| type          | String | Type of the quick text body part. Values are: <ul style="list-style-type: none"><li>• Constant</li><li>• Generated</li></ul> | Small, 50.0              | 50.0              |
| value         | String | Value of the quick text body part.                                                                                           | Small, 50.0              | 50.0              |

## Quick Text Runtime Body

Body of a runtime quick text.

| Property Name | Type   | Description                                  | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------------|--------------------------|-------------------|
| contextType   | String | Context of the quick text. Value is Runtime. | Small, 50.0              | 50.0              |
| quickTextBody | String | Body of the quick text.                      | Small, 50.0              | 50.0              |

## Quip Content Document Link

Content document link related to a Quip document.

| Property Name      | Type                                  | Description                      | Filter Group and Version | Available Version |
|--------------------|---------------------------------------|----------------------------------|--------------------------|-------------------|
| contentDocumentId  | String                                | ID of the content document.      | Small, 49.0              | 49.0              |
| quipLinkedEntities | <a href="#">Quip Linked Entity</a> [] | List of related linked entities. | Small, 49.0              | 49.0              |

## Quip Related Records

List of records related to a Quip document.

| Property Name                | Type                                          | Description                             | Filter Group and Version | Available Version |
|------------------------------|-----------------------------------------------|-----------------------------------------|--------------------------|-------------------|
| quipContent<br>DocumentLinks | <a href="#">Quip Content Document Link</a> [] | List of related content document links. | Small, 49.0              | 49.0              |

## Range Facet Display Metadata

Display metadata representation for a range facet.

| Property Name | Type                | Description                                                       | Filter Group and Version | Available Version |
|---------------|---------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| currencyInfo  | Map<String, String> | Map of currency information display metadata for the range facet. | Small, 64.0              | 64.0              |

## Range Search Facet

Range facet with minimum and maximum values in product search results.

| Property Name   | Type                                                      | Description                                                                                                                                                    | Filter Group and Version | Available Version |
|-----------------|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| attributeType   | String                                                    | Type of search attribute for the refinement.<br>Values are: <ul style="list-style-type: none"> <li>Custom</li> <li>Standard</li> <li>PricebookEntry</li> </ul> | Small, 64.0              | 64.0              |
| displayMetadata | <a href="#">Range Facet Display Metadata</a> on page 1936 | Metadata required for rendering the range facet.                                                                                                               | Small, 64.0              | 64.0              |
| displayName     | String                                                    | Display name of the facet.                                                                                                                                     | Small, 64.0              | 64.0              |
| displayRank     | String                                                    | Display rank of the facet. Valid values are from 1 through 50.                                                                                                 | Small, 64.0              | 64.0              |
| displayType     | String                                                    | Display type of the facet. Value is: <ul style="list-style-type: none"> <li>Range</li> </ul>                                                                   | Small, 64.0              | 64.0              |
| facetType       | String                                                    | Type of the facet. Value is: <ul style="list-style-type: none"> <li>Range</li> </ul>                                                                           | Small, 64.0              | 64.0              |
| max             | String                                                    | Maximum value of the facet found in the search result.                                                                                                         | Small, 64.0              | 64.0              |
| min             | String                                                    | Minimum value of the facet found in the search result.                                                                                                         | Small, 64.0              | 64.0              |
| nameOrId        | String                                                    | Developer name of the attribute for the refinement.                                                                                                            | Small, 64.0              | 64.0              |

## Rank Average Distance Output

The results of calculating the average distances from sets of inventory locations to an order recipient.

| Property Name | Type                                    | Description                                           | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|-------------------------------------------------------|--------------------------|-------------------|
| distanceUnit  | String                                  | The specified unit of distance (miles or kilometers). | Big, 51.0                | 51.0              |
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                        | Big, 51.0                | 51.0              |
| results       | <a href="#">Complete Response[]</a>     | The results of the shipping distance calculations.    | Big, 51.0                | 51.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful.     | Big, 51.0                | 51.0              |

## Read By

Information about who read the feed element and when.

| Property Name      | Type                         | Description                                                  | Filter Group and Version | Available Version |
|--------------------|------------------------------|--------------------------------------------------------------|--------------------------|-------------------|
| lastReadDateByUser | String                       | When the user last read the feed element in ISO 8601 format. | Small, 40.0              | 40.0              |
| user               | <a href="#">User Summary</a> | Information about the user who read the feed element.        | Small, 40.0              | 40.0              |

## Read By Capability

If a feed element has this capability, the context user can mark it as read.

| Property Name    | Type                               | Description                                                                                                               | Filter Group and Version | Available Version |
|------------------|------------------------------------|---------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isReadByMe       | Boolean                            | Specifies whether the feed element has been read ( <code>true</code> ) or not ( <code>false</code> ) by the context user. | Small, 40.0              | 40.0              |
| lastReadDateByMe | String                             | Last date when the feed element was marked read for the context user in ISO 8601 format. Otherwise, <code>null</code> .   | Small, 40.0              | 40.0              |
| page             | <a href="#">Read By Collection</a> | First page of information about who read the feed element and when.                                                       | Big, 40.0                | 40.0              |

## Read By Collection

A collection of information about who read the feed element and when.

| Property Name    | Type   | Description                                                                          | Filter Group and Version | Available Version |
|------------------|--------|--------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageToken | String | Token identifying the current page.                                                  | Medium, 40.0             | 40.0              |
| currentPageUrl   | String | Connect REST API URL identifying the current page. The default is 25 items per page. | Medium, 40.0             | 40.0              |

| Property Name     | Type                      | Description                                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|-------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| items             | <a href="#">Read By[]</a> | Collection of read-by information, including users and when they last read the feed element.                                                                                                                                                                                                    | Big, 40.0                | 40.0              |
| nextPageToken     | String                    | Token identifying the next page, or <b>null</b> if there isn't a next page.                                                                                                                                                                                                                     | Small, 40.0              | 40.0              |
| nextPageUrl       | String                    | Connect REST API URL identifying the next page, or <b>null</b> if there isn't a next page.                                                                                                                                                                                                      | Small, 40.0              | 40.0              |
| previousPageToken | String                    | Reserved for future use.                                                                                                                                                                                                                                                                        | Medium, 40.0             | 40.0              |
| previousPageUrl   | String                    | Reserved for future use.                                                                                                                                                                                                                                                                        | Medium, 40.0             | 40.0              |
| total             | Integer                   | Total number of users who read the feed element.<br><br> <b>Note:</b> This count appears in the UI under feed posts in private and unlisted Chatter groups as the "seen by" number, for example, "Seen by 48." | Small, 40.0              | 40.0              |

## Recommendation Reaction Collection

A list of recommendation reactions.

| Property Name  | Type                                      | Description                                             | Filter Group and Version | Available Version |
|----------------|-------------------------------------------|---------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl | String                                    | URL to the current page of reactions in the collection. | Small, 45.0              | 45.0              |
| nextPageUrl    | String                                    | URL to the next page of reactions in the collection.    | Small, 45.0              | 45.0              |
| reactions      | <a href="#">Recommendation Reaction[]</a> | Collection of recommendation reactions.                 | Small, 45.0              | 45.0              |

## Recommendations Capability

If a feed element has this capability, it has a recommendation.

| Property Name | Type                                                                                                                                                                                                                                                                                                                   | Description                      | Filter Group and Version | Available Version |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|--------------------------|-------------------|
| items         | A collection of these response bodies: <ul style="list-style-type: none"><li>Non-Entity Recommendation<br/>This response body isn't available in version 34.0 and later. In version 34.0 and later, the Chatter Recommendation response body is used for all recommendations.</li><li>Chatter Recommendation</li></ul> | A collection of recommendations. | Small, 32.0              | 32.0              |

## Recommended Object

A custom or static recommendation.

| Property Name | Type                  | Description                                                                                                                                                                   | Filter Group and Version | Available Version |
|---------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| idOrEnum      | String                | ID of a recommendation definition for a custom recommendation or the enum value <code>Today</code> for static recommendations that don't have an ID (version 35.0 and later). | Small, 34.0              | 34.0              |
| motif         | <a href="#">Motif</a> | Motif of the recommended object.                                                                                                                                              | Small, 34.0              | 34.0              |
| name          | String                | Name of the recommended object.                                                                                                                                               | Small, 29.0              | 22.0              |
| type          | String                | <code>RecommendedObject</code>                                                                                                                                                | Small, 29.0              | 22.0              |

## Record Capability

If a comment has this capability, it has a record attachment.

| Property Name         | Type   | Description        | Filter Group and Version | Available Version |
|-----------------------|--------|--------------------|--------------------------|-------------------|
| <code>recordId</code> | String | ID of the record.  | Small, 42.0              | 42.0              |
| <code>url</code>      | String | URL to the record. | Small, 42.0              | 42.0              |

## Record Field

Generic record field containing a label and text value.

| Property           | Type   | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|--------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>label</code> | String | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| <code>text</code>  | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |
| <code>type</code>  | String | Valid values are: <ul style="list-style-type: none"> <li>• <code>Boolean</code></li> <li>• <code>Email</code></li> <li>• <code>Number</code></li> <li>• <code>Phone</code></li> <li>• <code>Text</code></li> </ul>                                 | Small, 29.0              | 29.0              |

## Record Field: Blank

Record field displayed as a place holder in a grid of fields.

| Property          | Type   | Description | Filter Group and Version | Available Version |
|-------------------|--------|-------------|--------------------------|-------------------|
| <code>type</code> | String | Blank       | Small, 29.0              | 29.0              |

## Record Field: Compound

Record field that is a composite of subfields.

| Property | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| fields   |        | Collection of subfields that make up the compound field. A collection of these response bodies: <ul style="list-style-type: none"> <li><a href="#">Record Field</a></li> <li><a href="#">Record Field: Blank</a></li> <li><a href="#">Record Field: Compound</a></li> <li><a href="#">Record Field: Currency</a></li> <li><a href="#">Record Field: Date</a></li> <li><a href="#">Record Field: Percent</a></li> <li><a href="#">Record Field: Picklist</a></li> <li><a href="#">Record Field: Reference</a></li> <li><a href="#">Record Field: Reference with Date</a></li> </ul> | Big, 29.0                | 29.0              |
| label    | String | Localized string describing the record field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| text     | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case.                                                                                                                                                                                                                                                                                                                                 | Small, 29.0              | 29.0              |
| type     | String | Valid values are: <ul style="list-style-type: none"> <li><code>Address</code></li> <li><code>Compound</code></li> <li><code>Location</code></li> <li><code>Name</code></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 29.0              | 29.0              |

## Record Field: Currency

Record field containing a currency value.

| Property | Type   | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| label    | String | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| text     | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |

| Property | Type   | Description                                                        | Filter Group and Version | Available Version |
|----------|--------|--------------------------------------------------------------------|--------------------------|-------------------|
|          |        | Currency is formatted in the default currency of the organization. |                          |                   |
| type     | String | Currency                                                           | Small, 29.0              | 29.0              |

## Record Field: Date

Record field containing a date.

| Property  | Type   | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| dateValue | String | Date that a machine can read. Format is ISO 8601.                                                                                                                                                                                                  | Medium, 29.0             | 29.0              |
| label     | String | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| text      | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |
| type      | String | Valid values are: <ul style="list-style-type: none"> <li>• Date</li> <li>• DateTime</li> <li>• Time</li> </ul>                                                                                                                                     | Small, 29.0              | 29.0              |

## Record Field: Percent

Record field containing a percentage value.

| Property | Type   | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| value    | Double | Value of the percentage.                                                                                                                                                                                                                           | Medium, 29.0             | 29.0              |
| label    | String | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| text     | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |
| type     | String | Percent                                                                                                                                                                                                                                            | Small, 29.0              | 29.0              |

## Record Field: Picklist

Record field containing an enumerated value.

| Property | Type   | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| label    | String | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| text     | String | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |
| type     | String | Picklist                                                                                                                                                                                                                                           | Small, 29.0              | 29.0              |

## Record Field: Reference

Record field containing a reference to another object.

| Property  | Type                      | Description                                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|-----------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| label     | String                    | Localized string describing the record field.                                                                                                                                                                                                      | Small, 29.0              | 29.0              |
| reference | <a href="#">Reference</a> | Object referenced by the record field.                                                                                                                                                                                                             | Medium, 29.0             | 29.0              |
| text      | String                    | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case. | Small, 29.0              | 29.0              |
| type      | String                    | Reference                                                                                                                                                                                                                                          | Small, 29.0              | 29.0              |

## Record Field: Reference with Date

Record field containing a referenced object that acted at a specific time, for example, "Created By..."

| Property  | Type                      | Description                                                                                                     | Filter Group and Version | Available Version |
|-----------|---------------------------|-----------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| dateValue | String                    | Time at which the referenced object acted. Format is ISO 8601.                                                  | Medium, 29.0             | 29.0              |
| label     | String                    | Localized string describing the record field.                                                                   | Small, 29.0              | 29.0              |
| reference | <a href="#">Reference</a> | Object referenced by the record field.                                                                          | Medium, 29.0             | 29.0              |
| text      | String                    | Text value of the record field. All record fields have a text value. To ensure that all clients can consume new | Small, 29.0              | 29.0              |

| Property          | Type   | Description                                                                                                                         | Filter Group and Version | Available Version |
|-------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                   |        | content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case.  |                          |                   |
| <code>type</code> | String | Valid values are: <ul style="list-style-type: none"> <li>• <code>CreatedBy</code></li> <li>• <code>LastModifiedBy</code></li> </ul> | Small, 29.0              | 29.0              |

## Record Field Value

Field values by API name.

| Property Name             | Type   | Description                                   | Filter Group and Version | Available Version |
|---------------------------|--------|-----------------------------------------------|--------------------------|-------------------|
| <code>displayValue</code> | String | Field display value.                          | Small, 63.0              | 63.0              |
| <code>highlight</code>    | String | Represents field highlighting in the results. | Small, 63.0              | 63.0              |
| <code>value</code>        | Object | Field raw value.                              | Small, 63.0              | 63.0              |

## Record Summary

Record summary.

| Property       | Type                         | Description                                                                                                                      | Filter Group and Version | Available Version |
|----------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| entityLabel    | <a href="#">Entity Label</a> | Label of the record's entity.                                                                                                    | Small, 40.0              | 40.0              |
| id             | String                       | 18-character ID of the record.                                                                                                   | Small, 29.0              | 23.0              |
| motif          | <a href="#">Motif</a>        | Small, medium, and large icons indicating the tab style of the record. The motif can also contain the record type's base color.  | Small, 29.0              | 27.0              |
| mySubscription | <a href="#">Reference</a>    | If the context user is following this record, contains information about the subscription; otherwise returns <code>null</code> . | Medium, 29.0             | 24.0              |
| name           | String                       | The localized name.                                                                                                              | Small, 29.0              | 23.0              |
| type           | String                       | Type of record, such as <code>CustomObject</code> or <code>ContentDocument</code> .                                              | Small, 29.0              | 23.0              |
| url            | String                       | Relative URL to this record.                                                                                                     | Small, 29.0              | 23.0              |

## Record Summary List

Summary information about a collection of records in the organization, including custom objects.

| Property | Type   | Description                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| records  |        | A collection of records. The collection can contain any of these response bodies: <ul style="list-style-type: none"> <li><a href="#">File Summary</a></li> <li><a href="#">Group</a></li> <li><a href="#">Record Summary</a></li> <li><a href="#">User Summary</a></li> </ul> | Small, 30.0              | 30.0              |
| url      | String | The URL to this collection of records.                                                                                                                                                                                                                                        | Small, 30.0              | 30.0              |

## Record View

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, isn't available for the record type. Contains data and metadata so you can render a record with one response.

| Property               | Type                                    | Description                                                                                                                                                         | Filter Group and Version | Available Version |
|------------------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id                     | String                                  | 18-character ID of the object                                                                                                                                       | Small, 29.0              | 23.0              |
| motif                  | <a href="#">Motif</a>                   | Small, medium, and large icons indicating the type of the object. The motif can also contain the object's base color.<br><br>The icon is not a preview of the file. | Small, 29.0              | 27.0              |
| mySubscription         | <a href="#">Reference</a>               | If the context user is following this file, this contains information about the subscription, otherwise returns <code>null</code> .                                 | Medium, 29.0             | 23.0              |
| name                   | String                                  | The localized name                                                                                                                                                  | Small, 29.0              | 29.0              |
| relatedListDefinitions | <a href="#">List View Definition</a> [] | Related list definitions (metadata) for this object. These list definitions don't include the related list data.                                                    | Medium, 29.0             | 29.0              |
| sections               | <a href="#">Record View Section</a> []  | List of record view sections.                                                                                                                                       | Small, 29.0              | 29.0              |
| type                   | String                                  | A fixed type name for this object. Check this value to determine the shape of a response body.                                                                      | Small, 29.0              | 23.0              |
| url                    | String                                  | The Connect REST API URL resource for this object.                                                                                                                  | Small, 29.0              | 23.0              |

## Record View Section

Section of record fields and values on a record detail.

| Property      | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|---------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| columnCount   | Integer | Number of columns to use to lay out the fields in a record section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 29.0              | 29.0              |
| columnOrder   | String  | Order of the fields to use in the <code>fields</code> property to lay out the fields in a record section. <ul style="list-style-type: none"> <li><code>LeftRight</code>—Fields are rendered from left to right.</li> <li><code>TopDown</code>—Fields are rendered from the top down.</li> </ul>                                                                                                                                                                                                                                                                                       | Small, 29.0              | 29.0              |
| fields        |         | Fields and values for the record contained in this section. A collection of these response bodies: <ul style="list-style-type: none"> <li><a href="#">Record Field</a></li> <li><a href="#">Record Field: Blank</a></li> <li><a href="#">Record Field: Compound</a></li> <li><a href="#">Record Field: Currency</a></li> <li><a href="#">Record Field: Date</a></li> <li><a href="#">Record Field: Percent</a></li> <li><a href="#">Record Field: Picklist</a></li> <li><a href="#">Record Field: Reference</a></li> <li><a href="#">Record Field: Reference with Date</a></li> </ul> | Small, 29.0              | 29.0              |
| heading       | String  | Localized label to display when rendering this section of fields.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Small, 29.0              | 29.0              |
| isCollapsible | Boolean | Indicates whether the section can be collapsed to hide all the fields ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Small, 29.0              | 29.0              |

## Recordset Filter Criteria Collection

List of record IDs of the filtered object.

| Property Name    | Type                                         | Description                                                          | Filter Group and Version | Available Version |
|------------------|----------------------------------------------|----------------------------------------------------------------------|--------------------------|-------------------|
| recordsetFilters | <a href="#">Recordset Filter Criteria</a> [] | Collection of recordset filter criteria IDs and filtered record IDs. | Big, 53.0                | 53.0              |

## Reference

A reference to a record.

| Property | Type   | Description                                                                                               | Filter Group and Version | Available Version |
|----------|--------|-----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id       | String | The ID of the record being referenced, which could be an 18-character ID or some other string identifier. | Small, 29.0              | 23.0              |
| url      | String | The URL to the resource endpoint.                                                                         | Small, 29.0              | 23.0              |

## Referenced Refund Service Output

Response received as part of the referenced refund service.

| Property Name      | Type                                           | Description                                                 | Filter Group and Version | Available Version |
|--------------------|------------------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| error              | <a href="#">Error Response Output</a>          | Error response representation for refund.                   | Big, 48.0                | 48.0              |
| gatewayResponse    | <a href="#">Refund Gateway Response Output</a> | Gateway response received for the refund request processed. | Big, 48.0                | 48.0              |
| paymentGatewayLogs | <a href="#">Gateway Log Output</a> []          | Gateway log collection representation for refund.           | Big, 48.0                | 48.0              |
| paymentGroup       | <a href="#">Payment Group Output</a>           | Payment group associated with refund.                       | Big, 48.0                | 48.0              |

| Property Name | Type                          | Description                     | Filter Group and Version | Available Version |
|---------------|-------------------------------|---------------------------------|--------------------------|-------------------|
| refund        | <a href="#">Refund Output</a> | Refund response representation. | Big, 48.0                | 48.0              |

## Refund Gateway Response Output

Refund gateway response representation.

| Property Name                    | Type   | Description                                                                                        | Filter Group and Version | Available Version |
|----------------------------------|--------|----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| gatewayAvsCode                   | String | Code sent by gateways that use an address verification system.                                     | Big, 48.0                | 48.0              |
| gatewayDate                      | String | The date and time that of the gateway communication that lead to the creation of this gateway log. | Big, 48.0                | 48.0              |
| gatewayMessage                   | String | Information or error messages sent from the gateway.                                               | Big, 48.0                | 48.0              |
| gatewayReference<br>Details      | String | Gateway reference details.                                                                         | Big, 48.0                | 48.0              |
| gatewayReference<br>Number       | String | Unique transaction ID created by the payment gateway.                                              | Big, 48.0                | 48.0              |
| gatewayResult<br>Code            | String | Gateway-specific result code. Must be mapped to a Salesforce-specific result code.                 | Big, 48.0                | 48.0              |
| gatewayResult<br>CodeDescription | String | Description of the gateway's result code.                                                          | Big, 48.0                | 48.0              |
| salesforceResult<br>Code         | String | Salesforce-specific result code that can map to one or more gateway result codes.                  | Big, 48.0                | 48.0              |

## Refund Output

Refund output representation.

| Property Name   | Type   | Description                                                                   | Filter Group and Version | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| accountId       | String | ID of the account related to the refund record.                               | Big, 48.0                | 48.0              |
| amount          | Double | Total amount of the refund transaction performed in the payment request.      | Big, 48.0                | 48.0              |
| currencyIsoCode | String | Three-letter ISO 4217 currency code associated with the payment group record. | Big, 48.0                | 48.0              |

| Property Name | Type   | Description                                                                         | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------|--------------------------|-------------------|
| effectiveDate | String | Date that the refund becomes effective.                                             | Big, 48.0                | 48.0              |
| id            | String | ID of the refund record.                                                            | Big, 48.0                | 48.0              |
| refundNumber  | String | Number of the refund record that was created as a result of the request processing. | Big, 48.0                | 48.0              |
| requestDate   | String | Date when the refund occurred.                                                      | Big, 48.0                | 48.0              |
| status        | String | Indicates the results of processing the refund transaction in the gateway.          | Big, 48.0                | 48.0              |

## Refund Service Output

Refund comprehensive output representation.

| Property Name      | Type                                           | Description                                         | Filter Group and Version | Available Version |
|--------------------|------------------------------------------------|-----------------------------------------------------|--------------------------|-------------------|
| error              | <a href="#">ConnectApiResponse</a>             | Error response representation for a refund.         | Big, 49.0                | 49.0              |
| gatewayResponse    | <a href="#">Refund Gateway Response Output</a> | Gateway response representation for a refund.       | Big, 49.0                | 49.0              |
| paymentGatewayLogs | <a href="#">Gateway Log Output[]</a>           | Gateway log collection representation for a refund. | Big, 49.0                | 49.0              |
| paymentGroup       | <a href="#">Payment Group Output</a>           | Payment group associated with a refund.             | Big, 49.0                | 49.0              |
| refund             | <a href="#">Refund Output</a>                  | Refund response representation.                     | Big, 49.0                | 49.0              |

## Register Guest Buyer

Indicates success or failure of a register guest buyer action.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 48.0                | 48.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 48.0                | 48.0              |

## Related Feed Post

A related feed post

| Property Name   | Type                      | Description                                                                                                                          | Filter Group and Version | Available Version |
|-----------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id              | String                    | 18-character ID of the related feed post.                                                                                            | Small, 37.0              | 37.0              |
| motif           | <a href="#">Motif</a>     | Icon that identifies the related feed post. The motif can also contain the object's base color.                                      | Small, 37.0              | 37.0              |
| mySubscriptions | <a href="#">Reference</a> | If the context user is following the item, it contains information about the subscription. Otherwise, it returns <code>null</code> . | Medium, 37.0             | 37.0              |
| name            | String                    | Name of the related feed post.                                                                                                       | Small, 37.0              | 37.0              |
| score           | Double                    | Score of the related feed post that indicates how closely related it is to the context feed post.                                    | Small, 37.0              | 37.0              |

## Repository Folder Items Collection

A collection of repository folder items.

| Property Name   | Type                                     | Description                                                                                              | Filter Group and Version | Available Version |
|-----------------|------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                                   | Connect REST API URL identifying the current page.                                                       | Medium, 32.0             | 32.0              |
| items           | <a href="#">Repository Folder Item[]</a> | Collection of items in a repository folder.                                                              | Small, 32.0              | 32.0              |
| nextPageUrl     | String                                   | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.         | Small, 32.0              | 32.0              |
| previousPageUrl | String                                   | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page. | Medium, 32.0             | 32.0              |

## Repository Folder Summary

Summary of a repository folder.

| Property Name     | Type                      | Description                                                           | Filter Group and Version | Available Version |
|-------------------|---------------------------|-----------------------------------------------------------------------|--------------------------|-------------------|
| createdBy         | String                    | Name of user who created the folder.                                  | Small, 32.0              | 32.0              |
| createdDate       | String                    | Created date of the folder in ISO 8601 format.                        | Small, 32.0              | 32.0              |
| description       | String                    | Folder description.                                                   | Small, 32.0              | 32.0              |
| externalFolderUrl | String                    | Connect REST API URL to this folder in the external system.           | Small, 32.0              | 32.0              |
| folderItemsUrl    | String                    | Connect REST API URL that lists the files and folders in this folder. | Small, 32.0              | 32.0              |
| id                | String                    | ID of the folder.                                                     | Small, 32.0              | 32.0              |
| itemTypeUrl       | String                    | URL to the item type information.                                     | Small, 35.0              | 35.0              |
| modifiedBy        | String                    | Name of user who last modified the folder.                            | Small, 32.0              | 32.0              |
| modifiedDate      | String                    | Last modified date of the folder in ISO 8601 format.                  | Small, 32.0              | 32.0              |
| motif             | <a href="#">Motif</a>     | Motif of the folder.                                                  | Small, 32.0              | 32.0              |
| name              | String                    | Name of the folder.                                                   | Small, 32.0              | 32.0              |
| path              | String                    | The absolute path of the folder in the external system.               | Small, 32.0              | 32.0              |
| repository        | <a href="#">Reference</a> | The folder external repository.                                       | Small, 32.0              | 32.0              |
| type              | String                    | Record type, <code>folder</code> .                                    | Small, 32.0              | 32.0              |

| Property Name | Type   | Description                          | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------|--------------------------|-------------------|
| url           | String | Connect REST API URL to this folder. | Small, 32.0              | 32.0              |

| returnLineItem Splits | <a href="#">Return Order Item Split Line Output[]</a> | List of properties representing any remaining quantities from partial returns processed by this call. It includes order items, delivery charges, and return fees. Each element of the list includes the ID of a split ReturnOrderLineItem and the ID of the partially processed ReturnOrderLineItem whose remaining quantity it holds. | Big, 52.0                | 52.0              |
| success               | Boolean                                               | Indicates whether the transaction was successful.                                                                                                                                                                                                                                                                                      | Big, 52.0                | 52.0              |

## Return Order Item Split Line Output

After a change order is created for a ReturnOrderLineItem, that ReturnOrderLineItem is read-only. If the Return Items API is used to return a partial quantity, it creates a new “split” ReturnOrderLineItem to hold the remaining quantity to be returned. In that case, it returns this output property, which contains the IDs of the original and split ReturnOrderLineItems.

| Property Name              | Type                                    | Description                                                                 | Filter Group and Version | Available Version |
|----------------------------|-----------------------------------------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| errors                     | <a href="#">Error Response Output[]</a> | Any errors that were returned.                                              | Big, 52.0                | 52.0              |
| new ReturnOrderItemId      | String                                  | ID of the new ReturnOrderLineItem that holds the remaining return quantity. | Big, 52.0                | 52.0              |
| original ReturnOrderItemId | String                                  | ID of the original ReturnOrderLineItem.                                     | Big, 52.0                | 52.0              |
| success                    | Boolean                                 | Indicates whether the transaction was successful.                           | Big, 52.0                | 52.0              |

## Return Order Output

Output representation of the created Return Order.

| Property Name | Type                                    | Description                                       | Filter Group and Version | Available Version |
|---------------|-----------------------------------------|---------------------------------------------------|--------------------------|-------------------|
| errors        | <a href="#">Error Response Output[]</a> | Any errors that were returned.                    | Big, 52.0                | 50.0              |
| returnOrderId | String                                  | A newly created Return Order ID                   | Big, 50.0                | 50.0              |
| success       | Boolean                                 | Indicates whether the transaction was successful. | Big, 52.0                | 50.0              |

## Revenue Async Response

Output representation of the result of the API request with the request identifier.

