Get information about files posted to groups that the specified user is a member of.

**Resource**

```
/connect/files/users/userId/filter/groups
```

```
/connect/communities/communityId/files/users/userId/filter/groups
```

**Available since version**

36.0

In versions 24.0–35.0, use `/chatter/users/userId/files/filter/groups` and `/connect/communities/communityId/chatter/users/userId/files/filter/groups`, which require Chatter.

**HTTP methods**

GET or HEAD

**Request parameters**

| Parameter Name | Type    | Description                                                                                                                                                                      | Available Since |
|----------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                                                                                     | 24.0            |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                     | 24.0            |
| q              | String  | A query string to filter the results. The string must contain at least two characters, not including wildcards. For information about wildcards, see <a href="#">Wildcards</a> . | 27.0            |

## User Files, Filtered by Sharing

Get information about files that have been shared with the specified user.

**Resource**

```
/connect/files/users/userId/filter/shared-with-me
```

```
/connect/communities/communityId/files/users/userId/filter/shared-with-me
```

**Note:** The resource can also be accessed with the final keyword as one word, `sharedwithme`.

**Available since version**

36.0

In versions 24.0–36.0, use `/chatter/users/userId/files/filter/shared-with-me` and `/connect/communities/communityId/chatter/users/userId/files/filter/shared-with-me`, which require Chatter.

**HTTP methods**

GET or HEAD

**Request parameters**

| Parameter Name | Type    | Description                                                                                                                                                                      | Available Since |
|----------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                                                                                     | 24.0            |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                     | 24.0            |
| q              | String  | A query string to filter the results. The string must contain at least two characters, not including wildcards. For information about wildcards, see <a href="#">Wildcards</a> . | 27.0            |

## Chatter REST API Resources

---

These REST API resources require Chatter and can have different rate limit allocations.

Rate limits for Chatter REST API resources can be different from other Connect REST API resources. Chatter REST API resources have a per user, per application, per hour rate limit. When you exceed the rate limit, Chatter REST API resources return a 503 Service Unavailable error code.

For Connect REST API resources, see [Connect REST API Resources](#).

**IN THIS SECTION:**

[Announcements Resources](#)

Get the announcements for the specified parent or create an announcement. Also get information about, update, or delete an announcement.

[Chatter Resources](#)

Get a directory of Chatter feeds, groups, and users resources. Control when Chatter email digests are sent. Get a list of supported emojis. Get extensions. Get link metadata. Get information about, update, and delete Chatter streams.

[Comments Resources](#)

Get information about, edit, like, upvote, verify, or delete a comment. Determine whether the context user can edit a comment.

[Custom Recommendation Audience Resources](#)

Target specific audiences for your custom recommendations. Use these resources to get information about, create, update, and delete recommendation audiences.

[Custom Recommendation Definition Resources](#)

Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more. Use these resources to get information about, create, modify, and delete recommendation definitions. Also get information about, upload, modify, and delete recommendation definition photos.

[Dashboard Component Snapshot Resource](#)

A snapshot of a dashboard component.

[Experience Cloud Sites Chatter Moderation Resources](#)

Get information about whether a user has flagged a feed element or comment as inappropriate. Delete flags.

### [Feed Elements Resources](#)

Information about feed elements. Access, edit, post, search, and delete feed elements. Access a feed element's capabilities, including bundles and their feed elements.

### [Feeds Resources](#)

Feeds are made up of feed items. There are many feed types. Each feed type has an algorithm that determines which feed items it contains.

### [Followers on Records Resource](#)

Get information about the followers of the specified record.

### [Groups Resources](#)

Information about groups, such as the group's members, photo, and the groups in the organization. Create and delete a group, add members to a group, and change the group photo.

### [Influence Resource](#)

List of the percentile thresholds used to categorize an organization's users by their influence in Chatter.

### [Likes Resource](#)

Information about the specified like. Also used to delete a like.

### [Mentions Resources](#)

Information about users and groups that a user can mention in a feed item body or comment body. When a user or group is mentioned, they receive notification.

### [Missions Resources](#)

Update a user's mission activity count. Export and purge mission activity for a user. Purge mission activity for all users. Get a user's mission progress.

### [Question and Answers Resources](#)

Get question and answers suggestions. Get top unanswered questions for the context user in an Experience Cloud site.

### [Scheduled Custom Recommendations Resources](#)

Get information about, create, update, or delete scheduled custom recommendations.

### [Subscriptions Notifications Member Resource](#)

Get information about the frequency with which a user receives subscription notifications. Subscribe or unsubscribe a user from receiving notifications.

### [Subscriptions Resource](#)

Information about the specified subscription. Also used to delete a subscription, for example, to unfollow a record or a topic.

### [Topics Resources](#)

Get endorsements for a topic and endorse someone for a topic. Get the groups recently contributing to a topic. Get knowledgeable people for a topic. Opt out of being knowledgeable about a topic and opt back in.

### [User Profiles Resources](#)

The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

### [Users Resources](#)

Get information about the user, such as who is following the user and the user's recommendations. Post feed items and update conversation status.

# Announcements Resources

Get the announcements for the specified parent or create an announcement. Also get information about, update, or delete an announcement.

Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

This image shows an announcement in a group. Creating an announcement also creates a feed item with the announcement text.

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

Available resources are:

## Chatter Resources

Get a directory of Chatter feeds, groups, and users resources. Control when Chatter email digests are sent. Get a list of supported emojis. Get extensions. Get link metadata. Get information about, update, and delete Chatter streams.

Available resources:

| Resource                         | Description                                                    |
|----------------------------------|----------------------------------------------------------------|
| <a href="#">/chatter</a>         | Get a directory of Chatter feeds, groups, and users resources. |
| <a href="#">/chatter/digests</a> | Control when daily and weekly Chatter email digests are sent.  |

| Resource                                         | Description                                                                                         |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/emojis</a>                  | Get a list of emojis that are supported in the org.                                                 |
| <a href="#">/chatter/extensions</a>              | Get extensions.                                                                                     |
| <a href="#">/chatter/link-metadata</a>           | Get link metadata for URLs.                                                                         |
| <a href="#">/chatter/streams</a>                 | Get or search a list of Chatter feed streams for the context user.<br>Create a Chatter feed stream. |
| <a href="#">/chatter/streams/<i>streamId</i></a> | Get information about, update, or delete a Chatter feed stream.                                     |

## Chatter Directory

Get a directory of Chatter feeds, groups, and users resources.

### Resource

```
/chatter
```

```
/connect/communities/communityId/chatter
```

### Available since version

23.0

### Requires Chatter

Yes

### HTTP methods

GET or HEAD

### Response body

[Chatter Directory](#)

### Example response body

```
{
  "feeds": "/services/data/v65.0/chatter/feeds",
  "groups": "/services/data/v65.0/chatter/groups",
  "users": "/services/data/v65.0/chatter/users"
}
```

## Chatter Digests

Control when daily and weekly Chatter email digests are sent.

The times when Chatter sends email digests are not configurable in the UI. To control when email digests are sent and to use this resource, contact Salesforce to enable API-only Chatter Digests.

**Warning:** Enabling API-only Chatter Digests disables the scheduled digests for your org. You must call the API for your users to receive their digests.

### Resource

```
/chatter/digests
```

**Available version**

37.0

**Requires Chatter**

Yes

**HTTP methods**

POST

**Request body for POST****Root XML tag**

```

**Available version**

39.0

**Requires Chatter**

Yes

**HTTP methods**

GET, POST

## Request parameters for GET

| Parameter Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| globalScope    | Boolean | Specifies whether to get streams from all the context user's Experience Cloud sites, regardless of the <i>communityId</i> value.<br><br> <b>Tip:</b> If you know the site ID of the streams, we recommend using <code>/connect/communities/<i>communityId</i>/chatter/streams</code> and not using <code>globalScope</code> .                                                             | Optional             | 41.0              |
| page           | Integer | Number of the page you want returned. Starts at 0. If you pass in <code>null</code> or 0, the first page is returned.                                                                                                                                                                                                                                                                                                                                                      | Optional             | 39.0              |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.                                                                                                                                                                                                                                                                                                                                                                            | Optional             | 39.0              |
| q              | String  | Specifies the string to search. The search string must contain at least two characters, not including wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                           | Optional             | 40.0              |
| sort           | String  | Specifies the sort order. Values are: <ul style="list-style-type: none"> <li>• <code>Ascending</code>—Items are in ascending alphabetical order (A-Z).</li> <li>• <code>Descending</code>—Items are in descending alphabetical order (Z-A).</li> <li>• <code>MostRecentlyViewed</code>—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.</li> </ul> If not specified, default value is <code>Ascending</code> . | Optional             | 40.0              |

## Chatter Feed Stream

Get information about, update, or delete a Chatter feed stream.

**Resource**

```
/chatter/streams/streamId
```

```
/connect/communities/communityId/chatter/streams/streamId
```

**Available version**

39.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH, DELETE

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                      | Required or Optional | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| globalScope    | Boolean | Specifies whether to get streams from all the context user's Experience Cloud sites, regardless of the <i>communityId</i> value. | Optional             | 41.0              |

 **Tip:** If you know the site ID of the stream, we recommend using `/connect/communities/communityId/chatter/streams/streamId` and not using `globalScope`.

## Comment

Get information about, edit, or delete a comment.

To post a comment, use [Feed Elements Capability, Comments Items](#).

### Resource

```
/chatter/comments/commentId
```

```
/connect/communities/communityId/chatter/comments/commentId
```

### Available version

23.0

### Requires Chatter

Yes

### HTTP methods

GET, DELETE, PATCH

PATCH is supported in version 34.0 and later to edit a comment's body. PATCH can't be used to update a comment's capabilities.

### Request body for PATCH

### Root XML tag

```
<comment>
```

### JSON example for editing a comment

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "I am definitely going to check that out."
      }
    ]
  }
}
```

```
}
}
```

## Comment Capability, Verified

Get the verified status of a comment. Mark a comment as verified or unverified.

**Resource**

```
/chatter/comments/commentId/capabilities/verified
```

```
/connect/communities/communityId/chatter/comments/commentId/capabilities/verified
```

The *commentId* must be the ID of a comment on a question post. Only one comment on a question post can be marked as verified.

**Available version**

41.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Request body for PATCH****Root XML tag**

```
<verifiedCapability>
```

**JSON example**

```
{
  "isVerified": "true"
}
```

**Properties**

## Custom Recommendation Audience Resources

Target specific audiences for your custom recommendations. Use these resources to get information about, create, update, and delete recommendation audiences.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don't see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven't been accepted or dismissed.

Available resources:

| Resource                                                                                       | Description                                                                                |
|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <a href="#">/connect/recommendation-audiences</a>                                              | Get a list of custom recommendation audiences and create a custom recommendation audience. |
| <a href="#">/connect/recommendation-audiences/<br/><b>recommendationAudienceId</b></a>         | Get information about, update, and delete a custom recommendation audience.                |
| <a href="#">/connect/recommendation-audiences/<br/><b>recommendationAudienceId</b>/members</a> | Get the members of a custom recommendation audience.                                       |

## Custom Recommendation Definition Resources

Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more. Use these resources to get information about, create, modify, and delete recommendation definitions. Also get information about, upload, modify, and delete recommendation definition photos.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don't see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven't been accepted or dismissed.

| explanation | String | Explanation, or body, of the custom recommendation.                           | Optional             | 33.0              |
| name        | String | Name of the custom recommendation definition. The name is displayed in Setup. | Optional             | 33.0              |
| title       | String | Title of the custom recommendation definition.                                | Optional             | 33.0              |

#### Request parameters for PATCH

| Parameter Name | Type   | Description                                                                        | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------|----------------------|-------------------|
| actionUrl      | String | URL for acting on the custom recommendation, for example, the URL to join a group. | Optional             | 33.0              |
| actionUrlName  | String | Text label for the action URL in the user interface, for example, "Launch."        | Optional             | 34.0              |
| explanation    | String | Explanation, or body, of the custom recommendation.                                | Optional             | 33.0              |
| name           | String | Name of the custom recommendation definition. The name is displayed in Setup.      | Optional             | 33.0              |
| title          | String | Title of the custom recommendation definition.                                     | Optional             | 33.0              |

#### Response body for GET and PATCH

[Custom Recommendation Definition](#)

#### Response for DELETE

[204: Successful Delete](#)

## Custom Recommendation Definition Photo

Get information about, upload, modify, or delete the photo for a custom recommendation definition.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

To use an existing file as the recommendation definition photo, pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter.

To upload a binary file as a recommendation definition photo, you must send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

**Resource**

```
/connect/recommendation-definitions/recommendationDefinitionId/photo
```

**Available version**

33.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PUT, DELETE

**Request body for PUT****Root XML tag**

&lt;photo&gt;

**JSON example**

```
{  "cropSize" : "120",
  "cropX"    : "0",
  "cropY"    : "0",
  "fileId"   : "069D00000001IOh"
}
```

**Properties**

| Name     | Type    | Description                                                                                                             | Required or Optional                                   | Available Version |
|----------|---------|-------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|-------------------|
| cropSize | Integer | The length, in pixels, of any edge of the crop square.                                                                  | Required to crop an uploaded file or an existing file. | 29.0              |
| cropX    | Integer | The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0). | Required to crop an uploaded file or an existing file. | 29.0              |
| cropY    | Integer | The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).  | Required to crop an uploaded file or an existing file. | 29.0              |
| fileId   | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB. | Required to choose an existing file.                   | 25.0              |

 **Note:** Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.

| Name          | Type    | Description                                                                      | Required or Optional | Available Version |
|---------------|---------|----------------------------------------------------------------------------------|----------------------|-------------------|
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used. | Optional             | 25.0              |

**Request parameters for PUT**

| Parameter Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                         | Required or Optional                                   | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|-------------------|
| cropSize       | Integer | The length, in pixels, of any edge of the crop square.                                                                                                                                                                                                                                                                                                                                                              | Required to crop an uploaded file or an existing file. | 29.0              |
| cropX          | Integer | The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                                                                                             | Required to crop an uploaded file or an existing file. | 29.0              |
| cropY          | Integer | The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).                                                                                                                                                                                                                                                                                              | Required to crop an uploaded file or an existing file. | 29.0              |
| fileId         | String  | 18 character ID of an existing file. The key prefix must be 069 and the file size must be less than 2 GB.<br><br> <b>Note:</b> Files uploaded on the Group page and on the User Profile page don't have a file ID and can't be posted or cropped. Files uploaded on the Files page have a file ID and can be posted and cropped. | Required to choose an existing file.                   | 25.0              |
| versionNumber  | Integer | Version number of the existing content. If not provided, the latest version is used.                                                                                                                                                                                                                                                                                                                                | Optional                                               | 25.0              |

# Dashboard Component Snapshot Resource

A snapshot of a dashboard component.

Use this resource to post a snapshot of a dashboard component to a user, group, or dashboard feed to help other users follow changes in the data.

**Resource**

```
/connect/dashboards/components/componentId/snapshots
```

**Available since version**

25.0

**Requires Chatter**

Yes

**HTTP methods**

POST

**Request body**

**Root XML tag**

<dashboardComponentSnapshot>

**JSON**

```
{
  "parentId" : "0F9D00000000I4O",
  "feedItemBody" : {
    "messageSegments" : [
      {
        "text" : "Sales Heat",
        "type" : "Text"
      }
    ]
  }
}
```

**Properties**

| Name      | Type   | Description                                                           | Available Version |
|-----------|--------|-----------------------------------------------------------------------|-------------------|
| parentId  | String | A user, group, or dashboard ID to which you are posting the snapshot. | 25.0              |
| filterId1 | String | Optional. A dashboard filter item ID.                                 | 25.0              |

| Name          | Type                               | Description                                                                                          | Available Version |

#### Request parameters for DELETE

| Name   | Type   | Description                                                                                                                                                                                  | Required or Optional | Available Version |
|--------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| userId | String | The ID of the context user. If specified, removes the flag the user previously added to the comment. If not specified and the context user is a moderator, removes all flags on the comment. | Optional             | 29.0              |

#### Response body for GET and POST

[Moderation Flags](#)

## Feed Elements Resources

Information about feed elements. Access, edit, post, search, and delete feed elements. Access a feed element's capabilities, including bundles and their feed elements.

Available resources:

| Resource                                                           | Description                                                                                                                                         |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feed-elements</a>                             | Post feed elements and search all feed elements in an organization.                                                                                 |
| <a href="#">/chatter/feed-elements/batch</a>                       | Post a batch of up to 500 feed elements.                                                                                                            |
| <a href="#">/chatter/feed-elements/batch/<i>feedElementIds</i></a> | Get information about a comma-separated list of up to 500 feed elements. Errors for feed elements that can't be loaded are returned in the results. |
| <a href="#">/chatter/feed-elements/<i>feedElementId</i></a>        | Access, edit, or delete a feed element. Feed items are the only type of feed element that can be edited.                                            |

| Resource                                                                                              | Description                                                                                     |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities</a>                              | Access a feed element's set of capabilities.                                                    |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/approval</a>                     | Access the approval capability of a feed element.                                               |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/associated-actions</a>           | Access the associated actions capability of a feed element.                                     |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/banner</a>                       | Access the banner capability of a feed element.                                                 |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/bookmarks</a>                    | Get information about whether a feed element is bookmarked, or add bookmarks to feed elements.  |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/bundle</a>                       | Access the bundle capability of a feed element.                                                 |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/bundle/feed-elements</a>         | Access all feed elements that are grouped together in a bundle.                                 |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/call-collaboration</a>           | Access the call collaboration capability of a feed element.                                     |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/canvas</a>                       | Access the canvas capability of a feed element.                                                 |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/case-comment</a>                 | Access the case comment capability of a feed element.                                           |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/chatter-likes</a>                | Access information about the chatter likes capability for a feed element.                       |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/chatter-likes/items</a>          | Access a page of likes for a feed element. Like or unlike a feed element.                       |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/comments</a>                     | Access the comments capability for a feed element.                                              |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/comments/items</a>               | Access comments for a feed element, or add a comment to a feed element.                         |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/content</a>                      | Access the content capability of a feed element.                                                |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/dashboard-component-snapshot</a> | Access the dashboard component capability of a feed element.                                    |
| <a href="#">/chatter/feed-elements/<b>feedElementId</b>/capabilities/direct-message</a>               | Access the direct message capability of a feed element. Update the members of a direct message. |

| <code>/chatter/feed-elements/<i>feedElementId</i></code><br><code>/capabilities/up-down-vote/items</code> | Get a list of users who upvoted or downvoted a feed element.                         |
| <code>/chatter/feed-elements/<i>feedElementId</i>/related-posts</code>                                    | Get questions related to the context question.                                       |
| <code>/chatter/feed-elements/publish-draft</code>                                                         | Publish a draft feed element.                                                        |

## Feed Elements, Post and Search

Post feed elements and search all feed elements in an organization.

### Resource

```
/chatter/feed-elements
```

```
/connect/communities/communityId/chatter/feed-elements
```

### Available version

31.0

### Requires Chatter

Yes

### HTTP methods

GET, POST

## Request parameters for GET

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required or Optional | Available Version |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page               | String  | Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as <code>currentPageToken</code> or <code>nextPageToken</code> . If you pass in <code>null</code> , the first page is returned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 31.0              |
| pageSize           | Integer | Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in <code>null</code> , the default size is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 31.0              |
| q                  | String  | One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 31.0              |
| sort               | String  | Order of feed items in the feed. <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> | Optional             | 31.0              |

| Parameter Name             | Type    | Description                                                                                                                                                                       | Required or Optional | Available Version |
|----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| threadedComments Collapsed | Boolean | Specifies whether to return threaded comments in a collapsed style ( <code>true</code> ) or not ( <code>false</code> ). If you don't specify, the default is <code>false</code> . | Optional             | 44.0              |

**Response body for GET**[Feed Element Page](#)**Request body for POST**

Feed item and comment bodies have a 10,000 character limit. Because this limit can change, we recommend that clients make a `describeObjects()` call on the `FeedItem` or `FeedComment` object. To determine the maximum number of allowed characters, look at the length of the `Body` or `CommentBody` field.

[Feed Item Input](#)**Request parameters for POST**

| Parameter Name         | Type   | Description                                                                                                                                                                                                                                                                                                     | Required or Optional | Available Version |
|------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| feedElementType        | String | Feed elements are the top-level items that a feed contains. Feeds are feed element containers.<br><br>The only possible value is <code>FeedItem</code> .                                                                                                                                                        | Required             | 31.0              |
| originalFeed ElementId | String | If this feed element is shared, the original feed element 18-character ID.<br><br> <b>Important:</b> In version 39.0 and later, use the Feed Item Input with the nested <a href="#">Feed Entity Share Capability Input</a> . | Optional             | 31.0–38.0         |
| subjectId              | String | The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string <code>me</code> to indicate the context user.                                                                                                                                    | Required             | 31.0              |
| text                   | String | Text of the feed element.                                                                                                                                                                                                                                                                                       | Required             | 31.0              |
| visibility             | String | Specifies the type of users who can see a feed element. <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>                                                       | Optional             | 31.0              |

**Response body for POST**[Feed Item](#)**Example for posting a feed item using the request body**

```
{
  "body" : {
    "messageSegments" : [
      {
        "type" : "Text",
        "text" : "When should we meet for release planning? "
      }
    ],
    "feedElementType" : "FeedItem",

        "text" : " "
      },
      {
        "type" : "Mention",
        "id" : "005B0000000Ek1S"
      }
    ]
  }
}
```

```
    }
  ]
},
"feedElementType" : "FeedItem",
"subjectId" : "005D000000016Qxp"
}
```

**Example for posting a feed item with files using the request body**

```
{
  "body":{
    "messageSegments":[
      {
        "type":"Text",
        "text":"Please take a look at these files."
      }
    ]
  },
  "capabilities":{
    "files":{
      "items": [
        {"id": "069D000000001IOh"},
        {"id": "069D000000002IOg"}
      ]
    }
  },
  "subjectId":"me",
  "feedElementType":"FeedItem"
}
```

**Example for posting a poll using the request body**

```
{
  "body":{
    "messageSegments":[
      {
        "type":"Text",
        "text":"When should we meet for release planning?"
      }
    ]
  },
  "capabilities":{
    "poll":{
      "choices":[
        "Monday",
        "Tuesday"
      ]
    }
  },
  "feedElementType":"FeedItem",
  "subjectId":"me"
}
```

**Example for posting a rich-text feed item using the request body**

```
{
  "body": {
    "messageSegments": [
      {
        "markupType": "Paragraph",
        "type": "MarkupBegin"
      },
      {
        "markupType": "Bold",
        "type": "MarkupBegin"
      },
      {
        "text": "First line of text.",
        "type": "Text"
      },
      {
        "markupType": "Bold",
        "type": "MarkupEnd"
      },
      {
        "markupType": "Paragraph",
        "type": "MarkupEnd"
      },
      {
        "markupType": "Paragraph",
        "type": "MarkupBegin"
      },
      {
        "text": "&nbsp;",
        "type": "Text"
      },
      {
        "markupType": "Paragraph",
        "type": "MarkupEnd"
      },
      {
        "markupType": "Paragraph",
        "type": "MarkupBegin"
      },
      {
        "text": "Second line of text.",
        "type": "Text"
      },
      {
        "markupType": "Paragraph",
        "type": "MarkupEnd"
      }
    ]
  },
  "subjectId": "me",
  "feedElementType": "FeedItem"
}
```

**Example for posting a feed item with a code block using the request body**

```
{
  "body":{
    "messageSegments":[
      {
        "markupType" : "Code",
        "type" : "MarkupBegin"
      },
      {
        "text" : "<script>var i, t = 0;\nfor (i = 0; i < 5; i++) {\n  t +=\n    i;\n}\n</script>",
        "type" : "Text"
      },
      {
        "markupType" : "Code",
        "type" : "MarkupEnd"
      }
    ]
  },
  "subjectId":"me",
  "feedElementType":"FeedItem"
}
```

**Example for posting a feed item with an inline image using the request body**

```
{
  "body":{
    "messageSegments":[
      {
        "type":"Text",
        "text":"Please take a look at this file."
      },
      {
        "type":"InlineImage",
        "fileId":"069xx00000000QO",
        "altText":"API Spec"
      },
      {
        "type":"Text",
        "text":"And this one."
      },
      {
        "type":"InlineImage",
        "fileId":"069xx00000000QT",
        "altText":"REST API Spec"
      }
    ]
  },
  "subjectId":"me",
  "feedElementType":"FeedItem"
}
```

**Example for sharing a feed item using the request body**

```
{
  "body" : {
    "messageSegments" : [
      {
        "type" : "Text",
        "text" : "When should we meet for release planning? "
      },
      {
        "type" : "Mention",
        "id" : "005D00000016Qxp"
      }
    ]
  },
  "capabilities" : {
    "feedEntityShare" : {
      "feedEntityId" : "0D5B000000Py41t"
    }
  },
  "feedElementType" : "FeedItem",
  "subjectId" : "0F9B000000000W2"
}
```

**Example for sending a direct message**

```
{
  "body":{
    "messageSegments":[
      {
        "type":"Text",
        "text":"Thanks for attending my presentation test run this morning. Send me any feedback."
      }
    ]
  },
  "capabilities":{
    "directMessage":{
      "membersToAdd": ["005R00000000I2X4","005R00000000I23Y"],
      "subject": "Thank you!"
    }
  },
  "subjectId":"me",
  "feedElementType":"FeedItem"
}
```

[Post a Feed Element with an Inline Image](#)

## Feed Elements, Batch Post

Post a batch of up to 500 feed elements.

### Resource

```
/chatter/feed-elements/batch
```

```
/connect/communities/communityId/chatter/feed-elements/batch
```

### Available version

32.0

### Requires Chatter

Yes

### HTTP methods

POST, HEAD

### Request body for POST

[Batch Collection Input](#)

The rich input for this batch collection is a [Feed Item Input](#)

### Response body for POST

[Batch Results](#)

The Batch Results response body contains [Feed Item](#) response bodies corresponding to each of the request bodies. The Feed Item response bodies are returned in the same order as the request bodies.

The request returns an HTTP 200 status code unless an error occurs that affects the entire request (such as a parsing failure). If an individual request body causes an error, the Batch Results Item `statusCode` property contains the appropriate HTTP status code.

### Post a batch of feed elements

This example uses the `/chatter/feed-elements/batch` resource to post a batch of feed elements. This example uses cURL.

```
curl -H "X-PrettyPrint: 1" -F
'json={"inputs":[{"richInput":{"subjectId":"me","body":{"messageSegments":[{"type":"Text","text":"Post
Number
1"}]},"feedElementType":"FeedItem"}},{"richInput":{"subjectId":"me","body":{"messageSegments":[{"type":"Text","text":"Post
Number 2"}]},"feedElementType":"FeedItem"}}];type=application/json' -X POST
https://instance_name/services/data/v65.0/chatter/feed-elements/batch -H 'Authorization:
OAuth 00DD00000007HoR!...' --insecure
```

Here's the same example showing just the request body:

```
{
  "inputs": [
    {
      "richInput": {
        "subjectId": "me",
        "body": {
          "messageSegments": [
            {
              "type": "Text",
              "text": "Post Number 1"
            }
          ]
        }
      }
    ]
  }
}
```

```

    },
    "feedElementType": "FeedItem"
  }
},
{
  "richInput": {
    "subjectId": "me",
    "body": {
      "messageSegments": [
        {
          "type": "Text",
          "text": "Post Number 2"
        }
      ]
    },
    "feedElementType": "FeedItem"
  }
}
]
}

```

## Post a batch of feed elements with binary files (version 35.0 and earlier)

This example uses the [/chatter/feed-elements/batch](#) resource to post a batch of feed elements, upload two binary files, and attach them to the feed elements in the batch. Include the information about the binary parts in the request body. This example uses cURL.

```

curl -H "X-PrettyPrint: 1" -F 'json={"inputs":[{"binaryPartNames":["bin1"],
"richInput":{"subjectId":"me","body":{"messageSegments":[{"type":"Text","text":"Please accept this receipt"}]},"capabilities":
{"content" : {"description": "Receipt for expenses",
"title":"receipt.pdf"}}, "feedElementType":"FeedItem"}},
{"binaryPartNames":["bin2"],"richInput":{"subjectId":"me","body":{"messageSegments":[{"type":"Text","text":"Post
Number 2"}]}},
"capabilities": {"content" : {"description": "Receipt for expenses",
"title":"receipt2.pdf"}}, "feedElementType":"FeedItem"}]};type=application/json'
-F "bin1=@/Users/jsmith/Desktop/receipt.pdf;type=application/octet-stream" -F
"bin2=@/Users/jsmith/Desktop/receipt2.pdf;type=application/octet-stream"
-X POST https://instance_name/services/data/v35.0/chatter/feed-elements/batch
-H 'Authorization: OAuth 00DD00000007HoR44QATPNzhzYEBfU' --insecure

```

Here is the same example formatted to show the request body parts.

```

POST /services/data/v35.0/chatter/feed-elements/batch HTTP/1.1
Authorization: OAuth 00DRR0000000N0g!...
User-Agent: Jakarta Commons-HttpClient/3.0.1
Host: instance_name
Content-Length: 845
Content-Type: multipart/form-data; boundary=a7V4kRcFA8E79pivMuV2tukQ85cmNKeoEgJgq
Accept: application/json

--a7V4kRcFA8E79pivMuV2tukQ85cmNKeoEgJgq
Content-Disposition: form-data; name="json"
Content-Type: application/json; charset=UTF-8

```

```

{
  "inputs": [
    {
      "binaryPartNames": [
        "bin1"
      ],
      "richInput": {
        "subjectId": "me",
        "body": {
          "messageSegments": [
            {
              "type": "Text",
              "text": "Please accept this receipt"
            }
          ]
        },
        "capabilities": {
          "content": {
            "description": "Receipt for expenses",
            "title": "receipt.pdf"
          }
        },
        "feedElementType": "FeedItem"
      }
    },
    {
      "binaryPartNames": [
        "bin2"
      ],
      "richInput": {
        "subjectId": "me",
        "body": {
          "messageSegments": [
            {
              "type": "Text",
              "text": "Post Number 2"
            }
          ]
        },
        "capabilities": {
          "content": {
            "description": "Receipt for expenses",
            "title": "receipt2.pdf"
          }
        },
        "feedElementType": "FeedItem"
      }
    }
  ]
}

```

```
--a7V4kRcFA8E79pivMuV2tukQ85cmNKeoEgJgq
```

```
Content-Disposition: form-data; name="bin1"; filename="receipt.pdf"
```

```

Content-Type: application/octet-stream; charset=ISO-8859-1

...contents of receipt.pdf...

--a7V4kRcFA8E79pivMuV2tukQ85cmNKeoEgJgq
Content-Disposition: form-data; name="bin2"; filename="receipt2.pdf"
Content-Type: application/octet-stream; charset=ISO-8859-1

...contents of receipt2.pdf...

--a7V4kRcFA8E79pivMuV2tukQ85cmNKeoEgJgq--

```

 **Note:** The binary part names in the `binaryPartNames` properties must match the binary part names in the `name` properties of the binary request parts.

## Feed Elements, Batch Get

Get information about a comma-separated list of up to 500 feed elements. Errors for feed elements that can't be loaded are returned in the results.

### Resource

```
/chatter/feed-elements/batch/feedElementIds
```

```
/connect/communities/communityId/chatter/feed-elements/batch/feedElementIds
```

### Available version

31.0

### Requires Chatter

Yes

### HTTP methods

GET

### Response body for GET

[Batch Results](#)

## Feed Element

Access, edit, or delete a feed element. Feed items are the only type of feed element that can be edited.

### Resource

```
/chatter/feed-elements/feedElementId
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId
```

**Available version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET, DELETE, PATCH

PATCH is supported in version 34.0 and later to edit a comment's body. PATCH can't be used to update a comment's capabilities.

**Request parameters for GET**

| Parameter Name             | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |
|----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| commentSort                | String  | <p>Order of comments. Values are:</p> <ul style="list-style-type: none"><li>• <code>CreatedDateLatestAsc</code>—Sorts by most recently created comments in ascending order.</li><li>• <code>CreatedDateOldestAsc</code>—Sorts by oldest comments in ascending order.</li><li>• <code>Relevance</code>—Sorts by most relevant content.</li></ul> <p>The default value is <code>CreatedDateLatestAsc</code>.</p> <p>Sorting in descending order isn't supported.</p> | Optional             | 41.0              |
| elementsPerBundle          | Integer | Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3.                                                                                                                                                                                                                                                                                                                                     | Optional             | 31.0              |
| recentCommentCount         | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                                                                                                                                                                                                                                                                                                                               | Optional             | 31.0              |
| threadedComments Collapsed | Boolean | Specifies whether to return threaded comments in a collapsed style ( <code>true</code> ) or not ( <code>false</code> ). If you don't specify, the default is <code>false</code> .                                                                                                                                                                                                                                                                                  | Optional             | 44.0              |

**Response body for GET**[Generic Feed Element](#) or [Feed Item](#)**Request body for PATCH**[Feed Item Input](#)**Response body for PATCH**[Feed Item](#)

**Example for editing a feed post using the request body**

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "Check out the latest API documentation on developer.salesforce.com."
      }
    ]
  }
}
```

**Example for editing a question title and post**

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "The latest public versions are on developer.salesforce.com."
      }
    ]
  },
  "capabilities": {
    "questionAndAnswers": {
      "questionTitle": "Where can I find API documentation"
    }
  }
}
```

**Example for moving a feed post from one public group to another**

```
{
  "subjectId": "0F9xx000000000CM"
}
```

**Response body for DELETE**

[204: Successful Delete](#)

## Feed Elements Capabilities

Access a feed element's set of capabilities.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities
```

**Available version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type    | Description                                                                                                                    | Required or Optional | Available Version |
|--------------------|---------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| elementsPerBundle  | Integer | Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3. | Optional             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                           | Optional             | 31.0              |

**Response body for GET**[Feed Element Capabilities](#)

## Feed Elements Capability, Approval

Access the approval capability of a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/approval
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/approval
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Response bodies for GET**[Approval Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Associated Actions

Access the associated actions capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/associated-actions
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/associated-actions
```

### Available version

33.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Response bodies for GET

[Associated Actions Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Banner

Access the banner capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/banner
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/banner
```

### Available version

32.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Response bodies for GET

[Banner Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Bookmarks

Get information about whether a feed element is bookmarked, or add bookmarks to feed elements.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/bookmarks
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/bookmarks
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Request body for PATCH****Root XML tag**

```
<bookmarksCapability>
  <isBookmarkedByCurrentUser>true</isBookmarkedByCurrentUser>
</bookmarksCapability>
```

**JSON example**

```
{
  "isBookmarkedByCurrentUser": true
}
```

**Properties**

| Name                      | Type    | Description                                                                                              | Required or Optional | Available Version |
|---------------------------|---------|----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isBookmarkedByCurrentUser | Boolean | Specifies if the feed element should be bookmarked for the user ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 32.0              |

**Request parameter for PATCH**

| Parameter Name            | Type    | Description                                                                                              | Required or Optional | Available Version |
|---------------------------|---------|----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isBookmarkedByCurrentUser | Boolean | Specifies if the feed element should be bookmarked for the user ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 32.0              |

**Response body for GET, PATCH**[Bookmarks Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Bundle

Access the bundle capability of a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/bundle
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/bundle
```

**Available version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Request parameters for GET**

| Parameter Name     | Type    | Description                                                                                                                    | Required or Optional | Available Version |
|--------------------|---------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| elementsPerBundle  | Integer | Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3. | Optional             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                           | Optional             | 31.0              |

**Response bodies for GET**

One of these response bodies:

- [Generic Bundle Capability](#)
- [Tracked Change Bundle Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Bundle Elements

Access all feed elements that are grouped together in a bundle.

**Note:** Bundled posts contain feed-tracked changes and are in record feeds only.**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/bundle/feed-elements
```

```
connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/bundle/feed-elements
```

**Available version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                 | Required or Optional | Available Version |
|--------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| elementsPerBundle  | Integer | Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3.                                                                                                                              | Optional             | 31.0              |
| page               | String  | Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as <code>currentPageToken</code> or <code>nextPageToken</code> . If you pass in <code>null</code> , the first page is returned. | Optional             | 31.0              |
| pageSize           | Integer | Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in <code>null</code> , the default size is 25.                                                                                                             | Optional             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                                                                                                                        | Optional             | 31.0              |

**Response body for GET**[Feed Element Page](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

**Feed Elements Capability, Call Collaboration**

Access the call collaboration capability of a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/call-collaboration
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/call-collaboration
```

**Available version**

51.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Response body for GET**[Call Collaboration Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Canvas

Access the canvas capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/canvas
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/canvas
```

### Available version

32.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Response bodies for GET

[Canvas Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Case Comment

Access the case comment capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/case-comment
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/case-comment
```

### Available version

32.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Response bodies for GET

[Case Comment Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Chatter Likes

Access information about the chatter likes capability for a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/chatter-likes
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/chatter-likes
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Response**[Chatter Likes Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Chatter Likes Items

Access a page of likes for a feed element. Like or unlike a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/chatter-likes/items
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/chatter-likes/items
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH, POST

PATCH is supported in version 39.0 and later.

