                                                                                                                                                                                                                                                                                     | Small, 39.0              | 39.0              |
| edit                       | <a href="#">Edit Capability</a>                         | If a feed element has this capability, users who have permission can edit it.                                                                                                                                                                                                                                                                                                                     | Small, 34.0              | 34.0              |
| emailMessage               | <a href="#">Email Message Capability</a>                | If a feed element has this capability, it has an email message from a case.                                                                                                                                                                                                                                                                                                                       | Small, 32.0              | 32.0              |
| enhancedLink               | <a href="#">Enhanced Link Capability</a>                | If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.                                                                                                                                                                                                                                                          | Small, 32.0              | 32.0              |
| extensions                 | <a href="#">Extensions Capability</a>                   | If a feed element has this capability, it has one or more extension attachments.                                                                                                                                                                                                                                                                                                                  | Small, 40.0              | 40.0              |

| Property Name      | Type                                                | Description                                                                                                                                                                                 | Filter Group and Version | Available Version |
|--------------------|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| feedEntityShare    | <a href="#">Feed Entity Share Capability</a>        | If a feed element or comment has this capability, a feed entity is shared with it.                                                                                                          | Small, 39.0              | 39.0              |
| files              | <a href="#">Files Capability</a>                    | If a feed element has this capability, it has one or more file attachments.                                                                                                                 | Small, 36.0              | 36.0              |
| interactions       | <a href="#">Interactions Capability</a>             | If a feed element has this capability, it has information about user interactions.                                                                                                          | Small, 37.0              | 37.0              |
| link               | <a href="#">Link Capability</a>                     | If a feed element has this capability, it has a link.                                                                                                                                       | Small, 32.0              | 32.0              |
| mediaReferences    | <a href="#">Media Reference Capability</a>          | If a feed element has this capability, it has one or more media references.                                                                                                                 | Small, 41.0              | 41.0              |
| moderation         | <a href="#">Moderation Capability</a>               | If a feed element has this capability, users in the Experience Cloud site can flag the feed element for moderation. This response body also includes information about the flagged content. | Small, 31.0              | 31.0              |
| mute               | <a href="#">Mute Capability</a>                     | If a feed element has this capability, users can mute it.                                                                                                                                   | Small, 35.0              | 35.0              |
| origin             | <a href="#">Origin Capability</a>                   | If a feed element has this capability, it was created by a feed action.                                                                                                                     | Small, 33.0              | 33.0              |
| pin                | <a href="#">Pin Capability</a>                      | If a feed element has this capability, users who have permission can pin it to a feed.                                                                                                      | Small, 41.0              | 41.0              |
| poll               | <a href="#">Poll Capability</a>                     | If a feed element has this capability, the feed element can include a poll for voting.                                                                                                      | Small, 31.0              | 31.0              |
| questionAndAnswers | <a href="#">Question and And Answers Capability</a> | If a feed element has this capability, it has a question and comments on the feed element are answers to the question.                                                                      | Small, 31.0              | 31.0              |
| readBy             | <a href="#">Read By Capability</a>                  | If a feed element has this capability, the context user can mark it as read.                                                                                                                | Small, 40.0              | 40.0              |
| recommendations    | <a href="#">Recommendations Capability</a>          | If a feed element has this capability, it has a recommendation.                                                                                                                             | Small, 32.0              | 32.0              |
| recordSnapshot     | <a href="#">Record Snapshot Capability</a>          | If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.                                                                 | Small, 32.0              | 32.0              |
| socialPost         | <a href="#">Social Post Capability</a>              | If a feed element has this capability, it can interact with a social post on a social network.                                                                                              | Small, 36.0              | 36.0              |

| Property Name  | Type                                       | Description                                                                                                                          | Filter Group and Version | Available Version |
|----------------|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| status         | <a href="#">Status Capability</a>          | If a feed post or comment has this capability, it has a status that determines its visibility.                                       | Small, 37.0              | 37.0              |
| topics         | <a href="#">Topics Capability</a>          | If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations. | Small, 31.0              | 31.0              |
| trackedChanges | <a href="#">Tracked Changes Capability</a> | If a feed element has this capability, it contains all changes to a record for a single tracked change event.                        | Small, 32.0              | 32.0              |
| upDownVote     | <a href="#">Up Down Vote Capability</a>    | If a feed post or comment has this capability, users can upvote or downvote it.                                                      | Small, 41.0              | 41.0              |

## Feed Element Page

Container of feed elements with paginated results.

| Property Name    | Type   | Description                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageToken | String | Token identifying the current page.                                                                                                                                                                                   | Medium, 37.0             | 37.0              |
| currentPageUrl   | String | Connect REST API URL identifying the current page.                                                                                                                                                                    | Medium, 31.0             | 31.0              |
| elements         |        | Collection of feed elements. A feed element can be any of these: <ul style="list-style-type: none"><li>• <a href="#">Generic Feed Element</a></li><li>• <a href="#">Feed Item</a></li></ul>                           | Small, 31.0              | 31.0              |
| isModifiedToken  | String | An opaque polling token that describes when a news feed was last modified. Use this as the value in the <i>since</i> request parameter of the <code>/chatter/feeds/news/me/feed-elements/is-modified</code> resource. | Medium, 31.0             | 31.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |        |  <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.                                                                      |                          |                   |
| isModifiedUrl | String | Connect REST API URL with a <i>since</i> request parameter that contains an opaque token that describes when the feed was last modified. Returns <i>null</i> if the feed isn't a news feed. Use this URL to poll a news feed for updates.                                                                 | Medium, 31.0             | 31.0              |
|               |        |  <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.                                                                      |                          |                   |
| nextPageUrl   | String | Connect REST API URL identifying the next page, or <i>null</i> if there isn't a next page.                                                                                                                                                                                                                | Small, 31.0              | 31.0              |
| updatesToken  | String | Token to use in an <i>updatedSince</i> parameter, or <i>null</i> if not available. An opaque polling token that describes when a news feed was last modified. Use this token as the value in the <i>updatedSince</i> request parameter of the <code>/chatter/feeds/news/me/feed-elements</code> resource. | Big, 31.0                | 31.0              |
| updatesUrl    | String | A resource with the feed elements updated since the feed was refreshed. Value is <i>null</i> if the feed doesn't support updates polling.                                                                                                                                                                 | Big, 31.0                | 31.0              |

## Feed Enabled Entity Summary

An entity that can have feeds associated with it.

| Property Name | Type                  | Description                                                  | Filter Group and Version | Available Version |
|---------------|-----------------------|--------------------------------------------------------------|--------------------------|-------------------|
| id            | String                | The 18-character ID of the record.                           | Small, 39.0              | 39.0              |
| motif         | <a href="#">Motif</a> | Small, medium, and large icons indicating the record's type. | Small, 39.0              | 39.0              |
| name          | String                | The localized name of the record.                            | Small, 39.0              | 39.0              |
| type          | String                | The type of the record.                                      | Small, 39.0              | 39.0              |
| url           | String                | URL to the record.                                           | Small, 39.0              | 39.0              |

## Feed Entity Is Editable

Indicates whether the context user can edit a feed element or comment.

| Property Name              | Type    | Description                                                                                                                        | Filter Group and Version | Available Version |
|----------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| areAttachmentsEditableByMe | Boolean | <code>true</code> if the context user can add and remove attachments on the feed element or comment, <code>false</code> otherwise. | Small, 36.0              | 36.0              |
| feedEntityUrl              | String  | URL of the feed element or comment.                                                                                                | Small, 34.0              | 34.0              |
| isEditableByMe             | Boolean | <code>true</code> if the context user can edit the feed element or comment, <code>false</code> otherwise.                          | Small, 34.0              | 34.0              |

## Feed Entity Not Available Summary

A summary when the feed entity isn't available.

| Property Name | Type                                                                                                                                                                                           | Description | Filter Group and Version | Available Version |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------------|-------------------|
| actor         | One of these response bodies: <ul style="list-style-type: none"><li><a href="#">Record Summary</a></li><li><a href="#">User Summary</a></li><li><a href="#">Unauthenticated User</a></li></ul> | null        | Small, 39.0              | 39.0              |
| body          | <a href="#">Feed Item Body</a>                                                                                                                                                                 | null        | Small, 39.0              | 39.0              |

| Property Name        | Type                                                                                                                                                                                                                              | Description                                                                                                   | Filter Group and Version | Available Version |

| feedElementType           | String                         | Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element. One of these values: <ul style="list-style-type: none"> <li>• <code>Bundle</code>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>FeedItem</code>—A feed item has a single parent and is scoped to oneExperience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>Recommendation</code>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul> | Small, 31.0              | 31.0              |
| hasVerifiedComment        | Boolean                        | <code>true</code> if the feed item has a verified comment, otherwise <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 41.0              | 41.0              |
| header                    | <a href="#">Feed Item Body</a> | The header is the title of the post. This property contains renderable plain text for all the segments of the message. If a client doesn't know how to render a feed element type, it should render this text.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Medium, 31.0             | 31.0              |

| isEntity Available    | Boolean                                                                                                                                                                                                                   | Specifies whether the entity is available. If <code>false</code> , either the user doesn't have access to the entity or the entity was deleted.                                                                                      | Small, 39.0              | 39.0              |
| modifiedDate          | String                                                                                                                                                                                                                    | When the feed item was modified in the form of an ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                       | Small, 39.0              | 39.0              |
| originalFeedItem      | <a href="#">Reference</a>                                                                                                                                                                                                 | Reference to the original feed item if this feed item is a shared feed item; otherwise, <code>null</code> .                                                                                                                          | Small, 39.0              | 39.0              |
| originalFeedItemActor | One of these response bodies: <ul style="list-style-type: none"> <li><a href="#">Record Summary</a></li> <li><a href="#">User Summary</a></li> <li><a href="#">Unauthenticated User</a></li> </ul>                        | If this feed item is a shared feed item, information about the original poster of the feed item; otherwise, <code>null</code> .                                                                                                      | Medium, 39.0             | 39.0              |
| parent                | One of these response bodies: <ul style="list-style-type: none"> <li><a href="#">File Summary</a></li> <li><a href="#">Group</a></li> <li><a href="#">Record Summary</a></li> <li><a href="#">User Summary</a></li> </ul> | Parent of the feed entity.                                                                                                                                                                                                           | Medium, 39.0             | 39.0              |
| photoUrl              | String                                                                                                                                                                                                                    | URL of the photo associated with the feed item.                                                                                                                                                                                      | Medium, 39.0             | 39.0              |
| relativeCreatedDate   | String                                                                                                                                                                                                                    | Relative created date, for example, "2h ago."                                                                                                                                                                                        | Small, 39.0              | 39.0              |
| url                   | String                                                                                                                                                                                                                    | URL to the feed entity.                                                                                                                                                                                                              | Small, 39.0              | 39.0              |
| visibility            | String                                                                                                                                                                                                                    | Specifies who can see a feed item. <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul> | Small, 39.0              | 39.0              |

## Feed Modified Info

Feed modified information.

 **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

| Property                     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isModified</code>      | Boolean | <code>true</code> if a news feed and has been modified since the last time it was polled, <code>false</code> otherwise. Returns <code>null</code> if the feed is not a news feed.                                                                                                                                                                                           | Small, 29.0              | 23.0              |
| <code>isModifiedToken</code> | String  | An opaque polling token that describes when a news feed was last modified. Use this value as the <i>since</i> request parameter of the <a href="#">News Feed Is-Modified</a> resource.                                                                                                                                                                                      | Small, 29.0              | 27.0              |
| <code>nextPollUrl</code>     | String  | A <a href="#">News Feed Is-Modified</a> resource with a <i>since</i> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if feed is not a news feed. Make a request to this resource after making a request to the <code>isModifiedUrl</code> resource in the Feed or Feed Item Page response bodies. | Small, 29.0              | 23.0              |

## Feed Poll Choice

Feed poll choice.

| Property                    | Type    | Description                                                                                                                                                                | Filter Group and Version | Available Version |
|-----------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>id</code>             | String  | 18-character ID of the poll choice                                                                                                                                         | Small, 29.0              | 26.0              |
| <code>position</code>       | Integer | The location in the poll where this poll choice exists. The first poll choice starts at 1.                                                                                 | Small, 29.0              | 26.0              |
| <code>text</code>           | String  | Label text associated with the poll choice                                                                                                                                 | Small, 29.0              | 26.0              |
| <code>voteCount</code>      | Integer | Total number of votes for this poll choice                                                                                                                                 | Small, 29.0              | 26.0              |
| <code>voteCountRatio</code> | Double  | The ratio of total number of votes for this poll choice to all votes cast in the poll. Multiply the ratio by 100 to get the percentage of votes cast for this poll choice. | Small, 29.0              | 26.0              |

## File Preview Collection

A collection of file previews.

| Property Name | Type                            | Description                               | Filter Group and Version | Available Version |
|---------------|---------------------------------|-------------------------------------------|--------------------------|-------------------|
| fileId        | String                          | ID of the file.                           | Small, 35.0              | 35.0              |
| previews      | <a href="#">File Preview</a> [] | Previews supported for the file.          | Small, 35.0              | 35.0              |
| url           | String                          | URL to the current page of file previews. | Medium, 35.0             | 35.0              |
| versionNumber | String                          | Version number of the file.               | Medium, 40.0             | 40.0              |

## File Preview URL

The URL to a file preview.

| Property Name | Type    | Description                                                                 | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| pageNumber    | Integer | Preview page number starting from zero, or <code>null</code> for PDF files. | Small, 35.0              | 35.0              |
| previewUrl    | String  | File preview URL.                                                           | Small, 35.0              | 35.0              |

## File Shares Page

Files share page.

| Property        | Type                            | Description                              | Filter Group and Version | Available Version |
|-----------------|---------------------------------|------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                          | URL to the current page of file shares.  | Medium, 29.0             | 24.0              |
| linkShare       | <a href="#">File Share Link</a> | URL to the file share link.              | Small, 30.0              | 30.0              |
| shares          | <a href="#">File Shares[]</a>   | Collection of one or more file shares.   | Small, 29.0              | 24.0              |
| nextPageUrl     | String                          | URL to the next page of file shares.     | Small, 29.0              | 24.0              |
| previousPageUrl | String                          | URL to the previous page of file shares. | Medium, 29.0             | 24.0              |

## File Summary

Description of a file.

For all rendition properties, note the following: For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.

| Property             | Type                                     | Description                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|----------------------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| checksum             | String                                   | MD5 checksum for the file.                                                                                                                                                                                                                    | Big, 29.0                | 26.0              |
| contentSize          | Integer                                  | Size of the file in bytes.                                                                                                                                                                                                                    | Small, 29.0              | 24.0              |
| contentHubRepository | <a href="#">Files Connect Repository</a> | External data source associated with this file, or <code>null</code> if it doesn't point to an external file.                                                                                                                                 | Small, 32.0              | 32.0              |
| contentModifiedDate  | String                                   | ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. File-specific modified date, which is updated only for direct file operations, such as rename. Modifications to the file from outside of Salesforce can update this date. | Small, 32.0              | 32.0              |
| contentUrl           | String                                   | If the file is a link, returns the URL, otherwise the string <code>null</code> .                                                                                                                                                              | Small, 29.0              | 24.0              |
| contentVersionId     | String                                   | ID of the content version.                                                                                                                                                                                                                    | Small, 62.0              | 62.0              |
| createdDate          | String                                   | ISO 8601 date string when the file was created.                                                                                                                                                                                               | Small, 41.0              | 41.0              |
| description          | String                                   | Description of the file.                                                                                                                                                                                                                      | Medium, 29.0             | 24.0              |
| downloadUrl          | String                                   | URL to the file.                                                                                                                                                                                                                              | Small, 29.0              | 26.0              |
| externalDocumentUrl  | String                                   | External URL this file points to, or <code>null</code> if it doesn't point to an external file.                                                                                                                                               | Small, 32.0              | 32.0              |

| Property                          | Type                                                 | Description                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|-----------------------------------|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| externalFilePermissionInformation | <a href="#">External File Permission Information</a> | External file permission information, such as available groups, available permission types, and current sharing status, or <code>null</code> for non-external files or when <code>includeExternalFilePermissionsInfo</code> is <code>false</code> .         | Big, 35.0                | 35.0              |
| flashRenditionStatus              | String                                               | Specifies if a flash preview version of the file has been rendered.<br><br> <b>Note:</b> Flash renditions were retired on July 16, 2021.                                   | Big, 29.0                | 24.0              |

| Property             | Type                         | Description                                                                                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|----------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| origin               | String                       | Specifies the file source. Valid values are: <ul style="list-style-type: none"> <li>Chatter—file came from Chatter</li> <li>Content—file came from content</li> <li>FileField—file came from a record or other form</li> </ul>                                                 | Big, 29.0                | 24.0              |
| owner                | <a href="#">User Summary</a> | Owner of the file.                                                                                                                                                                                                                                                             | Small, 29.0              | 24.0              |
| parentFolder         | <a href="#">Reference</a>    | Reference to the parent folder.                                                                                                                                                                                                                                                | Small, 29.0              | 28.0              |
| pdfRenditionStatus   | String                       | Specifies if a PDF preview version of the file has been rendered.                                                                                                                                                                                                              | Big, 29.0                | 24.0              |
| publishStatus        | String                       | Publish status of the file. One of these values: <ul style="list-style-type: none"> <li>PendingAccess—File is pending publishing.</li> <li>PrivateAccess—File is private.</li> <li>PublicAccess—File is public.</li> </ul>                                                     | Small, 29.0              | 29.0              |
| renditionUrl         | String                       | URL to the rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.                     | Medium, 29.0             | 26.0              |
| renditionUrl240By180 | String                       | URL to the 240px by 180px rendition for the file, if available. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded. | Medium, 29.0             | 29.0              |
| renditionUrl720By480 | String                       | URL to the 720px by 480px rendition for the file, if available. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded. | Medium, 29.0             | 29.0              |
| repositoryFileId     | String                       | ID of the file in the external repository, or <code>null</code> if the file isn't external.                                                                                                                                                                                    | Small, 36.0              | 36.0              |
| repositoryFileUrl    | String                       | URL to the Connect REST API resource giving access to the external repository file properties, or <code>null</code> if this file doesn't point to an external file.                                                                                                            | Small, 32.0              | 32.0              |
| sharingOption        | String                       | Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>                                                                                   | Medium, 35.0             | 35.0              |

| Property                     | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| sharingPrivacy               | String | Sharing privacy of a file. Values are: <ul style="list-style-type: none"> <li>None—File is visible to anyone with record access.</li> <li>PrivateOnRecords—File is private on records.</li> </ul>                                                                                                                                                                                                                                                                               | Medium, 41.0             | 41.0              |
| sharingRole                  | String | Sharing role of the file. One of these values: <ul style="list-style-type: none"> <li>Admin—Owner permission, but doesn't own the file.</li> <li>Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file.</li> <li>Owner—Collaborator permission, and can make a file private, and delete a file.</li> <li>Viewer—Can view, download, and share a file.</li> <li>WorkspaceManaged—Permission controlled by the library.</li> </ul> | Medium, 29.0             | 29.0              |
| systemModstamp               | String | ISO 8601 date string indicating when a user or any automated system process, such as a trigger, updated the file.                                                                                                                                                                                                                                                                                                                                                               | Small, 41.0              | 41.0              |
| textPreview                  | String | Text preview of the file if available; null otherwise.                                                                                                                                                                                                                                                                                                                                                                                                                          | Big, 30.0                | 30.0              |
| thumb120By90RenditionStatus  | String | Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>                                                                                                                                        | Small, 29.0              | 24.0              |
| thumb240By180RenditionStatus | String | Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>                                                                                                                                       | Small, 29.0              | 24.0              |
| thumb720By480RenditionStatus | String | Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> </ul>                                                                                                                                                                                              | Small, 29.0              | 24.0              |

| Property      | Type   | Description                                                                                     | Filter Group and Version | Available Version |

## File Summary Page

File summary page.

| Property        | Type                           | Description                        | Filter Group and Version | Available Version |
|-----------------|--------------------------------|------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                         | URL to the current page of files.  | Medium, 29.0             | 24.0              |
| files           | <a href="#">File Summary[]</a> | Collection of one or more files.   | Small, 29.0              | 24.0              |
| nextPageUrl     | String                         | URL to the next page of files.     | Small, 29.0              | 24.0              |
| previousPageUrl | String                         | URL to the previous page of files. | Medium, 29.0             | 24.0              |

## File Upload Config

File upload config.

| Property Name            | Type     | Description                                                                                                       | Filter Group and Version | Available Version |
|--------------------------|----------|-------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| allowedFileExtensions    | String[] | File extensions that are allowed for upload.                                                                      | Small, 64.0              | 64.0              |
| hasCustomRecordTypes     | Boolean  | Specifies whether the ContentVersion has custom record types ( <code>true</code> ) or not ( <code>false</code> ). | Small, 62.0              | 62.0              |
| maxFileAttachmentsOnFeed | Integer  | Maximum number of file attachments on the feed.                                                                   | Small, 62.0              | 62.0              |
| maxFileSize              | Integer  | Maximum file size for upload.                                                                                     | Small, 64.0              | 64.0              |

| Property Name | Type   | Description                                    | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------|--------------------------|-------------------|
| token         | String | CSRF token that authenticates the file upload. | Small, 62.0              | 62.0              |
| uploadUrl     | String | URL to the file upload.                        | Small, 62.0              | 62.0              |

## Files Connect Allowed Item Type Collection

The item types allowed to be created in the repository folder.

| Property Name    | Type                                              | Description                                                            | Filter Group and Version | Available Version |
|------------------|---------------------------------------------------|------------------------------------------------------------------------|--------------------------|-------------------|
| allowedItemTypes | <a href="#">Files Connect Item Type Summary[]</a> | Collection of item types that can be created in the repository folder. | Small, 35.0              | 35.0              |

## Files Connect Field Definition

Field definition for the item type.

| Property Name | Type    | Description                                                  | Filter Group and Version | Available Version |
|---------------|---------|--------------------------------------------------------------|--------------------------|-------------------|
| displayName   | String  | Label or caption for the field.                              | Small, 35.0              | 35.0              |
| isMandatory   | Boolean | Specifies whether this field is mandatory for the item type. | Small, 35.0              | 35.0              |
| maxLength     | Integer | The maximum length of the value of the field.                | Small, 35.0              | 35.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name          | String | Name of the field.                                                                                                                                                                                                                                                             | Small, 35.0              | 35.0              |
| type          | String | Data type of the value of the field. Values are: <ul style="list-style-type: none"><li>• BooleanType</li><li>• DateTimeType</li><li>• DecimalType</li><li>• HtmlType</li><li>• IdType</li><li>• IntegerType</li><li>• StringType</li><li>• UriType</li><li>• XmlType</li></ul> | Small, 35.0              | 35.0              |

| id                 | String                                            | 18-character ID of the external data source.                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 32.0              | 32.0              |
| label              | String                                            | Repository label.                                                                                                                                                                                                                                                                                                                                                                                                                             | Small, 32.0              | 32.0              |
| motif              | <a href="#">Motif</a>                             | The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color. | Small, 32.0              | 32.0              |
| mySubscription     | <a href="#">Reference</a>                         | If the context user is following this record, information about the subscription; otherwise null.                                                                                                                                                                                                                                                                                                                                             | Medium, 32.0             | 32.0              |
| name               | String                                            | Repository name.                                                                                                                                                                                                                                                                                                                                                                                                                              | Small, 32.0              | 32.0              |
| providerType       | <a href="#">Files Connect Provider Type</a>       | Repository provider type.                                                                                                                                                                                                                                                                                                                                                                                                                     | Small, 32.0              | 32.0              |
| rootFolderItemsUrl | String                                            | URL to the repository root folder items, or null if the repository does not support browsing.                                                                                                                                                                                                                                                                                                                                                 | Small, 32.0              | 32.0              |
| type               | String                                            | Type of record, ContentHubRepository.                                                                                                                                                                                                                                                                                                                                                                                                         | Small, 32.0              | 32.0              |
| url                | String                                            | Connect REST API resource URL to the Files Connect repository.                                                                                                                                                                                                                                                                                                                                                                                | Small, 32.0              | 32.0              |