### JSON example

```
{
  "errors": null,
  "requestIdentifier": "ae6f23bc-f056-44b7-aa4d-c7f6fc5e0cf4",
  "success": true
}
```

| Property Name     | Type                           | Description                                                                                          | Filter Group and Version | Available Version |
|-------------------|--------------------------------|------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors            | <a href="#">Error Response</a> | Details of errors, if any.                                                                           | Big, 62.0                | 62.0              |
| requestIdentifier | String                         | Unique identifier of the request.                                                                    | Big, 62.0                | 62.0              |
| success           | Boolean                        | Indicates whether the API request is successful ( <code>true</code> ) or not ( <code>false</code> ). | Big, 62.0                | 62.0              |

## Sale Gateway Response

Contains information about the payment gateway's processing of the payment sale request.

| Property Name                | Type   | Description                                                                                        | Available Version |
|------------------------------|--------|----------------------------------------------------------------------------------------------------|-------------------|
| gatewayAvsCode               | String | Code sent by gateways that use an address verification system.                                     | Big, 54.0<br>54.0 |
| gatewayDate                  | String | The date and time that of the gateway communication that lead to the creation of this gateway log. | Big, 54.0<br>54.0 |
| gatewayMessage               | String | Information or error messages sent from the gateway.                                               | Big, 54.0<br>54.0 |
| gatewayReferenceDetails      | String | Provides information about the gateway communication.                                              | Big, 54.0<br>54.0 |
| gatewayReferenceNumber       | String | Unique transaction ID created by the payment gateway.                                              | Big, 54.0<br>54.0 |
| gatewayResultCode            | String | Gateway-specific result code. Must be mapped to a Salesforce-specific result code.                 | Big, 54.0<br>54.0 |
| gatewayResultCodeDescription | String | Description of the gateway's result code.                                                          | Big, 54.0<br>54.0 |
| salesforceResultCode         | String | Salesforce-specific result code that can map to one or more gateway result codes.                  | Big, 54.0<br>54.0 |

## Sale Output

Payment sale output.

| Property Name      | Type                                  | Description                                                                                                                                | Filter Group and Version | Available Version |
|--------------------|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| error              | <a href="#">Error Response Output</a> | Error response representation for the payment sale request.                                                                                | Big, 54.0                | 54.0              |
| gatewayResponse    | <a href="#">Sale Gateway Response</a> | Gateway log response containing details about gateway logs created during the processing of the capture request.                           | Big, 54.0                | 54.0              |
| payment            | <a href="#">Payment Output</a>        | Payment response object for the capture request. Contains the information related to a payment object created during request processing.   | Big, 54.0                | 54.0              |
| paymentGatewayLogs | <a href="#">Gateway Log Output[]</a>  | Payment gateway log response containing details of the PaymentGatewayLog entity records created during the processing of the sale request. | Big, 54.0                | 54.0              |
| paymentGroup       | <a href="#">Payment Group Output</a>  | Represents a payment group sent to the gateway as part of the sale request.                                                                | Big, 54.0                | 54.0              |
| paymentMethod      | <a href="#">Payment Method Output</a> | Represents the payment method sent with the sale request.                                                                                  | Big, 54.0                | 54.0              |

## Saved Payment Method Collection

Collection of active saved payment methods for an account or contact.

| Property Name    | Type                                          | Description                                         | Filter Group and Version | Available Version |
|------------------|-----------------------------------------------|-----------------------------------------------------|--------------------------|-------------------|
| count            | Integer                                       | Count of Saved Payment Methods.                     | Small, 58.0              | 58.0              |
| currentPageToken | String                                        | Token to the current page of Saved Payment Methods. | Small, 58.0              | 58.0              |
| currentPageUrl   | String                                        | URL to the current page of Saved Payment Methods.   | Small, 58.0              | 58.0              |
| items            | <a href="#">Saved Payment Method Output[]</a> | Saved Payment Method List.                          | Big, 58.0                | 58.0              |
| nextPageToken    | String                                        | Token to the next page of Saved Payment Methods.    | Small, 58.0              | 58.0              |
| nextPageUrl      | String                                        | URL to the next page of Saved Payment Methods.      | Small, 58.0              | 58.0              |

| Property Name     | Type    | Description                                        | Filter Group and Version | Available Version |
|-------------------|---------|----------------------------------------------------|--------------------------|-------------------|
| pageSize          | Integer | Page Size for Saved Payment Methods.               | Small, 58.0              | 58.0              |
| previousPageToken | String  | Token to previous page of Saved Payment Methods.   | Small, 58.0              | 58.0              |
| previousPageUrl   | String  | URL to the previous page of Saved Payment Methods. | Small, 58.0              | 58.0              |

## Saved Payment Method Output

An individual saved payment method for an account or contact.

| Property Name      | Type                                  | Description                                                                                                                 | Filter Group and Version | Available Version |
|--------------------|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accountHolderEmail | String                                | Email of the customer that holds the saved payment method.                                                                  | Small, 58.0              | 58.0              |
| accountHolderName  | String                                | Name of customer that holds the saved payment method.                                                                       | Small, 58.0              | 58.0              |
| bankAccountType    | String                                | Type of bank account, such as checking or savings.                                                                          | Small, 59.0              | 59.0              |
| bankCode           | String                                | Code of the banking institution that issued the saved payment method.                                                       | Small, 58.0              | 58.0              |
| bankName           | String                                | Name of the bank that issued the payment method.                                                                            | Small, 58.0              | 58.0              |
| error              | <a href="#">Error Response Output</a> | Error response if the saved payment method information couldn't be retrieved.                                               | Small, 58.0              | 58.0              |
| expiryMonth        | String                                | Month the saved card expires.                                                                                               | Small, 58.0              | 58.0              |
| expiryYear         | String                                | Year the saved card expires.                                                                                                | Small, 58.0              | 58.0              |
| gatewayCustomerId  | String                                | Owner associated with the payment method to the payment gateway.                                                            | Small, 60.0              | 60.0              |
| gatewayRefId       | String                                | ID returned by a payment gateway in a transaction response, indicating that the transaction has happened.                   | Big, 59.0                | 59.0              |
| gatewayReference   | String                                | Identifies the customer associated with the payment method to the payment gateway. We must pass this information in payment | Small, 58.0              | 58.0              |

| Property Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|-------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                   |         | request whenever a transaction with a saved payment method is made so the gateway can validate the request.                                                                                                                                                                                                                                             |                          |                   |
| gatewayToken      | String  | Token representing the saved payment method that is used for future transactions.                                                                                                                                                                                                                                                                       | Small, 58.0              | 58.0              |
| id                | String  | Salesforce ID of the saved payment method record.                                                                                                                                                                                                                                                                                                       | Small, 58.0              | 58.0              |
| isDefault         | Boolean | Indicates whether the saved payment method is the default payment method to use for transactions ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                                                                   | Small, 58.0              | 58.0              |
| issuer            | String  | Issuer of the saved payment method.                                                                                                                                                                                                                                                                                                                     | Small, 58.0              | 58.0              |
| last4             | String  | Last 4 Digits of the saved card payment method.                                                                                                                                                                                                                                                                                                         | Small, 58.0              | 58.0              |
| merchantAccountId | String  | Salesforce Payments merchant account ID associated with the saved payment method.                                                                                                                                                                                                                                                                       | Small, 58.0              | 58.0              |
| name              | String  | Name of the saved payment record.                                                                                                                                                                                                                                                                                                                       | Small, 58.0              | 58.0              |
| network           | String  | Saved payment method card network, for example Visa or Union Pay.                                                                                                                                                                                                                                                                                       | Small, 58.0              | 58.0              |
| paymentGatewayId  | String  | Salesforce ID of the Payment Gateway object record.                                                                                                                                                                                                                                                                                                     | Small, 58.0              | 58.0              |
| referenceOwnerId  | String  | Account or Contact record that owns the payment method.                                                                                                                                                                                                                                                                                                 | Small, 58.0              | 58.0              |
| status            | String  | Status of the saved payment method.<br>Possible values are: <ul style="list-style-type: none"> <li>• <code>Active</code></li> <li>• <code>AwaitingPayment</code></li> <li>• <code>Errored</code></li> <li>• <code>Expired</code></li> </ul>                                                                                                             | Big, 58.0                | 58.0              |
| type              | String  | Type of saved payment method. Possible values are: <ul style="list-style-type: none"> <li>• <code>Au_becs_debit</code>—BECS</li> <li>• <code>Bacs_debit</code>—BACS</li> <li>• <code>Bancontact</code>—Bancontact</li> <li>• <code>Card</code>—Card</li> <li>• <code>Ideal</code>—Ideal</li> <li>• <code>Sepa_debit</code>—SEPA Direct Debit</li> </ul> | Big, 58.0                | 58.0              |

| Property Name          | Type   | Description                                                                                                                                                                     | Filter Group and Version | Available Version |
|------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                        |        | <ul style="list-style-type: none"><li>• <code>Us_bank_account</code>—ACH Direct Debit</li></ul>                                                                                 |                          |                   |
| <code>usageType</code> | String | Specifies the usage type of the payment method. Possible values are: <ul style="list-style-type: none"><li>• <code>OffSession</code></li><li>• <code>OnSession</code></li></ul> | Big, 58.0                | 58.0              |

## Service Catalog Item Collection

Collection of service catalog items.

| Property Name | Type                                   | Description                                                                               | Filter Group and Version | Available Version |
|---------------|----------------------------------------|-------------------------------------------------------------------------------------------|--------------------------|-------------------|
| items         | <a href="#">Service Catalog Item[]</a> | List of service catalog items.                                                            | Small, 59.0              | 59.0              |
| baseUrl       | String                                 | Lightning Web Runtime (LWR) Base URL for the Service Catalog Item Definition Detail page. | Small, 60.0              | 60.0              |

## Service Territories List Result

List of service territories returned as per the query in the GET service territories call.

| Property Name      | Type                                         | Description                  | Filter Group and Version | Available Version |
|--------------------|----------------------------------------------|------------------------------|--------------------------|-------------------|
| serviceTerritories | <a href="#">Service Territories Result[]</a> | List of service territories. | Small, 48.0              | 48.0              |

## Service Territories Output

Output for the service territories GET method.

| Property Name | Type                                            | Description                | Filter Group and Version | Available Version |
|---------------|-------------------------------------------------|----------------------------|--------------------------|-------------------|
| result        | <a href="#">Service Territories List Result</a> | Result for the GET method. | Small, 48.0              | 48.0              |

## Service Territories Result

Represents a service territory result.

| Property Name    | Type   | Description                                                     | Filter Group and Version | Available Version |
|------------------|--------|-----------------------------------------------------------------|--------------------------|-------------------|
| city             | String | Service territory city.                                         | Small, 48.0              | 48.0              |
| country          | String | Service territory country.                                      | Small, 48.0              | 48.0              |
| id               | String | ID of the service territory.                                    | Small, 48.0              | 48.0              |
| latitude         | Double | Latitude of the service territory.                              | Small, 48.0              | 48.0              |
| longitude        | Double | Longitude of the service territory.                             | Small, 48.0              | 48.0              |
| name             | String | Name of the service territory.                                  | Small, 48.0              | 48.0              |
| operatingHoursId | String | ID of the service territory <code>operatingHours</code> record. | Small, 48.0              | 48.0              |
| postalCode       | String | Service territory postal code.                                  | Small, 48.0              | 48.0              |
| state            | String | Service territory state.                                        | Small, 48.0              | 48.0              |
| street           | String | Service territory street.                                       | Small, 48.0              | 48.0              |

## Session Context

Session context for a shopper using a Commerce store.

| Property Name | Type                                  | Description                                                                                               | Filter Group and Version | Available Version |
|---------------|---------------------------------------|-----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| accountId     | String                                | Context user's account ID.                                                                                | Small, 57.0              | 57.0              |
| accountName   | String                                | Context user's account name.                                                                              | Small, 57.0              | 57.0              |
| buyerGroups   | <a href="#">Buyer Group</a> []        | List of buyer groups associated with the context.                                                         | Small, 58.0              | 58.0              |
| guestUser     | Boolean                               | Indicates if the session context is for a guest user ( <code>true</code> ) or not ( <code>false</code> ). | Small, 54.0              | 54.0              |
| profile       | <a href="#">Commerce User Profile</a> | User's profile data.                                                                                      | Small, 62.0              | 62.0              |
| userId        | String                                | ID of the user.                                                                                           | Small, 54.0              | 54.0              |
| userName      | String                                | Full name of the user.                                                                                    | Small, 54.0              | 54.0—61.0         |

## Share Captured Activity Result

Represents the results of sharing a captured email or event.

| Property Name | Type    | Description                                   | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------|--------------------------|-------------------|
| success       | Boolean | Whether the share operation succeeded or not. | Small, 39.0              | 39.0              |

## Shift Pattern Error

Shifts from pattern error response.

| Property Name                | Type   | Description                     | Filter Group and Version | Available Version |
|------------------------------|--------|---------------------------------|--------------------------|-------------------|
| code                         | String | Error code.                     | Small, 53.0              | 53.0              |
| invalidService<br>ResourceId | String | ID of invalid service resource. | Small, 53.0              | 53.0              |
| message                      | String | Error message.                  | Small, 53.0              | 53.0              |

## Shifts from Pattern

Shifts created from a pattern.

| Property Name | Type                                | Description                                                                     | Filter Group and Version | Available Version |
|---------------|-------------------------------------|---------------------------------------------------------------------------------|--------------------------|-------------------|
| count         | Integer                             | Total count of created shifts.                                                  | Small, 51.0              | 51.0              |
| error         | <a href="#">Shift Pattern Error</a> | Error details for shifts from a pattern.                                        | Small, 53.0              | 53.0              |
| isSuccess     | Boolean                             | Indicates if the request is successful ( <b>true</b> ) or not ( <b>false</b> ). | Small, 53.0              | 53.0              |
| recordIds     | String[]                            | Collection of created shift IDs.                                                | Big, 51.0                | 51.0              |

## Shipping Profile

Output representation of the shipping profile.

### JSON example

```
[
  {
    "id": "7LAXxxxxxxxxx1",
    "name": "General Shipping Profile",
    "isDefault": true,
    "ShippingRateGroups": [
      {

        "transitTimeUnit": "days",
        "weightUnit": "Pounds"
      }
    ]
  }
}
```

| Property Name | Type                                | Description                                                 | Filter Group and Version | Available Version |
|---------------|-------------------------------------|-------------------------------------------------------------|--------------------------|-------------------|
| count         | Integer                             | Number of shipping profiles returned on the current page.   | Small, 59.0              | 59.0              |
| items         | <a href="#">Shipping Profile</a> [] | List of shipping profiles.                                  | Small, 59.0              | 59.0              |
| total         | Integer                             | Total number of shipping profiles available for a webstore. | Small, 59.0              | 59.0              |

## Shipping Rate Group

Output representation of the shipping rate group.

**JSON example**

```
{
  "id": "8Ni0000000000001",
  "name": "Shipping rate group 1",
  "shippingZones": [
```

```
{
  "Id": "12h000000000100",
  "countries": [
    {
      "isoCode": "US",
      "label": "United States"
    },
    {
      "isoCode": "CA",
      "label": "Canada"
    }
  ],
  "standardShippingRates": [
    {
      "conditionFactor": "ORDER_PRICE",
      "conditionRangeMax": 50,
      "conditionRangeMin": 0,
      "currencyIsoCode": "USD",
      "id": "5fy00000000001",
      "name": "ShippingRate1",
      "price": 10,
      "transitTimeMax": 5,
      "transitTimeMin": 2,
      "transitTimeUnit": "days",
      "weightUnit": "Pounds"
    },
    {
      "conditionFactor": "ORDER_PRICE",
      "conditionRangeMax": 50,
      "conditionRangeMin": 10,
      "currencyIsoCode": "USD",
      "id": "5fy00000000002",
      "name": "ShippingRate2",
      "price": 5,
      "transitTimeMax": 5,
      "transitTimeMin": 2,
      "transitTimeUnit": "days",
      "weightUnit": "Pounds"
    }
  ]
}
```

| Property Name | Type                            | Description                      | Filter Group and Version | Available Version |
|---------------|---------------------------------|----------------------------------|--------------------------|-------------------|
| id            | String                          | ID of the shipping rate group.   | Small, 59.0              | 59.0              |
| name          | String                          | Name of the shipping rate group. | Small, 59.0              | 59.0              |
| shippingZones | <a href="#">Shipping Zone[]</a> | List of shipping zones.          | Small, 59.0              | 59.0              |

# Shipping Zone

Output representation of the shipping rate area.

## JSON example

```
{
  "countries": [
    {
      "isoCode": "US",
      "label": "United States"
    },
    {
      "isoCode": "CA",
      "label": "Canada"
    }
  ],
  "standardShippingRates": [

| Property Name                      | Type                                                   | Description                          | Filter Group and Version | Available Version |
|------------------------------------|--------------------------------------------------------|--------------------------------------|--------------------------|-------------------|
| <code>standardShippingRates</code> | <a href="#">Standard Shipping Rate</a> <code>[]</code> | List of the standard shipping rates. | Small, 59.0              | 59.0              |

## Social Status Response

Status response for Webstore Meta Config entity creation.

| Property Name          | Type                                  | Description                                                                                         | Filter Group and Version | Available Version |
|------------------------|---------------------------------------|-----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>error</code>     | <a href="#">Error Response Output</a> | Detailed error message if the operation was unsuccessful.                                           | Small, 64.0              | 64.0              |
| <code>isSuccess</code> | Boolean                               | Specifies whether the operation was successful ( <code>true</code> ) or not ( <code>false</code> ). | Small, 64.0              | 64.0              |

## Sort Rule

Sort rule.

| Property Name            | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|--------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>direction</code>   | String | Direction of the sort rule. Values are: <ul style="list-style-type: none"> <li><code>Ascending</code>—Sorts in ascending alphanumeric order (A–Z, 0–9).</li> <li><code>Default</code>—When no direction is defined, sorts by relevance.</li> <li><code>Descending</code>—Sorts in descending alphanumeric order (Z–A, 9–0).</li> </ul>                                                                                                                                                            | Small, 52.0              | 52.0              |
| <code>label</code>       | String | Label of the sort rule.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 52.0              | 52.0              |
| <code>labelSuffix</code> | String | Label suffix of the sort rule. Values are: <ul style="list-style-type: none"> <li><code>Ascen</code>—Label suffix for 'Asc'</li> <li><code>Ascending</code>—Label suffix for 'Ascending'</li> <li><code>Az</code>—Label suffix for 'A-Z'</li> <li><code>Descen</code>—Label suffix for 'Desc'</li> <li><code>Descending</code>—Label suffix for 'Descending'</li> <li><code>FewMany</code>—Label suffix for 'Few-Many'</li> <li><code>HeavyLight</code>—Label suffix for 'Heavy-Light'</li> </ul> | Small, 54.0              | 54.0              |

| Property Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Filter Group and Version | Available Version |

| conditionRangeMax | Double  | Maximum value of the shipping rate condition.                                                                                                                                                 | Small, 59.0              | 59.0              |
| conditionRangeMin | Double  | Minimum value of the shipping rate condition. This value can't be negative.                                                                                                                   | Small, 59.0              | 59.0              |
| currencyIsoCode   | String  | Currency ISO code of the cart. The default value is the org's default currency.                                                                                                               | Small, 60.0              | 60.0              |
| id                | String  | ID of the shipping rate.                                                                                                                                                                      | Small, 59.0              | 59.0              |
| name              | String  | Name of the standard shipping rate.                                                                                                                                                           | Small, 59.0              | 59.0              |
| price             | String  | Price of standard shipping rate.                                                                                                                                                              | Small, 59.0              | 59.0              |
| transitTimeMax    | Integer | Maximum value of the shipping transit time.                                                                                                                                                   | Small, 61.0              | 61.0              |
| transitTimeMin    | Integer | Minimum value of the shipping transit time. This value can't be negative.                                                                                                                     | Small, 61.0              | 61.0              |
| transitTimeUnit   | String  | Transit time unit for shipping calculation.<br>Possible values are: <ul style="list-style-type: none"> <li>• Days</li> <li>• Hours</li> <li>• Weeks</li> </ul>                                | Small, 61.0              | 61.0              |
| weightUnit        | String  | Unit of measurement for the weight of the cart items. Possible values are: <ul style="list-style-type: none"> <li>• Grams</li> <li>• Kilograms</li> <li>• Ounces</li> <li>• Pounds</li> </ul> | Small, 62.0              | 62.0              |

## Status

Provides status on the object search.

| Property Name | Type   | Description         | Filter Group and Version | Available Version |
|---------------|--------|---------------------|--------------------------|-------------------|
| code          | String | Search status code. | Small, 63.0              | 63.0              |

| Property Name | Type   | Description            | Filter Group and Version | Available Version |
|---------------|--------|------------------------|--------------------------|-------------------|
| message       | String | Search status message. | Small, 63.0              | 63.0              |

## Status Capability

If a feed post or comment has this capability, it has a status that determines its visibility.

| Property Name        | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|----------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| feedEntityStatus     | String  | Status of the feed post or comment. Values are: <ul style="list-style-type: none"><li>• <b>Draft</b>—The feed post isn't published but is visible to the author and users with Modify All Data or View All Data permission. Comments can't be drafts.</li><li>• <b>Isolated</b>—The feed post or comment is isolated, and only admins can see it.</li><li>• <b>PendingReview</b>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li><li>• <b>Published</b>—The feed post or comment is approved and visible.</li></ul> | Small, 37.0              | 37.0              |
| isApprovable<br>ByMe | Boolean | Specifies whether the context user can change the status of the feed post or comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Small, 37.0              | 37.0              |

## Strategy Trace Node

A trace node for a recommendation strategy execution.

| Property Name | Type     | Description                                      | Filter Group and Version | Available Version |
|---------------|----------|--------------------------------------------------|--------------------------|-------------------|
| inputCount    | Integer  | Number of items put into the node.               | Small, 45.0              | 45.0              |
| messages      | String[] | Messages that occurred during node execution.    | Small, 45.0              | 45.0              |
| nodeName      | String   | Name of the node.                                | Small, 45.0              | 45.0              |
| nodeTime      | Long     | Time spent processing inside the node.           | Small, 45.0              | 45.0              |
| nodeType      | String   | Type of node.                                    | Small, 45.0              | 45.0              |
| outputCount   | Integer  | Number of items returned from the node.          | Small, 45.0              | 45.0              |
| outputs       | String[] | Recommendations that are returned from the node. | Small, 45.0              | 45.0              |
| totalTime     | Long     | Total time spent processing.                     | Small, 45.0              | 45.0              |

## Submit Cancel Output

ID of the change order created for a cancel action, and a set of its financial values.

| Property Name    | Type                                    | Description                                                                                                                      | Filter Group and Version | Available Version |
|------------------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| changeBalances   | <a href="#">Change Item Output</a>      | Financial values resulting from the cancel.                                                                                      | Big, 48.0                | 48.0              |
| changeOrderId    | String                                  | ID of the change order created for the canceled order items and shipping charges. Use this change order to create a credit memo. | Big, 48.0                | 48.0              |
| errors           | <a href="#">Error Response Output[]</a> | Any errors that were returned.                                                                                                   | Big, 48.0                | 48.0              |
| feeChangeOrderId | String                                  | ID of the change order created by canceling order items with associated cancel fees. Use this change order to create an invoice. | Big, 57.0                | 57.0              |
| success          | Boolean                                 | Indicates whether the transaction was successful.                                                                                | Big, 48.0                | 48.0              |

## Submit Cart to Exchange Order

Exchange order summary resulting from a submit cart to exchange order action.

| Property Name                               | Type                                         | Description                                               | Filter Group and Version | Available Version |
|---------------------------------------------|----------------------------------------------|-----------------------------------------------------------|--------------------------|-------------------|
| <del>balanceStateExchangeCart</del>         | <a href="#">Balance State Preview Output</a> | The balance state preview for the exchange web cart.      | Big, 61.0                | 61.0              |
| <del>balanceStateOriginalOrderSummary</del> | <a href="#">Balance State Preview Output</a> | The balance state preview for the original order summary. | Big, 61.0                | 61.0              |
| <del>balanceStateReturnOrder</del>          | <a href="#">Balance State Preview Output</a> | The balance state preview for the return order.           | Big, 61.0                | 61.0              |
| changeBalances                              | <a href="#">Change Item Output</a>           | Change order financial values for a preview order action. | Big, 60.0                | 60.0              |
| errors                                      | <a href="#">Error Response Output[]</a>      | Any errors that were returned.                            | Big, 60.0                | 60.0              |
| <del>exchangeOrderSummaryId</del>           | String                                       | Exchange order summary ID.                                | Big, 60.0                | 60.0              |
| orderSummaryId                              | String                                       | ID of the order summary.                                  | Big, 60.0                | 60.0              |
| success                                     | Boolean                                      | Indicates whether the transaction was successful.         | Big, 60.0                | 60.0              |

## Submit Return Output

ID of the change order created for a return action, and a set of its financial values.

| Property Name    | Type                                    | Description                                                                                                                      | Filter Group and Version | Available Version |
|------------------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| changeBalances   | <a href="#">Change Item Output</a>      | Financial values resulting from the return.                                                                                      | Big, 48.0                | 48.0              |
| changeOrderId    | String                                  | ID of the change order created for the returned order items and shipping charges. Use this change order to create a credit memo. | Big, 48.0                | 48.0              |
| errors           | <a href="#">Error Response Output[]</a> | Any errors that were returned.                                                                                                   | Big, 48.0                | 48.0              |
| feeChangeOrderId | String                                  | ID of the change order created by returning order items with associated return fees. Use this change order to create an invoice. | Big, 57.0                | 57.0              |
| success          | Boolean                                 | Indicates whether the transaction was successful.                                                                                | Big, 48.0                | 48.0              |

## Subscription

Chatter subscription, or following, information.

| Property   | Type                      | Description                                                                                                                                                                                                                                                                                                           | Filter Group and Version | Available Version |
|------------|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| community  | <a href="#">Reference</a> | Information about the Experience Cloud site. Returns <code>null</code> if the subscription exists in the default site or if digital experiences isn't enabled.                                                                                                                                                        | Medium, 29.0             | 26.0              |
| id         | String                    | 18-character ID of the subscription.                                                                                                                                                                                                                                                                                  | Small, 29.0              | 23.0              |
| subject    | Depends                   | Information about the parent, that is, the thing or person being followed. Valid values are: <ul style="list-style-type: none"> <li>• <a href="#">Group</a> (23.0)</li> <li>• <a href="#">Record Summary</a> (23.0)</li> <li>• <a href="#">Topic</a> (29.0)</li> <li>• <a href="#">User Summary</a> (23.0)</li> </ul> | Small, 29.0              |                   |
| subscriber | Depends                   | Information about the subscriber, that is, the person following this item. Valid values are: <ul style="list-style-type: none"> <li>• <a href="#">Group</a></li> <li>• <a href="#">User Summary</a></li> </ul>                                                                                                        | Small, 29.0              | 23.0              |
| url        | String                    | Relative URL to this specific subscription.                                                                                                                                                                                                                                                                           | Small, 29.0              | 23.0              |

## Subscription Config

Commerce subscription configuration settings for the application context.

| Property Name           | Type    | Description                                                                                                                                     | Filter Group and Version | Available Version |
|-------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| rlmSubscriptionEnabled  | Boolean | Indicates whether Commerce Revenue Lifecycle Management Subscription is enabled on the org ( <code>true</code> ) or not ( <code>false</code> ). | Small, 63.0              | 63.0              |
| subscriptionPlusEnabled | Boolean | Indicates whether Commerce Subscription Plus is enabled on the org ( <code>true</code> ) or not ( <code>false</code> ).                         | Small, 63.0              | 63.0              |

## Subscription Page

Page of Chatter subscriptions.

| Property        | Type                           | Description                                                                                             | Filter Group and Version | Available Version |
|-----------------|--------------------------------|---------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                         | Returns the current page of subscriptions                                                               | Medium, 29.0             | 23.0              |
| nextPageUrl     | String                         | Returns the next page of subscriptions. If there is no next page, returns the string "null"             | Small, 29.0              | 23.0              |
| mySubscription  | <a href="#">Reference</a>      | Returns information about the subscription, or <code>null</code> if the context user is not subscribed. | Medium, 29.0             | 23.0              |
| previousPageUrl | String                         | Returns the previous page of subscriptions. If there is no previous page, returns the string "null"     | Medium, 29.0             | 23.0              |
| subscriptions   | <a href="#">Subscription[]</a> | Collection of subscriptions                                                                             | Small, 29.0              | 23.0              |
| total           | Integer                        | Total number of subscriptions                                                                           | Small, 29.0              | 23.0              |

## Subscription Term Rule

Fields necessary to implement the subscription term.

| Property Name | Type    | Description                                                                      | Filter Group and Version | Available Version |
|---------------|---------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| increment     | Integer | Number of pricing term units that can be used to increase the subscription term. | Small, 59.0              | 59.0              |
| maximum       | Integer | Maximum number of pricing term units per subscription term.                      | Small, 59.0              | 59.0              |
| minimum       | Integer | Minimum number of pricing term units per subscription term.                      | Small, 59.0              | 59.0              |

## Supported Emoji

A collection of supported emoji.

| Property Name   | Type                             | Description                      | Filter Group and Version | Available Version |
|-----------------|----------------------------------|----------------------------------|--------------------------|-------------------|
| supportedEmojis | <a href="#">Emoji Collection</a> | A collection of supported emoji. | Small, 39.0              | 39.0              |

## Survey Description Output

Output representation of the response to the Start Survey request.

**Properties**

| Property Name                 | Type     | Description                                                                                                                       | Filter Group and Version | Available Version |
|-------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errors                        | String[] | Error messages for a failed request.                                                                                              | Small, 56.0              | 56.0              |
| flowInterview State           | String   | State of the flow interview.                                                                                                      | Small, 56.0              | 56.0              |
| invitationId                  | String   | ID of the survey invitation that's related to the request.                                                                        | Small, 56.0              | 56.0              |
| isPartially CmplSurvey Loaded | Boolean  | Indicates whether a partially completed survey is loaded ( <code>true</code> ) or a new survey is started ( <code>false</code> ). | Small, 63.0              | 63.0              |
| languageCode                  | String   | Code of the language that the survey is created in.                                                                               | Small, 56.0              | 56.0              |

| Property Name      | Type                                 | Description                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|--------------------|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| navigation Actions | String                               | Available navigation actions on the survey page.<br>Possible values are: <ul style="list-style-type: none"> <li>Back—Go to the previous survey page.</li> <li>Next—Go to the next survey page.</li> </ul>          | Small, 57.0              | 57.0              |
| responseId         | String                               | ID of the survey response.                                                                                                                                                                                         | Small, 57.0              | 57.0              |
| status             | String                               | Status of the API request.<br>Possible values are: <ul style="list-style-type: none"> <li>Failure—Survey Response API isn't successfully run.</li> <li>Success—Survey Response API is successfully run.</li> </ul> | Small, 56.0              | 56.0              |
| surveyDetail       | <a href="#">Survey Detail Output</a> | All details of the page in the survey.                                                                                                                                                                             | Small, 56.0              | 56.0              |
| warnings           | String[]                             | Warnings for a request.                                                                                                                                                                                            | Small, 56.0              | 56.0              |

## Survey Detail Output

Output representation of the details of the survey.

| Property Name | Type                                                                                              | Description                                                  | Filter Group and Version | Available Version |
|---------------|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------|--------------------------|-------------------|
| label         | String                                                                                            | The label of the survey.                                     | Small, 56.0              | 56.0              |
| name          | String                                                                                            | The API name of the survey.                                  | Small, 56.0              | 56.0              |
| surveyPage    | <a href="#">Survey Question Page Output</a><br>OR<br><a href="#">Survey Thank You Page Output</a> | The details of the question or thank you page in the survey. | Small, 56.0              | 56.0              |
| versionLabel  | String                                                                                            | The label of the survey version.                             | Small, 56.0              | 56.0              |
| versionNumber | Integer                                                                                           | The version number of the survey.                            | Small, 56.0              | 56.0              |

## Survey Email

Survey invitation email response.

| Property Name | Type    | Description                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| errorCode     | Integer | Error code for the failed call.                                                                                                                                                                                    | Small, 50.0              | 50.0              |
| errorMessage  | String  | Details explaining why the call failed.                                                                                                                                                                            | Small, 50.0              | 50.0              |
| status        | String  | Status of a survey invitation email. Values are: <ul style="list-style-type: none"><li>Failed—The survey invitation email wasn't sent.</li><li>Queued—The survey invitation email is queued for sending.</li></ul> | Small, 50.0              | 50.0              |

## Survey NPS Question Output

Output representation of the details of the NPS question on the survey page.

| Property Name       | Type    | Description                                                                   | Filter Group and Version | Available Version |
|---------------------|---------|-------------------------------------------------------------------------------|--------------------------|-------------------|
| description         | String  | Description for the survey question.                                          | Small, 56.0              | 56.0              |
| isResponse Required | Boolean | Indicates whether the response to the question is mandatory.                  | Small, 56.0              | 56.0              |
| label               | String  | Label of the survey question.                                                 | Small, 56.0              | 56.0              |
| maxScale            | Integer | Maximum score that participants can select for an NPS question in the survey. | Small, 56.0              | 56.0              |
| minScale            | Integer | Minimum score that participants can select for an NPS question in the survey. | Small, 56.0              | 56.0              |
| name                | String  | API name of the survey question.                                              | Small, 56.0              | 56.0              |
| questionType        | String  | Type of survey question.                                                      | Small, 56.0              | 56.0              |
| responseData Type   | String  | Data type of the survey question.                                             | Small, 56.0              | 56.0              |
| responseValue       | Integer | Value of the response to an NPS question in a survey.                         | Small, 57.0              | 57.0              |

## Survey Question Output

Output representation of the details of the question on the survey page.

| Property Name | Type   | Description                              | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------|--------------------------|-------------------|
| description   | String | The description for the survey question. | Small, 56.0              | 56.0              |

| Property Name       | Type    | Description                                                                                                      | Filter Group and Version | Available Version |
|---------------------|---------|------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isResponse Required | Boolean | Indicates whether the response to the question is mandatory ( <code>true</code> ) or not ( <code>false</code> ). | Small, 56.0              | 56.0              |
| label               | String  | The label of the survey question.                                                                                | Small, 56.0              | 56.0              |
| name                | String  | The API name of the survey question.                                                                             | Small, 56.0              | 56.0              |
| questionType        | String  | The type of survey question.                                                                                     | Small, 56.0              | 56.0              |
| responseData Type   | String  | The data type of the survey question.                                                                            | Small, 56.0              | 56.0              |

## Survey Question Page Output

The details of the question page in the survey.

| Property Name   | Type                                                                                                                                                                                                 | Description                      | Filter Group and Version | Available Version |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|--------------------------|-------------------|
| label           | String                                                                                                                                                                                               | The label of the survey page.    | Small, 56.0              | 56.0              |
| name            | String                                                                                                                                                                                               | The API name of the survey page. | Small, 56.0              | 56.0              |
| surveyQuestions | <a href="#">NPS Question Type</a><br><a href="#">Selection Question Type</a><br><a href="#">ShortText Question Type</a><br><a href="#">Text Question Type</a><br><a href="#">Other Question Type</a> | List of survey questions.        | Small, 56.0              | 56.0              |

| surveyPage    | <a href="#">Survey Question Page Output</a><br>OR<br><a href="#">Survey Thank You Page Output</a> | Details of the question or the Thank You page.                                                     | Small, 56.0              | 56.0              |

## Survey Selection Question Choice Output

The details of a boolean, rating, single selection, or a multiple selection question's choice on the survey page.

| Property Name | Type   | Description                                                                                                | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| label         | String | The label of a choice for a Boolean, rating, single selection, or multiple selection question in a survey. | Small, 56.0              | 56.0              |
| name          | String | The name of a choice for a Boolean, rating, single selection, or multiple selection question in a survey.  | Small, 56.0              | 56.0              |

## Survey Selection Question Output

Output representation of the details of the boolean, rating, single-selection, or multiple-selection question on the survey page.

| Property Name       | Type                                                      | Description                                                                                                     | Filter Group and Version | Available Version |
|---------------------|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description         | String                                                    | Description for the survey question.                                                                            | Small, 56.0              | 56.0              |
| isResponse Required | Boolean                                                   | Indicates whether the response to the question is mandatory.                                                    | Small, 56.0              | 56.0              |
| label               | String                                                    | Label of the survey question.                                                                                   | Small, 56.0              | 56.0              |
| name                | String                                                    | API name of the survey question.                                                                                | Small, 56.0              | 56.0              |
| questionChoices     | <a href="#">Survey Selection Question Choice Output[]</a> | Choices that are available for a boolean, rating, single-selection, or multiple-selection question in a survey. | Small, 56.0              | 56.0              |
| questionType        | String                                                    | Type of survey question.                                                                                        | Small, 56.0              | 56.0              |

| Property Name        | Type     | Description                                             | Filter Group and Version | Available Version |
|----------------------|----------|---------------------------------------------------------|--------------------------|-------------------|
| responseData<br>Type | String   | Data type of the survey question.                       | Small, 56.0              | 56.0              |
| responseValues       | String[] | List of survey response values for a selected question. | Small, 57.0              | 57.0              |

## Survey Short-Text Question Output

Output representation of the details of the short-text question on the survey page.

| Property Name          | Type    | Description                                                                                                      | Filter Group and Version | Available Version |
|------------------------|---------|------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description            | String  | Description for the survey question.                                                                             | Small, 56.0              | 56.0              |
| isResponse<br>Required | Boolean | Indicates whether the response to the question is mandatory ( <code>true</code> ) or not ( <code>false</code> ). | Small, 56.0              | 56.0              |
| label                  | String  | Label of the survey question.                                                                                    | Small, 56.0              | 56.0              |
| name                   | String  | API name of the survey question.                                                                                 | Small, 56.0              | 56.0              |
| questionType           | String  | Type of survey question.                                                                                         | Small, 56.0              | 56.0              |
| responseData<br>Type   | String  | Data type of the survey question.                                                                                | Small, 56.0              | 56.0              |
| responseValue          | String  | Value of the response to a short-text question in a survey.                                                      | Small, 57.0              | 57.0              |
| validation<br>Formula  | String  | Validation regex for the short text question.                                                                    | Small, 56.0              | 56.0              |

## Survey Text Question Output

Output representation of the details of the text question on the survey page.

| Property Name          | Type    | Description                                                                                                      | Filter Group and Version | Available Version |
|------------------------|---------|------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| description            | String  | Description for the survey question.                                                                             | Small, 56.0              | 56.0              |
| isResponse<br>Required | Boolean | Indicates whether the response to the question is mandatory ( <code>true</code> ) or not ( <code>false</code> ). | Small, 56.0              | 56.0              |
| label                  | String  | Label of the survey question.                                                                                    | Small, 56.0              | 56.0              |
| name                   | String  | API name of the survey question.                                                                                 | Small, 56.0              | 56.0              |

| Property Name        | Type   | Description                                                | Filter Group and Version | Available Version |
|----------------------|--------|------------------------------------------------------------|--------------------------|-------------------|
| questionType         | String | Type of survey question.                                   | Small, 56.0              | 56.0              |
| responseData<br>Type | String | Data type of the survey question.                          | Small, 56.0              | 56.0              |
| responseValue        | String | Value of the response to a long-text question in a survey. | Small, 57.0              | 57.0              |

## Survey Thank You Page Output

Output representation of the details of the Thank You page in the survey.

| Property Name          | Type                                        | Description                                                                           | Filter Group and Version | Available Version |
|------------------------|---------------------------------------------|---------------------------------------------------------------------------------------|--------------------------|-------------------|
| label                  | String                                      | The label of the survey page.                                                         | Small, 56.0              | 56.0              |
| message<br>Description | String                                      | The description for a message on the Thank You page in the survey.                    | Small, 56.0              | 56.0              |
| name                   | String                                      | The API name of the survey page.                                                      | Small, 56.0              | 56.0              |
| redirectUrl            | String                                      | The URL that respondents are automatically redirected to after completing the survey. | Small, 56.0              | 56.0              |
| thankYouMessage        | String                                      | The thank you message of the Thank You page in the survey.                            | Small, 56.0              | 56.0              |
| urlButtons             | <a href="#">Survey URL Buttons Output[]</a> | The buttons on the Thank You page which respondents select to navigate to URLs.       | Small, 56.0              | 56.0              |

## Survey URL Buttons Output

Output representation of the details of the URL buttons on the Thank You page in the survey.

| Property Name | Type   | Description                                             | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------|--------------------------|-------------------|
| label         | String | The label specified for a button on the Thank You page. | Small, 56.0              | 56.0              |
| url           | String | The URL specified for a button on the Thank You page.   | Small, 56.0              | 56.0              |

## Target

Personalization target information.

| Property Name | Type                            | Description                                                                                                                       | Filter Group and Version | Available Version |
|---------------|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| audience      | <a href="#">Audience Target</a> | Audience assigned to the target.                                                                                                  | Small, 47.0              | 47.0              |
| formulaScope  | <a href="#">Formula Scope</a>   | Formula scope of the target.                                                                                                      | Small, 50.0              | 50.0              |
| groupName     | String                          | Group name of the target. Groups bundle related target and audience pairs.                                                        | Small, 47.0              | 47.0              |
| id            | String                          | ID of the target.                                                                                                                 | Small, 47.0              | 47.0              |
| priority      | Integer                         | Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.  | Small, 47.0              | 47.0              |
| publishStatus | String                          | Publish status of the target. Values are: <ul style="list-style-type: none"> <li>Draft</li> <li>Live</li> </ul>                   | Small, 47.0              | 47.0              |
| scope         | <a href="#">Scope[]</a>         | List of scopes for the target.<br><br>In version 50.0 and later, the <code>formulaScope</code> property returns this information. | Small, 47.0              | 47.0–49.0         |
| targetType    | String                          | Type of target, indicating the nature of the data being targeted.                                                                 | Small, 47.0              | 47.0              |
| targetValue   | String                          | Value of the target.                                                                                                              | Small, 47.0              | 47.0              |
| url           | String                          | URL to the target.                                                                                                                | Small, 47.0              | 47.0              |

## Tax Adjustment

List of tax adjustments.

| Property Name       | Type   | Description                                                                                                                                                                                | Filter Group and Version | Available Version |
|---------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| adjustmentTaxAmount | String | Adjustment tax amount.                                                                                                                                                                     | Small, 58.0              | 58.0              |
| countryIsoCode      | String | ISO code of the country. Must match one of the valid ISO codes defined within the org's State-Country picklist. If unspecified, the default value is the default country for the webstore. | Small, 58.0              | 58.0              |
| id                  | String | Adjustment ID.                                                                                                                                                                             | Small, 58.0              | 58.0              |
| stateIsoCode        | String | ISO code of the state. Must match one of the valid ISO codes defined within the org's State-Country picklist. If unspecified, the default value is the default country for the webstore.   | Small, 58.0              | 58.0              |
| taxRatePercentage   | String | Tax rate percentage for the store.                                                                                                                                                         | Small, 58.0              | 58.0              |
| type                | String | Type of tax adjustment. Values are: <ul style="list-style-type: none"> <li>Promotional – Promotional type tax adjustment.</li> <li>Tiered – Tiered type tax adjustment.</li> </ul>         | Small, 58.0              | 58.0              |

## Taxes Info

Output representation of the tax rate and tax treatment information for a product.

### JSON example