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                             | Required or Optional | Available Version |
|----------------|---------|-------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | Integer | Specifies the number of the page you want returned. If you don't specify a value, the first page is returned.           | Optional             | 32.0              |
| pageSize       | Integer | Specifies the number of likes per page. Valid values are from 1 to 100. If you don't specify a size, the default is 25. | Optional             | 32.0              |

**Response body for GET**[Like Page](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

#### Request parameters for PATCH

| Parameter Name           | Type    | Description                                                                                                        | Required or Optional | Available Version |
|--------------------------|---------|--------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isLikedBy<br>CurrentUser | Boolean | Specifies whether the context user likes ( <code>true</code> ) or unlikes ( <code>false</code> ) the feed element. | Required             | 39.0              |

#### Response body for PATCH

[Like Page](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

#### Request parameters for POST

**Note:** POST doesn't take request parameters or a request body.

#### Response body for POST

[Like](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Close

Get the closed status of a feed element. Set a feed element to closed.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

#### Resource

#### Request body for PATCH

##### Root XML tag

```
<closeCapability>
```

**JSON example**

```
{
  "isClosed": "true"
}
```

**Properties**

| Name     | Type    | Description                                                                                  | Required or Optional | Available Version |
|----------|---------|----------------------------------------------------------------------------------------------|----------------------|-------------------|
| isClosed | Boolean | Specifies whether to set the feed element to closed ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 43.0              |

**Request parameters for PATCH**

| Parameter Name | Type    | Description                                                                                  | Required or Optional | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------------|----------------------|-------------------|
| isClosed       | Boolean | Specifies whether to set the feed element to closed ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 43.0              |

**Response body for GET and PATCH**[Close Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Comments

Access the comments capability for a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/comments
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/comments
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET

## Request parameters for GET

| Parameter Name                    | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|-----------------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| sort                              | String  | <p>Order of comments. Values are:</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateLatestAsc</code>—Sorts by most recently created comments in ascending order.</li> <li>• <code>CreatedDateOldestAsc</code>—Sorts by oldest comments in ascending order.</li> <li>• <code>Relevance</code>—Sorts by most relevant content.</li> </ul> <p>The default value is <code>CreatedDateLatestAsc</code>.</p> <p>Sorting in descending order isn't supported.</p> | Optional             | 41.0              |
| threaded<br>Comments<br>Collapsed | Boolean | Specifies whether to return threaded comments in a collapsed style ( <code>true</code> ) or not ( <code>false</code> ). If you don't specify, the default is <code>false</code> .                                                                                                                                                                                                                                                                                      | Optional             | 44.0              |

## Response body for GET

[Comments Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Comments Items

Access comments for a feed element, or add a comment to a feed element.

To upload a binary file to attach to a comment, you must send it in a multipart/form-data request. To send the text of the comment, you can choose to include a JSON or XML rich input body part in the multipart/form-data request. Alternately, you can choose to pass the information in request parameter parts. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

## Properties

| Name           | Type                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attachment     | Depends on type.           | <p>Values are:</p> <ul style="list-style-type: none"> <li>Attachment Input: Existing Content</li> <li>Attachment Input: New File Upload</li> </ul> <p> <b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.</p>                                                                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 24.0–31.0         |
| body           | Message Body Input         | <p>The body of the comment.</p> <p>Feed item and comment bodies have a 10,000 character limit. Because this limit can change, we recommend that clients make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object. To determine the maximum number of allowed characters, look at the length of the <code>Body</code> or <code>CommentBody</code> field.</p> <p>To edit this property in a comment, make a PATCH request to <code>/chatter/comments/<i>commentId</i></code></p> <p>Editing comments is supported in version 34.0 and later.</p> <p>Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.</p> | Required             | 23.0              |
| capabilities   | Comment Capabilities Input | <p>Capabilities of the comment, such as a file attachment.</p> <p>You can edit a comment's body, but you can't update a comment's capabilities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 32.0              |
| threadParentId | String                     | ID of the parent comment for a threaded comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 44.0              |

**Request parameters for POST**

| Parameter Name | Type   | Description       | Required or Optional | Available Version |
|----------------|--------|-------------------|----------------------|-------------------|
| text           | String | The comment text. | Required             | 32.0              |

**Response body for POST**[Comment](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

**Example for posting a comment using the request body**

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "New comment"
      }
    ]
  }
}
```

**Example for posting a comment with a mention using the request body**

```
{ "body" :
  {
    "messageSegments" : [
      {
        "type": "mention",
        "id" : "005D0000001GpHp"
      },
      {
        "type": "text",
        "text" : " Did you see the new plans?"
      }
    ]
  }
}
```

**Example for posting a comment with multiple mentions using the request body**

```
{ "body" :
  {
    "messageSegments" : [
      {
        "type": "mention",
        "id": "005D0000001LL8YIAW"
      },
      {
        "type" : "Text",
        "text" : " "
      },
    ],
  }
}
```

```

    {
      "type": "mention",
      "id": "005D0000001LL8sIAG"
    },
    {
      "type": "text",
      "text": " Did you see the new plans?"
    }
  ]
}

```

#### Example for posting a comment with a file using the request body

```

{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "Please take a look at this file."
      }
    ]
  },
  "capabilities": {
    "content": {
      "contentDocumentId": "069D00000001pyS"
    }
  }
}

```

#### Example for posting a rich-text comment using the request body

```

{
  "body": {
    "messageSegments": [
      {
        "markupType" : "Paragraph",
        "type" : "MarkupBegin"
      },
      {
        "markupType" : "Bold",
        "type" : "MarkupBegin"
      },
      {
        "text" : "First line of text.",
        "type" : "Text"
      },
      {
        "markupType" : "Bold",
        "type" : "MarkupEnd"
      },
      {
        "markupType" : "Paragraph",
        "type" : "MarkupEnd"
      },
    ],
  }
}

```

```

    {
      "markupType" : "Paragraph",
      "type" : "MarkupBegin"
    },
    {
      "text" : "&nbsp;",
      "type" : "Text"
    },
    {
      "markupType" : "Paragraph",
      "type" : "MarkupEnd"
    },
    {
      "markupType" : "Paragraph",
      "type" : "MarkupBegin"
    },
    {
      "text" : "Second line of text.",
      "type" : "Text"
    },
    {
      "markupType" : "Paragraph",
      "type" : "MarkupEnd"
    }
  ]
}

```

#### Example for posting a comment with a code block using the request body

```

{
  "body":{
    "messageSegments":[
      {
        "markupType" : "Code",
        "type" : "MarkupBegin"
      },
      {
        "text" : "<script>var i, t = 0;\nfor (i = 0; i < 5; i++) {\n  t +=\n    i;\n}\n</script>",
        "type" : "Text"
      },
      {
        "markupType" : "Code",
        "type" : "MarkupEnd"
      }
    ]
  }
}

```

#### Example for posting a comment with an inline image using the request body

```

{
  "body":{
    "messageSegments":[

```

```
{
  {
    "type": "Text",
    "text": "Please take a look at this file."
  },
  {
    "type": "InlineImage",
    "fileId": "069xx00000000QO",
    "altText": "API Spec"
  },
  {
    "type": "Text",
    "text": "And this one."
  },
  {
    "type": "InlineImage",
    "fileId": "069xx00000000QT",
    "altText": "REST API Spec"
  }
}
```

## Feed Elements Capability, Content

Access the content capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/content
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/content
```

### Available version

32.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Response bodies for GET

[Content Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Dashboard Component Snapshot

Access the dashboard component capability of a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/dashboard-component-snapshot
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/dashboard-component-snapshot
```

Available version

32.0

Requires Chatter

**Response body for GET and POST**[Moderation Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Mute

Get information about whether a feed element is muted, or mute or unmute a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/mute
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/mute
```

**Available version**

35.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, PATCH

**Request body for PATCH****Root XML tag**

```
<muteCapability>
```

**JSON example**

```
{
  "isMutedByMe": true
}
```

**Properties**

| Name        | Type    | Description                                                                                             | Required or Optional | Available Version |
|-------------|---------|---------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isMutedByMe | Boolean | Indicates whether the feed element is muted for the context user. Default value is <code>false</code> . | Required             | 35.0              |

**Request parameters for PATCH**

| Parameter Name | Type    | Description                                                                                             | Required or Optional | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isMutedByMe    | Boolean | Indicates whether the feed element is muted for the context user. Default value is <code>false</code> . | Required             | 35.0              |

**Response body for GET and PATCH**[Mute Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Origin

Access the origin capability of a feed element. If a feed element has this capability, it was created by a feed action.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/origin
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/origin
```

**Available version**

33.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Response bodies for GET**[Origin Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Poll

Access a poll for a feed element or vote on a poll.

To create a poll, use the [Feed Elements, Post and Search](#) resource. See [Post a Poll](#) for an example.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/poll
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/poll
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Request body for PATCH****JSON example for voting on a poll**

```
{
  "myChoiceId" : "09ATC000000011h2AA"
}
```

**Properties**

| Name       | Type     | Description                                                                              | Required or Optional          | Available Version |
|------------|----------|------------------------------------------------------------------------------------------|-------------------------------|-------------------|
| choices    | String[] | The choices used to create a new poll. You must specify 2–10 poll choices for each poll. | Required for creating a poll  | 32.0              |
| myChoiceId | String   | ID of an existing choice on the feed poll. Used to vote on an existing poll.             | Required for voting on a poll | 32.0              |

**Request parameters for PATCH**

| Parameter Name | Type   | Description       | Required or Optional | Available Version |
|----------------|--------|-------------------|----------------------|-------------------|
| myChoiceId     | String | A poll choice ID. | Required             | 32.0              |

**Response body for GET, PATCH**[Poll Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Question and Answers

Access question and answers for a feed element, or update question and answers on a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/question-and-answers
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/question-and-answers
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Request body for PATCH****Root XML tag**

```
<questionAndAnswersCapability>
  <bestAnswerId>0D7D000000001MAKAY</bestAnswerId>
</questionAndAnswersCapability>
```

**JSON example**

```
{
  "bestAnswerId": "0D7D000000001MAKAY"
}
```

**Properties**

| Name          | Type   | Description                                                                                                                                                                                                                  | Required or Optional                                                  | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|-------------------|
| bestAnswerId  | String | A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.                                                                                   | Required to PATCH the best answer.<br>Not supported in POST requests. | 32.0              |
| questionTitle | String | Title for a question feed element.<br>To edit the title of a question, make a PATCH request to<br><code>/chatter/feed-elements/<b>feedElementId</b></code> . Editing question titles is supported in version 34.0 and later. | Required to POST or PATCH a question.                                 | 32.0              |

**Request parameters for PATCH**

| Parameter Name | Type   | Description                                                                       | Required or Optional | Available Version |
|----------------|--------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| bestAnswerId   | String | A comment ID to use as a best answer for a question feed element. The best answer | Required             | 32.0              |

| Parameter Name | Type | Description                                              | Required or Optional | Available Version |
|----------------|------|----------------------------------------------------------|----------------------|-------------------|
|                |      | comment must already exist on the question feed element. |                      |                   |

**Response body for GET, PATCH**

[Question and Answers Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Read By

Access the read by capability of a feed element. Mark a feed element as read for the context user.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/read-by
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/read-by
```

**Available version**

40.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Request body for PATCH****Root XML tag**

```
<readByCapability>
```

**JSON example**

```
{
  "isReadByMe": "true"
}
```

**Properties**

| Name             | Type    | Description                                                                                                                                                                                           | Required or Optional | Available Version |
|------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isReadByMe       | Boolean | Specifies to mark the feed element as read ( <code>true</code> ) for the context user.                                                                                                                | Required             | 40.0              |
| lastReadDateByMe | String  | Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don't specify a date or you specify a future date, the current system date is used. | Optional             | 40.0              |

**Request parameters for PATCH**

| Parameter Name | Type    | Description                                                                            | Required or Optional | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------|----------------------|-------------------|
| isReadByMe     | Boolean | Specifies to mark the feed element as read ( <code>true</code> ) for the context user. | Required             | 40.0              |

**Response body for GET and PATCH**[Read By Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Read By Items

Get information about who read a feed element and when.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/read-by/items
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/read-by/items
```

**Available version**

40.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                                                                                                                                                 | Required or Optional | Available Version |
|----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | String  | Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as <code>currentPageToken</code> or <code>nextPageToken</code> . If you pass in <code>null</code> , the first page is returned. | Optional             | 40.0              |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you pass in <code>null</code> , the default size is 25.                                                                                                                     | Optional             | 40.0              |

**Response body for GET**[Read By Collection](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Batch Update Read By

Mark multiple feed elements as read by the context user at the same time.

### Resource

## Feed Elements Capability, Topics

Get, delete, and post topics associated with a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/topics
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/topics
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, DELETE, POST

**Request body for POST****Root XML tag**

```
<feedItemTopic>
```

**JSON**

The following example attaches a new topic to a feed item:

```
{ "topicName": "W3C"
}
```

**Properties**

| Name      | Type   | Description                                           | Required or Optional                                                                     | Available Version |
|-----------|--------|-------------------------------------------------------|------------------------------------------------------------------------------------------|-------------------|
| topicId   | String | ID of an existing topic                               | Required for existing topics if the topicName property isn't used                        | 29.0              |
| topicName | String | Name of a new or existing topic, up to 150 characters | Required for new topics; required for existing topics if the topicId property isn't used | 29.0              |

**Request parameters for POST**

| Parameter Name | Type   | Description                                            | Required or Optional                                                                                   | Available Version |
|----------------|--------|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------|-------------------|
| topicId        | String | ID of an existing topic.                               | Required for existing topics if the <code>topicName</code> property isn't used.                        | 32.0              |
| topicName      | String | Name of a new or existing topic, up to 150 characters. | Required for new topics; required for existing topics if the <code>topicId</code> property isn't used. | 32.0              |

**Request parameters for DELETE**

| Parameter Name | Type   | Description           | Required or Optional | Available Version |
|----------------|--------|-----------------------|----------------------|-------------------|
| topicId        | String | An existing topic ID. | Required             | 32.0              |

**Response body for POST**[Topic](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

**Response body for GET**[Topics Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Tracked Changes

Access the tracked changes capability of a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/tracked-changes
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/tracked-changes
```

**Available version**

32.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Response bodies for GET**[Tracked Changes Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Upvote and Downvote

Get the upvotes and downvotes for a feed element. Upvote or downvote a feed element.

### Resource

```
/chatter/feed-elements/feedElementId/capabilities/up-down-vote
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/up-down-vote
```

### Available version

41.0

### Requires Chatter

Yes

### HTTP methods

GET, PATCH

### Request body for PATCH

#### Root XML tag

```
<upDownVoteCapability>
```

#### JSON example

```
{
  "vote": "Up"
}
```

### Properties

| Name | Type   | Description                                                                                                                          | Required or Optional | Available Version |
|------|--------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| vote | String | Type of vote for a feed element or comment. Values are: <ul style="list-style-type: none"><li>Down</li><li>None</li><li>Up</li></ul> | Required             | 41.0              |

### Request parameters for PATCH

| Parameter Name | Type   | Description                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| vote           | String | Type of vote for a feed element or comment. Values are: <ul style="list-style-type: none"><li>Down</li><li>None</li><li>Up</li></ul> | Required             | 41.0              |

**Response body for GET and PATCH**[Up Down Vote Capability](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Feed Elements Capability, Upvote and Downvote Items

Get a list of users who upvoted or downvoted a feed element.

**Resource**

```
/chatter/feed-elements/feedElementId/capabilities/up-down-vote/items
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/capabilities/up-down-vote/items
```

**Available version**

42.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                                                   | Required or Optional | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | Integer | Number of the page you want returned. Starts at 0. If you don't specify a value or if you specify 0, the first page is returned.                              | Optional             | 42.0              |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a value, the default size is 25.                            | Optional             | 42.0              |
| vote           | String  | Specifies the value of the vote for the feed element. Values are: <ul style="list-style-type: none"><li>• Down</li><li>• Up</li></ul> You can't specify None. | Required             | 42.0              |

**Response body for GET**[Vote Collection](#)

If the feed element doesn't support this capability, the response is [404: Not Found](#).

## Draft Feed Element

Publish a draft feed element.

**Resource**

```
/chatter/feed-elements/publish-draft
```

```
/connect/communities/communityId/chatter/feed-elements/publish-draft
```

**Available version**

44.0

**Requires Chatter**

Yes

**HTTP methods**

POST

**Request body for POST**

If you want to update your draft prior to publishing, use the [Feed Item Input](#) request body.

**Note:** Use the `feedElementId` request parameter in addition to the Feed Item Input request body.

**Request parameters for POST**

If you don't need to update your draft prior to publishing, use this request parameter.

| Parameter Name             | Type   | Description                              | Required or Optional | Available Version |
|----------------------------|--------|------------------------------------------|----------------------|-------------------|
| <code>feedElementId</code> | String | ID of the draft feed element to publish. | Required             | 44.0              |

**Response body for POST**[Feed Item](#)

The published feed item has a new ID.

## Related Questions

Get questions related to the context question.

**Resource**

```
/chatter/feed-elements/feedElementId/related-posts
```

```
/connect/communities/communityId/chatter/feed-elements/feedElementId/related-posts
```

In version 37.0 and later, `feedElementId` must be a question ID.

**Available version**

37.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Request parameters for GET**

| Parameter Name          | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                                     | Available Version |
|-------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|-------------------|
| <code>filter</code>     | String  | Specifies the related question type. Values are: <ul style="list-style-type: none"> <li><code>Answered</code>—Related questions that have at least one answer.</li> <li><code>BestAnswer</code>—Related questions that have a best answer.</li> <li><code>Generic</code>—All types of related questions, including answered, with a best answer, and unanswered.</li> <li><code>Unanswered</code>—Related questions that don't have answers.</li> </ul> | Optional<br>If not specified, <code>Generic</code> is the default value. | 37.0              |
| <code>maxResults</code> | Integer | The maximum number of results to return. You can return up to 25 results; 5 is the default.                                                                                                                                                                                                                                                                                                                                                             | Optional<br>If not specified, 5 is the default value.                    | 37.0              |

**Response body for GET**[Related Feed Post Collection](#)

Each related feed post has a score indicating how closely it's related to the context feed post. We return related feed posts sorted by score, with the highest score first.

## Feeds Resources

Feeds are made up of feed items. There are many feed types. Each feed type has an algorithm that determines which feed items it contains.

The news feed, record feed, and user profile feed support GET and POST requests. All other feeds support GET requests.

**IN THIS SECTION:**[Bookmarks Feed Resources](#)

A feed containing feed elements saved as bookmarks by the context user.

[Experience Cloud Site Direct Message Moderation Feed Resources](#)

The feed containing direct messages that are flagged for moderation. This feed is available only to users with Moderate Experiences Chatter Messages permissions.

[Experience Cloud Site Home Feed Resources](#)

The feed containing feed elements and comments from the Experience Cloud site home.

[Experience Cloud Site Moderation Feed Resources](#)

A feed containing feed elements and comments that have been flagged for moderation in an Experience Cloud site.

[Company Feed Resources](#)

A feed containing all feed elements and comments from an entire company.

[Direct Messages Feed Resources](#)

The feed of direct messages.

[Draft Feed Resources](#)

The feed of the context user's draft posts.

[Favorites Feed Resources](#)

A feed containing favorites saved by the context user.

[Feeds Resource](#)

A list of all of the feeds the context user is able to view.

[Files Feed Resources](#)

A feed containing all the feed elements that contain files posted by people or groups that the context user follows.

[Filter Feed Resources](#)

The filter feed is the news feed filtered to contain feed elements whose parent is a specified object type.

[Groups Feed Resources](#)

A feed containing all feed elements from all groups the context user either owns or is a member of.

[Isolated Feed Resources](#)

The feed containing feed elements and comments that are isolated. Isolated feed elements and comments are available only to admins.

[Landing Feed Resource](#)

Get information about the landing feed and a page of feed elements.

[Mute Feed Resources](#)

A feed containing feed elements that the context user muted.

[News Feed Resources](#)

A feed containing feed elements of interest to the context user. You can post feed items to the news feed.

[Pending Review Feed Resources](#)

The feed containing feed elements and comments that are pending review.

[People Feed Resources](#)

All feed elements posted by all of the people the context user follows.

[Record Feed Resource](#)

The feed of the specified record, which could be a group, person, object, file and so on. You can post feed items to the record feed. You can get another user's record feed.

[Streams Feed Resources](#)

The feed of a stream.

[To Feed Resources](#)

A feed containing all @mentions of the context user and posts others have made to the context user's feed.

[Topics Feed Resources](#)

The feed of the specified topic.

User Profile Feed Resources

A feed containing feed elements created by the user, parented by the user, and where the user is mentioned. In Experience Cloud sites only, this feed also contains feed elements on which the user commented. This feed is different than the news feed, which returns more feed items, including group updates. You can post to the user-profile feed. You can get another user’s user profile feed.

SEE ALSO:

[Feeds and Feed Elements](#)

Bookmarks Feed Resources

A feed containing feed elements saved as bookmarks by the context user.

To bookmark an item, use PATCH with the [Feed Elements Capability, Bookmarks](#) resource and the `isBookmarkedByCurrentUser` parameter. For example:

```
/chatter/feed-elements/0D5D0000000Ir6zKAC/capabilities/bookmarks?isBookmarkedByCurrentUser=true
```

Available resources are:

| Resource                                                  | Description                                                  |
|-----------------------------------------------------------|--------------------------------------------------------------|
| <a href="#">/chatter/feeds/bookmarks/me</a>               | Returns the URL for the bookmarks feed for the context user. |
| <a href="#">/chatter/feeds/bookmarks/me/feed-elements</a> | Returns all feed elements bookmarked by the context user.    |

Bookmarks Feed URL

Returns the URL for the bookmarks feed for the context user.

Resource

```
/chatter/feeds/bookmarks/userId
```

```
/connect/communities/communityId/chatter/feeds/bookmarks/userId
```

 **Note:** `userId` must be the ID of the context user or the alias `me`.

Available since version

24.0

Requires Chatter

Yes

HTTP methods

GET or HEAD

Request parameter

| Parameter Name    | Type   | Description                                                                                                                                                                         |

## Response body for GET

### [Feed Element Page](#)

If a feed element has comments, the Comment Page response body contains a value in the `total` property to indicate the number of comments. However the `comments` property doesn't contain a collection of comments. For example, this excerpt from a response shows a total of 2 comments, but no information about the comments:

```

    "comments": {
      "comments": [],
      "currentPageUrl": "/services/data/v65.0/connect/communities/0DBD000000002etOAA
/chatter/feed-elements/0D5D0000000LYi9KAG/comments",
      "nextPageUrl": null,
      "total": 2
    },

```

[Feeds and Feed Elements](#)

## Company Feed Resources

A feed containing all feed elements and comments from an entire company.

The company feed includes posts and comments from:

- People in the company, the ones a user follows and the ones a user doesn't follow
- Public groups, including the ones a user is not a member of
- Private groups a user is a member of
- Updates for records and fields that an administrator configured for feed tracking, including the ones a user is not following. However, a user only sees updates for records they are allowed to access.

These resources are not available for communities.

Available resources are:

| Resource                                             | Description                                                    |
|------------------------------------------------------|----------------------------------------------------------------|
| <a href="#">/chatter/feeds/company</a>               | Returns a URL to the company feed and a page of feed elements. |
| <a href="#">/chatter/feeds/company/feed-elements</a> | Returns the feed elements of a company feed.                   |

## Company Feed URL

Returns a URL to the company feed and a page of feed elements.

### Resource

```
/chatter/feeds/company
```

### Available since version

23.0

### Requires Chatter

Yes

### HTTP methods

GET or HEAD

### Request parameters

| Parameter Name     | Type    | Description                                                                                                                                                                         |
|--------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pageSize           | Integer | Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.                                 |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                                                |
| sort               | String  | Order of feed items in the feed. <ul style="list-style-type: none"><li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for</li></ul> |

| Parameter Name | Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                |      | DirectMessageModeration, Draft, Isolated, Moderation, and PendingReview feeds.                                                                                                                                                                                                                                                                                                                                                                            |

**Response body**[Feed Element Page](#)

## Favorites Feed Resources

A feed containing favorites saved by the context user.

Favorites are feed searches, list views, and topics that the context user has added as a Chatter favorite.

Available resources are:

| Resource                                                                    | Description                                                                                                                        |
|-----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/favorites/me</a>                                 | Returns all the favorites for the context user. Creates a favorite of a Chatter feed search or topic.                              |
| <a href="#">/chatter/feeds/favorites/me/<i>favoriteId</i></a>               | Returns the feed for the specified favorite. Deletes the specified favorite. Updates the last view date of the specified favorite. |
| <a href="#">/chatter/feeds/favorites/me/<i>favoriteId</i>/feed-elements</a> | Returns a filtered feed, only showing those feed elements for the specified favorite.                                              |

## List of Favorites

Returns all the favorites for the context user. Creates a favorite of a Chatter feed search or topic.

**Note:** The response contains feed searches that were saved using the web UI. However, you can't use Connect REST API to save a feed search.

Resource

/chatter/feeds/favorites/*userId*

/connect/communities/*communityId*/chatter/feeds/favorites/*userId*

 **Note:** *userId* must be the ID of the context user or the alias me.

**Response body for GET**[Feed Element Page](#)

## Feeds Resource

A list of all of the feeds the context user is able to view.

Each user may have a different set of feeds. Use this resource to determine what feeds are available. In addition, the different feeds may have unique labels as well as URLs. Use the given labels returned in this resource and avoid hard-coding any of these values.

### Request parameters

| Parameter Name    | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required or Optional | Available Version |
|-------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| density           | String  | <p>The density of the feed. One of these values:</p> <ul style="list-style-type: none"><li>• <b>AllUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li><li>• <b>FewerUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li></ul> <p>The default value is <b>AllUpdates</b>.</p> | Optional             | 31.0              |
| elementsPerBundle | Integer | <p>Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3.</p>                                                                                                                                                                                                                                                                                                                                                                                                       | Optional             | 31.0              |
| page              | String  | <p>A generated token that indicates the view of feed elements in the feed.</p> <p>Page tokens are returned as part of the response body in one of the URL parameters, such as <code>nextPageURL</code>:</p> <div><pre>"nextPageUrl":<br/>"/services/data/v65.0/<br/>chatter/feeds/news/<br/>005D0000001GLOWIAN<br/>/feed-elements<br/>?page=2011-03-30T17:34:50Z,<br/>0D5D0000000DSv4KAG"</pre></div>                                                                                                                                       | Optional             | 31.0              |

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|--------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| pageSize           | Integer | Specifies the number of elements per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 31.0              |
| q                  | String  | One or more keywords to search for in the body and comments of feed elements in this feed.<br><br>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to include per feed element. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Optional             | 31.0              |
| sort               | String  | Order of feed items in the feed.<br><ul style="list-style-type: none"><li>• <b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li><li>• <b>CreatedDateDesc</b>—Sorts by most recent creation date.</li><li>• <b>LastModifiedDateDesc</b>—Sorts by most recent activity.</li><li>• <b>MostViewed</b>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li><li>• <b>Relevance</b>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li></ul> The default value is <code>CreatedDateDesc</code> . | Optional             | 31.0              |
| updatedSince       | String  | An opaque token defining the modification time stamp of the feed and the sort order.<br><br>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the Feed Element Page response body.<br><br>The <code>updatedSince</code> parameter doesn't return feed elements that are created in the same second as the request.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Optional             | 31.0              |

## Filter Feed Resources

The filter feed is the news feed filtered to contain feed elements whose parent is a specified object type.

Available resources are:

| Resource                                                                               | Description                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/filter/<i>userId</i></a>                                    | A collection of feed directory objects that contain information about filter feeds available to the context user. Each object contains a URL for the filter feed, a URL for feed items or feed elements in the filter feed, and a label describing the object used to filter the feed. |
| <a href="#">/chatter/feeds/filter/<i>userId</i>/<i>idPrefix</i></a>                    | A feed object that contains information about a specific filter feed available to the context user.                                                                                                                                                                                    |
| <a href="#">/chatter/feeds/filter/<i>userId</i>/<i>idPrefix</i><br/>/feed-elements</a> | Feed elements from the context user's news feed whose parent has the specified key prefix, such as the feed elements from all the groups the context user is a member of.                                                                                                              |

### List of Filter Feed URLs

A collection of feed directory objects that contain information about filter feeds available to the context user. Each object contains a URL for the filter feed, a URL for feed items or feed elements in the filter feed, and a label describing the object used to filter the feed. Each URL contains the first three characters of the filter object, which is called a *key prefix* and specifies the object type. Use this resource to return a list of the possible key prefix filter feeds that the context user can apply to their news feed. See [Filter Feed Elements](#).

**Note:** The collection of feed directory objects never contains User (005) and Group (0F9) object types. However, you can use those object types to filter the feed.

**Resource**

```
/chatter/feeds/filter/userId
```

```
/connect/communities/communityId/chatter/feeds/filter/userId
```

*userId* must be the ID of the context user or the alias me.

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

Response body

[Feed Directory](#)

If the response body is empty, the user isn't following any records.

Specific Filter Feed URL

A feed object that contains information about a specific filter feed available to the context user. The *keyPrefix* in the resource URL is the first three characters of the object ID and indicates the object type.

Resource

`/chatter/feeds/filter/userId/keyPrefix`

`/connect/communities/communityId/chatter/feeds/filter/userId/keyPrefix`

*userId* must be the ID of the context user or the alias me.

Available since version

23.0

Requires Chatter

Yes

HTTP methods

GET or HEAD

Request parameters

| Parameter Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                |      | The default value is<br>CreatedDateDesc. |

**Response body**

Feed

**Example request**

This request returns the URL for a filter feed items resource that's filtered by the User object (key prefix 005).

```
GET /chatter/feeds/filter/me/005
```

**Filter Feed Elements**

Feed elements from the context user's news feed whose parent has the specified key prefix, such as the feed elements from all the groups the context user is a member of.

The key prefix specifies the object type and is the first three characters of an object ID.

To filter by feed elements with a User parent object, use the key prefix 005.

To filter by feed elements with a Group parent object, use the key prefix 0F9.

To filter by feed elements with a parent object that the context user is following (for example, Account), use the [List of Filter Feed URLs](#) resource to return the parent objects.

Suppose the context user is a member of five groups. The following resource returns all of the feed elements for all five of those groups:

```
/chatter/feeds/filter/me/0F9/feed-elements
```

The filter feed returns only the feed elements that are *visible to the context user*. In this example, the resource doesn't return the feed elements for groups the context user is not a member of.

**Resource**

```
/chatter/feeds/filter/userId/keyPrefix/feed-elements
```

```
/connect/communities/communityId/chatter/feeds/filter/userId/keyPrefix/feed-elements
```

*userId* must be the ID of the context user or the alias me.

**Available version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET

**Response body for GET**[Feed Element Page](#)

## Groups Feed Resources

A feed containing all feed elements from all groups the context user either owns or is a member of.

Available resources are:

| Resource                                               | Description                                                                              |
|--------------------------------------------------------|------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/groups/me</a>               | Returns a URL to the feed elements for all the groups the context user is a member of.   |
| <a href="#">/chatter/feeds/groups/me/feed-elements</a> | Returns all feed elements for all groups the context user either owns or is a member of. |

### Groups Feed URL

Returns a URL to the feed elements for all the groups the context user is a member of.

Resource

/chatter/feeds/groups/*userId*

/connect/communities/*communityId*/chatter/feeds/groups/*userId*

 **Note:** *userId* must be the ID of the context user or the alias me.

## Groups Feed Elements

Returns all feed elements for all groups the context user either owns or is a member of.

To get the feed elements for a specific group, use the record feed resource (/chatter/feeds/record/**recordId**/feed-elements) and substitute the group ID for the **recordId**.

### Resource

/chatter/feeds/groups/**userId**/feed-elements

/connect/communities/**communityId**/chatter/feeds/groups/**userId**/feed-elements

 **Note:** *userId* must be the ID of the context user or the alias me.

## Isolated Feed Resources

The feed containing feed elements and comments that are isolated. Isolated feed elements and comments are available only to admins.

Available resources are:

| Resource                                              | Description                                                   |
|-------------------------------------------------------|---------------------------------------------------------------|
| <a href="#">/chatter/feeds/isolated</a>               | Get the URL to the isolated feed and a page of feed elements. |
| <a href="#">/chatter/feeds/isolated/feed-elements</a> | Get all the feed elements and comments that are isolated.     |

### Isolated Feed URL

Get the URL to the isolated feed and a page of feed elements.

**Resource**

```
/chatter/feeds/isolated
```

```
/connect/communities/communityId/chatter/feeds/isolated
```

**Available since version**

60.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Request parameters**

| Parameter Name     | Type    | Description                                                                                                                                         |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| pageSize           | Integer | Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed. |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                |

| Parameter Name    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Parameter Name | Type | Description                                                                                            |
|----------------|------|--------------------------------------------------------------------------------------------------------|
|                |      | only for Company, Home, and Topics feeds.                                                              |
|                |      | For the landing feed, the service determines the sort order and any sort value you specify is ignored. |

**Response body**[Feed](#)

## Mute Feed Resources

A feed containing feed elements that the context user muted.

To mute an item, use PATCH with the [Feed Elements Capability, Mute](#) resource and the `isMutedByMe` parameter. For example:

```
/chatter/feed-elements/0D5D0000000Ir6zKAC/capabilities/mute?isMutedByMe=true
```

Available resources are:

| Resource                                             | Description                                             |
|------------------------------------------------------|---------------------------------------------------------|
| <a href="#">/chatter/feeds/mute/me</a>               | Returns the URL for the mute feed for the context user. |
| <a href="#">/chatter/feeds/mute/me/feed-elements</a> | Returns all feed elements that the context user muted.  |

## Mute Feed URL

Returns the URL for the mute feed for the context user.

**Resource**

```
/chatter/feeds/mute/userId
```

```
/connect/communities/communityId/chatter/feeds/mute/userId
```

**Note:** `userId` must be the ID of the context user or the alias `me`.

**Available since version**

35.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Request parameter**

**Response body**[Feed Element Page](#)

## News Feed Resources

A feed containing feed elements of interest to the context user. You can post feed items to the news feed.

**Note:** To match the feed displayed in the Chatter UI, the composition of this feed may change between releases.

Available resources are:

| Resource                               | Description                                                            |
|----------------------------------------|------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/news/me</a> | Returns a URL to the feed elements for all feeds for the context user. |

| Resource                                             | Description                                                                                                                                                                                                                              |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/news/me/is-modified</a>   | Returns information about whether the news feed has been updated or changed since the specified time and date.                                                                                                                           |
| <a href="#">/chatter/feeds/news/me/feed-elements</a> | All feed elements from all groups the context user either owns or is a member of, as well as all files, records, and users the context user follows. Use this resource to get information about feed elements and to post feed elements. |

## News Feed URL

Returns a URL to the feed elements for all feeds for the context user.