## Files Connect Repository Authentication

Authentication information for a repository.

| Property Name       | Type    | Description                                                                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| authFlowUrl         | String  | Depends on the authProtocol. <ul style="list-style-type: none"> <li>NoAuthentication—<code>null</code>.</li> <li>OAuth—URL to start the OAuth flow.</li> <li>Password—URL to the authentication settings for external systems.</li> </ul>                                                                                  | Small, 40.0              | 40.0              |
| authProtocol        | String  | Authentication protocol used for the repository. Values are: <ul style="list-style-type: none"> <li>NoAuthentication—Repository doesn't require authentication.</li> <li>OAuth—Repository uses OAuth authentication protocol.</li> <li>Password—Repository uses user name and password authentication protocol.</li> </ul> | Small, 40.0              | 40.0              |
| userHasAuthSettings | Boolean | Specifies whether the user has credentials or the administrator configured the external data source to use the same set of credentials for every user ( <code>true</code> ). Otherwise, <code>false</code> .                                                                                                               | Small, 40.0              | 40.0              |

## Files Connect Repository Collection

A collection of Files Connect repositories.

| Property Name   | Type                                        | Description                                                                                              | Filter Group and Version | Available Version |
|-----------------|---------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                                      | Connect REST API URL identifying the current page.                                                       | Medium, 32.0             | 32.0              |
| nextPageUrl     | String                                      | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.         | Small, 32.0              | 32.0              |
| previousPageUrl | String                                      | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page. | Medium, 32.0             | 32.0              |
| repositories    | <a href="#">Files Connect Repository</a> [] | Collection of repositories.                                                                              | Small, 32.0              | 32.0              |

## Files Connect Repository Features

Information about the features of a Files Connect repository.

| Property               | Type    | Description                                                                                                             | Filter Group and Version | Available Version |
|------------------------|---------|-------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>canBrowse</code> | Boolean | Specifies whether the repository's folder hierarchy can be browsed ( <code>true</code> ) or not ( <code>false</code> ). | Small, 32.0              | 32.0              |
| <code>canSearch</code> | Boolean | Specifies whether the repository can be searched ( <code>true</code> ) or not ( <code>false</code> ).                   | Small, 32.0              | 32.0              |

## Find Routes With Fewest Splits Output

A list of inventory location combinations that can fulfill an order without exceeding the maximum number of shipments.

| Property Name   | Type                                        | Description                                                                                                | Filter Group and Version | Available Version |
|-----------------|---------------------------------------------|------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors          | <a href="#">Error Response Output[]</a>     | Any errors that were returned.                                                                             | Big, 51.0                | 51.0              |
| success         | Boolean                                     | Indicates whether the transaction was successful.                                                          | Big, 51.0                | 51.0              |
| targetLocations | <a href="#">Available Location Output[]</a> | Each element of the list is a set of inventory locations that together can fulfill the order being routed. | Big, 51.0                | 51.0              |

## Find Routes With Fewest Splits Using OCI Output

A list of order fulfillment routes with inventory availability information.

| Property Name | Type                                                                   | Description                                                                 | Filter Group and Version | Available Version |
|---------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a>                                | Any errors that were returned.                                              | Big, 54.0                | 54.0              |
| results       | <a href="#">Find Routes With Fewest Splits With Inventory Output[]</a> | Each element of the list is the response for one element of the input list. | Big, 54.0                | 54.0              |
| success       | Boolean                                                                | Indicates whether the transaction was successful.                           | Big, 54.0                | 54.0              |

## Find Routes With Fewest Splits With Inventory Output

Sets of inventory locations that can combine to fulfill an order, with availability data for those locations.

| Property Name | Type                                                  | Description                                                                               | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------------|-------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a>               | Any errors that were returned.                                                            | Big, 54.0                | 54.0              |
| inventory     | <a href="#">OCI Get Inventory Availability Output</a> | Inventory availability data for the location groups and locations specified in the input. | Big, 54.0                | 54.0              |
| success       | Boolean                                               | Indicates whether the transaction was successful.                                         | Big, 54.0                | 54.0              |

| Property Name   | Type                                         | Description                                                                                  | Filter Group and Version | Available Version |
|-----------------|----------------------------------------------|----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| targetLocations | <a href="#">Available Location Output</a> [] | Each entry in the list is a set of inventory locations that can combine to fulfill an order. | Big, 54.0                | 54.0              |

## Flat Feed

Flat feed.

| Property       | Type                              | Description                                | Filter Group and Version | Available Version |
|----------------|-----------------------------------|--------------------------------------------|--------------------------|-------------------|
| currentPageUrl | String                            | URL to the current page of items.          | Medium, 29.0             | 25.0–26.0         |
| items          | <a href="#">Flat Feed Item</a> [] | Collection of one or more flat feed items. | Small, 29.0              | 25.0–26.0         |
| nextPageUrl    | String                            | URL to the next page of items.             | Small, 29.0              | 25.0–26.0         |

## Flat Feed Item

Flat feed item.

| Property | Type                         | Description                                                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|----------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| item     | Depends on <code>type</code> | The flat feed item, depending on the value of <code>type</code> . Valid values are: <ul style="list-style-type: none"> <li>If <code>type</code> is <code>Comment</code>—<a href="#">Comment</a></li> <li>If <code>type</code> is <code>FeedItem</code>—<a href="#">Feed Item</a></li> </ul> | Small, 29.0              | 25.0–26.0         |
| type     | String                       | The type of item. Valid values are: <ul style="list-style-type: none"> <li><code>Comment</code></li> <li><code>FeedItem</code></li> </ul>                                                                                                                                                   | Small, 29.0              | 25.0–26.0         |

## Folder

Description of a folder.

| Property    | Type   | Description                                                      | Filter Group and Version | Available Version |
|-------------|--------|------------------------------------------------------------------|--------------------------|-------------------|
| createdDate | String | ISO 8601 date string specifying the creation date of the folder. | Small, 30.0              | 30.0              |

| Property       | Type                          | Description                                                                                                                                                                                                                                                                              | Filter Group and Version | Available Version |
|----------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| folderPaths    | <a href="#">Folder Path[]</a> | Collection of folder paths.                                                                                                                                                                                                                                                              | Medium, 40.0             | 40.0              |
| id             | String                        | 18-character ID of the folder.                                                                                                                                                                                                                                                           | Small, 30.0              | 30.0              |
| isInMyFileSync | Boolean                       | <code>true</code> if the folder and all folders in this folder are synced with Salesforce Files Sync; <code>false</code> otherwise.<br> <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018. | Small, 33.0              | 33.0              |
| modifiedDate   | String                        | ISO 8601 date string specifying the last modified date of the folder.                                                                                                                                                                                                                    | Small, 30.0              | 30.0              |
| motif          | <a href="#">Motif</a>         | Small, medium, and large icon indicating the record's type. The motif can also contain the record type's base color.                                                                                                                                                                     | Small, 30.0              | 30.0              |
| mySubscription | <a href="#">Reference</a>     | If the context user is following this record, this property contains information about the subscription; otherwise this property is <code>null</code> .                                                                                                                                  | Medium, 30.0             | 30.0              |
| name           | String                        | Folder name.                                                                                                                                                                                                                                                                             | Small, 30.0              | 30.0              |
| parentFolder   | <a href="#">Reference</a>     | Reference to the parent folder.                                                                                                                                                                                                                                                          | Small, 30.0              | 30.0              |
| path           | String                        | Path to the folder.                                                                                                                                                                                                                                                                      | Small, 30.0              | 30.0              |
| systemModstamp | String                        | ISO 8601 date string when a user or any automated system process, such as a trigger, updates the folder.                                                                                                                                                                                 | Small, 41.0              | 41.0              |
| type           | String                        | <code>Folder</code>                                                                                                                                                                                                                                                                      | Small, 30.0              | 30.0              |
| url            | String                        | Connect REST API URL to this resource.                                                                                                                                                                                                                                                   | Small, 30.0              | 30.0              |

## Folder Item Page

A paged collection of Folder Item response bodies.

| Property        | Type                           | Description                                                                                              | Filter Group and Version | Available Version |
|-----------------|--------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                         | Connect REST API URL identifying the current page.                                                       | Medium, 30.0             | 30.0              |
| items           | <a href="#">Folder Item</a> [] | A collection of folder items.                                                                            | Small, 30.0              | 30.0              |
| nextPageUrl     | String                         | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.         | Small, 30.0              | 30.0              |
| previousPageUrl | String                         | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page. | Medium, 30.0             | 30.0              |

## Folder Path

A folder path.

| Property Name | Type   | Description                                            | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------|--------------------------|-------------------|
| folderId      | String | ID of the folder.                                      | Small, 40.0              | 40.0              |
| folderName    | String | Name of the folder, or <code>null</code> for the root. | Small, 40.0              | 40.0              |

| orderSummaryId              | String                                      | (Creation failed) The input OrderSummaryId.                                                               | Big, 50.0                | 50.0              |
| referenceId                 | String                                      | The referenceId from the FulfillmentGroup input representation. Use this value to troubleshoot a failure. | Big, 50.0                | 50.0              |
| success                     | Boolean                                     | Indicates whether the transaction was successful.                                                         | Big, 50.0                | 50.0              |

## Fulfillment Order Cancel Line Items Output

Wraps the base output.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Fulfillment Order Invoice Output

ID of the created invoice.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| invoiceId     | String                                  | ID of the created invoice.                        | Big, 48.0                | 48.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Fulfillment Order Output

A list of IDs of the created FulfillmentOrders.

| Property Name       | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors              | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| fulfillmentOrderIds | String[]                                | A list of IDs of created Fulfillment Orders.      | Big, 48.0                | 48.0              |
| success             | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Gateway Log Output

Gateway log output representation.

| Property Name     | Type   | Description                                                                                                                                      | Filter Group and Version | Available Version |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| createdDate       | String | Date indicating when the gateway log was created.                                                                                                | Big, 48.0                | 48.0              |
| gatewayResultCode | String | The gateway sends result codes to show the status of a transaction as it is passed to the financial institution and then returned to the client. | Big, 48.0                | 48.0              |
| id                | String | ID of the gateway log record.                                                                                                                    | Big, 48.0                | 48.0              |
| interactionStatus | String | Gateway interaction status. Current supported values are SUCCESS, FAILED, or TIMEOUT.                                                            | Big, 48.0                | 48.0              |

## Generic Bundle Capability

If a feed element has this capability, the feed element may be a group of other feed elements condensed into one.

 **Note:** Bundled posts contain feed-tracked changes and are in record feeds only.

| Property Name | Type                              | Description                                                    | Filter Group and Version | Available Version |
|---------------|-----------------------------------|----------------------------------------------------------------|--------------------------|-------------------|
| bundleType    | String                            | Type of bundle. The value is <code>GenericBundle</code> .      | Small, 31.0              | 31.0              |
| page          | <a href="#">Feed Element Page</a> | A collection of feed elements.                                 | Small, 31.0              | 31.0              |
| totalElements | Integer                           | The total number of feed elements that this bundle aggregates. | Small, 31.0              | 31.0              |

## Get FO Capacity Values Output

Response to a request for fulfillment order capacity values for one or more locations.

| Property Name | Type                                       | Description                                                          | Filter Group and Version | Available Version |
|---------------|--------------------------------------------|----------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a>    | Any errors that were returned.                                       | Big, 55.0                | 55.0              |
| locations     | <a href="#">Location Capacity Output[]</a> | List of fulfillment order capacity values for one or more locations. | Big, 55.0                | 55.0              |
| success       | Boolean                                    | Indicates whether the transaction was successful.                    | Big, 55.0                | 55.0              |

## Global Product Import

Information about a global product import job.

| Property Name                      | Type                | Description                                           | Filter Group and Version | Available Version |
|------------------------------------|---------------------|-------------------------------------------------------|--------------------------|-------------------|
| cmsWorkspaceId                     | String              | ID of the CMS workspace.                              | Medium, 57.0             | 57.0              |
| commerceEntitlementPolicyId        | String              | ID of the entitlement policy imported to.             | Small, 53.0              | 53.0              |
| commerceEntitlementProductsCreated | Integer             | Number of entitlement products created by the import. | Small, 53.0              | 53.0              |
| contentVersionId                   | String              | ID of the .csv file that was imported.                | Small, 53.0              | 53.0              |
| endTime                            | Long                | Unix epoch timestamp when the import finished.        | Small, 53.0              | 53.0              |
| errorMessages                      | Map<String, String> | Map of .csv file record number to error message.      | Small, 53.0              | 53.0              |
| jobId                              | String              | ID of the import job.                                 | Medium, 57.0             | 57.0              |
| numberError                        | Integer             | Number of .csv records that failed to process.        | Small, 53.0              | 53.0              |
| numberSuccess                      | Integer             | Number of .csv records that processed successfully.   | Small, 53.0              | 53.0              |
| numberToProcess                    | Integer             | Number of .csv records in the data source.            | Small, 53.0              | 53.0              |
| numberWarning                      | Integer             | Number of warning messages.                           | Small, 56.0              | 56.0              |
| pricebookAliasToIdMapping          | Map<String, ID>     | Map of pricebook aliases to pricebook IDs.            | Medium, 57.0             | 57.0              |
| pricebookEntriesCreated            | Integer             | Number of pricebook entries created by the import.    | Small, 53.0              | 53.0              |

| Property Name                        | Type    | Description                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|--------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| pricebookEntries Updated             | Integer | Number of pricebook entries updated by the import.                                                                                                                                                                                     | Small, 53.0              | 53.0              |
| processTime                          | Long    | Unix epoch timestamp of how long the import process took.                                                                                                                                                                              | Small, 53.0              | 53.0              |
| productAttribute SetProducts Created | Integer | Number of product attribute set products created by the import.                                                                                                                                                                        | Small, 53.0              | 53.0              |
| productAttributes Created            | Integer | Number of product attributes created by the import.                                                                                                                                                                                    | Small, 53.0              | 53.0              |
| productAttributes Updated            | Integer | Number of product attributes updated by the import.                                                                                                                                                                                    | Small, 53.0              | 53.0              |
| productCatalog Id                    | String  | ID of the product catalog imported to.                                                                                                                                                                                                 | Small, 53.0              | 53.0              |
| productCategories Created            | Integer | Number of product categories created by the import.                                                                                                                                                                                    | Small, 53.0              | 53.0              |
| productCategory ProductsCreated      | Integer | Number of product category products created by the import.                                                                                                                                                                             | Small, 53.0              | 53.0              |

| isArchived              | Boolean                      | Specifies whether the group is archived ( <b>true</b> ) or not ( <b>false</b> ).                                                                                                                                                                          | Big, 29.0                | 29.0              |
| isAutoArchive Disabled  | Boolean                      | Specifies whether automatic archiving is disabled for the group ( <b>true</b> ) or not ( <b>false</b> ).                                                                                                                                                  | Big, 29.0                | 29.0              |
| isBroadcast             | Boolean                      | Specifies whether the group is a broadcast group ( <b>true</b> ) or not ( <b>false</b> ). In a broadcast group, only group owners and managers can post to the group.                                                                                     | Big, 36.0                | 36.0              |
| lastFeedElementPostDate | String                       | Date of the most recent feed element posted to the group.                                                                                                                                                                                                 | Big, 31.0                | 31.0              |
| lastFeedItemPostDate    | String                       | Date of the most recent feed item posted to the group. After API version 30.0, use <code>lastFeedElementPostDate</code> .                                                                                                                                 | Big, 29.0                | 24.0–30.0         |
| memberCount             | Integer                      | Total number of group members.                                                                                                                                                                                                                            | Small, 29.0              | 23.0              |
| motif                   | <a href="#">Motif</a>        | Small, medium, and large icons indicating that the object is a group. The motif can also contain the record type's base color.<br><br>The icon is not the group photo.                                                                                    | Small, 29.0              | 27.0              |
| myRole                  | String                       | Values are: <ul style="list-style-type: none"> <li>• <code>GroupOwner</code></li> <li>• <code>GroupManager</code></li> <li>• <code>NotAMember</code></li> <li>• <code>NotAMemberPrivateRequested</code></li> <li>• <code>StandardMember</code></li> </ul> | Small, 29.0              | 23.0              |
| mySubscription          | <a href="#">Reference</a>    | If the context user is a member of this group, contains information about that subscription, otherwise <code>null</code> .                                                                                                                                | Medium, 29.0             | 23.0              |
| name                    | String                       | Name of the group.                                                                                                                                                                                                                                        | Small, 29.0              | 23.0              |
| owner                   | <a href="#">User Summary</a> | Information about the owner of the group.                                                                                                                                                                                                                 | Medium, 29.0             | 24.0              |
| pendingRequests         | Integer                      | The number of pending requests to join a private group. For public groups, the value is <code>null</code> .                                                                                                                                               | Medium, 29.0             | 29.0              |
| photo                   | <a href="#">Photo</a>        | Information about the group photo.                                                                                                                                                                                                                        | Small, 29.0              | 23.0              |
| type                    | String                       | Value is <code>CollaborationGroup</code> .                                                                                                                                                                                                                | Small, 29.0              | 23.0              |
| url                     | String                       | Relative URL string to the group.                                                                                                                                                                                                                         | Small, 29.0              | 23.0              |

| Property   | Type   | Description                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| visibility | String | Values are: <ul style="list-style-type: none"><li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li><li>• <code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li><li>• <code>Unlisted</code>—Reserved for future use.</li></ul> | Small, 29.0              | 23.0              |

## Group Member Page

Group member page.

| Property          | Type                           | Description                                                                                                                      | Filter Group and Version | Available Version |
|-------------------|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl    | String                         | URL to this page of members                                                                                                      | Medium, 29.0             | 23.0              |
| members           | <a href="#">Group Member[]</a> | Collection of group members                                                                                                      | Small, 29.0              | 23.0              |
| myMembership      | <a href="#">Reference</a>      | If the context user is a member of this group, returns information about that membership, or returns <code>null</code> otherwise | Medium, 29.0             | 23.0              |
| nextPageUrl       | String                         | URL to the next page of members                                                                                                  | Small, 29.0              | 23.0              |
| previousPageUrl   | String                         | URL to the previous page of members                                                                                              | Medium, 29.0             | 23.0              |
| totalMember Count | Integer                        | Total number of group members                                                                                                    | Small, 29.0              | 23.0              |

## Group Membership Request

Group membership request.

| Property       | Type                      | Description                                                            | Filter Group and Version | Available Version |
|----------------|---------------------------|------------------------------------------------------------------------|--------------------------|-------------------|
| createdDate    | String                    | ISO 8601 date string specifying the date of the membership request.    | Big, 29.0                | 27.0              |
| id             | String                    | ID for the group membership request object.                            | Small, 29.0              | 27.0              |
| lastUpdateDate | String                    | ISO 8601 date string specifying the last time the request was updated. | Small, 29.0              | 27.0              |
| requestedGroup | <a href="#">Reference</a> | Information about the group the user is requesting to join.            | Big, 29.0                | 27.0              |

| Property        | Type                         | Description                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| responseMessage | String                       | Message to display to the user if their membership request is declined. The value of this property is used only when the value of the <code>status</code> property is <code>Declined</code> .<br><br>The maximum length is 756 characters. | Big, 29.0                | 27.0              |
| status          | String                       | Status of the request to join a private group. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Declined</li> <li>Pending</li> </ul>                                                                                   | Small, 29.0              | 27.0              |
| url             | String                       | URL to this group membership request object.                                                                                                                                                                                               | Small, 29.0              | 27.0              |
| user            | <a href="#">User Summary</a> | Information about the user requesting membership in a group.                                                                                                                                                                               | Small, 29.0              | 27.0              |

## Group Membership Request Collection

Group membership request collection.

| Property | Type                                     | Description                                            | Filter Group and Version | Available Version |
|----------|------------------------------------------|--------------------------------------------------------|--------------------------|-------------------|
| requests | <a href="#">Group Membership Request</a> | Information about all requests to join a private group | Small, 29.0              | 27.0              |
| total    | Integer                                  | The total number of requests to join a private group   | Small, 29.0              | 27.0              |

## Group Page

Page of Chatter groups.

| Property        | Type                           | Description                        | Filter Group and Version | Available Version |
|-----------------|--------------------------------|------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                         | URL to this page of groups         | Medium, 29.0             | 23.0              |
| groups          | <a href="#">Group Detail[]</a> | Collection of group details        | Small, 29.0              | 23.0              |
| nextPageUrl     | String                         | URL to the next page of groups     | Small, 29.0              | 23.0              |
| previousPageUrl | String                         | URL to the previous page of groups | Medium, 29.0             | 23.0              |

## Group Record

A record associated with a group.

| Property | Type                                                           | Description                                             | Filter Group and Version | Available Version |
|----------|----------------------------------------------------------------|---------------------------------------------------------|--------------------------|-------------------|
| id       | String                                                         | 18-character ID of the record associated with the group | Small, 33.0              | 33.0              |
| record   | <a href="#">Record Summary</a><br><a href="#">User Summary</a> | Information about the record associated with the group  | Small, 33.0              | 33.0              |
| url      | String                                                         | URL to the record associated with the group             | Small, 33.0              | 33.0              |

## Hold FO Capacity Output

Response to a request to hold fulfillment order capacity at one or more locations. Can correspond to one action call.

| Property Name                        | Type                                               | Description                                                                                    | Filter Group and Version | Available Version |
|--------------------------------------|----------------------------------------------------|------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>errors</code>                  | <a href="#">Error Response Output[]</a>            | Any errors that were returned.                                                                 | Big, 55.0                | 55.0              |
| <code>holdFOCapacityResponses</code> | <a href="#">Hold FO Capacity Response Output[]</a> | List of responses to the requests to hold fulfillment order capacity at one or more locations. | Big, 55.0                | 55.0              |
| <code>success</code>                 | Boolean                                            | Indicates whether the request was successful.                                                  | 55.0                     | 55.0              |

## Hold FO Capacity Response Output

Response to a request to hold fulfillment order capacity at one or more locations.

| Property Name                  | Type                                       | Description                                                                                   | Filter Group and Version | Available Version |
|--------------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>capacityResponses</code> | <a href="#">Capacity Response Output[]</a> | List of responses to the requests to hold fulfillment order capacity at individual locations. | Big, 55.0                | 55.0              |

## HTTP Header

An HTTP header.

| Property Name      | Type   | Description               | Filter Group and Version | Available Version |
|--------------------|--------|---------------------------|--------------------------|-------------------|
| <code>name</code>  | String | Name of the HTTP header.  | Small, 59.               | 59.0              |
| <code>value</code> | String | Value of the HTTP header. | Small, 59.               | 59                |

## Icon

Icon.

| Property | Type    | Description                                                                                  | Filter Group and Version | Available Version |
|----------|---------|----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| height   | Integer | The height of the icon, in pixels                                                            | Small, 29.0              | 27.0              |
| width    | Integer | The width of the icon, in pixels                                                             | Small, 29.0              | 27.0              |
| url      | String  | The URL of the icon. This URL is available to unauthenticated users. The URL doesn't expire. | Small, 29.0              | 27.0              |

## Influence Thresholds

Chatter influence thresholds.