```
{
  "countryIsoCode": "US",
  "priority": 1,
  "stateIsoCode": "CA",
  "taxRatePercentage": "10.00",
  "taxTreatmentDescription": "Created for test purposes.",
  "taxTreatmentName": "Default Tax treatment"
}
```

| Property Name         | Type    | Description                        | Filter Group and Version | Available Version |
|-----------------------|---------|------------------------------------|--------------------------|-------------------|
| countryIsoCode        | String  | ISO code of the country.           | Small, 56.0              | 56.0              |
| stateIsoCode          | String  | ISO code of the state.             | Small, 56.0              | 56.0              |
| priority              | Integer | Priority of the tax treatment.     | Small, 56.0              | 56.0              |
| taxRate<br>Percentage | String  | Tax rate percentage for the store. | Small, 56.0              | 56.0              |

| Property Name           | Type   | Description                                     | Filter Group and Version | Available Version |
|-------------------------|--------|-------------------------------------------------|--------------------------|-------------------|
| taxTreatmentDescription | String | Description of the tax treatment for the store. | Small, 56.0              | 56.0              |
| taxTreatmentName        | String | Name of the tax treatment for the store.        | Small, 56.0              | 56.0              |

## Taxes Info Container

Output representation of the list of tax details about a product.

### JSON example

```
{
  "taxesInfoList": [
    {
      "countryIsoCode": "US",
      "priority": 1,
      "stateIsoCode": "CA",