### Resource

```
/chatter/feeds/news/userId
```

```
/connect/communities/communityId/chatter/feeds/news/userId
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

### Available since version

23.0

### Requires Chatter

Yes

## Response body

[Feed](#)

## Example response body

```
{
  "feedElementPostUrl": "/services/data/v65.0/chatter/feed-elements",
  "feedElementsUrl":
"/services/data/v65.0/chatter/feeds/news/005xx000001Sv1mAAB/feed-elements"
}
```

## News Feed Is-Modified

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

Returns information about whether the news feed has been updated or changed since the specified time and date.

**Tip:** If you are working with remote organizations such as an ISV, use the [/connect/organization](#) resource and the `feedPolling` property of the Feature response body to shape your polling strategy. If `feedPolling` isn't enabled, be conservative in how often you poll for new content.

## Use the Is-Modified resource to poll the news feed

1. Use either of the following resources to get the latest elements from a news feed or to get information about the feed: [/chatter/feeds/news/me/feed-elements](#), [/chatter/feeds/news/me](#).

The response bodies for both resources contain the `isModifiedUrl` property. This property contains the URL to the Is-Modified resource, which includes a `since` request parameter that defines the last modified date of the feed. If the sort order of the request to the news feed changes, the news feed is modified.

2. Issue a GET request to the URL in the `isModifiedUrl` property.

The Feed Modified Info response contains the following properties.

- `isModified`—a boolean indicating whether the feed has been updated since the last time you checked. Conditions under which this property is `true` depend on the sort order of the original request to the news feed. For example, if the feed is sorted by posts (`CreatedDateDesc`) and a comment was added, `isModified` is `false`.
- `nextPollUrl`—a string containing the URL of the Is-Modified resource. This property contains a URL only if `isModified` is `false`. If `isModified` is `true`, `nextPollUrl` is `null`.

3. If the `isModified` property is `true`, issue a GET request to the News Feed Elements resource to refresh the news feed.
4. If the `isModified` property is `false`, issue a GET request to the URL in the `nextPollUrl` property. This request also returns a Feed Modified Info response body that contains the `isModified` and `nextPollUrl` properties.

 **Note:** We don't recommend exceeding one poll per minute.

## Pending Review Feed Resources

The feed containing feed elements and comments that are pending review.

Available resources are:

| Resource                                                    | Description                                                         |
|-------------------------------------------------------------|---------------------------------------------------------------------|
| <a href="#">/chatter/feeds/pending-review</a>               | Get the URL to the pending review feed and a page of feed elements. |
| <a href="#">/chatter/feeds/pending-review/feed-elements</a> | Get all the feed elements and comments that are pending review.     |

## Pending Review Feed URL

Get the URL to the pending review feed and a page of feed elements.

### Resource

```
/chatter/feeds/pending-review
```

```
/connect/communities/communityId/chatter/feeds/pending-review
```

### Available since version

39.0

### Requires Chatter

Yes

### HTTP methods

GET, HEAD

### Request parameters

| Parameter Name     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pageSize           | Integer | Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.                                                                                                                                                                                                                                                                                                                                                                         |
| recentCommentCount | Integer | Maximum number of comments to return with each feed element. The default value is 3.                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Response body for GET**[Feed Element Page](#)

If a feed element has comments, the Comment Page response body contains a value in the `total` property to indicate the number of published comments. However the `comments` property contains a collection of comments that are pending review.

**People Feed Resources**

All feed elements posted by all of the people the context user follows.

Available resources are:

| Resource                                               | Description                                                                          |
|--------------------------------------------------------|--------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/people/me</a>               | Returns a URL to the feed elements for all the people the context user is following. |
| <a href="#">/chatter/feeds/people/me/feed-elements</a> | Returns all the feed elements from all the people the context user follows.          |

## People Feed URL

Returns a URL to the feed elements for all the people the context user is following.

### Resource

```
/chatter/feeds/people/userId
```

```
/connect/communities/communityId/chatter/feeds/people/userId
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

## Record Feed Resource

The feed of the specified record, which could be a group, person, object, file and so on. You can post feed items to the record feed. You can get another user's record feed.

Available resources are:

| Resource                                                                   | Description                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/record/<i>recordId</i></a>                      | Returns a URL to the feed elements for all the records the context user is following, or a URL to all the feed elements of the specified <i>recordId</i> . Use this resource to get a group feed.                                                                                                                                                                    |
| <a href="#">/chatter/feeds/record/<i>recordId</i>/feed-elements</a>        | Returns the feed elements for all the records the context user is following, or all the feed elements of the specified <i>recordId</i> . Use this resource to search a feed or to get the feed elements for a specific feed, including another user's feed. To use this resource to get the feed elements for a group, specify the group ID as the <i>recordId</i> . |
| <a href="#">/chatter/feeds/record/<i>recordId</i>/pinned-feed-elements</a> | Get pinned feed elements from a group feed. Pin or unpin a feed element to a group feed.                                                                                                                                                                                                                                                                             |

## Record Feed URL

Returns a URL to the feed elements for all the records the context user is following, or a URL to all the feed elements of the specified *recordId*. Use this resource to get a group feed.

Resource

/chatter/feeds/record/**recordId**

/connect/communities/**communityId**/chatter/feeds/record/**recordId**

 **Note:** If *recordId* is a user ID, it must be the same as the context user or the alias *me*.

Available since version

23.0

Requires Chatter

## Record Feed Elements

Returns the feed elements for all the records the context user is following, or all the feed elements of the specified *recordId*. Use this resource to search a feed or to get the feed elements for a specific feed, including another user’s feed. To use this resource to get the feed elements for a group, specify the group ID as the *recordId*.

Resource

`/chatter/feeds/record/recordId/feed-elements`

`/connect/communities/communityId/chatter/feeds/record/recordId/feed-elements`

 **Note:** If *recordId* is a user ID, it must be the same as the context user or the alias *me*.

Available since version  
23.0

Requires Chatter  
Yes

HTTP methods  
GET, HEAD

Request parameters for GET

| Parameter Name    | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| customFilter      | String  | Custom filter that applies only to the case feed. See <a href="#">customFeedFilter</a> in the <i>Metadata API Developer Guide</i> for supported values.<br><br>You can specify <i>customFilter</i> or <i>filter</i> . You can't specify both.                                                                                                                                                                                                                                                                                  | Optional             | 40.0              |
| density           | String  | The density of the feed. One of these values: <ul style="list-style-type: none"><li>• <b>AllUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li><li>• <b>FewerUpdates</b>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li></ul> The default value is <b>AllUpdates</b> . | Optional             | 31.0              |
| elementsPerBundle | Integer | Maximum number of feed elements to include in a bundle. The value must be an integer between 0 and 10. The default value is 3.<br><br> <b>Note:</b> Bundled posts contain feed-tracked changes and are in record feeds only.                                                                                                                                                                                                                | Optional             | 31.0              |

| Parameter Name      | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|---------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>filter</code> | String | <p>Specifies a filter value for a feed.</p> <ul style="list-style-type: none"> <li><code>AllQuestions</code>—Feed elements that are questions.</li> <li><code>AuthoredBy</code>—Feed elements authored by the user profile owner. This value is valid only for the <code>UserProfile</code> feed.</li> <li><code>CommunityScoped</code>—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a <code>User</code> or a <code>Group</code> parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the <code>UserProfile</code> feed.</li> <li><code>QuestionsWithCandidateAnswers</code>—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</li> <li><code>QuestionsWithCandidateAnswersReviewedPublished</code>—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.</li> <li><code>Read</code>—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the <code>Record</code> feed of a group.</li> <li><code>SolvedQuestions</code>—Feed elements that are questions and that have a best answer.</li> <li><code>UnansweredQuestions</code>—Feed elements that are questions and that don't have any answers.</li> <li><code>UnansweredQuestionsWithCandidateAnswers</code>—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</li> <li><code>Unread</code>—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the <code>Record</code> feed of a group.</li> </ul> | Optional             | 32.0              |

| Parameter Name                   | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|----------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                                  |         | <ul style="list-style-type: none"> <li><b>UnsolvedQuestions</b>—Feed elements that are questions and that don't have a best answer.</li> </ul> <p> <b>Note:</b> The <code>filter</code> parameter doesn't work for group feeds.</p> <p>You can specify <code>customFilter</code> or <code>filter</code>. You can't specify both.</p> |                      |                   |
| <code>page</code>                | String  | <p>A generated token that indicates the view of feed elements in the feed.</p> <p>Page tokens are returned as part of the response body, in one of the URL parameters, such as <code>nextPageURL</code>, for example:</p> <pre>"nextPageUrl": "/services/data/v65.0/ chatter/feeds/news/ 005D0000001GLowIAN /feed-elements ?page=2011-03-30T17:34:50Z, 0D5D0000000DSv4KAG"</pre>                                      | Optional             | 31.0              |
| <code>pageSize</code>            | Integer | Specifies the number of elements per page. Valid values are between 1 and 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                        | Optional             | 31.0              |
| <code>q</code>                   | String  | <p>One or more keywords to search for in the body and comments of feed elements in this feed.</p> <p>The search string can contain wildcards and must contain at least two characters that aren't wildcards. See <a href="#">Wildcards</a>.</p>                                                                                                                                                                       | Optional             | 31.0              |
| <code>recentComment Count</code> | Integer | Maximum number of comments to include per feed element. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                              | Optional             | 31.0              |
| <code>showInternal Only</code>   | Boolean | Specifies whether to show only feed elements from internal (non-site) users ( <code>true</code> ), or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                           | Optional             | 31.0              |
| <code>sort</code>                | String  | <p>Order of feed items in the feed.</p> <ul style="list-style-type: none"> <li><b>CreatedDateAsc</b>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> </ul>                                                                                  | Optional             | 31.0              |

| Parameter Name                         | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |

This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> <p>The default value is <code>CreatedDateDesc</code>.</p> |                      |                   |
| <code>threadedCommentsCollapsed</code> | Boolean | Specifies whether to return threaded comments in a collapsed style ( <code>true</code> ) or not ( <code>false</code> ). If you don't specify a value, the default is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Optional             | 44.0              |
| <code>updatedSince</code>              | String  | <p>An opaque token defining the modification time stamp of the feed and the sort order.</p> <p>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the Feed Element Page response body.</p> <p>The <code>updatedSince</code> parameter doesn't return feed elements that are created in the same second as the request.</p>                                                                                                                                                                                                                                                                            | Optional             | 31.0              |

**Response body for GET**[Feed Element Page](#)**IN THIS SECTION:**[Record Pinned Feed Elements](#)

Get pinned feed elements from a group feed. Pin or unpin a feed element to a group feed.

**SEE ALSO:**[Feeds and Feed Elements](#)[Get a Record Feed](#)[Get Another User's Feed](#)**Record Pinned Feed Elements**

Get pinned feed elements from a group feed. Pin or unpin a feed element to a group feed.

**Resource**

```
/chatter/feeds/record/recordId/pinned-feed-elements
```

```
/connect/communities/communityId/chatter/feeds/record/recordId/pinned-feed-elements
```

 **Note:** The `recordId` must be a group ID.

**Available version**

41.0

**Requires Chatter**

Yes

**HTTP methods**

GET, PATCH

**Response body for GET**[Pinned Feed Element Collection](#)

In the UI, pinned feed elements don't show all auxiliary information, such as comments, likes, interaction counts, or read by information. As a result, the Pinned Feed Element Collection doesn't include all the information for these capabilities.

**Request body for PATCH****Root XML tag**

```
<pinCapability>
```

**JSON example**

```
{
  "entityId": "0D5B000000TW7uh",
  "isPinned": "true"
}
```

**Properties**

| Name     | Type    | Description                                                                                                                                                                                                                                     | Required or Optional | Available Version |
|----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| entityId | String  | ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed. | Required             | 41.0              |
| isPinned | Boolean | Specifies whether to pin ( <code>true</code> ) or unpin ( <code>false</code> ) the entity.                                                                                                                                                      | Required             | 41.0              |

**Response body for PATCH**[Pin Capability](#)

## Streams Feed Resources

The feed of a stream.

Available resources are:

| Resource                                                             | Description                                                                                                                                   |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/streams/<i>streamId</i></a>               | Get the URL to the streams feed.                                                                                                              |
| <a href="#">/chatter/feeds/streams/<i>streamId</i>/feed-elements</a> | Get all feed elements from any combination of up to 25 people, groups, records, and topics that the context user subscribes to in the stream. |

## Streams Feed URL

Get the URL to the streams feed.

| pageSize           | Integer | Specifies the number of elements per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Optional             | 31.0              |
| recentCommentCount | Integer | Maximum number of comments to include per feed element. The default value is 3. The maximum value is 25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Optional             | 31.0              |
| sort               | String  | <p>Order of feed items in the feed.</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for <code>Home</code> feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul> <p>The default value is <code>CreatedDateDesc</code>.</p> | Optional             | 31.0              |
| updatedSince       | String  | <p>An opaque token defining the modification time stamp of the feed and the sort order.</p> <p>Do not construct this token. Retrieve this token from the <code>updatesToken</code> property of the Feed Element Page response body.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 31.0              |

| Parameter Name | Type | Description                                                                                                              | Required or Optional | Available Version |
|----------------|------|--------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                |      | The <code>updatedSince</code> parameter doesn't return feed elements that are created in the same second as the request. |                      |                   |

**Response body**

[Feed Element Page](#)

## To Feed Resources

A feed containing all @mentions of the context user and posts others have made to the context user's feed.

Available resources are:

| Resource                                           | Description                                                                                             |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/feeds/to/me</a>               | Returns a URL to the feed elements for the feed of the context user.                                    |
| <a href="#">/chatter/feeds/to/me/feed-elements</a> | Returns the feed elements for all @mentions of the context user, and all posts made to the user's feed. |

## To Feed URL

Returns a URL to the feed elements for the feed of the context user.

**Resource**

```
/chatter/feeds/to/userId
```

```
/connect/communities/communityId/chatter/feeds/to/userId
```

**Note:** `userId` must be the ID of the context user or the alias `me`.

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Request parameters**

| Parameter Name    | Type   | Description                                                                                                                                                                                                               |

Available version

41.0

Requires Chatter

Yes

HTTP methods

GET, PATCH

Response body for GET

[Pinned Feed Element Collection](#)

In the UI, pinned feed elements don't show all auxiliary information, such as comments, likes, interaction counts, or read by information. As a result, the Pinned Feed Element Collection doesn't include all the information for these capabilities.

Request body for PATCH

## User Profile Feed Resources

A feed containing feed elements created by the user, parented by the user, and where the user is mentioned. In Experience Cloud sites only, this feed also contains feed elements on which the user commented. This feed is different than the news feed, which returns more feed items, including group updates. You can post to the user-profile feed. You can get another user's user profile feed.

**Note:** To match the feed displayed in the Chatter UI, the composition of this feed may change between releases.

## Followers on Records Resource

Get information about the followers of the specified record.

**Resource**

```
/chatter/records/recordId/followers
```

```
/connect/communities/communityId/chatter/records/recordId/followers
```

As of version 29.0, you can use a topic ID for the *recordId*.

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Request parameters**

| Parameter Name | Type    | Description                                                                                                                  |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------|
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                                 |
| pageSize       | Integer | Specifies the number of items per page. Valid values are between 1 and 1000. If you don't specify a size, the default is 25. |

## Groups Resources

Information about groups, such as the group's members, photo, and the groups in the organization. Create and delete a group, add members to a group, and change the group photo.

**Note:** The groups resource is not a feed. To view the feed for a group, or post to it, use the [record feed resource](#) with a *groupId*.

Available resources:

| Resource                                                              | Description                                                                                                                                        |
|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/group-membership-requests/<b>requestId</b></a>   | Update the status of a request by a user to join a private group or get information about a request to join a private group.                       |
| <a href="#">/chatter/group-memberships/<b>membershipId</b></a>        | Access information about a member of a group, remove a member from a group, and update a group member's role.                                      |
| <a href="#">/chatter/group-memberships/batch/<b>membershipIds</b></a> | Access information about a list of group members.                                                                                                  |
| <a href="#">/chatter/group-records/<b>groupRecordId</b></a>           | Get information about a group record or remove the association between a record and a group.                                                       |
| <a href="#">/chatter/groups/</a>                                      | A list of all the groups in the organization. Get information about groups or create a group.                                                      |
| <a href="#">/chatter/groups/batch/<b>group_list</b></a>               | Get information about more than one group at the same time.                                                                                        |
| <a href="#">/chatter/groups/<b>groupId</b></a>                        | Get information about a Chatter group.                                                                                                             |
| <a href="#">/chatter/groups/<b>groupId</b>/announcements</a>          | Information about the announcements posted to the specified group. Get information or post an announcement to a group.                             |
| <a href="#">/chatter/groups/<b>groupId</b>/banner-photo</a>           | Get, create, or delete the banner photo for a group.                                                                                               |
| <a href="#">/chatter/groups/<b>groupId</b>/files</a>                  | Get information about the files posted to the specified group.                                                                                     |
| <a href="#">/chatter/groups/<b>groupId</b>/members</a>                | Members of a specified group. Get the members and add a member to a group. To add a member, the context user must be the group owner or moderator. |
| <a href="#">/chatter/groups/<b>groupId</b>/members/requests</a>       | Request membership in a private group or get the status of requests to a join a private group.                                                     |
| <a href="#">/chatter/groups/<b>groupId</b>/my-settings</a>            | Get information about the context user's Chatter settings for the specified group.                                                                 |
| <a href="#">/chatter/groups/<b>groupId</b>/photo</a>                  | The photo for the specified group. Get, post, crop, and delete the photo.                                                                          |
| <a href="#">/chatter/groups/<b>groupId</b>/records</a>                | Get the list of records associated with a group. Associate a record with a group.                                                                  |
| <a href="#">/chatter/groups/<b>groupId</b>/topics</a>                 | Get up to five topics most recently used in a group.                                                                                               |
| <a href="#">/chatter/groups/group/<b>groupId</b>/invite</a>           | Invite internal and external users to join a group.                                                                                                |

```

**Available version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, POST

POST available in 29.0

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                                                                                                                                                                                                                                                                 | Available |
|----------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| archiveStatus  | String  | Returns the list of groups filtered by the archive status you specify: <ul style="list-style-type: none"><li>• <b>All</b>—All groups, including groups that are archived and groups that aren't archived.</li><li>• <b>Archived</b>—Groups that are archived.</li><li>• <b>NotArchived</b>—Groups that aren't archived.</li></ul> The default value is <b>NotArchived</b> . | 29.0      |
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                                                                                                                                                                                                                                                                                | 23.0      |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 250. The default value is 25.                                                                                                                                                                                                                                                                       | 23.0      |
| q              | String  | Specifies the string to search. For more information about wildcards, see <a href="#">Wildcards</a> .                                                                                                                                                                                                                                                                       | 23.0      |

### Properties

| Name                  | Type                                    | Description                                                                                                                                                                                         | Available Version |
|-----------------------|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| announcement          | String                                  | An announcement ID.<br><br>An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement. | 31.0              |
| canHaveChatterGuests  | Boolean                                 | <code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .                  | 29.0              |
| description           | String                                  | The "Description" section of the group                                                                                                                                                              | 29.0              |
| information           | <a href="#">Group Information Input</a> | The "Information" section of the group. If the group is private, the "Information" section is visible only to members. The "Description" section is visible to everyone.                            | 28.0              |
| isArchived            | Boolean                                 | <code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                          | 29.0              |
| isAutoArchiveDisabled | Boolean                                 | <code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                | 29.0              |
| isBroadcast           | Boolean                                 | <code>true</code> if only group owners and managers can create posts in the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                   | 36.0              |
| name                  | String                                  | The name of the group                                                                                                                                                                               | 29.0              |
| owner                 | String                                  | The ID of the group owner. This property is available for PATCH requests only.                                                                                                                      | 29.0              |

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                | Available Version |
|------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| visibility | String | Group visibility type. One of the following values: <ul style="list-style-type: none"> <li><code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li><code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li><code>Unlisted</code>—Reserved for future use.</li> </ul> | 29.0              |

### Request parameters for POST

| Parameter Name       | Type    | Description                                                                                                                                                                                                                                                                                                                                         | Required or Optional | Available |
|----------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------|
| canHaveChatterGuests | Boolean | <code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .                                                                                                                                                                  | Optional             | 29.0      |
| description          | String  | The “Description” section of the group                                                                                                                                                                                                                                                                                                              | Optional             | 29.0      |
| informationText      | String  | The text in the “Information” section of the group                                                                                                                                                                                                                                                                                                  | Optional             | 29.0      |
| informationTitle     | String  | The title of the “Information” section of the group                                                                                                                                                                                                                                                                                                 | Optional             | 29.0      |
| name                 | String  | The name of the group                                                                                                                                                                                                                                                                                                                               | Required             | 29.0      |
| visibility           | String  | Group visibility type. One of the following: <ul style="list-style-type: none"> <li><code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li><code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li><code>Unlisted</code>—Reserved for future use.</li> </ul> | Required             | 29.0      |

| announcement          | String                                  | An announcement ID.<br><br>An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.                                                                                                                                                        | 31.0              |
| canHaveChatterGuests  | Boolean                                 | <code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .                                                                                                                                                                         | 29.0              |
| description           | String                                  | The "Description" section of the group                                                                                                                                                                                                                                                                                                                     | 29.0              |
| information           | <a href="#">Group Information Input</a> | The "Information" section of the group. If the group is private, the "Information" section is visible only to members. The "Description" section is visible to everyone.                                                                                                                                                                                   | 28.0              |
| isArchived            | Boolean                                 | <code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                                                                 | 29.0              |
| isAutoArchiveDisabled | Boolean                                 | <code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                                       | 29.0              |
| isBroadcast           | Boolean                                 | <code>true</code> if only group owners and managers can create posts in the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                          | 36.0              |
| name                  | String                                  | The name of the group                                                                                                                                                                                                                                                                                                                                      | 29.0              |
| owner                 | String                                  | The ID of the group owner. This property is available for PATCH requests only.                                                                                                                                                                                                                                                                             | 29.0              |
| visibility            | String                                  | Group visibility type. One of the following values: <ul style="list-style-type: none"> <li><code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li><code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li><code>Unlisted</code>—Reserved for future use.</li> </ul> | 29.0              |

## Group Information Input

## JSON

```
{
  "text" : "Post questions about the API.",
  "title" : "API Questions"
}
```

## Properties

| Name  | Type   | Description                                                                                                               | Available Version |
|-------|--------|---------------------------------------------------------------------------------------------------------------------------|-------------------|
| text  | String | The text in the “Information” section of the group. HTML is not supported. The maximum length is 4000 characters (bytes). | 28.0              |
| title | String | The title in the “Information” section of the group. The maximum length is 240 characters (bytes).                        | 28.0              |

## Request parameters for PATCH

| Property              | Type    | Description                                                                                                                                                                                                                      | Required or Optional | Available Version |
|-----------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| announcement          | String  | The ID of a feed item to use as an announcement.<br><br>An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement. | Optional             | 31.0              |
| canHaveChatterGuests  | Boolean | <code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .                                               | Optional             | 29.0              |
| description           | String  | The “Description” section of the group.                                                                                                                                                                                          | Optional             | 29.0              |
| informationText       | String  | The “Information” section of the group. If the group is private, the “Information” section is visible only to members. The “Description” section is visible to everyone.                                                         | Optional             | 28.0              |
| informationTitle      | String  | The title of the “Information” section of the group.                                                                                                                                                                             | Optional             | 28.0              |
| isArchived            | String  | <code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                       | Optional             | 29.0              |
| isAutoArchiveDisabled | Boolean | <code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                             | Optional             | 29.0              |
| isBroadcast           | Boolean | <code>true</code> if only group owners and managers can create posts in the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                | Optional             | 36.0              |
| name                  | String  | The name of the group.                                                                                                                                                                                                           | Optional             | 29.0              |

| Property   | Type   | Description                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| owner      | String | The ID of the group owner. This property is available for PATCH requests only.                                                                                                                                                                                                                                                                                   | Optional             | 29.0              |
| visibility | String | Group visibility type. One of the following values: <ul style="list-style-type: none"> <li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li>• <code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li>• <code>Unlisted</code>—Reserved for future use.</li> </ul> | Optional             | 29.0              |

### Response body for GET and PATCH

[Group Detail](#)

### Example for PATCH

This request body updates the text and title of the “Information” section of a group:

```
{
  "information" : {
    "text" : "Post questions about the API to this group. If you have the answer to a question, please post it. This is a private R&D group.",
    "title" : "API Questions Group"
  }
}
```

Here is the same example using request parameters:

```
https://instance_name/services/data/65.0/chatter/groups/groupId?informationText=Post+questions+about+the+API+to+this+group.+If+you+have+the+answer+to+a+question%2C%20+please+post+it.+This+is+a+private+R%26amp%3Bamp%3BD+group.&informationTitle=API+Questions+Group
```

The response is a [Group Detail](#) response body.

## Batch Group Information

Get information about more than one group at the same time.

### Resource

```
/chatter/groups/batch/group_list
```

```
/connect/communities/communityId/chatter/groups/batch/group_list
```

Where *group\_list* is a comma-separated list of up to 500 group IDs.

### Available since version

23.0

### Requires Chatter

Yes

**HTTP methods**

GET or HEAD

**Response body**[Batch Results](#)

## Group Announcements

Information about the announcements posted to the specified group. Get information or post an announcement to a group.

Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To get information about, update, or delete an announcement, use the [Announcements Resources](#).

**Resource**

```
/chatter/groups/groupID/announcements
```

```
/connect/communities/communityId/chatter/groups/groupID/announcements
```

**Available since version**

31.0

**Requires Chatter**

Yes

**HTTP methods**

GET, POST, HEAD

**Request parameters for GET**

| Parameter Name | Type    | Description                                                                                                                  | Available Since |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------|-----------------|
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                                 | 31.0            |
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25. | 31.0            |

**Request body for POST****Root XML tag**

&lt;announcement&gt;

**JSON example for creating an announcement**

```
{  "body":    {    "messageSegments": [      {        "text": "Please install the updates for all iOS devices.",        "type": "Text"      }    ]  }
```

```

    }
  ],
  "parentId": "0F9B0000000004S",
  "expirationDate": "2016-02-22T00:00:00.000Z"
}

```

#### JSON example for creating an announcement using an existing feed item

```

{
  "feedItemId": "0D5D0000000DaZBKA0",
  "expirationDate": "2016-02-22T00:00:00.000Z"
}

```

## Group Banner Photo

Get, create, or delete the banner photo for a group.

To use an image from the Files page as a group banner photo, pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter. Images uploaded on the Group page don't have a file ID and can't be used as the `fileId`.

To upload a binary file as the group banner photo, send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

**Resource**

```
/chatter/groups/groupId/banner-photo
```

```
/connect/communities/communityId/chatter/groups/groupId/banner-photo
```

**Available version**

36.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, DELETE, POST

Group owners and managers and users with the Manage All Data permission can DELETE and POST group banner photos.

**Request body for POST****Root XML tag**

```
<bannerPhoto>
```

**JSON example**

```
{
  "cropHeight" : "120",
  "cropWidth" : "240",
  "fileId" : "069D00000001IOh"
}
```

**Properties**

| Name          | Type    | Description                                                                                                                                                                                              | Required or Optional             | Available Version |
|---------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| cropHeight    | Integer | Height of the crop rectangle in pixels.                                                                                                                                                                  | Optional                         | 36.0              |
| cropWidth     | Integer | Width of the crop rectangle in pixels.                                                                                                                                                                   | Optional                         | 36.0              |
| cropX         | Integer | X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).                                                                                                  | Optional                         | 36.0              |
| cropY         | Integer | Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).                                                                                                   | Optional                         | 36.0              |
| fileId        | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.                                                                                  | Required to use an existing file | 36.0              |
|               |         |  <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. |                                  |                   |
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used.                                                                                                                         | Optional                         | 36.0              |

**Request parameters for POST**

| Name          | Type    | Description                                                                                                                                                                                                                                                                                                | Required or Optional             | Available Version |
|---------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| cropHeight    | Integer | The length of an edge in pixels of the crop rectangle.                                                                                                                                                                                                                                                     | Optional                         | 36.0              |
| cropWidth     | Integer | The width of an edge in pixels of the crop rectangle.                                                                                                                                                                                                                                                      | Optional                         | 36.0              |
| cropX         | Integer | The position X in pixels from the left edge of the image to start the crop square. Top left is position (0,0).                                                                                                                                                                                             | Optional                         | 36.0              |
| cropY         | Integer | The position Y in pixels from the top edge of the image to start the crop square. Top left is position (0,0).                                                                                                                                                                                              | Optional                         | 36.0              |
| fileId        | String  | ID of an existing file. The key prefix must be 069 and the file size must be less than 8 MB.<br><br> <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. | Required to use an existing file | 36.0              |
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used.                                                                                                                                                                                                                           | Optional                         | 36.0              |

## Group Memberships Resources

Information about memberships in Chatter groups.

Available resources are:

| Resource                                                              | Description                                                                                                   |
|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/group-memberships/<i>membershipId</i></a>        | Access information about a member of a group, remove a member from a group, and update a group member's role. |
| <a href="#">/chatter/group-memberships/batch/<i>membershipIds</i></a> | Access information about a list of group members.                                                             |

## Group Memberships Information

Access information about a member of a group, remove a member from a group, and update a group member's role.

Membership IDs are returned from the [/chatter/groups/\*groupId\*/memberships](#) resource.

### Resource

```
/chatter/group-memberships/membershipId
```

```
/connect/communities/communityId/chatter/group-memberships/membershipId
```

### Available since version

23.0

### Requires Chatter

Yes

### HTTP methods

GET, DELETE, HEAD, PATCH

PATCH is supported in version 29.0.

### Request body for PATCH

#### Root XML tag

```
<member>
```

#### JSON example

```
{
  "role" : "GroupManager",
  "userId" : "005B00000000Ge16"
}
```

### Properties

| Name   | Type   | Description                                                                                                                         | Available Version |
|--------|--------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| role   | String | The role of the member. One of these values: <ul style="list-style-type: none"> <li>GroupManager</li> <li>StandardMember</li> </ul> | 29.0              |
| userId | String | The user ID of the member to be added to the group.                                                                                 | 23.0              |

**Note:** To update a group member's role in a PATCH request, pass only the `role` property, don't pass the `userId` property.

**Request parameters for PATCH**

| Name | Type   | Description                                                                                                                          | Available Version |
|------|--------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| role | String | The role of the member. One of these values: <ul style="list-style-type: none"><li>• GroupManager</li><li>• StandardMember</li></ul> | 29.0              |

**Response body for GET or PATCH**[Group Member](#)**Batch Group Memberships**

Access information about a list of group members. The members don't have to belong to the same group. Each membership ID is associated with a specific group.

Membership IDs are returned in the response bodies of several [groups resources](#).

The following groups resource lists every member of a group in its own [Group Member](#) response body. The `id` property of every Group Member response body contains a membership ID:

```
/chatter/groups/groupId/members
```

**Resource**

```
/chatter/group-memberships/batch/membershipIds
```

```
/connect/communities/communityId/chatter/group-memberships/batch/membershipIds
```

Where *membershipIds* is a comma-separated list of up to 500 membership IDs.

**Available since version**

27.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD

**Response body for GET or HEAD**[Batch Results](#)**Example for GET**

This request gets the group membership information for two users:

```
/chatter/group-memberships/batch/0FBD00000003GAPOA2,0FBD00000003GAKOA
```

This is the Batch Results response body, which contains nested [User Summary](#) response bodies:

```
{
  "hasErrors": true,
  "results": [
    {
```

```

"result": {
  "id": "0FBD00000003GAPOA2",
  "role": "StandardMember",

    "message": "The requested resource does not exist"
  }],
  "statusCode": 404
}

```

```
    ]
  }
```

Note that the second group membership wasn't found. Batch requests return a status code for each subrequest.

Group Photo

The photo for the specified group. Get, post, crop, and delete the photo.

To use an image from the Files page as a group photo (existing content), pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter. Images uploaded on the Group page don't have a file ID and can't be used as the `fileId`.

To upload a binary file as a group photo, you must send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

## Group Records

Get the list of records associated with a group. Associate a record with a group.

#### Resource

```
/chatter/groups/groupID/records
```

```
/connect/communities/communityId/chatter/groups/groupID/records
```

#### Available since version

33.0

#### Requires Chatter

Yes

#### HTTP methods

GET, HEAD, POST

POST is supported in version 34.0 and later.

#### Request parameters for GET

| Parameter Name | Type    | Description                                                                                  | Available Since |
|----------------|---------|----------------------------------------------------------------------------------------------|-----------------|
| page           | Integer | An integer specifying a page of items. The default value is 0, which returns the first page. | 33.0            |

| Parameter Name | Type    | Description                                                                                                                  | Available Since |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------|-----------------|
| pageSize       | Integer | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25. | 33.0            |

### Request body for POST

#### Root XML tag

```
<groupRecord>
```

#### JSON example

```
{"recordId" : "001D000000Io9cD"}
```

### Properties

| Name     | Type   | Description       | Required or Optional | Available Version |

|----------|----------|----------------------------------------------------|----------------------|-------------------|
| invitees | String[] | List of email addresses to send the invitation to. | Required             | 39.0              |
| message  | String   | Message to include in the invitation.              | Optional             | 39.0              |

**Response body for POST**[Invite Collection](#)

## Influence Resource

List of the percentile thresholds used to categorize an organization's users by their influence in Chatter.

Users are ranked based on the number of posts and comments made, and comments and likes received. The percentile associated with a category represents the bottom threshold for that influencer category. For example: 0.25 defines the cutoff for the **Active Influencer** category, which means it includes users with an influence rank equal to or greater than the 25th percentile (25%) and less than the next highest category threshold.

## Influence Thresholds

**Resource**

```
/chatter/influence/thresholds
```

```
/connect/communities/communityId/chatter/influence/thresholds
```

**Available since version**

**Response body**[Influence Thresholds](#)**Example response body**

```
{ "thresholds": [
  {
    "name": "Top Influencer",
    "threshold": "0.8",
  }
  {
    "name": "Active Influencer",
    "threshold": "0.25",
  }
  {
    "name": "Observer",
    "threshold": "0.0",
  }
]}
```

## Likes Resource

Information about the specified like. Also used to delete a like.

**Resource**`/chatter/likes/likeId``/connect/communities/communityId/chatter/likes/likeId`

You can find the ID for a specific like from any feed, such as a news feed or a record feed.

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET, DELETE or HEAD

**Response body for GET or HEAD**[Like](#)

## Mentions Resources

Information about users and groups that a user can mention in a feed item body or comment body. When a user or group is mentioned, they receive notification.

Use the Mentions Completions resource to get a list of mention proposals. Use the Mentions Validations resource to determine which of those proposals are valid for the context user.

## IN THIS SECTION:

[Mentions Completions](#)

Information about users and groups to mention in a feed item body or comment body. Use this resource to generate a list of proposed mentions that a user can choose from. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

[Mentions Validations](#)

Information about whether the specified mentions are valid for the context user. For example, the context user can't mention private groups he doesn't belong to. If such a group were included in the list of mention validations, the `hasErrors` property of the Mention Validations response body would be `true` and the group would have a `validationStatus` of `Disallowed` in its mention validation.

## Mentions Completions

Information about users and groups to mention in a feed item body or comment body. Use this resource to generate a list of proposed mentions that a user can choose from. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

## Scheduled Custom Recommendation

Get information about, update, or delete a scheduled custom recommendation.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Response body for PATCH**[Scheduled Custom Recommendation](#)**Request parameters for DELETE**

| Parameter Name             | Type    | Description                                                                                                                                                                                                               | Required or Optional | Available Version |
|----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| deleteDefinition<br>IfLast | Boolean | <p>If <code>true</code> and if the DELETE request is for the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is <code>false</code>.</p> | Optional             | 35.0              |

**Response for DELETE**[204: Successful Delete](#)

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

## Subscriptions Notifications Member Resource

Get information about the frequency with which a user receives subscription notifications. Subscribe or unsubscribe a user from receiving notifications.

When users opt to receive notifications for the topics they follow, they get an email when the topic is added to a post that they have access to. When users opt to receive notifications for their streams, they get an email on every post in the stream.

**Resource**

```
/connect/chatter/subscriptions/notification/entityId/members/userId
```

```
/connect/communities/communityId/chatter/subscriptions/notification/entityId/members/userId
```

In version 38.0–39.0, *entityId* must be a topic ID. In version 40.0 and later, *entityId* must be a topic ID or a Chatter feed stream ID.

**Available version**

38.0

**Requires Chatter**

Yes

**HTTP methods**

GET, POST, DELETE

**Request body for POST****Root XML tag**

```
<notificationMember>
```

**JSON example**

```
{
  "notificationFrequency": "EachPost"
}
```

**Properties**

| Name                   | Type   | Description                                                                                                           | Required or Optional | Available Version |
|------------------------|--------|-----------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| notification Frequency | String | Frequency with which a user receives email. In version 38.0 and later, <code>EachPost</code> is the only valid value. | Required             | 38.0              |

**Request parameters for POST**

| Parameter Name         | Type   | Description                                                                                                           | Required or Optional | Available Version |
|------------------------|--------|-----------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| notification Frequency | String | Frequency with which a user receives email. In version 38.0 and later, <code>EachPost</code> is the only valid value. | Required             | 38.0              |

**Response body for GET and POST**[Notification Member](#)**Response body for DELETE**[204: Successful Delete](#)

## Subscriptions Resource

Information about the specified subscription. Also used to delete a subscription, for example, to unfollow a record or a topic.

A subscription ID is returned as part of the response body for `follower` and `following` resources, for example, `/records/recordId/followers`. In addition, subscriptions IDs are also returned in many summary response bodies, such as group summary or user summary.

**Resource**

```
/chatter/subscriptions/subscriptionId
```

```
/connect/communities/communityId/chatter/subscriptions/subscriptionId
```

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET, DELETE, or HEAD

**Response body for GET**[Subscription](#)

## Topic Endorsements

An endorsement. Get information about an endorsement and remove an endorsement.

**Resource**

```
/connect/topic-endorsements/endorsementId
```

```
/connect/communities/communityId/topic-endorsements/endorsementId
```

**Available since version**

30.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, DELETE

**Response body for GET**[Topic Endorsement](#)**Response body for DELETE**[204: Successful Delete](#)**Example for DELETE**

When you endorse someone for a topic, an endorsement record is created with the key prefix `0en`. To remove an endorsement, delete the endorsement record.