| Property  | Type   | Description                                                                                                                                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name      | String | Description of this influencer category. For example: <code>Active Influencer</code>                                                                                                                                                                                                                                                                               | Small, 29.0              | 24.0              |
| threshold | Double | Number expressed as a raw percentile that defines the bottom threshold for this influencer category. For example: <code>0.25</code> defines the cutoff for the <code>Active Influencer</code> category, which means it includes users with an influence rank equal to or greater than the 25th percentile (25%) and less than the next highest category threshold. | Small, 29.0              | 24.0              |

## Insights

Insight details for a business objective, or goal.

| Property Name      | Type                                          | Description                                                                                                           | Filter Group and Version | Available Version |
|--------------------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| dashboardUrl       | String                                        | URL to the dashboard where the insight can be viewed.                                                                 | Small, 62.0              | 62.0              |
| insightSummaryText | String                                        | A localized, human-readable summary of the insight value's performance, including the change from the previous value. | Small, 62.0              | 62.0              |
| name               | String                                        | Name of the insight.                                                                                                  | Small, 62.0              | 62.0              |
| values             | <a href="#">Insight Values</a> on page 1707[] | List of insight categories.                                                                                           | Small, 62.0              | 62.0              |

## Insight Values

Insight value details for a business objective, or goal.

| Property Name | Type   | Description                                                                             | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------------------------------------------------|--------------------------|-------------------|
| contextId     | String | Salesforce record ID of the record that the insight is based on.                        | Small, 62.0              | 62.0              |
| name          | String | Name of the Salesforce record that the insight is based on.                             | Small, 62.0              | 62.0              |
| previousValue | Double | Value of the insight for the previous timeframe based on the key performance indicator. | Small, 62.0              | 62.0              |
| value         | Double | Value of the insight for the current timeframe based on the key performance indicator.  | Small, 62.0              | 62.0              |

## Interactions Capability

If a feed element has this capability, it has information about user interactions.

| Property Name | Type | Description                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| count         | Long | The number of individual views, likes, and comments on a feed post.<br><br> <b>Note:</b> This count appears in the UI under the feed post as the number of views, for example, "5 views." | Small, 37.0              | 37.0              |

## Invalid Parameter

Invalid parameter for a Commerce store checkout.

| Property Name | Type   | Description                                   | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------|--------------------------|-------------------|
| detail        | String | Detailed message about the invalid parameter. | Small, 55.0              | 55.0              |
| name          | String | Name of the invalid parameter.                | Small, 55.0              | 55.0              |

## Inventory Configuration

Inventory settings for the application context.

| Property Name          | Type                                            | Description                                                                                              | Filter Group and Version | Available Version |
|------------------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| inventoryDefaultSource | <a href="#">Inventory Default Source Output</a> | Inventory default source details.                                                                        | Small, 58.0              | 58.0              |
| isInventoryEnabled     | Boolean                                         | Indicates whether Inventory is enabled for your org ( <code>true</code> ) or not ( <code>false</code> ). | Small, 58.0              | 58.0              |

## Inventory Default Source Output

Inventory default source for an application context.

| Property Name     | Type    | Description                                    | Filter Group and Version | Available Version |
|-------------------|---------|------------------------------------------------|--------------------------|-------------------|
| inventoryCacheTTL | Integer | Inventory cache time-to-live (TTL) in seconds. | Small, 59.0              | 59.0              |

| Property Name             | Type    | Description                          | Filter Group and Version | Available Version |
|---------------------------|---------|--------------------------------------|--------------------------|-------------------|
| inventoryDimension        | String  | Inventory dimension.                 | Small, 59.0              | 59.0              |
| locationSourceId          | String  | Location source ID of the inventory. | Small, 58.0              | 58.0              |
| reservationInSeconds      | Integer | Reservation in seconds.              | Small, 58.0              | 58.0              |
| warehouseLocationSourceId | String  | Inventory location source type.      | Small, 58.0              | 58.0              |
| warehouseSourceId         | String  | Inventory source ID.                 | Small, 58.0              | 58.0              |

## Invite

An invitation.

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| email         | String | Email address of the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 39.0              | 39.0              |
| status        | String | Specifies the status of an invitation to join a group. Values are: <ul style="list-style-type: none"> <li>• <b>ActedUponUser</b>—The user was added to the group. An email was sent asking the user to visit the group.</li> <li>• <b>Invited</b>—An email was sent asking the user to sign up for the org.</li> <li>• <b>MaxedOutUsers</b>—The group has the maximum allowed members.</li> <li>• <b>MultipleError</b>—The user wasn't invited due to multiple errors.</li> <li>• <b>NoActionNeededUser</b>—The user is already a member of the group.</li> <li>• <b>NotVisibleToExternalInviter</b>—The user is not accessible to the user sending the invitation.</li> <li>• <b>Unhandled</b>—The user couldn't be added to the group for an unknown reason.</li> </ul> | Small, 39.0              | 39.0              |
| userId        | String | ID of the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 39.0              | 39.0              |

| itemReferenceType | String | Item reference type. Possible values are: <ul style="list-style-type: none"><li>• <code>Category</code></li><li>• <code>Price</code></li><li>• <code>Product</code></li><li>• <code>StandardShippingRate</code></li></ul>                                                                                                      | Small, 62.0              | 62.0              |
| name              | String | Name of the product or category.                                                                                                                                                                                                                                                                                               | Small, 62.0              | 62.0              |
| operatorType      | String | Type of operator for the item reference. Possible values are: <ul style="list-style-type: none"><li>• <code>EqualTo</code></li><li>• <code>GreaterThan</code></li><li>• <code>GreaterThanOrEqualTo</code></li><li>• <code>LessThan</code></li><li>• <code>LessThanOrEqualTo</code></li><li>• <code>NotEqualTo</code></li></ul> | Small, 62.0              | 62.0              |

| Property Name | Type   | Description                                                                                                                                    | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| value         | String | Value of the item referenced. For example, for <code>Price</code> in the <code>itemReferenceType</code> property, this would be a price value. | Small, 62.0              | 62.0              |

## Knowledge Article Version

A knowledge article version.

| Property Name      | Type   | Description                                                       | Filter Group and Version | Available Version |
|--------------------|--------|-------------------------------------------------------------------|--------------------------|-------------------|
| articleType        | String | Type of the knowledge article.                                    | Small, 36.0              | 36.0              |
| id                 | String | ID of the knowledge article version.                              | Small, 36.0              | 36.0              |
| knowledgeArticleId | String | ID of the corresponding knowledge article.                        | Small, 36.0              | 36.0              |
| lastPublishedDate  | String | Last published date of the knowledge article. Format is ISO 8601. | Small, 36.0              | 36.0              |
| summary            | String | Summary of the knowledge article contents.                        | Medium, 36.0             | 36.0              |
| title              | String | Title of the knowledge article.                                   | Small, 36.0              | 36.0              |
| urlName            | String | URL name of the knowledge article.                                | Small, 36.0              | 36.0              |

## Knowledge Article Version Collection

A collection of knowledge article versions.

| Property Name | Type                                        | Description                                 | Filter Group and Version | Available Version |
|---------------|---------------------------------------------|---------------------------------------------|--------------------------|-------------------|
| items         | <a href="#">Knowledge Article Version[]</a> | A collection of knowledge article versions. | Small, 36.0              | 36.0              |

## Knowledgeable People

User that is knowledgeable about a topic.

| Property                     | Type                         | Description                                                                                                                                                                                                                                                                                                                                                                  | Filter Group and Version | Available Version |
|------------------------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isEndorsedByMe</code>  | Boolean                      | Specifies if the knowledgeable user is endorsed for the topic by the context user, <code>true</code> if so, <code>false</code> otherwise.                                                                                                                                                                                                                                    | Small, 30.0              | 30.0              |
| <code>knowledgeableId</code> | String                       | ID of the knowledgeable record.                                                                                                                                                                                                                                                                                                                                              | Small, 30.0              | 30.0              |
| <code>numEndorsements</code> | Integer                      | Number of endorsements received by the knowledgeable user for the topic.                                                                                                                                                                                                                                                                                                     | Medium, 30.0             | 30.0              |
| <code>reasons</code>         | String                       | Reason why the user is considered knowledgeable about the topic. Values are: <ul style="list-style-type: none"><li>• <code>Influential</code>—User was mentioned in posts or in comments on posts with the topic or received likes on comments on posts with the topic.</li><li>• <code>Endorsed</code>—User received endorsement from another user for the topic.</li></ul> | Medium, 30.0             | 30.0              |
| <code>user</code>            | <a href="#">User Summary</a> | User that is knowledgeable about the topic.                                                                                                                                                                                                                                                                                                                                  | Small, 30.0              | 30.0              |

## Lightning Type Detail

Detailed information about a lightning type.

| Property Name   | Type                | Description                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|-----------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description     | String              | Description of the type from the schema.json.                                                                                                                                                                                                                              | Small, 64.0              | 64.0              |
| developerName   | String              | Developer name, or API name, of the type.                                                                                                                                                                                                                                  | Small, 64.0              | 64.0              |
| editorConfig    | Map<String, Object> | Editor configuration for the specified target.                                                                                                                                                                                                                             | Big, 64.0                | 64.0              |
| id              | String              | 18-character ID of the type. This is returned for the database-based (Custom) types only.                                                                                                                                                                                  | Small, 64.0              | 64.0              |
| namespacePrefix | String              | Namespace prefix that is associated with the type. Refer to a type using the namespacePrefix__developerName notation, or fully qualified name.                                                                                                                             | Small, 64.0              | 64.0              |
| rendererConfig  | Map<String, Object> | Renderer configuration for the specified target.                                                                                                                                                                                                                           | Big, 64.0                | 64.0              |
| schema          | Map<String, Object> | The JSON schema definition (schema.json) of the type.                                                                                                                                                                                                                      | Big, 64.0                | 64.0              |
| source          | String              | Source of the Lightning type. Values are: <ul style="list-style-type: none"> <li>Standard—Standard type provided out-of-the-box by Salesforce.</li> <li>Custom—Custom type created in the org.</li> <li>Managed—Type that was installed from a managed package.</li> </ul> | Small, 65.0              | 65.0              |
| title           | String              | Title of the type from the schema.json.                                                                                                                                                                                                                                    | Small, 64.0              | 64.0              |

## Lightning Type Summary

Summary of a lightning type.

| Property Name | Type                                | Description                                   | Filter Group and Version | Available Version |
|---------------|-------------------------------------|-----------------------------------------------|--------------------------|-------------------|
| createdBy     | <a href="#">Lightning Type User</a> | User who created the type.                    | Small, 64.0              | 64.0              |
| createdDate   | String                              | Date when the type was created.               | Small, 64.0              | 64.0              |
| description   | String                              | Description of the type from the schema.json. | Small, 64.0              | 64.0              |

| Property Name   | Type                                | Description                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|-----------------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| detailUrl       | String                              | URL to detailed information about the type.                                                                                                                                                                                                                                                       | Small, 64.0              | 64.0              |
| developerName   | String                              | Developer name, or API name, of the type.                                                                                                                                                                                                                                                         | Medium, 64.0             | 64.0              |
| id              | String                              | 18-character ID of the Type. This is returned for the database-based (Custom) types only.                                                                                                                                                                                                         | Medium, 64.0             | 64.0              |
| namespacePrefix | String                              | Namespace prefix that is associated with the type. Refer to a type using the namespacePrefix__developerName notation, or fully qualified name.                                                                                                                                                    | Medium, 64.0             | 64.0              |
| source          | String                              | Source of the Lightning type. Values are: <ul style="list-style-type: none"><li>• <b>Standard</b>—Standard type provided out-of-the-box by Salesforce.</li><li>• <b>Custom</b>—Custom type created in the org.</li><li>• <b>Managed</b>—Type that was installed from a managed package.</li></ul> | Small, 65.0              | 65.0              |
| title           | String                              | Title of the type from the schema.json.                                                                                                                                                                                                                                                           | Small, 64.0              | 64.0              |
| updatedBy       | <a href="#">Lightning Type User</a> | User who updated the type.                                                                                                                                                                                                                                                                        | Small, 64.0              | 64.0              |
| updatedAt       | String                              | Date when the type was updated.                                                                                                                                                                                                                                                                   | Small, 64.0              | 64.0              |

[Link Metadata Collection](#)

## Link Metadata Collection

Collection of link metadata.

| Property Name    | Type                            | Description                 | Filter Group and Version | Available Version |
|------------------|---------------------------------|-----------------------------|--------------------------|-------------------|
| linkMetadataList | <a href="#">Link Metadata[]</a> | List of metadata for links. | Small, 42.0              | 42.0              |

## List Current Share Collection

Current shares associated with a list.

| Property Name     | Type                                  | Description                                                      | Filter Group and Version | Available Version |
|-------------------|---------------------------------------|------------------------------------------------------------------|--------------------------|-------------------|
| currentListShares | <a href="#">List Share Category[]</a> | List of share categories that the list is currently shared with. | Small, 44.0              | 44.0              |

## List Share

A list share.

| Property Name | Type   | Description                                            | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------|--------------------------|-------------------|
| apiName       | String | API name for the group or role.                        | Small, 60.0              | 60.0              |
| groupId       | String | ID for the group or role that the list is shared with. | Small, 44.0              | 44.0              |
| label         | String | Label for the group or role.                           | Small, 44.0              | 44.0              |

## List Share Category

Groups and roles associated with a list.

| Property Name      | Type                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|--------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| imageColor         | String                       | Color of the image for the recipient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 44.0              | 44.0              |
| imageUrl           | String                       | URL of the image for the recipient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 44.0              | 44.0              |
| shareLabel         | String                       | Translated label to show in the UI for this category of shares.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 44.0              | 44.0              |
| shareType          | String                       | Type of group a list view is shared with.<br>Values are: <ul style="list-style-type: none"><li>ChannelProgramGroup—Shared with a channel program.</li><li>Regular—Shared with a group.</li><li>Role—Shared with a role.</li><li>RoleAndSubordinates—Shared with a role and all subordinates types.</li><li>RoleAndSubordinatesInternal—Shared with a role and subordinates that aren't partners.</li><li>Territory—Shared with a territory.</li><li>TerritoryAndSubordinates—Shared with a territory and its subordinates.</li></ul> | Small, 44.0              | 44.0              |
| shares             | <a href="#">List Share[]</a> | List of structures for shared groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 44.0              | 44.0              |
| sharesListComplete | Boolean                      | Indicates whether the shares list contains all available results ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 44.0              | 44.0              |

## List Share Collection

Current and potential shares associated with a list.

| Property Name       | Type                                  | Description                                        | Filter Group and Version | Available Version |
|---------------------|---------------------------------------|----------------------------------------------------|--------------------------|-------------------|
| availableListShares | <a href="#">List Share Category[]</a> | Share categories that the list can be shared with. | Small, 44.0              | 44.0              |
| currentListShares   | <a href="#">List Share Category[]</a> | Share categories that the list is shared with.     | Small, 44.0              | 44.0              |

## List Timeline

Output representation of the timeline activity list.

List View Column

Single column of a record’s related list. Describes how to lay out the column; doesn’t contain the column’s data.

| Property | Type   | Description                                                                                     | Filter Group and Version | Available Version |
|----------|--------|-------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| dataType | String | The object type for this column’s field. This is the object type used in REST API and SOAP API. | Medium, 29.0             | 29.0              |
| fieldId  | String | The fully qualified API field ID, for example, <code>Contact.Name</code> .                      | Big, 29.0                | 29.0              |
| label    | String | The localized label of this column.                                                             | Small, 29.0              | 29.0              |

| Property | Type   | Description                                         | Filter Group and Version | Available Version |
|----------|--------|-----------------------------------------------------|--------------------------|-------------------|
| name     | String | The short name of the API field, for example, Name. | Medium, 29.0             | 29.0              |

## List View Definition

Related list structure or a search list structure on a record view. There's no data in the list.

| Property    | Type                                | Description                                                                                                                                                                                                                                                                                                      | Filter Group and Version | Available Version |
|-------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| columns     | <a href="#">List View Column</a> [] | The columns of fields shown in this list view.                                                                                                                                                                                                                                                                   | Big, 29.0                | 29.0              |
| label       | String                              | The localized label of this list view.                                                                                                                                                                                                                                                                           | Small, 29.0              | 29.0              |
| objectType  | <a href="#">List View Object</a>    | The definition of the type of the objects in this list view.                                                                                                                                                                                                                                                     | Medium, 29.0             | 29.0              |
| rowLimit    | Integer                             | The maximum number of objects per page in this list view. To view all objects in this related list, page through the data in pages no larger than this size. To build a SOQL statement from this describe, the SOQL statement must include a LIMIT value equal to this value or an error is thrown on execution. | Medium, 29.0             | 29.0              |
| sortColumns | <a href="#">List View Sort</a> []   | The columns in which to sort this list view. The sort columns are given in the order of their priority (for example, primary sort, secondary sort, and so on).                                                                                                                                                   | Medium, 29.0             | 29.0              |

## List View Object

Type of record displayed in the rows of a related list.

| Property | Type   | Description                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| fieldId  | String | The API field ID that refers to the parent record. For example, if an Account record has a related list of Contact records, then in the Contact related list definition on the Account this value might be "Account". | Big, 29.0                | 29.0              |

| Property | Type   | Description                                                                                  | Filter Group and Version | Available Version |
|----------|--------|----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| type     | String | The object type name for this object. This is the object type used in REST API and SOAP API. | Small, 29.0              | 29.0              |

## List View Record

The list view of a record.

| Property       | Type                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|----------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| fields         |                           | <p>The fields and values for the record displayed in this list. A collection of any of these:</p> <ul style="list-style-type: none"> <li><a href="#">Record Field</a></li> <li><a href="#">Record Field: Blank</a></li> <li><a href="#">Record Field: Compound</a></li> <li><a href="#">Record Field: Currency</a></li> <li><a href="#">Record Field: Date</a></li> <li><a href="#">Record Field: Percent</a></li> <li><a href="#">Record Field: Picklist</a></li> <li><a href="#">Record Field: Reference</a></li> <li><a href="#">Record Field: Reference with Date</a></li> </ul> | Medium, 30.0             | 30.0              |
| id             | String                    | 18-character ID of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Small, 29.0              | 23.0              |
| motif          | <a href="#">Motif</a>     | <p>Small, medium, and large icons indicating the type of the object. The motif can also contain the object's base color.</p> <p>The icon is not a preview of the file.</p>                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 29.0              | 27.0              |
| mySubscription | <a href="#">Reference</a> | If the context user is following this file, this contains information about the subscription; otherwise returns null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Medium, 29.0             | 23.0              |
| name           | String                    | The localized name of this record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 29.0              | 23.0              |
| type           | String                    | A fixed type name for this object. Check this value to determine the shape of a response body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Small, 29.0              | 23.0              |
| url            | String                    | The Connect REST API URL resource for this object.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 29.0              | 23.0              |

## List View Sort

Ordinal of a sort order in a related list.

| Property | Type   | Description                                                                                                                                                                                                                                                                                                                                                                         | Filter Group and Version | Available Version |
|----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| column   | String | The field ID on the related list column to sort.                                                                                                                                                                                                                                                                                                                                    | Small, 29.0              | 29.0              |
| order    | String | The order in which to sort the column. One of these values: <ul style="list-style-type: none"><li>Ascending—Items are in ascending alphabetical order (A-Z).</li><li>Descending—Items are in descending alphabetical order (Z-A).</li><li>MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.</li></ul> | Small, 29.0              | 29.0              |

## Location Capacity Output

Fulfillment order capacity values for a location.

| Property Name | Type                                  | Description                                                                                                   | Filter Group and Version | Available Version |
|---------------|---------------------------------------|---------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| assigned      | Integer                               | Value of the location's Assigned Fulfillment Order Count.                                                     | Big, 55.0                | 55.0              |
| capacity      | Integer                               | Value of the location's Fulfillment Order Capacity. This property represents the location's maximum capacity. | Big, 55.0                | 55.0              |
| error         | <a href="#">Error Response Output</a> | Error returned by the request, if any.                                                                        | Big, 55.0                | 55.0              |
| heldCapacity  | Integer                               | Number of fulfillment orders that the location is holding capacity for.                                       | Big, 55.0                | 55.0              |
| locationId    | String                                | ID of the location.                                                                                           | Big, 55.0                | 55.0              |

## Location Output

An inventory location's distance to an order recipient.

| Property Name      | Type   | Description                                            | Filter Group and Version | Available Version |
|--------------------|--------|--------------------------------------------------------|--------------------------|-------------------|
| distance           | Double | The distance from the location to the order recipient. | Big, 51.0                | 51.0              |
| locationIdentifier | String | The location identifier.                               | Big, 51.0                | 51.0              |

## Maintenance Information

Information about the upcoming scheduled maintenance for the organization.

| Property Name                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description                  | String | Description of the maintenance.                                                                                                                                                                                                                                                                                                                                                                                                               | Small, 34.0              | 34.0              |
| maintenance Title            | String | Title of the maintenance.                                                                                                                                                                                                                                                                                                                                                                                                                     | Small, 34.0              | 34.0              |
| maintenance Type             | String | Type of maintenance. Values are: <ul style="list-style-type: none"> <li>• <code>Downtime</code>—Downtime maintenance.</li> <li>• <code>GenerallyAvailable</code>—Generally available mode.</li> <li>• <code>MaintenanceAndAvailable</code>—Maintenance with available mode.</li> <li>• <code>MaintenanceWithDowntime</code>—Scheduled maintenance with downtime.</li> <li>• <code>ReadOnly</code>—Maintenance with read-only mode.</li> </ul> | Small, 34.0              | 34.0              |
| message EffectiveTime        | String | Effective time when users start seeing the maintenance message. Format is ISO 8601.                                                                                                                                                                                                                                                                                                                                                           | Small, 34.0              | 34.0              |
| message ExpirationTime       | String | Expiration time of the maintenance message. Format is ISO 8601.                                                                                                                                                                                                                                                                                                                                                                               | Small, 34.0              | 34.0              |
| scheduledEnd Downtime        | String | Scheduled end of downtime. <code>null</code> for <code>GenerallyAvailable</code> and <code>ReadOnly</code> maintenance types. Format is ISO 8601.                                                                                                                                                                                                                                                                                             | Small, 34.0              | 34.0              |
| scheduledEnd MaintenanceTime | String | Scheduled end of maintenance. <code>null</code> for <code>Downtime</code> maintenance type. Format is ISO 8601.                                                                                                                                                                                                                                                                                                                               | Small, 34.0              | 34.0              |
| scheduledStart Downtime      | String | Scheduled start of downtime. <code>null</code> for <code>GenerallyAvailable</code> and <code>ReadOnly</code> maintenance types. Format is ISO 8601.                                                                                                                                                                                                                                                                                           | Small, 34.0              | 34.0              |

| Property Name                     | Type   | Description                                                                                                     | Filter Group and Version | Available Version |

## Managed Content Media Node Value

Managed content node of media type.

| Property Name             | Type   | Description                                                                                                                                                                                                                                              | Filter Group and Version | Available Version |
|---------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>altText</code>      | String | Alternative text for the managed content node.                                                                                                                                                                                                           | Small, 47.0              | 47.0              |
| <code>altUrl</code>       | String | Alternative URL to the managed content node.<br><br>In version 49.0 and later, this information is returned in the <code>thumbnailUrl</code> property.                                                                                                   | Small, 47.0              | 47.0–48.0         |
| <code>contentKey</code>   | String | Content key of the managed content.                                                                                                                                                                                                                      | Small, 51.0              | 51.0              |
| <code>fileName</code>     | String | File name of the managed content node.                                                                                                                                                                                                                   | Small, 48.0              | 48.0              |
| <code>mediaType</code>    | String | Type of managed content media. Value is <code>Image</code> .                                                                                                                                                                                             | Small, 47.0              | 47.0              |
| <code>mimeType</code>     | String | MIME type of the managed content node.                                                                                                                                                                                                                   | Small, 47.0              | 47.0              |
| <code>nodeType</code>     | String | Type of managed content node. Value is <code>Media</code> .                                                                                                                                                                                              | Small, 47.0              | 47.0              |
| <code>resourceUrl</code>  | String | Resource URL to the image.<br><br>In version 48.0, the resource URL is available if referencing asset files and is <code>null</code> if referencing media. In version 49.0 and later, the resource URL is available if referencing asset files or media. | Small, 48.0              | 48.0              |
| <code>thumbnailUrl</code> | String | URL to the thumbnail of the media.                                                                                                                                                                                                                       | Small, 49.0              | 49.0              |
| <code>title</code>        | String | Title of the managed content node.                                                                                                                                                                                                                       | Small, 47.0              | 47.0              |

| Property Name      | Type   | Description                                                                                   | Filter Group and Version | Available Version |
|--------------------|--------|-----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| unauthenticatedUrl | String | Unauthenticated URL to the image or <b>null</b> if the image isn't visible to external users. | Small, 48.0              | 48.0              |
| url                | String | URL to the image.                                                                             | Small, 47.0              | 47.0              |

## Managed Content Media Source Node Value

Source of managed content media.

| Property Name      | Type    | Description                                                                                                              | Filter Group and Version | Available Version |
|--------------------|---------|--------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| fileName           | String  | File name of the media source.                                                                                           | Small, 49.0              | 49.0              |
| isExternal         | Boolean | Specifies whether the media source is referenced via an external URL ( <b>true</b> ) or uploaded ( <b>false</b> ).       | Small, 49.0              | 49.0              |
| mediaType          | String  | Type of managed content media. Values are: <ul style="list-style-type: none"><li>• Document</li><li>• Image</li></ul>    | Small, 49.0              | 49.0              |
| mimeType           | String  | MIME type of the media source.                                                                                           | Small, 49.0              | 49.0              |
| nodeType           | String  | Type of managed content node. Value is <b>MediaSource</b> .                                                              | Small, 49.0              | 49.0              |
| referenceId        | String  | Reference ID of the uploaded media source.                                                                               | Small, 49.0              | 49.0              |
| resourceUrl        | String  | Resource URL of the media source.                                                                                        | Small, 49.0              | 49.0              |
| unauthenticatedUrl | String  | URL to the media source for unauthenticated users, or <b>null</b> if the media source isn't available to external users. | Small, 49.0              | 49.0              |
| url                | String  | URL to the media source for authenticated users.                                                                         | Small, 49.0              | 49.0              |

## Managed Content Node Type

Managed content node type.