      "taxTreatmentDescription": "Created for test purposes.",
      "taxTreatmentName": "Default Tax treatment"
    }
  ]
}
```

| Property Name | Type                          | Description                                                         | Filter Group and Version | Available Version |
|---------------|-------------------------------|---------------------------------------------------------------------|--------------------------|-------------------|
| taxesInfoList | <a href="#">Taxes Info</a> [] | List of details about the tax rate and tax treatment for the store. | Small, 56.0              | 56.0              |

## Terms of Service

Information related to the Social Customer Service terms of service.

| Property Name     | Type   | Description                                                                                  | Filter Group and Version | Available Version |
|-------------------|--------|----------------------------------------------------------------------------------------------|--------------------------|-------------------|
| acceptingUserId   | String | ID of the user who accepted the terms of service. Specify <code>null</code> if not accepted. | Small, 44.0              | 44.0              |
| termsOfServiceUrl | String | URL to the terms of service page.                                                            | Small, 44.0              | 44.0              |

## Text Classifications

HTTP headers containing URLs associating text strings and classifications.

| Property Name | Type        | Description                                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|---------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| httpHeaders   | HTTP Header | HTTP headers for text classifications output. Each header provides a URL you can use to get the result of the classification. The URL takes a list of text strings and classifiers that each text string can be classified in. | Big, 59.0                | 59.0              |

## Text Classifications Bulk Results

Text classification bulk results.

| Property Name | Type                                | Description                             | Filter Group and Version | Available Version |
|---------------|-------------------------------------|-----------------------------------------|--------------------------|-------------------|
| resultsList   | Text Classifications Result With ID | List of results for passed request IDs. | Big, 59.0                | 59.0              |

## Text Classifications Result

Text classifications result.

| Property Name    | Type              | Description                                                             | Filter Group and Version | Available Version |
|------------------|-------------------|-------------------------------------------------------------------------|--------------------------|-------------------|
| classifications  | Classifications[] | List of classifications that each text string was given after analysis. | Big, 59.0                | 59.0              |
| classificationId | String            | Response ID to receive feedback for classification.                     | Small, 59.0              | 59.0              |

## Text Classifications Result with ID

Text classifications result with ID.

| Property Name | Type            | Description                             | Filter Group and Version | Available Version |
|---------------|-----------------|-----------------------------------------|--------------------------|-------------------|
| id            | String          | Request ID for text classifications.    | Small, 59.0              | 59.0              |
| result        | Classifications | Result for text classifications.        | Small, 59.0              | 59.0              |
| status        | String          | Request status for text classification. | Small, 59.0              | 59.0              |

## Theme Info

Theme information related to an object.

| Property Name | Type   | Description                       | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------|--------------------------|-------------------|
| color         | String | Color that represents the object. | Small, 63.0              | 63.0              |
| iconUrl       | String | Icon that represents the object.  | Small, 63.0              | 63.0              |

## Topic

Topic.

| Property       | Type                         | Description                                                                                                                                                                                             | Filter Group and Version | Available Version |
|----------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| createdDate    | String                       | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z                                                                                                                                             | Big, 29.0                | 28.0              |
| description    | String                       | Description of the topic                                                                                                                                                                                | Big, 29.0                | 28.0              |
| id             | String                       | 18-character ID of the topic                                                                                                                                                                            | Small, 29.0              | 28.0              |
| images         | <a href="#">Topic Images</a> | Images associated with the topic                                                                                                                                                                        | Medium, 32.0             | 32.0              |
| isBeingDeleted | Boolean                      | <b>true</b> if the topic is currently being deleted; <b>false</b> otherwise.<br><br>After the topic is deleted, when attempting to retrieve the topic, the response is <a href="#">404: Not Found</a> . | Small, 33.0              | 33.0              |

| Property          | Type    | Description                                                                                                                                       | Filter Group and Version | Available Version |
|-------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name              | String  | Name of the topic                                                                                                                                 | Small, 29.0              | 24.0              |
| nonLocalized Name | String  | Non-localized name of the topic                                                                                                                   | Medium, 36.0             | 36.0              |
| talkingAbout      | Integer | Number of people talking about this topic over the last two months, based on factors such as topic additions and comments on posts with the topic | Medium, 29.0             | 28.0              |
| url               | String  | URL to the topic detail page                                                                                                                      | Small, 29.0              | 29.0              |

## Topic Endorsement Collection

A collection of topic endorsement response bodies.

| Property          | Type                                 | Description                                                                                        | Filter Group and Version | Available Version |
|-------------------|--------------------------------------|----------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl    | String                               | Connect REST API URL identifying the current page.                                                 | Medium, 30.0             | 30.0              |
| topicEndorsements | <a href="#">Topic Endorsement</a> [] | Collection of topic endorsement response bodies                                                    | Small, 30.0              | 30.0              |
| nextPageUrl       | String                               | Connect REST API URL identifying the next page, or <b>null</b> if there isn't a next page.         | Small, 30.0              | 30.0              |
| previousPageUrl   | String                               | Connect REST API URL identifying the previous page, or <b>null</b> if there isn't a previous page. | Medium, 30.0             | 30.0              |

## Topic Endorsement Summary

Topic endorsement summary.

| Property Name | Type   | Description                                      | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------|--------------------------|-------------------|
| activityDate  | String | Date of the user activity. Format is ISO 8601.   | Small, 42.0              | 42.0              |
| activityType  | String | Type of user activity. Value is <b>Comment</b> . | Small, 42.0              | 42.0              |
| activityUrl   | String | URL to the user activity.                        | Small, 42.0              | 42.0              |

| Property Name | Type                              | Description                                                     | Filter Group and Version | Available Version |
|---------------|-----------------------------------|-----------------------------------------------------------------|--------------------------|-------------------|
| community     | <a href="#">Community Summary</a> | Experience Cloud site in which the user performed the activity. | Medium, 42.0             | 42.0              |
| endorsementId | String                            | ID of the topic endorsement.                                    | Small, 42.0              | 42.0              |

## Topics Capability

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.

| Property Name   | Type                    | Description                                                                                     | Filter and Version | Available Version |
|-----------------|-------------------------|-------------------------------------------------------------------------------------------------|--------------------|-------------------|
| canAssignTopics | Boolean                 | <code>true</code> if a topic can be assigned to the feed element, <code>false</code> otherwise. | Small, 32.0        | 32.0              |
| items           | <a href="#">Topic[]</a> | A collection of topics associated with this feed element.                                       | Small, 32.0        | 32.0              |

## Topics People Are Knowledgeable About

Represents a topic that a specified user is knowledgeable about.

| Property        | Type     | Description                                                                                                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|-----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isEndorsedByMe  | Boolean  | Specifies if the knowledgeable user is endorsed for the topic by the context user, <code>true</code> if so, <code>false</code> otherwise                                                                                                                                                                                                                        | Small, 30.0              | 30.0              |
| knowledgeableId | String   | ID of the knowledgeable record                                                                                                                                                                                                                                                                                                                                  | Small, 30.0              | 30.0              |
| numEndorsements | Integer  | Number of endorsements received by the knowledgeable user for the topic                                                                                                                                                                                                                                                                                         | Medium, 30.0             | 30.0              |
| reasons         | String[] | Reason why the user is considered knowledgeable about the topic. <ul style="list-style-type: none"> <li><code>Influential</code>—User was mentioned in posts or in comments on posts with the topic or received likes on comments on posts with the topic.</li> <li><code>Endorsed</code>—User received endorsement from another user for the topic.</li> </ul> | Medium, 30.0             | 30.0              |

| Property | Type                  | Description                                | Filter Group and Version | Available Version |
|----------|-----------------------|--------------------------------------------|--------------------------|-------------------|
| topic    | <a href="#">Topic</a> | Topic that the user is knowledgeable about | Small, 30.0              | 30.0              |

## Topics People Are Knowledgeable About Collection

A collection of topics people are knowledgeable about response bodies.

| Property                | Type                                                    | Description                                                                                              | Filter Group and Version | Available Version |
|-------------------------|---------------------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl          | String                                                  | Connect REST API URL identifying the current page.                                                       | Medium, 30.0             | 30.0              |
| knowledgeableAboutTopic | <a href="#">Topics People Are Knowledgeable About[]</a> | Collection of topics people are knowledgeable about response bodies                                      | Small, 30.0              | 30.0              |
| nextPageUrl             | String                                                  | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.         | Small, 30.0              | 30.0              |
| previousPageUrl         | String                                                  | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page. | Medium, 30.0             | 30.0              |
| userId                  | String                                                  | ID of the user who is knowledgeable about the topics.                                                    | Small, 36.0              | 36.0              |

## Tracked Change Bundle Capability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a *bundle*. This type of bundle aggregates feed tracked changes.

**Note:** Bundled posts contain feed-tracked changes and are in record feeds only.

| Property Name | Type                                  | Description                                                | Filter Group and Version | Available Version |
|---------------|---------------------------------------|------------------------------------------------------------|--------------------------|-------------------|
| changes       | <a href="#">Feed Tracked Change[]</a> | Collection of feed tracked changes.                        | Small, 31.0              | 31.0              |
| bundleType    | String                                | Type of bundle. The value is <code>TrackedChanges</code> . | Small, 31.0              | 31.0              |
| page          | <a href="#">Feed Element Page</a>     | A collection of feed elements.                             | Small, 31.0              | 31.0              |

| Property Name | Type    | Description                                                    | Filter Group and Version | Available Version |
|---------------|---------|----------------------------------------------------------------|--------------------------|-------------------|
| totalElements | Integer | The total number of feed elements that this bundle aggregates. | Small, 31.0              | 31.0              |

SEE ALSO:

[Feed Element Capabilities](#)

## Tracked Changes Capability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

| Property Name | Type                                  | Description                         | Filter Group and Version | Available Version |
|---------------|---------------------------------------|-------------------------------------|--------------------------|-------------------|
| changes       | <a href="#">Feed Tracked Change[]</a> | Collection of feed tracked changes. | Small, 32.0              | 32.0              |

## Unauthenticated User

Unauthenticated user.

| Property | Type   | Description                                                                                                     | Filter Group and Version | Available Version |
|----------|--------|-----------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name     | String | Either the name in the <code>From</code> field of the source email, or the email address from the source email. | Small, 29.0              | 24.0              |
| type     | String | UnauthenticatedUser                                                                                             | Small, 29.0              | 24.0              |

## Up Down Vote Capability

If a feed post or comment has this capability, users can upvote or downvote it.

| Property Name | Type   | Description                                                                                                                           | Filter Group and Version | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| downVoteCount | Long   | Number of downvotes.                                                                                                                  | Small, 41.0              | 41.0              |
| myVote        | String | Specifies the context user's vote. Values are: <ul style="list-style-type: none"> <li>• Down</li> <li>• None</li> <li>• Up</li> </ul> | Small, 41.0              | 41.0              |

| Property Name | Type | Description        | Filter Group and Version | Available Version |
|---------------|------|--------------------|--------------------------|-------------------|
| upVoteCount   | Long | Number of upvotes. | Small, 41.0              | 41.0              |

## User Chatter Settings

A user's global Chatter settings.

| Property                       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                              | Filter Group and Version | Available Since |
|--------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-----------------|
| defaultGroup<br>EmailFrequency | String | <p>The default frequency with which a user receives email from a group when they join it. Values are:</p> <ul style="list-style-type: none"> <li>EachPost</li> <li>DailyDigest</li> <li>WeeklyDigest</li> <li>Never</li> </ul> <p>In communities, the Email on every post option is disabled after more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to Daily digests.</p> | Small, 29.0              | 27.0            |

## User Detail

User detail. If the context user doesn't have permission to see a property, the property is set to **null**.

| Property | Type   | Description               | Filter Group and Version | Available Version |
|----------|--------|---------------------------|--------------------------|-------------------|
| aboutMe  | String | Text from user's profile. | Big, 29.0                | 23.0              |

| Property          | Type                              | Description                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|-------------------|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| additionalLabel   | String                            | If one exists, an extra label for the user, for example, "Customer," "Partner," or "Acme Corporation."                                                                                                         | Small, 30.0              | 30.0              |
| address           | <a href="#">Address</a>           | User's address.                                                                                                                                                                                                | Big, 29.0                | 23.0              |
| bannerPhoto       | <a href="#">Banner Photo</a>      | User's banner photo.                                                                                                                                                                                           | Big, 36.0                | 36.0              |
| chatterActivity   | <a href="#">Chatter Activity</a>  | Chatter activity statistics.                                                                                                                                                                                   | Big, 29.0                | 23.0              |
| chatterInfluence  | <a href="#">Chatter Influence</a> | User's influence rank.                                                                                                                                                                                         | Big, 29.0                | 23.0              |
| communityNickname | String                            | User's nickname in the site.                                                                                                                                                                                   | Medium, 32.0             | 32.0              |
| companyName       | String                            | Company name.                                                                                                                                                                                                  | Small, 29.0              | 23.0              |
| currentStatus     | <a href="#">User Status</a>       | User's current status.                                                                                                                                                                                         |                          | 23.0–25.0         |
| displayName       | String                            | User's name that is displayed in the site. If nicknames are enabled, the nickname is displayed. If nicknames aren't enabled, the full name is displayed.                                                       | Small, 32.0              | 32.0              |
| email             | String                            | User's email address.                                                                                                                                                                                          | Medium, 29.0             | 23.0              |
| firstName         | String                            | User's first name. In version 39.0 and later, if nicknames are enabled, <code>firstName</code> is <code>null</code> .                                                                                          | Small, 29.0              | 23.0              |
| followersCount    | Integer                           | Number of users following this user.                                                                                                                                                                           | Big, 29.0                | 23.0              |
| followingCounts   | <a href="#">Following Counts</a>  | Information about items the user is following.                                                                                                                                                                 | Big, 29.0                | 23.0              |
| groupCount        | Integer                           | Number of groups user is following.                                                                                                                                                                            | Big, 29.0                | 23.0              |
| hasChatter        | Boolean                           | <code>true</code> if user has access to Chatter; <code>false</code> otherwise.                                                                                                                                 | Small, 31.0              | 31.0              |
| id                | String                            | 18-character ID of the user.                                                                                                                                                                                   | Small, 29.0              | 23.0              |
| isActive          | Boolean                           | <code>true</code> if user is active, <code>false</code> otherwise.                                                                                                                                             | Small, 29.0              | 23.0              |
| isChatterGuest    | Boolean                           | <code>true</code> if user is a Chatter customer, <code>false</code> otherwise. In version 26.0 and later, use the <code>userType</code> property.                                                              |                          | 23.0–25.0         |
| isInThisCommunity | Boolean                           | <code>true</code> if the user is in the same Experience Cloud site as the context user; <code>false</code> otherwise. Can be <code>false</code> for record feed @mentions on posts with the scope "All Users." | Small, 29.0              | 28.0              |
| lastName          | String                            | User's last name. In version 39.0 and later, if nicknames are enabled, <code>lastName</code> is <code>null</code> .                                                                                            | Small, 29.0              | 23.0              |
| managerId         | String                            | 18-character ID of the user's manager.                                                                                                                                                                         | Big, 29.0                | 23.0              |
| managerName       | String                            | Locale-based concatenation of manager's first and last names.                                                                                                                                                  | Big, 29.0                | 23.0              |

| Property       | Type                           | Description                                                                                                                                                                       | Filter Group and Version | Available Version |
|----------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| motif          | <a href="#">Motif</a>          | Small, medium, and large icons indicating that the object is a user. The motif can also contain the object's base color.<br><br>The motif icon is not the user's profile picture. | Small, 29.0              | 27.0              |
| mySubscription | <a href="#">Reference</a>      | If the context user is following this user, contains information about the subscription, otherwise <code>null</code> .                                                            | Medium, 29.0             | 23.0              |
| name           | String                         | Locale-based concatenation of first and last names. In version 39.0 and later, if nicknames are enabled, <code>name</code> is the nickname.                                       | Small, 29.0              | 23.0              |
| outOfOffice    | <a href="#">Out of Office</a>  | If one exists, extra out-of-office message for the user.                                                                                                                          | Small, 40.0              | 40.0              |
| phoneNumbers   | <a href="#">Phone Number[]</a> | Collection of user's phone numbers.                                                                                                                                               | Big, 29.0                | 23.0              |
| photo          | <a href="#">Photo</a>          | Information about the user's photos.                                                                                                                                              | Small, 29.0              | 23.0              |
| reputation     | <a href="#">Reputation</a>     | Reputation of the user in the site, which is determined by the number of points earned from events and actions performed in the site.                                             | Big, 32.0                | 32.0              |
| stamps         | <a href="#">Stamp[]</a>        | Collection of the user's stamps.<br><br>In version 44.0 and later, use SOQL to get a user's stamps.                                                                               | Small, 39.0              | 39.0–43.0         |
| thanksReceived | Integer                        | Number of thanks the user has received.                                                                                                                                           | Big, 29.0                | 29.0              |
| title          | String                         | Title of the user.                                                                                                                                                                | Small, 29.0              | 23.0              |
| type           | String                         | Value is <code>User</code> .                                                                                                                                                      | Small, 29.0              | 23.0              |
| url            | String                         | URL to the user's Chatter profile.                                                                                                                                                | Small, 29.0              | 23.0              |
| username       | String                         | User name of the user, such as <i>Admin@mycompany.com</i> .                                                                                                                       | Small, 29.0              | 24.0              |

| Property | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Filter Group and Version | Available Version |
|----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| userType | String | Type of user. Valid values are: <ul style="list-style-type: none"><li>• <code>ChatterGuest</code>—User is an external user in a private group.</li><li>• <code>ChatterOnly</code>—User is a Chatter Free customer.</li><li>• <code>Guest</code>—User is unauthenticated.</li><li>• <code>Internal</code>—User is a standard org member.</li><li>• <code>Portal</code>—User is an external user in an Experience Cloud site.</li><li>• <code>System</code>—User is Chatter Expert or a system user.</li><li>• <code>Undefined</code>—User is a user type that is a custom object.</li></ul> | Medium, 29.0             | 26.0              |

## User Group Detail Collection

A page of groups that a user is a member of.

| Property Name   | Type                           | Description                                                                  | Filter Group and Version | Available Version |
|-----------------|--------------------------------|------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                         | URL to the current page.                                                     | Medium, 45.0             | 45.0              |
| groups          | <a href="#">Group Detail[]</a> | Collection of groups that the user is a member of.                           | Small, 45.0              | 45.0              |
| nextPageUrl     | String                         | URL to the next page, or <code>null</code> if there is no next page.         | Small, 45.0              | 45.0              |
| previousPageUrl | String                         | URL to the previous page, or <code>null</code> if there is no previous page. | Medium, 45.0             | 45.0              |
| total           | Integer                        | Total number of groups that the user is a member of.                         | Small, 45.0              | 45.0              |

## User Group Page

A paginated collection of groups a user is a member of.

| Property        | Type                    | Description                                                                                                                                                                                                      | Filter Group and Version | Available Version |
|-----------------|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageUrl  | String                  | URL to the current page                                                                                                                                                                                          | Medium, 29.0             | 23.0              |
| groups          | <a href="#">Group[]</a> | Collection of groups for a user                                                                                                                                                                                  | Small, 29.0              | 23.0              |
| nextPageUrl     | String                  | URL to the next page, if there is no next page, returns the string "null"                                                                                                                                        | Small, 29.0              | 23.0              |
| previousPageUrl | String                  | URL to the previous page, if there is no previous page, returns the string "null"                                                                                                                                | Medium, 29.0             | 23.0              |
| total           | Integer                 | Total number of groups a user is a member of.<br><br>This number is always the total number of groups a user is a member of, even when the request is a search and the response contains a subset of that total. | Small, 29.0              | 23.0              |

## User Mission

Mission details for a user.

| Property Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| activityCount | Integer | Number of mission activities of the specified type for the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 46.0              | 46.0              |
| activityType  | String  | Type of mission activity for a user. Values are: <ul style="list-style-type: none"> <li>• <code>FeedItemAnswerAQuestion</code>—User answered a question.</li> <li>• <code>FeedItemLikeSomething</code>—User liked a post or comment.</li> <li>• <code>FeedItemMarkAnswerAsBest</code>—User marked an answer as the best answer.</li> <li>• <code>FeedItemPostQuestion</code>—User posted a question.</li> <li>• <code>FeedItemReceiveAComment</code>—User received a comment on a post.</li> <li>• <code>FeedItemReceiveALike</code>—User received a like on a post or comment.</li> <li>• <code>FeedItemReceiveAnAnswer</code>—User received an answer to a question.</li> </ul> | Small, 46.0              | 46.0              |

| Property Name    | Type    | Description                                                                                                                                                                                                                        | Filter Group and Version | Available Version |
|------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
|                  |         | <ul style="list-style-type: none"> <li>FeedItemWriteAComment—User commented on a post.</li> <li>FeedItemWriteAPost—User made a post.</li> <li>FeedItemYourAnswerMarkedBest—User's answer was marked as the best answer.</li> </ul> |                          |                   |
| missionName      | String  | Name of the mission.                                                                                                                                                                                                               | Small, 46.0              | 46.0              |
| missionThreshold | Integer | Threshold of the mission. When a user reaches this activity count, the mission is achieved.                                                                                                                                        | Small, 46.0              | 46.0              |

## User Mission Activity Status

Status of mission activity for a user.

| Property Name | Type   | Description                            | Filter Group and Version | Available Version |
|---------------|--------|----------------------------------------|--------------------------|-------------------|
| message       | String | Success or error message.              | Small, 45.0              | 45.0              |
| status        | String | Status of mission activity for a user. | Small, 45.0              | 45.0              |

## User Page

Page of Chatter users.

| Property          | Type                           | Description                                                                               | Filter Group and Version | Available Version |
|-------------------|--------------------------------|-------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageToken  | String                         | Token identifying the current page.                                                       | Medium, 37.0             | 37.0              |
| currentPageUrl    | String                         | URL to the current page.                                                                  | Medium, 29.0             | 23.0              |
| nextPageToken     | String                         | Token identifying the next page, or <code>null</code> if there isn't a next page.         | Small, 37.0              | 37.0              |
| nextPageUrl       | String                         | URL to the next page. If there is no next page, returns <code>null</code> .               | Small, 29.0              | 23.0              |
| previousPageToken | String                         | Token identifying the previous page, or <code>null</code> if there isn't a previous page. | Medium, 37.0             | 37.0              |
| previousPageUrl   | String                         | URL to the previous page. If there is no previous page, returns <code>null</code> .       | Medium, 29.0             | 23.0              |
| users             | <a href="#">User Detail</a> [] | Collection of user detail information.                                                    | Small, 29.0              | 24.0              |

## User Profile

Chatter user profile.

| Property     | Type                               | Description                                                            | Filter Group and Version | Available Version |
|--------------|------------------------------------|------------------------------------------------------------------------|--------------------------|-------------------|
| capabilities | <a href="#">User Capabilities</a>  | The context user's capabilities specific to the subject user's profile | Medium, 29.0             | 29.0              |
| id           | String                             | The ID of the user attached to the profile                             | Small, 29.0              | 29.0              |
| tabs         | <a href="#">User Profile Tab[]</a> | The tabs visible to the context user for that user type                | Big, 29.0                | 29.0              |
| url          | String                             | The URL of the user's profile                                          | Small, 29.0              | 29.0              |
| userDetail   | <a href="#">User Detail</a>        | The details about the user attached to the profile                     | Small, 29.0              | 29.0              |

## User Profile Tab

User profile tab.

| Property  | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| id        | String  | The tab's unique identifier or 18-character Id                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Small, 29.0              | 29.0              |
| isDefault | Boolean | Specifies if the tab appears first when clicking the user profile ( <code>true</code> ) or not ( <code>false</code> )                                                                                                                                                                                                                                                                                                                                                                          | Small, 29.0              | 29.0              |
| tabType   | String  | Specifies the type of user profile tab: <ul style="list-style-type: none"><li>• <code>CustomVisualForce</code>—Tab that displays data from a Visualforce page.</li><li>• <code>CustomWeb</code>—Tab that displays data from any external web-based application or web page.</li><li>• <code>Element</code>—Tab that displays generic content inline.</li><li>• <code>Feed</code>—Tab that displays the Chatter feed.</li><li>• <code>Overview</code>—Tab that displays user details.</li></ul> | Small, 29.0              | 29.0              |
| tabUrl    | String  | The current tab's content URL (for non built-in tab types)                                                                                                                                                                                                                                                                                                                                                                                                                                     | Small, 29.0              | 29.0              |

## User Settings

Settings specific to a user.

| Property                     | Type    | Description                                                                                                                                                               | Filter Group and Version | Available Version |
|------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| approvalPosts                | Boolean | User can approve workflows from Chatter posts.                                                                                                                            | Small, 29.0              | 27.0              |
| canAccess<br>PersonalStreams | Boolean | User can access personal stream feeds.                                                                                                                                    | Small, 40.0              | 40.0              |
| canFollow                    | Boolean | User can follow things.                                                                                                                                                   | Small, 29.0              | 24.0              |
| canModify<br>AllData         | Boolean | User has Modify all Data permission.                                                                                                                                      | Small, 29.0              | 24.0              |
| canOwnGroups                 | Boolean | User can own groups.                                                                                                                                                      | Small, 29.0              | 24.0              |
| canViewAllData               | Boolean | User has View all Data permission.                                                                                                                                        | Small, 29.0              | 24.0              |
| canViewAllGroups             | Boolean | User has View all Groups permission.                                                                                                                                      | Small, 29.0              | 24.0              |
| canViewAllUsers              | Boolean | User has View all Users permission.                                                                                                                                       | Small, 29.0              | 24.0              |
| canViewCommunity<br>Switcher | Boolean | User can see the site switcher menu.                                                                                                                                      | Small, 34.0              | 34.0              |
| canViewFull<br>UserProfile   | Boolean | User can see other user's Chatter profile.                                                                                                                                | Small, 29.0              | 24.0              |
| canView<br>PublicFiles       | Boolean | User can see all files that are public.                                                                                                                                   | Small, 29.0              | 24.0              |
| currencySymbol               | String  | Currency symbol to use for displaying currency values. Applicable only when the <code>multiCurrency</code> property of the Features response body is <code>false</code> . | Small, 29.0              | 28.0              |

| Property                                        | Type                      | Description                                                                                                                                                       | Filter Group and Version | Available Version |
|-------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>externalUser</code>                       | Boolean                   | User is a Chatter customer.                                                                                                                                       | Small, 29.0              | 24.0              |
| <code>fileSyncLimit</code>                      | Integer                   | Maximum number of files user can sync.                                                                                                                            | Small, 32.0              | 32.0              |
| <code>fileSyncStorageLimit</code>               | Integer                   | Maximum storage for synced files, in megabytes (MB).                                                                                                              | Small, 29.0              | 29.0              |
| <code>folderSyncLimit</code>                    | Integer                   | Maximum number of folders user can sync.                                                                                                                          | Small, 32.0              | 32.0              |
| <code>hasAccessToInternalOrg</code>             | Boolean                   | User is a member of the internal org.                                                                                                                             | Small, 29.0              | 26.0              |
| <code>hasChatter</code>                         | Boolean                   | User has access to Chatter.                                                                                                                                       | Small, 31.0              | 31.0              |
| <code>hasFileSync</code>                        | Boolean                   | User has Sync Files permission.                                                                                                                                   | Small, 29.0              | 26.0              |
| <code>hasFieldServiceLocationTracking</code>    | Boolean                   | User has Field Service GPS tracking enabled.                                                                                                                      | Small, 41.0              | 41.0              |
| <code>hasFieldServiceMobileAccess</code>        | Boolean                   | User has access to the Field Service mobile app.                                                                                                                  | Small, 41.0              | 41.0              |
| <code>hasFileSyncManagedClientAutoUpdate</code> | Boolean                   | Administrator for the user's org allows file sync clients to update automatically.                                                                                | Small, 34.0              | 34.0              |
| <code>hasRestDataApiAccess</code>               | Boolean                   | User has access to REST API.                                                                                                                                      | Small, 29.0              | 29.0              |
| <code>timeZone</code>                           | <a href="#">Time Zone</a> | User's time zone as selected in the user's personal settings in Salesforce. This value doesn't reflect a device's current location.                               | Small, 30.0              | 30.0              |
| <code>userDefaultCurrencyIsoCode</code>         | String                    | ISO code for the default currency. Applicable only when the <code>multiCurrency</code> property of the <code>Features</code> response body is <code>true</code> . | Small, 29.0              | 28.0              |
| <code>userId</code>                             | String                    | 18-character ID of the user.                                                                                                                                      | Small, 29.0              | 24.0              |
| <code>userLocale</code>                         | String                    | Locale of user.                                                                                                                                                   | Small, 29.0              | 24.0              |

## User Summary

The User Summary response body is a subset of the User Detail response body.

| Property          | Type    | Description                                                                                                                                                                                                    | Filter Group and Version | Available Version |
|-------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| additionalLabel   | String  | If one exists, an extra label for the user, for example, "Customer," "Partner," or "Acme Corporation."                                                                                                         | Small, 30.0              | 30.0              |
| communityNickname | String  | User's nickname in the site.                                                                                                                                                                                   | Medium, 32.0             | 32.0              |
| companyName       | String  | Name of the company.                                                                                                                                                                                           | Small, 29.0              | 23.0              |
| displayName       | String  | User's name that is displayed in the site. If nicknames are enabled, the nickname is displayed. If nicknames aren't enabled, the full name is displayed.                                                       | Small, 32.0              | 32.0              |
| firstName         | String  | User's first name. In version 39.0 and later, if nicknames are enabled, <code>firstName</code> is <code>null</code> .                                                                                          | Small, 29.0              | 23.0              |
| id                | String  | 18-character ID of the user.                                                                                                                                                                                   | Small, 29.0              | 23.0              |
| isActive          | Boolean | <code>true</code> if user is active, <code>false</code> otherwise.                                                                                                                                             | Small, 29.0              | 25.0              |
| isChatterGuest    | Boolean | <code>true</code> if user is a Chatter customer, <code>false</code> otherwise<br>In version 26.0 and later, use the <code>userType</code> property.                                                            |                          | 23.0–26.0         |
| isInThisCommunity | Boolean | <code>true</code> if the user is in the same Experience Cloud site as the context user; <code>false</code> otherwise. Can be <code>false</code> for record feed @mentions on posts with the scope "All Users." | Small, 29.0              | 28.0              |
| lastName          | String  | User's last name. In version 39.0 and later, if nicknames are enabled, <code>lastName</code> is <code>null</code> .                                                                                            | Small, 29.0              | 23.0              |

| Property       | Type                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Filter Group and Version | Available Version |
|----------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| motif          | <a href="#">Motif</a>         | Small, medium, and large icons indicating that the object is a user. The motif can also contain the object's base color.<br><br>The motif icon is not the user's profile photo.                                                                                                                                                                                                                                                                                                                                                                                                      | Small, 29.0              | 27.0              |
| mySubscription | <a href="#">Reference</a>     | If the context user is following this user, contains information about the subscription, otherwise <code>null</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Medium, 29.0             | 23.0              |
| name           | String                        | Locale-based concatenation of first and last names. In version 39.0 and later, if nicknames are enabled, <code>name</code> is the nickname.                                                                                                                                                                                                                                                                                                                                                                                                                                          | Small, 29.0              | 23.0              |
| outOfOffice    | <a href="#">Out of Office</a> | If one exists, extra out-of-office message for the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Small, 40.0              | 40.0              |
| photo          | <a href="#">Photo</a>         | Information about the user's photo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 29.0              | 23.0              |
| reputation     | <a href="#">Reputation</a>    | Reputation of the user in the Experience Cloud site, which is determined by the number of points earned from events and actions performed in the site.                                                                                                                                                                                                                                                                                                                                                                                                                               | Big, 32.0                | 32.0              |
| stamps         | <a href="#">Stamp[]</a>       | Collection of the user's stamps.<br><br>In version 44.0 and later, use SOQL to get a user's stamps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 39.0              | 39.0–43.0         |
| title          | String                        | Title of the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 29.0              | 23.0              |

| url            | String                        | URL to the user's Chatter profile.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Small, 29.0              | 23.0              |
| userType       | String                        | Type of user. Valid values are: <ul style="list-style-type: none"> <li><code>ChatterGuest</code>—User is an external user in a private group.</li> <li><code>ChatterOnly</code>—User is a Chatter Free customer.</li> <li><code>Guest</code>—User is unauthenticated.</li> <li><code>Internal</code>—User is a standard org member.</li> <li><code>Portal</code>—User is an external user in an Experience Cloud site.</li> <li><code>System</code>—User is Chatter Expert or a system user.</li> <li><code>Undefined</code>—User is a user type that is a custom object.</li> </ul> | Medium, 29.0             | 26.0              |

 Example:

 **Note:** If the user's name is Chatter Expert and the return contains mostly null values, it indicates that the Chatter Expert user is either deactivated or taken over by an administrator, or the org was created before Salesforce introduced the Chatter Expert user. This is a special user that offers tips, tricks, and sample posts to help users get started with Chatter.

## Verified Capability

If a comment has this capability, users with permission can mark it as verified or unverified.

| Property Name    | Type    | Description                                                                                                                           | Filter Group and Version | Available Version |
|------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isVerifiableByMe | Boolean | Specifies whether the context user has permission to mark comments as verified or unverified ( <b>true</b> ) or not ( <b>false</b> ). | Small, 41.0              | 41.0              |
| isVerified       | Boolean | Specifies whether the comment is marked as verified ( <b>true</b> ) or not ( <b>false</b> ).                                          | Small, 41.0              | 41.0              |

| Property Name                       | Type                         | Description                                                                                                                                                                                                                                                                                                                      | Filter Group and Version | Available Version |
|-------------------------------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isVerifiedByAnonymized</code> | Boolean                      | Specifies whether the comment is marked as verified by an anonymous user ( <code>true</code> ) or not ( <code>false</code> ). If the comment has never been marked as verified or unverified, <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified. |                          |                   |
| <code>lastVerifiedByUser</code>     | <a href="#">User Summary</a> | User who last marked the comment as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.                                                                                                                         | Small, 41.0              | 41.0              |
| <code>lastVerifiedDate</code>       | String                       | ISO 8601 date string. Date when the comment was last marked as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.                                                                                              | Small, 41.0              | 41.0              |

| currentPageToken  | Integer                | Token identifying the current page.                                                                                                                                                                                                                                                                                                                                                         | Medium, 42.0             | 42.0              |
| currentPageUrl    | String                 | Connect REST API URL identifying the current page.                                                                                                                                                                                                                                                                                                                                          | Medium, 42.0             | 42.0              |
| items             | <a href="#">Vote[]</a> | Collection of users and their upvotes or downvotes.<br><br>Upvotes include likes and upvotes. For example, if a post receives five likes and three upvotes, the number of upvotes is eight. For this reason, the collection of users and their upvotes also includes users who liked the post or comment. If a user both liked and upvoted a post, they appear only once in the collection. | Small, 42.0              | 42.0              |
| nextPageToken     | Integer                | Token identifying the next page, or <code>null</code> if there isn't a next page.                                                                                                                                                                                                                                                                                                           | Small, 42.0              | 42.0              |
| nextPageUrl       | String                 | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.                                                                                                                                                                                                                                                                                            | Small, 42.0              | 42.0              |
| previousPageToken | Integer                | Token identifying the previous page, or <code>null</code> if there isn't a previous page.                                                                                                                                                                                                                                                                                                   | Medium, 42.0             | 42.0              |

| Property Name   | Type   | Description                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| previousPageUrl | String | Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.                                                                                                                                                                                                                | Medium, 42.0             | 42.0              |
| total           | Long   | Total number of upvotes or downvotes for the feed element or comment.<br><br>The number of upvotes includes the number of likes and upvotes. For example, if a post receives five likes and three upvotes, the total number of upvotes is eight. If a user both liked and upvoted a post, we count that as two upvotes. | Small, 42.0              | 42.0              |

## Waitlist Analytics

Output representation of the waitlist analytics.

### JSON example

```
"waitlistAnalytics":{
  "currentParticipant": 1,
  "totalWaitingTime": 40,
  "avgWaitingTime": 20,
  "avgParticipants": 24
}
```

| Property Name       | Type    | Description                                     | Filter Group and Version | Available Version |
|---------------------|---------|-------------------------------------------------|--------------------------|-------------------|
| avg Participants    | Integer | Count of average participants per day.          | Small, 59.0              | 59.0              |
| avg WaitingTime     | Integer | Average waiting time in minutes.                | Small, 59.0              | 59.0              |
| current Participant | Integer | Number of current participants in the waitlist. | Small, 59.0              | 59.0              |
| total WaitingTime   | Integer | Total waiting time in minutes.                  | Small, 59.0              | 59.0              |

## Waitlist Check In

Output representation of the waitlist check in request.

**JSON example**

```
{
  "result" : {
    "participantId" : "00Q5h00000JdQWzEAN",
    "serviceAppointmentId" : "08pxx0000004CYqAAM",
    "waitlistParticipantId" : "12oxx0000004FGiAAM"
  }
}
```

| Property Name | Type                                     | Description                              | Filter Group and Version | Available Version |
|---------------|------------------------------------------|------------------------------------------|--------------------------|-------------------|
| result        | <a href="#">Waitlist Check In Result</a> | Result of the waitlist check in request. | Small, 59.0              | 59.0              |

## Waitlist Check In Result

Output representation of the waitlist check in result.

**JSON example**

```
{
  "result" : {
    "participantId" : "00Q5h00000JdQWzEAN",
    "serviceAppointmentId" : "08pxx0000004CYqAAM",
    "waitlistParticipantId" : "12oxx0000004FGiAAM"
  }
}
```

| Property Name         | Type   | Description                                   | Filter Group and Version | Available Version |
|-----------------------|--------|-----------------------------------------------|--------------------------|-------------------|
| participantId         | String | ID of the participant who has an appointment. | Small, 59.0              | 59.0              |
| serviceAppointmentId  | String | ID of the service appointment.                | Small, 59.0              | 59.0              |
| waitlistParticipantId | String | ID of the waitlist participant.               | Small, 59.0              | 59.0              |

## Waitlist Details

Output representation of the waitlist details.

**JSON example**

```
{
  "description": "None",
  "isActive": true,
  "name": "Queue_1",
}
```

```

    "serviceResources":[
      {
        "id": "0Hnxx0000004C92CAE",
        "name":"Admin"
      },
      {
        "id": "0Hnxx0000004CFVCA2",
        "name":"Standard User 2 Technician"
      }
    ],
    "waitlistAnalytics":{
      "currentParticipant":1,
      "totalWaitingTime":40,
      "avgWaitingTime":20,
      "avgParticipants":24
    },

      }
    ]
  }
]
```

| Property Name | Type                                | Description                                                       | Filter Group and Version | Available Version |
|---------------|-------------------------------------|-------------------------------------------------------------------|--------------------------|-------------------|
| waitlists     | <a href="#">Waitlist Details</a> [] | List of waitlists that are associated with a service appointment. | Small, 59.0              | 59.0              |

## Waitlist Participant Details

Output representation of the waitlist participant details.

**JSON example**

```

{
  "participant":{
    "id":"001xx000003GZUZA4",
    "name":"Global Media"
  }
}
```

| Property Name | Type   | Description                       | Filter Group and Version | Available Version |
|---------------|--------|-----------------------------------|--------------------------|-------------------|
| id            | String | ID of the waitlist participant.   | Small, 59.0              | 59.0              |
| name          | String | Name of the waitlist participant. | Small, 59.0              | 59.0              |

## Waitlist Participant Result

Output representation of a waitlist participant result. A waitlist participant is a customer who is added to a waitlist.

### JSON example

```

    "waitlistParticipants": [
    {
      "participant": {
        "id": "001xx000003GZUZA4",
        "name": "Global Media"
      },
      "participantIdentifier": "WP-0020",
      "serviceAppointmentId": "08pxx0000004CYqAAM",
      "serviceResource": {
        "id": "0Hnxx0000004C92CAE",
        "name": "Admin"
      },

| result        | <a href="#">Waitlist List Result</a> | Details of the waitlist, including the list of participants and work type groups. | Small, 59.0              | 59.0              |

## Waitlist Service Resource

Output representation of the waitlist service resource. Service resources are individual users who can attend customer appointments.

**JSON example**

```
"serviceResources": [
  {
    "id": "0Hnxx0000004C92CAE",
    "name": "Admin"
  },
  {
    "id": "0Hnxx0000004CFVCA2",
```

```

    "name": "Standard User 2 Technician"
  }
]

```

| Property Name | Type   | Description                   | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------|--------------------------|-------------------|
| id            | String | ID of the service resource.   | Small, 59.0              | 59.0              |
| name          | String | Name of the service resource. | Small, 59.0              | 59.0              |

## Waitlist Work Type Group

Output representation of the waitlist work type group. A work type group is a general appointment category or topic, such as a home loan or an investment.

### JSON example

```

    "workTypeGroups": [
      {
        "id": "0VSxx0000004CoyGAE",
        "name": "General Banking WTG"
      }
    ]

```

| Property Name | Type   | Description                  | Filter Group and Version | Available Version |
|---------------|--------|------------------------------|--------------------------|-------------------|
| id            | String | ID of the work type group.   | Small, 59.0              | 59.0              |
| name          | String | Name of the work type group. | Small, 59.0              | 59.0              |

## Webstore Meta Config

Details of a webstore Meta configuration.

| Property Name                  | Type   | Description                                       | Filter Group and Version | Available Version |
|--------------------------------|--------|---------------------------------------------------|--------------------------|-------------------|
| adAccountExtKey                | String | External key for Meta Ad Account.                 | Small, 64.0              | 64.0              |
| businessManagerExtKey          | String | External key for Meta Business Manager.           | Small, 64.0              | 64.0              |
| catalogExtKey                  | String | External key for Meta Catalog.                    | Small, 64.0              | 64.0              |
| commerceMerchantSettingsExtKey | String | External key for Meta Commerce Merchant Settings. | Small, 64.0              | 64.0              |
| id                             | String | ID of the Webstore Meta Config entity.            | Small, 64.0              | 64.0              |
| pageExtKey                     | String | External key for Meta Page.                       | Small, 64.0              | 64.0              |

| Property Name | Type   | Description                              | Filter Group and Version | Available Version |
|---------------|--------|------------------------------------------|--------------------------|-------------------|
| profileExtKey | String | External key for Meta Instagram Profile. | Small, 64.0              | 64.0              |
| trackerExtKey | String | External key for Meta Pixel.             | Small, 64.0              | 64.0              |
| webStoreId    | String | ID of the webstore.                      | Small, 64.0              | 64.0              |

## Webstore Meta Configurations

List of webstore Meta configurations.

| Property Name  | Type                                   | Description                                                                      | Filter Group and Version | Available Version |
|----------------|----------------------------------------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| configurations | <a href="#">Webstore Meta Config[]</a> | List of webstore Meta configurations.                                            | Small, 64.0              | 64.0              |
| status         | <a href="#">Social Status Response</a> | Status specifying whether retrieval of webstore Meta configurations was success. | Small, 64.0              | 64.0              |

## Wishlist

Wishlist, including summary and items.

| Property Name | Type                                     | Description              | Filter Group and Version | Available Version |
|---------------|------------------------------------------|--------------------------|--------------------------|-------------------|
| page          | <a href="#">Wishlist Item Collection</a> | Page of wishlist items.  | Small, 49.0              | 49.0              |
| summary       | <a href="#">Wishlist Summary</a>         | Summary of the wishlist. | Small, 49.0              | 49.0              |

## Wishlist to Cart Result

Result of adding a wishlist to a cart.

| Property Name | Type   | Description                                      | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------|--------------------------|-------------------|
| cartId        | String | ID of the cart to which the products were added. | Small, 49.0              | 49.0              |

| Property Name                | Type                               | Description                                                        | Filter Group and Version | Available Version |
|------------------------------|------------------------------------|--------------------------------------------------------------------|--------------------------|-------------------|
| failedWishlistToCartItems    | <a href="#">Cart Item Result[]</a> | Wishlist items that weren't successfully added to the cart.        | Medium, 49.0             | 49.0              |
| productsFailedCount          | Integer                            | Total number of products that weren't added to the cart.           | Small, 49.0              | 49.0              |
| productsRequestedCount       | Integer                            | Total number of products requested to add to the cart.             | Small, 49.0              | 49.0              |
| productsSucceededCount       | Integer                            | Total number of products that were successfully added to the cart. | Small, 49.0              | 49.0              |
| succeededWishlistToCartItems | <a href="#">Cart Item Result[]</a> | Wishlist items that were successfully added to the cart.           | Medium, 49.0             | 49.0              |

## Workspace Permission

A user's permissions for a workspace.

| Property Name               | Type    | Description                                                                                            | Filter Group and Version | Available Version |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| canAddFileComments          | Boolean | Specifies whether the user can add comments on files in the workspace.                                 | Small, 39.0              | 39.0              |
| canAddFiles                 | Boolean | Specifies whether the user can add files to the workspace.                                             | Small, 39.0              | 39.0              |
| canAddFilesOnBehalfOfOthers | Boolean | Specifies whether the user can add files on behalf of others to the workspace.                         | Small, 39.0              | 39.0              |
| canArchiveFiles             | Boolean | Specifies whether the user can archive files in the workspace.                                         | Small, 39.0              | 39.0              |
| canAttachOrShareFilesToFeed | Boolean | Specifies whether the user can attach or share files in the workspace to a feed.                       | Small, 39.0              | 39.0              |
| canDeleteFiles              | Boolean | Specifies whether the user can delete files in the workspace.                                          | Small, 39.0              | 39.0              |
| canDeliverContent           | Boolean | Specifies whether the user can create a content delivery from files in the workspace.                  | Small, 39.0              | 39.0              |
| canFeatureFiles             | Boolean | Specifies whether the user can feature files in the workspace.                                         | Small, 39.0              | 39.0              |
| canManageWorkspace          | Boolean | Specifies whether the user can perform any action on the workspace or change the workspace membership. | Small, 39.0              | 39.0              |

| Property Name              | Type    | Description                                                                 | Filter Group and Version | Available Version |
|----------------------------|---------|-----------------------------------------------------------------------------|--------------------------|-------------------|
| canModifyFileComments      | Boolean | Specifies whether the user can modify comments on files in the workspace.   | Small, 39.0              | 39.0              |
| canOrganizeFilesAndFolders | Boolean | Specifies whether the user can organize files and folders in the workspace. | Small, 39.0              | 39.0              |
| canTagFiles                | Boolean | Specifies whether the user can add tags to files in the workspace.          | Small, 39.0              | 39.0              |
| canViewFileComments        | Boolean | Specifies whether the user can view comments on files in the workspace.     | Small, 39.0              | 39.0              |

## Wrapped Map

Map of a parameter name and value.

| Property Name | Type                | Description                      | Filter Group and Version | Available Version |
|---------------|---------------------|----------------------------------|--------------------------|-------------------|
| wrappedMap    | Map<String, Object> | Map of parameter name and value. | Small, 60.0              | 60.0              |

## Connect REST API Appendices

Use these appendices when working with action link buttons, personalization audience criteria, or personalization targets. You can also find retired resources, request bodies, and response bodies here.