```
DELETE /connect/topic-endorsements/0enD000000003UIAQ
```

This is the response:

```
HTTP 204
```

## Topic Groups

Get information about the five groups that most recently contributed to a topic.

**Resource**

```
/connect/topics/topicId/groups
```

```
/connect/communities/communityId/topics/topicId/groups
```

**Available since version**

29.0

In version 28.0, use `/chatter/topics/topicId/groups`.

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Response body**[Group Page](#)

## Topics, Knowledgeable People List

People who are knowledgeable about topics. Get a list of knowledgeable people for the specified topic.

**Resource**

```

```

```
/connect/communities/communityId/topics/topicId/knowledgeable-users
```

**Available since version**

30.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Request parameters**

| Parameter Name | Values  | Description                                                                                          | Required or Optional | Available Version |
|----------------|---------|------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| page           | Integer | An integer greater than 0 specifying a page of topics. The default value is zero.                    | Optional             | 30.0              |
| pageSize       | Integer | Specifies the number of items per page. Valid values are between 1 and 100. The default value is 25. | Optional             | 30.0              |

**Response body**[Knowledgeable People Collection](#)

## Topics, Opt Outs from Knowledgeable People List

Topic opt outs. Get a list of topic opt outs for the specified topic. Hide yourself from the Knowledgeable People list for the specified topic.

**Resource**

```
/connect/topics/topicId/topic-opt-outs
```

```
/connect/communities/communityId/topics/topicId/topic-opt-outs
```

**Available since version**

30.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, POST

**Response body for GET**[Topic Opt Out Collection](#)**Response body for POST**[Topic Opt Out](#)

## Topics, Opt Out from Knowledgeable People List

Topic opt out. After hiding yourself from the Knowledgeable People list, show yourself again.

**Resource**

```
/connect/topic-opt-outs/topicOptOutId
```

```
/connect/communities/communityId/topic-opt-outs/topicOptOutId
```

**Available since version**

30.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, DELETE

**Response body for GET**[Topic Opt Out](#)**Response body for DELETE**[204: Successful Delete](#)**Example for DELETE**

When you opt out of the knowledgeable people list for a topic, a topic opt out record is created with the key prefix 0eb. To show yourself in the knowledgeable people list after you've opted out, delete the topic opt out record.

```
DELETE /connect/topic-opt-outs/0ebD0000000003oIAA
```

This is the response:

```
HTTP 204
```

## User Profiles Resources

The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Available resources:

| Resource                                                          | Description                                         |
|-------------------------------------------------------------------|-----------------------------------------------------|
| <a href="#">/connect/user-profiles/<i>userID</i></a>              | Get details about a user's profile.                 |
| <a href="#">/connect/user-profiles/<i>userID</i>/banner-photo</a> | Get, create, or delete the banner photo for a user. |

## User Profiles Resource

Get details about a user's profile.

For information about subtab apps, see [What Is a Subtab App?](#)

The capabilities information provides some information about the context user's capabilities in relation to another user, called the subject user. For example, the capabilities information indicates whether the context user can chat with the subject user and whether the context user can direct message the subject user. Specify the subject user as the *userID*.

**Resource**

```
/connect/user-profiles/userId
```

```
/connect/communities/communityId/user-profiles/userId
```

**Available since version**

29.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Response body for GET**[User Profile](#)

## User Profiles Banner Photo

Get, create, or delete the banner photo for a user.

To use an image from the Files page as a user banner photo, pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter. Images uploaded on the User Profile page don't have a file ID and can't be used as the `fileId`.

To upload a binary file as the user banner photo, send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

**Resource**

```
/connect/user-profiles/userId/banner-photo
```

```
/connect/communities/communityId/user-profiles/userId/banner-photo
```

**Available version**

36.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, POST, DELETE

**Request body for POST****Root XML tag**

&lt;bannerPhoto&gt;

**JSON example**

```
{  "cropHeight" : "120",  "cropWidth"  : "240",  "fileId"     : "069D00000001Ioh"}  }
```

**Properties**

| Name          | Type    | Description                                                                                                                                                                                                                                                                                                                           | Required or Optional             | Available Version |
|---------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| cropHeight    | Integer | Height of the crop rectangle in pixels.                                                                                                                                                                                                                                                                                               | Optional                         | 36.0              |
| cropWidth     | Integer | Width of the crop rectangle in pixels.                                                                                                                                                                                                                                                                                                | Optional                         | 36.0              |
| cropX         | Integer | X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).                                                                                                                                                                                                                               | Optional                         | 36.0              |
| cropY         | Integer | Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).                                                                                                                                                                                                                                | Optional                         | 36.0              |
| fileId        | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.<br><br> <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. | Required to use an existing file | 36.0              |
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used.                                                                                                                                                                                                                                                      | Optional                         | 36.0              |

**Request parameters for POST**

| Name       | Type    | Description                                                                                                    | Required or Optional | Available Version |
|------------|---------|----------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cropHeight | Integer | The length of an edge in pixels of the crop rectangle.                                                         | Optional             | 36.0              |
| cropWidth  | Integer | The width of an edge in pixels of the crop rectangle.                                                          | Optional             | 36.0              |
| cropX      | Integer | The position X in pixels from the left edge of the image to start the crop square. Top left is position (0,0). | Optional             | 36.0              |
| cropY      | Integer | The position Y in pixels from the top edge of the image to start the crop square. Top left is position (0,0).  | Optional             | 36.0              |

| Name                       | Type    | Description                                                                                                                                                                                                                                                                                                | Required or Optional             | Available Version |

## User Profiles Photo

The user profile photo. Get, post, and crop the photo.

To use an image from the Files page, pass the file ID in the `fileId` property of the request body or in the `fileId` request parameter. Images uploaded on the User page and on the Group page don't have a file ID and can't be used as the `fileId`.

To upload a binary file as the user photo, send it in a multipart/form-data message. For information about how to create the multipart/form-data message, see [Uploading Binary Files](#).

To display user profile photos in a feed, cache the user photos. Then use the `photoVersionId` property of the Photo response body to determine when to update a photo. This technique helps you avoid running over limits and may improve mobile client performance.

## Users Resources

Get information about the user, such as who is following the user and the user's recommendations. Post feed items and update conversation status.

Available resources are:

| Resource                          | Description                                                        |
|-----------------------------------|--------------------------------------------------------------------|
| <a href="#">/chatter/users</a>    | Returns information about all users in an organization.            |
| <a href="#">/chatter/users/me</a> | Information about the context or specified user's Chatter profile. |

| Resource                                                                       | Description                                                                                                                                                                                    |
|--------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">/chatter/users/batch/<b>user_list</b></a>                          | Returns information about the specified users' profiles.                                                                                                                                       |
| <a href="#">/chatter/users/<b>userId</b>/activities/export-job</a>             | Export Chatter-related activity, such as bookmarks, topic endorsements, and votes, for a user.                                                                                                 |
| <a href="#">/chatter/users/<b>userId</b>/activities/purge-job</a>              | Start a job to purge Chatter-related activity, such as bookmarks, topic endorsements, and votes, for a user.                                                                                   |
| <a href="#">/chatter/users/me/conversations</a>                                | Get private conversations for the context user and search across private conversations.                                                                                                        |
| <a href="#">/chatter/users/me/conversations/<b>conversationId</b></a>          | Get a private conversation for the context user. Search within a private conversation and change the status of a private conversation.                                                         |
| <a href="#">/chatter/users/me/conversations/unread-count</a>                   | Get the number of private conversations that have unread messages for a user.                                                                                                                  |
| <a href="#">/chatter/users/me/followers</a>                                    | Get information about the followers for a user.                                                                                                                                                |
| <a href="#">/chatter/users/me/following</a>                                    | Returns a list of people, groups, records, topics, and files that the specified user is following. Also used to follow records.                                                                |
| <a href="#">/chatter/users/me/groups</a>                                       | Get the groups that a user is a member of.                                                                                                                                                     |
| <a href="#">/chatter/users/me/knowledgeable-about-topics</a>                   | Topics that the specified user is knowledgeable about. Get a list of topics for the specified user.                                                                                            |
| <a href="#">/chatter/users/me/messages</a>                                     | Get private messages for the context user. Search across private messages and post a private message.                                                                                          |
| <a href="#">/chatter/users/me/messages/<b>messageId</b></a>                    | Get a private message for the context user.                                                                                                                                                    |
| <a href="#">/chatter/users/me/recommendations</a>                              | Get the Chatter recommendations, such as user, group, file, record, topic, and article recommendations, for the context user. Also get custom and static recommendations for the context user. |
| <a href="#">/chatter/users/me/recommendations/<b>action</b></a>                | Get the Chatter, custom, and static recommendations for the specified action for the context user.                                                                                             |
| <a href="#">/chatter/users/me/recommendations/<b>action/objectCategory</b></a> | Get the Chatter, custom, and static recommendations for the specified action and object category for the context user.                                                                         |
| <a href="#">/chatter/users/me/recommendations/<b>action/idPrefix</b></a>       | Get the Chatter, custom, and static recommendations for the specified action and key prefix for the context user.                                                                              |

| Resource                                                                                                     | Description                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>/chatter/users/me/recommendations/<b>action/objectID</b></code>                                        | Get the Chatter, custom, and static recommendations for the specified action and object ID for the context user. Also used to delete a recommendation. |
| <code>/chatter/users/<b>userId</b>/recommendations/<b>action/objectEnum</b></code>                           | Get the static Chatter recommendation for the specified action and object type for the context user. Also used to delete a static recommendation.      |
| <code>/connect/communities/<b>communityId</b></code><br><code>/chatter/users/<b>userId</b>/reputation</code> | Get a user's reputation in an Experience Cloud site.                                                                                                   |
| <code>/chatter/users/me/settings</code>                                                                      | Get information about a user's global Chatter settings.                                                                                                |
| <code>/chatter/users/me/topics</code>                                                                        | Get up to five topics most recently used by a user.                                                                                                    |

## User Information

Returns information about all users in an organization.

### Resource

```
/chatter/users
```

```
/connect/communities/communityId/chatter/users
```

### Available since version

23.0

### Requires Chatter

Yes

### HTTP methods

GET or HEAD

### Request parameters

| Parameter | Type    | Description                                                                                                        | Available Version |
|-----------|---------|--------------------------------------------------------------------------------------------------------------------|-------------------|
| page      | Integer | An integer specifying a page of items. The default value is 0, which returns the first page.                       | 23.0              |
| pageSize  | Integer | The number of items per page. Valid values are between 1 and 250. The default value is 25.                         | 23.0              |
| q         | String  | Specifies the string to search.<br><br>This parameter searches user names, not email addresses, titles, and so on. | 23.0              |

| Parameter                    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Available Version |
|------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <code>searchContextId</code> | String | <p>Specify a feed item ID that provides context for the search results.</p> <p>Use this parameter for @mention completion. Passing a feed item ID for <code>searchContextId</code> matches users already mentioned in the thread earlier in the returned collection. You can also use the <a href="#">Mentions Completions</a> resource, which is specifically designed for @mention completion.</p> <p>When using this parameter, you can't query more than 500 results and you can't use wildcards in the search term.</p> | 28.0              |

**Response body**[User Page](#)

In versions earlier than 28.0, the `user` property in the User Page response body can contain a User Summary or a User Detail response body. In version 28.0 and later, it always contains User Detail. The fields that the context user is not allowed to see are set to `null`.

## User Profile Information

Information about the context or specified user's Chatter profile.

**Resource**

```
/chatter/users/userId
```

```
/connect/communities/communityId/chatter/users/userId
```

**Available version**

23.0

PATCH available in 29.0

**Requires Chatter**

Yes

**HTTP methods**

GET, HEAD, PATCH

**Response body for GET**

- [User Detail](#)—Versions 26.0 and later. If the user is external, the properties that the User Detail response body shares with the User Summary response body can have non-null values. Other properties are always `null`.
- [User Summary](#)—Versions 25.0 and earlier.

**Request body for PATCH****Root XML tag**

```
<user>
```

**JSON example**

```
{
  "aboutMe": "Staff Technical Writer responsible for the Connect API and Connect in
```

```
Apex documentation."
}
```

### Properties

| Name    | Type   | Description                                                                                                                                                                                                                         | Available Version |
|---------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| aboutMe | String | The aboutMe property of a User Detail response body. The maximum length is 1000 characters. This property populates the "About Me" section of the user profile, which is visible to all members of an Experience Cloud site or org. | 29.0              |

### Request parameters for PATCH

| Name    | Type   | Description                                                                                                                                                                                                                         | Available Version |
|---------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| aboutMe | String | The aboutMe property of a User Detail response body. The maximum length is 1000 characters. This property populates the "About Me" section of the user profile, which is visible to all members of an Experience Cloud site or org. | 29.0              |

### Response body for PATCH

[User Detail](#)

### Example for updating the "About Me" section in the user profile using parameters

```
/chatter/users/me?aboutMe=Staff+Technical+Writer+at+Seattle+Apps
```

### SEE ALSO:

[Get Chatter Activity Statistics for a User](#)

## Batch User Information

Returns information about the specified users' profiles.

**Resource**

```
/chatter/users/batch/user_list
```

```
/connect/communities/communityId/chatter/users/batch/user_list
```

Where *user\_list* is a comma-separated list of up to 500 user IDs.

**Available since version**

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Response body**

[Batch Results](#)

**SEE ALSO:**

## User Activity, Export

Export Chatter-related activity, such as bookmarks, topic endorsements, and votes, for a user.

The following activities can be exported.

**Resource**

```
/chatter/users/userId/activities/export-job
```

```
/connect/communities/communityId/chatter/users/userId/activities/export-job
```

**Available version**

42.0

**Requires Chatter**

Yes

**HTTP methods**

POST

**Note:** POST doesn't take request parameters or a request body.

**Response body for POST**

[User Activities Job](#)

## User Activity, Purge

Start a job to purge Chatter-related activity, such as bookmarks, topic endorsements, and votes, for a user.

The following activities can be purged with this resource.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.

- `ChatterLike`—User liked a post or comment.
- `CompanyVerify`—User verified comment.
- `DownVote`—User downvoted a post or comment.
- `FeedEntityRead`—User read a post.
- `FeedRead`—User read a feed.
- `Mute`—User muted a post.
- `TopicEndorsement`—User endorsed another user on a topic or received endorsement on a topic.
- `UpVote`—User upvoted a post or comment.

To delete a user's posts and comments, use these resources, respectively.

- [Feed Element](#)

#### Resource

```
/chatter/users/userId/activities/purge-job
```

```
/connect/communities/communityId/chatter/users/userId/activities/purge-job
```

#### Available version

42.0

#### Requires Chatter

Yes

#### HTTP methods

POST

**Note:** POST doesn't take request parameters or a request body.

#### Response body for POST

[User Activities Job](#)

## User Conversations, General

Get private conversations for the context user and search across private conversations.

To get all private messages for a context user, see [User Messages, General](#).

Private messages and direct messages are different features. Direct messages are newer and offer a richer feature set for private communication in Experience Cloud sites. Direct messages are a capability within Chatter feeds. To work with direct messages, see [Feed Elements, Post and Search](#).

#### Resource

```
/chatter/users/userId/conversations
```

```
/connect/communities/communityId/chatter/users/userId/conversations
```

**Note:** `userId` must be the ID of the context user or the alias `me`.

#### Available since version

23.0

**Requires Chatter**

Yes

**HTTP methods**

GET or HEAD

**Request parameters for GET**

| Parameter Name | Type    | Required or Optional | Description                                                                                                                                                                                                                                                                                                                                                                                                                    | Available Version |
|----------------|---------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| page           | String  | Optional             | A page token that indicates where retrieval begins. Get this token from the <code>NextPageUrl</code> property in the response body.                                                                                                                                                                                                                                                                                            | 23.0              |
| pageSize       | Integer | Optional             | Specifies the number of items per page. Valid values are from 1 through 100. If you don't specify a size, the default is 25.                                                                                                                                                                                                                                                                                                   | 23.0              |
| q              | String  | Optional             | <p>Specifies the string to search. The search string must contain at least two characters, not including any wildcards. ## User Conversations, Specific

Get a private conversation for the context user. Search within a private conversation and change the status of a private conversation.

To get a specific private message for a context user, see [User Messages, Specific](#). To get all private conversations for a context user, see [User Conversations, General](#).

Private messages and direct messages are different features. Direct messages are newer and offer a richer feature set for private communication in Experience Cloud sites. Direct messages are a capability within Chatter feeds. To work with direct messages, see [Feed Elements, Post and Search](#).

[Send a Private Message](#)

User Messages, Specific

Get a private message for the context user.

To get a specific private conversation, see [User Conversations, Specific](#). To get all private messages for the context user, see [User Messages, General](#).

Private messages and direct messages are different features. Direct messages are newer and offer a richer feature set for private communication in Experience Cloud sites. Direct messages are a capability within Chatter feeds. To work with direct messages, see [Feed Elements, Post and Search](#).

### Response body

[Chatter Recommendations](#)

## User Recommendations for a Specific Action

Get the Chatter, custom, and static recommendations for the specified action for the context user.

### Resource

```
/chatter/users/userId/recommendations/action
```

```
/connect/communities/communityId/chatter/users/userId/recommendations/action
```

 **Note:** `userId` must be the ID of the context user or the alias `me`.

Valid values for `action` and resulting recommendations:

- `follow` returns recommendations to follow users, files, records, and topics (version 36.0 and later).
- `join` returns recommendations to join groups.
- `view` returns recommendations to view users, files, groups, and records (version 25.0 and later). In version 34.0 and later, `view` returns custom recommendations. In version 35.0 and later, `view` returns static recommendations. In version 37.0 and later, `view` returns article recommendations.

### Available since version

24.0

### Requires Chatter

Yes

## User Recommendations for a Specific Action and Object Category

Get the Chatter, custom, and static recommendations for the specified action and object category for the context user.

**Resource**

```
/chatter/users/userId/recommendations/action/objectCategory
```

```
/connect/communities/communityId/chatter/users/userId/recommendations/action/objectCategory
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

- Valid values for *action*:
  - follow
  - join
  - view (version 25.0 and later)
- Valid values for *objectCategory*:
  - If *action* is *follow*, *objectCategory* is *users*, *files*, *records*, or *topics* (version 36.0 and later).
  - If *action* is *join*, *objectCategory* is *groups*.
  - If *action* is *view*, *objectCategory* is *users*, *files*, *groups*, *records*, *custom* (version 34.0 and later), *apps* (version 35.0 and later), or *articles* (version 37.0 and later).

**Available since version**

23.0

### Response body for GET

[Chatter Recommendations](#)

### Example request URL to get new Chatter recommendations based on an action just performed

If you just followed Pam, who has a user ID of 005D0000001GLowIAB, use:

```
/chatter/users/me/recommendations/follow/users?contextAction=follow&contextObjectId=005D0000001GLowIAB
```

to get only recommendations of users who are followed by the same people who follow Pam. In this example, John follows Pam so you get a recommendation to follow Suzanne since John also follows Suzanne.

### Example request URL to get a list of files viewed by the same people who viewed the file you're viewing

This URL provides the same list that displays in the People Also Viewed area on the file detail page for the given file ID.

```
/chatter/users/me/recommendations/view/files?contextAction=view&contextObjectId=069D00000000xNXIAY
```

[Get Recommendations of Users to Follow](#)

## User Recommendations for a Specific Action and Key Prefix

Get the Chatter, custom, and static recommendations for the specified action and key prefix for the context user.

### Resource

```
/chatter/users/userId/recommendations/action/idPrefix
```

```
/connect/communities/communityId/chatter/users/userId/recommendations/action/idPrefix
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

- Valid values for *action*:
  - follow
  - join
  - view
- The key prefix, or *idPrefix* in the resource URL, is the first three characters of the object ID and indicates the object type. Valid values for *idPrefix* in this URL are:
  - If *action* is *follow*, *idPrefix* is the key prefix for users (005), files (069), topics (0T0), or records (such as 001 or 003).
  - If *action* is *join*, *idPrefix* is the key prefix for groups (0F9).

- If *action* is *view*, *idPrefix* is the key prefix for users (005), files (069), groups (0F9), records (such as 001 or 003), custom recommendations (ORD) in version 34.0 and later, static recommendations (T) in version 35.0 and later, or articles (such as kA0) in version 37.0 and later.

Values must be from 1 to 99.                                                                                                                                                                                                    | 23.0              |
| <code>viewed</code>     | String  | ID of a file. Provides new recommendations based on the context of this file ID.<br><br> <b>Important:</b> Use <code>contextAction</code> and <code>contextObjectId</code> in version 33.0 and later. | 23.0–33.0         |

**Example request URL**

```
/chatter/users/me/recommendations/view/001
```

**Response body for GET**[Chatter Recommendations](#)

## User Recommendations for a Specific Action and Object ID

Get the Chatter, custom, and static recommendations for the specified action and object ID for the context user. Also used to delete a recommendation.

**Resource**

```
/chatter/users/userId/recommendations/action/objectId
```

```
/connect/communities/communityId/chatter/users/userId/recommendations/action/objectId
```

 **Note:** *userId* must be the ID of the context user or the alias *me*.

- Valid values for *action*:
  - *follow*
  - *join*
  - *view* (version 25.0 and later)
- Valid values for *objectId*:
  - If *action* is *follow*, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
  - If *action* is *join*, *objectId* is a group ID.
  - If *action* is *view*, *objectId* is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), Today for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

**Available since version**

24.0

**Requires Chatter**

Yes

**HTTP methods**

GET, DELETE

DELETE is used to remove a recommendation and is only valid for the following resources:

- `/chatter/users/userId/recommendations/follow/recommendedUserId`
- `/chatter/users/userId/recommendations/follow/recommendedFileId`
- `/chatter/users/userId/recommendations/follow/recommendedRecordId`
- `/chatter/users/userId/recommendations/follow/recommendedTopicId`
- `/chatter/users/userId/recommendations/join/recommendedGroupId`
- `/chatter/users/userId/recommendations/view/customRecommendationId`
- `/chatter/users/userId/recommendations/view/Today`
- `/chatter/users/userId/recommendations/view/recommendedArticleId`

 **Note:** *userId* must be the ID of the context user or the alias *me*.

**Response body for GET**[Chatter Recommendations](#)**Response for DELETE**[204: Successful Delete](#)

## User Recommendations for a Specific Action and Object Type

Get the static Chatter recommendation for the specified action and object type for the context user. Also used to delete a static recommendation.

**Resource**

```
/chatter/users/userId/recommendations/action/objectEnum
```

```
/connect/communities/communityId/chatter/users/userId/recommendations/action/objectEnum
```

**Note:** *userId* must be the ID of the context user or the alias *me*.

- Valid values for *action*:
  - *view*
- Valid values for *objectEnum*:
  - *Today*—Static recommendations that don't have an ID, for example, the Today app recommendation.

**Available version**

34.0

**Requires Chatter**

Yes

**HTTP methods**

## Connect REST API Request Bodies

To perform a POST, PATCH, or PUT request, pass query parameters or create a request body formatted in either XML or JSON. This chapter lists the request bodies. The query parameters are listed with each resource.

To create a JSON request body, specify the properties of the request body in JSON format.

This is an example of a Comment request body.

```
{
  "body" : "Let's look for a new solution."
}
```

If a request body is top-level, it has a root XML tag listed. To create an XML request body, nest the properties as XML tags inside the root XML tag.

This is the same Connect request body in XML format:

```
<comment>
  <body>Let's look for a new solution.</body>
</comment>
```

## Action Info Input

Recommended action information.

### Root XML tag

`actionInfo`

### Properties

| Name       | Type   | Description                                                                                | Required or Optional | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------|----------------------|-------------------|
| name       | String | Name of the Lightning web component used for dynamically rendering the recommended action. | Optional             | 60.0              |
| parameters | String | Parameters required for processing and displaying the recommended action.                  | Required             | 60.0              |

## Action Link Definition Input

The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can drive productivity and accelerate innovation.

## Usage

You can use context variables in the `actionUrl`, `headers`, and `requestBody` properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.

The available context variables are:

| Context Variable                  | Description                                                                                                                                         |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>{!actionLinkId}</code>      | The ID of the action link the user executed.                                                                                                        |
| <code>{!actionLinkGroupId}</code> | The ID of the action link group containing the action link the user executed.                                                                       |
| <code>{!communityId}</code>       | The ID of the site in which the user executed the action link. The value for your internal org is the empty key <code>"000000000000000000"</code> . |
| <code>{!communityUrl}</code>      | The URL of the site in which the user executed the action link. The value for your internal org is empty string <code>""</code> .                   |

| Context Variable | Description                                                   |
|------------------|---------------------------------------------------------------|
| {!orgId}         | The ID of the org in which the user executed the action link. |
| {!userId}        | The ID of the user that executed the action link.             |

**Root XML tag**

```
<actionLinkDefinition>
```

**JSON example**

This example doesn't use a template.

```
{
  "actionType": "Api",
  "actionUrl": "/services/data/v65.0/chatter/feed-elements",
  "groupDefault": "true",
  "labelKey": "Post",
  "method": "Post",
  "requiresConfirmation": "true",
  "requestBody": "{ \"subjectId\": \"me\", \"feedElementType\": \"FeedItem\", \"body\": { \"messageSegments\": [ { \"type\": \"Text\", \"text\": \"Testing a post created via an API action link.\" } ] } }",
  "headers": [
    {
      "name": "Content-Type", "value": "application/json"
    }
  ]
}
```

This example uses a template.

```
{
  "templateId": "07gD00000004C9r",
  "templateBindings": [
    {
      "key": "Bindings.version",
      "value": "v33.0"
    }
  ]
}
```

**Properties**

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                            | Required or Optional                                       | Available Version |
|------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|-------------------|
| actionType | String | Defines the type of action link. Values are: <ul style="list-style-type: none"> <li>• <b>Api</b>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> </ul> | Required<br><br>Can be defined in an action link template. | 33.0              |

| Name                   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                              | Available Version |

|                        |        | <ul style="list-style-type: none"> <li><b>ApiAsync</b>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<i>actionLinkId</i></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><b>Download</b>—The action link downloads a file from the action URL.</li> <li><b>Ui</b>—The action link takes the user to a web page at the action URL.</li> </ul> <p>Use <code>Ui</code> if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.</p>                                                                                                                                                                                                                                                                                                 |                                                                   |                   |
| <code>actionUrl</code> | String | <p>The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>.</p> <p> <b>Tip:</b> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for <code>actionUrl</code>, for example, <code>https://www.example.com/api/v1/exampleResource</code>. If your API isn't versioned, you can use the <code>expirationDate</code> property of the Action Link Group Definition Input to avoid issues due to upgrades or changing functionality in your API.</p> | <p>Required</p> <p>Can be defined in an action link template.</p> | 33.0              |

| <code>requires Confirmation</code> | Boolean | <code>true</code> to require the user to confirm the action; <code>false</code> otherwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Required<br>Can be defined in an action link template.                                                                                  | 33.0              |
| <code>userId</code>                | String  | The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> .                                                                                                                                                                                                                                                                                                                                                                                       | Optional<br>Can be defined in an action link template using the <code>User Visibility</code> and <code>Custom User Alias</code> fields. | 33.0              |

## SEE ALSO:

[Define Action Links and Post with a Feed Element](#)  
[Action Link Group Definition Input](#)

## Action Link Group Definition Input

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define standalone actions in their own action group.

Information in the action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only requests made via the connected app that created the action link definition can read, modify, or delete the definition. In addition, the user making the request must have created the definition or have View All Data permission.

### Root XML tag

```
<actionLinkGroup>
```

### JSON example

This example instantiates an action link group definition without a template:

```
{
  "actionLinks": [
    {
      "actionType": "Api",
      "labelKey": "Like",
      "groupDefault": "true",
      "actionUrl": "https://test.com/this",
      "method": "HttpPost",
      "requiresConfirmation": "false"
    },
    {
      "actionType": "Api",
      "labelKey": "Unlike",
      "groupDefault": "false",
      "actionUrl": "https://test.com/that",
      "method": "HttpPost",
      "requiresConfirmation": "false"
    }
  ],
  "executionsAllowed": "OncePerUser",
  "expirationDate": "2014-07-07T23:59:11.168Z",
  "category": "Primary"
}
```

This example instantiates an action link group definition from a template:

```
{
  "templateId": "07gD00000004C9r",
  "templateBindings": [
    {
      "key": "Bindings.version",
      "value": "v33.0"
    }
  ]
}
```

## Properties

| Name                           | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional                                                                                                                    | Available Version |

## Activity Reminder Input

Activity reminder details in Salesforce Classic.

**Root XML tag**`<activityReminder>`**JSON example**

```
{
  "reminderDateTime": "2016-11-22T16:00:00.000Z",
  "isReminderDisplayed": false
}
```

**Properties**

| Name                           | Type    | Description                                                           | Required or Optional | Available Version |
|--------------------------------|---------|-----------------------------------------------------------------------|----------------------|-------------------|
| <del>isReminderDisplayed</del> | Boolean | Indicates whether the activity reminder is displayed.                 | Required             | 39.0              |
| reminderDateTime               | String  | Date and time that the activity reminder displays in ISO 8601 format. | Optional             | 39.0              |

## Add Order To Cart Input

Input for adding an order to a cart.

**Root XML tag**`addOrderToCartInput`

**JSON example**

Here's a sample request for a registered user:

```
{
  "cartStateOrId": "active",
  "orderSummaryIdOrRefNumber": "Oder_Summary_ID"
}
```

Here's a sample request with verification for a guest user:

```
{
  "cartStateOrId": "active",
  "orderSummaryIdOrRefNumber": "GJA4C-MUVBN-6ZT4P-V6CSB",
  "verification": {
    "email": "Ma*****@vi*****.info",
    "lastName": "Strosin",
    "phoneNumber": "*****7740"
  }
}
```

Here's a sample request with access token for a guest user:

```
{
  "cartStateOrId": "active",
  "orderSummaryIdOrRefNumber": "GJA4C-MUVBN-6ZT4P-V6CSB",
  "accessToken": "U2FsdGVkX1+kpld8aQKHsqZJv1shF8Jx4Nc0kOdN+L5gViQa/sZtU5NHMDpIUEhz "
}
```

**Properties**

| Name                          | Type   | Description                                                                                                                                                                           | Required or Optional                                                                                                       | Available Version |
|-------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|-------------------|
| accessToken                   | String | Encrypted access token, retrieved from the Commerce Webstore Order Summary Authorization API after successful verification for guest users. The access token is valid for 60 minutes. | Optional<br><br>This is required for guest users if the request doesn't include the session cookie and verification field. | 64.0              |
| cartStateOrId                 | String | Cart state (active or current) or the ID of the cart to which the products from an order are to be added.                                                                             | Required                                                                                                                   | 59.0              |
| orderSummaryId<br>OrRefNumber | String | Either the order summary ID or reference number value.<br><br>For guest shoppers, use the order reference number.                                                                     | Required                                                                                                                   | 59.0              |

| Name         | Type                                                                | Description                                 | Required or Optional                                                                                                      | Available Version |
|--------------|---------------------------------------------------------------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------|
| verification | <a href="#">Order Summary</a><br><a href="#">Verification Input</a> | Verification attributes for guest shoppers. | Optional<br><br>This is required for guest users if the request doesn't include the session cookie and accessToken field. | 59.0              |

## Address Input

Address input representation for a payment method, payment intent, or card payment method.

### JSON example

```
{
  "city": "San Francisco",
  "companyName": "Salesforce",
  "country": "US",
  "postalCode": "94105",
  "state": "CA",
  "street": "415 Mission Street"
}
```

### Properties

| Name        | Type   | Description                                    | Required or Optional | Available Version |
|-------------|--------|------------------------------------------------|----------------------|-------------------|
| city        | String | City                                           | Optional             | 49.0              |
| companyName | String | Company name                                   | Optional             | 49.0              |
| country     | String | Country, specified using the ISO country code. | Optional             | 49.0              |
| postalCode  | String | Postal code                                    | Optional             | 49.0              |
| state       | String | State                                          | Optional             | 49.0              |
| street      | String | Street                                         | Optional             | 49.0              |

## Adjust Item Input

A price adjustment to an OrderItemSummary. It only supports discounts, not increases.

### Root XML tag

```
<adjustItem>
```

## JSON example

```
{
  "reason": "Unknown",
  "amount": -45,
  "adjustmentType": "AmountWithoutTax",
  "orderItemSummaryId": "10uxx0000004EXLAA2",
  "description": "foobar"
}
```

## Properties

| Name               | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |
|--------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| adjustmentType     | String | <p>Describes how the amount is calculated. It can have one of these values:</p> <ul style="list-style-type: none"> <li>• <b>AmountTaxOnly</b>—Value of amount is the tax-only adjustment only. Available in version 65.0 and later.</li> <li>• <b>AmountWithTax</b>—Value of amount is the adjustment, including tax.</li> <li>• <b>AmountWithoutTax</b>—Value of amount is the adjustment, not including tax. Tax is calculated on the value and added.</li> <li>• <b>Percentage</b>—Value of amount is a percentage discount. It is divided by 100, and then multiplied by the <b>TotalPrice</b> and <b>TotalTaxAmount</b> of the <b>OrderItemSummary</b> to determine the adjustment amount.</li> <li>• <b>ProductOnly</b>—Value of amount is the product-only adjustment only. Available in version 65.0 and later.</li> </ul> | Required             | 49.0              |
| amount             | Double | Value used to calculate the adjustment amount, as described by the <b>adjustmentType</b> . It must be a negative value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required             | 49.0              |
| description        | String | Description of the adjustment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optional             | 49.0              |
| orderItemSummaryId | String | ID of the <b>OrderItemSummary</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required             | 49.0              |

| Name   | Type   | Description                                                                                                                          | Required or Optional | Available Version |
|--------|--------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| reason | String | Reason for the adjustment. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object. | Required             | 49.0              |

## Adjust Order Item Summary Input

Price adjustments to order item summaries that together make up a price adjustment to an order, with options for adjusting items in the process of being fulfilled.

### Root XML tag

```
<adjustOrderItemSummaryInput>
```

### JSON example

```
{
  "adjustItems": [{
    "reason": "Unknown",
    "amount": -45,
    "adjustmentType": "AmountWithoutTax",
    "orderItemSummaryId": "10uxx0000004EXLAA2",
    "description": "foobar"
  }],
  "allocatedItemsChangeOrderType": "Disallowed"
}
```

### Properties

| Name                          | Type                                | Description                                                                                                                                                                                                                                                                                                                                              | Required or Optional | Available Version |

## Alternative Input

Alternative representation for an extension on a feed element.

### Root XML tag

```
<alternativeInput>
```

### JSON example

```
{
  "textRepresentation": "Quip document with ID 132452345",
  "thumbnailUrl": "http://salesforce.quip.com?id=132452345",
  "title": "Quip"
}
```

### Properties

| Name               | Type   | Description                           | Required or Optional | Available Version |
|--------------------|--------|---------------------------------------|----------------------|-------------------|
| textRepresentation | String | Text representation of the extension. | Required             | 40.0              |
| thumbnailUrl       | String | Thumbnail URL to the extension.       | Optional             | 40.0              |

| Name  | Type   | Description             | Required or Optional | Available Version |
|-------|--------|-------------------------|----------------------|-------------------|
| title | String | Title of the extension. | Optional             | 40.0              |

## Alternative Payment Method Input

Alternative payment method input.

### JSON example

```
{
  "name": "John Doe",
  "accountId": "001000000000000xyz",
  "gatewayToken": "test token",
  "gatewayTokenDetails": "test token details",
  "comments": "sample request",
  "email": "jdoe@salesforce.com"
}
```

### Properties

| Name                | Type   | Description                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|---------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| accountId           | String | Salesforce Payments account to which this payment method is linked.                                                                                                                                                                                                        | Required             | 54.0              |
| comments            | String | Details about a record added by a user. Maximum of 1,000 characters.Users can add comments to provide additional details about a record. Maximum of 1000 characters.                                                                                                       | Optional             | 54.0              |
| email               | String | Email address of the card holder.                                                                                                                                                                                                                                          | Optional             | 54.0              |
| gatewayToken        | String | A unique, alphanumeric ID, called a token, that a payment gateway generates when it first processes a payment. The token replaces the actual payment data so that the data is kept secure. This token is stored as encrypted text, and can be used for recurring payments. | Required             | 54.0              |
| gatewayTokenDetails | String | Information about the gateway token.                                                                                                                                                                                                                                       | Required             | 54.0              |
| name                | String | Name that you assign to the payment method object.                                                                                                                                                                                                                         | Optional             | 54.0              |

# Announcement Input

An announcement.

## Root XML tag

```
<announcement>
```

## JSON example for creating an announcement

```
{
  "body": {
    "messageSegments": [
      {
        "text": "Please install the updates for all iOS devices.",
        "type": "Text"
      }
    ]
  },
  "parentId": "0F9B0000000004S",
  "expirationDate": "2016-02-22T00:00:00.000Z"
}
```

## JSON example for creating an announcement using an existing feed item