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| label         | String | Label of the managed content node type.                                                                                                                                                                                                                                                                                                                                    | Small, 47.0              | 47.0              |
| name          | String | Developer name of the managed content node type.                                                                                                                                                                                                                                                                                                                           | Small, 47.0              | 47.0              |
| nodeType      | String | Type of managed content node. Values are: <ul style="list-style-type: none"><li>• <code>Date</code></li><li>• <code>DateTime</code></li><li>• <code>Media</code></li><li>• <code>MediaSource</code></li><li>• <code>MultilineText</code></li><li>• <code>NameField</code></li><li>• <code>RichText</code></li><li>• <code>Text</code></li><li>• <code>Url</code></li></ul> | Small, 47.0              | 47.0              |

## Managed Content Search Index Collection

Collection of search indexes for a channel.

| Property Name | Type                                            | Description                                                                                          | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| indexes       | <a href="#">Managed Content Search Index</a> [] | List of search indexes, including the current live index and the latest in-progress or failed index. | Small, 54.0              | 54.0              |

## Managed Content Search Result

A managed content search result.

| Property Name | Type                                                       | Description                              | Filter Group and Version | Available Version |
|---------------|------------------------------------------------------------|------------------------------------------|--------------------------|-------------------|
| contentKey    | String                                                     | Content key of the managed content.      | Small, 510.0             | 51.0              |
| contentType   | <a href="#">Managed Content Search Result Content Type</a> | Content type of the managed content.     | Medium, 48.0             | 48.0              |
| id            | String                                                     | ID of the managed content.               | Small, 48.0              | 48.0              |
| publishDate   | String                                                     | Publish date of the managed content.     | Medium, 48.0             | 48.0              |
| title         | String                                                     | Title of the managed content.            | Small, 48.0              | 48.0              |
| urlName       | String                                                     | URL name of the managed content version. | Medium, 48.0             | 48.0              |

## Managed Content Search Result Collection

Collection of managed content search results.

| Property Name  | Type                                             | Description                                                                                      | Filter Group and Version | Available Version |
|----------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| count          | Integer                                          | Total number of search results.                                                                  | Small, 48.0              | 48.0              |
| currentPageUri | String                                           | Connect REST API URL identifying the current page.                                               | Small, 48.0              | 48.0              |
| items          | <a href="#">Managed Content Search Result</a> [] | Collection of search results.                                                                    | Small, 48.0              | 48.0              |
| nextPageUri    | String                                           | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page. | Small, 48.0              | 48.0              |

## Managed Content Search Result Content Type

Content type of a managed content search result.

| Property Name | Type   | Description                                 | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------|--------------------------|-------------------|
| developerName | String | Developer name of the managed content type. | Medium, 48.0             | 48.0              |
| label         | String | Label of the managed content type.          | Medium, 48.0             | 48.0              |

## Managed Content Variant

Managed content variant.

| Property Name | Type                                          | Description                                                 | Filter Group and Version | Available Version |
|---------------|-----------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| apiName       | String                                        | API name of the managed content variant.                    | Small, 63.0              | 63.0              |
| contentBody   | Map<String, Object>                           | Map of properties of the managed content with their values. | Big, 54.0                | 54.0              |
| contentFqn    | String                                        | Fully qualified name (FQN) of the managed content.          | Small, 64.0              | 64.0              |
| contentKey    | String                                        | Globally unique identifier (GUID) for the managed content.  | Small, 54.0              | 54.0              |
| contentSpace  | <a href="#">Managed Content Space Summary</a> | Content space of the managed content.                       | Small, 54.0              | 54.0              |
| contentType   | <a href="#">Managed Content Type Summary</a>  | Type of managed content.                                    | Small, 54.0              | 54.0              |
| createdBy     | <a href="#">Managed Content User Summary</a>  | User who created the managed content variant.               | Small, 54.0              | 54.0              |

| Property Name           | Type                                           | Description                                                                                                                  | Filter Group and Version | Available Version |
|-------------------------|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| createdDate             | String                                         | Date when the managed content variant was created.                                                                           | Small, 54.0              | 54.0              |
| externalId              | String                                         | External ID of the managed content.                                                                                          | Small, 58.0              | 58.0              |
| folder                  | <a href="#">Managed Content Folder Summary</a> | Folder of the managed content.                                                                                               | Small, 54.0              | 54.0              |
| isPublished             | Boolean                                        | Specifies whether the managed content variant is published to a channel ( <code>true</code> ) or not ( <code>false</code> ). | Small, 54.0              | 54.0              |
| language                | String                                         | Language locale of the managed content.                                                                                      | Small, 54.0              | 54.0              |
| lastModifiedBy          | <a href="#">Managed Content User Summary</a>   | User who last modified the managed content variant.                                                                          | Small, 54.0              | 54.0              |
| lastModifiedDate        | String                                         | Date when the managed content variant was last modified.                                                                     | Small, 54.0              | 54.0              |
| managedContentId        | String                                         | ID of the managed content.                                                                                                   | Small, 54.0              | 54.0              |
| managedContentVariantId | String                                         | ID of the managed content variant.                                                                                           | Small, 54.0              | 54.0              |
| managedContentVersionId | String                                         | Managed content version ID.                                                                                                  | Small, 54.0              | 54.0              |
| status                  | <a href="#">Managed Content Variant Status</a> | Information about a managed content variant's status in the authoring space.                                                 | Small, 57.0              | 57.0              |
| title                   | String                                         | Title of the managed content.                                                                                                | Small, 54.0              | 54.0              |
| urlName                 | String                                         | URL name of the managed content.                                                                                             | Small, 54.0              | 54.0              |

## Managed Content Variant Search Result

Keyword-based search result for a managed content variant.

| Property Name | Type                                                       | Description                                   | Filter Group and Version | Available Version |
|---------------|------------------------------------------------------------|-----------------------------------------------|--------------------------|-------------------|
| contentKey    | String                                                     | Content key of the managed content variant.   | Small, 57.0              | 57.0              |
| contentType   | <a href="#">Managed Content Search Result Content Type</a> | Content type of the managed content variant.  | Small, 57.0              | 57.0              |
| createdBy     | <a href="#">Managed Content User Summary</a>               | User who created the managed content variant. | Small, 57.0              | 57.0              |

## Managed Social Account

Information describing the managed social account or fan page of a social network.

| Property Name            | Type   | Description                                                                                                                                    | Filter Group and Version | Available Version |
|--------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| defaultResponseAccountId | String | Default response account to use when replying to posts sent to this account.                                                                   | Small, 44.0              | 44.0              |
| displayName              | String | Real name (or user name if real name not available) for this account on the social network.                                                    | Small, 44.0              | 44.0              |
| externalPictureUrl       | String | URL to the account's avatar image.                                                                                                             | Small, 44.0              | 44.0              |
| id                       | String | Internal SFDC ID for this managed social account. If the account has not been added, it doesn't have an ID value.                              | Small, 44.0              | 44.0              |
| label                    | String | Label for the social account.                                                                                                                  | Small, 44.0              | 44.0              |
| profileUrl               | String | URL to the account's profile.                                                                                                                  | Small, 44.0              | 44.0              |
| socialNetwork            | String | Social network that this account belongs to.<br>Values are: <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> </ul> | Small, 44.0              | 44.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |        | <ul style="list-style-type: none"> <li>Instagram</li> <li>InstagramBusiness</li> <li>KakaoTalk</li> <li>Kik</li> <li>Line</li> <li>LinkedIn</li> <li>Messenger</li> <li>Other</li> <li>Pinterest</li> <li>QQ</li> <li>Rypple</li> <li>SinaWeibo</li> <li>SMS</li> <li>Snapchat</li> <li>Telegram</li> <li>Twitter</li> <li>Vkontakte</li> <li>WeChat</li> <li>WhatsApp</li> <li>YouTube</li> </ul> |                          |                   |
| uniqueName    | String | Unique name used for distinguishing same name fan pages; acts like a user name for a fan page.                                                                                                                                                                                                                                                                                                     | Small, 44.0              | 44.0              |
| username      | String | Unique user name or handle for this account on the social network.                                                                                                                                                                                                                                                                                                                                 | Small, 44.0              | 44.0              |

## Managed Social Account Setup

Describes the setup details of a managed social account or fan page of a social network.

| Property Name                | Type   | Description                                                                  | Filter Group and Version | Available Version |
|------------------------------|--------|------------------------------------------------------------------------------|--------------------------|-------------------|
| authorizedBy<br>Username     | String | Authorized-by user name used for displaying authorized name in fan pages.    | Small, 44.0              | 44.0              |
| defaultResponse<br>AccountId | String | Default response account to use when replying to posts sent to this account. | Small, 44.0              | 44.0              |

| Property Name        | Type    | Description                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|----------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| displayName          | String  | Real name (or user name if real name not available) for this account on the social network.                                                                                                                                                                                                                            | Small, 44.0              | 44.0              |
| externalPictureUrl   | String  | URL to the account's avatar image.                                                                                                                                                                                                                                                                                     | Small, 44.0              | 44.0              |
| id                   | String  | Internal SFDC ID for this managed social account. If the account has not been added, it doesn't have an ID value.                                                                                                                                                                                                      | Small, 44.0              | 44.0              |
| isActive             | Boolean | Indicates whether the account is considered active ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                                                                                | Small, 44.0              | 44.0              |
| isAuthenticated      | Boolean | Indicates whether the account is authenticated ( <code>true</code> ) or needs to be reauthenticated ( <code>false</code> ).                                                                                                                                                                                            | Small, 44.0              | 44.0              |
| label                | String  | Label for the social account.                                                                                                                                                                                                                                                                                          | Small, 44.0              | 44.0              |
| managedAccountId     | String  | ID for this account in a third-party system (for example, Social Studio).                                                                                                                                                                                                                                              | Small, 44.0              | 44.0              |
| parentProviderUserId | String  | User ID of the user on the social network if the managed social account is a fan page (for example, a Facebook fan page).                                                                                                                                                                                              | Small, 44.0              | 44.0              |
| profileUrl           | String  | URL to the account's profile.                                                                                                                                                                                                                                                                                          | Small, 44.0              | 44.0              |
| providerUserId       | String  | User ID of the user on the social network, or the Page ID of the page if the managed social account is a fan page.                                                                                                                                                                                                     | Small, 44.0              | 44.0              |
| socialNetwork        | String  | Social network that this account belongs to. Values are: <ul style="list-style-type: none"> <li>Facebook</li> <li>GooglePlus</li> <li>Instagram</li> <li>InstagramBusiness</li> <li>KakaoTalk</li> <li>Kik</li> <li>Line</li> <li>LinkedIn</li> <li>Messenger</li> <li>Other</li> <li>Pinterest</li> <li>QQ</li> </ul> | Small, 44.0              | 44.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |        | <ul style="list-style-type: none"> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>                     |                          |                   |
| status        | String | Status of this managed social account.<br>Values are: <ul style="list-style-type: none"> <li>• Running—Posts for this social account are being sent to your org.</li> <li>• Stopped—Posts for this social account aren't being sent to your org.</li> </ul> | Small, 44.0              | 44.0              |
| uniqueName    | String | Unique name used for distinguishing same name fan pages; acts like a user name for a fan page.                                                                                                                                                              | Small, 44.0              | 44.0              |
| username      | String | Unique user name or handle for this account on the social network.                                                                                                                                                                                          | Small, 44.0              | 44.0              |

## Managed Social Account Setup Authentication

Current configuration of Social Customer Service.

| Property Name | Type   | Description                                                                                                                                                                       | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| oauthJWT      | String | JSON web token (JWT). This JWT must be in the form field ( <code>tokenString</code> ) when you POST to the OAuth URL. This token expires every 60 seconds, so fetch it on demand. | Small, 44.0              | 44.0              |
| oauthUrl      | String | OAuth URL. POST to this URL to begin the OAuth process. The response to a POST request is an HTML page.                                                                           | Small, 44.0              | 44.0              |

## Managed Social Accounts

A list of managed social accounts that are in the org and assigned to the user.

| Property Name         | Type                                     | Description                                                                   | Filter Group and Version | Available Version |
|-----------------------|------------------------------------------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| managedSocialAccounts | <a href="#">Managed Social Account[]</a> | List of managed social accounts that are in the org and assigned to the user. | Medium, 44.0             | 44.0              |

## Managed Social Accounts Setup

A list of managed social account setup entities.

| Property Name         | Type                                           | Description                                    | Filter Group and Version | Available Version |
|-----------------------|------------------------------------------------|------------------------------------------------|--------------------------|-------------------|
| managedSocialAccounts | <a href="#">Managed Social Account Setup[]</a> | List of managed social account setup entities. | Medium, 44.0             | 44.0              |

## Managed Topic

Managed topic in an Experience Cloud site.

| Property Name    | Type                            | Description                                                                                                                                                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|------------------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| children         | <a href="#">Managed Topic[]</a> | Children managed topics of the managed topic; <code>null</code> if the <code>depth</code> request parameter isn't specified or is <code>1</code> .                                                                                                                                                                                                                                          | Medium, 35.0             | 35.0              |
| id               | String                          | ID of managed topic.                                                                                                                                                                                                                                                                                                                                                                        | Small, 32.0              | 32.0              |
| managedTopicType | String                          | Type of managed topic. <ul style="list-style-type: none"> <li><b>Content</b>—Topics that are associated with native content.</li> <li><b>Featured</b>—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.</li> <li><b>Navigational</b>—Topics that display in a navigational menu in the Experience Cloud site.</li> </ul> | Small, 32.0              | 32.0              |
| parent           | <a href="#">Reference</a>       | Parent managed topic of the managed topic.                                                                                                                                                                                                                                                                                                                                                  | Medium, 35.0             | 35.0              |
| topic            | <a href="#">Topic</a>           | Information about the topic.                                                                                                                                                                                                                                                                                                                                                                | Small, 32.0              | 32.0              |

| Property Name | Type   | Description                                | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------|--------------------------|-------------------|
| url           | String | Connect REST API URL to the managed topic. | Small, 32.0              | 32.0              |

## Managed Topic Collection

A collection of managed topics in an Experience Cloud site.

| Property Name  | Type                            | Description                                                                                      | Filter Group and Version | Available Version |
|----------------|---------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl | String                          | Connect REST API URL identifying the current page.                                               | Medium, 32.0             | 32.0              |
| managedTopics  | <a href="#">Managed Topic[]</a> | Collection of managed topics.                                                                    | Small, 32.0              | 32.0              |
| nextPageUrl    | String                          | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page. | Medium, 44.0             | 44.0              |

## Markets

Market configuration for a Commerce store.

| Property Name     | Type                | Description                    | Filter Group and Version | Available Version |
|-------------------|---------------------|--------------------------------|--------------------------|-------------------|
| localeCurrencyMap | Map<String, String> | Map of locales and currencies. | Small, 58.0              | 58.0              |
| marketId          | String              | Identifier for the market.     | Small, 58.0              | 58.0              |

## Match Info

Search information related to the search result.

| Property Name | Type    | Description                                                                                                 | Filter Group and Version | Available Version |
|---------------|---------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isPromoted    | Boolean | Specifies whether search promotion affected the result ( <code>true</code> ) or not ( <code>false</code> ). | Small, 63.0              | 63.0              |

| Property Name    | Type    | Description                                                                                                 | Filter Group and Version | Available Version |
|------------------|---------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isSpellCorrected | Boolean | Specifies whether spell correction affected the result ( <code>true</code> ) or not ( <code>false</code> ). | Small, 63.0              | 63.0              |

## MCS Folder Share

Target that a managed content space folder is shared with.

| Property Name  | Type    | Description                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| canUserUnshare | Boolean | Specifies whether the user has permission to unshare with the target space ( <code>true</code> ) or not ( <code>false</code> ). Content Manager or higher role in the target workspace has permission to unshare. | Small, 63.0              | 63.0              |
| shareStatus    | String  | Status of sharing a managed content space folder. Values are: <ul style="list-style-type: none"><li>• <code>PendingShare</code></li><li>• <code>PendingUnshare</code></li><li>• <code>Shared</code></li></ul>     | Small, 63.0              | 63.0              |
| targetId       | String  | ID of the share target.                                                                                                                                                                                           | Small, 63.0              | 63.0              |
| targetLabel    | String  | Label of the share target.                                                                                                                                                                                        | Small, 63.0              | 63.0              |

## Mention Validations

Information about whether a set of mentions is valid for the context user.

| Property           | Type                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                  | Filter Group and Version | Available Version |
|--------------------|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| hasErrors          | Boolean                               | Indicates whether at least one of the proposed mentions has an error ( <code>true</code> ), or not ( <code>false</code> ). For example, context users can't mention private groups they don't belong to. If such a group is included in the list of mention validations, <code>hasErrors</code> is <code>true</code> and the group has a <code>validationStatus</code> of <code>Disallowed</code> in its mention validation. | Small, 29.0              | 29.0              |
| mentionValidations | <a href="#">Mention Validation</a> [] | Information about whether a set of mentions is valid for the context user.                                                                                                                                                                                                                                                                                                                                                   | Medium, 29.0             | 29.0              |

## Message

Message.

## Message Segment: Entity Link

Represents an entity, such as a user or a group.

| Property  | Type                      | Description                                                                                                                          | Filter Group and Version | Available Version |
|-----------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| motif     | <a href="#">Motif</a>     | A set of small, medium, and large icons that correspond to the entity type. The motif can also contain the entity type's base color. | Small, 29.0              | 27.0              |
| reference | <a href="#">Reference</a> | Information about the entity                                                                                                         | Small, 29.0              | 25.0              |
| text      | String                    | Plain text output for this segment                                                                                                   | Small, 29.0              | 25.0              |
| type      | String                    | EntityLink                                                                                                                           | Small, 29.0              | 25.0              |

## Message Segment: Field Change

Represents an inline field change.