### IN THIS SECTION:

#### [Action Links Labels](#)

Use these labels for action link buttons.

#### [Retired Resources](#)

These resources are retired.

#### [Retired Request Bodies](#)

These request bodies are retired.

#### [Retired Response Bodies](#)

These response bodies are retired.

## Action Links Labels

Use these labels for action link buttons.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and

header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can drive productivity and accelerate innovation.

Specify the key in the `labelKey` property of the [Action Link Definition Input](#) request body. When the action link is rendered, the UI uses labels for the “New,” “Pending,” “Success,” and “Failed” states as needed.

**Tip:** If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template and define the label in the template. See [Action Link Templates](#).

| Key             | New             | Pending                 | Success           | Failed                 |
|-----------------|-----------------|-------------------------|-------------------|------------------------|
| Accept          | Accept          | Acceptance Pending      | Accepted          | Acceptance Failed      |
| Activate        | Activate        | Activation Pending      | Activated         | Activation Failed      |
| Add             | Add             | Add Pending             | Added             | Add Failed             |
| Add to Calendar | Add to Calendar | Add to Calendar Pending | Added to Calendar | Add to Calendar Failed |
| Add to Cart     | Add to Cart     | Add Pending             | Added             | Add Failed             |
| Agree           | Agree           | Agree Pending           | Agree             | Agree Failed           |
| Alert           | Alert           | Alert Pending           | Alerted           | Alert Failed           |
| Answer          | Answer          | Answer Pending          | Answered          | Answer Failed          |
| Approve         | Approve         | Approval Pending        | Approved          | Approval Failed        |
| Assign          | Assign          | Assign Pending          | Assigned          | Assign Failed          |
| Assist          | Assist          | Assistance Pending      | Assisted          | Assistance Failed      |
| Attach          | Attach          | Attach Pending          | Attached          | Attach Failed          |
| Authorize       | Authorize       | Authorization Pending   | Authorized        | Authorization Failed   |
| Begin           | Begin           | Begin Pending           | Started           | Begin Failed           |
| Book            | Book            | Book Pending            | Booked            | Book Failed            |
| Buy             | Buy             | Buy Pending             | Bought            | Buy Failed             |
| Call            | Call            | Call Pending            | Called            | Call Failed            |
| Call Me         | Call Me         | Call Pending            | Call Succeeded    | Call Failed            |
| Certify         | Certify         | Certification Pending   | Certified         | Certification Failed   |

## Retired Resources

These resources are retired.

### IN THIS SECTION:

#### [Commerce Einstein Resources](#)

Get the status of a Commerce Einstein deployment. Get the Commerce Einstein configuration. Export and purge Commerce Einstein activity.

[Commerce Webstore Promotions, Associate Action](#)

Gets the associated promotions and price adjustments for a cart and its items. Only the 50 highest priority eligible promotions are processed.

[Commerce Webstore Promotions, Execute Action](#)

Applies associated promotion discounts to a cart and its items.

[Datacloud Resources](#)

Information about Datacloud resources used to purchase Data.com contacts or companies. Use the Datacloud resources to purchase Data.com contacts or companies and get information about your purchases, including how many credits are available for your use. You can also add contacts to selected companies or import contacts to your CRM.

[Feed Items Resources](#)

Get, search, delete, bookmark, and like feed items. Get and post comments. Get and vote in polls. Get, add, and remove topics. In Experience Cloud sites, get a flagged post, flag a post for moderation, and delete moderation flags.

[Feeds Resources](#)

Get feed items for feeds. Post feed items to feeds.

[Forecasting Resources](#)

Get jump-to information, managers in a hierarchy, and user access to forecasts.

[Social Engagement Resources](#)

Provide social functionality, such as access to managed social accounts and social post intents, for service agents.

[Social Engagement Setup Resources](#)

Configure the Social Customer Service product.

[User Resources](#)

Change the status of a conversation. Get, post, and crop a user photo. Get the most recent user status feed item. Update or delete user status.

[Zones Resources](#)

Information about Chatter Answers zones.

## Commerce Einstein Resources

## Commerce Einstein Webstore Deployment Status

Get the status of a Commerce Einstein deployment for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/status
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Deployment Status](#).

**HTTP methods**

GET

**Response body for GET**

[Commerce Einstein Status](#)

## Commerce Einstein Webstore Configuration

Get the Commerce Einstein configuration for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/configuration
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Configuration](#).

**HTTP methods**

GET

**Response body for GET**[Commerce Einstein Configuration](#)

## Commerce Einstein Webstore Activities, Export

Enqueue a job to export Commerce Einstein activity for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/activities/export-jobs
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Activities, Export](#).

**HTTP methods**

POST

**Request body for POST****Root XML tag**

&lt;job&gt;

**JSON example**

```
{
  "userId" : "005B0000000Ge16"
}
```

**Properties**

| Name     | Type   | Description                                                                        | Required or Optional                              | Available Version |
|----------|--------|------------------------------------------------------------------------------------|---------------------------------------------------|-------------------|
| cookieId | String | ID of the cookie. Specify <code>cookieId</code> or <code>userId</code> , not both. | Required if <code>userId</code> isn't specified   | 52.0              |
| userId   | String | ID of the user. Specify <code>cookieId</code> or <code>userId</code> , not both.   | Required if <code>cookieId</code> isn't specified | 52.0              |

**Response body for POST**[Commerce Einstein Activity Export Job](#)

## Commerce Einstein Webstore Activities, Export Status (Deprecated after v54.0)

Get the status of a Commerce Einstein activity export job for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/activities/export-jobs/jobId
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Activities, Export Status](#).**HTTP methods**

GET

**Response body for GET**[Commerce Einstein Activity Export Job](#)**Commerce Einstein Webstore Activities, Download Export File**

Download an exported Commerce Einstein activity file for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/activities/export-jobs/jobId/file-content
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Activities, Download Export File](#).**HTTP methods**

GET

**Response body for GET**

Binary stream of the file content

**Commerce Einstein Webstore Activities, Purge**

Enqueue a job to purge Commerce Einstein activity for a store.

**Resource**

```
/commerce/einstein/webstores/webstoreId/activities/purge-jobs
```

**Available version**

52.0-54.0

In version 55.0 and later, use [Commerce Einstein Webstore Activities, Purge](#).**HTTP methods**

POST

**Request body for POST****Root XML tag**

&lt;job&gt;

**JSON example**

```

Datacloud Resources

Information about Datacloud resources used to purchase Data.com contacts or companies. Use the Datacloud resources to purchase Data.com contacts or companies and get information about your purchases, including how many credits are available for your use. You can also add contacts to selected companies or import contacts to your CRM.

Available resources are:

| Resource                                                      | Description              |
|---------------------------------------------------------------|--------------------------|
| <a href="#">/connect/datacloud/companies/<i>companyId</i></a> | Get company information. |

| Resource                                                           | Description                                                      |
|--------------------------------------------------------------------|------------------------------------------------------------------|
| <a href="#">/connect/datacloud/contacts/<b>contactId</b></a>       | Get the contact information for the specified contact.           |
| <a href="#">/connect/datacloud/contact-imports</a>                 | Import records as contacts or leads.                             |
| <a href="#">/connect/datacloud/orders</a>                          | Purchase the contacts or companies for the listed IDs.           |
| <a href="#">/connect/datacloud/orders/<b>orderId</b></a>           | Get information for an order.                                    |
| <a href="#">/connect/datacloud/orders/<b>orderId</b>/companies</a> | Get all the order information about all companies.               |
| <a href="#">/connect/datacloud/orders/<b>orderId</b>/contacts</a>  | Get all the order information for a specific order for contacts. |
| <a href="#">/connect/datacloud/usage/<b>userId</b></a>             | Get usage information for a Monthly user or a Listpool user.     |

**Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

## Datacloud Company Information

Get company information.

### Resource

```
/connect/datacloud/companies/companyId
```

### Available version

32.0

### HTTP methods

GET

### Response Body

[Datacloud Company](#)

**Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

## Datacloud Contact Import

Import records as contacts or leads.

**Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

## Resource

```
/connect/datacloud/contact-imports
```

## Available version

36.0

## HTTP methods

POST

## Request body for POST

The POST request can have contact IDs.

### Root XML tag

```
<DatacloudContactImportInput>
```

### JSON Example Add Contact

To add the records as contacts, include a `parentAccountId`.

```
{
  "datacloudContactIds": [ 10344600,42701050,45995423 ],
  "parentAccountId": "09KR00000004C9rMAE"
}
```

### JSON Example Add Lead

Without a `parentAccountId`, the records are added as leads.

```
{
  "datacloudContactIds": [ 10344600,42701050,45995423 ]
}
```

## Properties

| Name                             | Type     | Description                                                                                                                                                                  | Required or Optional | Available Version |
|----------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>datacloudContactIds</code> | String[] | A list of the <code>contactIds</code> to import. There can be from 1 up to 200 <code>contactIds</code> in a comma-separated list. Requests with more than 200 contacts fail. | Required             | 36.0              |
| <code>parentAccountId</code>     | String   | The <code>accountId</code> for the selected account that is in your organization.                                                                                            | Optional             | 36.0              |

## Feed Items Resources

Get, search, delete, bookmark, and like feed items. Get and post comments. Get and vote in polls. Get, add, and remove topics. In Experience Cloud sites, get a flagged post, flag a post for moderation, and delete moderation flags.

 **Important:** Feed Item Resources aren't available in version 32.0 and later. In version 32.0 and later, use [Feed Elements Resources](#).

### IN THIS SECTION:

#### [Feed-Items Batch](#)

Get up to 500 feed items in one request

#### [Feed-Items Query](#)

Search for feed items.

#### [Feed-Items, Specific Feed Item](#)

Get, delete, or bookmark a feed item.

#### [Feed Items Comments](#)

Get comments for a feed item or post a comment.

#### [Feed-Items Likes](#)

Get likes for a feed item or like a feed item.

#### [Feed-Items Polls](#)

Get a poll or a vote on a poll.

#### [Feed-Items Topics](#)

Add a topic to a feed item. Remove a topic from a feed item.

#### [Moderation Flags on a Feed Item](#)

In Experience Cloud sites, get a flagged post, flag a post for moderation, and delete moderation flags.

## Feed-Items Batch

Get up to 500 feed items in one request

Get information about the comma-separated list of up to 500 feed items. Errors for feed items that couldn't be loaded are returned in the results.

### Resource

```
/chatter/feed-items/batch/feedItemIds
```

### Available versions

29.0–31.0

 **Important:** In version 32.0 and later, use [Feed Elements](#), [Batch Get](#).

### Requires Chatter

Yes

### HTTP methods

GET

### Response body for GET

[Batch Results](#)

## Feed-Items Query

Search for feed items.

The query parameter (q) is required. All types of feed items are searched, including tracked changes. A search returns feed items with the search term in the feed item body, as well as feed items that have comments that contain the search term. You can also use wildcards with the query parameter.

### Resource

```
/chatter/feed-items?q=searchTerm
```

### Available versions

23.0–31.0

 **Important:** In version 32.0 and later, use [Feed Elements, Post and Search](#).

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Request parameters

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional | Available Since |
|--------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------|
| page               | String  | A generated token that indicates the view of feed items in the feed.                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 23.0–31.0       |
| pageSize           | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                              | Optional             | 23.0–31.0       |
| q                  | String  | <p>Specifies the string to search. The search string must contain at least two characters, not including any wildcards. For more information about wildcards, see <a href="#">Wildcards</a>.</p> <p>The query parameter searches all types of feed items, including tracked changes. The search returns feed items with the search term in the feed item body, as well as feed items that have comments that contain the search term.</p> | Required             | 23.0–31.0       |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3.                                                                                                                                                                                                                                                                                                                                                              | Optional             | 29.0–31.0       |
| sort               | String  | <p>The sort order of the results. Values are:</p> <ul style="list-style-type: none"><li>• CreatedDateDesc</li><li>• LastModifiedDateDesc</li></ul> <p>The default value is CreatedDateDesc.</p>                                                                                                                                                                                                                                           | Optional             | 28.0–31.0       |

### Response body

[Feed Item Page](#)

## Feed-Items, Specific Feed Item

Get, delete, or bookmark a feed item.

### Resource

```
/chatter/feed-items/feedItemId
```

### Available versions

23.0–31.0

**Important:** In version 32.0 and later, use [Feed Element](#).

### Requires Chatter

Yes

### HTTP methods

GET, DELETE, PATCH

### Request body for PATCH

The root XML tag is `<feedItem>`.

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specify <code>true</code> to add the feed item to the list of bookmarked feed items for the context user. Specify <code>false</code> to remove this feed item from the list of bookmarked feed items for the context user. |

### Request parameter for PATCH

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specify <code>true</code> to add the feed item to the list of bookmarked feed items for the context user. Specify <code>false</code> to remove this feed item from the list of bookmarked feed items for the context user. |

### Response body for GET and PATCH

[Feed Item](#)

### Example

This PATCH request bookmarks a feed item:

```
/chatter/feed-items/0D5D0000000JvckKAC?isBookmarkedByCurrentUser=true
```

## Feed Items Comments

Get comments for a feed item or post a comment.

The default number of comments to retrieve is 3. To retrieve more comments increase the size of the `pageSize` parameter.

For additional information about posting a comment, see [Using POST, PATCH, or PUT for Input](#).

To upload a binary file to attach to a comment, you must send it in a multipart/form-data request. To send the text of the comment, you can choose to include a JSON or XML rich input body part in the multipart/form-data request. Alternately, you can choose to pass the information in request parameter parts. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

## Resource

```
/chatter/feed-items/feedItemId/comments
```

## Available since version

23.0–31.0

**Important:** In version 32.0 and later, use [Feed Elements Capability, Comments Items](#).

## Requires Chatter

Yes

## HTTP methods

GET, POST or HEAD

## Request body for POST

### Root XML tag

<comment>

### Properties

| Name       | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|------------|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachment | Depends on type.                   | Values are: <ul style="list-style-type: none"> <li><a href="#">Attachment Input: Existing Content</a></li> <li><a href="#">Attachment Input: New File Upload</a></li> </ul> <b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.                                                                                                                                          | Optional             | 24.0–31.0         |
| body       | <a href="#">Message Body Input</a> | The body of the comment.<br><br>Feed item and comment bodies have a 10,000 character limit. Because this limit can change, we recommend that clients make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object. To determine the maximum number of allowed characters, look at the length of the <code>Body</code> or <code>CommentBody</code> field. | Required             | 23.0              |

| Name           | Type                                       | Description                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|----------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                |                                            | <p>To edit this property in a comment, make a PATCH request to <code>/chatter/comments/<i>commentId</i></code></p> <p>Editing comments is supported in version 34.0 and later.</p> <p>Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.</p> |                      |                   |
| capabilities   | <a href="#">Comment Capabilities Input</a> | <p>Capabilities of the comment, such as a file attachment.</p> <p>You can edit a comment's body, but you can't update a comment's capabilities.</p>                                                                                                                                                                                    | Optional             | 32.0              |
| threadParentId | String                                     | ID of the parent comment for a threaded comment.                                                                                                                                                                                                                                                                                       | Optional             | 44.0              |

**Request parameters for POST****Parameters for attaching an existing file**

| Parameter Name    | Type   | Description                                                                   | Required or Optional | Available Version |
|-------------------|--------|-------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType    | String | The type of attachment. Must contain the value <code>ExistingContent</code> . | Required             | 27.0–31.0         |
| contentDocumentId | String | ID of an existing file to be posted.                                          | Required             | 24.0–31.0         |
| text              | String | Text of the comment.                                                          | Optional             | 23.0–31.0         |

**Parameters for posting text**

| Parameter Name | Type   | Description       | Required or Optional | Available Version |
|----------------|--------|-------------------|----------------------|-------------------|
| text           | String | The comment text. | Required             | 23.0–31.0         |

**Request parameters for GET or HEAD**

| Parameter Name | Type   | Description                                                                                                 | Required or Optional | Available Version |
|----------------|--------|-------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | String | <p>A generated token that indicates the view of feed items in the feed.</p> <p>Page tokens are returned</p> | Optional             | 23.0–31.0         |

| Parameter Name        | Type    | Description                                                                                                                                                                                   | Required or Optional | Available Version |
|-----------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                       |         | as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                |                      |                   |
| <code>pageSize</code> | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.<br><br>This parameter specifies the number of comments per page. | Optional             | 23.0–31.0         |

**Response body for GET or HEAD**[Comment Page](#)**Response body for POST**[Comment](#)**Example: Posting a Comment**

This POST request uses a request parameter to post a comment to a feed item:

```
/chatter/feed-items/0D5D0000000JvckKAC/comments?text=I+completely+agree
```

**Example: Posting a Comment and Attaching an Existing File**

This POST request posts a comment and attaches a file that has already been uploaded to the user's organization:

```
/chatter/feed-items/0D5D0000000JvckKAC/comments?text=yes&attachmentType=ExistingContent&contentDocumentId=069D00000001FHF
```

**Example: Posting a Comment and Uploading and Attaching a New File**

See [Uploading Binary Files](#).

**Feed-Items Likes**

Get likes for a feed item or like a feed item.

**Resource**

```
/chatter/feed-items/feedItemId/likes
```

**Available versions**

23.0–31.0

**Important:** In version 32.0 and later, use [Feed Elements Capability, Chatter Likes Items](#).

**Requires Chatter**

Yes

**HTTP methods**

GET, POST

**Request parameters for GET**

 **Note:** There aren't any request parameters for POST.

| Parameter Name | Type    | Description                                                                                                                  |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------|
| page           | Integer | Specifies the number of the page you want returned.                                                                          |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25. |

**Response body for GET**

[Like Page](#)

**Response body for POST**

[Like](#)

SEE ALSO:

[Like a Feed Item](#)

**Feed-Items Polls**

Get a poll or a vote on a poll.

**Resource**

```
/chatter/feed-items/feedItemId/poll
```

The *feedItemId* must have the type `PollPost`.

**Available versions**

26.0–31.0

 **Important:** In version 32.0 and later, use [Feed Elements Capability, Poll](#).

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

Use PATCH to either vote in an existing poll, or change the context user's vote.

**Request body for PATCH****Root XML tag**

```
<feedPoll>
```

**Properties**

| Name       | Type   | Description                                                                                                              | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------|-------------------|
| myChoiceId | String | ID of an existing choice on the feed poll. Used to specify the ID of the poll choice that the context user is voting on. | 26.0–31.0         |

**Request parameters for PATCH**

| Name       | Type   | Description                                                                                                              | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------|-------------------|
| myChoiceId | String | ID of an existing choice on the feed poll. Used to specify the ID of the poll choice that the context user is voting on. | 26.0–31.0         |

**Response body for GET and PATCH**

[Feed Item Attachment: Poll](#)

**Feed-Items Topics**

Add a topic to a feed item. Remove a topic from a feed item.

Only users with the Assign Topics permission can add or remove existing topics from feed items. Only users with the Create Topics permission can add new topics to feed items.

**Resource**

```
/chatter/feed-items/feedItemId/topics
```

**Available versions**

28.0–31.0

**Important:** In version 32.0 and later, use [Feed Elements Capability, Topics](#).

**Requires Chatter**

Yes

**HTTP methods**

DELETE, POST

**Request parameter for DELETE**

| Parameter Name | Type   | Description             | Required or Optional | Available Version |
|----------------|--------|-------------------------|----------------------|-------------------|
| topicId        | String | ID of an existing topic | Required             | 28.0–31.0         |

**Request body for POST****Root XML tag**

```
<feedItemTopic>
```

**JSON**

The following example attaches a new topic to a feed item:

```
{ "topicName": "W3C"
}
```

**Properties**

| Name      | Type   | Description                                           | Required or Optional                                                                     | Available Version |
|-----------|--------|-------------------------------------------------------|------------------------------------------------------------------------------------------|-------------------|
| topicId   | String | ID of an existing topic                               | Required for existing topics if the topicName property isn't used                        | 29.0              |
| topicName | String | Name of a new or existing topic, up to 150 characters | Required for new topics; required for existing topics if the topicId property isn't used | 29.0              |

**Request parameters for POST**

| Parameter Name | Type   | Description                                           | Required or Optional                                                                      | Available Version |
|----------------|--------|-------------------------------------------------------|-------------------------------------------------------------------------------------------|-------------------|
| topicId        | String | ID of an existing topic                               | Required for existing topics if the topicName parameter isn't used                        | 28.0–31.0         |
| topicName      | String | Name of a new or existing topic, up to 150 characters | Required for new topics; required for existing topics if the topicId parameter isn't used | 28.0–31.0         |

**Response for DELETE**

[204: Successful Delete](#)

**Response body for POST**

[Topic](#)

**Example for POST**

This example passes the ID of an existing topic in the `topicId` parameter to associate it with a feed item:

```
/chatter/feed-items/0D5D0000000JmIB/topics?topicId=0TOD0000000090r
```

**Moderation Flags on a Feed Item**

In Experience Cloud sites, get a flagged post, flag a post for moderation, and delete moderation flags.

If the context user has the Moderate Experiences Feeds permission, get the number of times members flagged a post, flag a post for moderation, and delete all flags on a post.

If the context user isn't a moderator, get whether the user flagged a post, flag a post for moderation, and remove a flag the user previously added.

### Resource

```
/connect/communities/communityId/chatter/feed-items/feedItemId/moderation-flags
```

### Available version

29.0–31.0

**Important:** In version 32.0 and later, use [Feed Elements Capability, Moderation](#).

### Requires Chatter

Yes

### HTTP methods

GET, DELETE, POST

### Request parameters for GET

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| visibility | String | Visibility behavior of a flag for various user types. <ul style="list-style-type: none"><li><code>ModeratorsOnly</code>—The flag is visible only to users with moderation permissions on the flagged element or item.</li><li><code>SelfAndModerators</code>—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li></ul> | Optional             | 30.0–31.0         |

### Request body for POST

#### Root XML tag

```
<moderationFlag>
```

#### JSON

```
{
  "note" : "Flagged by moderator as spam on 6.6.16.",
  "type" : "FlagAsSpam",
  "visibility" : "ModeratorsOnly"
}
```

### Properties

| Name | Type   | Description                                      | Required or Optional | Available Version |
|------|--------|--------------------------------------------------|----------------------|-------------------|
| note | String | A note of up to 4,000 characters about the flag. | Optional             | 38.0              |

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| type       | String | Type of moderation flag. <ul style="list-style-type: none"> <li>FlagAsInappropriate—Flag for inappropriate content.</li> <li>FlagAsSpam—Flag for spam.</li> </ul>                                                                                                                                                                                                       | Optional             | 38.0              |
| visibility | String | Visibility behavior of a flag for various user types. <ul style="list-style-type: none"> <li>ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul> | Optional             | 30.0              |

**Request parameters for POST**

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| visibility | String | Visibility behavior of a flag for various user types. <ul style="list-style-type: none"> <li>ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul> | Optional             | 30.0–31.0         |

**Request parameters for DELETE**

| Name   | Type   | Description                                                                                                                                                                            | Required or Optional | Available Version |
|--------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| userId | String | The ID of the context user. If specified, removes the flag the user previously added to the post. If not specified and the context user is a moderator, removes all flags on the post. | Optional             | 29.0–31.0         |

## Feeds Resources

Get feed items for feeds. Post feed items to feeds.

### IN THIS SECTION:

[Bookmarks Feed Items](#)

Get feed items bookmarked by the context user.

[Experience Cloud Site Moderation Feed Items](#)

Get feed items that have been flagged by Experience Cloud site members.

[Company Feed Items](#)

Get the feed items of a company feed.

[Favorites Feed Items](#)

Get the feed items for a favorite.

[Files Feed Items](#)

Get feed items posted with files by people or groups that the context user follows.

[Filter Feed Items](#)

Get feed items from the context user's news feed whose parent has the specified key prefix.

[Groups Feed Items](#)

Get feed items for the groups the context user either owns or is a member of.

[News Feed Items](#)

Get feed items from all groups the context user either owns or is a member of, as well as from files, records, and users the context user follows. Post feed items.

[People Feed Items](#)

Get the feed items from the people the context user follows.

[Record Feed Items](#)

Get the feed items for the records the context user is following, or get the feed items of a record. Post a feed item and search a record feed.

[To Feed Items](#)

Get the feed items for @mentions of the context user and posts made to the user's feed.

[Topics Feed Items](#)

Get feed items for a topic.

[User Profile Feed Items](#)

Get the feed items on records that can be tracked in a feed. Post a feed item.

## Bookmarks Feed Items

Get feed items bookmarked by the context user.

Resource

```
/chatter/feeds/bookmarks/userId/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

Available version

24.0–31.0

 **Important:** In version 32.0 and later, use [Bookmarks Feed Elements](#).

**Response body for GET**[Feed Item Page](#)**Bookmarks Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/bookmarks/userId/feed-items/flat
```

**Note:** `userId` must be the ID of the context user or the alias `me`.

**Available version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |

Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code>, for example:</p> <pre>"nextPageUrl": "/services/data/v65.0/ chatter/feeds/news/ 005D0000001GLowIAN /feed-items ?page=2011-03-30T17:34:50Z, 0D5D0000000DSv4KAG"</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Optional             | 23.0–31.0         |
| pageSize            | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 23.0–31.0         |
| q                   | String  | <p>One or more keywords to search for in the body and comments of feed items in this feed.</p> <p>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 28.0–31.0         |
| recentComment Count | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| sort                | String  | <p>Order of feed items in the feed.</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> <p>The default value is <code>CreatedDateDesc</code>.</p> | Optional             | 23.0–31.0         |

Response body for GET

Feed Item Page

Files Feed Items

Get feed items posted with files by people or groups that the context user follows.

Resource

```
/chatter/feeds/files/userId/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

Available version

23.0–31.0

 **Important:** In version 32.0 and later, use [Files Feed Elements](#).

Requires Chatter

Yes

HTTP methods

GET

Request parameters for GET

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| density        | String | The density of the feed. One of these values: <ul style="list-style-type: none"><li>AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li><li>FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li></ul> The default value is AllUpdates. | Optional             | 29.0–31.0         |
| page           | String | A generated token that indicates the view of feed elements in the feed.<br><br>Page tokens are returned as part of the response body, in one of the URL parameters, such as nextPageURL, for example: <pre>"nextPageUrl":<br/>"/services/data/v65.0/<br/>chatter/feeds/news/<br/>005D0000001GLowIAN<br/>/feed-elements<br/>?page=2011-03-30T17:34:50Z,<br/>0D5D0000000DSv4KAG"</pre>                                                                                                                 | Optional             | 23.0–31.0         |

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |

| pageSize           | Integer | Specifies the number of items per page. Valid values are between 1 and 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 23.0–31.0         |
| q                  | String  | One or more keywords to search for in the body and comments of feed elements in this feed.<br><br>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 28.0–31.0         |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| sort               | String  | Order of feed items in the feed.<br><br><ul style="list-style-type: none"> <li>• <b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <b>CreatedDateDesc</b>—Sorts by most recent creation date.</li> <li>• <b>LastModifiedDateDesc</b>—Sorts by most recent activity.</li> <li>• <b>MostViewed</b>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <b>Relevance</b>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 23.0–31.0         |
| updatedSince       | String  | An opaque token defining the modification time stamp of the feed and the sort order.<br><br>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the Feed Element Page response body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Optional             | 30.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Files Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

### Resource

```
/chatter/feeds/files/userId/feed-items/flat
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

### Available since version

25.0–26.0

### Requires Chatter

Yes

### HTTP methods

GET

### Request parameters

| Parameter Name     | Type                                                                                                                                         | Description                                                                                                                                                                                                                                                                                                                               |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                      | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <i>recentCommentCount</i> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                       | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <i>nextPageURL</i> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                      | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                 |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <i>CreatedDateDesc</i></li><li>• <i>LastModifiedDateDesc</i></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <i>LastModifiedDateDesc</i> .                                                                                                                                                                        |

### Response body

[Flat Feed](#)

### Filter Feed Items

Get feed items from the context user's news feed whose parent has the specified key prefix.

The key prefix specifies the object type and is the first three characters of an object ID. For example, to filter feed items with a user parent object, use the key prefix 005. To filter feed items with a group parent object, use the key prefix 0F9.

Resource

```
/chatter/feeds/filter/userId/keyPrefix/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias me.

Available version

23.0–31.0

 **Important:** In version 32.0 and later, use [Filter Feed Elements](#).

Requires Chatter

Yes

| q                  | String  | One or more keywords to search for in the body and comments of feed elements in this feed.<br><br>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 28.0–31.0         |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 29.0–31.0         |
| sort               | String  | Order of feed items in the feed.<br><ul style="list-style-type: none"><li>• <b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <b>DirectMessageModeration</b>, <b>Draft</b>, <b>Isolated</b>, <b>Moderation</b>, and <b>PendingReview</b> feeds.</li><li>• <b>CreatedDateDesc</b>—Sorts by most recent creation date.</li><li>• <b>LastModifiedDateDesc</b>—Sorts by most recent activity.</li><li>• <b>MostViewed</b>—Sorts by most viewed content. This sort order is available only for <b>Home</b> feeds when the <b>ConnectApi.FeedFilter</b> is <b>UnansweredQuestions</b>.</li><li>• <b>Relevance</b>—Sorts by most relevant content. This sort order is available only for <b>Company</b>, <b>Home</b>, and <b>Topics</b> feeds.</li></ul> The default value is <b>CreatedDateDesc</b> . | Optional             | 23.0–31.0         |
| updatedSince       | String  | An opaque token defining the modification time stamp of the feed and the sort order.<br><br>Do not construct this token. Retrieve this token from the <b>updatesToken</b> property of the Feed Element Page response body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 30.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Filter Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/filter/userId/feed-items/flat
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

**Available since version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code> .                                                                                                                                                                        |

See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 28.0–31.0         |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| sort               | String  | Order of feed items in the feed.<br><br><ul style="list-style-type: none"> <li>• <b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <b>CreatedDateDesc</b>—Sorts by most recent creation date.</li> <li>• <b>LastModifiedDateDesc</b>—Sorts by most recent activity.</li> <li>• <b>MostViewed</b>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <b>Relevance</b>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 23.0–31.0         |
| updatedSince       | String  | An opaque token defining the modification time stamp of the feed and the sort order.<br><br>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the Feed Element Page response body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Optional             | 30.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Groups Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/groups/userId/feed-items/flat
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

**Available since version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code> .                                                                                                                                                                        |

**Response body**

Flat Feed

**News Feed Items**

Get feed items from all groups the context user either owns or is a member of, as well as from files, records, and users the context user follows. Post feed items.