```
{
  "feedItemId": "0D5D00000000DaZBKA0",
  "expirationDate": "2016-02-22T00:00:00.000Z"
}
```

## JSON example for updating an announcement

```
{
  "expirationDate": "2016-02-22T00:00:00.000Z",
  "isArchived": "false"
}
```

## Properties

| Name | Type                               | Description               | Required or Optional                                                                                                                | Available Version |
|------|------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| body | <a href="#">Message Body Input</a> | Text of the announcement. | Required for creating an announcement if <code>feedItemId</code> isn't specified<br><br>Don't specify for updating an announcement. | 31.0              |

| Name           | Type    | Description                                                                                                                                                                                                                                                                                                            | Required or Optional                                                                                                                | Available Version |
|----------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| expirationDate | String  | Date time in ISO 8601 format. The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI. | Required for creating an announcement<br><br>Optional for updating an announcement                                                  | 31.0              |
| feedItemId     | String  | ID of an <code>AdvancedTextPost</code> feed item that is the body of the announcement.                                                                                                                                                                                                                                 | Required for creating an announcement if <code>body</code> isn't specified<br><br>Don't specify for updating an announcement.       | 36.0              |
| isArchived     | Boolean | Specifies whether the announcement is archived.                                                                                                                                                                                                                                                                        | Optional                                                                                                                            | 36.0              |
| parentId       | String  | ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.                                                                                                                                                                                                            | Required for creating an announcement if <code>feedItemId</code> isn't specified<br><br>Don't specify for updating an announcement. | 36.0              |
| sendEmails     | Boolean | Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren't enabled for the organization, announcement emails aren't sent. Default value is <code>false</code> .                                                             | Optional for creating an announcement<br><br>Don't specify for updating an announcement                                             | 36.0              |

## Apple Pay Domain Input

Apple Pay domain registration input for using Apple Pay with Salesforce Payments.

### JSON example

```
{
  "domainName": "https://www.mysite.com"
}
```

**Properties**

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| domainName | String | Store's org domain. A valid domain name must use HTTPS, and must not contain a port, path, query parameter, or fragment. Valid domain examples: <ul style="list-style-type: none"><li>• https://salesforce.com</li><li>• https://www.mysite.com</li></ul> Don't enter URLs such as: <ul style="list-style-type: none"><li>• storefront.example.com (doesn't use HTTPS)</li><li>• https://storefront.example.com:1234 (has a port)</li><li>• https://storefront.example.com/abc (has a path)</li><li>• https://storefrontexample.com?id=8907283 (has a query parameter)</li></ul> | Required             | 58.0              |

## Article Topic Assignment Job Input

An article and topic assignment job.

**Root XML tag**

```
<ArticleTopicAssignmentJob>
```

**JSON example**

```
{
  "operation": "AssignTopicsToArticle",
  "topicNames": ["API", "Connect REST API", "ConnectApi"]
}
```

**Properties**

| Name      | Type   | Description                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| operation | String | Type of operation to perform on articles and topics. Values are: <ul style="list-style-type: none"><li>• AssignTopicsToArticle—Assign topics to articles in a data category.</li><li>• UnassignTopicsFromArticle—Unassign topics from articles in a data category.</li></ul> | Required             | 40.0              |

| Name       | Type                              | Description                                                 | Required or Optional | Available Version |
|------------|-----------------------------------|-------------------------------------------------------------|----------------------|-------------------|
| topicNames | <a href="#">Topic Names Input</a> | List of topic names to assign to or unassign from articles. | Required             | 40.0              |

## Asset Action Input

Asset action input consumed by Customer Asset Lifecycle Management. The asset action object represents a change made to a lifecycle-managed asset during its lifecycle, specifically, the difference in quantity, amount, and monthly recurring revenue.

### JSON example

```
"assetAction": {
  "category": "Initial Sale",
  "actionDate": "2019-09-05T16:00:00+08:00",
  "quantityChange": 20,
  "mrrChange": 200,
  "amount": 1800
}
```

### Properties

| Name           | Type   | Description                                                                                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |
|----------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actionDate     | String | Date when the change occurred. This value can be different from the start date of the asset state period related to this asset action. For example, suppose that on 01/01 a user cancels a subscription as of 06/01. Create an asset action with an action date of 01/01, and set the start date of the related asset state period to 06/01. | Required             | 50.0              |
| amount         | Double | The change in amount resulting from the asset action.                                                                                                                                                                                                                                                                                        | Required             | 50.0              |
| category       | String | Asset action category for reporting.                                                                                                                                                                                                                                                                                                         | Required             | 50.0              |
| mrrChange      | Double | The change in monthly recurring revenue resulting from the asset action.                                                                                                                                                                                                                                                                     | Required             | 50.0              |
| quantityChange | Double | The change in quantity resulting from the asset action.                                                                                                                                                                                                                                                                                      | Required             | 50.0              |

## Asset Action Source Input

Asset action source input consumed by Customer Asset Lifecycle Management. The asset action source is an optional asset action child object for tracking a Salesforce order product, a work order line item, or an external reference to a change. You can provide multiple asset action sources for a single asset action.

**JSON example**

```
"assetActionSource": {
  "transactionDate": "2020-10-01T14:00:00+08:00",
  "startDate": "2020-10-01T09:00:00+08:00",
  "endDate": "2020-12-31T08:59:59+08:00",
  "quantity": 5,
  "productAmount": 150,
  "referenceEntityItem": "1WLB00000003geJOAQ"
}
```

**Properties**

| Name                         | Type   | Description                                                                                                                     | Required or Optional | Available Version |
|------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actualTax                    | Double | Actual tax.                                                                                                                     | Optional             | 50.0              |
| adjustmentAmount             | Double | Adjustment amount.                                                                                                              | Optional             | 50.0              |
| endDate                      | String | End date.                                                                                                                       | Optional             | 50.0              |
| estimatedTax                 | Double | Estimated tax.                                                                                                                  | Optional             | 50.0              |
| externalReference            | String | ID of an external object that caused the asset action.                                                                          | Optional             | 50.0              |
| externalReference DataSource | String | Data source for an external object that caused the asset action.                                                                | Optional             | 50.0              |
| productAmount                | Double | Product amount.                                                                                                                 | Optional             | 50.0              |
| quantity                     | Double | Quantity.                                                                                                                       | Optional             | 50.0              |
| referenceEntity Item         | String | ID of the Salesforce object that caused the asset action. Supported Salesforce objects: Order Product and Work Order Line Item. | Optional             | 50.0              |
| startDate                    | String | Start date.                                                                                                                     | Optional             | 50.0              |
| transactionDate              | String | Date of the transaction related to the asset action.                                                                            | Optional             | 50.0              |

## Asset File Input

Asset file input.

**Root XML tag**

```
<fileAsset>
```

**JSON example**

```
{
  "isVisibleByExternalUsers": "true"
}
```

**Properties**

| Name                     | Type    | Description                                                                                                         | Required or Optional | Available Version |
|--------------------------|---------|---------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isVisibleByExternalUsers | Boolean | Indicates whether unauthenticated users can see the asset file ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 43.0              |

## Asset State Period Input

Asset state period input consumed by Customer Asset Lifecycle Management. The asset state period represents the current quantity, amount, and monthly recurring revenue for a lifecycle-managed asset during a period. You create asset state periods to represent the creation of an asset, asset changes, and asset cancellations. When the current date reaches the start date of the next asset state period, the asset's quantity, amount, and monthly recurring revenue fields are updated on the basis of the now-current asset state period.

**JSON example**

```
"assetStatePeriod": {
  "startDate": "2020-07-01T09:00:00+08:00",
  "endDate": "2020-09-30T08:59:59+08:00",
  "quantity": 20,
  "mrr": 200,
  "amount": 600
}
```

**Properties**

| Name      | Type   | Description                                                                 | Required or Optional | Available Version |
|-----------|--------|-----------------------------------------------------------------------------|----------------------|-------------------|
| amount    | Double | Amount of revenue allocated for the time defined by the asset state period. | Required             | 50.0              |
| endDate   | String | Service end date for the asset state period.                                | Optional             | 50.0              |
| mrr       | Double | Monthly recurring revenue for the time defined by the asset state period.   | Required             | 50.0              |
| quantity  | Double | Quantity of the asset during the asset state period.                        | Required             | 50.0              |
| startDate | String | Service start date for the asset state period.                              | Required             | 50.0              |

## Assigned Resource Input

Input representation of the assigned resource details.

**Root XML tag**

```
<assignedResources>
```

**JSON example**

```
{
  "assignedResources": [
    {
      "serviceResourceId": "0HnRM0000004Gzy0AE",
      "isRequiredResource": true,
      "isPrimaryResource": true,
      "extendedFields": []
    },
    {
      "serviceResourceId": "0HnRM0000004Mln0AE",
      "isRequiredResource": true,
      "isPrimaryResource": false,
      "extendedFields": []
    }
  ]
}
```

**Properties**

| Name                | Type                                    | Description                                                                                                                                    | Required or Optional                              | Available Version |
|---------------------|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-------------------|
| extended Fields     | <a href="#">Extended Fields Input[]</a> | Custom fields.                                                                                                                                 | Optional                                          | 48.0              |
| isPrimary Resource  | Boolean                                 | Indicates whether the assigned resource is the primary resource. For multi-resource appointments, only one resource can be a primary resource. | Required if multi-resource scheduling is enabled. | 48.0              |
| isRequired Resource | Boolean                                 | Indicates whether the assigned resource is a required resource.                                                                                | Required                                          | 48.0              |
| service ResourceId  | String                                  | Resource who is assigned to the service appointment.                                                                                           | Required                                          | 48.0              |

## Associated Actions Capability Input

Describes action links that can be created or updated on a feed element. To associate an action link group with a feed element, the client must be the same connected app that created the action link group definition and the user must either be the user who created the definition or have View all Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can drive productivity and accelerate innovation.

**Root XML tag**

```
<associatedActions>
```

**JSON example**

```
"associatedActions": {
  "actionLinkGroupIds": ["0Agxx00000000d1CAA", "0Agxx00000000d2DFY"]
}
```

**Properties**

| Name               | Type     | Description                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |
|--------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actionLinkGroupIds | String[] | <p>The action link group IDs to associate with the feed element. Associate one <b>Primary</b> and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property.</p> <p>Get an action link group ID in the response from a request to <a href="/connect/action-link-group-definitions">/connect/action-link-group-definitions</a>.</p> | Required             | 33.0              |

## Audience Criterion Input

Audience criterion.

**Root XML tag**

```
<audienceCriteria>
```

**JSON example**

```
{
  "criterion": [
    {
      "permission": "AssignTopics",
      "isEnabled": "true"
    }
  ],
  "criterionNumber": 1,
  "criterionOperator": "Equal",
  "criterionType": "Permission"
}
```

## Properties

| Name              | Type                                             | Description                                                                                                                                                                                                                                                                                                                                 | Required or Optional                                                         | Available Version |

| Name              | Type                                      | Description                                                 | Required or Optional                                                                          | Available Version |
|-------------------|-------------------------------------------|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------|-------------------|
| address           | <a href="#">Address Input</a>             | Payment method address.                                     | Optional. If you use an ID, don't use the address property because a validation error occurs. | 49.0              |
| cardPaymentMethod | <a href="#">Card Payment Method Input</a> | Card payment method including customer payment information. | Optional. For a successful request, include cardPaymentMethod details or an ID.               | 49.0              |

| Name          | Type    | Description                                                                                                                                                                               | Required or Optional                                                                                                                                                                                                                                                                 | Available Version |
|---------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
|               |         |                                                                                                                                                                                           | Don't use both or an error occurs.                                                                                                                                                                                                                                                   |                   |
| id            | String  | ID of a PaymentMethod or SavedPaymentMethod record that the payment gateway uses to process the payment authorization. The SavedPaymentMethod can be passed only for Salesforce Payments. | Optional. For a successful request, include an ID or a cardPaymentMethod. Don't use both or an error occurs.<br><br>If you specify an ID don't use an address or saveForFuture property because a validation error occurs. The address can't be updated on the paymentMethod object. | 49.0              |
| saveForFuture | Boolean | Indicates whether to save the payment method for future use ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, the default value is <code>false</code> .                | Optional. If you specify an ID, don't use the saveForFuture property because a validation error occurs.                                                                                                                                                                              | 49.0              |

## Authorization Input

Payment authorization input consumed by the payment authorization service.

### JSON example (without idempotency)

```
{
  "accountId": "0000000",
  "amount": "5000",
  "comments": "Authorization for $5000",
  "currencyIsoCode": "USD",
  "effectiveDate": "15-01-2020",
  "paymentGatewayId": "00000000",

  "paymentGroup": {
    "createPaymentGroup": "true",
    "sourceObjectId": "",
    "currencyIsoCode": "USD"
  },
}
```

```

"paymentMethod": {
  "address": "123 Test Street, San Francisco, CA, 94105",
  "cardPaymentMethod": "",
  "id": "0000000" ,
  "saveForFuture": "false"
}
}

```

#### JSON example (idempotency key in JSON payload)

```

{
  "accountId":"000000",
  "amount":"5000",
  "idempotencyKey":"qw",
  "comments":"Authorization for $5000",
  "currencyIsoCode":"USD",
  "effectiveDate":"15-01-2020",
  "paymentGatewayId":"0000000",

  "paymentGroup":{
    "createPaymentGroup":"true",
    "sourceObjectId":"",
    "currencyIsoCode":"USD"
  },
  "paymentMethod": {
    "address": "123 Test Street, San Francisco, CA, 94105",
    "cardPaymentMethod": "",
    "id": "0000000" ,
    "saveForFuture": "false"
  }
}

```

#### JSON example (idempotency key in header)

```

{
  "accountId":"000000",
  "amount":"5000",
  "comments":"Authorization for $5000",
  "currencyIsoCode":"USD",
  "effectiveDate":"15-01-2020",
  "paymentGatewayId":"0000000",
  "paymentGroup":{ "createPaymentGroup":"true", "sourceObjectId":"",
  "currencyIsoCode":"USD" },
  "paymentMethod": {
    "address": "123 Test Street, San Francisco, CA, 94105",
    "cardPaymentMethod": "",
    "id": "0000000" ,
    "saveForFuture": "false"
  }
}

```

#### Header

Name: sfdc-Payments-Idempotency-Key

Data Type: String

Max Length: 255

Example:

```
Content-Type: application/json; charset=UTF-8
Accept: application/json
sfmc-Payments-Idempotency-Key: UniqueIdempotencyKey
```

### Properties

| Name             | Type                                                    | Description                                                                                                                                         | Required or Optional                  | Available Version |
|------------------|---------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------|
| accountId        | String                                                  | Salesforce account that contains the payment transaction being authorized.                                                                          | Required                              | 49.0              |
| amount           | Double                                                  | Authorization amount.                                                                                                                               | Required                              | 49.0              |
| comments         | String                                                  | Optional comments for the payment authorization.                                                                                                    | Optional                              | 49.0              |
| currencyIsoCode  | String                                                  | Three-letter ISO 4217 currency code associated with the payment group record.                                                                       | Required, if multicurrency is enabled | 49.0              |
| effectiveDate    | String                                                  | Date that the authorization will be applied to the transaction.                                                                                     | Required                              | 49.0              |
| idempotencyKey   | String                                                  | Idempotency key used for the payment request. Can be provided in the payload or the header, but not in both places at once.                         | Optional                              | 49.0              |
| paymentGatewayId | String                                                  | Payment gateway that processes the authorization.                                                                                                   | Required                              | 49.0              |
| paymentGroup     | <a href="#">PaymentGroupInputRepresentation</a>         | Payment group for the authorization. The payload must reference either a <code>paymentGroup</code> or a <code>paymentGroupId</code> , but not both. | Optional                              | 49.0              |
| paymentMethod    | <a href="#">AuthApiPaymentMethodInputRepresentation</a> | Payment method used in the payment gateway for the authorization transaction.                                                                       | Required                              | 49.0              |

## Authorization Reversal Input

Authorization reversal input consumed by authorization reversal service.

### JSON example (without idempotency key)

```
{
  "paymentAuthReversal": {
    "accountId": "0000000032",
    "amount": "19.39",
    "effectiveDate": "2020-11-02T08:59:59+08:00"
  }
}
```

**JSON example (idempotency key in JSON payload)**

```
{
  "accountId": "",
  "amount": "5000",
  "idempotencyKey": "qw",
  "comments": "Sale of 20 renewed licenses",
  "currencyIsoCode": "USD",
  "effectiveDate": "05-01-2020",
  "paymentGatewayId": "0000000",
  "paymentGroup": "",
  "paymentMethod": "SamplePaymentMethod"
}
```

**JSON example (idempotency key in header)**

```
{
  "accountId": "",
  "amount": "5000",
  "comments": "Sale of 20 renewed licenses",
  "currencyIsoCode": "USD",
  "effectiveDate": "05-01-2020",
  "paymentGatewayId": "0000000",
  "paymentGroup": "",
  "paymentMethod": "SamplePaymentMethod"
}
```

**Header**

Name: sfdc-Payments-Idempotency-Key

Data Type: String

Max Length: 255

Example:

```
Content-Type: application/json; charset=UTF-8
Accept: application/json
sfdc-Payments-Idempotency-Key: UniqueIdempotencyKey
```

**Properties**

| Name           | Type                | Description                                                                                                                                                                                                                                                   | Required or Optional | Available Version |
|----------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| accountId      | String              | Account for the payment authorization reversal. Must match the payment authorization's account.                                                                                                                                                               | Optional             | 51.0              |
| additionalData | Map<String, String> | Allows users to enter additional data, if needed for a payment request. The additionalData object consists of entries, each of which includes a key and value. Supports up to five key-value pairs. Each key and each value can contain up to 255 characters. | Optional             | 51.0              |

| Name           | Type   | Description                                                                                                                 | Required or Optional | Available Version |
|----------------|--------|-----------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| amount         | Double | Amount of adjustment applied to the payment authorization.                                                                  | Required             | 51.0              |
| comments       | String | Users can add comments to provide additional details about a record. Maximum of 1,000 characters.                           | Optional             | 51.0              |
| effectiveDate  | String | Date that the adjustment takes effect on the authorization.                                                                 | Required             | 51.0              |
| email          | String | Email of the client that initiated the request.                                                                             | Optional             | 51.0              |
| idempotencyKey | String | Idempotency key used for the payment request. Can be provided in the payload or the header, but not in both places at once. | Optional             | 51.0              |
| ipAddress      | String | IP address of the client who made the request.                                                                              | Optional             | 51.0              |
| macAddress     | String | MAC address of the client who made the request.                                                                             | Optional             | 51.0              |
| phone          | String | Phone number of the client that initiated the request.                                                                      | Optional             | 51.0              |

## Available Territory Slots Input

Input representation of the available territory slots request.

### Request example

```
{
  "startTime": "2022-07-27T00:00:00.000Z",
  "endTime": "2022-07-29T00:00:00.000Z",
  "workTypeGroupId": "0VSB0000000KyjBOAS",
  "accountId": "001B000000qAUAWIA4",
  "territoryIds": [
    "0HhB0000000TO9WKAW"
  ],
  "schedulingPolicyId": "0VrB0000000KyjB",
  "requiredResourceIds": [
    "0HnB0000000TO8gKAK"
  ],
  "engagementChannelTypeIds": [
    "0eFRM00000000CJ2AY"
  ]
}
```

**Request example with only required fields**

```
{
  "workType": {
    "id": "08qS70000004DTsIAM"
  },
  "territoryIds": [
    "0HhS700000004DTdKAM"
  ],
  "engagementChannelTypeIds": [
    "0eFRM00000000CJ2AY"
  ]
}
```

**Properties**

| Name                       | Type     | Description                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| accountId                  | String   | ID of the associated account.                                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 49.0              |
| allowConcurrent Scheduling | Boolean  | Indicates whether concurrent appointments are allowed ( <code>true</code> ) or not allowed ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                                                                                                                                         | Optional             | 49.0              |
| correlationId              | String   | ID to pass custom information to the <code>ServiceResourceScheduleHandler</code> Apex interface. For example, you can use the correlation ID to identify the app, website, or any other external system that calls this Apex interface implementation. If you don't pass a custom value, a randomly generated identifier is passed.                                                                                  | Optional             | 53.0              |
| endTime                    | String   | Latest time that an appointment can end.<br> <b>Note:</b> The API only returns time slots up to 31 days from the <code>startTime</code> .                                                                                                                                                                                         | Optional             | 49.0              |
| engagementChannelTypeIds   | String[] | The ID of the engagement channel type record. The resources and their associated time slots are filtered by the specified engagement channel type.<br> <b>Note:</b> This field supports only one engagement channel type ID.<br>You can use engagement channel types with the <code>available-territory-slots</code> API only if: | Optional             | 56.0              |

| Name                             | Type                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required or Optional | Available Version |
|----------------------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                                  |                       | <ul style="list-style-type: none"> <li>• <b>Schedule Appointments Using Engagement Channels</b> is enabled in Salesforce Scheduler Settings in your Salesforce org.</li> <li>• Shifts are defined in the scheduling policy. For more information on setting up shifts in the scheduling policy, see <a href="#">Define Shift Rules in Scheduling Policy</a>.</li> </ul> <p> <b>Note:</b> Engagement channel types are not supported with operating hours rules in the scheduling policy.</p> |                      |                   |
| <code>filterByResources</code>   | <code>String[]</code> | <p>Comma-separated list of service resource IDs. API returns only eligible service resources that are both in the list and in the selected service territory. The resources are sorted by the order in which the resource IDs are passed.</p> <p> <b>Note:</b> You can either pass <code>filterByResources</code> or <code>requiredResourceIds</code> in a request.</p>                                                                                                                     | Optional             | 51.0              |
| <code>recordLimit</code>         | <code>Integer</code>  | The maximum number of earliest available slots across the specified territories. The API outputs the specified number of sorted slots across service territories.                                                                                                                                                                                                                                                                                                                                                                                                             | Optional             | 63.0              |
| <code>requiredResourceIds</code> | <code>String[]</code> | <p>List of resource IDs that you want to get available time slots for. When you pass more than one resource ID, the API returns all the slots where any of the passed resources are available. For example, suppose that you have three qualified resources: A, B, and C. If you pass resource IDs A and B, the API returns all the slots where:</p> <ul style="list-style-type: none"> <li>• only A is available</li> <li>• only B is available</li> <li>• both A and B are available</li> <li>• both A and C are available</li> <li>• both B and C are available</li> </ul> | Optional             | 49.0              |

| Name                                              | Type     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|---------------------------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                                                   |          | <ul style="list-style-type: none"> <li>A, B, and C are all available</li> </ul> <p>The API doesn't return the slots where only C is available.</p> <p>If this field is empty, time slots for all qualified resources are returned.</p> <p> <b>Note:</b> The API request doesn't show time slots for the resource specified in <code>requiredResourceIds</code> if it does not appear in the list of least utilized resources set for <code>resourceLimitAppointmentDistribution</code>. For example, if you specify a resource A in <code>requiredResourceIds</code> and <code>resourceLimitAppointmentDistribution</code> is set to 15, the request doesn't show time slots for this resource, as A isn't among the top 15 least utilized resources.</p> |                      |                   |
| <code>resourceLimitAppointmentDistribution</code> | Integer  | <p>Specify the maximum number of service resources that you want to show during appointment scheduling when appointment distribution is enabled. Default value is 10.</p> <p> <b>Note:</b> The <code>filterByResources</code> field takes precedence over the <code>resourceLimitAppointmentDistribution</code> field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                              | Optional             | 53.0              |
| <code>schedulingPolicyId</code>                   | String   | ID of the AppointmentSchedulingPolicy object. If not provided, the default configurations are considered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 49.0              |
| <code>startTime</code>                            | String   | Earliest time that an appointment can start. Defaults to the current time of the request, if empty. You can also use a time from the past.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Optional             | 49.0              |
| <code>territoryIds</code>                         | String[] | List of IDs of service territories where the specified work is performed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required             | 49.0              |

| Name          | Type    | Description                                                                                                                                                                                              | Required or Optional             | Available Version |
|---------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| cropHeight    | Integer | Height of the crop rectangle in pixels.                                                                                                                                                                  | Optional                         | 36.0              |
| cropWidth     | Integer | Width of the crop rectangle in pixels.                                                                                                                                                                   | Optional                         | 36.0              |
| cropX         | Integer | X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).                                                                                                  | Optional                         | 36.0              |
| cropY         | Integer | Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).                                                                                                   | Optional                         | 36.0              |
| fileId        | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.                                                                                  | Required to use an existing file | 36.0              |
|               |         |  <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. |                                  |                   |
| versionNumber | Integer | Version number of an existing file. If not provided, the latest version is used.                                                                                                                         | Optional                         | 36.0              |

# Batch Collection Input

Describes a collection of inputs for a batch request.

## JSON example

```
{
  "inputs": [
    {
      "richInput": {
        "subjectId": "me",
        "body": {
          "messageSegments": [
            {
              "type": "Text",
              "text": "Post Number 1"
            }
          ]
        },
        "feedElementType": "FeedItem"
      }
    }, {
      "richInput": {
        "subjectId": "me",
        "body": {
          "messageSegments": [
            {
              "type": "Text",
              "text": "Post Number 2"
            }
          ]
        },
        "feedElementType": "FeedItem"
      }
    }
  ]
}
```

## Properties

| Name   | Type                          | Description                                                                                                                                                     | Required or Optional | Available Version |
|--------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| inputs | <a href="#">Batch Input[]</a> | Collection of inputs (request bodies) to be processed together. Every Batch Input request body's richInput property must contain the same type of request body. | Required             | 32.0              |

# Batch Input

A single batch input to nest in a batch collection input.

JSON example

Example without a binary part:

```
{
  "richInput": {
    "subjectId": "me",
    "body": {
      "messageSegments": [
        {
          "type": "Text",
          "text": "Post Number 1"
        }
      ]
    },
    "feedElementType": "FeedItem"
  }
}
```

Example with a binary part:

```
{
  "binaryPartNames": [
    "bin1"
  ],
  "richInput": {
    "subjectId": "me",
    "body": {
      "messageSegments": [
        {
          "type": "Text",
          "text": "Please accept this receipt"
        }
      ]
    },
    "capabilities": {
      "content": {
        "description": "Receipt for expenses",
        "title": "receipt.pdf"
      }
    },
    "feedElementType": "FeedItem"
  }
}
```

In this example, the name parameter in the Content-Disposition header of the binary body part must have the value bin1.

Properties

| Name            | Type     | Description                                                                                                                              | Required or Optional | Available Version |
|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| binaryPartNames | String[] | List of the name parameters in the Content-Disposition header of the binary body parts to include with this input. If this value exists, | Optional             | 32.0              |

| Name      | Type | Description                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|-----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|           |      | <p>the corresponding binary part must be included in the request.</p> <p> <b>Note:</b> When used with the <a href="#">/chatter/feed-elements/batch</a> resource, this property can contain only one value, not a list of values.</p> |                      |                   |
| richInput |      | <p>An input body (<i>request body</i>) for the request. The <code>richInput</code> property must contain the request body that the resource expects.</p> <p>The <a href="#">/chatter/feed-elements/batch</a> resource expects a <a href="#">Feed Item Input</a> request body.</p>                                     | Required             | 32.0              |

[Batch Collection Input](#)

## Bookmarks Capability Input

Create or update a bookmark on a feed element.

### Root XML tag

```
<bookmarksCapability>
  <isBookmarkedByCurrentUser>true</isBookmarkedByCurrentUser>
</bookmarksCapability>
```

### JSON example

```
{
  "isBookmarkedByCurrentUser": true
}
```

### Properties

| Name                      | Type    | Description                                                                                              | Required or Optional | Available Version |
|---------------------------|---------|----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isBookmarkedByCurrentUser | Boolean | Specifies if the feed element should be bookmarked for the user ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 32.0              |

SEE ALSO:

[Feed Element Capabilities Input](#)

## Boolean List Input

List of Boolean values.

### Properties

| Name   | Type      | Description                                                      | Required or Optional | Available Version |
|--------|-----------|------------------------------------------------------------------|----------------------|-------------------|
| values | Boolean[] | List of Boolean values to filter on, for example, [true, false]. | Optional             | 63.0              |

SEE ALSO:

[Filter Input](#)

## Boost and Bury Rule Condition Input

Condition for a boost and bury rule.

### JSON example

```
{
  "attributeNameOrId" : "ID",
  "attributeType" : "Product2",
  "values": ["01txx0000006iiOAAQ", "01txx0000006ij4AAA"]
}
```

### Properties

| Name              | Type     | Description                                                 | Required or Optional | Available Version |
|-------------------|----------|-------------------------------------------------------------|----------------------|-------------------|
| attributeNameOrId | String   | Identifier of the attribute for the condition. Value is ID. | Required             | 59.0              |
| attributeType     | String   | Search attribute type. Value is Product2.                   | Optional             | 59.0              |
| values            | String[] | List of up to 100 attribute values for the condition.       | Required             | 59.0              |

## Boost and Bury Rule Input

Boost and bury rule input.

### Root XML tag

searchBoostBuryRule

### JSON example

```
{
  "name": "Medium boost all Alpine products",
  "action": "Boost",
}
```

```
    "level": 70,
    "targetExpression": {
      "conditions": [
        {
          "attributeNameOrId": "Id",
          "attributeType": "Product2",
          "values": ["01txx0000006iiOAAQ", "01txx0000006ij4AAA"]
        }
      ]
    },
    "startDate": "2023-07-31T00:10:00.000Z",
    "endDate": "2023-08-31T00:10:00.000Z"
  }
```

Properties

| Name             | Type                                                        | Description                                                                                                                                                                                                                                              | Required or Optional | Available Version |
|------------------|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| action           | String                                                      | Action of the boost and bury rule. Values are: <ul style="list-style-type: none"><li>Boost—Boost rule. Increases search result rankings for targeted products.</li><li>Bury—Bury rule. Decreases search result rankings for targeted products.</li></ul> | Required             | 59.0              |
| endDate          | String                                                      | End date and time of the boost and bury rule.                                                                                                                                                                                                            | Required             | 59.0              |
| level            | Integer                                                     | Level of the boost and bury rule. Values are from 1-100. The level determines the degree to which a boost and bury rule influences search result rankings for the targeted products.                                                                     | Required             | 59.0              |
| name             | String                                                      | Name of the boost and bury rule.                                                                                                                                                                                                                         | Required             | 59.0              |
| startDate        | String                                                      | Start date and time of the boost and bury rule.                                                                                                                                                                                                          | Required             | 59.0              |
| targetExpression | <a href="#">Boost and Bury Rule Target Expression Input</a> | Target expression for a boost and bury rule. The target expression specifies which products a boost and bury rule applies to.                                                                                                                            | Required             | 59.0              |

Boost and Bury Rule Target Expression Input

Target expression for a boost and bury rule.

JSON example

```
{
  "conditions": [
    {
```

```

        "attributeNameOrId": "Id",
        "attributeType": "Product2",
        "values": ["01txx0000006iiOAAQ", "01txx0000006ij4AAA"]
      }
    ]
  }
}

```

**Properties**

| Name       | Type                                                  | Description                                                       | Required or Optional | Available Version |
|------------|-------------------------------------------------------|-------------------------------------------------------------------|----------------------|-------------------|
| conditions | <a href="#">Boost and Bury Rule Condition Input[]</a> | List of conditions for the boost and bury rule target expression. | Required             | 59.0              |

## Bot Version Activation Input

Activation information for the bot version.

**Properties**

| Name   | Type   | Description                                                                                                                                                                                                                                                                       | Required or Optional | Available Version |
|--------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| status | String | <p>Activation status of the bot version. Values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p>Activation status must be specified in the <code>status</code> request parameter or the Bot Version Activation Input request body.</p> | Optional             | 50.0              |

## Business Objective Association Input

Business objective association.

**Root XML tag**

```
BusObjAssociationsInputRepresentation
```

**JSON example**

```

{
  "type" : "Webstore",
  "id"   : "0w9000000000000000"
}

```

**Properties**

| Name | Type   | Description                                                                                                                    | Required or Optional | Available Version |
|------|--------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id   | String | Association ID for the business objective, or goal.                                                                            | Required             | 59.0              |
| type | String | Definition category of the business objective, or goal. Values are: <ul style="list-style-type: none"><li>• Webstore</li></ul> | Required             | 59.0              |

## Business Objective Input

A business objective, or goal.

**Root XML tag**

BusObjInputRepresentation

**JSON example**

```
{
  "associations": [
    {
      "type": "Webstore",
      "id": "0w9000000000000000"
    },
    {
      "type": "Webstore",
      "id": "01t000000000000000"
    }
  ],
  "description": "Increase revenue through targeted product recommendations",
  "labelName": "Revenue Growth Initiative"
}
```

**Properties**

BusinessObjectiveInputRepresentation

**JSON example**

```
{
  "businessObjectiveId": "0G00000000000001",
  "insightSummary": {
    "targetCompletionDate": "2024-12-31",
    "targetValue": 1000000.00
  }
}
```

**Properties**

| Name                | Type                                                           | Description                                         | Required or Optional | Available Version |
|---------------------|----------------------------------------------------------------|-----------------------------------------------------|----------------------|-------------------|
| businessObjectiveId | String                                                         | ID of the business objective.                       | Required             | 62.0              |
| insightSummary      | <a href="#">Business Objective Insights Input</a> on page 1025 | A summary of insights about the business objective. | Optional             | 62.0              |

## Buyer Profile Input

Input details for the buyer profile update request.

**JSON examples**

Here's an example of a request that includes both email and phone number updates when two-factor authentication is disabled:

```
{
  "firstName": "Morton",
  "lastName": "Strosin",
  "email": "Ma*****@vi*****.info",
  "phoneNumber": "*****7740",
}
```

```
  "verificationInput": {}
}
```

Here's an example of a request that includes an email update when two-factor authentication is enabled:

```
{
  "firstName": "Morton",
  "lastName": "Strosin",
  "email": "Ma*****@vi*****.info",
  "verificationInput": {
    "reCaptchaToken": "03AFcWe45uIQZjl6LznRTupQwTySasFVbN7_8Pj9",
    "stepUpVerificationIdentifier": "hjdfghjdfgj768"
  }
}
```

Here's an example of a request that includes a phone number update when two-factor authentication is enabled:

```
{
  "firstName": "Morton",
  "lastName": "Strosin",
  "phoneNumber": "*****7740",
  "verificationInput": {
    "reCaptchaToken": "03AFcWe45uIQZjl6LznRTupQwTySasFVbN7_8Pj9",
    "stepUpVerificationIdentifier": "hjdfghjdfgj768"
  }
}
```

## Buyer Profile Verification Input

Input details for the buyer profile verification request.

### JSON example

```
{
  "reCaptchaToken": "03AFcWe45uIQZjl6LznRTupQwTySasFVbN7_8Pj9",
  "stepUpVerificationIdentifier": "hjdFghjdfgj768"
}
```

**Properties**

| Name                         | Type   | Description                                                                                                                                              | Required or Optional | Available Version |
|------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| reCaptchaToken               | String | An encrypted response generated by Google reCAPTCHA. This token is used as a unique identifier to verify the user's identity.                            | Required             | 64.0              |
| stepUpVerificationIdentifier | String | An unique identifier for updating the buyer's email and phone number. This identifier is generated by the Commerce Webstore My Profile Initiate OTP API. | Required             | 64.0              |

## Buyer Profile Verify Input

Input details for the buyer profile verify request.

**JSON example**

```
{
  "code": "87XXXX",
  "identifier": "z9jOsN8Buj8bRISupnbg"
}
```

**Properties**

| Name       | Type   | Description                                                                                                              | Required or Optional | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| code       | String | The one-time-password (OTP) to be verified. This is generated through the Commerce Webstore My Profile Initiate OTP API. | Required             | 64.0              |
| identifier | String | An identifier associated with the OTP. This is generated through the Commerce Webstore My Profile Initiate OTP API.      | Required             | 64.0              |

  "amount": "-5"
}
]
```

**Properties**

| Name        | Type                                    | Description                | Required or Optional | Available Version |
|-------------|-----------------------------------------|----------------------------|----------------------|-------------------|
| lineId      | String                                  | Line ID.                   | Required             | 58.0              |
| productId   | String                                  | Product ID.                | Required             | 58.0              |
| quantity    | String                                  | Quantity of product.       | Required             | 58.0              |
| unitPrice   | String                                  | Unit price of the product. | Required             | 58.0              |
| totalPrice  | String                                  | Total price for the item.  | Required             | 58.0              |
| adjustments | <a href="#">Line Adjustment Input[]</a> | List of adjustment inputs. | Optional             | 58.0              |

## Cancel All Order Items Input

Cancellation of all items in an order.