**Example:** An example of an inline field change is "First Name from Bob to Joe". This example segment consists of multiple segments.

```
[
  Text("Owner from "),
  FieldChangeValue("Bob Smith"),
  Text(" to "),
  FieldChangeValue("Dave Jones")
]
```

| Property | Type       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| segments | Segments[] | Collection of message segments, based on type. Segments can be one or more of the following: <ul style="list-style-type: none"><li>• <a href="#">Message Segment: Entity Link</a></li><li>• <a href="#">Message Segment: Field Change</a></li><li>• <a href="#">Message Segment: Field Change Name</a></li><li>• <a href="#">Message Segment: Field Change Value</a></li><li>• <a href="#">Message Segment: Hashtag</a></li><li>• <a href="#">Message Segment: Inline Image</a> (version 35.0 and later)</li><li>• <a href="#">Message Segment: Link</a></li><li>• <a href="#">Message Segment: Markup Begin</a> (version 35.0 and later)</li><li>• <a href="#">Message Segment: Markup End</a> (version 35.0 and later)</li><li>• <a href="#">Message Segment: Mention</a></li><li>• <a href="#">Message Segment: More Changes</a></li><li>• <a href="#">Message Segment: Text</a></li></ul> | Medium, 29.0             | 23.0              |
| text     | String     | Formatted text of the change. For example: <div>"City from San Francisco to New Orleans"</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Small, 29.0              | 23.0              |
| type     | String     | Value is <code>FieldChange</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Small, 29.0              | 23.0              |

[Message Segment: More Changes](#)

## Message Segment: Field Change Name

Represents an inline name of a field change, like "Name" or "Description." Making this a separate segment makes it possible to give special user interface treatments to field names, for example, making a name field bold.

| Property | Type   | Description                                                                                                                                                    | Filter Group and Version | Available Version |
|----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| text     | String | Formatted text of the change. Possible values include: <ul style="list-style-type: none"><li>• Old name of the field</li><li>• New name of the field</li></ul> | Small, 29.0              | 23.0              |

| Property | Type   | Description                           | Filter Group and Version | Available Version |
|----------|--------|---------------------------------------|--------------------------|-------------------|
| type     | String | Value is <code>FieldChangeName</code> | Small, 29.0              | 23.0              |

## Message Segment: Field Change Value

Represents an inline value of a field change. Making this a separate segment makes it possible to add special coding, for example, to wrap values in anchor tags.

| Property  | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| valueType | String | The value type. One of these values: <ul style="list-style-type: none"><li>• <code>NewValue</code>—The new value of the field change.</li><li>• <code>OldValue</code>—The old value of the field change.</li></ul>                                                                                                                                                                            | Big, 29.0                | 29.0              |
| text      | String | Formatted text of the change. Possible values include: <ul style="list-style-type: none"><li>• the words <code>a blank value</code></li></ul>  <b>Note:</b> This text is also localized. <ul style="list-style-type: none"><li>• the old value of the field</li><li>• the new value of the field</li></ul> | Small, 29.0              | 23.0              |
| type      | String | Value is <code>FieldChangeValue</code>                                                                                                                                                                                                                                                                                                                                                        | Small, 29.0              | 23.0              |
| url       | String | URL value if the field change is to a URL field (such as a web address)                                                                                                                                                                                                                                                                                                                       | Small, 29.0              | 23.0              |

## Message Segment: Hashtag

Represents an inline hashtag.

| Property | Type   | Description                                     | Filter Group and Version | Available Version |
|----------|--------|-------------------------------------------------|--------------------------|-------------------|
| tag      | String | Text of the hashtag without the hash symbol (#) | Small, 29.0              | 23.0              |
| text     | String | Text of the hashtag with the hash symbol (#)    | Small, 29.0              | 23.0              |

| Property | Type   | Description                                                                                                 | Filter Group and Version | Available Version |
|----------|--------|-------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| topicUrl | String | URL to the topic in this format:<br><code>/services/data/.../topics?exactMatch=true&amp;q=<b>tag</b></code> | Small, 29.0              | 28.0              |
| type     | String | Value is <code>Hashtag</code>                                                                               | Small, 29.0              | 23.0              |
| url      | String | URL search for the tag in this format:<br><code>services/data/.../feed-elements?q=%23<b>tag</b></code>      | Small, 29.0              | 23.0              |

## Message Segment: Inline Image

An inline image in the feed body.

| Property Name | Type                                    | Description                                                                              | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|------------------------------------------------------------------------------------------|--------------------------|-------------------|
| altText       | String                                  | Alt text for the inline image.                                                           | Small, 35.0              | 35.0              |
| contentSize   | Integer                                 | Size of the file in bytes.                                                               | Small, 35.0              | 35.0              |
| fileExtension | String                                  | Extension of the file, such as gif.                                                      | Small, 37.0              | 37.0              |
| imageDetails  | <a href="#">Image File Detail</a>       | Details for the image, or <code>null</code> if the file isn't an image.                  | Big, 41.0                | 41.0              |
| text          | String                                  | Alt text for the inline image or the ID of the inline image if no alt text is available. | Small, 35.0              | 35.0              |
| thumbnails    | <a href="#">File Preview Collection</a> | Information about the available thumbnails for the image.                                | Medium, 35.0             | 35.0              |
| type          | String                                  | <code>InlineImage</code>                                                                 | Small, 35.0              | 35.0              |
| url           | String                                  | URL to the latest version of the inline image.                                           | Small, 35.0              | 35.0              |

## Message Segment: Resource Link

Represents a resource link.

| Property          | Type   | Description                          | Filter Group and Version | Available Version |
|-------------------|--------|--------------------------------------|--------------------------|-------------------|
| <code>text</code> | String | Formatted text of this segment       | Small, 29.0              | 23.0              |
| <code>type</code> | String | Value is <code>"ResourceLink"</code> | Small, 29.0              | 23.0              |
| <code>url</code>  | String | URL value of the resource link       | Small, 29.0              | 27.0              |

## Message Segment: Text

Represents plain inline text.

| Property          | Type   | Description                                                                                                                                                                                                                                      | Filter Group and Version | Available Version |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>text</code> | String | Formatted text associated with the item. Possible values include: <ul style="list-style-type: none"><li>Formatted text of a feed item or comment.</li><li>The name of the field that has been changed with the word <code>from</code>.</li></ul> | Small, 29.0              | 23.0              |
| <code>type</code> | String | Value is <code>Text</code> .                                                                                                                                                                                                                     | Small, 29.0              | 23.0              |

## Microbatching Error Resubmission

Microbatching error resubmission.

| Property Name             | Type    | Description                                         | Filter Group and Version | Available Version |
|---------------------------|---------|-----------------------------------------------------|--------------------------|-------------------|
| nextPageToken             | String  | Token for the next page of records to submit.       | Small, 54.0              | 54.0              |
| nextPageUrl               | String  | URL to the next page of records to submit.          | Small, 54.0              | 54.0              |
| numberOfRecords Submitted | Integer | Total number of records submitted for reprocessing. | Small, 54.0              | 54.0              |

## Microbatching Ingestion Output

Microbatching ingestion response.

| Property Name | Type   | Description                                           | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------|--------------------------|-------------------|
| recordUUID    | String | Universally unique identifier of the ingested record. | Small, 55.0              | 55.0              |

## Moderation Audit Record Count

Moderation audit record count.

| Property Name       | Type              | Description                                                                             | Filter Group and Version | Available Version |
|---------------------|-------------------|-----------------------------------------------------------------------------------------|--------------------------|-------------------|
| auditAction ToCount | Map<String, Long> | The number of actions audited for a user in an Experience Cloud site. For String values | Small, 40.0              | 40.0              |

| Property Name | Type | Description                                                                                                                       | Filter Group and Version | Available Version |
|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|               |      | of audit actions, see <a href="#">NetworkActivityAudit</a> in the <i>Object Reference for Salesforce and Lightning Platform</i> . |                          |                   |

## Moderation Capability

If a feed element has this capability, users in the Experience Cloud site can flag the feed element for moderation. This response body also includes information about the flagged content.

| Property Name   | Type                             | Description                                                                        | Filter Group and Version | Available Version |
|-----------------|----------------------------------|------------------------------------------------------------------------------------|--------------------------|-------------------|
| moderationFlags | <a href="#">Moderation Flags</a> | Flags for this feed element. Moderators can view and take action on flagged items. | Big, 31.0                | 31.0              |

## Moderation Flags Collection

Collection of flags on a feed item, comment, or file.

| Property Name    | Type                                   | Description                                                                                      | Filter Group and Version | Available Version |
|------------------|----------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageToken | String                                 | Token identifying the current page.                                                              | Small, 40.0              | 40.0              |
| currentPageUrl   | String                                 | Connect REST API URL identifying the current page.                                               | Small, 40.0              | 40.0              |
| flags            | <a href="#">Moderation Flag Item[]</a> | List of flag details.                                                                            | Small, 40.0              | 40.0              |
| nextPageToken    | String                                 | Token identifying the next page, or <code>null</code> if there isn't a next page.                | Small, 40.0              | 40.0              |
| nextPageUrl      | String                                 | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page. | Small, 40.0              | 40.0              |
| pageSize         | Integer                                | Number of items per page.                                                                        | Small, 40.0              | 40.0              |

## Motif

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

### Example:

**Note:** The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the “boat” tab style:

```
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png"
},
```

Files use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

 **Note:** To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

| Property      | Type   | Description                                                          | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------|--------------------------|-------------------|
| color         | String | A hex value representing the base color of the record type, or null. | Small, 29.0              | 29.0              |
| largeIconUrl  | String | A large icon indicating the record type.                             | Small, 29.0              | 27.0              |
| mediumIconUrl | String | A medium icon indicating the record type.                            | Small, 29.0              | 27.0              |
| smallIconUrl  | String | A small icon indicating the record type.                             | Small, 29.0              | 27.0              |

| Property   | Type   | Description                                                                                       | Filter Group and Version | Available Version |
|------------|--------|---------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| svgIconUrl | String | An icon in SVG format indicating the record type, or <code>null</code> if the icon doesn't exist. | Small, 34.0              | 34.0              |

## Multiple Fulfillment Order Invoices Output

IDs of the created Invoices.

| Property Name | Type     | Description                          | Filter Group and Version | Available Version |
|---------------|----------|--------------------------------------|--------------------------|-------------------|
| invoiceIds    | String[] | List of IDs of the created Invoices. | Big, 52.0                | 52.0              |

## Multiple Fulfillment Order Output

List of responses for the individual FulfillmentOrder creation attempts from a create multiple fulfillment orders request.

| Property Name     | Type                                       | Description                                                       | Filter Group and Version | Available Version |
|-------------------|--------------------------------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| errors            | <a href="#">Error Response Output[]</a>    | Any errors that were returned.                                    | Big, 50.0                | 50.0              |
| fulfillmentOrders | <a href="#">Fulfillment Group Output[]</a> | A list of response data for created and failed FulfillmentOrders. | Big, 50.0                | 50.0              |
| success           | Boolean                                    | Indicates whether the transaction was successful.                 | Big, 50.0                | 50.0              |

## Mute Capability

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

| Property Name | Type    | Description                                                | Filter Group and Version | Available Version |
|---------------|---------|------------------------------------------------------------|--------------------------|-------------------|
| isMutedByMe   | Boolean | Indicates whether the context user muted the feed element. | Small, 35.0              | 35.0              |

| Property Name      | Type   | Description                          | Filter Group and Version | Available Version |
|--------------------|--------|--------------------------------------|--------------------------|-------------------|
| applicationDevName | String | Developer name of the connected app. | Medium, 47.0             | 47.0              |
| applicationId      | String | ID of the connected app.             | Small, 47.0              | 47.0              |

| Property Name             | Type    | Description                                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| applicationName           | String  | Name of the connected app.                                                                                                                                                                                 | Small, 47.0              | 47.0              |
| applicationNamespace      | String  | Namespace of the connected app if it's installed with a managed package.                                                                                                                                   | Medium, 47.0             | 47.0              |
| enabled                   | Boolean | Specifies whether the notification type is enabled for the connected app ( <code>true</code> ) or not ( <code>false</code> ). If <code>true</code> , notifications of this type are displayed in the tray. | Small, 47.0              | 47.0              |
| notificationLabel         | String  | Display label of the notification.                                                                                                                                                                         | Small, 47.0              | 47.0              |
| notificationTypeName      | String  | API name of the custom notification type.                                                                                                                                                                  | Medium, 47.0             | 47.0              |
| notificationTypeNamespace | String  | Namespace of the custom notification type if it's installed with a managed package.                                                                                                                        | Medium, 47.0             | 47.0              |
| notificationTypeId        | String  | Notification type or ID of the custom notification type.                                                                                                                                                   | Small, 47.0              | 47.0              |
| pushEnabled               | Boolean | Specifies whether push is enabled for the notification type in the connected app ( <code>true</code> ) or not ( <code>false</code> ).                                                                      | Small, 47.0              | 47.0              |

## Notification App Settings Collection

Notification app settings.

| Property Name           | Type                                       | Description                              | Filter Group and Version | Available Version |
|-------------------------|--------------------------------------------|------------------------------------------|--------------------------|-------------------|
| notificationAppSettings | <a href="#">Notification App Setting[]</a> | Collection of notification app settings. | Small, 47.0              | 47.0              |

## Notification Collection

Collection of notifications.

| Property Name | Type                           | Description                  | Filter Group and Version | Available Version |
|---------------|--------------------------------|------------------------------|--------------------------|-------------------|
| notifications | <a href="#">Notification[]</a> | Collection of notifications. | Small, 49.0              | 49.0              |

## Notification Member

A notification member.

| Property Name         | Type   | Description                                                                                                           | Filter Group and Version | Available Version |
|-----------------------|--------|-----------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| notificationFrequency | String | Frequency with which a user receives email. In version 38.0 and later, <code>EachPost</code> is the only valid value. | Small, 38.0              | 38.0              |
| url                   | String | URL to the notification member.                                                                                       | Small, 38.0              | 38.0              |

## Notification Setting

Notification setting.

| Property Name             | Type    | Description                                                                                                                  | Filter Group and Version | Available Version |
|---------------------------|---------|------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| desktopEnabled            | Boolean | Specifies whether desktop delivery is enabled for the notification type ( <code>true</code> ) or not ( <code>false</code> ). | Small, 47.0              | 47.0              |
| emailEnabled              | Boolean | Specifies whether email delivery is enabled for the notification type ( <code>true</code> ) or not ( <code>false</code> ).   | Small, 47.0              | 47.0              |
| mobileEnabled             | Boolean | Specifies whether mobile delivery is enabled for the notification type ( <code>true</code> ) or not ( <code>false</code> ).  | Small, 47.0              | 47.0              |
| notificationLabel         | String  | Display label of the notification.                                                                                           | Small, 47.0              | 47.0              |
| notificationTypeName      | String  | API name of the custom notification type.                                                                                    | Medium, 47.0             | 47.0              |
| notificationTypeNamespace | String  | Namespace of the custom notification type if it's installed with a managed package.                                          | Medium, 47.0             | 47.0              |
| notificationTypeOrId      | String  | Notification type or ID of the custom notification type.                                                                     | Small, 47.0              | 47.0              |
| slackEnabled              | Boolean | Reserved for future use.                                                                                                     | Small, 52.0              | 52.0              |

## Notification Settings Collection

Notification settings.

| Property Name        | Type                                    | Description                          | Filter Group and Version | Available Version |
|----------------------|-----------------------------------------|--------------------------------------|--------------------------|-------------------|
| notificationSettings | <a href="#">Notification Setting</a> [] | Collection of notification settings. | Small, 47.0              | 47.0              |

## Notification Status

Status of notifications for the context user.

| Property Name | Type    | Description                                                                                         | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| lastActivity  | String  | Date and time of latest activity date for any notifications or, if none, the current date and time. | Small, 49.0              | 49.0              |
| oldestUnread  | String  | Date and time of oldest unread notification or, if none, the current date and time.                 | Small, 49.0              | 49.0              |
| oldestUnseen  | String  | Date and time of oldest unseen notification or, if none, the current date and time.                 | Small, 49.0              | 49.0              |
| unreadCount   | Integer | Count of unread notifications.                                                                      | Small, 49.0              | 49.0              |
| unseenCount   | Integer | Count of unseen notifications.                                                                      | Small, 49.0              | 49.0              |

## OAuth Credential Auth URL

OAuth authentication URL for a credential.

| Property Name      | Type   | Description                                                                                                                                                                                 | Filter Group and Version | Available Version |
|--------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| authenticationUrl  | String | Authentication URL for the user external credential.<br><br>Authentication URLs have encoded and escaped special characters. Before using the URL, undo the encoded and escaped characters. | Small, 56.0              | 56.0              |
| externalCredential | String | Fully qualified developer name of the external credential.                                                                                                                                  | Small, 56.0              | 56.0              |
| principalName      | String | Name of the external credential named principal.                                                                                                                                            | Small, 56.0              | 56.0              |

| Property Name | Type   | Description                                                                                                                                               | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| principalType | String | Type of credential principal. Values are: <ul style="list-style-type: none"><li>AwsStsPrincipal</li><li>NamedPrincipal</li><li>PerUserPrincipal</li></ul> | Small, 56.0              | 56.0              |

## OAuth Provider

The provider of the OAuth service.

| Property Name    | Type   | Description                             | Filter Group and Version | Available Version |
|------------------|--------|-----------------------------------------|--------------------------|-------------------|
| authorizationUrl | String | The URL used for authorization.         | Small, 37.0              | 37.0              |
| name             | String | The name of the OAuth service provider. | Small, 37.0              | 37.0              |

[OAuth User](#)

## OAuth User

Information about a user's OAuth status.

| Property Name                 | Type                           | Description                                                        | Filter Group and Version | Available Version |
|-------------------------------|--------------------------------|--------------------------------------------------------------------|--------------------------|-------------------|
| availableExternalEmailService | <a href="#">OAuth Provider</a> | The available OAuth service provider.                              | Small, 37.0              | 37.0              |
| isAuthenticated               | Boolean                        | Specifies whether the user is authenticated (true) or not (false). | Small, 37.0              | 37.0              |

## Object Metadata

Search metadata related to the object.

| Property Name  | Type                                                 | Description                                    | Filter Group and Version | Available Version |
|----------------|------------------------------------------------------|------------------------------------------------|--------------------------|-------------------|
| dataCategories | Map<String, <a href="#">Data Category Metadata</a> > | Metadata on each data category for the object. | Small, 63.0              | 63.0              |
| fields         | Map<String, <a href="#">Field Metadata</a> >         | Metadata on each field of the object.          | Small, 63.0              | 63.0              |

| Property Name | Type                       | Description                | Filter Group and Version | Available Version |
|---------------|----------------------------|----------------------------|--------------------------|-------------------|
| label         | String                     | Name of the object.        | Small, 63.0              | 63.0              |
| labelPlural   | String                     | Plural name of the object. | Small, 63.0              | 63.0              |
| objectApiName | String                     | API name of the object.    | Small, 63.0              | 63.0              |
| themeInfo     | <a href="#">Theme Info</a> | Theme of the object.       | Small, 63.0              | 63.0              |

## Object Query Info

Contains search query execution information for the object.

| Property Name       | Type                                  | Description                                                                                                                                     | Filter Group and Version | Available Version |
|---------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| displayFields       | String[]                              | Fields to display from the response.                                                                                                            | Small, 64.0              | 64.0              |
| hasMoreResults      | Boolean                               | Specifies whether there are more records to fetch matching the search query for the object ( <code>true</code> ) or not ( <code>false</code> ). | Small, 64.0              | 64.0              |
| nameField           | String                                | Name field identifier of the object.                                                                                                            | Small, 64.0              | 64.0              |
| numberOfMatches     | Integer                               | Number of results for the object matching the search query.                                                                                     | Small, 64.0              | 64.0              |
| orderBy             | <a href="#">Applied Order By</a> []   | Applied order for object search.                                                                                                                | Small, 64.0              | 64.0              |
| source              | String                                | Source name for the object.                                                                                                                     | Small, 64.0              | 64.0              |
| spellCorrectionInfo | <a href="#">Spell Correction Info</a> | Spell correction information for the object search.                                                                                             | Small, 64.0              | 64.0              |
| status              | <a href="#">Status</a>                | Status on the object search such as error messages and warnings.                                                                                | Small, 64.0              | 64.0              |

## OCI Attribute Set

Details of an attribute set.

| Property Name             | Type     | Description                                                                | Filter Group and Version | Available Version |
|---------------------------|----------|----------------------------------------------------------------------------|--------------------------|-------------------|
| groupEligibilityExclusion | String[] | List of group IDs that are excluded from aggregating the location and SKU. | Big, 59.0                | 59.0              |

## OCI Batch Update

Details of the updated inventory records.

| Property Name | Type                                     | Description                                       | Filter Group and Version | Available Version |
|---------------|------------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">OCI Batch Update Error[]</a> | Errors returned by the transaction.               | Big, 62.0                | 62.0              |
| success       | Boolean                                  | Indicates whether the transaction was successful. | Big, 62.0                | 62.0              |

## OCI Batch Update Error

Error returned from an attempt to batch update inventory.

| Property Name | Type                                    | Description                              | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|------------------------------------------|--------------------------|-------------------|
| details       | <a href="#">OCI Batch Update Single</a> | Details of one updated inventory record. | Small, 62.0              | 62.0              |
| errorCode     | String                                  | Error code, if any.                      | Small, 62.0              | 62.0              |
| message       | String                                  | Details of the error, if available.      | Small, 62.0              | 62.0              |

## OCI Batch Update Single

Details of one updated inventory record.

| Property Name      | Type   | Description                                                                    | Filter Group and Version | Available Version |
|--------------------|--------|--------------------------------------------------------------------------------|--------------------------|-------------------|
| actionRequestId    | String | Idempotent ID that identifies this request.                                    | Small, 62.0              | 62.0              |
| externalRefId      | String | Unique code, reference, or identifier for the record used by external systems. | Small, 62.0              | 62.0              |
| locationIdentifier | String | Location identifier.                                                           | Small, 62.0              | 62.0              |
| stockKeepingUnit   | String | SKU of the product being updated.                                              | Small, 62.0              | 62.0              |

## OCI Create Reservation Error Output

Error returned from an attempt to create an Omnichannel Inventory reservation.

| Property Name | Type   | Description                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------|--------------------------|-------------------|
| errorCode     | String | The error code.                     | Small, 51.0              | 51.0              |
| message       | String | Details of the error, if available. | Small, 51.0              | 51.0              |

## OCI Create Reservation Output

Result of an Omnichannel Inventory reservation creation request.

| Property Name   | Type                                                   | Description                                                 | Filter Group and Version | Available Version |
|-----------------|--------------------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| details         | <a href="#">OCI Create Reservation Single Output[]</a> | Details for each product in the reservation.                | Small, 51.0              | 51.0              |
| errors          | <a href="#">OCI Create Reservation Error Output[]</a>  | Any errors returned by the reservation request.             | Big, 51.0                | 51.0              |
| expirationTime  | String                                                 | The time at which the reservation would expire.             | Small, 51.0              | 51.0              |
| reservationTime | String                                                 | The time when the reservation was recorded.                 | Small, 51.0              | 51.0              |
| success         | Boolean                                                | Indicates whether the reservation was successfully created. | Big, 51.0                | 51.0              |

## OCI Create Reservation Single Output

Details of an inventory reservation for one product.

| Property Name                      | Type   | Description                                                       | Filter Group and Version | Available Version |
|------------------------------------|--------|-------------------------------------------------------------------|--------------------------|-------------------|
| errorCode                          | String | The error code, if any.                                           | Small, 51.0              | 51.0              |
| <del>locationGroupIdentifier</del> | String | Identifier of the location group where the inventory is reserved. | Small, 51.0              | 51.0              |
| locationIdentifier                 | String | Identifier of the location where the inventory is reserved.       | Small, 51.0              | 51.0              |
| quantity                           | Double | The reserved quantity of the product.                             | Small, 51.0              | 51.0              |
| stockKeepingUnit                   | String | The SKU of the reserved product.                                  | Small, 51.0              | 51.0              |

## OCI Fulfill Reservation Error Output

Response to a request to fulfill one inventory reservation.

| Property Name | Type                                                  | Description                                          | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------------|------------------------------------------------------|--------------------------|-------------------|
| details       | <a href="#">OCI Fulfill Reservation Single Output</a> | Details of the fulfilled reservation, if successful. | Small, 51.0              | 51.0              |
| errorCode     | String                                                | Error code, if any.                                  | Small, 51.0              | 51.0              |
| message       | String                                                | Details of the error, if available.                  | Small, 51.0              | 51.0              |

## OCI Fulfill Reservation Output

Response to a request to fulfill one or more inventory reservations.

| Property Name | Type                                                   | Description                                                           | Filter Group and Version | Available Version |
|---------------|--------------------------------------------------------|-----------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">OCI Fulfill Reservation Error Output[]</a> | Responses for the individual reservations in the fulfillment request. | Big, 51.0                | 51.0              |
| success       | Boolean                                                | Indicates whether the request was successful.                         | Big, 51.0                | 51.0              |

## OCI Fulfill Reservation Single Output

Details of a single fulfilled reservation.

| Property Name      | Type   | Description                                                               | Filter Group and Version | Available Version |
|--------------------|--------|---------------------------------------------------------------------------|--------------------------|-------------------|
| actionRequestId    | String | The UUID that identifies the original fulfill reservation request.        | Small, 51.0              | 51.0              |
| externalRefId      | String | The external reference ID of the location that fulfilled the reservation. | Small, 51.0              | 51.0              |
| locationIdentifier | String | The identifier of the location that fulfilled the reservation.            | Small, 51.0              | 51.0              |
| quantity           | Double | The fulfilled quantity.                                                   | Small, 51.0              | 51.0              |
| stockKeepingUnit   | String | The SKU of the fulfilled product.                                         | Small, 51.0              | 51.0              |

## OCI Future Inventory Output

An expected future inventory restock.

| Property Name | Type   | Description                                 | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------|--------------------------|-------------------|
| expectedDate  | String | Date when the future inventory is expected. | Big, 51.0                | 51.0              |
| quantity      | Double | Quantity of the future inventory.           | Big, 51.0                | 51.0              |

## OCI Get Inventory Availability Output

Response to a request for inventory availability data.

| Property Name  | Type                                                     | Description                                                           | Filter Group and Version | Available Version |
|----------------|----------------------------------------------------------|-----------------------------------------------------------------------|--------------------------|-------------------|
| locationGroups | <a href="#">OCI Location Group Availability Output[]</a> | A list of inventory availability data for individual location groups. | Big, 51.0                | 51.0              |
| locations      | <a href="#">OCI Location Availability Output[]</a>       | A list of inventory availability data for individual locations.       | Big, 51.0                | 51.0              |