Resource

```
/chatter/feeds/news/userId/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

Available version

23.0–31.0

 **Important:** In version 32.0 and later, use [News Feed Elements](#).

Requires Chatter

Yes

HTTP methods

GET, POST

Request parameters for GET

| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| sort               | String  | Order of feed items in the feed.<br><ul style="list-style-type: none"><li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li><li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li><li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li><li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li><li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li></ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 23.0–31.0         |
| updatedSince       | String  | An opaque token defining the modification time stamp of the feed and the sort order.<br><br>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the <code>Feed Item Page</code> response body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 30.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Request body for POST****Root XML tag**

&lt;feedItem&gt;

JSON

The following example attaches a poll to a feed item:

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "When should we meet for release planning?"
      }
    ]
  },
  "capabilities": {
    "poll": {
      "choices": [
        "Monday",
        "Tuesday"
      ]
    }
  },
  "feedElementType": "FeedItem",
  "subjectId": "me"
}
```

### Request parameters for POST

Use one of the following sets of parameters. For example, you can't post a link and attach a file in the same request.

#### Parameters for attaching an existing file

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|----------------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>ExistingContent</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Required             | 27.0–31.0         |
| <code>contentDocumentId</code>         | String  | 18-character ID of an existing file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required             | 23.0–31.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> | Optional             | 26.0–31.0         |

| Parameter Name | Type | Description                                                                                                                                      | Required or Optional | Available Version |
|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                |      | If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . |                      |                   |

#### Parameters for attaching a new file

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional | Available Version |
|----------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>NewFile</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required             | 27.0–31.0         |
| <code>desc</code>                      | String  | Description of file being posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–26.0         |
|                                        |         |  <b>Attention:</b> Don't use this parameter as of version 27.0. Use <code>description</code> instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      |                   |
| <code>description</code>               | String  | Description of file being posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 27.0–31.0         |
| <code>fileName</code>                  | String  | File name of the file being posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Required             | 23.0–24.0         |
|                                        |         |  <b>Attention:</b> Don't use this parameter as of version 24.0. Use <code>title</code> instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      |                   |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 23.0–31.0         |
| <code>title</code>                     | String  | File name of a file to be uploaded and posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 24.0–31.0         |
| <code>visibility</code>                | String  | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> Default values: <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> | Optional             | 26.0–31.0         |

| Parameter Name | Type | Description                                                                                                                                      | Required or Optional | Available Version |
|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                |      | If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . |                      |                   |

#### Parameters for posting a link

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>Link</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required             | 27.0–31.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–31.0         |
| <code>url</code>                       | String  | URL of the link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required             | 23.0–31.0         |
| <code>urlName</code>                   | String  | Name of the URL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for posting a poll

| Parameter Name                      | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType                      | String  | The attachment type. Must contain the value <code>Poll</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required             | 27.0–31.0         |
| isBookmarked<br>ByCurrentUser       | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| pollChoice1 through<br>pollChoice10 | String  | The choices used to create a feed item with a poll. Specify 2–10 poll choices for each poll.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required             | 26.0–31.0         |
| text                                | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Required             | 23.0–31.0         |
| visibility                          | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for sharing a post

| Parameter Name                | Type    | Description                                                                                                                                                 | Required or Optional | Available Version |
|-------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isBookmarked<br>ByCurrentUser | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 26.0–31.0         |

| Parameter Name                  | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|---------------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>originalFeedItemId</code> | String | The 18-character ID of the feed item you want to share.<br><br> <b>Note:</b> Sharing a post takes precedence over uploading a file. Do not share a post and upload a file in the same post.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required             | 24.0–31.0         |
| <code>text</code>               | String | A comment on the shared feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 28.0–31.0         |
| <code>visibility</code>         | String | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> Default values: <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . | Optional             | 26.0–31.0         |

**Parameters for posting text only**

| Parameter Name                         | Type    | Description                                                                                                                                                                                                               | Required or Optional | Available Version |
|----------------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                               | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item. The maximum number of characters is 1000.                                                                                                                                                          | Required             | 23.0–31.0         |
| <code>visibility</code>                | String  | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> </ul> | Optional             | 26.0–31.0         |

| Parameter Name | Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |

#### Parameters for posting a canvas app

| Parameter Name                         | Type    | Description                                                                                                                                                 | Required or Optional | Available Version |
|----------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>Canvas</code> .                                                                                           | Required             | 29.0–31.0         |
| <code>description</code>               | String  | Description of the canvas app                                                                                                                               | Optional             | 29.0–31.0         |
| <code>developerName</code>             | String  | The developer name (API name) of the canvas app                                                                                                             | Required             | 29.0–31.0         |
| <code>height</code>                    | String  | The height of the canvas app in pixels. Default height is 200 pixels.                                                                                       | Optional             | 29.0–31.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 29.0–31.0         |
| <code>namespacePrefix</code>           | String  | The namespace prefix of the Developer Edition organization in which the canvas app was created.                                                             | Optional             | 29.0–31.0         |
| <code>parameters</code>                | String  | Parameters passed to the canvas app in JSON format. The JSON must be URL-encoded:<br><pre>parameters={'isUpdated'='true';}"</pre>                           | Optional             | 29.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item                                                                                                                                       | Optional             | 29.0–31.0         |
| <code>thumbnailUrl</code>              | String  | The URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.                                                                     | Optional             | 29.0–31.0         |
| <code>title</code>                     | String  | The title of the link to the canvas app                                                                                                                     | Optional             | 29.0–31.0         |

| Parameter Name          | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>visibility</code> | String | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 29.0–31.0         |

**Response body for POST**[Feed Item](#)**News Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/news/userId/feed-items/flat
```

**Note:** `userId` must be the ID of the context user or the alias `me`.

**Available version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name                  | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>numFeedItems</code>       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| <code>page</code>               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| <code>recentCommentCount</code> | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| <code>sort</code>               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code>                                                                                                                                                                          |

**Response body**[Flat Feed](#)**People Feed Items**

Get the feed items from the people the context user follows.

**Resource**

```
/chatter/feeds/people/userId/feed-items
```

 **Note:** `userId` must be the ID of the context user or the alias `me`.

**Available version**

23.0–31.0

 **Important:** In version 32.0 and later, use [People Feed Elements](#).

**Requires Chatter**

Yes

**HTTP methods**

GET

## Request parameters for GET

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|--------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| density            | String  | <p>The density of the feed. One of these values:</p> <ul style="list-style-type: none"> <li>• <b>AllUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li> <li>• <b>FewerUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li> </ul> <p>The default value is <b>AllUpdates</b>.</p> | Optional             | 29.0–31.0         |
| page               | String  | <p>A generated token that indicates the view of feed elements in the feed.</p> <p>Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code>, for example:</p> <pre>"nextPageUrl": "/services/data/v65.0/ chatter/feeds/news/ 005D00000001GLowIAN /feed-elements ?page=2011-03-30T17:34:50Z, 0D5D0000000DSv4KAG"</pre>                                                                                                                                                              | Optional             | 23.0–31.0         |
| pageSize           | Integer | Specifies the number of items per page. Valid values are between 1 and 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 23.0–31.0         |
| q                  | String  | <p>One or more keywords to search for in the body and comments of feed elements in this feed.</p> <p>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a>.</p>                                                                                                                                                                                                                                                                                                | Optional             | 28.0–31.0         |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| sort               | String  | <p>Order of feed items in the feed.</p> <ul style="list-style-type: none"> <li>• <b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <b>DirectMessageModeration</b>, <b>Draft</b>, <b>Isolated</b>, <b>Moderation</b>, and <b>PendingReview</b> feeds.</li> </ul>                                                                                                                                                                                                                                       | Optional             | 23.0–31.0         |

| Parameter Name            | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |

**Response body for GET**[Feed Item Page](#)**People Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/people/userId/feed-items/flat
```

 **Note:** `userId` must be the ID of the context user or the alias `me`.

**Available since version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name                  | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>numFeedItems</code>       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| <code>page</code>               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| <code>recentCommentCount</code> | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| <code>sort</code>               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code>                                                                                                                                                                          |

**Response body**[Flat Feed](#)**Record Feed Items**

Get the feed items for the records the context user is following, or get the feed items of a record. Post a feed item and search a record feed.

**Resource**

```
/chatter/feeds/record/recordId/feed-items
```

**Note:** If `recordId` is a user ID, it must be the same as the context user or the alias `me`. To use this resource to get the feed items for a group, specify the group ID as the `recordId`.

**Available version**

23.0–31.0

**Important:** In version 32.0 and later, use [Record Feed Elements](#).

**Requires Chatter**

Yes

**HTTP methods**

GET, POST

**Request parameters for GET**

| Parameter Name      | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |

| pageSize            | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 23.0–31.0         |
| q                   | String  | <p>One or more keywords to search for in the body and comments of feed items in this feed.</p> <p>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a>.</p>                                                                                                                                                                                                                                                                                               | Optional             | 28.0–31.0         |
| recentComment Count | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| showInternal Only   | Boolean | Specifies whether to show only feed items from internal (non-Experience Cloud site) users ( <b>true</b> ), or not ( <b>false</b> ). The default value is <b>false</b> .                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 30.0–31.0         |

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|----------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| sort           | String | <p>Order of feed items in the feed.</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> <p>The default value is <code>CreatedDateDesc</code>.</p> | Optional             | 23.0–31.0         |
| updatedSince   | String | <p>An opaque token defining the modification time stamp of the feed and the sort order.</p> <p>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the <code>Feed Item Page</code> response body.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Optional             | 30.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Request body for POST****Root XML tag**

&lt;feedItem&gt;

**JSON**

The following example attaches a poll to a feed item:

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "When should we meet for release planning?"
      }
    ]
  },
  "capabilities": {
```

```
    "poll": {
      "choices": [
        "Monday",
        "Tuesday"
      ]
    },
    "feedElementType": "FeedItem",
    "subjectId": "me"
  }
}
```

Properties

| Name       | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional                                                        | Available Version |
|------------|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|-------------------|
| attachment | Depends on type.                   | <p>You can specify only one of these values in the attachment parameter. Values are:</p> <ul style="list-style-type: none"><li>Attachment Input: Canvas App (v29.0–31.0)</li><li>Attachment Input: Existing Content (v23.0–31.0)</li><li>Attachment Input: Feed Poll (v26.0–31.0)</li><li>Attachment Input: Link (v23.0–31.0)</li><li>Attachment Input: New File Upload (v23.0–31.0)</li></ul> <p> <b>Important:</b> As of API version 32.0, use the capabilities property.</p> | Optional                                                                    |                   |
| body       | <a href="#">Message Body Input</a> | <p>Description of message body. Feed item and comment bodies have a 10,000 character limit. Because this limit can change, we recommend that clients make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object. To determine the maximum number of allowed characters, look at the length of the <code>Body</code> or <code>CommentBody</code> field. The body can contain up to 25 mentions.</p> <p>If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code></p>        | Required unless the feed item has a content capability or a link capability | 23.0              |

| Name                      | Type                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional                                                                               | Available Version |

|                         |        | property. In API version 39.0 and later, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      |                   |
| <code>subjectId</code>  | String | <p>The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string <code>me</code> to indicate the context user.</p> <p>In version 45.0 and later, you can move a feed element from one public group to another by setting this property to the ID of the new public group. You can't include or change any other properties when moving a feed element.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 31.0              |
| <code>visibility</code> | String | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li>• <code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>• For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>• For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0              |

**Request parameters for POST**

Use one of the following sets of parameters. For example, you can't post a link and attach a file in the same request.

**Parameters for attaching an existing file**

| Parameter Name            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |

| attachmentType            | String  | The attachment type. Must contain the value <code>ExistingContent</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required             | 27.0–31.0         |
| contentDocumentId         | String  | 18-character ID of an existing file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required             | 23.0–31.0         |
| isBookmarkedByCurrentUser | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| text                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–31.0         |
| visibility                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

**Parameters for attaching a new file**

| Parameter Name | Type   | Description                                                                                                                                                                              | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType | String | The attachment type. Must contain the value <code>NewFile</code> .                                                                                                                       | Required             | 27.0–31.0         |
| desc           | String | Description of file being posted.                                                                                                                                                        | Optional             | 23.0–26.0         |
|                |        |  <b>Attention:</b> Don't use this parameter as of version 27.0. Use <code>description</code> instead. |                      |                   |
| description    | String | Description of file being posted.                                                                                                                                                        | Optional             | 27.0–31.0         |

| Parameter Name            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|---------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| fileName                  | String  | File name of the file being posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 23.0–24.0         |
|                           |         |  <b>Attention:</b> Don't use this parameter as of version 24.0. Use <code>title</code> instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      |                   |
| isBookmarkedByCurrentUser | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| text                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–31.0         |
| title                     | String  | File name of a file to be uploaded and posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required             | 24.0–31.0         |
| visibility                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for posting a link

| Parameter Name            | Type    | Description                                                                                                                                                 | Required or Optional | Available Version |
|---------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType            | String  | The attachment type. Must contain the value <code>Link</code> .                                                                                             | Required             | 27.0–31.0         |
| isBookmarkedByCurrentUser | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 26.0–31.0         |
| text                      | String  | Text of the feed item.                                                                                                                                      | Optional             | 23.0–31.0         |
| url                       | String  | URL of the link.                                                                                                                                            | Required             | 23.0–31.0         |

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| urlName        | String | Name of the URL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 23.0–31.0         |
| visibility     | String | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><b>InternalUsers</b>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><b>AllUsers</b>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <b>AllUsers</b>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <b>InternalUsers</b>. Internal users can accept this value or use the value <b>AllUsers</b> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <b>visibility</b> of the feed item must be <b>AllUsers</b>.</p> | Optional             | 26.0–31.0         |

**Parameters for posting a poll**

| Parameter Name                   | Type    | Description                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|----------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType                   | String  | The attachment type. Must contain the value <b>Poll</b> .                                                                                                                                                                                                                                                                             | Required             | 27.0–31.0         |
| isBookmarkedByCurrentUser        | Boolean | Specifies whether to bookmark the new feed item for the user ( <b>true</b> ) or not ( <b>false</b> ). The default value is <b>false</b> .                                                                                                                                                                                             | Optional             | 26.0–31.0         |
| pollChoice1 through pollChoice10 | String  | The choices used to create a feed item with a poll. Specify 2–10 poll choices for each poll.                                                                                                                                                                                                                                          | Required             | 26.0–31.0         |
| text                             | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                | Required             | 23.0–31.0         |
| visibility                       | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><b>InternalUsers</b>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><b>AllUsers</b>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> | Optional             | 26.0–31.0         |

| Parameter Name | Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |

|                |      | <p>this value or use the value <code>AllUsers</code> to allow external users to see their posts.</p> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> |                      |                   |

#### Parameters for posting text only

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item. The maximum number of characters is 1000.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for posting a canvas app

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|----------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>Canvas</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required             | 29.0–31.0         |
| <code>description</code>               | String  | Description of the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Optional             | 29.0–31.0         |
| <code>developerName</code>             | String  | The developer name (API name) of the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 29.0–31.0         |
| <code>height</code>                    | String  | The height of the canvas app in pixels. Default height is 200 pixels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 29.0–31.0         |
| <code>namespacePrefix</code>           | String  | The namespace prefix of the Developer Edition organization in which the canvas app was created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Optional             | 29.0–31.0         |
| <code>parameters</code>                | String  | Parameters passed to the canvas app in JSON format. The JSON must be URL-encoded:<br><pre>parameters={'isUpdated':'true';}"</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| <code>thumbnailUrl</code>              | String  | The URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 29.0–31.0         |
| <code>title</code>                     | String  | The title of the link to the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 29.0–31.0         |
| <code>visibility</code>                | String  | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> Default values: <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . | Optional             | 29.0–31.0         |

**Response body for POST**[Feed Item](#)

## Record Feed Items Flat

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

### Resource

```
/chatter/feeds/record/userId/feed-items/flat
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

### Available since version

25.0–26.0

### Requires Chatter

Yes

### HTTP methods

GET

### Request parameters for GET

| Parameter Name     | Type                                                                                                                                         | Description                                                                                                                                                                                                                                                                                                                               |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                      | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <i>recentCommentCount</i> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                       | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <i>nextPageURL</i> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                      | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                 |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <i>CreatedDateDesc</i></li><li>• <i>LastModifiedDateDesc</i></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <i>LastModifiedDateDesc</i> .                                                                                                                                                                        |

### Response body for GET

Flat Feed

## To Feed Items

Get the feed items for @mentions of the context user and posts made to the user's feed.

The To Feed includes posts that mention you and posts that other users make to your wall. Your own posts are included only if they have a comment. The comment can be from you or from another user.

### Resource

```
/chatter/feeds/to/userId/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias me.

### Available version

23.0–31.0

 **Important:** In version 32.0 and later, use [To Feed Elements](#).

### Requires Chatter

Yes

### HTTP methods

GET

### Request parameters for GET

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required or Optional | Available Version |
|----------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| density        | String | <p>The density of the feed. One of these values:</p> <ul style="list-style-type: none"><li>• <b>AllUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li><li>• <b>FewerUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li></ul> <p>The default value is <b>AllUpdates</b>.</p> | Optional             | 29.0–31.0         |
| page           | String | <p>A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageUrl</code>, for example:</p> <pre>"nextPageUrl":<br/>"/services/data/v65.0/<br/>chatter/feeds/news/<br/>005D0000001GLowIAN<br/>/feed-items<br/>?page=2011-03-30T17:34:50Z,<br/>0D5D0000000DSv4KAG"</pre>                                                                                                                                                 | Optional             | 23.0–31.0         |

| Parameter Name      | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|---------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| pageSize            | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 23.0–31.0         |
| q                   | String  | One or more keywords to search for in the body and comments of feed items in this feed.<br><br>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 28.0–31.0         |
| recentComment Count | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| sort                | String  | Order of feed items in the feed.<br><ul style="list-style-type: none"><li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li><li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li><li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li><li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li><li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li></ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 23.0–31.0         |

**Response body for GET**[Feed Item Page](#)**To Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/to/me/feed-items/flat
```

or

```
/chatter/feeds/to/userId/feed-items/flat
```

 **Note:** *userId* must be the ID of the context user or the alias me.

**Available since version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Request parameters**

| Parameter Name     | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code>                                                                                                                                                                          |

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | String  | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 28.0–31.0         |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 28.0–31.0         |
| sort           | String  | <div>Order of feed items in the feed.</div> <ul style="list-style-type: none"><li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li><li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li><li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li><li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li><li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li></ul> <div>The default value is <code>CreatedDateDesc</code>.</div> | Optional             | 28.0–31.0         |

**Response body for GET**[Feed Item Page](#)

## User Profile Feed Items

Get the feed items on records that can be tracked in a feed. Post a feed item.

### Resource

```
/chatter/feeds/user-profile/userId/feed-items
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

### Available version

23.0–31.0

 **Important:** In version 32.0 and later, use [User Profile Feed Elements](#).

### Requires Chatter

Yes

### HTTP methods

GET

### Request parameters for GET

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| density        | String | The density of the feed. One of these values: <ul style="list-style-type: none"><li>AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li><li>FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li></ul> The default value is AllUpdates. | Optional             | 29.0–31.0         |
| page           | String | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as nextPageURL, for example: <div><pre>"nextPageUrl":<br/>"/services/data/v65.0/<br/>chatter/feeds/news/<br/>005D0000001GLowIAN<br/>/feed-items<br/>?page=2011-03-30T17:34:50Z,<br/>0D5D0000000DSv4KAG"</pre></div>                                                                                                                   | Optional             | 23.0–31.0         |

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|--------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| pageSize           | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 23.0–31.0         |
| q                  | String  | One or more keywords to search for in the body and comments of feed items in this feed.<br><br>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 28.0–31.0         |
| recentCommentCount | Integer | Maximum number of comments to include per feed item. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 29.0–31.0         |
| sort               | String  | Order of feed items in the feed.<br><ul style="list-style-type: none"><li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li><li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li><li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li><li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li><li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li></ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 23.0–31.0         |

**Response body for GET**[Feed Item Page](#)**Request body for POST****Root XML tag**

&lt;feedItem&gt;

**JSON**

The following example attaches a poll to a feed item:

```
{
  "body": {
    "messageSegments": [
```

```
        {
          "type": "Text",
          "text": "When should we meet for release planning?"
        }

| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>ExistingContent</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required             | 27.0–31.0         |
| <code>contentDocumentId</code>         | String  | 18-character ID of an existing file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required             | 23.0–31.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for attaching a new file

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|----------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>            | String  | The attachment type. Must contain the value <code>NewFile</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Required             | 27.0–31.0         |
| <code>desc</code>                      | String  | Description of file being posted.<br> <b>Attention:</b> Don't use this parameter as of version 27.0. Use <code>description</code> instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 23.0–26.0         |
| <code>description</code>               | String  | Description of file being posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 27.0–31.0         |
| <code>fileName</code>                  | String  | File name of the file being posted.<br> <b>Attention:</b> Don't use this parameter as of version 24.0. Use <code>title</code> instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required             | 23.0–24.0         |
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 23.0–31.0         |
| <code>title</code>                     | String  | File name of a file to be uploaded and posted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required             | 24.0–31.0         |
| <code>visibility</code>                | String  | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> Default values: <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . | Optional             | 26.0–31.0         |

#### Parameters for posting a link

| Parameter Name              | Type   | Description                                                     | Required or Optional | Available Version |
|-----------------------------|--------|-----------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code> | String | The attachment type. Must contain the value <code>Link</code> . | Required             | 27.0–31.0         |

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 23.0–31.0         |
| <code>url</code>                       | String  | URL of the link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required             | 23.0–31.0         |
| <code>urlName</code>                   | String  | Name of the URL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

**Parameters for posting a poll**

| Parameter Name                                             | Type    | Description                                                                                                                                                 | Required or Optional | Available Version |
|------------------------------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>attachmentType</code>                                | String  | The attachment type. Must contain the value <code>Poll</code> .                                                                                             | Required             | 27.0–31.0         |
| <code>isBookmarkedByCurrentUser</code>                     | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 26.0–31.0         |
| <code>pollChoice1</code> through <code>pollChoice10</code> | String  | The choices used to create a feed item with a poll. Specify 2–10 poll choices for each poll.                                                                | Required             | 26.0–31.0         |
| <code>text</code>                                          | String  | Text of the feed item.                                                                                                                                      | Required             | 23.0–31.0         |

| Parameter Name          | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>visibility</code> | String | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

#### Parameters for sharing a post

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                       | Required or Optional | Available Version |
|----------------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                       | Optional             | 26.0–31.0         |
| <code>originalFeedItemId</code>        | String  | <p>The 18-character ID of the feed item you want to share.</p> <p> <b>Note:</b> Sharing a post takes precedence over uploading a file. Do not share a post and upload a file in the same post.</p>                                                             | Required             | 24.0–31.0         |
| <code>text</code>                      | String  | A comment on the shared feed item.                                                                                                                                                                                                                                                                                                                | Optional             | 28.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> | Optional             | 26.0–31.0         |

| Parameter Name | Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |

Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> |                      |                   |

#### Parameters for posting text only

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|----------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isBookmarkedByCurrentUser</code> | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 26.0–31.0         |
| <code>text</code>                      | String  | Text of the feed item. The maximum number of characters is 1000.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required             | 23.0–31.0         |
| <code>visibility</code>                | String  | <p>Who can see the post. Valid values are:</p> <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> <p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p> | Optional             | 26.0–31.0         |

**Parameters for posting a canvas app**

| Parameter Name            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|---------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachmentType            | String  | The attachment type. Must contain the value <code>Canvas</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required             | 29.0–31.0         |
| description               | String  | Description of the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Optional             | 29.0–31.0         |
| developerName             | String  | The developer name (API name) of the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 29.0–31.0         |
| height                    | String  | The height of the canvas app in pixels. Default height is 200 pixels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| isBookmarkedByCurrentUser | Boolean | Specifies whether to bookmark the new feed item for the user ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 29.0–31.0         |
| namespacePrefix           | String  | The namespace prefix of the Developer Edition organization in which the canvas app was created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Optional             | 29.0–31.0         |
| parameters                | String  | Parameters passed to the canvas app in JSON format. The JSON must be URL-encoded:<br><pre>parameters={ 'isUpdated'='true'; }"</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 29.0–31.0         |
| text                      | String  | Text of the feed item                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 29.0–31.0         |
| thumbnailUrl              | String  | The URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 29.0–31.0         |
| title                     | String  | The title of the link to the canvas app                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 29.0–31.0         |
| visibility                | String  | Who can see the post. Valid values are: <ul style="list-style-type: none"> <li><code>InternalUsers</code>—If digital experiences is enabled, only members of the default, internal site can see the feed item.</li> <li><code>AllUsers</code>—If digital experiences is enabled, all members of the site can see the feed item.</li> </ul> Default values: <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code> . | Optional             | 29.0–31.0         |

**Response body for POST**[Feed Item](#)**User-Profile Feed Items Flat**

This resource is deprecated as of version 26.0.

Returns a flat feed, that is, a feed where there is no hierarchy between feed items and comments: Feed items and comments are at the same level. All items are returned in chronological order.

**Resource**

```
/chatter/feeds/user-profile/me/feed-items/flat
```

or

```
/chatter/feeds/user-profile/userId/feed-items/flat
```

**Available version**

25.0–26.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type                                                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| numFeedItems       | Integer                                                                                                                                                  | Specifies the number of feed items returned. Valid values are from 0 through 100. Default value is 25. Because feed items can include comments, specifying 25 flat feed items may actually return more. For example, if each feed item has one comment, and <code>recentCommentCount</code> is greater than 1, 50 flat feed items are returned. |
| page               | String                                                                                                                                                   | A generated token that indicates the view of feed items in the feed. Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code> .                                                                                                                                                    |
| recentCommentCount | Integer                                                                                                                                                  | Specifies the number of recent comments returned. Valid values are from 0 through 25. Default value is 3.                                                                                                                                                                                                                                       |
| sort               | String. One of the following: <ul style="list-style-type: none"><li>• <code>CreatedDateDesc</code></li><li>• <code>LastModifiedDateDesc</code></li></ul> | Sorts the returned feed either by created date in ascending order, or by last modified date, also in ascending order. The default is <code>LastModifiedDateDesc</code> .                                                                                                                                                                        |

Response body for GET

[Flat Feed](#)

Forecasting Resources

Get jump-to information, managers in a hierarchy, and user access to forecasts.

IN THIS SECTION:

- [Forecasting Jump-To-User](#)  
For Salesforce Forecasting, returns a list of users whose forecasts the context user has access to view. The method compares a search string to available users’ first and last names. This functionality is analogous to using **Jump To** on the Forecasts page.
- [Forecasting Manager Ancestors Query](#)  
Get the manager at the top of the forecast hierarchy.
- [Forecasting Manager Ancestors, Specific User](#)  
Get a list of managers between the context user and a specified user.
- [Forecasting User Access](#)  
Indicates whether the context user has access to view a specified user’s forecast.

Forecasting Jump-To-User

For Salesforce Forecasting, returns a list of users whose forecasts the context user has access to view. The method compares a search string to available users’ first and last names. This functionality is analogous to using **Jump To** on the Forecasts page.

Requires Salesforce Forecasting. Forecast managers and users with the View All Forecasts permission can access other user’s forecasts.

Resource

```
/connect/forecasting/jump-to-user
```

Available version

36.0–43.0

In version 44.0 and later, use [Forecasting Jump-To-User-Or-Territory](#).

HTTP methods

GET

Request parameters for GET

| Parameter Name | Type   | Description                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| nameStartsWith | String | The first few letters of the user’s name. The system compares the string to both the first name and last name of all users the context user has access to and returns any entries that match either. | Required             | 36.0              |

Response body for GET

[Forecasting User Collection](#)

### Forecasting Manager Ancestors Query

Get the manager at the top of the forecast hierarchy.

Requires Salesforce Forecasting.

If the context user is a forecast manager with the View All Forecasts or View All Data permission, this resource returns the manager at the top of the forecast hierarchy. If the hierarchy does not have a forecast manager assigned to every role with direct reports, this resource returns all managers who do not have a forecast manager above them. For all other users, this resource returns nothing.

Resource

```
/connect/forecasting/manager-ancestors
```

Available version

36.0–43.0

In version 44.0 and later, use [Forecasting Manager Parents by User Role or Territory ID](#).

HTTP methods

GET

Response body for GET

[Forecasting Manager Ancestors](#)

### Forecasting Manager Ancestors, Specific User

Get a list of managers between the context user and a specified user.

Requires Salesforce Forecasting.

The list of managers returned depends on the permissions of the context user.

| Context User’s Permissions                        | List of Managers Returned                                                                           |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Forecast user                                     | Returns the list of managers between the specified user role and the context user.                  |
| Any user with View All Forecasts or View All Data | Returns the list of managers between the specified user role and the top of the forecast hierarchy. |

Resource

```
/connect/forecasting/manager-ancestors/forecastingManagerUserRoleId
```

Available version

36.0–43.0

In version 44.0 and later, use [Forecasting Manager Parents by User Role or Territory ID](#).