**Root XML tag**

cancelAllOrderItemsInput

**Properties**

| Name           | Type                                           | Description                                                                                                                                  | Required or Optional | Available Version |
|----------------|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| changeItemFees | <a href="#">Change Item Fee with Tax Input</a> | List of input data for fees, including taxes, associated with the order items being canceled.                                                | Optional             | 63.0              |
| excludedItems  | String[]                                       | List of items excluded from cancellation.                                                                                                    | Optional             | 63.0              |
| reason         | String                                         | Reason for the cancellation. The value must match one of the picklist values on the Reason field of the Order Product Summary Change object. | Required             | 63.0              |
| reasonText     | String                                         | Reason text used for the return insights. The value has a max of 255 characters.                                                             | Optional             | 63.0              |

## Cancel Asset Input

Cancellation input consumed by Customer Asset Lifecycle Management. Represents a cancellation action made against a lifecycle-managed asset.

### JSON example

```
{
  "assetStatePeriod": {
    "startDate": "2020-10-01T09:00:00+08:00",
    "endDate": "2020-11-30T08:59:59+08:00",
    "quantity": 25,
    "mrr": 250,
    "amount": 500
  },
  "assetAction": {
    "category": "Cancellations",
    "actionDate": "2020-12-01T09:00:00+08:00",
    "quantityChange": -25,
    "mrrChange": -250,
    "amount": -250
  },
  "assetActionSources": [
    {

      "endDate": "2020-12-31T08:59:59+08:00",
      "quantity": -25,
      "productAmount": -250,
      "referenceEntityItem": "1WLB00000003geJOAQ"
    }
  ]
}
```

### Properties

| Name               | Type                                        | Description                                            | Required or Optional | Available Version |
|--------------------|---------------------------------------------|--------------------------------------------------------|----------------------|-------------------|
| assetAction        | <a href="#">Asset Action Input</a>          | Asset action that caused the cancellation.             | Required             | 50.0              |
| assetActionSources | <a href="#">Asset Action Source Input[]</a> | List of asset action sources.                          | Optional             | 50.0              |
| assetId            | String                                      | ID of the asset to be canceled.                        | Required             | 50.0              |
| assetStatePeriod   | <a href="#">Asset State Period Input</a>    | Most recent asset state period for the canceled asset. | Required             | 50.0              |

## Canvas Capability Input

Create or update a canvas app associated with a feed element.

**Root XML tag**

```
<canvasCapability>
  <developerName>true</developerName>
  <title>true</title>
</canvasCapability>
```

**JSON example**

```
{
  "developerName": "myNewApp",
  "title": "My New App"
}
```

**Properties**

| Name            | Type   | Description                                                                                 | Required or Optional | Available Version |
|-----------------|--------|---------------------------------------------------------------------------------------------|----------------------|-------------------|
| description     | String | A description of the canvas app. The maximum size is 255 characters.                        | Optional             | 32.0              |
| developerName   | String | The API name (developer name) of the connected app.                                         | Required             | 32.0              |
| height          | String | The height of the canvas app in pixels.                                                     | Optional             | 32.0              |
| namespacePrefix | String | A unique namespace prefix for the canvas app.                                               | Optional             | 32.0              |
| parameters      | String | JSON parameters passed to the canvas app.                                                   | Optional             | 32.0              |
| thumbnailUrl    | String | A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels. | Optional             | 32.0              |
| title           | String | A title for the canvas link.                                                                | Required             | 32.0              |

## Capacity Request Input

Request related to a location's fulfillment order capacity.

**Root XML tag**

```
<capacityRequestInput>
```

**JSON example**

```
{
  "actionRequestId" : "FOCapacityInteractionId1",
  "locationId": "LOC-1"
}
```

**Properties**

| Name            | Type   | Description                                                                                                                                           | Required or Optional | Available Version |
|-----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actionRequestId | String | Unique string that identifies the request. Can be a UUID. Use the action request IDs in response data to identify which requests succeeded or failed. | Required             | 55.0              |
| locationId      | String | ID of the location associated with the request.                                                                                                       | Required             | 55.0              |

## Capture Input

Payment capture input consumed by payment capture service.

**JSON example (without idempotency)**

```
{
  {
    "accountId": "",
    "amount": 150,
    "comments": "capture request",
    "paymentGroup": {
      "createPaymentGroup": "true",
      "sourceObjectId": "",
      "currencyIsoCode": "USD"
    },
  },
  {
    "effectiveDate": "2019-10-18T11:32:27.000Z",
    "ipAddress": "202.95.77.70",
    "macAddress": "00-14-22-01-23-45",
    "phone": "100-456-67",
    "email": "test@ccs.org",
    "additionalData": {
      "key1": "value1",
      "key2": "value2",
      "key3": "value3",
      "key4": "value4",
      "key5": "value5"
    }
  }
}
```

**JSON example (idempotency key in JSON payload)**

```
{
  "accountId": "",
  "amount": 150,
  "idempotencyKey": "qw",
  "comments": "capture request",
  "paymentGroup": {
    "createPaymentGroup": "true",
    "sourceObjectId": "",
  }
}
```

```

    "currencyIsoCode": "USD"
  },
  "effectiveDate": "2019-10-18T11:32:27.000Z",
  "ipAddress": "202.95.77.70",
  "macAddress": "00-14-22-01-23-45",
  "phone": "100-456-67",
  "email": "test@ccs.org",
  "additionalData": {
    "key1": "value1",
    "key2": "value2",
    "key3": "value3",
    "key4": "value4",
    "key5": "value5"
  }
}

```

### JSON example (idempotency key in header)

```

{
  "accountId": "",
  "amount": 150,
  "comments": "capture request",
  "paymentGroup": {
    "createPaymentGroup": "true",
    "sourceObjectId": "",
    "currencyIsoCode": "USD"
  },
  "effectiveDate": "2019-10-18T11:32:27.000Z",
  "ipAddress": "202.95.77.70",
  "macAddress": "00-14-22-01-23-45",
  "phone": "100-456-67",
  "email": "test@ccs.org",
  "additionalData": {
    "key1": "value1",
    "key2": "value2",
    "key3": "value3",
    "key4": "value4",
    "key5": "value5"
  }
}

```

### Header

Name: sfdc-Payments-Idempotency-Key

Data Type: String

Max Length: 255

Example:

```

Content-Type: application/json; charset=UTF-8
Accept: application/json
sfdc-Payments-Idempotency-Key: UniqueIdempotencyKey

```

**Properties**

| Name           | Type                                | Description                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|----------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| accountId      | String                              | ID of the account that must be linked to this capture request.                                                                                                                                                                                                   | Optional             | 48.0              |
| additionalData | Map<String, String>                 | Allows users to enter additional data, if needed for a payment request.<br>The additionalData object consists of entries, each of which includes a key and value. Supports up to five key-value pairs. Each key and each value can contain up to 255 characters. | Optional             | 48.0              |
| amount         | Double                              | Amount that must be captured.                                                                                                                                                                                                                                    | Required             | 48.0              |
| clientContext  | String                              | Provides context for payment APIs. Used for a payment caller to reestablish context.                                                                                                                                                                             | Optional             | 49.0              |
| comments       | String                              | Comments for payment capture request.                                                                                                                                                                                                                            | Optional             | 48.0              |
| effectiveDate  | String                              | Date that the payment becomes effective.                                                                                                                                                                                                                         | Optional             | 48.0              |
| email          | String                              | Email of the client that initiated the request.                                                                                                                                                                                                                  | Optional             | 48.0              |
| idempotencyKey | String                              | Idempotency key used for the payment request. Can be provided in the payload or the header, but not in both places at once.                                                                                                                                      | Optional             | 48.0              |
| ipAddress      | String                              | IP address of the client who made the request.                                                                                                                                                                                                                   | Optional             | 48.0              |
| macAddress     | String                              | MAC address of the client who made the request.                                                                                                                                                                                                                  | Optional             | 48.0              |
| paymentGroup   | <a href="#">Payment Group Input</a> | Payment group details associated with the payment request.                                                                                                                                                                                                       | Optional             | 48.0              |
| phone          | String                              | Phone number of the client that initiated the request.                                                                                                                                                                                                           | Optional             | 48.0              |

## Card Payment Method Input

Card payment method input consumed by the payment gateway.

**JSON example**

```
{
  "accountId": "00000",
  "autoPay": "true",
```

```

"cardCategory":"CreditCard",
"cardHolderFirstName":"Mary",
"cardHolderLastName":"Smith",
"cardHolderName":"Mary Smith",
"cardNumber":"0000 0000 0000 0000",
"cardType":"AmericanExpress",
"cvv":"111",
"expiryMonth":"04",
"expiryYear":"25",
"nickName":"Primary American Express Credit Card"}

```

### Properties

| Name                | Type    | Description                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|---------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| accountId           | String  | Salesforce Payments account to which this payment method is linked.                                                                                                                                                                                                                  | Required             | 49.0              |
| autoPay             | Boolean | Indicates whether a token for recurring payments is being requested ( <code>true</code> ) or not ( <code>false</code> ). The token lets the payment method be used for recurring payments.                                                                                           | Optional             | 55.0              |
| cardCategory        | String  | Card processing type. Valid values are: <ul style="list-style-type: none"> <li>• <code>CreditCard</code></li> <li>• <code>DebitCard</code></li> </ul>                                                                                                                                | Required             | 49.0              |
| cardHolderFirstName | String  | First name of the card holder.                                                                                                                                                                                                                                                       | Required             | 49.0              |
| cardHolderLastName  | String  | Last name of the card holder.                                                                                                                                                                                                                                                        | Required             | 49.0              |
| cardHolderName      | String  | Full name of the card holder.                                                                                                                                                                                                                                                        | Required             | 49.0              |
| cardNumber          | String  | Card number.                                                                                                                                                                                                                                                                         | Required             | 49.0              |
| cardType            | String  | Card network type. Valid values are: <ul style="list-style-type: none"> <li>• <code>AmericanExpress</code></li> <li>• <code>DinersClub</code></li> <li>• <code>Jcb</code></li> <li>• <code>MasterCard</code></li> <li>• <code>Maestro</code></li> <li>• <code>Visa</code></li> </ul> | Required             | 49.0              |
| comments            | String  | Optional comments for providing more information about the card.                                                                                                                                                                                                                     | Optional             | 49.0              |
| cvv                 | String  | Card verification value. A unique number on the back of a credit card to authenticate the card.                                                                                                                                                                                      | Optional             | 49.0              |

| Name        | Type    | Description                       | Required or Optional | Available Version |
|-------------|---------|-----------------------------------|----------------------|-------------------|
| email       | String  | Email address of the card holder. | Optional             | 49.0              |
| expiryMonth | Integer | Card expiration month.            | Required             | 49.0              |
| expiryYear  | Integer | Card expiration year.             | Required             | 49.0              |
| nickName    | String  | Optional nickname for the card.   | Optional             | 49.0              |
| startMonth  | Integer | Month the card becomes active.    | Optional             | 49.0              |
| startYear   | Integer | Year the card becomes active.     | Optional             | 49.0              |

## Card Payment Method Tokenization Input

Credit card payment method input for tokenization.

### JSON example

```
{
  "cardHolderName": "John Doe Guest",
  "cardNumber": "4242424242424242",
  "expiryMonth": 12,
  "expiryYear": 2029,
  "cvv": 111,
  "cardType": "Visa"
}
```

### Properties

| Name           | Type    | Description                                                                                                                          | Required or Optional | Available Version |
|----------------|---------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cardHolderName | String  | Name of the card holder that appears on the card.                                                                                    | Required             | 55.0              |
| cardNumber     | String  | Card number.                                                                                                                         | Required             | 55.0              |
| cardType       | String  | Card network type. Valid values are: <ul style="list-style-type: none"><li>AmericanExpress</li><li>MasterCard</li><li>Visa</li></ul> | Required             | 55.0              |
| cvv            | Integer | CW (security code).                                                                                                                  | Required             | 55.0              |
| expiryMonth    | Integer | Card expiration month.                                                                                                               | Required             | 55.0              |
| expiryYear     | Integer | Card expiration year.                                                                                                                | Required             | 55.0              |

## Cart Coupon Input

A cart coupon input.

### Root XML tag

```
<cartCouponInput>
```

### JSON example

```
{
  "couponCode": "COUP10",
  "customFields": [
    {
      "attributes": {
        "type": "WebCartAdjustmentBasis"
      },
      "Test__C": "test@salesforce.com"
    }
  ]
}
```

### Properties

| Name         | Type                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|--------------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| couponCode   | String                                     | Coupon code.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required             | 54.0              |
| customFields | <a href="#">sObject Attributes Input[]</a> | An array of sObjects and their associated custom fields. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, only the WebCart and WebCartAdjustmentBasis sObjects is supported. Field-level security rules configured by the web store admin in the <a href="#">shopper profiles</a> shopper profile are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. | Optional             | 63.0              |

## Cart Input

A cart.

### Root XML tag

```
<cart>
```

### JSON example

This cart input creates a cart for the specified account using the provided currency, USD, in an org with the multicurrency feature enabled.

```
{
  "name": "My Cart",
  "type": "Cart",
}
```

```

    "currencyIsoCode": "USD",
    "effectiveAccountId": "0010L000002LC0qYAG"
  }

```

### JSON example with custom fields

This cart input creates a cart with custom fields from the WebCart sObject. Custom fields are optional and must be previously defined for the sObject. See [Create Custom Fields](#).

```

{
  "name": "My Cart with Custom Fields",
  "type": "Cart",
  "currencyIsoCode": "USD",
  "effectiveAccountId": "0010L000002LC0qYAG",
  "customFields": [
    {
      "attributes": {
        "type": "WebCart"
      },
      "MyCustomTextField__c": "Text",
      "MyCustomNumberField__c": 12.34,
      "MyCustomPercentField__c": 0.2345,
      "MyCustomGeolocationField__c": {
        "latitude": 33.345,
        "longitude": 45.567
      }
    }
  ]
}

```

### Properties

| Name               | Type                                       | Description                                                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|--------------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| currencyIsoCode    | String                                     | Currency ISO code of the cart.                                                                                                                                                                                                                                                                                                                                                         | Optional             | 57.0              |
| customFields       | <a href="#">sObject Attributes Input[]</a> | Array of sObjects and custom fields for the sObjects. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, only the WebCart sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. | Optional             | 61.0              |
| effectiveAccountId | String                                     | ID of the buyer account or guest buyer profile for which the request is made. If unspecified, the default value is determined from context.                                                                                                                                                                                                                                            | Optional             | 49.0              |
| isSecondary        | Boolean                                    | Specifies whether the cart is secondary ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .                                                                                                                                                                                                                                          | Optional             | 53.0              |

| Name         | Type   | Description                                                                                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|--------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name         | String | Name of the cart. The name can have up to 250 Unicode characters. If unspecified, defaults to the generated name.                                                                                                                                                                                                                                      | Optional             | 49.0              |
| orderOwnerId | String | ID of the owner of the order.                                                                                                                                                                                                                                                                                                                          | Optional             | 58.0              |
| type         | String | Type of cart. Values are: <ul style="list-style-type: none"> <li>• <b>Cart</b>—Cart created by a customer.</li> <li>• <b>PayNowReadOnly</b>—Clone of a Template cart that the customer can check out with using the Pay Now feature.</li> <li>• <b>Template</b>—Cart created by an internal user.</li> </ul> If unspecified, defaults to <b>Cart</b> . | Optional             | 49.0              |
| typeAsString | String | Type of the cart provided as a string.                                                                                                                                                                                                                                                                                                                 | Optional             | 59.0              |

## Cart Inventory Reservation Input (Pilot)

Input representation to create or update a reservation.

**Note:** This feature is not generally available and is being piloted with certain Customers subject to additional terms and conditions. It is not part of your purchased Services. This feature is subject to change, may be discontinued with no notice at any time in Salesforce's sole discretion, and Salesforce may never make this feature generally available. Make your purchase decisions only on the basis of generally available products and features. This feature is made available on an AS IS basis and use of this feature is at your sole risk.

### Root XML tag

```
<cartInventoryReservationInput>
```

### JSON example

```
{
  "durationInSeconds":100
}
```

### Properties

| Name              | Type    | Description                      | Required or Optional | Available Version |
|-------------------|---------|----------------------------------|----------------------|-------------------|
| durationInSeconds | Integer | Reservation duration in seconds. | Required             | 58.0              |

## Cart Item Input

An item in a cart.

**Root XML tag**`<cartItem>`**JSON example for adding an item to a cart**

```
{
  "productId": "01t000000000000000",
  "quantity": "5",
  "type": "Product"
}
```

**JSON example for updating an item in a cart**

```
{
  "quantity": "7"
}
```

**Properties**

| Name                      | Type                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional                                                                                       | Available Version |
|---------------------------|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------|
| cartDelivery<br>GroupId   | String                                     | ID of the cart delivery group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Optional                                                                                                   | 59.0              |
| customFields              | <a href="#">sObject Attributes Input[]</a> | Array of sObjects and custom fields for the sObjects. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, only the CartItem sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. The custom fields can be of type Checkbox, Currency, Date, Email, LongTextArea, Number, Percent, Phone, Text, TextArea, Url, Address, or Location. The customFields property isn't supported in stores built on an Aura template. | Optional                                                                                                   | 61.0              |
| productId                 | String                                     | ID of the product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required when adding an item to a cart (POST)<br><br>Not supported when updating an item in a cart (PATCH) | 49.0              |
| productSelling<br>ModelId | String                                     | The ID of the product selling model associated with Product2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Optional                                                                                                   | 59.0              |

Value is <code>Product</code> .                                                                                                | Required when adding an item to a cart (POST)<br><br>Not supported when updating an item in a cart (PATCH) | 49.0              |

## Cart Item Promotion Collection Input

Cart item promotion collection input.

### Root XML tag

```
<cartItemPromotionCollectionInput>
```

### JSON example

```
{
  "items": [
    {
      "cartItemId": "0a9xx000000000GAAQ"
    },
    {
      "cartItemId": "0a9xx000000000GBCQ"
    }
  ]
}
```

### Properties

| Name  | Type                                         | Description                                          | Required or Optional | Available Version |
|-------|----------------------------------------------|------------------------------------------------------|----------------------|-------------------|
| items | <a href="#">Cart Item Promotion Input</a> [] | List of cart items to get the associated promotions. | Required             | 53.0              |

## Cart Item Promotion Input

Cart item promotion input.

### Root XML tag

```
<cartItemPromotionInput>
```

### JSON example

```
{
  "cartItemId": "0a9xx000000000GAAQ"
}
```

### Properties

| Name       | Type   | Description                              | Required or Optional | Available Version |
|------------|--------|------------------------------------------|----------------------|-------------------|
| cartItemId | String | ID of the item associated with the cart. | Required             | 53.0              |

## Cart Messages Visibility Input

Set the visibility for cart messages.

### Root XML tag

```
<messageVisibility>
```

### JSON example

```
{
  "visibility": "true"
}
```

### Properties

| Name       | Type    | Description                                                                                | Required or Optional | Available Version |
|------------|---------|--------------------------------------------------------------------------------------------|----------------------|-------------------|
| visibility | Boolean | Specifies whether to set cart messages as visible ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 50.0              |

## Cart to Wishlist Input

Copy products from a cart to a wishlist.

### Root XML tag

```
<cartToWishlist>
```

**JSON example**

```
{
  "wishlistId": "3orxx00000000A1"
}
```

**Properties**

| Name       | Type   | Description                                  | Required or Optional | Available Version |
|------------|--------|----------------------------------------------|----------------------|-------------------|
| wishlistId | String | ID of the wishlist to copy cart products to. | Required             | 50.0              |

## Category Import Abort Input

Cancel asynchronous category import job input.

**Root XML tag**

```
categoryImportAbortInput
```

**JSON example**

```
{
  "status": "Aborted"
}
```

**Properties**

| Name   | Type   | Description                | Required or Optional | Available Version |
|--------|--------|----------------------------|----------------------|-------------------|
| status | String | The value must be Aborted. | Required             | 59.0              |

## Category Import Input

Configuration for an asynchronous category import job.

**Root XML tag**

```
categoryImportInput
```

**JSON example**

```
{
  "importConfiguration": {
    "importSource": {
      "contentVersionId": "069xx0000004CH6AAM"
    },
    "importSettings": {
      "productCatalogId": "0ZSxx000000004rGAA"
    }
  }
}
```

**Properties**

| Name                | Type                                       | Description                                    | Required or Optional | Available Version |
|---------------------|--------------------------------------------|------------------------------------------------|----------------------|-------------------|
| importConfiguration | <a href="#">Import Configuration Input</a> | Configuration for a category import operation. | Required             | 59.0              |

## Category Settings Input

Category settings applicable to all product rows in a product import .csv file.

**Root XML tag**

```
<categorySettings>
```

**JSON example**

```
{
  "category": {
    "productCatalogId": "0ZSRM00000004Fk4AI"
  }
}
```

**Properties**

| Name             | Type   | Description                                                                             | Required or Optional                                                                   | Available Version |
|------------------|--------|-----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|-------------------|
| productCatalogId | String | ID of product catalog to associate with each product row in a product import .csv file. | Required if you specify one or more category-related column headings in your .csv file | 54.0              |

## Change Asset Input

Change input consumed by Customer Asset Lifecycle Management. Represents a change action made against a lifecycle-managed asset.

**JSON example**

```
{
  "assetStatePeriods": [
    {
      "startDate": "2020-07-01T09:00:00+08:00",
      "endDate": "2020-09-30T08:59:59+08:00",
      "quantity": 20,
      "mrr": 200,
      "amount": 600
    }
  ]
}
```

```

    },
    {
      "startDate": "2020-10-01T09:00:00+08:00",
      "endDate": "2020-12-31T08:59:59+08:00",
      "quantity": 25,
      "mrr": 250,
      "amount": 750
    }
  ],
  "assetAction": {
    "category": "Upsells",
    "actionDate": "2020-10-01T14:00:00+08:00",
    "quantityChange": 5,
    "mrrChange": 50,
    "amount": 150
  },
  "assetActionSources": [
    {
      "transactionDate": "2020-10-01T14:00:00+08:00",
      "startDate": "2020-10-01T09:00:00+08:00",
      "endDate": "2020-12-31T08:59:59+08:00",
      "quantity": 5,
      "productAmount": 150,
      "referenceEntityItem": "1WLB00000003geJOAQ"
    }
  ]
}

```

### Properties

| Name               | Type                                        | Description                                                    | Required or Optional | Available Version |
|--------------------|---------------------------------------------|----------------------------------------------------------------|----------------------|-------------------|
| assetAction        | <a href="#">Asset Action Input</a>          | Action that caused a change to the asset.                      | Required             | 50.0              |
| assetActionSources | <a href="#">Asset Action Source Input[]</a> | List of asset action sources.                                  | Optional             | 50.0              |
| assetId            | String                                      | Asset that was changed as a result of the action.              | Required             | 50.0              |
| assetStatePeriods  | <a href="#">Asset State Period Input[]</a>  | List of asset state periods affected by the change asset call. | Optional             | 50.0              |

## Change Input

A list of changes to order item summaries that make up an order change, such as a cancel or return.

### Root XML tag

```
<changeInput>
```

### JSON example

```

{
  "changeItems": [

```

```
{
  "orderItemSummaryId": "10uxx0000004FYDAA2",
  "quantity": 1.0,
  "reason": "Wrong Item",
  "shippingReductionFlag": true
}
```

### Properties

| Name        | Type                              | Description                            | Required or Optional | Available Version |
|-------------|-----------------------------------|----------------------------------------|----------------------|-------------------|
| changeItems | <a href="#">Change Item Input</a> | List of changes to OrderItemSummaries. | Required             | 48.0              |

## Change Item Fee Input

Input representation for Change Item Fee Input

### Root XML tag

```
<changeItemFeeInput>
```

### JSON example

```
{
  "amount": "10",
  "amountType": "AmountWithoutTax",
  "description": "Restocking Fee",
  "product2Id": "10uxx0000004GKbAAM",
  "reason": "Other"
}
```

### Properties

| Name   | Type   | Description                                                                      | Required or Optional | Available Version |
|--------|--------|----------------------------------------------------------------------------------|----------------------|-------------------|
| amount | Double | Positive value used to calculate the fee amount, as described by the amountType. | Required             | 57.0              |

| Name             | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                | Available Version |

| priceBookEntryId   | String                                    | ID of the price book entry associated with the fee product.                                                                                  | Required unless price books are optional in the org | 63.0              |
| product2Id         | String                                    | ID of the product representing the fee.                                                                                                      | Required                                            | 63.0              |
| reasonText         | String                                    | Reason for the cancellation. The value must match one of the picklist values on the Reason field of the Order Product Summary Change object. | Required                                            | 63.0              |

## Change Item Input

Change to an OrderItemSummary, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The OrderItemSummary can't be a shipping charge.

**Root XML tag**

```
<changeItem>
```

**JSON example**

```
{
  "orderItemSummaryId": "10uxx0000004FYDAA2",
  "quantity": 1.0,
  "reason": "Wrong Item",
  "shippingReductionFlag": true
}
```

**Properties**

| Name               | Type                                    | Description                                                                            | Required or Optional | Available Version |
|--------------------|-----------------------------------------|----------------------------------------------------------------------------------------|----------------------|-------------------|
| changeItemFees     | <a href="#">Change Item Fee Input[]</a> | List of input data for fees associated with the order item being returned or canceled. | Optional             | 57.0              |
| orderItemSummaryId | String                                  | ID of the order item summary.                                                          | Required             | 48.0              |

| Name                  | Type    | Description                                                                                                                      | Required or Optional | Available Version |
|-----------------------|---------|----------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| quantity              | Double  | Quantity to change. Use a positive value. For example, a value of 2 means "cancel or return 2 units."                            | Required             | 48.0              |
| reason                | String  | Reason for the change. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object. | Required             | 48.0              |
| reasonForChangeText   | String  | Reason text used for the return insights. The value has a max of 255 characters.                                                 | Optional             | 59.0              |
| shippingReductionFlag | Boolean | Specifies whether to prorate the shipping charge.                                                                                | Required             | 48.0              |

## Checkout Address Input

Checkout address input.

**Root XML tag**

```
<address>
```

**JSON example**

```
{
  "name": "Alan Johnson",
  "firstName": "Alan",
  "lastName": "Johnson",
  "region": "CA",
  "country": "US",
  "city": "San Francisco",
  "street": "415 Mission St",
  "postalCode": "94105",
```

```
"shipToPhoneNumber": "+16175551212"
}
```

### Properties

| Name              | Type    | Description                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|-------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| city              | String  | The address city.                                                                                                                                                                                                                                                                                       | Optional             | 55.0              |
| country           | String  | ISO code of the address country. Must match one of the valid ISO codes defined within the org's State-Country picklist.                                                                                                                                                                                 | Required             | 55.0              |
| firstName         | String  | First name of the contact.                                                                                                                                                                                                                                                                              | Optional             | 57.0              |
| isDefault         | Boolean | Indicates whether a contact's address is the default address ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .                                                                                                                                             | Optional             | 55.0              |
| lastName          | String  | Last name of the contact.                                                                                                                                                                                                                                                                               | Optional             | 57.0              |
| name              | String  | Name of the contact.                                                                                                                                                                                                                                                                                    | Required             | 55.0              |
| postalCode        | String  | Zip code or postal code for the address.                                                                                                                                                                                                                                                                | Optional             | 55.0              |
| shipToPhoneNumber | String  | Phone number of the contact. Don't include a value for this field when submitting an address to the payment API. All default payment components strip phone numbers from the address before submitting to the payment API. If you specify a value, it must be a valid phone number with a country code. | Optional             | 63.0              |
| region            | String  | ISO code of the address region. Must match one of the valid ISO codes defined within the org's State-Country picklist.                                                                                                                                                                                  | Optional             | 55.0              |
| street            | String  | The address street.                                                                                                                                                                                                                                                                                     | Required             | 55.0              |

## Checkout Coupon Input

A coupon associated with a checkout.

### Root XML tag

```
checkoutCouponInput
```

### JSON example

```
{
  "couponCodes": ["10OFFORDER"]
}
```

**Properties**

| Name        | Type     | Description                                                                             | Required or Optional | Available Version |
|-------------|----------|-----------------------------------------------------------------------------------------|----------------------|-------------------|
| couponCodes | String[] | A list of coupons associated with the checkout. Only a single coupon code is supported. | Required             | 61.0              |

## Checkout Input

Input for a Commerce store checkout.

**Root XML tag**

<checkout>

**JSON examples**

Here's an example of a request including contact information and Cart custom fields:

**Note:** The PATCH request fails if it includes contact information with Cart Delivery Group custom fields or with both Cart and Cart Delivery Group custom fields.

```
{
  "contactInfo": {
    "firstName": "Alan",
    "lastName": "Johnson",
    "email": "al**@jo*****.com",
    "phoneNumber": "*****3944"
  },
  "customFields": [
    {
      "attributes": {
        "type": "WebCart"
      },
      "Id": "0a6xx0000000000",
      "MyCustomTextField__c": "Foo",
      "MyCustomNumberField__c": 12.34,
      "MyCustomPercentField__c": 0.2345,
      "MyCustomGeolocationField__c": {
        "latitude": 33.345,
        "longitude": 45.567
      }
    }
  ]
}
```

Here's an example of a request including delivery method and custom fields:

```
{
  "deliveryMethodId": "7cdLT000000EzA5YAK",
```

```

"customFields": [
  {
    "attributes": {
      "type": "WebCart"
    },
    "Id": "0a6xx0000000000",
    "MyCustomTextField__c": "Foo",
    "MyCustomNumberField__c": 12.34,
    "MyCustomPercentField__c": 0.2345,
    "MyCustomGeolocationField__c": {
      "latitude": 33.345,
      "longitude": 45.567
    }
  },
  {
    "attributes": {
      "type": "CartDeliveryGroup"
    },
    "Id": "0a7SB000000oBujYAE",
    "MyCustomTextField__c": "Bar",
    "MyCustomNumberField__c": 4.55,
    "MyCustomPhoneField__c": "*****1212",
    "MyCustomAddressField__c": {
      "street": "100 Folsom Street",
      "city": "San Francisco",
      "state": "California", //This field isn't currently supported in custom fields.

      "stateCode": "US_CA",
      "postalCode": "93555",
      "country": "United States", //This field isn't currently supported in custom
fields.
      "countryCode": "US",
      "geocodeAccuracy": "City",
      "latitude": 34,
      "longitude": 85.9
    }
  }
]
}

```

Here's an example of a request including shipping information (`deliveryAddress`, `desiredDeliveryDate`, and `shippingInstructions`) and custom fields:

**Note:** The PATCH request fails if it includes only shipping instructions along with custom fields for either Cart or Cart Delivery Group.

```

{
  "deliveryAddress": {
    "name": "Alan Johnson",
    "firstName": "Alan",
    "lastName": "Johnson",
    "region": "CA",
    "country": "US",
    "city": "San Francisco",
    "street": "415 Mission St",

```

```

    "postalCode": "94105"
  },
  "desiredDeliveryDate": "2021-05-28T16:41:41.090Z",
  "shippingInstructions": "type code 1234 on gate keypad",
  "customFields": [
    {

```

Here's an example of a request including shipping information (deliveryAddress, desiredDeliveryDate, and shippingInstructions) without custom fields:

**Note:** Any combination of these three sub-resources is valid if custom fields aren't included in the request.

```

{
  "deliveryAddress": {
    "name": "Alan Johnson",
    "firstName": "Alan",
    "lastName": "Johnson",
    "region": "CA",

```

```

    "country": "US",
    "city": "San Francisco",
    "street": "415 Mission St",
    "postalCode": "94105"
  },
  "desiredDeliveryDate": "2021-05-28T16:41:41.090Z",
  "shippingInstructions": "type code 1234 on gate keypad"
}

```

Here's an example of a request for a guest user, including contact information and delivery address:

```

{
  "contactInfo": {
    "firstName": "Alan",
    "lastName": "Johnson",
    "email": "al**@jo*****.com",
    "phoneNumber": "*****3944"
  },
  "deliveryAddress": {
    "name": "Alan Johnson",
    "firstName": "Alan",
    "lastName": "Johnson",
    "region": "CA",
    "country": "US",
    "city": "San Francisco",
    "street": "415 Mission St",
    "postalCode": "94105"
  }
}

```

| delivery MethodId     | String                                 | <p>Delivery method ID for the checkout.</p> <p>When Shipping is disabled for your web store, updation of delivery method isn't supported.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Optional             | 55.0              |
| desired DeliveryDate  | String                                 | Desired delivery date for the checkout.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Optional             | 55.0              |
| shipping Instructions | String                                 | Special shipping instructions for the checkout.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Optional             | 55.0              |

## Checkout Order Action Input

Input representation of the Checkout Order action request, including the action and its parameters for a single order.

### Root XML tag

`checkoutOrderAction`

### Properties

| Name                    | Type                                                   | Description                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-------------------------|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>action</code>     | String                                                 | Name of the action to be performed on the place order request. Valid values are: <ul style="list-style-type: none"><li><code>prepare</code>—Validates the request, temporarily reserves inventory, and applies coupons on the items in the cart.</li><li><code>submit</code>—Validates the request, enqueues order creation, and returns the order reference number.</li></ul> | Required             | 64.0              |
| <code>parameters</code> | <a href="#">Checkout Order Action Parameters Input</a> | Parameter for the <code>submit</code> action in a place order request.                                                                                                                                                                                                                                                                                                         | Optional             | 64.0              |

## Checkout Order Action List Input

Input representation of the Commerce store checkout.request.

### Root XML tag

`checkoutPlaceOrderActionList`

### JSON example

Example request for the prepare action in a place order request:

```
{
  "actions": [
    {
      "action": "prepare"
    }
  ]
}
```

Example request for the submit action in a place order request:

```
{
  "actions": [
    {
      "action": "submit"
    }
  ]
}
```

**Properties**

| Name    | Type                                        | Description                                                       | Required or Optional | Available Version |
|---------|---------------------------------------------|-------------------------------------------------------------------|----------------------|-------------------|
| actions | <a href="#">Checkout Order Action Input</a> | Details of the action to be performed on the place order request. | Required             | 64.0              |

## Checkout Order Action Parameters Input

Input representation of the Checkout order action parameters request.

**Root XML tag**

```
checkoutPlaceOrderActionParameter
```

**Properties**

| Name                      | Type   | Description                              | Required or Optional | Available Version |
|---------------------------|--------|------------------------------------------|----------------------|-------------------|
| registration<br>AccountId | String | Registered account ID of the guest user. | Optional             | 64.0              |

## Checkout Payment Input

Payment input for a Commerce store checkout.

**Root XML tag**

```
<checkoutPaymentInput>
```

**JSON example for authorized payment**

```
{
  "requestType": "Auth",
  "paymentToken": "cardPaymentMethodId",
  "billingAddress": {
    "name": "John Doe",
    "street": "123 Acme Drive",
    "city": "Los Angeles",
    "region": "CA",
    "country": "US",
    "postalCode": "90001"
  }
}
```

JSON example for post authorized payment

```
{
  "requestType": "PostAuth",
  "paymentToken": 'pi_0swefj329r4ljsdfk',
  "billingAddress": {
    "name": "John Doe",
    "street": "123 Acme Drive",
    "city": "Los Angeles",
    "region": "CA",
    "country": "US",
    "postalCode": "90001"
  }
}
```

JSON example for simple purchase order

```
{
  "requestType": "SimplePurchaseOrder",
  "paymentToken": "000348957393223",
  "billingAddress": {
    "name": "John Doe",
    "street": "123 Acme Drive",
    "city": "Los Angeles",
    "region": "CA",
    "country": "US",
    "postalCode": "90001"
  }
}
```

Properties

| Name            | Type                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional                                                                                                    | Available Version |
|-----------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-------------------|
| billing Address | <a href="#">Checkout Address Input</a> | Billing address for the checkout. Don't include a value for <code>shipToPhoneNumber</code> on the Checkout Address Input. This field is ingored in the payment request.                                                                                                                                                                                                                                                                                                               | Optional                                                                                                                | 55.0              |
| paymentToken    | String                                 | Payment token value has a different meaning depending on the request type.<br><br>If the request type is <code>Auth</code> , the value is a card payment method ID.<br><br>If the request type is <code>SimplePurchaseOrder</code> , the value is a purchase order number.<br><br>If the request type is <code>PostAuth</code> , the value is a string that identifies the payment transaction so it can be validated by the payment gateway adapter's <code>PostAuth</code> handler. | Required if <code>requestType</code> is <code>Auth</code> , <code>PostAuth</code> , or <code>SimplePurchaseOrder</code> | 55.0              |

| Name         | Type   | Description                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|--------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| paymentsData | String | Additional data from a payment request for custom checkout implementations. Supports up to four key-value pairs. <code>paymentsData</code> is only applicable to requests with a <code>requestType</code> of <code>Auth</code> or <code>PostAuth</code> . Simple purchase orders don't support <code>paymentsData</code> .                       | Optional             | 55.0              |
| requestType  | String | Type of payment request. Valid values are: <ul style="list-style-type: none"><li>• <code>Auth</code>—Payment authorization request.</li><li>• <code>PostAuth</code>—Record a payment transaction that happened outside of the Salesforce platform</li><li>• <code>SimplePurchaseOrder</code>—Use a purchase order as a form of payment</li></ul> | Required             | 55.0              |

## Checkout Start Address Input

Checkout start address input.