## OCI Inventory Check Availability Output

Inventory product availability for an individual location or location group.

| Property Name  | Type                                                           | Description                                                                                                                                             | Filter Group and Version | Available Version |
|----------------|----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| locationGroups | <a href="#">OCI Location Group Check Availability Output[]</a> | List of inventory availability data for individual location groups. Request <code>locationGroups</code> or <code>location</code> information, not both. | Big, 60.0                | 60.0              |
| locations      | <a href="#">OCI Location Check Availability Output[]</a>       | List of inventory availability data for individual locations. Request <code>locationGroups</code> or <code>location</code> information, not both.       | Big, 60.0                | 60.0              |

## OCI Inventory Levels Output

Inventory levels data.

| Property Name  | Type                                             | Description                                                         | Filter Group and Version | Available Version |
|----------------|--------------------------------------------------|---------------------------------------------------------------------|--------------------------|-------------------|
| locationGroups | <a href="#">OCI Location Group Levels Output</a> | List of inventory availability data for individual location groups. | Big, 60.0                | 60.0              |

| Property Name  | Type                                         | Description                                                   | Filter Group and Version | Available Version |
|----------------|----------------------------------------------|---------------------------------------------------------------|--------------------------|-------------------|
| locations      | <a href="#">OCI Location Levels Output</a>   | List of inventory availability data for individual locations. | Big, 60.0                | 60.0              |
| totalInventory | <a href="#">OCI Inventory Product Output</a> | All inventory information associated with the product.        | Big, 60.0                | 60.0              |

## OCI Inventory Product Check Availability Output

Inventory product availability.

| Property Name | Type    | Description                                                           | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------|--------------------------|-------------------|
| available     | Boolean | Requested quantity is either available (true) or unavailable (false). | Big, 60.0                | 60.0              |
| inventory     | String  | All inventory information associated with the product.                | Big, 60.0                | 60.0              |
| product2Id    | String  | Product ID.                                                           | Big, 06.0                | 60.0              |

## OCI Inventory Product Output

Inventory product data.

| Property Name      | Type   | Description                    | Filter Group and Version | Available Version |
|--------------------|--------|--------------------------------|--------------------------|-------------------|
| availableToFulfill | Double | Available To Fulfill quantity. | Big, 60.0                | 60.0              |
| availableToOrder   | Double | Available To Order quantity.   | Big, 60.0                | 60.0              |
| onHand             | Double | On Hand quantity.              | Big, 60.0                | 60.0              |
| product2Id         | String | Product ID.                    | Big, 60.0                | 60.0              |
| stockKeepingUnit   | String | Product SKU.                   | Big, 60.0                | 60.0              |

## OCI Inventory Record Output

Inventory availability data for a product.

| Property Name      | Type   | Description                        | Filter Group and Version | Available Version |
|--------------------|--------|------------------------------------|--------------------------|-------------------|
| availableToFulfill | Double | The Available To Fulfill quantity. | Big, 51.0                | 51.0              |
| availableToOrder   | Double | The Available To Order quantity.   | Big, 51.0                | 51.0              |

| Property Name    | Type                                          | Description                                                                        | Filter Group and Version | Available Version |
|------------------|-----------------------------------------------|------------------------------------------------------------------------------------|--------------------------|-------------------|
| effectiveDate    | String                                        | The effective date of the inventory. Indicates if the SKU exists in the inventory. | Big, 51.0                | 51.0              |
| exists           | Boolean                                       | Indicates if the SKU exists in the inventory.                                      | Big, 62.0                | 62.0              |
| futures          | <a href="#">OCI Future Inventory Output[]</a> | A list of any expected future inventory restocks.                                  | Big, 51.0                | 51.0              |
| onHand           | Double                                        | The On Hand quantity.                                                              | Big, 51.0                | 51.0              |
| reserved         | Double                                        | The Reserved quantity.                                                             | Big, 51.0                | 51.0              |
| safetyStockCount | Double                                        | The Safety Stock Count.                                                            | Big, 51.0                | 51.0              |
| stockKeepingUnit | String                                        | The SKU of the product.                                                            | Big, 51.0                | 51.0              |

## OCI Location Availability Output

Output representation of one location's inventory availability

| Property Name      | Type                                          | Description             | Filter Group and Version | Available Version |
|--------------------|-----------------------------------------------|-------------------------|--------------------------|-------------------|
| inventoryRecords   | <a href="#">OCI Inventory Record Output[]</a> | The Inventory Records   | Big, 51.0                | 51.0              |
| locationIdentifier | String                                        | The Location Identifier | Big, 51.0                | 51.0              |

## OCI Location Check Availability Output

Inventory product availability for a location.

| Property Name     | Type                                                              | Description                 | Filter Group and Version | Available Version |
|-------------------|-------------------------------------------------------------------|-----------------------------|--------------------------|-------------------|
| inventoryProducts | <a href="#">OCI Inventory Product Check Availability Output[]</a> | List of inventory products. | Big, 60.0                | 60.0              |
| locationId        | String                                                            | Location ID.                | Big, 60.0                | 60.0              |

## OCI Location Group Availability Output

A set of inventory availability data for one inventory location group.

| Property Name           | Type                                          | Description                                                                                                                               | Filter Group and Version | Available Version |
|-------------------------|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| inventoryRecords        | <a href="#">OCI Inventory Record Output[]</a> | A list of availability data for individual products. The data combines the quantities for all locations belonging to this location group. | Big, 51.0                | 51.0              |
| locationGroupIdentifier | String                                        | The identifier of the location group.                                                                                                     | Big, 51.0                | 51.0              |

## OCI Location Group Check Availability Output

Inventory product availability for a location group.

| Property Name     | Type                                                              | Description                 | Filter Group and Version | Available Version |
|-------------------|-------------------------------------------------------------------|-----------------------------|--------------------------|-------------------|
| inventoryProducts | <a href="#">OCI Inventory Product Check Availability Output[]</a> | List of inventory products. | Big, 60.0                | 60.0              |
| locationGroupId   | String                                                            | Location group ID.          | Big, 60.0                | 60.0              |

## OCI Location Group Levels Output

Inventory location group levels data.

| Property Name     | Type                                         | Description                    | Filter Group and Version | Available Version |
|-------------------|----------------------------------------------|--------------------------------|--------------------------|-------------------|
| inventoryProducts | <a href="#">OCI Inventory Product Output</a> | List of products in inventory. | Big, 60.0                | 60.0              |
| locationGroupId   | String                                       | ID of the location group.      | Big, 60.0                | 60.0              |

## OCI Location Levels Output

Inventory location levels data.

| Property Name     | Type                                         | Description                    | Filter Group and Version | Available Version |
|-------------------|----------------------------------------------|--------------------------------|--------------------------|-------------------|
| inventoryProducts | <a href="#">OCI Inventory Product Output</a> | List of products in inventory. | Big, 60.0                | 60.0              |
| locationId        | String                                       | Location ID.                   | Big, 60.0                | 60.0              |

## OCI Publish Location Structure Output

Response to a publish location structure request.

| Property Name | Type   | Description                                                                      | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| uploadId      | String | Identifier of the publish job. Use this value to retrieve the status of the job. | Big, 51.0                | 51.0              |

## OCI Publish Location Structure Status Output

Detailed status of a publish location structure job.

| Property Name         | Type     | Description                                                                   | Filter Group and Version | Available Version |
|-----------------------|----------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| endTimeUTC            | String   | The UTC time when the job finished. (for example: "2020-07-06T22:54:08.012Z") | Big, 51.0                | 51.0              |
| recordsProcessedCount | Integer  | The number of records processed by the job.                                   | Big, 51.0                | 51.0              |
| recordsReadCount      | Integer  | The number of records read by the job.                                        | Big, 51.0                | 51.0              |
| recordsSkippedCount   | Integer  | The number of records skipped by the job.                                     | Big, 51.0                | 51.0              |
| startTimeUTC          | String   | The UTC time when the job started. (for example: "2020-07-06T22:53:06.788Z")  | Big, 51.0                | 51.0              |
| status                | String   | The status of the job. (e.g., "PENDING," "COMPLETED," etc.).                  | Big, 51.0                | 51.0              |
| uploadId              | String   | Identifier of the job.                                                        | Big, 51.0                | 51.0              |
| validationErrors      | String[] | List of any validation errors returned by the job.                            | Big, 51.0                | 51.0              |
| validationStatus      | String   | The validation status of the job.                                             | Big, 51.0                | 51.0              |

## OCI Release Reservation Error Output

Response to a request to release one inventory reservation.

| Property Name | Type                                                  | Description                                         | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------------|-----------------------------------------------------|--------------------------|-------------------|
| details       | <a href="#">OCI Release Reservation Single Output</a> | Details of the released reservation, if successful. | Small, 51.0              | 51.0              |
| errorCode     | String                                                | Error code, if any.                                 | Small, 51.0              | 51.0              |

| Property Name | Type   | Description                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------|--------------------------|-------------------|
| message       | String | Details of the error, if available. | Small, 51.0              | 51.0              |

## OCI Release Reservation Output

Response to a request to release one or more inventory reservations.

| Property Name | Type                                                   | Description                                                       | Filter Group and Version | Available Version |
|---------------|--------------------------------------------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">OCI Release Reservation Error Output[]</a> | Responses for the individual reservations in the release request. | Big, 51.0                | 51.0              |
| success       | Boolean                                                | Indicates whether the request was successful.                     | Big, 51.0                | 51.0              |

## OCI Release Reservation Single Output

Details of a single released reservation.

| Property Name                      | Type   | Description                                                              | Filter Group and Version | Available Version |
|------------------------------------|--------|--------------------------------------------------------------------------|--------------------------|-------------------|
| actionRequestId                    | String | The UUID that identifies the original release reservation request.       | Small, 51.0              | 51.0              |
| externalRefId                      | String | The external reference ID of the location that released the reservation. | Small, 51.0              | 51.0              |
| <del>locationGroupIdentifier</del> | String | The identifier of the location group that released the reservation.      | Small, 51.0              | 51.0              |
| locationIdentifier                 | String | The identifier of the location that released the reservation.            | Small, 51.0              | 51.0              |
| quantity                           | Double | The released quantity.                                                   | Small, 51.0              | 51.0              |
| stockKeepingUnit                   | String | The SKU of the released product.                                         | Small, 51.0              | 51.0              |

## OCI Transfer Reservation Error Output

Response to a request to fulfill one inventory reservation.

| Property Name | Type                                                   | Description                                            | Filter Group and Version | Available Version |
|---------------|--------------------------------------------------------|--------------------------------------------------------|--------------------------|-------------------|
| details       | <a href="#">OCI Transfer Reservation Single Output</a> | Details of the transferred reservation, if successful. | Small, 51.0              | 51.0              |
| errorCode     | String                                                 | Error code, if any.                                    | Small, 51.0              | 51.0              |
| message       | String                                                 | Details of the error, if available.                    | Small, 51.0              | 51.0              |

## OCI Transfer Reservation Output

Response to a request to transfer one or more inventory reservations.

| Property Name | Type                                                    | Description                                                        | Filter Group and Version | Available Version |
|---------------|---------------------------------------------------------|--------------------------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">OCI Transfer Reservation Error Output[]</a> | Responses for the individual reservations in the transfer request. | Big, 51.0                | 51.0              |
| success       | Boolean                                                 | Indicates whether the request was successful.                      | Big, 51.0                | 51.0              |

## OCI Transfer Reservation Single Output

Details of a single transferred reservation.

| Property Name                          | Type    | Description                                                                                | Filter Group and Version | Available Version |
|----------------------------------------|---------|--------------------------------------------------------------------------------------------|--------------------------|-------------------|
| actionRequestId                        | String  | The UUID that identifies the original transfer reservation request.                        | Small, 51.0              | 51.0              |
| externalRefId                          | String  | The external reference ID of the location that received the reservation.                   | Small, 51.0              | 51.0              |
| <del>fromLocationGroupIdentifier</del> | String  | The identifier of the location group that sent the reservation.                            | Small, 51.0              | 51.0              |
| <del>fromLocationIdentifier</del>      | String  | The identifier of the location that sent the reservation.                                  | Small, 51.0              | 51.0              |
| <del>ignoreAvailabilityCheck</del>     | Boolean | Whether this call ignored availability data at the location that received the reservation. | Small, 52.0              | 52.0              |
| quantity                               | Double  | The quantity of transferred inventory.                                                     | Small, 51.0              | 51.0              |
| stockKeepingUnit                       | String  | The SKU of the transferred product.                                                        | Small, 51.0              | 51.0              |
| <del>toLocationGroupIdentifier</del>   | String  | The identifier of the location group that received the reservation.                        | Small, 51.0              | 51.0              |

| Property Name        | Type   | Description                                                   | Filter Group and Version | Available Version |
|----------------------|--------|---------------------------------------------------------------|--------------------------|-------------------|
| toLocationIdentifier | String | The identifier of the location that received the reservation. | Small, 51.0              | 51.0              |

## OCI Update Reservation Error Output

Error returned from an attempt to update an Omnichannel Inventory reservation.

| Property Name | Type   | Description                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------|--------------------------|-------------------|
| errorCode     | String | The error code.                     | Small, 61.0              | 61.0              |
| message       | String | Details of the error, if available. | Small, 61.0              | 61.0              |

## OCI Update Reservation Output

Result of an Omnichannel Inventory update request for reserved inventory.

| Property Name   | Type                                                    | Description                                                 | Filter Group and Version | Available Version |
|-----------------|---------------------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| details         | <a href="#">OCI Update Reservation Single Output []</a> | Details for each product in the reservation.                | Small, 61.0              | 61.0              |
| errors          | <a href="#">OCI Update Reservation Error Output []</a>  | Any errors returned by the reservation update request.      | Big, 61.0                | 61.0              |
| reservationTime | String                                                  | The time when the reservation was updated.                  | Small, 61.0              | 61.0              |
| success         | Boolean                                                 | Indicates whether the reservation was successfully updated. | Big, 61.0                | 61.0              |

## OCI Update Reservation Single Output

Details of an updated reservation for one product.

| Property Name           | Type   | Description                                                       | Filter Group and Version | Available Version |
|-------------------------|--------|-------------------------------------------------------------------|--------------------------|-------------------|
| adjustment              | Double | The total reservation adjustment                                  | Small, 61.0              | 61.0              |
| errorCode               | String | The error code, if any.                                           | Small, 61.0              | 61.0              |
| locationGroupIdentifier | String | Identifier of the location group where the inventory is reserved. | Small, 61.0              | 61.0              |

| Property Name      | Type   | Description                                                 | Filter Group and Version | Available Version |
|--------------------|--------|-------------------------------------------------------------|--------------------------|-------------------|
| locationIdentifier | String | Identifier of the location where the inventory is reserved. | Small, 61.0              | 61.0              |
| quantity           | Double | The total reservation quantity of the product.              | Small, 61.0              | 61.0              |
| stockKeepingUnit   | String | The SKU of the updated product.                             | Small, 61.0              | 61.0              |

## OCI Upload Inventory Availability Output

Response to an upload inventory availability job.

| Property Name | Type   | Description                                                                     | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------|--------------------------|-------------------|
| uploadId      | String | Identifier of the upload job. Use this value to retrieve the status of the job. | Big, 51.0                | 51.0              |

## OCI Upload Inventory Availability Status Output

Detailed status of an upload inventory availability job.

| Property Name         | Type     | Description                                                                            | Filter Group and Version | Available Version |
|-----------------------|----------|----------------------------------------------------------------------------------------|--------------------------|-------------------|
| endTimeUTC            | String   | The UTC time when the job finished. (for example: "2020-07-06T22:54:08.012Z")          | Big, 51.0                | 51.0              |
| recordsProcessedCount | Integer  | The number of records processed by the job.                                            | Big, 51.0                | 51.0              |
| recordsReadCount      | Integer  | The number of records read by the job.                                                 | Big, 51.0                | 51.0              |
| recordsSkippedCount   | Integer  | The number of records skipped by the job.                                              | Big, 51.0                | 51.0              |
| startTimeUTC          | String   |                                                                                        | Big, 51.0                | 51.0              |
| status                | String   | The overall status of the inventory availability upload (e.g. "PENDING", "COMPLETED"). | Big, 51.0                | 51.0              |
| uploadId              | String   | Identifier of the job.                                                                 | Big, 51.0                | 51.0              |
| validationErrors      | String[] | List of any validation errors returned by the job.                                     | Big, 51.0                | 51.0              |
| validationStatus      | String   | The validation status of the job.                                                      | Big, 51.0                | 51.0              |

## Order By

Order by parameter for object search.

| Property Name | Type   | Description                                                                                                                                                      | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| field         | String | API name of the field.                                                                                                                                           | Small, 63.0              | 63.0              |
| order         | String | Order direction. Values are: <ul style="list-style-type: none"> <li>Ascending</li> <li>Descending</li> </ul>                                                     | Small, 63.0              | 63.0              |
| orderNulls    | String | Null value order. Values are: <ul style="list-style-type: none"> <li>Firsts—Null values are sorted first.</li> <li>Lasts—Null values are sorted last.</li> </ul> | Small, 63.0              | 63.0              |

| previousPageUrl   | String                           | Connect REST API URL identifying the previous page, or <b>null</b> if there isn't a previous page.                                                                                                                                                                                                                                  | Small, 51.0              | 51.0              |
| sortOrder         | String                           | Sort order for order summaries. Values are: <ul style="list-style-type: none"><li>CreatedDateAsc—Sorts by the oldest created date.</li><li>CreatedDateDesc—Sorts by the most recent created date.</li><li>OrderedDateAsc—Sorts by the oldest ordered date.</li><li>OrderedDateDesc—Sorts by the most recent ordered date.</li></ul> | Small, 51.0              | 51.0              |

## Order Summary Graph Output

Response from creating a pending order summary based on an order summary graph.

| Property Name       | Type                     | Description                                                                                                                                                                                                                                                                                 | Filter Group and Version | Available Version |
|---------------------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error               | Error Response Output    | Error details, if applicable.                                                                                                                                                                                                                                                               | Big, 57.0                | 57.0              |
| httpHeaders         | Name Value Pair Output[] | List of name-value pairs representing the graph's HTTP headers. If the pending order summary is successfully created, the name is Location and the value is the URI of the pending order summary record. For example:<br><del>/services/2a/57.0/orders/PendingOrderSummary/XXXXXXXXXX</del> | Big, 57.0                | 57.0              |
| orderSummaryGraphId | String                   | ID of the order summary graph used to create the pending order summary.                                                                                                                                                                                                                     | Big, 57.0                | 57.0              |
| success             | Boolean                  | Whether the graph was successfully processed.                                                                                                                                                                                                                                               | Big, 57.0                | 57.0              |

## Organization

An org.

| Property        | Type                                      | Description                                                                                                | Filter Group and Version | Available Version |
|-----------------|-------------------------------------------|------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accessTimeout   | Integer                                   | Amount of time after which the system prompts users who have been inactive to log out or continue working. | Small, 29.0              | 24.0              |
| features        | <a href="#">Features</a>                  | Information about features available in the org or site.                                                   | Small, 29.0              | 24.0              |
| maintenanceInfo | <a href="#">Maintenance Information[]</a> | Information about a list of upcoming scheduled maintenances for the org.                                   | Medium, 34.0             | 34.0              |
| name            | String                                    | Org name.                                                                                                  | Small, 29.0              | 26.0              |
| orgId           | String                                    | 18-character ID for the org.                                                                               | Small, 29.0              | 24.0              |
| userSettings    | <a href="#">User Setting</a>              | Information about the org permissions for the user.                                                        | Small, 29.0              | 24.0              |

## Origin Capability

If a feed element has this capability, it was created by a feed action.

| Property Name | Type                         | Description                                                 | Filter Group and Version | Available Version |
|---------------|------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| actor         | <a href="#">User Summary</a> | The user who executed the feed action.                      | Small, 33.0              | 33.0              |
| originRecord  | <a href="#">Reference</a>    | A reference to the feed element containing the feed action. | Small, 33.0              | 33.0              |

| businessUnits      | <a href="#">Pardot Business Unit Context Item[]</a> | List of the Pardot business unit context items that the context user has access to.      | Small, 55.0              | 55.0              |
| isSuccess          | Boolean                                             | Indicates whether the requested resource was successfully provided.                      | Small, 55.0              | 55.0              |
| totalBusinessUnits | Integer                                             | Indicates the total number of Pardot business units that the context user has access to. | Small, 55.0              | 55.0              |

## Payment Authorization Output

Payment authorization output representation.

| Property Name   | Type   | Description                                                                   | Filter Group and Version | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| accountId       | String | Salesforce account for the payment authorization.                             | Big, 49.0                | 49.0              |
| amount          | Double | Amount that the gateway authorized for the payment transaction.               | Big, 49.0                | 49.0              |
| currencyIsoCode | String | Three-letter ISO 4217 currency code associated with the payment group record. | Big, 49.0                | 49.0              |
| effectiveDate   | String | Date that the authorization becomes effective.                                | Big, 49.0                | 49.0              |
| expirationDate  | String | Date that the authorization expires.                                          | Big, 49.0                | 49.0              |
| id              | String | ID of the payment authorization record.                                       | Big, 49.0                | 49.0              |

| Property Name              | Type   | Description                                                     | Filter Group and Version | Available Version |
|----------------------------|--------|-----------------------------------------------------------------|--------------------------|-------------------|
| paymentAuthorizationNumber | String | System-defined number for the payment authorization record.     | Big, 49.0                | 49.0              |
| requestDate                | String | Date that the authorization occurred.                           | Big, 49.0                | 49.0              |
| status                     | String | Status of the payment authorization as returned by the gateway. | Big, 49.0                | 49.0              |

## Payment Configuration

Payment configuration information for Salesforce Checkout.

| Property Name                     | Type    | Description                                                                                                             | Filter Group and Version | Available Version |
|-----------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| paymentMethodManualCaptureEnabled | Boolean | Indicates whether manual capture is enabled for the payment method ( <code>true</code> ) or not ( <code>false</code> ). | Small, 61.0              | 61.0              |
| paymentMethodSetDevName           | String  | Name of the payment method set.                                                                                         | Small, 61.0              | 61.0              |

## Payment Group Output

Payment group output representation.

| Property Name   | Type   | Description                                                                   | Filter Group and Version | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| currencyIsoCode | String | Three-letter ISO 4217 currency code associated with the payment group record. | Big, 48.0                | 48.0              |
| id              | String | ID of the payment group record.                                               | Big, 48.0                | 48.0              |
| sourceObjectId  | String | Source object ID of the payment group record. Supports only OrderId.          | Big, 48.0                | 48.0              |

## Payment Intents

List of initiated payment intents.

| Property Name | Type                    | Description                                             | Filter Group and Version | Available Version |
|---------------|-------------------------|---------------------------------------------------------|--------------------------|-------------------|
| error         | ConnectApiErrorResponse | Error explaining why the payment intent wasn't created. | Big, 57.0                | 57.0              |

| Property Name    | Type                | Description                                                     | Filter Group and Version | Available Version |
|------------------|---------------------|-----------------------------------------------------------------|--------------------------|-------------------|
| gatewayRefId     | String              | Identifier of the gateway response.                             | Big, 57.0                | 57.0              |
| gatewayResponse  | Map<String, Object> | Response from the payment gateway request.                      | Big, 57.0                | 57.0              |
| guid             | String              | Unique identifier of the payment intent request.                | Small, 57.0              | 57.0              |
| paymentGatewayId | String              | ID of the Salesforce Payment Gateway object.                    | Big, 57.0                | 57.0              |
| status           | String              | Status of payment intent, such as created, processing, succeed. | Big, 57.0                | 57.0              |

## Payment Link Config Output

Payment link configuration details.