HTTP methods

GET

Response body for GET

[Forecasting Ancestors](#)

### Forecasting User Access

Indicates whether the context user has access to view a specified user’s forecast.

Requires Salesforce Forecasting.

Resource

```
/connect/forecasting/user-access
```

Available version

36.0–42.0

In version 43.0 and later, use [Forecasting User Access by Forecasting Type](#).

HTTP methods

GET

Request parameters for GET

| Parameter Name | Type   | Description                                                           | Required or Optional | Available Version |
|----------------|--------|-----------------------------------------------------------------------|----------------------|-------------------|
| user           | String | The ID of the user whose forecast the context user is trying to view. | Required             | 36.0              |

Response body for GET

[Forecasting User Access Collection](#)

## Social Engagement Resources

Provide social functionality, such as access to managed social accounts and social post intents, for service agents.

 **Note:** Social Studio was retired on November 18, 2024.

Available resources are:

| Resource                                                                                                           | Description                                                                       |

## Social Posts Intents, Mass Approval

Approve or reject the publishing of a large number of social posts.

### Resource

```
/connect/social-engagement/social-posts/intents/approvals
```

### Available version

46.0–61.0

### HTTP methods

PATCH

### Request body for PATCH

#### Root XML tag

```
<massApproveReject>
```

#### JSON example

```
{
  "isApproved" : "true",
  "socialPostIdList" : {"socialPostIdList": ["0STxx0000004CHG", "0STxx0000005THX"]}
}
```

### Properties

| Name             | Type     | Description                                                                                                                                                       | Required or Optional | Available Version |
|------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isApproved       | Boolean  | Specifies whether to approve ( <code>true</code> ) or reject ( <code>false</code> ) publishing the social posts. If unspecified, defaults to <code>false</code> . | Optional             | 46.0              |
| socialPostIdList | String[] | A list of up to 200 social post IDs.                                                                                                                              | Required             | 46.0              |

**Response body for PATCH**[Social Post Mass Approval](#)**Social Posts Intents**

Get available intents for a social post.

**Resource**

```
/connect/social-engagement/social-posts/socialPostId/intents
```

**Available version**

45.0–61.0

**HTTP methods**

GET

**Response body for GET**[Social Post Intents](#)**Social Posts Intents, Delete Social Post**

Delete a social post from its social network.

**Note:** Deleting a social post from its social network doesn't delete the record from Salesforce.

**Resource**

```
/connect/social-engagement/social-posts/socialPostId/intents/deletes/socialAccountId
```

**Available version**

46.0–61.0

**HTTP methods**

PUT

**Response body for PUT**[Delete Social Post Intent](#)**Social Posts Intents, Follow Persona**

Follow or stop following a social persona of a social post on its social network.

**Resource**

```
/connect/social-engagement/social-posts/socialPostId/intents/follow/socialAccountId
```

The *socialPostId* is the ID of the social post authored by the social persona to follow or stop following. The *socialAccountId* is the ID of the social account that follows or stops following the social persona.

**Available version**

45.0–61.0

**HTTP methods**

PUT, DELETE

Use PUT to follow a social persona of a social post. Use DELETE to stop following a social persona of a social post.

 **Note:** PUT takes no request parameters nor a request body.

#### Response body for PUT

[Follow Social Persona Intent](#)

#### Response for DELETE

[204: Successful Delete](#)

## Social Posts Intents, Hide Social Post

Hide or unhide a social post on its social network.

#### Resource

```

```

#### Available version

46.0–61.0

#### HTTP methods

DELETE, PUT

Use PUT to hide a post. Use DELETE to unhide a post.

#### Response body for DELETE

[204: Successful Delete](#)

#### Response body for PUT

[Hide Social Post Intent](#)

## Social Posts Intents, Like Social Post

Like or unlike a social post in its social network.

#### Resource

```
/connect/social-engagement/social-posts/socialPostId/intents/likes/socialAccountId
```

#### Available version

46.0–61.0

#### HTTP methods

DELETE, PUT

Use PUT to like a post. Use DELETE to unlike a post.

#### Response for DELETE

[204: Successful Delete](#)

#### Response body for PUT

[Like Social Post Intent](#)

## Social Posts Intents, Recall Publish Approval

Recall an approval request to publish a social post.

#### Resource

```
/connect/social-engagement/social-posts/socialPostId/intents/approval
```

**Available version**

46.0–61.0

**HTTP methods**

DELETE

**Response for DELETE**[204: Successful Delete](#)

## Managed Social Accounts

Get a list of managed social accounts that are in the org and assigned to the user.

**Resource**

```
/connect/social-engagement/managed-social-accounts
```

**Available version**

44.0–61.0

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required or Optional | Available Version |

**Response body for GET**[Managed Social Accounts](#)**Managed Social Account**

Get a managed social account that is in the org and assigned to the user.

**Resource**`/connect/social-engagement/managed-social-accounts/id`**Available version**

44.0–61.0

**HTTP methods**

GET

**Response body for GET**[Managed Social Account](#)**Managed Social Account Relationships**

Get the follow relationship between a managed social account and a social persona.

**Resource**`/connect/social-engagement/managed-social-accounts/id/relationships/socialPersonaId`**Available version**

46.0–61.0

**HTTP methods**

GET

**Response body for GET**[Social Account Relationship](#)**Social Persona Intents, Follow**

Follow or stop following a social persona on its social network.

**Resource**`/connect/social-engagement/social-persona/socialPersonaId/intents/follow/socialAccountId`

The *socialPersonaId* is the ID of the social persona to follow or stop following. The *socialAccountId* is the ID of the social account that follows or stops following the social persona.

Available version

45.0–61.0

HTTP methods

PUT, DELETE

Use PUT to follow a social persona. Use DELETE to stop following a social persona.

 **Note:** PUT takes no request parameters nor a request body.

Response body for PUT

[Follow Social Persona Intent](#)

Response for DELETE

[204: Successful Delete](#)

# Social Engagement Setup Resources

Configure the Social Customer Service product.

 **Note:** Social Studio was retired on November 18, 2024.

When authenticating a managed social account, follow these guidelines for a typical flow.

1. Make a GET request to `/connect/social-engagement/setup/managed-social-accounts/authentication` using the social network parameter (`socialNetwork`) and a callback URL (`callbackUrl`) to your own service.
2. The response to the GET request contains an OAuth URL (`oauthUrl`) used to initiate authentication, and an OAuth JWT (`oauthJWT`) used for security purposes.
3. Present a browser form to the admin where the form's action is set to the OAuth URL (`oauthUrl`), the form's method is POST, and the form has a single hidden field called `stringToken` set to the OAuth JWT (`oauthJWT`) value.
4. Submit the form, so that the browser redirects to the OAuth URL (`oauthUrl`) that presents the admin with the login page for the desired social network.
5. The admin logs in with their social network credentials and grants permission to the app.
6. The browser redirects back to the callback URL (`callbackUrl`) with an `accountId` query parameter appended to the end of the URL.
7. The service running at the callback URL location captures the `accountId` query parameter and makes a GET request to `/connect/social-engagement/setup/managed-social-accounts`. Set the `managedAccountId` parameter to the `accountId` value you got from the query parameter.
8. The response to the GET contains a list of social accounts from the social network that can be added to Social Customer Service, along with any accounts that have already been added. The already added accounts have `id` values specified.
9. Take any social account without an ID from the previous step and copy the information to a POST request to `/connect/social-engagement/setup/managed-social-accounts`, which adds the social account to Social Customer Service.

Available resources are:

**Response body for GET**[Managed Social Account Setup Authentication](#)

## Managed Social Accounts Setup

Add managed social accounts and get managed social accounts from a recently authenticated social network.

**Resource**

```
/connect/social-engagement/setup/managed-social-accounts
```

**Available version**

44.0–61.0

**HTTP methods**

GET, POST

**Request parameters for GET**

| Parameter Name   | Type   | Description                                                                                                                                                                                                                                                                                                              | Required or Optional | Available Version |
|------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| managedAccountId | String | ID that Social Studio provides after the user authenticates to a social network. If you provide this parameter, we make a request to the Social Studio to find out what managed accounts are available to that social network user. For example, this parameter can be used to get fan pages managed by a Facebook user. | Optional             | 44.0              |

**Request body for POST****Root XML tag**

```
<managedSocialAccountSetup>
```

**JSON example**

```
{
  "managedAccountId" : "exampleSocialStudioId",
  "socialNetwork" : "Facebook",
  "parentProviderUserId" : "exampleFacebookUserId",
  "providerUserId" : "exampleFacebookFanpageId",
  "status" : "Running"
}
```

**Properties**

| Name             | Type   | Description                                                                       | Required or Optional | Available Version |
|------------------|--------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| managedAccountId | String | ID for this managed account in a third-party system (for example, Social Studio). | Required             | 44.0              |

| Name                     | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional                                                                                                                                                                                                   | Available Version |
|--------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| parentProvider<br>UserId | String | User ID of the user on the social network if the managed social account is a fan page (for example, a Facebook fan page).                                                                                                                                                                                                                                                                                             | Required when using Facebook for POST requests to <code>/connect/social-engagement/setup/managed-social-accounts</code> . Otherwise it is optional.                                                                    | 44.0              |
| providerUserId           | String | User ID of the user on the social network, or the Page ID of the page if the managed social account is a fan page.                                                                                                                                                                                                                                                                                                    | Required for POST requests to <code>/connect/social-engagement/setup/managed-social-accounts</code> . Optional for PATCH requests to <code>/connect/social-engagement/setup/managed-social-accounts/<b>id</b></code> . | 44.0              |
| socialNetwork            | String | Social network that this account belongs to. Values are: <ul style="list-style-type: none"> <li>Facebook</li> <li>Twitter</li> <li>Instagram (if your org supports it)</li> <li>YouTube (if your org supports it)</li> </ul> To see which networks are available on your org, check with your Salesforce representative.                                                                                              | Required for POST requests to <code>/connect/social-engagement/setup/managed-social-accounts</code> . Optional for PATCH requests to <code>/connect/social-engagement/setup/managed-social-accounts/<b>id</b></code> . | 44.0              |
| status                   | String | Status of this managed social account. Values are: <ul style="list-style-type: none"> <li>Running—Posts for this social account are being sent to your org.</li> <li>Stopped—Posts for this social account aren't being sent to your org.</li> </ul> Use this field to start and stop inbound activity for a given social account. Defaults to <code>Running</code> for a Social Customer Service Starter/Pro tenant; | Optional                                                                                                                                                                                                               | 44.0              |

| Name | Type | Description                                          | Required or Optional | Available Version |
|------|------|------------------------------------------------------|----------------------|-------------------|
|      |      | defaults to Stopped for a Full Social Studio tenant. |                      |                   |

|                |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | /managed-social-accounts.<br>Otherwise it is optional.                                                                                                                                                |                   |
| providerUserId | String | User ID of the user on the social network, or the Page ID of the page if the managed social account is a fan page.                                                                                                                                                                                                                                                                                                                                                                      | Required for POST requests to<br>/connect/social-engagement/setup/managed-social-accounts.<br>Optional for PATCH requests to<br>/connect/social-engagement/setup/managed-social-accounts/ <b>id</b> . | 44.0              |
| socialNetwork  | String | Social network that this account belongs to. Values are: <ul style="list-style-type: none"> <li>Facebook</li> <li>Twitter</li> <li>Instagram (if your org supports it)</li> <li>YouTube (if your org supports it)</li> </ul> To see which networks are available on your org, check with your Salesforce representative.                                                                                                                                                                | Required for POST requests to<br>/connect/social-engagement/setup/managed-social-accounts.<br>Optional for PATCH requests to<br>/connect/social-engagement/setup/managed-social-accounts/ <b>id</b> . | 44.0              |
| status         | String | Status of this managed social account. Values are: <ul style="list-style-type: none"> <li>Running—Posts for this social account are being sent to your org.</li> <li>Stopped—Posts for this social account aren't being sent to your org.</li> </ul> Use this field to start and stop inbound activity for a given social account. Defaults to <code>Running</code> for a Social Customer Service Starter/Pro tenant; defaults to <code>Stopped</code> for a Full Social Studio tenant. | Optional                                                                                                                                                                                              | 44.0              |

**Response body for GET and PATCH**[Managed Social Account Setup](#)**Response for DELETE**[204: Successful Delete](#)

## Social Engagement Terms of Service

Get and accept the terms of service. Make a PUT request to read the terms of service and then make a PATCH request to accept them.

**Resource**

```
/connect/social-engagement/terms-of-service
```

**Available version**

44.0–61.0

**HTTP methods**

PUT, PATCH

**Response body for PUT, PATCH**[Terms of Service](#)

## User Resources

Change the status of a conversation. Get, post, and crop a user photo. Get the most recent user status feed item. Update or delete user status.

**IN THIS SECTION:**[User Conversation Status](#)

Change the status of a conversation.

[User Photo](#)

Get, post, and crop a user photo.

[User Status](#)

Get the most recent user status feed item. Update or delete user status.

## User Conversation Status

Change the status of a conversation.

**Resource**

```
/chatter/users/me/conversations/conversationId/mark-read
```

**Available versions**

23.0–29.0

**Important:** In version 30.0 and later, use [User Conversations, Specific](#) to change the status of a conversation.**Requires Chatter**

Yes

**HTTP methods**

POST, PUT

**Request body****Root XML tag**

&lt;conversation&gt;

**Properties**

| Name | Type    | Description                                                                                     | Available Version |
|------|---------|-------------------------------------------------------------------------------------------------|-------------------|
| read | Boolean | Changes the conversation status to unread ( <code>false</code> ) or read ( <code>true</code> ). | 24.0              |

**Request parameters**

| Parameter Name | Type    | Description                                                                                     |
|----------------|---------|-------------------------------------------------------------------------------------------------|
| read           | Boolean | Changes the conversation status to unread ( <code>false</code> ) or read ( <code>true</code> ). |

**User Photo**

Get, post, and crop a user photo.

To use an image from the Files page as a user photo, pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter. Images uploaded on the User page don't have a file ID and can't be used as the `fileId`.

To upload a binary file as the user photo, you must send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

To display user profile photos in a feed, cache the user photos. Then use the `photoVersionId` property of the Photo response body to determine when you need to update a photo. This technique helps you avoid running over limits and may improve mobile client performance.

**Resource**`/chatter/users/userId/photo``/connect/communities/communityId/chatter/users/userId/photo`**Available since version**

23.0–34.0

**Important:** In version 35.0 and later, use `/connect/user-profiles/userId/photo`.**Requires Chatter**

Yes

**HTTP methods**

GET, POST

**Request body for POST****Root XML tag**

&lt;photo&gt;

**JSON example**

```
{
  "cropSize" : "120",
  "cropX" : "0",
  "cropY" : "0",
  "fileId" : "069D00000001IOh"
}
```

**Properties**

| Name          | Type    | Description                                                                                                                                                                                                                                                                                                                             | Required or Optional                                   | Available Version |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|-------------------|
| cropSize      | Integer | The length, in pixels, of any edge of the crop square.                                                                                                                                                                                                                                                                                  | Required to crop an uploaded file or an existing file. | 29.0              |
| cropX         | Integer | The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                 | Required to crop an uploaded file or an existing file. | 29.0              |
| cropY         | Integer | The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                  | Required to crop an uploaded file or an existing file. | 29.0              |
| fileId        | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.<br><br> <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. | Required to choose an existing file.                   | 25.0              |
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used.                                                                                                                                                                                                                                                        | Optional                                               | 25.0              |

**Request parameters for POST**

| Parameter Name | Type    | Description                                            | Required or Optional                                   | Available Version |
|----------------|---------|--------------------------------------------------------|--------------------------------------------------------|-------------------|
| cropSize       | Integer | The length, in pixels, of any edge of the crop square. | Required to crop an uploaded file or an existing file. | 29.0              |

| Parameter Name             | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                              | Required or Optional                                   | Available Version |
|----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|-------------------|
| <code>cropX</code>         | Integer | The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                                                                                                  | Required to crop an uploaded file or an existing file. | 29.0              |
| <code>cropY</code>         | Integer | The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                                                                                                   | Required to crop an uploaded file or an existing file. | 29.0              |
| <code>fileId</code>        | String  | <p>18 character ID of an existing file. **Request parameters for GET**

| Parameter Name        | Type    | Description                                                                                                                                                                                                                               | Optional or Required | Available Version |
|-----------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>filter</code>   | String  | A filter for the search results. One of these values: <ul style="list-style-type: none"> <li><code>Article</code>—Search results contain only articles.</li> <li><code>Question</code>—Search results contain only questions.</li> </ul>  | Optional             | 29.0              |
| <code>language</code> | String  | The language of the articles or questions. The value must be a Salesforce supported locale code. In an <code>&lt;apex:page&gt;</code> , the default value is the language of the page. Otherwise, the default value is the user's locale. | Optional             | 36.0              |
| <code>page</code>     | Integer | The page of items to return. The default value is 0, which returns the first page.                                                                                                                                                        | Optional             | 29.0              |
| <code>pageSize</code> | Integer | The number of items per page. Valid values are from 1 through 100. The default value is 20.                                                                                                                                               | Optional             | 29.0              |
| <code>q</code>        | String  | Required and can't be <code>null</code> . Specifies the string to search. The search string must                                                                                                                                          | Required             | 29.0              |

| Parameter Name | Type | Description                                                                               | Optional or Required | Available Version |
|----------------|------|-------------------------------------------------------------------------------------------|----------------------|-------------------|
|                |      | contain at least two characters, not including wildcards. See <a href="#">Wildcards</a> . |                      |                   |

## Retired Request Bodies

These request bodies are retired.

**IN THIS SECTION:**[Attachment Input: Canvas App](#)

Canvas app attachment input.

[Attachment Input: Existing Content](#)

Existing content attachment input.

[Attachment Input: Link](#)

Link attachment input.

[Attachment Input: New File Upload](#)

New file upload attachment input.

[Attachment Input: Feed Poll](#)

Feed poll attachment input.

[Datacloud Contact Import Input](#)

Input representation of the criteria for importing records as contacts or leads.

[Datacloud Order Input](#)

A list of Data.com identification numbers that are used to purchase contacts or companies by a specific user type.

[Feed Poll Input](#)

Feed poll input.

[Promotion Association Input](#)

Cart and its cart items before any promotion discounts are associated with them.

[Promotion Execution Input](#)

Cart and its items, with associated promotion discounts for the items.

[Social Customer Service Configuration Input](#)

Social Customer Service configuration options to save.

[Social Customer Service Message Type Settings Input](#)

Social Customer Service settings related to the behavior of specific message types.

[Social Customer Service Provider Settings Input](#)

Social Customer Service settings related to the behavior of specific social networks.

[Social Post Mass Approval Input](#)

List of social post IDs and the action to approve or reject publishing them.

## Attachment Input: Canvas App

Canvas app attachment input.

**Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Canvas Capability Input](#).

### XML

In XML request bodies, `attachmentType` is an attribute of the `<attachment>` element.

```
<attachment attachmentType="Canvas">
  <developerName>TravelApp</developerName>
</attachment>
```

### JSON

```
{ "attachment" :
  {
    "attachmentType" : "Canvas",
    "developerName" : "TravelApp",
    "namespacePrefix" : "dev_org",
    "parameters" : "{&quot;itinerary&quot;;&quot;123&quot;;}",
    "height" : "250px",
    "title" : "TravelItinerary",
  }
}
```

### Properties

| Name                         | Type   | Description                                                                                               | Available Version |
|------------------------------|--------|-----------------------------------------------------------------------------------------------------------|-------------------|
| <code>attachmentType</code>  | String | The attachment type. Must contain the value <code>Canvas</code> .                                         | 29.0–31.0         |
| <code>description</code>     | String | Optional. The description of the canvas app.                                                              | 29.0–31.0         |
| <code>developerName</code>   | String | The developer name (API name) of the canvas app                                                           | 29.0–31.0         |
| <code>height</code>          | String | Optional. The height of the canvas app in pixels. Default height is 200 pixels.                           | 29.0–31.0         |
| <code>namespacePrefix</code> | String | Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created. | 29.0–31.0         |
| <code>parameters</code>      | String | Optional. Parameters passed to the canvas app in JSON format. The JSON must be escaped.                   | 29.0–31.0         |
| <code>thumbnailUrl</code>    | String | Optional. The URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.         | 29.0–31.0         |
| <code>title</code>           | String | Optional. The title of the link used to call the canvas app.                                              | 29.0–31.0         |

## Attachment Input: Existing Content

Existing content attachment input.

 **Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Content Capability Input](#).

### XML

In XML request bodies, `attachmentType` is an attribute of the `<attachment>` element.

```
<attachment attachmentType="ExistingContent">
  <contentDocumentId>069...</contentDocumentId>
</attachment>
```

### JSON

```
{ "attachment":
  {
    "attachmentType": "ExistingContent",
    "contentDocumentId": "069D00000001FHF"
  }
}
```

### Properties

| Name                           | Type   | Description                                                                | Available Version |
|--------------------------------|--------|----------------------------------------------------------------------------|-------------------|
| <code>attachmentType</code>    | String | The attachment type. Must contain the value <code>ExistingContent</code> . | 27.0–31.0         |
| <code>contentDocumentId</code> | String | ID of the existing content                                                 | 23.0–31.0         |

## Attachment Input: Link

Link attachment input.

 **Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Link Capability Input](#).

### XML

The `attachmentType` property is an attribute of the `<attachment>` element. For example:

```
<attachment attachmentType="Link">
  <url>http://www.google.com</url>
  <urlName>A search engine</urlName>
</attachment>
```

### JSON

```
{ "attachment":
  {
    "attachmentType": "Link",
    "url": "https://salesforce.com",
    "urlName": "Salesforce"
  }
}
```

### Properties

| Name           | Type   | Description                                                                                      | Available Version |
|----------------|--------|--------------------------------------------------------------------------------------------------|-------------------|
| attachmentType | String | The attachment type. Must contain the value <code>Link</code> .                                  | 27.0–31.0         |
| url            | String | URL included in the attachment.                                                                  | 23.0–31.0         |
| urlName        | String | Optional. Name of the URL. If not provided, a name is generated from the domain name of the URL. | 23.0–31.0         |

## Attachment Input: New File Upload

New file upload attachment input.

 **Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Content Capability Input](#).

To upload a new file, provide the binary file in a multipart/form-data body part where `name="feedItemFileUpload"`. See [Uploading Binary Files](#).

### XML

The `attachmentType` property is an attribute of the `<attachment>` element. For example:

```
<attachment attachmentType="NewFile">
  <description>TPS Report (with cover)</description>
  <title>TPS.txt</title>
</attachment>
```

### JSON

```
{ "attachment":
  {
    "attachmentType": "NewFile",
    "description": "TPS Report (with cover)",
    "title": "TPS.txt"
  }
}
```

### Properties

| Name           | Type   | Description                                                        | Available Version |
|----------------|--------|--------------------------------------------------------------------|-------------------|
| attachmentType | String | The attachment type. Must contain the value <code>NewFile</code> . | 27.0–31.0         |
| desc           | String | Description of the file.                                           | 23.0–26.0         |

 **Attention:** This parameter should not be used as of version 27.0. Use `description` instead.

| Name        | Type   | Description                        | Available Version |
|-------------|--------|------------------------------------|-------------------|
| description | String | Optional. Description of the file. | 27.0–31.0         |
| title       | String | Title of the file.                 | 24.0–31.0         |

## Attachment Input: Feed Poll

Feed poll attachment input.

 **Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Poll Capability Input](#).

### XML

Note that in XML, the choices for the poll are each wrapped in a `<choice>` element and `attachmentType` is an attribute of the `<attachment>` element. For example:

```
<attachment attachmentType="Poll">
  <pollChoices>
    <choice>One</choice>
    <choice>Two</choice>
  </pollChoices>
</attachment>
```

### JSON

```
{ "attachment":
  {
    "attachmentType": "Poll",
    "pollChoices": [
      "Monday",
      "Tuesday"
    ]
  }
}
```

### Properties

| Name           | Type      | Description                                                     | Available Version |
|----------------|-----------|-----------------------------------------------------------------|-------------------|
| attachmentType | String    | The attachment type. Must contain the value <code>Poll</code> . | 27.0–31.0         |
| pollChoices    | String [] | A list of choices used in the feed poll.                        | 26.0–31.0         |

## Datacloud Contact Import Input

Input representation of the criteria for importing records as contacts or leads.

### Root XML tag

```
<DatacloudContactImportInput>
```

**JSON Example Add Contact**

To add the records as contacts, include a `parentAccountId`.

```
{
  "datacloudContactIds": [ 10344600,42701050,45995423 ],
  "parentAccountId": "09KR00000004C9rMAE"
}
```

**JSON Example Add Lead**

Without a `parentAccountId`, the records are added as leads.

```
{
  "datacloudContactIds": [ 10344600,42701050,45995423 ]
}
```

**Properties**

| Name                             | Type     | Description                                                                                                                                                                  | Required or Optional | Available Version |
|----------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>datacloudContactIds</code> | String[] | A list of the <code>contactIds</code> to import. There can be from 1 up to 200 <code>contactIds</code> in a comma-separated list. Requests with more than 200 contacts fail. | Required             | 36.0              |
| <code>parentAccountId</code>     | String   | The <code>accountId</code> for the selected account that is in your organization.                                                                                            | Optional             | 36.0              |

**Datacloud Order Input**

A list of Data.com identification numbers that are used to purchase contacts or companies by a specific user type.

**Root XML tag**

```
<DatacloudOrder>
```

**JSON example**

```
{
  "companyIds": [
    "23456",
    "24548"
  ],
  "userType": "Monthly"
}
```

**Properties**

| Name                    | Type   | Description                                                                                                                    | Required or Optional           | Available Version |
|-------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-------------------|
| <code>companyIds</code> | String | The list of companies to purchase. If <code>contactIds</code> are included with <code>companyIds</code> , your purchase fails. | Required to purchase companies | 32.0              |

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional          | Available Version |
|------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|-------------------|
| contactIds | String | The list of contacts to purchase. If <code>companyIds</code> are included with <code>contactIds</code> , your purchase fails.                                                                                                                                                                                                                                                                                                                                             | Required to purchase contacts | 32.0              |
| userType   | String | <p>The Data.com user type.</p> <ul style="list-style-type: none"> <li><code>Monthly</code>—A user type that's assigned monthly point limits for purchasing Data.com records. Only the assigned user can use monthly points. Points expire at the end of the month. Monthly is the default setting for <code>DatacloudUserType</code>.</li> <li><code>Listpool</code>—A user type that allows users to draw from a pool of points to purchase Data.com records.</li> </ul> | Optional                      | 32.0              |

## Feed Poll Input

Feed poll input.

 **Important:** This request body isn't available in version 32.0 and later. In version 32.0 and later, use [Poll Capability Input](#).

### Root XML tag

```
<feedPoll>
```

### Properties

| Name       | Type   | Description                                                                                                              | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------|-------------------|
| myChoiceId | String | ID of an existing choice on the feed poll. Used to specify the ID of the poll choice that the context user is voting on. | 26.0–31.0         |

## Promotion Association Input

Cart and its cart items before any promotion discounts are associated with them.

 **Important:** This request body isn't available in version 56.0 and later. In version 56.0 and later, use [Promotion Evaluation Input](#).

### Root XML tag

```
<salesTransaction>
```

### JSON example

```

}
```

### Properties

| Name                                  | Type    | Description                                                                                                                                                                                                                        | Required or Optional | Available Version |
|---------------------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>callbackUrl</code>              | String  | Callback URL used to generate tenant setup URL.                                                                                                                                                                                    | Optional             | 44.0              |
| <code>inboundApexHandlerId</code>     | String  | ID of the inbound Apex handler that is responsible for inserting any records as a result of inbound social data. Default value is <code>null</code> and uses the default inbound Apex handler provided by Social Customer Service. | Optional             | 44.0              |
| <code>inboundParentPostEnabled</code> | Boolean | Indicates whether the parent post of an inbound post should also be sent to your org. The parent post represents the social post that this post is replying to. Default value is <code>false</code> .                              | Optional             | 44.0              |

| Name                                | Type                                                              | Description                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|-------------------------------------|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| inboundProcessingConcurrencyEnabled | Boolean                                                           | Indicates whether your org allows concurrent processing of inbound social posts written by different people ( <code>true</code> ) or not ( <code>false</code> ). Social posts written by the same person are processed one at a time instead of simultaneously. Default value is <code>false</code> . | Optional             | 53.0              |
| providerSettings                    | <a href="#">Social Customer Service Provider Settings Input[]</a> | List of Social Customer Service settings related to the behavior of specific social networks.                                                                                                                                                                                                         | Optional             | 45.0              |
| runAsUserId                         | String                                                            | ID of the user that is executing your inbound Apex handler. Default value is the ID of the context user.                                                                                                                                                                                              | Optional             | 44.0              |
| socialPublishingApprovalEnabled     | Boolean                                                           | Indicates whether some agents require approval to publish on social networks. Default value is <code>false</code> .                                                                                                                                                                                   | Optional             | 44.0              |

## Social Customer Service Message Type Settings Input

Social Customer Service settings related to the behavior of specific message types.

### Root XML tag

```
<SocialCustomerServiceMessageTypeSettings>
```

### JSON example

```
{
  "enable" : true,
  "messageType" : "PrivateMessage"
}
```

### Properties

| Name        | Type    | Description                                                                                                                | Required or Optional | Available Version |
|-------------|---------|----------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| enable      | Boolean | Specifies whether to send the message type to Social Customer Service ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 45.0              |
| messageType | String  | Specifies the message type, such as <code>PrivateMessage</code> .                                                          | Required             | 45.0              |

### IN THIS SECTION:

#### [Datacloud Company](#)

The Data.com company record. If you own a company record, you see all the fields. If you don't own the company record, some fields are hidden by asterisks (\*\*).

#### [Datacloud Company Collection](#)

Purchase details for all companies that were purchased for a specific order.

#### [Datacloud Contact](#)

Information about Data.com contacts. If you own a contact, you see all the fields. If you don't own the contact record, some fields are hidden by asterisks (\*\*).