### Root XML tag

```
<address>
```

### JSON example

```
{
  "country": "US",
  "city": "San Francisco",
  "city": "Company1",
  "firstName": "Alan",
  "id": "2z9R000000008LfIAI",
  "lastName": "Johnson",
  "name": "Alan Johnson",
  "postalCode": "94105",
  "region": "CA",
  "shouldUseDefaultAddress": false,
  "street": "415 Mission St",
}
```

### Properties

| Name        | Type   | Description               | Required or Optional | Available Version |
|-------------|--------|---------------------------|----------------------|-------------------|
| city        | String | The address city.         | Optional             | 61.0              |
| companyName | String | The address company name. | Required             | 61.0              |

| Name                        | Type    | Description                                                                                                                      | Required or Optional | Available Version |
|-----------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| country                     | String  | ISO code of the address country. Must match one of the valid ISO codes defined within the org's State-Country picklist.          | Required             | 61.0              |
| firstName                   | String  | First name of the contact.                                                                                                       | Optional             | 61.0              |
| id                          | String  | ID for the checkout                                                                                                              | Optional             | 61.0              |
| lastName                    | String  | Last name of the contact.                                                                                                        | Optional             | 61.0              |
| name                        | String  | Name of the contact.                                                                                                             | Required             | 61.0              |
| postalCode                  | String  | Zip code or postal code for the address.                                                                                         | Optional             | 61.0              |
| region                      | String  | ISO code of the address region. Must match one of the valid ISO codes defined within the org's State-Country picklist.           | Optional             | 61.0              |
| shouldUse<br>DefaultAddress | Boolean | Indicates whether the contact's default address should be used for checkout ( <code>true</code> ) or not ( <code>false</code> ). | Optional             | 61.0              |
| street                      | String  | Address street.                                                                                                                  | Required             | 61.0              |

## Checkout Start Input

Input to start a Commerce store checkout for a cart.

### Root XML tag

```
<checkoutStart>
```

### JSON example

```
{
  "cartId": "0a6456789012345AAA",
  "customFields": [
    {
      "attributes": {
        "type": "WebCart"
      },
      "CartCustomNumberField__c": 1,
      "CartCustomTextField__c": "Text1"
    },
    {
      "attributes": {
        "type": "CartDeliveryGroup"
      },
      "Cdgdistrict__c": "District1",
    },
    {
      "attributes": {
        "type": "CartDeliveryGroup"
      }
    }
  ]
}
```

```

    },
    "id": "0a7xx000000006TAAQ",
    "CdgWardField__c": 8
  }
]
}

```

### Properties

| Name         | Type                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Required or Optional | Available Version |
|--------------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cartId       | String                                   | ID of a cart, or the value <code>active</code> , which indicates that the checkout operation should use the active cart.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required             | 55.0              |
| customFields | <a href="#">sObject Attributes Input</a> | <p>Array of sObjects with their respective custom fields. Currently, custom fields are supported on the <a href="#">WebCart</a> and <a href="#">CartDeliveryGroup</a> entities. You can specify up to 21 sObjects in the array: one WebCart and multiple CartDeliveryGroups.</p> <p>Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile.</p> <p>The custom fields can be of type Checkbox, Currency, Date, Email, LongTextArea, Number, Percent, Phone, Text, TextArea, Url, Address, or Location. We currently don't support updating the <code>country</code> and <code>state</code> fields through <code>customFields</code> as part of the address update using request. Instead, specify the <code>countryCode</code> and <code>stateCode</code>.</p> <p>Use the <code>yyyy-MM-dd</code> format to specify date fields.</p> <p>Use the <code>yyyy-MM-ddTHH:mm:ss.SSS+/-HH:mm</code> or <code>yyyy-MM-ddTHH:mm:ss.SSSZ</code> formats to specify <code>dateTime</code> fields. When a timezone is added to a UTC <code>dateTime</code>, the result is the date and time in that timezone.</p> <p>Use the <code>HH:mm:ss.SSS</code> or <code>HH:mm:ss.SSSZ</code> formats to specify <code>time</code> fields. When a timezone is added to a UTC time, the result is the time in that timezone.</p> | Optional             | 62.0              |

| Name                     | Type                                         | Description                                                                                 | Required or Optional | Available Version |
|--------------------------|----------------------------------------------|---------------------------------------------------------------------------------------------|----------------------|-------------------|
|                          |                                              | The <code>customFields</code> property isn't supported in stores built on an Aura template. |                      |                   |
| delivery<br>AddressInput | <a href="#">Checkout Start Address Input</a> | Address data used for the delivery address.                                                 | Optional             | 61.0              |

## Clean Input

Defines a data integration rule, its type, and the records to update.

### Root XML tag

```
<CleanInput>
```

### JSON example

```
{
  "cleanType": "bulk"
  "cleanRuleId": "07ixx0000000000U"
  "requestId": "0Ysxx00000000004"
  "entityIds": ["003xx000004TnDu", .... ]
}
```

### Properties

| Name        | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required or Optional | Available Version |
|-------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cleanRuleId | String | The 18-character ID of the data integration rule used to update records. Get the IDs for active rules from the <a href="#">Clean Rule Statuses</a> resource.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required             | 37.0              |
| cleanType   | String | The system-generated type of update operation used by the data integration rule. One of these values: <ul style="list-style-type: none"> <li><code>BulkClean</code>—Updates all existing records applicable to the specified data integration rule.</li> <li><code>Incremental</code>—Updates only records that do not have a status of <code>In Sync</code> or <code>Reviewed</code>.</li> <li><code>Manual</code>—Manually updates records with the specified data integration rule.</li> <li><code>Perpetual</code>—Automatically updates saved records with the specified data integration rule.</li> </ul> | Optional             | 37.0              |

| Name      | Type     | Description                                                                    | Required or Optional | Available Version |
|-----------|----------|--------------------------------------------------------------------------------|----------------------|-------------------|
| entityIds | String[] | The 18-character IDs of the records to update using the data integration rule. | Required             | 37.0              |
| requestId | String   | The system-generated ID of the update request.                                 | Optional             | 37.0              |

## Close Capability Input

Set a feed element to closed.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

### Root XML tag

```
<closeCapability>
```

### JSON example

```
{
  "isClosed": "true"
}
```

### Properties

| Name     | Type    | Description                                                                                  | Required or Optional | Available Version |
|----------|---------|----------------------------------------------------------------------------------------------|----------------------|-------------------|
| isClosed | Boolean | Specifies whether to set the feed element to closed ( <b>true</b> ) or not ( <b>false</b> ). | Required             | 43.0              |

## Comment Capabilities Input

Comment capabilities input.

### Root XML tag

```
<commentCapabilities>
```

### Properties

| Name            | Type                                               | Description                          | Available Version |
|-----------------|----------------------------------------------------|--------------------------------------|-------------------|
| content         | <a href="#">Content Capability Input</a>           | Content to attach to the comment.    | 32.0              |
| feedEntityShare | <a href="#">Feed Entity Share Capability Input</a> | Feed entity to share to the comment. | 42.0              |

| Name   | Type                                    | Description                                          | Available Version |
|--------|-----------------------------------------|------------------------------------------------------|-------------------|
| record | <a href="#">Record Capability Input</a> | Existing knowledge article to attach to the comment. | 42.0              |

## Comment Input

A comment.

### Root XML tag

<comment>

### JSON example for editing a comment body

This example uses the [Comment](#) resource with a PATCH request.

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "I am definitely going to check that out."
      }
    ]
  }
}
```

### JSON example for posting a comment and attaching an existing file to the comment

This example uses the [Feed Elements Capability, Comments Items](#) resource with a POST request.

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",

## Commerce Address Field Input

Commerce address field input. This is used to reference custom fields for the address.

**Root XML tag**

```
<commerceAddressField>
```

**JSON example**

```
{
  "dataName" : "options__c",
  "text" : "alpha"
}
```

**Properties**

| Name     | Type   | Description                            | Required or Optional | Available Version |
|----------|--------|----------------------------------------|----------------------|-------------------|
| dataName | String | The name of the custom address field.  | Required             | 54.0              |
| text     | String | The value of the custom address field. | Optional             | 54.0              |

| city                          | String                                         | The address city.                                                                                                                                                             | Optional             | 54.0              |
| commerceAddressFieldInputList | <a href="#">Commerce Address Field Input[]</a> | A list of custom address fields, if any.                                                                                                                                      | Optional             | 54.0              |
| companyName                   | String                                         | The address company name.                                                                                                                                                     | Optional             | 57.0              |
| country                       | String                                         | The address country, specified using the ISO country code. For example, US for United States.                                                                                 | Optional             | 54.0              |
| countryCode                   | String                                         | Two-character country code. For example, US for United States.                                                                                                                | Optional             | 54.0–58.0         |
| firstName                     | String                                         | The address first name.                                                                                                                                                       | Optional             | 57.0              |
| isDefault                     | Boolean                                        | Indicates whether a contact's address is the preferred method of communication ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 54.0              |
| lastName                      | String                                         | The address last name.                                                                                                                                                        | Optional             | 57.0              |
| middleName                    | String                                         | The address middle name.                                                                                                                                                      | Optional             | 57.0              |
| name                          | String                                         | Name of the contact.                                                                                                                                                          | Required             | 54.0              |

| Name        | Type   | Description                                                                                                                 | Required or Optional | Available Version |
|-------------|--------|-----------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| phoneNumber | String | The phone number associated with the address, including a valid country code. For example, +1xxxxxxxxxxx (for a US number). | Optional             | 57.0              |
| postalCode  | String | Zip code or postal code for the address.                                                                                    | Optional             | 54.0              |
| region      | String | The address state, specified using the ISO state code. For example, CA for California state.                                | Optional             | 54.0              |
| regionCode  | String | The address state code. For example, CA for California state.                                                               | Optional             | 54.0–58.0         |
| street      | String | The address street.                                                                                                         | Optional             | 54.0              |

## Commerce Einstein Activity Job Input

Commerce Einstein activity job.

### Root XML tag

```
<job>
```

### JSON example

```
{
  "userId" : "005B0000000Ge16"
}
```

### Properties

| Name     | Type   | Description                                                                        | Required or Optional                              | Available Version |
|----------|--------|------------------------------------------------------------------------------------|---------------------------------------------------|-------------------|
| cookieId | String | ID of the cookie. Specify <code>cookieId</code> or <code>userId</code> , not both. | Required if <code>userId</code> isn't specified   | 52.0              |
| userId   | String | ID of the user. Specify <code>cookieId</code> or <code>userId</code> , not both.   | Required if <code>cookieId</code> isn't specified | 52.0              |

## Commerce Extension Provider Apex Class Input

Apex extension provider class extending an Apex base class for an extension point.

### Root XML tag

```
<ApexClassInputRepresentation>
```

**JSON example**

```
{
  "classId": "0ZExx000000003FGAQ",
  "className": "UltimateSoftwareSalesforceInventoryServiceExtension"
}
```

**Properties**

| Name      | Type   | Description                                                            | Required or Optional | Available Version |
|-----------|--------|------------------------------------------------------------------------|----------------------|-------------------|
| classId   | String | ID of the Apex extension provider class.                               | Required             | 59.0              |
| className | String | Name of the Apex extension provider class, without the file extension. | Required             | 59.0              |

## Commerce Extension Provider Input

An extension provider for an Commerce extension point.

**Root XML tag**

```
<ProviderInputRepresentation>
```

**JSON example**

```
{
  "name": "UltimateInventory",
  "epn": "Commerce_Domain_Inventory_Service",
  "type": "apexClass",
  "description": "Extension provider for ultimate inventory.",
  "isApplication": true,
  "apexClass": {
    "classId": "0ZExx000000003FGAQ",
    "className": "UltimateSoftwareSalesforceInventoryServiceExtension"
  }
}
```

**Properties**

| Name      | Type   | Description                                                                                                                                                       | Required or Optional | Available Version |
|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name      | String | Unique name of the extension provider.                                                                                                                            | Required             | 59.0              |
| epn       | String | Extension point name (unique identifier for an extension). For valid values, see the <a href="#">RegisteredExternalService</a> object's ExtensionPointName field. | Required             | 59.0              |
| type      | String | Type of extension (for example, apexClass).                                                                                                                       | Required             | 59.0              |
| configUrl | String | Reserved for future use.                                                                                                                                          | Optional             | 59.0              |
| iconUri   | String | Reserved for future use.                                                                                                                                          | Optional             | 59.0              |

| Name          | Type                                                         | Description                                                                                                                     | Required or Optional | Available Version |
|---------------|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| description   | String                                                       | Description of the provider.                                                                                                    | Required             | 59.0              |
| isApplication | String                                                       | Indicates if the extension provider is contained within a managed package. ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 59.0              |
| apexClass     | <a href="#">Commerce Extension Provider Apex Class Input</a> | Apex class for the extension provider.                                                                                          | Required             | 59.0              |

## Commerce Extension Provider Mapping Input

Describes information used to map an extension provider to a webstore.

### Root XML tag

```
<MappingInputRepresentation>
```

### JSON example

```
{
  "webstoreId": "0ZExx000000003FGAQ",
  "providerName": "UltimateInventory"
}
```

### Properties

| Name         | Type   | Description                                                                                                                                                                    | Required or Optional | Available Version |
|--------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id           | String | Mapping ID.                                                                                                                                                                    | Optional             | 59.0              |
| webstoreId   | String | ID of the webstore.                                                                                                                                                            | Required             | 59.0              |
| providerName | String | Unique name of the extension provider.                                                                                                                                         | Required             | 59.0              |
| epn          | String | Extension point name (unique identifier for an extension). For valid values, see the <a href="#">RegisteredExternalService</a> object's <code>ExtensionPointName</code> field. | Optional             | 59.0              |

## Commerce Subscription Cancel Input

Input representation for the Commerce subscription cancel request.

### Root XML tag

```
CommerceSubscriptionCancelInput
```

### JSON example

```
{
  "subscriptionIds": [
```

```
    "02ixx0000004Hb4AAE"  
  ]  
}
```

**Properties**

| Name          | Type     | Description                                                                                                                                | Required or Optional | Available Version |
|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| subscriptions | String[] | List of digital product subscription IDs to cancel.<br><br>Currently supports canceling only one digital product subscription per request. | Required             | 63.0              |

## Commerce Subscription Amend Input

Input representation for the Commerce subscription amend request.

**Root XML tag**

CommerceSubscriptionAmendInput

**JSON example**

```
{  
  "amendStartDate": "2025-08-01T00:00:00.000Z",  
  "quantityChange": 50,  
  "subscriptionIds": [  
    "02ixx0000004Hb4AAE"  
  ]  
}
```

**Properties**

| Name           | Type   | Description                                                                                                                                                  | Required or Optional | Available Version |
|----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| amendStartDate | Date   | The date when the subscription amendment takes effect.<br><br>The specified date must not be in the past and cannot be later than the subscription end date. | Required             | 65.0              |
| quantityChange | Double | The change in digital product quantity for the existing subscription.                                                                                        | Required             | 65.0              |

| Name            | Type     | Description                                                                                                                              | Required or Optional | Available Version |
|-----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| subscriptionIds | String[] | List of digital product subscription IDs to amend.<br><br>Currently supports amending only one digital product subscription per request. | Required             | 65.0              |

## Commerce Subscription IDs List Input

Input representation of Commerce subscription IDs to be canceled.

### Root XML tag

SubscriptionsIds

### JSON example

```
{
  "ids": [
    "02ixx0000004Hb4AAE"
  ]
}
```

### Properties

| Name | Type     | Description                                                                                                                                  | Required or Optional | Available Version |
|------|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| ids  | String[] | IDs of the digital product subscriptions.<br><br>Currently supports canceling or amending only one digital product subscription per request. | Required             | 63.0              |

## Commerce Subscription Saved Payment Method Input

Input representation for updating a saved payment method associated with a subscription.

### Root XML tag

commerceSubscriptionSavedPaymentMethodInput

### JSON example

```
{
  "merchantAccountId": "8zbxx00000000DAAY",
  "savedPaymentMethodId": "12qxx000002pmjEAAQ"
}
```

### Properties

| Name                     | Type   | Description                                                                       | Required or Optional | Available Version |
|--------------------------|--------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| merchant<br>AccountId    | String | Salesforce Payments merchant account ID associated with the saved payment method. | Required             | 63.0              |
| savedPayment<br>MethodId | String | ID of the saved payment method record associated with the Commerce subscription.  | Required             | 63.0              |

## Community Input

Create an Experience Cloud site.

### JSON example

```
{
  "name": "The Capricorn Cafe",
  "urlPathPrefix": "capricorncafe",
  "templateName": "B2B Commerce Template",
  "templateParams": { "CreateStoreDefaults": "ALL" },
  "description": "Coffee and coffee products for the most discerning tastes."
}
```

### Properties

| Name           | Type                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required or Optional | Available Version |
|----------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| description    | String              | Description of the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 46.0              |
| name           | String              | Name of the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required             | 46.0              |
| templateName   | String              | Name of the Experience Builder template for the site.<br><br>Use the <a href="#">Experience Builder Templates</a> resource to get a list of available templates and their names.                                                                                                                                                                                                                                                                                                                                                              | Required             | 46.0              |
| templateParams | Map<String, String> | Map of template-specific parameters. Valid values are: <ul style="list-style-type: none"> <li>• "AuthenticationType": "AUTHENTICATED"</li> <li>• "AuthenticationType": "UNAUTHENTICATED" (version 52.0–55.0)</li> <li>• "AuthenticationType": "AUTHENTICATED_WITH_PUBLIC_ACCESS"</li> <li>• "CreateStoreDefaults": "ALL"</li> <li>• "CreateStoreDefaults": "NONE"</li> <li>• "WebstoreId": "<b>WebstoreId</b>"</li> </ul> AuthenticationType values are valid when creating an Experience Cloud site using the Build Your Own (LWR) template. | Optional             | 52.0              |

| Name                       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional                                                               | Available Version |

|                            |        | CreateStoreDefaults values are valid when creating an Experience Cloud site using the B2B or D2C store template.<br><br>The <code>WebstoreId</code> value is valid when creating an Experience Cloud site using the B2B Aura, B2B LWR, and D2C templates. The store can't already be associated to a site, and the store type field must match the template. The B2B store type can be used with the B2B Aura and B2B LWR templates, and the D2C store type can be used with the D2C template. |                                                                                    |                   |
| <code>urlPathPrefix</code> | String | URL prefix for the site. For example, in the site URL <code>MyDomainName.my.site.com/customers</code> , <code>customers</code> is the <code>UrlPathPrefix</code> .                                                                                                                                                                                                                                                                                                                             | Required if you already have a site that doesn't have a <code>urlPathPrefix</code> | 46.0              |

## Composite Commerce Variation Input

Input representation of product variation details.

### Properties

| Name                         | Type                                      | Description                                      | Required or Optional | Available Version |
|------------------------------|-------------------------------------------|--------------------------------------------------|----------------------|-------------------|
| <code>parentProductId</code> | String                                    | ID of the variation parent product.              | Required             | 62.0              |
| <code>variations</code>      | <a href="#">Product Variation Input[]</a> | List of variation products and their attributes. | Required             | 62.0              |

## Composite Promotion Qualifier Input

Input representation of the promotion qualifier.

### JSON example

```
[
  {
    "currencyIsoCode": "USD",
    "qualifierReferences": [
      {
        "id": "01tSB0000002p01YAA",
        "itemReferenceType": "Product",
        "name": "Alpine Energy Drink Chai Post 0.5L PET - 6 pack",
        "operatorType": "EQUALS_TO"
      }
    ]
  }
]
```

```

    }
  ],
  "qualifierType": "Quantity",
  "qualifierValue": 2
}
]

```

### Properties

| Name                             | Type                                   | Description                                                                                                                                                                                                                                                                                                               | Required or Optional | Available Version |
|----------------------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| approaching<br>DiscountThreshold | String                                 | The cart amount that a customer has to reach before seeing an approaching discount message. For example, if a promotion qualifier minimum is set at \$150 and this field is set at \$50, then a customer receives a banner notification that they're approaching the discount when they have at least \$50 in their cart. | Small, 64.0          | 64.0              |
| currencyIso<br>Code              | String                                 | Three-letter ISO 4217 currency code associated with the promotion qualifier.                                                                                                                                                                                                                                              | Optional             | 62.0              |
| qualifier<br>References          | <a href="#">Item Reference Input[]</a> | List of product or category for the promotion qualifier.                                                                                                                                                                                                                                                                  | Optional             | 62.0              |
| qualifierType                    | String                                 | Type of the promotion qualifier. Possible values are: <ul style="list-style-type: none"> <li>Amount—Minimum spend amount.</li> <li>Quantity—Minimum quantity.</li> </ul>                                                                                                                                                  | Optional             | 62.0              |
| qualifierValue                   | Double                                 | Value for the promotion qualifier. For example, if qualifier type is <code>Quantity</code> , the value can be "3".                                                                                                                                                                                                        | Optional             | 62.0              |

## Composite Promotion Segment Input

Input representation of the promotion segment.

### JSON example

```

[
  {
    "id": "0ZESB0000006vja4AA",
    "name": "Codecept B2B LWR Store",
    "segmentType": "Webstore"
  }
]

```

**Properties**

| Name        | Type   | Description                                                                                                                         | Required or Optional | Available Version |
|-------------|--------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id          | String | ID of the promotion segment.                                                                                                        | Optional             | 62.0              |
| name        | String | Name of the promotion segment.                                                                                                      | Optional             | 62.0              |
| segmentType | String | Type of the promotion segment. Possible values are: <ul style="list-style-type: none"><li>• BuyerGroup</li><li>• Webstore</li></ul> | Optional             | 62.0              |

## Composite Promotion Target Input

Input representation of the promotion target.

**JSON example**

```
[
  {
    "adjustmentType": "PercentageDiscount",
    "adjustmentValue": "10",
    "currencyIsoCode": "USD",
    "isMinItemCountRequired": false,
    "restrictionQuantity": null,
    "ruleCriteriaType": "ANY",
    "targetReferences": [
      {
        "id": "01tSB0000002p01YAA",
        "itemReferenceType": "Product",
        "name": "Alpine Energy Drink Chai Post 0.5L PET - 6 pack",
        "operatorType": "EQUALS_TO",
        "value": "EnergyDrink"
      }
    ]
  }
]
```

**Properties**

| Name               | Type   | Description                                                                                                                                                                         | Required or Optional | Available Version |
|--------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| adjustment<br>Type | String | Adjustment type for the promotion target. Possible values are: <ul style="list-style-type: none"><li>• FixedAmountOff<br/>LineItemTotal—Fixed amount off line item total.</li></ul> | Required             | 62.0              |

| Name                    | Type                                   | Description                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|-------------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                         |                                        | <ul style="list-style-type: none"> <li>FixedAmountOff Transaction—Fixed amount off transaction.</li> <li>FixedAmountOff UnitPrice—Fixed amount off unit price.</li> <li>FixedPrice—Fixed price.</li> <li>PercentageDiscount—Percentage discount.</li> <li>TotalFixedPrice—Total fixed price.</li> </ul> |                      |                   |
| adjustment Value        | String                                 | Discount value.                                                                                                                                                                                                                                                                                         | Required             | 62.0              |
| currencyIso Code        | String                                 | Three-letter ISO 4217 currency code associated with the promotion target.                                                                                                                                                                                                                               | Optional             | 62.0              |
| isMinItem CountRequired | Boolean                                | Indicates whether discount apply only when a cart reaches the quantity limit (true) or not (false).                                                                                                                                                                                                     | Optional             | 62.0              |
| restriction Quantity    | String                                 | The maximum number of items that can receive the discount.                                                                                                                                                                                                                                              | Optional             | 62.0              |
| targetReference Type    | String                                 | Reference type of the promotion target. Possible values are: <ul style="list-style-type: none"> <li>Shipping</li> <li>Transaction</li> </ul>                                                                                                                                                            | Required             | 62.0              |
| targetReferences        | <a href="#">Item Reference Input[]</a> | List of products or categories associated with the promotion target.                                                                                                                                                                                                                                    | Required             | 62.0              |

## Composite Promotion Translation Input

Input representation of the promotion translation.

### JSON example

Here's an example for the `displayName` field:

```
{
  "translations": {},
  "value": "Fall Promotion"
}
```

Here's an example for the `termsAndCondition` field:

```
{
  "translations": {},
  "value": "This is fall promotion.Get 10% off on Product &#39;Alpine Energy Drink Chai
Post 0.5L PET - 6 pack."
}
```

### Properties

| Name         | Type                | Description                                   | Required or Optional | Available Version |
|--------------|---------------------|-----------------------------------------------|----------------------|-------------------|
| translations | Map<String, String> | Map of language code to the translated value. | Optional             | 62.0              |
| value        | String              | Value to be translated.                       | Optional             | 62.0              |

## Composite Product Input

Input representation of the composite product create request.

### JSON example

```
{
  "productFields": {
    "Name": "Sample Product",
    "Type": "Base", // This is required when creating a variant parent
    "Description": "This is a sample product",
    "StockKeepingUnit": "110000",
    "CustomField1__c": 9999,
    "CustomField2__c": "some custom text"
  },
  "categoryIds": [
    "0ZGxx00000000007GAA",
    "0ZGxx00000000008GAA"
  ],
  "productMedia": [
    {
      "mediaId": "20Yxx0000011QskEAE",
      "developerName": "productDetailImage"
    },
    {
      "mediaId": "20Yxx0000011QslEAE",
      "developerName": "productListImage"
    }
  ],
  "attributeSetInfo": {
    "id": "0iYxx0000000001EAA", // present if using an existing set
    "name": "Apparel", // present if creating a new set
    "attributes": [ // present if creating a new set
      "Color__c",
      "Size__c"
    ]
  }
}
```

```

    }
  }
}

```

**Properties**

| Name             | Type                                        | Description                                                | Required or Optional | Available Version |
|------------------|---------------------------------------------|------------------------------------------------------------|----------------------|-------------------|
| attributeSetInfo | <a href="#">Product Attribute Set Input</a> | Attribute set information for a variation parent product.  | Optional             | 62.0              |
| categoryIds      | String[]                                    | A list of category IDs to be associated with the product.  | Optional             | 61.0              |
| productFields    | Map<String, String>                         | A map of product field names and their values.             | Required             | 61.0              |
| productMedia     | <a href="#">Product Media Input</a> []      | A list of media records to be associated with the product. | Optional             | 61.0              |
| productPricing   | <a href="#">Product Pricing Input</a>       | Details of the product pricing.                            | Optional             | 61.0              |

## Composite Promotion Input

Input representation of the create promotion request.

**Root XML tag**

```
<createPromotion>
```

**JSON example**

```

### Properties

| Name   | Type    | Description                                                      | Required or Optional | Available Version |
|--------|---------|------------------------------------------------------------------|----------------------|-------------------|
| active | Boolean | Indicates whether the promotion is active (true) or not (false). | Optional             | 62.0              |

| Name                            | Type                                        | Description                                                                                                                                                                                                                                                              | Required or Optional | Available Version |
|---------------------------------|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| areQualItemsExclFromDiscounts   | Boolean                                     | Indicates whether qualifying items are excluded from discounts for the promotion ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                    | Optional             | 62.0              |
| coupons                         | <a href="#">Promotion Coupon Input[]</a>    | List of coupons associated with the promotion.                                                                                                                                                                                                                           | Optional             | 63.0              |
| currencyIsoCode                 | String                                      | Three-letter ISO 4217 currency code associated with the promotion.                                                                                                                                                                                                       | Optional             | 62.0              |
| description                     | String                                      | Localized display name of the promotion.                                                                                                                                                                                                                                 | Optional             | 62.0              |
| discountOrder                   | String                                      | Discount order for the promotion. Possible values are: <ul style="list-style-type: none"> <li>• <code>LeastExpensive</code></li> <li>• <code>MostExpensive</code></li> </ul>                                                                                             | Optional             | 62.0              |
| discountRestriction             | String                                      | Discount restriction for the promotion. Possible values are: <ul style="list-style-type: none"> <li>• <code>LeastExpensive</code></li> <li>• <code>None</code></li> </ul>                                                                                                | Optional             | 62.0              |
| displayName                     | <a href="#">Promotion Translation Input</a> | Promotion display name and translated values.                                                                                                                                                                                                                            | Optional             | 62.0              |
| endTime                         | String                                      | The date time the promotion ends.                                                                                                                                                                                                                                        | Optional             | 62.0              |
| exclusivityType                 | String                                      | Type of exclusivity to be considered when applying the promotion. Possible values are: <ul style="list-style-type: none"> <li>• <code>Class</code>—Class exclusion.</li> <li>• <code>Global</code>—Global exclusion.</li> <li>• <code>No</code>—No exclusion.</li> </ul> | Optional             | 62.0              |
| generationId                    | String                                      | ID of the generated promotion. This field is used to display the feedback component and collect promotion feedback when Smart Promotion is enabled.                                                                                                                      | Optional             | 62.0              |
| isApproachingDiscountApplicable | Boolean                                     | Indicates whether the promotion is an approaching discount ( <code>true</code> ) or not ( <code>false</code> ). If true, the promotion shows an approaching discount alert.                                                                                              | Small, 64.0          | 64.0              |
| maximumUsageCount               | Integer                                     | Number of times a promotion can apply to a cart.                                                                                                                                                                                                                         | Optional             | 62.0              |
| name                            | String                                      | Name of the promotion.                                                                                                                                                                                                                                                   | Required             | 62.0              |

| Name              | Type                                        | Description                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|-------------------|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|

| email                  | String | Email address of the contact.         | Optional             | 55.0              |
| firstName              | String | First name of the contact.            | Optional             | 55.0              |
| isoCountryCodeForPhone | String | ISO code of the phone number country. | Optional             | 62.0              |
| lastName               | String | Last name of the contact.             | Optional             | 55.0              |

| Name        | Type   | Description                  | Required or Optional | Available Version |
|-------------|--------|------------------------------|----------------------|-------------------|
| phoneNumber | String | Phone number of the contact. | Optional             | 55.0              |

## Content Capability Input

Create or update a file associated with a comment.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use [Files Capability Input](#).

### Root XML tag

```
<contentCapability>
  <contentDocumentId>069D00000001pyS</contentDocumentId>
</contentCapability>
```

### JSON example

```
{
  "contentDocumentId": "069D00000001pyS"
}
```

### Properties

| Name              | Type   | Description                                                                                                                                                                                  | Required or Optional                                           | Available Version |
|-------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|-------------------|
| contentDocumentId | String | ID of the existing content.                                                                                                                                                                  | Required for existing content<br>Not supported for new content | 32.0              |
| description       | String | Description of the file to be uploaded.                                                                                                                                                      | Optional for new content<br>Not supported for existing content | 32.0              |
| sharingOption     | String | Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul> | Optional                                                       | 35.0              |

| Name  | Type   | Description                                                                                                                                                                | Required or Optional                                           | Available Version |
|-------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|-------------------|
| title | String | Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt. | Required for new content<br>Not supported for existing content | 32.0              |

## Content Taxonomy Term Input

Create or update a term within a content taxonomy.

### Root XML tag

<term>

### JSON example

```
{
  "label" : "Fruit",
  "description" : "The seed-bearing part of a flowering plant.",
  "parentTermId" : ""
}
```

### Properties

| Name        | Type   | Description              | Required or Optional                                           | Available Version |
|-------------|--------|--------------------------|----------------------------------------------------------------|-------------------|
| description | String | Description of the term. | Required when creating a term<br>Optional when updating a term | 63.0              |
| label       | String | Label of the term.       | Required when creating a term<br>Optional when updating a term | 63.0              |

| Name         | Type   | Description                                                                                                                                | Required or Optional | Available Version |
|--------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| parentTermId | String | ID of the parent term. If unspecified when creating a term, creates a root term. If unspecified when updating a term, no changes are made. | Optional             | 63.0              |

## Conversation Entries Update Input

List of conversation entry updates.

### JSON example

```
{
  "conversationEntriesUpdates": [
    {
      "identifier": "36b0f4d9-7c14-43dc-bb9e-7713a4930df0",
      "messageText": "The credit card I used was xxxx-xxxx-xxxx-4321."
    },
    {
      "identifier": "46b0f5d9-7c14-43dc-bb9e-b713a4930df1",
      "messageText": "My ssn is: XXXXX."
    }
  ]
}
```

### Properties

| Name                       | Type                                              | Description                         | Required or Optional | Available Version |
|----------------------------|---------------------------------------------------|-------------------------------------|----------------------|-------------------|
| conversationEntriesUpdates | <a href="#">Conversation Entry Update Input[]</a> | List of conversation entry updates. | Required             | 51.0              |

## Conversation Entry Update Input

Conversation entry update.

### JSON example

```
{
  "identifier": "36b0f4d9-7c14-43dc-bb9e-7713a4930df0",
  "messageText": "The credit card I used was xxxx-xxxx-xxxx-4321."
}
```

**Properties**

| Name           | Type     | Description                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| identifier     | String   | Identifier of the updated conversation entry.                                                                                                                                                                                                                                         | Required             | 51.0              |
| messageText    | String   | Message text of the updated conversation entry.                                                                                                                                                                                                                                       | Required             | 51.0              |
| relatedRecords | String[] | List of IDs of records to associate with the conversation entry. Supported related records include the messaging session ( <code>MessagingSession.Id</code> ), voice call ( <code>VoiceCall.Id</code> ), and conversation entry ( <code>ConversationEntry.MessageIdentifier</code> ). | Optional             | 52.0              |

## Coupon Code Redemption Input

Input representation for coupon code redemption.

**JSON example**

```
{
  "couponCodes": ["code1", "code2", "code3", "code4"],
  "transactionId": "0a6D20000004CETIA2",
  "buyer": "001xx000003GZ6NAAW"
}
```

**Properties**

| Name               | Type   | Description                                                | Required or Optional | Available Version |
|--------------------|--------|------------------------------------------------------------|----------------------|-------------------|
| buyer              | String | ID of the buyer account or email address for a guest user. | Required             | 60.0              |
| couponCodes        | String | List of coupon codes.                                      | Required             | 58.0              |
| effectiveAccountId | String | ID of the account.                                         | Required             | 58.0–59.0         |
| transactionId      | String | ID of the transaction, which must be a valid cart ID.      | Required             | 58.0              |

## Create Credit Memo Input

A list of change orders used to create a credit memo.

### Root XML tag

```
<createCreditMemoInput>
```

### JSON example

```
{
  "changeOrderIds": [
    "801R0000000EAAkIAO"
  ]
}
```

### Properties

| Name           | Type     | Description                       | Required or Optional | Available Version |
|----------------|----------|-----------------------------------|----------------------|-------------------|
| changeOrderIds | String[] | List of IDs of the change orders. | Required             | 48.0              |

## Create Invoice From Change Orders Input

OrderSummary and associated change orders to create Invoices for.

### Root XML tag

```
<createInvoiceFromChangeOrdersInput>
```

### JSON example

```
{
  "changeOrderIds" ["0a3xx00000000W1", "0a3xx00000000W2", "0a3xx00000000W3"],
  "orderSummaryId": "10sxx0000004EAqCAM"
}
```

### Properties

| Name           | Type     | Description                                          | Required or Optional | Available Version |
|----------------|----------|------------------------------------------------------|----------------------|-------------------|
| changeOrderIds | String[] | List of IDs of change orders to create Invoices for. | Required             | 56.0              |
| orderSummaryId | String   | ID of the associated Order Summary.                  | Required             | 56.0              |

## Create Multiple Invoices From Change Orders Input

Data about the change orders to create Invoices for.

Root XML tag

<createMultipleInvoicesFromChangeOrdersInput>

JSON example

```
[
  {
    "changeOrderIds" ["0a3xx000000000W1", "0a3xx000000000W2", "0a3xx000000000W3"],
    "orderSummaryId": "10sxx0000004EAqCAM"
  }
]
```

Properties

| Name                                     | Type                                                      | Description                                                                                                                                                                                 | Required or Optional | Available Version |
|------------------------------------------|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <a href="#">invoicesFromChangeOrders</a> | <a href="#">Create Invoice From Change Orders Input[]</a> | List of OrderSummary IDs with the IDs of the associated change orders to create Invoices for. Each entry in the list generates one invoice, which combines the change orders in that entry. | Required             | 56.0              |

## Create Order Payment Summary Input

An OrderSummary for which to create an OrderPaymentSummary, with the payment authorization or payments to include in it.