### JSON example

```
{
  "amount": 25.5,
  "cartId": "0a612d32fgcd",
  "currencyIsoCode": "USD",
  "description": "Payment made for online purchase.",
  "paymentMethodSetDevName": "AMER_US",
  "type": "PredefinedAmount",
  "title": "PaymentLink Title"
}
```

| Property Name           | Type   | Description                                                                                                                                       | Filter Group and Version | Available Version |
|-------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| amount                  | Double | Amount of the payment link.                                                                                                                       | Small, 58.0              | 58.0              |
| cartId                  | String | ID of the cart associated with the payment link.                                                                                                  | Small, 59.0              | 59.0              |
| currencyIsoCode         | String | Currency Iso code of the payment link.                                                                                                            | Small, 58.0              | 58.0              |
| description             | String | Description of the payment link.                                                                                                                  | Small, 58.0              | 58.0              |
| paymentMethodSetDevName | String | Developer name of the payment method set associated with the payment link, which is used to display the payment methods on the payment link page. | Small, 58.0              | 58.0              |
| title                   | String | Title of the payment link.                                                                                                                        | Small, 58.0              | 58.0              |

| Property Name | Type            | Description                                                                                                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|---------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| type          | PaymentLinkType | Type of the payment link. Possible values are: <ul style="list-style-type: none"><li>PredefinedAmount—Type of payment link with a predefined amount. This payment link type calls the <a href="#">Commerce Webstore Checkout Orders API</a>.</li><li>WithProducts—Type of payment link with product items. This payment link type calls the <a href="#">Commerce Webstore Checkouts API</a>.</li></ul> | Small, 59.0              | 59.0              |

## Payment Method Details

Details about the payment method.

| Property Name            | Type                                              | Description                            | Filter Group and Version | Available Version |
|--------------------------|---------------------------------------------------|----------------------------------------|--------------------------|-------------------|
| alternativePaymentMethod | <a href="#">Alternative Payment Method Output</a> | Alternative Payment Method details.    | Big, 56.0                | 56.0              |
| cardPaymentMethod        | <a href="#">Card Payment Method Output</a>        | Details about the card payment method. | Big, 56.0                | 56.0              |

## Payment Method Output

Payment method response.

| Property Name        | Type                                   | Description                                                         | Filter Group and Version | Available Version |
|----------------------|----------------------------------------|---------------------------------------------------------------------|--------------------------|-------------------|
| accountId            | String                                 | Salesforce Payments account to which this payment method is linked. | Big, 49.0                | 49.0              |
| id                   | String                                 | ID of the payment method record.                                    | Big, 49.0                | 49.0              |
| paymentMethodDetails | <a href="#">Payment Method Details</a> | Details about the payment method.                                   | Big, 56.0                | 56.0              |
| status               | String                                 | Status of the payment method as returned by the payment gateway.    | Big, 49.0                | 49.0              |

## Payment Method Sets

Retrieved list of payment method sets in use for Salesforce Payments merchant accounts.

| Property Name         | Type     | Description                                                                                 | Filter Group and Version | Available Version |
|-----------------------|----------|---------------------------------------------------------------------------------------------|--------------------------|-------------------|
| countryCode           | String   | Country that the payment method set is assigned to.                                         | Small, 58.0              | 58.0              |
| developerName         | String   | Developer-assigned unique name to identify the payment method set.                          | Small, 58.0              | 58.0              |
| id                    | String   | Identifies the payment method set that is mapped to a web store.                            | Small, 58.0              | 58.0              |
| merchantAccountId     | String   | Identifies the Salesforce Payments merchant account associated with the payment method set. | Small, 58.0              | 58.0              |
| name                  | String   | Assigned name of the payment method set.                                                    | Small, 58.0              | 58.0              |
| paymentMethodAccounts | String[] | List of payment gateway accounts for the payment method set.                                | Big, 58.0                | 58.0              |
| paymentMethods        | String[] | List of payment methods in the set.                                                         | Big, 58.0                | 58.0              |

## Payment Method Tokenization Gateway Response Output

Payment method tokenization gateway response representation.

| Property Name                 | Type   | Description                                                                                        | Filter Group and Version | Available Version |
|-------------------------------|--------|----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| gatewayAvsCode                | String | Code sent by gateways that use an address verification system.                                     | Big, 51.0                | 51.0              |
| gatewayDate                   | String | The date and time that of the gateway communication that lead to the creation of this gateway log. | Big, 51.0                | 51.0              |
| gatewayMessage                | String | Information or error messages sent from the gateway.                                               | Big, 51.0                | 51.0              |
| gatewayResult Code            | String | Gateway-specific result code. Must be mapped to a Salesforce-specific result code.                 | Big, 51.0                | 51.0              |
| gatewayResult CodeDescription | String | Description of the gateway's result code.                                                          | Big, 51.0                | 51.0              |
| gatewayToken                  | String | Payment method token from the payment gateway.                                                     | Big, 51.0                | 51.0              |
| salesforceResult Code         | String | Salesforce-specific result code that can map to one or more gateway result codes.                  | Big, 51.0                | 51.0              |

## Payment Method Tokenization Output

Payment method tokenization output representation.

| Property Name      | Type                                                                | Description                                                            | Filter Group and Version | Available Version |
|--------------------|---------------------------------------------------------------------|------------------------------------------------------------------------|--------------------------|-------------------|
| error              | <a href="#">Error Response Output</a>                               | Error response following a failed payment method tokenization request. | Big, 51.0                | 51.0              |
| gatewayResponse    | <a href="#">Payment Method Tokenization Gateway Response Output</a> | Gateway response following a payment method tokenization request.      | Big, 51.0                | 51.0              |

## Payment Output

Payment output representation.

| Property Name   | Type   | Description                                                                 | Filter Group and Version | Available Version |
|-----------------|--------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| accountId       | String | ID of the account related the payment record.                               | Big, 48.0                | 48.0              |
| amount          | Double | Total amount of the payment transaction performed in the payment request.   | Big, 48.0                | 48.0              |
| currencyIsoCode | String | Three-letter ISO 4217 currency code associated with the payment output.     | Big, 48.0                | 48.0              |
| effectiveDate   | String | Date that the payment becomes effective.                                    | Big, 48.0                | 48.0              |
| id              | String | ID of the payment record.                                                   | Big, 48.0                | 48.0              |
| paymentNumber   | String | Number of the payment record created as a result of the request processing. | Big, 48.0                | 48.0              |
| requestDate     | String | Date when the payment transaction occurred.                                 | Big, 48.0                | 48.0              |
| status          | String | Status of the payment new payment entity record.                            | Big, 48.0                | 48.0              |

## Payment Token

Represents a payment token for a Commerce store checkout.

| Property Name | Type                             | Description             | Filter Group and Version | Available Version |
|---------------|----------------------------------|-------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response[]</a> | List of errors, if any. | Small, 55.0              | 55.0              |
| token         | String                           | Token for the payment.  | Small, 55.0              | 55.0              |

## Phone Number

A phone number.

| Property | Type   | Description                                                                                                                                                                                                            | Filter Group and Name | Available Version |
|----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-------------------|
| label    | String | Localized string indicating the phone type                                                                                                                                                                             | Small, 30.0           | 30.0              |
| number   | String |  <b>Note:</b> This property is not available after version 26.0. Use the <code>phoneNumber</code> property instead.<br>Phone number | NA                    | 23.0–26.0         |

| Property    | Type   | Description                                                                                                                                                                                                                                                                                               | Filter Group and Name | Available Version |
|-------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-------------------|
| phoneNumber | String | Phone number                                                                                                                                                                                                                                                                                              | Small, 29.0           | 27.0              |
| phoneType   | String | Phone type. One of these values: <ul style="list-style-type: none"> <li>Fax</li> <li>Mobile</li> <li>Work</li> </ul> These values are not localized.                                                                                                                                                      | Small, 30.0           | 30.0              |
| type        | String |  <b>Note:</b> This property is not available after version 29.0. Use the <code>phoneType</code> property instead.<br><br>Values are: <ul style="list-style-type: none"> <li>Fax</li> <li>Mobile</li> <li>Work</li> </ul> | Small, 29.0           | 23.0–29.0         |

## Pinned Feed Element Collection

Collection of pinned feed elements.

| Property Name | Type                                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                      | Filter Group and Version | Available Version |
|---------------|-----------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| elements      | <a href="#">Feed Item[]</a><br>or<br><a href="#">Generic Feed Element[]</a> | Collection of pinned feed elements.<br><br> <b>Note:</b> In the UI, pinned feed elements don't show all auxiliary information, such as comments, likes, interaction counts, or read by information. As a result, the Pinned Feed Element Collection doesn't include all the information for these capabilities. | Small, 41.0              | 41.0              |

## Platform Action

A platform action instance with state information for the context user.

Action links are one type of platform action and are therefore represented as platform action response bodies.

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| actionUrl     | String | For action links of subtype <code>Ui</code> or <code>Download</code> , direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format:<br><code>/action-link-redirect/<b>communityId</b>/<b>actionLinkId</b>?_bearer=<b>bearerToken</b></code><br><br>For <code>Api</code> and <code>ApiAsync</code> action links and for all platform actions, this value is <code>null</code> .<br><br>Salesforce handles the callout to <code>Api</code> or <code>ApiAsync</code> action links. | Medium, 33.0             | 33.0              |

| Property Name                    | Type                             | Description                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|----------------------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                                  |                                  | To call an <code>Api</code> or an <code>ApiAsync</code> action link, you can also make a PATCH request to the <a href="#">/connect/action-links/<i>actionLinkId</i></a> resource and set <code>status</code> to <code>PendingStatus</code> .                                    |                          |                   |
| <code>apiName</code>             | String                           | The API name. This value may be <code>null</code> .                                                                                                                                                                                                                             | Medium, 33.0             | 33.0              |
| <code>confirmationMessage</code> | String                           | If this action requires a confirmation and has a status of <code>NewStatus</code> , this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is <code>null</code> .                                                | Medium, 33.0             | 33.0              |
| <code>createdRecords</code>      | <a href="#">Record Summary[]</a> | The collection of records that this action created after it was invoked by the context user. This collection is empty if the action hasn't been performed yet by the context user or if the action doesn't create a record. Only records created by the context user are shown. | Medium, 33.0             | 33.0              |
| <code>executingUser</code>       | <a href="#">User Summary</a>     | User who initiated execution of the platform action.                                                                                                                                                                                                                            | Medium, 33.0             | 33.0              |
| <code>groupDefault</code>        | Boolean                          | <code>true</code> if this platform action is the default or primary platform action in the platform action group; <code>false</code> otherwise. There can be only one default platform action per platform action group.                                                        | Small, 33.0              | 33.0              |
| <code>iconUrl</code>             | String                           | The URL of the icon for the platform action. This value may be <code>null</code> .                                                                                                                                                                                              | Medium, 33.0             | 33.0              |
| <code>id</code>                  | String                           | The ID of the platform action.<br><br>If the <code>type</code> is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is <code>null</code> .                                                                                              | Small, 33.0              | 33.0              |
| <code>label</code>               | String                           | The localized label for this platform action.                                                                                                                                                                                                                                   | Small, 33.0              | 33.0              |
| <code>modifiedDate</code>        | String                           | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z                                                                                                                                                                                                                     | Small, 33.0              | 33.0              |
| <code>platformActionGroup</code> | <a href="#">Reference</a>        | A reference to the platform action group containing this platform action.                                                                                                                                                                                                       | Small, 33.0              | 33.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| status        | String | <p>The execution status of the platform action. Values are:</p> <ul style="list-style-type: none"> <li>FailedStatus—The action link execution failed.</li> <li>NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.</li> <li>PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.</li> <li>SuccessfulStatus—The action link executed successfully.</li> </ul> <p>For action links only, you can update the status by making a PATCH request to the <a href="/connect/action-links/{actionLinkId}">/connect/action-links/{actionLinkId}</a> resource.</p>                                                                                                                                                                                       | Small, 33.0              | 33.0              |
| subtype       | String | <p>The subtype of a platform action or null. If the type property is ActionLink, possible values are:</p> <ul style="list-style-type: none"> <li>Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</li> <li>ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to <a href="/connect/action-links/{actionLinkId}">/connect/action-links/{actionLinkId}</a> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</li> <li>Download—The action link downloads a file from the action URL.</li> <li>Ui—The action link takes the user to a web page at the action URL.</li> </ul> | Small, 33.0              | 33.0              |

| Property Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| type          | String | The type of platform action. Values are: <ul style="list-style-type: none"><li>• <code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</li><li>• <code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li><li>• <code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions.</li><li>• <code>QuickAction</code>—A global or object-specific action.</li><li>• <code>StandardButton</code>—A predefined Salesforce button such as New, Edit, or Delete.</li></ul> | Small, 33.0              | 33.0              |
| url           | String | Connect REST API resource URL for the platform action.<br><br>If the <code>type</code> is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Small, 33.0              | 33.0              |

## Platform Action Group

A platform action group instance with state appropriate for the context user.

Action link groups are one type of platform action group and are therefore represented as platform action group response bodies.

| Property Name | Type   | Description                                                                                                                                                                                                               | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| category      | String | Indicates the priority and relative locations of platform actions. Values are: <ul style="list-style-type: none"><li>• <code>Primary</code>—The action link group is displayed in the body of the feed element.</li></ul> | Medium, 33.0             | 33.0              |

| Property Name   | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |

## Poll Capability

If a feed element has this capability, the feed element can include a poll for voting.

| Property Name | Type                                | Description                                                                          | Filter and Version | Available Version |
|---------------|-------------------------------------|--------------------------------------------------------------------------------------|--------------------|-------------------|
| choices       | <a href="#">Feed Poll Choice</a> [] | Collection of poll choices that make up the poll.                                    | Small, 32.0        | 32.0              |
| myChoiceId    | String                              | 18-character ID of the poll choice that the context user has voted for in this poll. | Small, 32.0        | 32.0              |

| Property Name  | Type   | Description                                                  | Filter and Version | Available Version |
|----------------|--------|--------------------------------------------------------------|--------------------|-------------------|
|                |        | Returns <code>null</code> if the context user has not voted. |                    |                   |
| totalVoteCount | String | Total number of votes cast on the feed poll element.         | Small, 32.0        | 32.0              |

## Post Auth Gateway Response

Post authorization payment gateway response.

| Property Name                | Type                                   | Description                                                                                    | Filter Group and Version | Available Version |
|------------------------------|----------------------------------------|------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| gatewayAuthorizationCode     | String                                 | Code used with the authorization request in the payment gateway.                               | Big, 54.0                | 54.0              |
| gatewayAvsCode               | String                                 | Code sent by gateways that use an address verification system.                                 | Big, 54.0                | 54.0              |
| gatewayDate                  | String                                 | The date and time of the gateway communication that leads to the creation of this gateway log. | Big, 54.0                | 54.0              |
| gatewayMessage               | String                                 | Information or error messages sent from the gateway.                                           | Big, 54.0                | 54.0              |
| gatewayReferenceDetails      | String                                 | Gateway reference details.                                                                     | Big, 54.0                | 54.0              |
| gatewayReferenceNumber       | String                                 | Unique transaction ID created by the payment gateway.                                          | Big, 54.0                | 54.0              |
| gatewayResultCode            | String                                 | Gateway-specific result code. Must be mapped to a Salesforce-specific result code.             | Big, 54.0                | 54.0              |
| gatewayResultCodeDescription | String                                 | Description of the gateway's result code.                                                      | Big, 54.0                | 54.0              |
| paymentMethodDetails         | <a href="#">Payment Method Details</a> | Details about the payment method.                                                              | Big, 56.0                | 56.0              |
| salesforceResultCode         | String                                 | Salesforce-specific result code that can map to one or more gateway result codes.              | Big, 54.0                | 54.0              |

## Post Auth Output

Payment post authorization output.

| Property Name        | Type                                         | Description                                                                                                                                                                | Filter Group and Version | Available Version |
|----------------------|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error                | <a href="#">Error Response Output</a>        | Information about errors that occurred in the payment gateway while evaluating the post authorization request.                                                             | Big, 54.0                | 54.0              |
| gatewayResponse      | <a href="#">Post Auth Gateway Response</a>   | Payment gateway's response to the post authorization request.                                                                                                              | Big, 54.0                | 54.0              |
| paymentAuthorization | <a href="#">Payment Authorization Output</a> | Payment gateway's response to the original payment authorization request.                                                                                                  | Big, 54.0                | 54.0              |
| paymentGatewayLogs   | <a href="#">Gateway Log Output[]</a>         | Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. | Big, 54.0                | 54.0              |
| paymentGroup         | <a href="#">Payment Group Output</a>         | Payment group, consisting of one or more payments, sent to the gateway for the post authorization request.                                                                 | Big, 54.0                | 54.0              |
| paymentMethod        | <a href="#">Payment Method Output</a>        | Payment method used in the post authorization request.                                                                                                                     | Big, 54.0                | 54.0              |

## Preserve Cart Output

Represents a preserved cart.

| Property Name                   | Type                                     | Description                                                                                                   | Filter Group and Version | Available Version |
|---------------------------------|------------------------------------------|---------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| cartId                          | String                                   | ID of the authenticated cart.                                                                                 | Small, 60.0              | 60.0              |
| currencyIsoCode                 | String                                   | Currency ISO code for the authenticated cart.                                                                 | Small, 60.0              | 60.0              |
| failedCartItems                 | <a href="#">Cart Item Basic Result[]</a> | List of products that weren't successfully transferred from the guest cart to the authenticated cart.         | Medium, 60.0             | 60.0              |
| numberOfProducts                | Integer                                  | Total number of products in the guest cart.                                                                   | Small, 60.0              | 60.0              |
| numberOfProducts<br>WithError   | Integer                                  | Total number of products that weren't successfully transferred from the guest cart to the authenticated cart. | Small, 60.0              | 60.0              |
| numberOfProducts<br>WithSuccess | Integer                                  | Total number of products successfully transferred from the guest cart to the authenticated cart.              | Small, 60.0              | 60.0              |

| Property Name       | Type                                     | Description                                                                              | Filter Group and Version | Available Version |
|---------------------|------------------------------------------|------------------------------------------------------------------------------------------|--------------------------|-------------------|
| succeededCart Items | <a href="#">Cart Item Basic Result[]</a> | List of products successfully transferred from the guest cart to the authenticated cart. | Medium, 60.0             | 60.0              |

## Preview Cancel Output

Expected financial values for a proposed cancel action.

| Property Name  | Type                                    | Description                                               | Filter Group and Version | Available Version |
|----------------|-----------------------------------------|-----------------------------------------------------------|--------------------------|-------------------|
| changeBalances | <a href="#">Change Item Output</a>      | Expected financial values for the proposed cancel action. | Big, 48.0                | 48.0              |
| errors         | <a href="#">Error Response Output[]</a> | Any errors that were returned.                            | Big, 48.0                | 48.0              |
| orderSummaryId | String                                  | ID of the OrderSummary.                                   | Big, 48.0                | 48.0              |
| success        | Boolean                                 | Indicates whether the transaction was successful.         | Big, 48.0                | 48.0              |

## Preview Cart To Exchange Order

Expected change order financial values for the preview cart to exchange order action.

| Property Name                          | Type                                         | Description                                               | Filter Group and Version | Available Version |
|----------------------------------------|----------------------------------------------|-----------------------------------------------------------|--------------------------|-------------------|
| <del>balanceStateExchangeCart</del>    | <a href="#">Balance State Preview Output</a> | The balance state preview for the exchange web cart.      | Big, 61.0                | 61.0              |
| <del>balanceStateOriginalSummary</del> | <a href="#">Balance State Preview Output</a> | The balance state preview for the original order summary. | Big, 61.0                | 61.0              |
| <del>balanceStateReturnOrder</del>     | <a href="#">Balance State Preview Output</a> | The balance state preview for the return order.           | Big, 61.0                | 61.0              |
| changeBalances                         | <a href="#">Change Item Output</a>           | Change order financial values for a preview order action. | Big, 60.0                | 60.0              |
| errors                                 | <a href="#">Error Response Output[]</a>      | Any errors that were returned.                            | Big, 60.0                | 60.0              |
| orderSummaryId                         | String                                       | ID of the order summary.                                  | Big, 60.0                | 60.0              |
| success                                | Boolean                                      | Indicates whether the transaction was successful.         | Big, 60.0                | 60.0              |

## Preview Return Output

Expected financial values for a proposed return action.

| Property Name  | Type                                    | Description                                               | Filter Group and Version | Available Version |
|----------------|-----------------------------------------|-----------------------------------------------------------|--------------------------|-------------------|
| changeBalances | <a href="#">Change Item Output</a>      | Expected financial values for the proposed return action. | Big, 48.0                | 48.0              |
| errors         | <a href="#">Error Response Output[]</a> | Any errors that were returned.                            | Big, 48.0                | 48.0              |
| orderSummaryId | String                                  | ID of the OrderSummary.                                   | Big, 48.0                | 48.0              |
| success        | Boolean                                 | Indicates whether the transaction was successful.         | Big, 48.0                | 48.0              |

## Price Adjustment Schedule

Price adjustment schedule.

| Property Name         | Type                                    | Description                          | Filter Group and Version | Available Version |
|-----------------------|-----------------------------------------|--------------------------------------|--------------------------|-------------------|
| adjustmentMethod      | String                                  | Reserved for future use.             | Small, 59.0              | 59.0              |
| id                    | String                                  | ID of the price adjustment schedule. | Small, 49.0              | 49.0              |
| priceAdjustment Tiers | <a href="#">Price Adjustment Tier[]</a> | List of price adjustment tiers.      | Small, 49.0              | 49.0              |
| scheduleType          | String                                  | Reserved for future use.             | Small, 59.0              | 59.0              |

## Product Attribute Value Metadata

Metadata for a product attribute value.

| Property Name    | Type    | Description                                                                                       | Filter Group and Version | Available Version |
|------------------|---------|---------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| apiName          | String  | API Name of the product attribute picklist value. For example, <code>blue__c</code> .             | Small, 63.0              | 63.0              |
| colorHexCode     | String  | Hex code value of a color attribute. For example, <code>#0000FF</code> .                          | Small, 63.0              | 63.0              |
| label            | String  | Label of the picklist value for a custom field product attribute. For example, <code>Red</code> . | Small, 63.0              | 63.0              |
| variantAvailable | Boolean | Specifies whether a variation product exists ( <code>true</code> ) or not ( <code>false</code> ). | Small, 63.0              | 63.0              |

## Product Bundle Child Output

Output representation of a product details bundle child.

| Property Name    | Type   | Description                                    | Filter Group and Version | Available Version |
|------------------|--------|------------------------------------------------|--------------------------|-------------------|
| description      | String | Description of the child product.              | Big, 64.0                | 64.0              |
| name             | String | Child product name.                            | Big, 64.0                | 64.0              |
| productId        | String | ProductId of the child product.                | Big, 64.0                | 64.0              |
| quantity         | Double | Quantity of the child product per bundle.      | Big, 64.0                | 64.0              |
| stockKeepingUnit | String | Stock Keeping Unit (SKU) of the child product. | Big, 64.0                | 64.0              |

## Product Cart Item

Cart items of a specific product type.

| Property Name | Type                                            | Description                      | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------|----------------------------------|--------------------------|-------------------|
| cartItems     | <a href="#">Cart Item Result</a> on page 1468[] | Items in a cart.                 | Big, 60.0                | 60.0              |
| product       | <a href="#">Cart Item Product</a> on page 1467  | Product summary for a cart item. | Big, 60.0                | 60.0              |

## Product Cart Item Collection

Items in the cart, grouped by product type.