#### [Datacloud Contact Collection](#)

Purchase details for all contacts that were purchased for a specific order.

#### [Datacloud Import](#)

Represents the Data.com contact import response.

#### [Datacloud Import Status](#)

Represents the status for each `contactId` for this request.

#### [Datacloud Order](#)

Information about the Data.com records that you purchased and details of the purchase.

#### [Datacloud Purchase Usage](#)

Information about the Data.com purchase usage for an organization. Shows the credits that are used and available for Monthly and Listpool users.

#### [Feed Item Attachment: Approval](#)

An approval attachment.

#### [Feed Item Attachment: Basic Template](#)

Basic template feed item attachment.

#### [Feed Item Attachment: Canvas Template](#)

Canvas template feed item attachment.

#### [Feed Item Attachment: Case Comment](#)

Case comment feed item attachment.

#### [Feed Item Attachment: Content](#)

Content feed item attachment.

#### [Feed Item Attachment: Dashboard](#)

Dashboard feed item attachment.

[Feed Item Attachment: Email Message](#)

An email message sent from a case record in Case Feed.

[Feed Item Attachment: Link](#)

Link feed item attachment.

[Feed Item Attachment: Poll](#)

Poll feed item attachment.

[Feed Item Attachment: Record Snapshot](#)

Record snapshot feed item attachment.

[Feed Item Attachment: Tracked Change](#)

Tracked change feed item attachment.

[Feed Item Page](#)

Chatter feed item page.

[Feed Item Topics](#)

Feed item topics.

[Non-Entity Recommendation](#)

A recommendation for a non-Salesforce entity, such as an application.

[Promotion Association](#)

Promotion associated with cart items.

[Promotion Association Collection](#)

Collection of promotion associations.

[Promotion Execution](#)

Promotion discounts applied to a cart and its items.

[Social Account](#)

A social account on a social network.

[Social Account Relationship](#)

Follow relationship between a managed social account and a social persona.

[Social Customer Service Configuration](#)

The current configuration of Social Customer Service.

[Social Customer Service Message Type Settings](#)

Social Customer Service settings related to the behavior of specific message types.

[Social Customer Service Provider Settings](#)

Social Customer Service settings related to the behavior of specific social networks.

[Social Post Capability](#)

If a feed element has this capability, it can interact with a social post on a social network.

[Social Post Intents](#)

Intents available for a social post.

[Social Post Mass Approval](#)

Approval or rejection of a large number of social posts.

[Social Post Status](#)

The status of a social post.

[Zone](#)

A Chatter Answers zone.

[Zone Page](#)

A page of Chatter Answers zones.

[Zone Search Page](#)

A page of results from a search within a Chatter Answers zone.

[Zone Search Result](#)

The result of a search within a Chatter Answers zone.

## Datacloud Company

The Data.com company record. If you own a company record, you see all the fields. If you don't own the company record, some fields are hidden by asterisks (\*\*\*).

| Property Name  | Type                    | Description                                                                                                                             | Filter Group and Version | Available Version |
|----------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| activeContacts | Integer                 | The number of active contacts that the company has.                                                                                     | Small, 32.0              | 32.0              |
| address        | <a href="#">Address</a> | The address of the company.                                                                                                             | Small, 32.0              | 32.0              |
| annualRevenue  | Double                  | The amount of money that the company makes in one year.                                                                                 | Small, 32.0              | 32.0              |
| companyId      | String                  | The unique numerical identifier for the company.                                                                                        | Small, 32.0              | 32.0              |
| description    | String                  | The description of the company.                                                                                                         | Small, 32.0              | 32.0              |

## Datacloud Contact Collection

Purchase details for all contacts that were purchased for a specific order.

| Property Name  | Type                                 | Description                                                      | Filter Group and Version | Available Version |
|----------------|--------------------------------------|------------------------------------------------------------------|--------------------------|-------------------|
| contacts       | <a href="#">Datacloud Contact</a> [] | A list of all the contacts for a specific <code>orderId</code> . | Small, 32.0              | 32.0              |
| currentPageUrl | String                               | The current page of contacts.                                    | Medium, 32.0             | 32.0              |

| Property Name   | Type    | Description                                                                                                                                                          | Filter Group and Version | Available Version |
|-----------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| nextPageUrl     | String  | The URL to the next page of contacts. If there's only one page of contacts, the value is null.                                                                       | Small, 32.0              | 32.0              |
| previousPageUrl | String  | The URL to the previous page of contacts. The value is null when there's only one page of contacts.                                                                  | Medium, 32.0             | 32.0              |
| total           | Integer | Number of contacts that are associated with this order. The total number of contacts can be greater than the number of contacts that are displayed on a single page. | Small, 32.0              | 32.0              |

## Datacloud Import

Represents the Data.com contact import response.

| Property Name              | Type                                      | Description                                                                                                                                                                                  | Filter Group and Version | Available Version |
|----------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| duplicatesSkippedCount     | Integer                                   | The number of duplicate records blocked from being added.                                                                                                                                    | Small, 36.0              | 35.0              |
| errorCount                 | Integer                                   | The number of errors generated for this response.                                                                                                                                            | Small, 36.0              | 35.0              |
| errorMessageDescriptionUrl | String                                    | The URL to the error message for this response.                                                                                                                                              | Small, 36.0              | 35.0              |
| importStatus               | <a href="#">Datacloud Import Status[]</a> | The status of this response.                                                                                                                                                                 | Small, 36.0              | 35.0              |
| orgAllowsDuplicates        | Boolean                                   | Indicates whether duplicate rules are turned on for the organization. True means that the organization accepts duplicate records, and false means the organization blocks duplicate records. | Small, 36.0              | 35.0              |
| successCount               | Integer                                   | The number of contacts successfully added to the organization.                                                                                                                               | Small, 36.0              | 35.0              |

## Datacloud Import Status

Represents the status for each `contactId` for this request.

| Property Name | Type   | Description                                                                                                                                                             | Filter Group and Version | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| datacloudId   | String | The contact's ID. Each <code>contactId</code> is a unique numeric value.                                                                                                | Small, 36.0              | 35.0              |
| importStatus  | String | The import status for each contact listed in the request. Values are: <ul style="list-style-type: none"> <li>• Duplicate</li> <li>• Error</li> <li>• Success</li> </ul> | Small, 36.0              | 35.0              |

## Feed Item Attachment: Canvas Template

Canvas template feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Canvas Capability](#) is used.

| Property        | Type                 | Description                                                                                               | Filter Type and Version | Available Version |
|-----------------|----------------------|-----------------------------------------------------------------------------------------------------------|-------------------------|-------------------|
| description     | String               | Optional. Description of the canvas app. The maximum length of this field is 500 characters.              | Small, 29.0             | 29.0–31.0         |
| developerName   | String               | The developer name (API name) of the canvas app                                                           | Small, 29.0             | 29.0–31.0         |
| height          | String               | Optional. The height of the canvas app in pixels. Default height is 200 pixels.                           | Small, 29.0             | 29.0–31.0         |
| icon            | <a href="#">Icon</a> | The canvas app icon                                                                                       | Small, 29.0             | 29.0–31.0         |
| namespacePrefix | String               | Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created. | Small, 29.0             | 29.0–31.0         |
| parameters      | String               | Optional. Parameters passed to the canvas app in JSON format. Example: <pre>{ 'isUpdated'='true' }</pre>  | Small, 29.0             | 29.0–31.0         |

| Property     | Type   | Description                                                                                       | Filter Type and Version | Available Version |
|--------------|--------|---------------------------------------------------------------------------------------------------|-------------------------|-------------------|
| thumbnailUrl | String | Optional. The URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels. | Small, 29.0             | 29.0–31.0         |
| title        | String | The title of the link used to call the canvas app                                                 | Small, 29.0             | 29.0–31.0         |
| type         | String | Canvas                                                                                            | Small, 29.0             | 29.0–31.0         |

## Feed Item Attachment: Case Comment

Case comment feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Case Comment Capability](#) is used.

| Property    | Type                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |

## Feed Item Attachment: Content

Content feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Content Capability](#) is used.

| Property                     | Type    | Description                                                                                | Filter Group and Version | Available Version |
|------------------------------|---------|--------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>checkSum</code>        | String  | MD5 checksum for the file.                                                                 | Small, 29.0              | 26.0–31.0         |
| <code>contentUrl</code>      | String  | URL for link files and Google Docs; otherwise the value is <code>null</code> .             | Small, 31.0              | 31.0–31.0         |
| <code>description</code>     | String  | Description of the attachment.                                                             | Small, 29.0              | 23.0–31.0         |
| <code>downloadUrl</code>     | String  | File's URL. This value is <code>null</code> if the content is a link or a Google Doc.      | Small, 29.0              | 23.0–31.0         |
| <code>fileExtension</code>   | String  | Extension of the file.                                                                     | Small, 29.0              | 26.0–31.0         |
| <code>fileSize</code>        | String  | Size of the file in bytes. If size cannot be determined, returns <code>unknown</code> .    | Small, 29.0              | 23.0–31.0         |
| <code>fileType</code>        | String  | Type of file.                                                                              | Small, 29.0              | 23.0–31.0         |
| <code>hasImagePreview</code> | Boolean | <code>true</code> if the file has a preview image available, <code>false</code> otherwise. | Small, 29.0              | 23.0–29.0         |
| <code>hasPdfPreview</code>   | Boolean | <code>true</code> if the file has a PDF preview available, <code>false</code> otherwise.   | Small, 29.0              | 23.0–31.0         |
| <code>id</code>              | String  | 18-character ID of the content.                                                            | Small, 29.0              | 23.0–31.0         |

| Property                                       | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                  | Filter Group and Version | Available Version |
|------------------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isInMyFileSync</code>                    | Boolean | <p><code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.</p> <p> <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.</p>                                                                                                                                            | Small, 29.0              | 26.0–31.0         |
| <code>mimeType</code>                          | String  | MIME type content of the file.                                                                                                                                                                                                                                                                                                                                                                               | Small, 29.0              | 23.0–31.0         |
| <code>renditionUrl</code>                      | String  | URL to the rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.                                                                                                                                                   | Small, 29.0              | 26.0–31.0         |
| <code>renditionUrl<br/>240By180</code>         | String  | URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.                                                                                                                                         | Small, 30.0              | 30.0–31.0         |
| <code>renditionUrl<br/>720By480</code>         | String  | URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.                                                                                                                                         | Small, 30.0              | 30.0–31.0         |
| <code>textPreview</code>                       | String  | Text preview of the file if available; <code>null</code> otherwise.                                                                                                                                                                                                                                                                                                                                          | Big, 30.0                | 30.0–31.0         |
| <code>thumb120By90<br/>RenditionStatus</code>  | String  | <p>Specifies the rendering status of the 120 x 90 preview image of the file. One of these values:</p> <ul style="list-style-type: none"> <li>• <code>Processing</code>—Image is being rendered.</li> <li>• <code>Failed</code>—Rendering process failed.</li> <li>• <code>Success</code>—Rendering process was successful.</li> <li>• <code>Na</code>—Rendering is not available for this image.</li> </ul>  | Medium, 30.0             | 30.0–31.0         |
| <code>thumb240By180<br/>RenditionStatus</code> | String  | <p>Specifies the rendering status of the 240 x 180 preview image of the file. One of these values:</p> <ul style="list-style-type: none"> <li>• <code>Processing</code>—Image is being rendered.</li> <li>• <code>Failed</code>—Rendering process failed.</li> <li>• <code>Success</code>—Rendering process was successful.</li> <li>• <code>Na</code>—Rendering is not available for this image.</li> </ul> | Medium, 30.0             | 30.0–31.0         |
| <code>thumb720By480<br/>RenditionStatus</code> | String  | <p>Specifies the rendering status of the 720 x 480 preview image of the file. | versionId | String | 18-character ID of this version of the content.                                                                                                    | Medium, 29.0             | 23.0–31.0         |

## Feed Item Attachment: Dashboard

Dashboard feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Dashboard Component Snapshot Capability](#) is used.

| Property                       | Type                         | Description                                                                                                                                                                                          | Filter Group and Version | Available Version |
|--------------------------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| componentId                    | String                       | 18-character ID of the component.                                                                                                                                                                    | Small, 29.0              | 24.0–31.0         |
| componentName                  | String                       | Name of the component. If no name is saved with the component, returns the localized string, "Untitled Component."                                                                                   | Small, 29.0              | 24.0–31.0         |
| dashboard<br>BodyText          | String                       | Text that should be displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null. | Small, 29.0              | 24.0–31.0         |
| dashboardId                    | String                       | 18-character ID of the dashboard.                                                                                                                                                                    | Small, 29.0              | 24.0–31.0         |
| dashboardName                  | String                       | Name of the dashboard.                                                                                                                                                                               | Small, 29.0              | 24.0–31.0         |
| fullSize<br>ImageUrl           | String                       | URL of the full-sized dashboard image.                                                                                                                                                               | Small, 29.0              | 24.0–31.0         |
| lastRefresh<br>Date            | String                       | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z of when this dashboard was last refreshed.                                                                                               | Small, 29.0              | 24.0–31.0         |
| lastRefreshDate<br>DisplayText | String                       | The text of the last refresh date to be displayed, such as, "Last refreshed on October 31, 2011."                                                                                                    | Small, 29.0              | 24.0–31.0         |
| runningUser                    | <a href="#">User Summary</a> | The user running the dashboard.                                                                                                                                                                      | Small, 29.0              | 24.0–31.0         |
| thumbnailUrl                   | String                       | URL of the thumbnail-sized dashboard image.                                                                                                                                                          | Small, 29.0              | 24.0–31.0         |
| type                           | String                       | DashboardComponent                                                                                                                                                                                   | Small, 29.0              | 27.0–31.0         |

## Feed Item Attachment: Email Message

An email message sent from a case record in Case Feed.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Email Message Capability](#) is used.

| Property       | Type                             | Description                                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|----------------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| direction      | String                           | The direction of the email message. One of these values: <ul style="list-style-type: none"><li>Inbound—An inbound message (sent by a customer).</li><li>Outbound—An outbound message (sent to a customer by a support agent).</li></ul> | Small, 29.0              | 29.0–31.0         |
| emailMessageId | String                           | ID of the email message                                                                                                                                                                                                                 | Small, 29.0              | 29.0–31.0         |
| subject        | String                           | Subject of the email message                                                                                                                                                                                                            | Small, 29.0              | 29.0–31.0         |
| textBody       | String                           | Body of the email message                                                                                                                                                                                                               | Big, 29.0                | 29.0–31.0         |
| toAddresses    | <a href="#">Email Address</a> [] | Collection of addresses to receive the email message                                                                                                                                                                                    | Small, 29.0              | 29.0–31.0         |
| type           | String                           | Emailmessage                                                                                                                                                                                                                            | Small, 29.0              | 27.0–31.0         |

## Feed Item Attachment: Link

Link feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Link Capability](#) is used.

| Property | Type   | Description                                       | Filter Group and Version | Available Version |
|----------|--------|---------------------------------------------------|--------------------------|-------------------|
| title    | String | Description of the link                           | Small, 29.0              | 23.0–31.0         |
| type     | String | Link                                              | Small, 29.0              | 27.0–31.0         |
| url      | String | URL attached to the feed item (could be external) | Small, 29.0              | 23.0–31.0         |

## Feed Item Attachment: Poll

Poll feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Poll Capability](#) is used.

| Property | Type                                | Description                                           | Filter Group and Version | Available Version |
|----------|-------------------------------------|-------------------------------------------------------|--------------------------|-------------------|
| choices  | <a href="#">Feed Poll Choice</a> [] | Collection of feed poll choices that make up the poll | Small, 29.0              | 26.0–31.0         |

| Property       | Type    | Description                                                                                                                                      | Filter Group and Version | Available Version |
|----------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| myChoiceId     | String  | 18-character ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user hasn't voted. | Small, 29.0              | 26.0–31.0         |
| totalVoteCount | Integer | Total number of votes cast on the feed poll item                                                                                                 | Small, 29.0              | 26.0–31.0         |
| type           | String  | Poll                                                                                                                                             | Small, 29.0              | 27.0–31.0         |

## Feed Item Attachment: Record Snapshot

Record snapshot feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Record Snapshot Capability](#) is used.

| Property   | Type                        | Description                   | Filter Group and Version | Available Version |
|------------|-----------------------------|-------------------------------|--------------------------|-------------------|
| recordView | <a href="#">Record View</a> | A representation of a record. | Small, 29.0              | 29.0–31.0         |
| type       | String                      | RecordSnapshot                | Small, 29.0              | 29.0–31.0         |

## Feed Item Attachment: Tracked Change

Tracked change feed item attachment.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Tracked Changes Capability](#) is used.

| Property | Type                                  | Description                         | Filter Group and Version | Available Version |
|----------|---------------------------------------|-------------------------------------|--------------------------|-------------------|
| changes  | <a href="#">Feed Tracked Change[]</a> | Collection of feed tracked changes. | Small, 29.0              | 29.0–31.0         |
| type     | String                                | TrackedChange                       | Small, 29.0              | 29.0–31.0         |

## Feed Item Page

Chatter feed item page.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Feed Element Page](#) is used.

| Property       | Type   | Description                           | Filter Group and Version | Available Version |
|----------------|--------|---------------------------------------|--------------------------|-------------------|
| currentPageUrl | String | URL to the current page of feed items | Medium, 29.0             | 23.0–31.0         |

| Property                     | Type                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Filter Group and Version | Available Version |
|------------------------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>isModifiedToken</code> | String                       | An opaque polling token that describes when a news feed was last modified. Use this value as the <code>since</code> request parameter of the <a href="#">News Feed Is-Modified</a> resource.<br><br> <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.                                     | Medium, 29.0             | 27.0–31.0         |
| <code>isModifiedUrl</code>   | String                       | A <a href="#">News Feed Is-Modified</a> resource with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if feed is not a news feed.<br><br> <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants. | Medium, 29.0             | 23.0–31.0         |
| <code>items</code>           | <a href="#">Feed Item</a> [] | Collection of one or more feed items                                                                                                                                                                                                                                                                                                                                                                                                                                         | Small, 29.0              | 23.0–31.0         |
| <code>nextPageUrl</code>     | String                       | URL to the next page of feed items                                                                                                                                                                                                                                                                                                                                                                                                                                           | Small, 29.0              | 23.0–31.0         |
| <code>updatesToken</code>    | String                       | Token to use in an <code>updatedSince</code> parameter, or <code>null</code> if not available.                                                                                                                                                                                                                                                                                                                                                                               | Big, 30.0                | 30.0–31.0         |
| <code>updatesUrl</code>      | String                       | A Connect REST API resource with a query string containing the value of the <code>updatesToken</code> property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is <code>null</code> if not available.                                                                                                                                                                                    | Big, 30.0                | 30.0–31.0         |

## Feed Item Topics

Feed item topics.

 **Important:** This response body isn't available in version 32.0 and later. In version 32.0 and later, [Topics Capability](#) is used.

| Property                     | Type                     | Description                                                                                 | Filter Group and Version | Available Version |
|------------------------------|--------------------------|---------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>canAssignTopics</code> | Boolean                  | <code>true</code> if a topic can be assigned to the feed item, <code>false</code> otherwise | Small, 29.0              | 28.0–31.0         |
| <code>topics</code>          | <a href="#">Topic</a> [] | Collection of topics                                                                        | Small, 29.0              | 28.0–31.0         |

## Non-Entity Recommendation

A recommendation for a non-Salesforce entity, such as an application.

This response body isn't available in version 34.0 and later. In version 34.0 and later, the [Chatter Recommendation](#) response body is used for all recommendations.

| Property Name      | Type                                | Description                                                                                                                                                                                                   | Filter Group and Version | Available Version |
|--------------------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| displayLabel       | String                              | Localized label of the non-entity object.                                                                                                                                                                     | Small, 32.0              | 32.0              |
| explanation        | <a href="#">Explanation Summary</a> | The recommendation explanation.                                                                                                                                                                               | Big, 29.0                | 23.0              |
| motif              | <a href="#">Motif</a>               | Motif for the non-entity object.                                                                                                                                                                              | Small, 32.0              | 32.0              |
| recommendationType | String                              | Specifies the type of record being recommended. <ul style="list-style-type: none"><li>• apps</li><li>• articles</li><li>• files</li><li>• groups</li><li>• records</li><li>• topics</li><li>• users</li></ul> | Small, 32.0              | 32.0              |

## Promotion Association

Promotion associated with cart items.

 **Important:** This response body isn't available in version 56.0 and later. In version 56.0 and later, use [Promotion Evaluation](#).

| Property Name    | Type                                | Description               | Filter Group and Version | Available Version |
|------------------|-------------------------------------|---------------------------|--------------------------|-------------------|
| promotion        | <a href="#">Promotion</a>           | Promotion.                | Small, 53.0              | 53.0              |
| promotionTargets | <a href="#">Promotion Target</a> [] | Set of promotion targets. | Small, 53.0              | 53.0              |

## Promotion Association Collection

Collection of promotion associations.

| Property Name         | Type                                     | Description                     | Filter Group and Version | Available Version |
|-----------------------|------------------------------------------|---------------------------------|--------------------------|-------------------|
| promotionAssociations | <a href="#">Promotion Association</a> [] | List of promotion associations. | Small, 53.0              | 53.0              |

## Promotion Execution

Promotion discounts applied to a cart and its items.

 **Important:** This response body isn't available in version 56.0 and later. In version 56.0 and later, use [Promotion Evaluation](#).

| Property Name    | Type                | Description                                                                      | Filter Group and Version | Available Version |
|------------------|---------------------|----------------------------------------------------------------------------------|--------------------------|-------------------|
| salesTransaction | Map<String, Object> | Map of discounts applied to a cart and the specific discount for each cart item. | 53.0                     | 53.0              |

## Social Account

A social account on a social network.

| Property Name           | Type   | Description                                                                          | Filter Group and Version | Available Version |
|-------------------------|--------|--------------------------------------------------------------------------------------|--------------------------|-------------------|
| externalSocialAccountId | String | ID of the external social account, if available.                                     | Small, 38.0              | 38.0              |
| handle                  | String | Social handle, screen name, or alias that identifies this account.                   | Small, 36.0              | 36.0              |
| name                    | String | Name of the account as defined by the account's owner.                               | Small, 36.0              | 36.0              |
| profileUrl              | String | URL to the account's profile.                                                        | Small, 36.0              | 36.0              |
| socialPersonaId         | String | ID of the social persona account, if the external social account ID isn't available. | Small, 39.0              | 39.0              |

## Social Account Relationship

Follow relationship between a managed social account and a social persona.

| Property Name   | Type    | Description                                                             | Filter Group and Version | Available Version |
|-----------------|---------|-------------------------------------------------------------------------|--------------------------|-------------------|
| isFollowed      | Boolean | Specifies whether the social account is followed by the social persona. | Small, 46.0              | 46.0              |
| isFollowing     | Boolean | Specifies whether the social account is following the social persona.   | Small, 46.0              | 46.0              |
| socialAccountId | String  | ID of the social account.                                               | Small, 46.0              | 46.0              |
| socialPersonaId | String  | ID of the social persona.                                               | Small, 46.0              | 46.0              |

## Social Customer Service Configuration

The current configuration of Social Customer Service.

| Property Name                                    | Type                                                        | Description                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
|--------------------------------------------------|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>inboundApexHandlerId</code>                | String                                                      | ID of the Apex class that handles inbound social data.                                                                                                                                                                                                          | Small, 44.0              | 44.0              |
| <code>isAllFBResponseAccountsEnabled</code>      | Boolean                                                     | Indicates whether the org has access to all Facebook accounts when responding to a post ( <code>true</code> ) or just the Facebook account that the post was sent to ( <code>false</code> ).                                                                    | Small, 55.0              | 55.0              |
| <code>isInboundParentPostEnabled</code>          | Boolean                                                     | Indicates whether a social post's parent is sent to this org.                                                                                                                                                                                                   | Small, 44.0              | 44.0              |
| <code>inboundProcessingConcurrencyEnabled</code> | Boolean                                                     | Indicates whether your org allows concurrent processing of inbound social posts written by different people ( <code>true</code> ) or not ( <code>false</code> ). Social posts written by the same person are processed one at a time instead of simultaneously. | Small, 53.0              | 53.0              |
| <code>isPackageInstalled</code>                  | Boolean                                                     | Indicates whether a Social Customer Service package is installed to this org.                                                                                                                                                                                   | Small, 44.0              | 44.0              |
| <code>isSocialPublishingApprovalEnabled</code>   | Boolean                                                     | Indicates whether some agents require approval before publishing social posts.                                                                                                                                                                                  | Small, 44.0              | 44.0              |
| <code>isTenantConnectionValid</code>             | Boolean                                                     | Indicates whether the tenant connection is valid. This value is <code>true</code> if we're able to connect to Social Studio and <code>false</code> if you must reauthenticate to Social Studio using the <code>setupTenantUrl</code> response parameter.        | Small, 44.0              | 40.0              |
| <code>managedSocialAccountCount</code>           | Integer                                                     | Current number of social accounts that this org has.                                                                                                                                                                                                            | Small, 44.0              | 44.0              |
| <code>managedSocialAccountLimit</code>           | Integer                                                     | Maximum number of social accounts that this org is allowed to have.                                                                                                                                                                                             | Small, 44.0              | 44.0              |
| <code>providerSettings</code>                    | <a href="#">Social Customer Service Provider Settings[]</a> | List of Social Customer Service settings related to the behavior of specific social networks.                                                                                                                                                                   | Small, 45.0              | 45.0              |
| <code>runAsUserId</code>                         | String                                                      | ID of the context user.                                                                                                                                                                                                                                         | Small, 44.0              | 44.0              |
| <code>setupTenantUrl</code>                      | String                                                      | Setup tenant URL used to direct the user's browser to authorize their tenant.                                                                                                                                                                                   | Small, 44.0              | 40.0              |
| <code>tenantType</code>                          | String                                                      | Type of tenant in this org (for example, Starter). Null if no tenant is configured.                                                                                                                                                                             | Small, 44.0              | 44.0              |

## Social Customer Service Message Type Settings

Social Customer Service settings related to the behavior of specific message types.

| Property Name | Type    | Description                                                                                                                | Filter Group and Version | Available Version |
|---------------|---------|----------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| isEnabled     | Boolean | Specifies whether the message type is sent to Social Customer Service ( <code>true</code> ) or not ( <code>false</code> ). | Small, 45.0              | 45.0              |
| messageType   | String  | Specifies the message type, such as <code>PrivateMessage</code> .                                                          | Small, 45.0              | 45.0              |

## Zone

A Chatter Answers zone.

| Property         | Type    | Description                                               | Filter Group and Version | Available Version |
|------------------|---------|-----------------------------------------------------------|--------------------------|-------------------|
| description      | String  | The description of the zone.                              | Big, 29.0                | 29.0              |
| id               | String  | The zone ID.                                              | Small, 29.0              | 29.0              |
| isActive         | Boolean | Indicates that the zone is active.                        | Small, 29.0              | 29.0              |
| isChatterAnswers | Boolean | Indicates that the zone is available for Chatter Answers. | Small, 29.0              | 29.0              |
| name             | String  | Name of the zone.                                         | Small, 29.0              | 29.0              |
| url              | String  | Connect REST API resource URL to the zone.                | Small, 30.0              | 30.0              |

| Property     | Type   | Description                                                                                                                                                                                                                       | Filter Group and Version | Available Version |
|--------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| visibility   | String | Zone visibility type. One of these values: <ul style="list-style-type: none"> <li>Community—Available in an Experience Cloud site.</li> <li>Internal—Available internally only.</li> <li>Portal—Available in a portal.</li> </ul> | Small, 29.0              | 29.0              |
| visibilityId | String | If the zone is available in a site, this property contains the ID of the site. If the zone is available to all sites, this property contains the value <code>All</code> .                                                         | Small, 29.0              | 29.0              |

## Zone Page

A page of Chatter Answers zones.

| Property       | Type                    | Description                                                                                      | Filter Group and Version | Available Version |
|----------------|-------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| zones          | <a href="#">Zone</a> [] | Collection of one or more zones                                                                  | Small, 29.0              | 29.0              |
| currentPageUrl | String                  | Connect REST API URL identifying the current page.                                               | Medium, 29.0             | 29.0              |
| nextPageUrl    | String                  | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page. | Small, 29.0              | 29.0              |

## Zone Search Page

A page of results from a search within a Chatter Answers zone.

| Property         | Type                                   | Description                                                                                      | Filter Group and Version | Available Version |
|------------------|----------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| currentPageToken | String                                 | Token identifying the current page.                                                              | Medium, 29.0             | 29.0              |
| currentPageUrl   | String                                 | Connect REST API URL identifying the current page.                                               | Medium, 29.0             | 29.0              |
| items            | <a href="#">Zone Search Results</a> [] | Collection of search results                                                                     | Small, 29.0              | 29.0              |
| currentPageToken | String                                 | Token identifying the next page, or <code>null</code> if there isn't a next page.                | Small, 29.0              | 29.0              |
| nextPageUrl      | String                                 | Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page. | Small, 29.0              | 29.0              |

## Zone Search Result

The result of a search within a Chatter Answers zone.

| Property      | Type    | Description                                                                                                                                                                                                                         | Filter Group and Version | Available Version |
|---------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| hasBestAnswer | Boolean | Indicates whether or not the search result has a best answer                                                                                                                                                                        | Small, 29.0              | 29.0              |
| id            | String  | ID of the search result. The search result can be a question or an article.                                                                                                                                                         | Small, 29.0              | 29.0              |
| title         | String  | Title of the search result                                                                                                                                                                                                          | Small, 29.0              | 29.0              |
| type          | String  | Type of the search result. One of these values: <ul style="list-style-type: none"><li>• <code>Article</code>—Search results contain only articles.</li><li>• <code>Question</code>—Search results contain only questions.</li></ul> | Small, 29.0              | 29.0              |
| voteCount     | String  | Number of votes given to the search result                                                                                                                                                                                          | Small, 29.0              | 29.0              |