| Property Name      | Type                                             | Description                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|--------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| count              | Integer                                          | Number of cart items returned on the current page.                                                                                                                                                                    | Small, 60.0              | 60.0              |
| currentPage        | Integer                                          | Current page of cart items. The value matches the requested page number, unless the requested page number exceeds the total number of pages. In this scenario, the current page is the highest available page number. | Small, 60.0              | 60.0              |
| hasErrors          | Boolean                                          | Indicates whether at least one of the results contains an error ( <code>True</code> ) or not ( <code>False</code> ).                                                                                                  | Small, 60.0              | 60.0              |
| products           | <a href="#">Product Cart Item</a> on page 1892[] | Products in the cart.                                                                                                                                                                                                 | Big, 60.0                | 60.0              |
| totalItemCount     | Integer                                          | Total number of unique products in the cart.                                                                                                                                                                          | Small, 60.0              | 60.0              |
| totalNumberOfPages | Integer                                          | Total number of pages for the given page size.                                                                                                                                                                        | Small, 60.0              | 60.0              |

## Product Category

Product category.

| Property Name | Type   | Description                  | Filter Group and Version | Available Version |
|---------------|--------|------------------------------|--------------------------|-------------------|
| description   | String | Description of the category. | Small, 49.0              | 49.0              |
| id            | String | ID of the category.          | Small, 49.0              | 49.0              |
| name          | String | Name of the category.        | Small, 49.0              | 49.0              |

| Property Name | Type   | Description                            | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------|--------------------------|-------------------|
| urlSlug       | String | SEO-friendly URL slug of the category. | Small, 59.0              | 59.0              |

## Product Category Media

Media associated with a product category.

| Property Name    | Type    | Description                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| alternateText    | String  | Alternative text for the product category media.                                                                                                                                                                     | Small, 49.0              | 49.0              |
| contentVersionId | String  | ID of the latest published content version if the media is stored as a ContentDocument. If the image is a customer-provided external URL, the value is <code>null</code> . Not supported in enhanced CMS workspaces. | Small, 49.0              | 49.0              |
| id               | String  | ID of the product category image.                                                                                                                                                                                    | Small, 49.0              | 49.0              |
| mediaType        | String  | Type of product media. Values are: <ul style="list-style-type: none"><li>• Document</li><li>• Image</li><li>• Video</li></ul>                                                                                        | Small, 49.0              | 49.0              |
| sortOrder        | Integer | Sort order of a media item inside a media group.                                                                                                                                                                     | Small, 49.0              | 49.0              |
| thumbnailUrl     | String  | URL of the thumbnail for product media. If a value exists, it should be used for the thumbnail whether the image is natively uploaded or hosted externally. Not supported in enhanced CMS workspaces.                | Small, 49.0              | 49.0              |
| title            | String  | Title of the product category media.                                                                                                                                                                                 | Small, 49.0              | 49.0              |
| url              | String  | URL of the product category media.                                                                                                                                                                                   | Small, 49.0              | 49.0              |

|---------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| productClass  | String  | Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul> | Small, 62.0              | 62.0              |
| total         | Integer | Total number of child products in the collection.                                                                                                                         | Small, 57.0              | 57.0              |

## Product Component Group

Representation for a product component group associated with the child product.

| Property Name | Type   | Description                          | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------|--------------------------|-------------------|
| id            | String | ID of the product component group.   | Small, 65.0              | 65.0              |
| name          | String | Name of the product component group. | Small, 65.0              | 65.0              |

## Product Config

Product configuration settings for the application context.

| Property Name               | Type   | Description                          | Filter Group and Version | Available Version |
|-----------------------------|--------|--------------------------------------|--------------------------|-------------------|
| configurator<br>FlowApiName | String | API name of the product config flow. | Small, 65.0              | 65.0              |

## Product Deliver Estimation

Delivery estimation information for each product.

| Property Name          | Type     | Description                       | Available Version |
|------------------------|----------|-----------------------------------|-------------------|
| estimatedDeliveryDate  | Datetime | Estimated delivery date.          | 63.0              |
| estimatedShipDate      | Datetime | Estimated shipping date.          | 63.0              |
| quantity               | Double   | Product quantity.                 | 63.0              |
| routingCalculationType | String   | Routing calculation type.         | 63.0              |
| stockKeepingUnit       | String   | Product stock keeping unit (SKU). | 63.0              |

## Product Detail

Details of a product.

| Property Name              | Type                                                     | Description                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|----------------------------|----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| attributeSetInfo           | Map<String, <a href="#">Product Attribute Set Info</a> > | Map of the attribute set developer name to its metadata.                                                                                                                                                                                   | Small, 50.0              | 50.0              |
| defaultImage               | <a href="#">Product Media</a>                            | Default image of the product.                                                                                                                                                                                                              | Small, 49.0              | 49.0              |

## Product Expand

Expanded product information listing reasons for product returns.

| Property Name | Type     | Description                  | Filter Group and Version | Available Version |
|---------------|----------|------------------------------|--------------------------|-------------------|
| returnReasons | String[] | Return reasons for products. | Big, 59.                 | 59.0              |

## Product Image Group Output

Details about a product image group.

| Property Name | Type                                    | Description                              | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|------------------------------------------|--------------------------|-------------------|
| images        | <a href="#">Product Image Output</a> [] | List of product images in the group.     | Big, 55.0                | 55.0              |
| viewType      | String                                  | The type of product images in the group. | Big, 55.0                | 55.0              |

## Product Image Output

Details about a product image.

| Property Name | Type   | Description                                        | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------------|--------------------------|-------------------|
| alternateText | String | Alternate text for accessibility.                  | Big, 55.0                | 55.0              |
| mediaType     | String | Media type.                                        | Big, 55.0                | 55.0              |
| thumbnailUrl  | String | URL of the thumbnail version of the product image. | Big, 55.0                | 55.0              |
| title         | String | Title.                                             | Big, 55.0                | 55.0              |

| Property Name | Type   | Description               | Filter Group and Version | Available Version |
|---------------|--------|---------------------------|--------------------------|-------------------|
| url           | String | URL of the product image. | Big, 55.0                | 55.0              |

## Product List

Products with product data and with expand details.

| Property Name | Type                      | Description               | Filter Group and Version | Available Version |
|---------------|---------------------------|---------------------------|--------------------------|-------------------|
| products      | <a href="#">Product[]</a> | The product's identifier. | Big, 58.0                | 59.0              |

## Product Media

Media associated with a product.

| Property Name    | Type    | Description                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| alternateText    | String  | Alternative text for the product media.                                                                                                                                                                              | Small, 49.0              | 49.0              |
| contentVersionId | String  | ID of the latest published content version if the media is stored as a ContentDocument. If the image is a customer-provided external URL, the value is <code>null</code> . Not supported in enhanced CMS workspaces. | Small, 49.0              | 49.0              |
| id               | String  | ID of the product image.                                                                                                                                                                                             | Small, 49.0              | 49.0              |
| mediaType        | String  | Type of product media. Values are: <ul style="list-style-type: none"><li>• Document</li><li>• Image</li><li>• Video</li></ul>                                                                                        | Small, 49.0              | 49.0              |
| sortOrder        | Integer | Sort order of a media item within a media group.                                                                                                                                                                     | Small, 49.0              | 49.0              |
| thumbnailUrl     | String  | URL of the thumbnail for product media. If a value exists, it should be used for the thumbnail whether the image is natively uploaded or hosted externally. Not supported in enhanced CMS workspaces.                | Small, 49.0              | 49.0              |
| title            | String  | Title of the product media.                                                                                                                                                                                          | Small, 49.0              | 49.0              |

| Property Name | Type   | Description               | Filter Group and Version | Available Version |
|---------------|--------|---------------------------|--------------------------|-------------------|
| url           | String | URL of the product media. | Small, 49.0              | 49.0              |

## Product Price Entry

Line item price for the product.

| Property Name         | Type                                      | Description                                                                                                                  | Filter Group and Version | Available Version |
|-----------------------|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error                 | <a href="#">Error Response Output</a>     | Error code and error message.                                                                                                | Big, 56.0                | 56.0              |
| listPrice             | String                                    | List price for the product entry.                                                                                            | Small, 56.0              | 56.0              |
| priceAdjustment       | <a href="#">Price Adjustment Schedule</a> | Price adjustment schedule.                                                                                                   | Small, 56.0              | 56.0              |
| pricebookEntryId      | String                                    | ID of the pricebook entry.                                                                                                   | Small, 56.0              | 56.0              |
| productSellingModelId | String                                    | ID of the product selling model. If no product selling model ID is specified in a request parameter, this property is empty. | Small, 56.0              | 56.0              |
| success               | Boolean                                   | Specifies whether execution was successful ( <code>true</code> ) or not ( <code>false</code> ).                              | Small, 56.0              | 56.0              |
| unitPrice             | String                                    | Unit price for the product entry.                                                                                            | Small, 56.0              | 56.0              |

## Product Return Rate

Return rate of a product (units returned divided by units sold).

| Property Name | Type   | Description                                                 | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------|--------------------------|-------------------|
| productId     | String | ID of the product.                                          | Big, 59.0                | 59.0              |
| returnRate    | Double | Return rate of specified product. Values range from 0 to 1. | Big, 59.0                | 59.0              |

## Product Return Rate List

Output representation of products with return rates

| Property Name         | Type                                  | Description                   | Filter Group and Version | Available Version |
|-----------------------|---------------------------------------|-------------------------------|--------------------------|-------------------|
| productReturnRateList | <a href="#">Product Return Rate[]</a> | List of product return rates. | Big, 59.0                | 59.0              |

## Product Search

Product search response.

| Property Name     | Type                                   | Description                                                                                                          | Filter Group and Version | Available Version |
|-------------------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currencyIsoCode   | String                                 | Three-letter ISO 4217 currency code associated with the product.                                                     | Big, 59.0                | 59.0              |
| facets            | <a href="#">Product Search Facet[]</a> | A list of facet names to filter the search. For example, ["size_medium", "color_red"].                               | Big, 59.0                | 59.0              |
| locale            | String                                 | Locale used for the product search.                                                                                  | Big, 59.0                | 59.0              |
| pageNumber        | Integer                                | Maximum number of search results pages to return. If you don't specify a value, the default is 1.                    | Big, 59.0                | 59.0              |
| pageSize          | Integer                                | Number of items per page. Valid values are from 1 through 100. If you don't specify a value, the default size is 20. | Big, 59.0                | 59.0              |
| products          | <a href="#">Product Search[]</a>       | Array of products found by the search.                                                                               | Big, 59.0                | 59.0              |
| totalRecordsFound | Integer                                | Total products found.                                                                                                | Big, 59.0                | 59.0              |

## Product Search Facet

Product search facet value.

| Property Name | Type                                         | Description                            | Filter Group and Version | Available Version |
|---------------|----------------------------------------------|----------------------------------------|--------------------------|-------------------|
| attributeType | String                                       | Attribute type of the facet value.     | Big, 59.0                | 59.0              |
| displayName   | String                                       | Display name of the facet value.       | Big, 59.0                | 59.0              |
| displayRank   | Integer                                      | Display rank of the facet value.       | Big, 59.0                | 59.0              |
| displayType   | String                                       | Display type of the facet value.       | Big, 59.0                | 59.0              |
| facetType     | String                                       | Type of the facet.                     | Big, 59.0                | 59.0              |
| nameOrId      | String                                       | Name or ID of the facet.               | Big, 59.0                | 59.0              |
| values        | <a href="#">Product Search Facet Value[]</a> | A list of facet values for the search. | Big, 59.0                | 59.0              |

## Product Search Facet Value

Product search facet value.

| Property Name | Type    | Description                                     | Filter Group and Version | Available Version |
|---------------|---------|-------------------------------------------------|--------------------------|-------------------|
| displayName   | String  | Display name of the search facet.               | Big, 59.0                | 59.0              |
| nameOrId      | String  | Unique name or ID of the search facet.          | Big, 59.0                | 59.0              |
| productCount  | Integer | Number of products found with the search facet. | Big, 59.0                | 59.0              |
| type          | String  | Type of the search facet.                       | Big, 59.0                | 59.0              |

## Product Search Image

Product search image.

| Property Name | Type    | Description                           | Filter Group and Version | Available Version |
|---------------|---------|---------------------------------------|--------------------------|-------------------|
| alternateText | String  | Alternate text for the product image. | Big, 59.0                | 59.0              |
| mediaType     | String  | Media type of the product image.      | Big, 59.0                | 59.0              |
| sortOrder     | Integer | Sort order of the product image.      | Big, 59.0                | 59.0              |
| title         | String  | Title of the product image.           | Big, 59.0                | 59.0              |
| url           | String  | URL of the product image.             | Big, 59.0                | 59.0              |

## Product Search Product

Product returned by a product search.

| Property Name         | Type                                                 | Description                              | Filter Group and Version | Available Version |
|-----------------------|------------------------------------------------------|------------------------------------------|--------------------------|-------------------|
| description           | String                                               | Description of the product.              | Big, 59.0                | 59.0              |
| image                 | <a href="#">Product Search Image</a>                 | Image of the product.                    | Big, 59.0                | 59.0              |
| name                  | String                                               | Name of the product.                     | Big, 59.0                | 59.0              |
| productClass          | String                                               | Class of the product.                    | Big, 59.0                | 59.0              |
| stockKeepingUnit      | String                                               | Stock Keeping Unit (SKU) of the product. | Big, 59.0                | 59.0              |
| variationAttributeSet | <a href="#">Product Variation Attribute Output[]</a> | Variation attribute set of the product.  | Big, 59.0                | 59.0              |

## Product Search Results

Product search results.

| description          | String                                 | Description of the product selling model displayed on the UI.                                                                                                                                                                                                                                                                                                                                                                                                                                               | Small, 60.0              | 60.0              |
| displayName          | String                                 | Name of the product selling model displayed on the UI.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 60.0              | 60.0              |
| id                   | String                                 | ID of the product selling model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Small, 56.0              | 56.0              |
| name                 | String                                 | Name of the product selling model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Small, 56.0              | 56.0              |
| pricingTerm          | Integer                                | Number of pricing term units in the pricing term. Used with <code>pricingTermUnit</code> to define the length of the pricing term. For example, if <code>pricingTermUnit</code> is <code>Months</code> and this property is 1, the subscription is priced monthly. However, if the <code>sellingModelType</code> property is set to <code>OneTime</code> , the <code>pricingTerm</code> property is empty, because the product isn't sold as a subscription. The only allowed value for this property is 1. | Small, 56.0              | 56.0              |
| pricingTermUnit      | String                                 | Unit of time used to define a pricing term. Values are: <ul style="list-style-type: none"> <li><code>Months</code>—Product is priced on a monthly basis.</li> <li><code>Annual</code>—Product is priced on an annual basis.</li> </ul>                                                                                                                                                                                                                                                                      | Small, 56.0              | 56.0              |
| sellingModelType     | String                                 | Type of product selling model. Values are: <ul style="list-style-type: none"> <li><code>Evergreen</code>—A subscription without an end date. An evergreen subscription continues until the shopper affirmatively cancels it.</li> <li><code>OneTime</code>—A product that isn't sold as a subscription.</li> <li><code>TermDefined</code>—A subscription with a defined end date. The subscription continues for a specified time period. When the term ends, the subscription ends.</li> </ul>             | Small, 56.0              | 56.0              |
| subscriptionTermRule | <a href="#">Subscription Term Rule</a> | Rules for a subscription term.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Small, 59.0              | 59.0              |

## Program Application Output

Output representation of an application request to a Program.

### JSON example

```
{
  "success": true,
  "message": "Your application has been submitted successfully",
  "applicationId": "IA-0000000456"
}
```

| Property Name | Type   | Description                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------|--------------------------|-------------------|
| applicationId | String | Tracking number for an application. | Small, 58.0              | 58.0              |

| Property Name | Type    | Description                                                                                               | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| message       | String  | Response message.                                                                                         | Small, 58.0              | 58.0              |
| success       | Boolean | Indicates if the application is successfully created ( <code>true</code> ) or not ( <code>false</code> ). | Small, 58.0              | 58.0              |

## Promotion

Promotion associated with a cart and its items.

| Property Name | Type                   | Description                                                                                                   | Filter Group and Version | Available Version |
|---------------|------------------------|---------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| coupon        | <a href="#">Coupon</a> | Coupon for the promotion.                                                                                     | Small, 54.0              | 54.0              |
| displayName   | String                 | Display name for the promotion record.                                                                        | Small, 53.0              | 53.0              |
| id            | String                 | ID of the promotion record.                                                                                   | Small, 53.0              | 53.0              |
| isAutomatic   | Boolean                | Specifies whether the promotion is automatically applied ( <code>true</code> ) or not ( <code>false</code> ). | Small, 53.0              | 53.0              |
| priority      | Integer                | Specifies the order in which this promotion is evaluated.                                                     | Small, 53.0              | 53.0              |

## Promotions Approaching Discount

Output representation of the qualifier for a promotion with an approaching discount.

| Property Name          | Type   | Description                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| promotionId            | String | ID of the promotion with an approaching discount.                                                                                                                                                                                     | Small, 64.0              | 64.0              |
| qualifyingAmount       | String | Qualifying amount when promotion is applied.                                                                                                                                                                                          | Small, 64.0              | 64.0              |
| qualifyingProductTotal | String | Qualifying product total.                                                                                                                                                                                                             | Small, 64.0              | 64.0              |
| targetType             | String | Target type of a promotion discount. <ul style="list-style-type: none"> <li>• <code>Shipping</code>—Promotion discounts shipping amount.</li> <li>• <code>Transaction</code>—Promotion discounts total transaction amount.</li> </ul> | Small, 64.0              | 64.0              |

## Promotion Cart

A cart, its items, and its adjustment groups.

| Property Name             | Type                                              | Description                                     | Filter Group and Version | Available Version |
|---------------------------|---------------------------------------------------|-------------------------------------------------|--------------------------|-------------------|
| cartAdjustmentGroups      | <a href="#">Promotion Cart Adjustment Group[]</a> | Cart adjustment groups belonging to the cart.   | Small, 56.0              | 56.0              |
| cartItems                 | <a href="#">Promotion Cart Item[]</a>             | Cart items belonging to the cart.               | Small, 56.0              | 56.0              |
| currencyIsoCode           | String                                            | Currency code of the cart.                      | Small, 56.0              | 56.0              |
| id                        | String                                            | ID of the cart.                                 | Small, 56.0              | 56.0              |
| totalAdjustmentBaseAmount | String                                            | Total adjustment base amount for the cart.      | Small, 56.0              | 56.0              |
| totalNetAmount            | String                                            | Total price of the cart, including adjustments. | Small, 56.0              | 56.0              |
| totalProductBaseAmount    | String                                            | Total price of all cart items in the cart.      | Small, 56.0              | 56.0              |

## Promotion Price Adjustment

Price adjustments used in a promotion product evaluation.

| Property Name      | Type   | Description                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|--------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustmentAmount   | String | Adjustment amount of the promotion.                                                                                                                                                                                                             | Small, 58.0              | 58.0              |
| adjustmentType     | String | How the price adjustment amount is calculated. <ul style="list-style-type: none"> <li>• <code>AdjustmentAmount</code>—The adjustment is a fixed amount.</li> <li>• <code>AdjustmentPercentage</code>—The adjustment is a percentage.</li> </ul> | Small, 56.0              | 56.0              |
| adjustmentValue    | String | Value of the price adjustment.                                                                                                                                                                                                                  | Small, 58.0              | 58.0              |
| displayName        | String | Localized promotion display name.                                                                                                                                                                                                               | Small, 58.0              | 58.0              |
| promotionId        | String | ID of the promotion.                                                                                                                                                                                                                            | Small, 58.0              | 58.0              |
| termsAndConditions | String | Localized terms and conditions for the promotion.                                                                                                                                                                                               | Small, 58.0              | 58.0              |

## Promotion Product Evaluation

Results of a promotion product evaluation.

| Property Name   | Type   | Description                                                                   | Filter Group and Version | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| currencyIsoCode | String | Three-letter ISO 4217 currency code associated with the payment group record. | Small, 58.0              | 58.0              |
| errorMessage    | String | Promotion product evaluation error message.                                   | Small, 58.0              | 58.0              |

| Property Name         | Type                       | Description                                                                                                         | Filter Group and Version | Available Version |
|-----------------------|----------------------------|---------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isSuccess             | Boolean                    | Specifies whether the promotion product evaluation is a success ( <code>true</code> ) or not ( <code>false</code> ) | Small, 58.0              | 58.0              |
| productId             | String                     | ID of the product.                                                                                                  | Small, 58.0              | 58.0              |
| promotionDiscountList | Promotion Price Adjustment | Represents the list of Promotion Discounts                                                                          | Small, 58.0              | 58.0              |
| promotionalPrice      | String                     | Promotional price of the product                                                                                    | Small, 58.0              | 58.0              |
| salesPrice            | String                     | Sales price of the product.                                                                                         | Small, 58.0              | 58.0              |
| sku                   | String                     | Stock keeping unit (SKU) of the product.                                                                            | Small, 58.0              | 58.0              |

## Promotion Target

Target of a promotion (for example, cart items).

| Property Name                       | Type                         | Description                                                                                                                                                                                                                                                                                                                                                            | Filter Group and Version | Available Version |
|-------------------------------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustment Amount                   | String                       | Absolute adjustment amount.                                                                                                                                                                                                                                                                                                                                            | Small, 53.0              | 53.0              |
| adjustment Percent                  | String                       | Percentage adjustment amount.                                                                                                                                                                                                                                                                                                                                          | Small, 53.0              | 53.0              |
| adjustmentType                      | String                       | Adjustment type (percentage or absolute).                                                                                                                                                                                                                                                                                                                              | Small, 53.0              | 53.0              |
| id                                  | String                       | ID for the promotion target.                                                                                                                                                                                                                                                                                                                                           | Small, 53.0              | 53.0              |
| priority                            | Integer                      | Priority of the promotion target.                                                                                                                                                                                                                                                                                                                                      | Small, 53.0              | 53.0              |
| promotion Target Association Status | String                       | Association status of the promotion target: <ul style="list-style-type: none"> <li>VALID (the promotion target is valid and can be applied to the transaction)</li> <li>BLOCKEDEXCLUSIVE (the promotion target is valid, but is blocked from the transaction by another promotion)</li> <li>INVALID (the promotion target is not valid for the transaction)</li> </ul> | Small, 53.0              | 53.0              |
| promotion TargetLine Items          | Promotion Target Line Item[] | Line items which the promotion target maps to.                                                                                                                                                                                                                                                                                                                         | Small, 53.0              | 53.0              |
| targetId                            | String                       | ID of the target record.                                                                                                                                                                                                                                                                                                                                               | Small, 53.0              | 53.0              |
| targetType                          | String                       | Promotion target type.                                                                                                                                                                                                                                                                                                                                                 | Small, 53.0              | 53.0              |

## Promotion Target Line Item

Line item for a cart item associated with a promotion.

| Property Name | Type   | Description           | Filter Group and Version | Available Version |
|---------------|--------|-----------------------|--------------------------|-------------------|
| lineId        | String | ID for the line item. | Small, 53.0              | 53.0              |

## Purchase Quantity Rule

Rule that restricts the quantity of a product that can be purchased.

| Property Name | Type   | Description                                            | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------|--------------------------|-------------------|
| increment     | String | Increment value of the quantity that can be purchased. | Small, 52.0              | 52.0              |
| maximum       | String | Maximum quantity that can be purchased.                | Small, 52.0              | 52.0              |
| minimum       | String | Minimum quantity that can be purchased.                | Small, 52.0              | 52.0              |