Root XML tag

<orderPaymentSummaryInput>

JSON examples

```
{
  "orderSummaryId": "10sxx00000000000001",
  "paymentAuthorizationId": "2Dgxx000000000W0001"
}

{
  "orderSummaryId": "10sxx00000000000001",
  "paymentIds": [
    "0a3xx00000000085AAA",
    "0a3xx00000000085BBB"
  ]
}
```

**Properties**

| Name                   | Type     | Description                      | Required or Optional                                                | Available Version |
|------------------------|----------|----------------------------------|---------------------------------------------------------------------|-------------------|
| orderSummaryId         | String   | ID of the OrderSummary.          | Required                                                            | 48.0              |
| paymentAuthorizationId | String   | ID of the payment authorization. | Either a payment authorization or at least one payment is required. | 48.0              |
| paymentIds             | String[] | List of IDs of the payments.     | Either a payment authorization or at least one payment is required. | 48.0              |

## Credential Custom Header Input

Credential custom header input.

**JSON example**

```
{
  "headerName": "SampleHeader",
  "headerValue": "SampleHeaderValue",
  "sequenceNumber": 1
}
```

**Properties**

| Name           | Type    | Description      | Required or Optional | Available Version |
|----------------|---------|------------------|----------------------|-------------------|
| headerName     | String  | Header name.     | Required             | 58.0              |
| headerValue    | String  | Header value.    | Required             | 58.0              |
| id             | String  | Header ID.       | Optional             | 58.0              |
| sequenceNumber | Integer | Sequence number. | Required             | 58.0              |

SEE ALSO:

[External Credential Input](#)[Named Credential Input](#)

# Credential Input

Credential input.

## Root XML tag

```
<credential>
```

## JSON example for creating a credential (POST)

```
{
  externalCredential: "ecNameAws",
  authenticationProtocol: "AwsSv4",
  principalName: "principalA",
  principalType: "NamedPrincipal",
  credentials: {
    awsAccessKeyId: {
      value: "000000000000",
      encrypted: false
    },
    awsSecretAccessKey: {
      value: "aws-secret-value",
      encrypted: true
    },
    awsRoleArn: {
      value: "arn:partition:service:region:account-id:resource-id",
      encrypted: false
    }
  }
}
```

## JSON example for replacing a credential (PUT)

In this example, assume the credential has two values: `apiKey` and `apiSecret`. When this request body is used with PUT, `apiKey` is updated and `apiSecret` is deleted.

```
{
  authenticationProtocol: String : "Custom",
  externalCredential: String : "medicalIntegrationExternalCredential",
  principalName: String : "customerSupportGroup",
  principalType: String : "NamedPrincipal",
  // Map<String, ConnectApi.CredentialValue>
  credentials: {
    apiKey: {
      value: String : "00000000",
      encrypted: Boolean : false
    }
  }
}
```

## JSON example for updating a custom credential (PATCH)

PATCH is supported only for custom credentials. Only the credentials included in the request body are updated. In this example, assume the credential has two values: `apiKey` and `apiSecret`. When this request body is used with PATCH, `apiKey` is updated and `apiSecret` remains the same.

```
{
  authenticationProtocol: String : "Custom",
  externalCredential: String : "medicalIntegrationExternalCredential",
```

```
principalName: String : "customerSupportGroup",
principalType: String : "NamedPrincipal",
// Map<String, ConnectApi.CredentialValue>
credentials: {
    apiKey: {
        value: String : "000000000",
        encrypted: Boolean : false
    }
}
}
```

### Properties

| Name                           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |

## Credential Value Input

Credential value input.

Authentication protocols have credential allowlists and encryption rules.

- `AwsSv4`—`awsAccessKeyId` (not encrypted), `awsSecretAccessKey` (encrypted), `awsRoleArn` (not encrypted)
- `Custom`—Any credential name is valid (user sets encryption rules)

### JSON example

```
{
  value: "aws-secret-value",
  encrypted: true
}
```

**Properties**

| Name      | Type    | Description                                                                                                                                                               | Required or Optional | Available Version |
|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| encrypted | Boolean | Specifies whether the value of the credential is encrypted ( <b>true</b> ) or not ( <b>false</b> ).                                                                       | Required             | 56.0              |
| revision  | Integer | Revision number of a short-lived credential, such as OAuthToken. If the provided revision isn't the latest version, the authentication endpoint refreshes the credential. | Optional             | 58.0              |
| value     | String  | Value of the credential.                                                                                                                                                  | Required             | 56.0              |

## Custom List Audience Criteria Input

Criteria for the custom list type of custom recommendation audience.

**Root XML tag**

&lt;criteria&gt;

**JSON example**

```
{
  "memberOperationType" : "Add",
  "members" : {
    "userIds" : [
      "005B0000000Ge16",
      "005D0000001GpHp"
    ]
  },
  "type" : "CustomList"
}
```

**Properties**

| Name                | Type   | Description                                                                                                                                                                                                                           | Required or Optional                                                                                                            | Available Version |
|---------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|-------------------|
| memberOperationType | String | <p>The operation to carry out on the audience members. Values are:</p> <ul style="list-style-type: none"> <li>• Add—Adds specified members to the audience.</li> <li>• Remove—Removes specified members from the audience.</li> </ul> | <p>Required to update a recommendation audience</p> <p>Don't use or specify <b>null</b> to create a recommendation audience</p> | 36.0              |

| Name    | Type                                     | Description                                                                                                                                                                                         | Required or Optional                                                                                                       | Available Version |
|---------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|-------------------|
| members | <a href="#">User ID Collection Input</a> | A collection of user IDs.<br>When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each Experience Cloud site can have up to 100 audiences. | Required to update a recommendation audience<br>Don't use or specify <code>null</code> to create a recommendation audience | 36.0              |
| type    | String                                   | Value must be <code>CustomList</code> .                                                                                                                                                             | Required                                                                                                                   | 36.0              |

## Custom Recommendation Definition Input

A custom recommendation definition.

### JSON example

```
{
  "actionUrl" : "https://www.example.com",
  "actionUrlName" : "Launch",
  "explanation" : "Click this link to learn more!",
  "name" : "Corporate Training Project",
  "title" : "Want to learn more about Corporate Training Project?"}
```

### Properties

| Name          | Type   | Description                                                                        | Required or Optional                                                                                       | Available Version |
|---------------|--------|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------|
| actionUrl     | String | URL for acting on the custom recommendation, for example, the URL to join a group. | Required for creating a recommendation definition<br><br>Optional for updating a recommendation definition | 33.0              |
| actionUrlName | String | Text label for the action URL in the user interface, for example, "Launch."        | Required for creating a recommendation definition<br><br>Optional for updating a recommendation definition | 34.0              |

| Name        | Type   | Description                                                                   | Required or Optional                                                                                       | Available Version |
|-------------|--------|-------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------|
| explanation | String | Explanation, or body, of the custom recommendation.                           | Required for creating a recommendation definition<br><br>Optional for updating a recommendation definition | 33.0              |
| name        | String | Name of the custom recommendation definition. The name is displayed in Setup. | Required for creating a recommendation definition<br><br>Optional for updating a recommendation definition | 33.0              |
| title       | String | Title of the custom recommendation definition.                                | Optional                                                                                                   | 33.0              |

## Dashboard Component Snapshot Input

Dashboard component snapshot input.

### Root XML tag

```
<dashboardComponentSnapshot>
```

### JSON

```
{
  "parentId" : "0F9D00000000I40",
  "feedItemBody" : {
    "messageSegments" : [
      {
        "text" : "Sales Heat",
        "type" : "Text"
      }
    ]
  }
}
```

**Properties**

| Name          | Type                               | Description                                                                                          | Available Version |
|---------------|------------------------------------|------------------------------------------------------------------------------------------------------|-------------------|
| parentId      | String                             | A user, group, or dashboard ID to which you are posting the snapshot.                                | 25.0              |
| filterId1     | String                             | Optional. A dashboard filter item ID.                                                                | 25.0              |
| filterId2     | String                             | Optional. A second dashboard filter item ID.                                                         | 25.0              |
| filterId3     | String                             | Optional. A third dashboard filter item ID.                                                          | 25.0              |
| feedItemBody  | <a href="#">Message Body Input</a> | Contains the text that accompanies the feed item associated with the dashboard component snapshot.   | 25.0              |
| runningUserId | String                             | Optional. A user ID from which the view of the dashboard will be created, if other than the creator. | 25.0              |

## Data Category Group Collection Input

Collection of data category groups.

**Root XML tag**

```
<DataCategoryGroupCollectionInputRepresentation>
```

**JSON example**

```
{
  "dataCategoryGroups": [
    {
      "categoryGroupName": "Geographic",
      "rootCategory": {
        "categoryName": "WorldWide",
        "childCategories": [
          {
            "categoryName": "US",
            "childCategories": [
              {
                "categoryName": "America",
                "childCategories": [
                  {
                    "categoryName": "States",
                    "childCategories": [
                      {
                        "categoryName": "California"
                      }
                    ]
                  }
                ]
              }
            ]
          }
        ]
      }
    }
  ]
}
```

```
{
  "dataCategoryGroups": [
    {
      "categoryGroupName": "Developer name of the data category group.",
      "rootCategory": {
        "categoryName": "Developer name of the data category group."
      }
    }
  ]
}
```

**Properties**

| Name               | Type                                        | Description                         | Required or Optional | Available Version |
|--------------------|---------------------------------------------|-------------------------------------|----------------------|-------------------|
| dataCategoryGroups | <a href="#">Data Category Group Input[]</a> | Collection of data category groups. | Required             | 59.0              |

## Data Category Group Input

Data category group.

**Properties**

| Name              | Type                                | Description                                | Required or Optional | Available Version |
|-------------------|-------------------------------------|--------------------------------------------|----------------------|-------------------|
| categoryGroupName | String                              | Developer name of the data category group. | Required             | 59.0              |
| rootCategory      | <a href="#">Data Category Input</a> | Root category of the data category group.  | Required             | 59.0              |

## Delivery Address Input

Delivery address.

While each field is optional, at least one combination (latitude and longitude, country and postal code, or city, state, and country) must be included. The fields can't be left empty.

### Root XML tag

deliveryAddress

### JSON example

```
{
  "shippingCarrier": {
    "externalReference": "UPS001",
    "shippingCarrierMethods": [
      {
        "externalReference": "UPSGround001"
      },
      {
        "externalReference": "UPS AIR001"
      }
    ]
  },
  "locations": [
    "California"
  ],
  "products": [
    {
      "stockKeepingUnit": "SKU01",
      "quantity": 5
    }
  ],
  "deliveryAddress": {
    "country": "USA",
    "state": "CA",
    "city": "San Francisco",
    "postalCode": "00000",
    "latitude": 30.123,
    "longitude": 100.123
  }
}
```

**Properties**

| Property   | Type   | Description                                    | Required or Optional | Available Version |
|------------|--------|------------------------------------------------|----------------------|-------------------|
| city       | String | City in the state for the delivery address.    | Optional             | 63.0              |
| country    | String | Country code for the delivery address.         | Optional             | 63.0              |
| latitude   | Double | Latitude for the delivery address.             | Optional             | 63.0              |
| longitude  | Double | Longitude for the delivery address.            | Optional             | 63.0              |
| postalCode | String | Postal code of the delivery address.           | Optional             | 63.0              |
| state      | String | State in the country for the delivery address. | Optional             | 63.0              |

## Delivery Estimation Product Input

Delivery estimation product information.

**Root XML tag**

```
deliveryEstimationProduct
```

**JSON example**

```
"products": [  
  {  
    "stockKeepingUnit": "SKU01",  
    "quantity": 5  
  }  
],
```

**Properties**

| Property         | Type   | Description                         | Required or Optional | Available Version |
|------------------|--------|-------------------------------------|----------------------|-------------------|
| name             | String | Product name.                       | Optional             | 63.0              |
| productId        | String | ID of the product.                  | Optional             | 63.0              |
| quantity         | Double | Product quantity.                   | Required             | 63.0              |
| stockKeepingUnit | String | Product's stock keeping unit (SKU). | Required             | 63.0              |

## Delivery Group Input

Delivery group input.

**Root XML tag**

```
<deliveryGroup>
```

**Properties**

| Name                 | Type                                   | Description                                   | Required or Optional | Available Version |
|----------------------|----------------------------------------|-----------------------------------------------|----------------------|-------------------|
| deliveryAddress      | <a href="#">Checkout Address Input</a> | Shipping address input.                       | Optional             | 53.0              |
| deliveryMethodId     | String                                 | ID of the delivery method.                    | Optional             | 53.0              |
| desiredDeliveryDate  | String                                 | Delivery date of the delivery group.          | Optional             | 53.0              |
| id                   | String                                 | ID of the delivery group.                     | Optional             | 53.0              |
| name                 | String                                 | Name of the delivery group.                   | Optional             | 60.0              |
| shippingInstructions | String                                 | Shipping instructions for the delivery group. | Optional             | 53.0              |

## Digest Job Input

Submit a daily or weekly Chatter email digest job.

**Root XML tag**

```
<digestJob>
```

**JSON example**

```
{
  "period": "DailyDigest"
}
```

**Properties**

| Name   | Type   | Description                                                                                                                                                                                                                                                                                                                | Required or Optional | Available Version |
|--------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| period | String | Time period that's included in a Chatter email digest. Values are: <ul style="list-style-type: none"><li>• <code>DailyDigest</code>—The email includes up to the 50 latest posts from the previous day.</li><li>• <code>WeeklyDigest</code>—The email includes up to the 50 latest posts from the previous week.</li></ul> | Required             | 37.0              |

## Direct Message Capability Input

Create or update the members of a direct message.

**Root XML tag**

```
<directMessageCapability>
```

**JSON example**

```
{
  "membersToAdd": ["005R0000000I2X4", "005R0000000I23Y", "005R0000000IUV5"]
}
```

**Properties**

| Name            | Type     | Description                                                     | Required or Optional                                                                                       | Available Version |
|-----------------|----------|-----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------|
| membersToAdd    | String[] | List of user IDs for members to include in the direct message.  | Required when creating a direct message (POST)<br><br>Optional when updating a direct message (PATCH)      | 39.0              |
| membersToRemove | String[] | List of user IDs for members to remove from the direct message. | Optional when updating a direct message (PATCH)<br><br>Not supported when creating a direct message (POST) | 40.0              |
| subject         | String   | Subject of the direct message.                                  | Optional when creating a direct message (POST)<br><br>Not supported when updating a direct message (PATCH) | 39.0              |

## Distinct Value Refinement Input

Attribute-based refinement with distinct values for product search.

**JSON example**

```
{
  "attributeType": "Custom",
  "nameOrId": "Color__c",
  "values": ["red", "blue"],
  "type": "DistinctValue"
}
```

**Properties**

| Name          | Type     | Description                                                                                                                                   | Required or Optional | Available Version |
|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attributeType | String   | Search attribute type. Values are: <ul style="list-style-type: none"> <li>• Custom</li> <li>• ProductAttribute</li> <li>• Standard</li> </ul> | Required             | 50.0              |
| nameOrId      | String   | Developer name of the attribute. In version 49.0 and later, the ID of the attribute isn't supported.                                          | Required             | 49.0              |
| type          | String   | Search facet type. Value is: <ul style="list-style-type: none"> <li>• DistinctValue</li> <li>• Range</li> </ul>                               | Required             | 49.0              |
| values        | String[] | Comma-separated list of attribute values.                                                                                                     | Required             | 49.0              |

## Distribute Picked Quantities Input

Input representation to Distribute Picked Quantities.

**Root XML tag**

```
<distributePickedQuantitiesInput>
```

**JSON example**

```
POST /services/data/vXX.0/commerce/fulfillment/pick-tickets/actions/distribute-quantities
Content-Type: application/json; charset=UTF-8
Accept: application/json

{
  "quantitiesPickedList": [{
    "externalItemId": "skul",
    "quantity": 16
  }],
  "optimizationCriteria": "FulfillInSequencePartial",
  "distributeToOrders": [{
    "externalOrderId": "FO-1",
    "itemQuantities": [{
      "externalItemId": "skul",
      "quantity": 4
    }]
  }]
}
```

**Properties**

| Name                              | Type                                    | Description                                                 | Required or Optional | Available Version |
|-----------------------------------|-----------------------------------------|-------------------------------------------------------------|----------------------|-------------------|
| <code>distributeToOrders</code>   | <a href="#">DistributeToOrdersInput</a> | List of orders that need quantities distributed.            | Required             | 58.0              |
| <code>optimizationCriteria</code> | String                                  | Criteria used for distributing picked quantities to orders. | Required             | 58.0              |
| <code>quantitiesPickedList</code> | <a href="#">ItemQuantityInput</a>       | Quantities for each item picked.                            | Required             | 58.0              |

## Distribute To Orders Input

Input representation of a single element within the Distribute To Orders list.

**Root XML tag**

```
<distributeToOrders>
```

**Properties**

| Name                         | Type                              | Description               | Required or Optional | Available Version |
|------------------------------|-----------------------------------|---------------------------|----------------------|-------------------|
| <code>externalOrderId</code> | String                            | ID of the external order. | Required             | 58.0              |
| <code>itemQuantities</code>  | <a href="#">ItemQuantityInput</a> | Order Item Quantity List  | Required             | 58.0              |

## Double List Input

List of Double values.

**Properties**

| Name                | Type     | Description                         | Required or Optional | Available Version |
|---------------------|----------|-------------------------------------|----------------------|-------------------|
| <code>values</code> | Double[] | List of Double values to filter on. | Optional             | 63.0              |

SEE ALSO:

[Filter Input](#)

## Duplicate Job Input

Create a duplicate job.

**Root XML tag**

```
<DuplicateJob>
```

**JSON example**

```
{
  "duplicateJobDefId": "0POB0000004GUDXIA4"
}
```

**Properties**

| Name              | Type   | Description                         | Required or Optional | Available Version |
|-------------------|--------|-------------------------------------|----------------------|-------------------|
| duplicateJobDefId | String | ID of the duplicate job definition. | Required             | 42.0              |

## Duplicate Job Status Input

Update the duplicate job status.

**Root XML tag**

```
<DuplicateJobStatus>
```

**JSON example**

```
{
  "status": "Canceled"
}
```

**Properties**

| Name   | Type   | Description                                                    | Required or Optional | Available Version |
|--------|--------|----------------------------------------------------------------|----------------------|-------------------|
| status | String | Status of the duplicate job. Canceled is the only valid value. | Required             | 42.0              |

## Einstein LLM Additional Configuration Input

Additional configuration information for the LLM provider.

**Root XML tag**

```
EinsteinLlmAdditionalConfigInputRepresentation
```

**Properties**

| Name                 | Type                                        | Description                                        | Required or Optional | Available Version |
|----------------------|---------------------------------------------|----------------------------------------------------|----------------------|-------------------|
| additionalParameters | Map<String, <a href="#">Wrapped Value</a> > | Map of parameters and values for the LLM provider. | Optional             | 60.0              |
| applicationName      | String                                      | Name of the application.                           | Required             | 60.0              |

| Name             | Type     | Description                                                                                                                                                                                                                                                                         | Required or Optional | Available Version |
|------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| enablePiiMasking | Boolean  | Specifies whether to mask personally identifiable information (PII) ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                            | Optional             | 60.0              |
| frequencyPenalty | Double   | Use to reduce the repetitiveness of generated tokens. The higher the value, the stronger a penalty is applied to previously present tokens, proportional to how many times they already appeared in the prompt or in prior generations. Minimum value is 0.0. Maximum value is 1.0. | Optional             | 60.0              |
| maxTokens        | Integer  | Maximum number of tokens to generate.                                                                                                                                                                                                                                               | Optional             | 60.0              |
| numGenerations   | Integer  | Number of generation requests to send to the LLM provider.                                                                                                                                                                                                                          | Optional             | 60.0              |
| presencePenalty  | Double   | Use to reduce the repetitiveness of generated tokens. This value is similar to frequency penalty, except that this penalty is applied equally to all tokens that already appeared, regardless of their exact frequencies. Minimum value is 0.0, and maximum value is 1.0.           | Optional             | 60.0              |
| stopSequences    | String[] | Generated text is cut at the end of the earliest occurrence of a stop sequence.                                                                                                                                                                                                     | Optional             | 60.0              |
| temperature      | Double   | Sampling temperature to use. Higher values mean the model takes more risks. Lower temperatures mean that generations are less random. Minimum value is 0.0, and maximum value is 1.0.                                                                                               | Optional             | 60.0              |

## Einstein Prompt Template Generations Input

Prompt template input parameters and LLM provider to use for generation.

### Root XML tag

```
EinsteinPromptTemplateGenerationsInput
```

### JSON example

```
{
  "isPreview": false,
  "inputParams": {
    "valueMap": {
      "Input:String1": {
        "value": "Value of String1"
      }
    }
  }
}
```

```

    },
    "Input:String2": {
      "value": "Value of String2"
    },
    "Input:Account": {
      "value": {
        "id": "001SB000004nerfYAA"
      }
    }
  },
  "additionalConfig": {
    "applicationName": "PromptTemplateGenerationsInvocable"
  }
}

```

### Properties

| Name             | Type                                               | Description                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|------------------|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| additionalConfig | <a href="#">EinsteinLlm Additional ConfigInput</a> | Configuration information for the LLM provider.                                                                                                                                                                                                                                                                                       | Required             | 60.0              |
| citationMode     | String                                             | Mode of citations for the specified prompt template. Valid values are: <ul style="list-style-type: none"> <li><code>post_generation</code>—Citations are generated after the generated response for the specified prompt template.</li> <li><code>off</code>—Citations aren't generated for the specified prompt template.</li> </ul> | Optional             | 62.0              |
| inputParams      | Map<String, <a href="#">Wrapped Value</a> >        | Parameters and values to resolve the specified prompt template.                                                                                                                                                                                                                                                                       | Required             | 60.0              |
| isPreview        | Boolean                                            | Specifies whether to only resolve the prompt template ( <code>true</code> ) or to resolve the prompt template and generate an LLM response ( <code>false</code> ).                                                                                                                                                                    | Required             | 60.0              |
| outputLanguage   | String                                             | Language code for the language to generate the LLM response in. See <a href="#">Supported Languages in Prompt Template Responses</a> .                                                                                                                                                                                                | Optional             | 61.0              |
| tags             | <a href="#">Wrapped Value</a>                      | Map of wrapped values, such as free-form user feedback, that can be used to resolve a specified prompt template.                                                                                                                                                                                                                      | Optional             | 62.0              |

## Ensure Funds Async Input

ID of an Invoice to ensure funds for and apply them to.

### Root XML tag

```
<ensureFundsAsyncInput>
```

### JSON example

```
{
  "invoiceId": "3ttR000000000JN1AY"
}
```

### Properties

| Name           | Type    | Description                                                                                                                                                                                                                                         | Required or Optional | Available Version |
|----------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| invoiceId      | String  | ID of the Invoice.                                                                                                                                                                                                                                  | Required             | 48.0              |
| isOrderBalance | Boolean | If true, the reserved balance amount is used for the Order Summary to fund the invoice. If not enough reserved balance amount, any available balance that isn't reserved by another Order Summary is used. If false, any available balance is used. | Optional             | 59.0              |

[Order Summaries, Ensure Funds Async](#)

## Ensure Refunds Async Input

ID of a credit memo to ensure refunds for, an amount of excess funds to refund, or both. At least one is required. Also includes any invoices for fees that reduce the refund amount, such as return fees. If multiple payment methods are available, you can specify how to distribute the refund.

### Root XML tag

```
<ensureRefundsAsyncInput>
```

### JSON example

```
{
  "creditMemoId": "50gR000000000JB00G",
  "invoicesToPay": [
    {
      "invoiceId": "3ttR000000000JN1AY"
    }
  ]
}
```

## Properties

| Name                            | Type                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional                                                           | Available Version |
|---------------------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|-------------------|
| creditMemoId                    | String                                 | ID of the credit memo that represents a refund amount.                                                                                                                                                                                                                                                                                                                                                                                                                    | Either <code>creditMemoId</code> or <code>excessFundsAmount</code> is required | 48.0              |
| excessFundsAmount               | Double                                 | Amount of excess funds to refund.                                                                                                                                                                                                                                                                                                                                                                                                                                         | Either <code>excessFundsAmount</code> or <code>creditMemoId</code> is required | 49.0              |
| invoicesToPay                   | <a href="#">Invoice To Pay Input[]</a> | List of invoices for any fees that reduce the refund, such as return fees.                                                                                                                                                                                                                                                                                                                                                                                                | Optional                                                                       | 56.0              |
| isAllowPartial                  | Boolean                                | This value controls the behavior when the amounts included in the <code>sequences</code> list don't cover the entire refund amount. If this value is false, then the default refund logic is applied to ensure the remaining refund amount. If this value is true, then the unrefunded balance remains on the credit memo. If you don't specify a <code>sequences</code> list, this value is ignored and the default refund logic is applied. The default value is false. | Optional                                                                       | 56.0              |
| <del>isReservedAmountUsed</del> | Boolean                                | If true, the refundable amount is used to open the payment balance for the <code>reservedBalanceAmount</code> in the Order Payment Summaries. The remaining refundable amount considers the sequence of order payment summaries, if provided. If false, any reserved balance amount for exchanges is refunded.                                                                                                                                                            | Optional                                                                       | 59.0              |

| Name      | Type                                                   | Description                                                                                                                                                                                                                                                                                                         | Required or Optional | Available Version |
|-----------|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| sequences | <a href="#">Sequence Order Payment Summary Input[]</a> | Ordered list of refund amounts and OrderPaymentSummaries to apply them to. An OrderPaymentSummary must either belong to the order summary or be a reference to the order summary in the OrderPaymentSummaryReference entity. The process traverses this list in order and stops when it's refunded the full amount. | Optional             | 56.0              |

## Entitlement Settings Input

Entitlement settings applicable to all product rows in a product import .csv file.

### Root XML tag

```
<entitlementSettings>
```

### JSON example

```
{
  "entitlement": {
    "defaultEntitlementPolicyId": "1CeRM00000003o40AA"
  }
}
```

### Properties

| Name                                  | Type   | Description                                                                                | Required or Optional                                                                      | Available Version |
|---------------------------------------|--------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|-------------------|
| <del>defaultEntitlementPolicyId</del> | String | ID of entitlement policy to associate with each product row in a product import .csv file. | Required if you specify one or more entitlement-related column headings in your .csv file | 54.0              |

## Environment Hub SSO User Mapping Input

Creates an SSO mapping between a user in an Environment Hub org and a user in an Environment Hub member org.

### Root XML tag

```
<ssoUserMapping>
```

**JSON example**

```
{
  "hubUserId": "005B0000000F6SNIA0",
  "memberUsername": "jeanSmith"
}
```

**Properties**

| Name           | Type   | Description                                                       | Required or Optional | Available Version |
|----------------|--------|-------------------------------------------------------------------|----------------------|-------------------|
| hubUserId      | String | The ID of a user in an Environment Hub organization.              | Required             | 36.0              |
| memberUsername | String | The username of a user in an Environment Hub member organization. | Required             | 36.0              |

## Estimate Delivery Date Input

Delivery date estimation information.

**Root XML tag**

estimateDeliveryDateInput

**JSON example**

```
{
  "shippingCarrier": {
    "externalReference": "UPS001",
    "shippingCarrierMethods": [
      {
        "externalReference": "UPSGround001"
      },
      {
        "externalReference": "UPSAIR001"
      }
    ]
  },
  "locations": [
    "California"
  ],
  "products": [
    {
      "stockKeepingUnit": "SKU01",
      "quantity": 5
    }
  ],
  "deliveryAddress": {
    "country": "USA",
  }
}
```

```

    "state": "CA",
    "city": "San Francisco",
    "postalCode": "00000",
    "latitude": 30.123,
    "longitude": 100.123
  }
}

```

### Properties

| Property        | Type         | Description                                       | Required or Optional | Available Version |
|-----------------|--------------|---------------------------------------------------|----------------------|-------------------|
| deliveryAddress | OneOfAddress | Delivery address.                                 | Optional             | 63.0              |
| locations       | String       | List of location external references.             | Optional             | 63.0              |
| products        | OneOfProduct | List of products included in delivery estimation. | Required             | 63.0              |
| shippingCarrier | OneOfCarrier | Shipping carrier used to deliver the order.       | Required             | 63.0              |

## Extended Fields Input

Input representation for extended fields.

### Root XML tag

```
<extendedFields>
```

### JSON example

```

{
  "extendedFields": [
    {
      "name": "assigned_to__c",
      "value": "abcd"
    },
    {
      "name": "ownership__c",
      "value": true
    }
  ]
}

```

### Properties

| Name  | Type   | Description                | Required or Optional | Available Version |
|-------|--------|----------------------------|----------------------|-------------------|
| name  | String | Name of the custom field.  | Optional             | 48.0              |
| value | String | Value of the custom field. | Optional             | 48.0              |

# Extension Input

An extension.

**Root XML tag**

```
<extension>
```

**JSON example**

```
{
  "alternativeRepresentation":
    {
      "textRepresentation": "Quip document with ID 132452345",
      "thumbnailUrl": "http://salesforce.quip.com?id=132452345",
      "title": "Quip"
    },
  "extensionId": "id1",
  "payload": "eyJkb2N1bWVudF9pZCI6IClzMjM0NSJ9",
  "payloadVersion": "0.1"
}
```

**Properties**

| Name                       | Type                              | Description                                                                                 | Required or Optional | Available Version |
|----------------------------|-----------------------------------|---------------------------------------------------------------------------------------------|----------------------|-------------------|
| alternative Representation | <a href="#">Alternative Input</a> | Alternative representation of the extension.                                                | Required             | 40.0              |
| extensionId                | String                            | ID of the extension.                                                                        | Required             | 40.0              |
| payload                    | String                            | Payload associated with the extension.                                                      | Required             | 40.0              |
| payloadVersion             | String                            | Payload version that identifies the structure of the payload associated with the extension. | Optional             | 40.0              |

## External Auth Identity Provider Credential Input

External auth identity provider credential input.

**Properties**

| Name            | Type   | Description                                              | Required or Optional | Available Version |
|-----------------|--------|----------------------------------------------------------|----------------------|-------------------|
| credentialName  | String | Name of the external auth identity provider credential.  | Required             | 62.0              |
| credentialValue | String | Value of the external auth identity provider credential. | Required             | 62.0              |

SEE ALSO:

[External Auth Identity Provider Credentials Input](#)

# External Auth Identity Provider Credentials Input

External auth identity provider credentials input.

**Root XML tag**

```
<externalAuthIdentityProviderCredentials>
```

**JSON example for creating (POST) or replacing (PUT) an external auth identity provider's credentials**

Use this example request body to create or update credentials for an external auth identity provider that uses OAuth2.0 authentication with an authorization code. Assume the credential has two values: `clientId` and `clientSecret`.

```
{
  "credentials": [
    {
      "credentialName": "clientId",
      "credentialValue": "SampleClientID"
    },
    {
      "credentialName": "clientSecret",
      "credentialValue": "SampleClientSecret"
    }
  ]
}
```

**Properties**

| Name        | Type                                                                            | Description                                               | Required or Optional | Available Version |
|-------------|---------------------------------------------------------------------------------|-----------------------------------------------------------|----------------------|-------------------|
| credentials | <a href="#">External Auth Identity Provider Credential Input</a> on page 1129[] | List of an external auth identity provider's credentials. | Required             | 62.0              |

[External Auth Identity Provider Credentials](#)

# External Auth Identity Provider Input

External auth identity provider input.

**Root XML tag**

```
<externalAuthIdentityProvider>
```

**JSON example**

To create an external auth identity provider, you must also use the POST method with the `/named-credentials/external-auth-identity-provider-credentials/fullName` resource to populate the identity provider's credentials.

```
{
  "label": "ExternalIdp2",
  "fullName": "ExternalIdp2",
  "description": "OAuth Browser flow for connected app",
}
```

```

    "authenticationProtocol": "OAuth",
    "authenticationFlow": "AuthorizationCode",
    "clientAuthentication": "ClientSecretPost",
    "authorizeUrl": "https://identityprovider.com/services/oauth2/authorize",
    "tokenUrl": "https://identityprovider.com/services/oauth2/token",
    "userInfoUrl": "https://identityprovider.com/services/userinfo",
    "parameters": [
      {
        "parameterName": "PkceEnabled",
        "parameterType": "IdentityProviderOptions",
        "parameterValue": "true"
      },
      {
        "parameterName": "ExampleName",
        "parameterType": "AuthorizeRequestQueryParameter",
        "parameterValue": "ExampleValue",
        "sequenceNumber": 1
      }
    ]
  }
}

```

### Properties

| Name                                | Type   | Description                                                                                                                                                                                                                                                                            | Required or Optional                                                                                                                                                         | Available Version |
|-------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <code>authenticationFlow</code>     | String | Authentication flow to get tokens to call protected APIs. Values are: <ul style="list-style-type: none"> <li>• <code>AuthorizationCode</code></li> </ul>                                                                                                                               | Required                                                                                                                                                                     | 62.0              |
| <code>authenticationProtocol</code> | String | Authentication protocol required to access the external system. Values are: <ul style="list-style-type: none"> <li>• <code>OAuth</code></li> </ul>                                                                                                                                     | Required                                                                                                                                                                     | 62.0              |
| <code>authorizeUrl</code>           | String | Authorization endpoint URL for the external system.                                                                                                                                                                                                                                    | Required when the <code>authenticationProtocol</code> is <code>OAuth</code> and the <code>authenticationFlow</code> is <code>AuthorizationCode</code> . Otherwise, Optional. | 62.0              |
| <code>clientAuthentication</code>   | String | Client authentication method that describes how credentials are sent to the authorization server. Values are: <ul style="list-style-type: none"> <li>• <code>ClientSecretBasic</code></li> <li>• <code>ClientSecretPost</code></li> </ul> Defaults to <code>ClientSecretBasic</code> . | Optional                                                                                                                                                                     | 63.0              |
| <code>description</code>            | String | External auth identity provider description.                                                                                                                                                                                                                                           | Optional                                                                                                                                                                     | 62.0              |

| Name                             | Type                                                              | Description                                                                                                                                   | Required or Optional | Available Version |
|----------------------------------|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| fullName                         | String                                                            | Full name of the external auth identity provider. The full name can include a namespace prefix.                                               | Required             | 62.0              |
| label                            | String                                                            | External auth identity provider label.                                                                                                        | Required             | 62.0              |
| parameters                       | <a href="#">External Auth Identity Provider Parameter Input[]</a> | List of custom request parameters to customize and extend requests to the identity provider's token endpoint.                                 | Optional             | 63.0              |
| standardExternalIdentityProvider | String                                                            | Reference to a standard external auth identity provider.                                                                                      | Optional             | 63.0              |
| tokenUrl                         | String                                                            | Token endpoint URL to retrieve tokens from the external system. Required for all OAuth 2.0 authentication flows.                              | Required             | 62.0              |
| userInfoUrl                      | String                                                            | User info URL to retrieve user profile information from the external system.<br><br>Applicable only when the authenticationProtocol is OAuth. | Optional             | 62.0              |

## External Auth Identity Provider Parameter Input

External auth identity provider parameter input.

### Root XML tag

```
<externalAuthIdentityProvider>
```

### JSON example

```
{
  "parameterName": "PkceEnabled",
  "parameterType": "IdentityProviderOptions",
  "parameterValue": "true"
},
{
  "parameterName": "ExampleName",
  "parameterType": "AuthorizeRequestQueryParameter",
  "parameterValue": "ExampleValue",
  "sequenceNumber": 1
}
```

**Properties**

| Name           | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| parameterName  | String  | The name of the external auth identity provider parameter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required             | 63.0              |
| parameterType  | String  | Parameter type for an external auth identity provider. Values are: <ul style="list-style-type: none"> <li>• <code>AuthorizeRequestQueryParameter</code></li> <li>• <code>IdentityProviderOptions</code></li> <li>• <code>ManagedByComponent</code></li> <li>• <code>ManagedByFeature</code></li> <li>• <code>RefreshRequestBodyParameter</code></li> <li>• <code>RefreshRequestHttpHeader</code></li> <li>• <code>RefreshRequestQueryParameter</code></li> <li>• <code>TokenRequestBodyParameter</code></li> <li>• <code>TokenRequestHttpHeader</code></li> <li>• <code>TokenRequestQueryParameter</code></li> </ul> | Required             | 63.0              |
| parameterValue | String  | If <code>parameterType</code> describes a literal value then the literal value is stored in this property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Optional             | 63.0              |
| sequenceNumber | Integer | Specifies the order of parameters to apply when an external auth identity provider has more than one parameter. Priority is from lower to higher numbers, for example, 1 is the highest priority.                                                                                                                                                                                                                                                                                                                                                                                                                    | Optional             | 63.0              |

## External Credential Input

Input used to create or update an external credential.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

**JSON example for creating an external credential (POST)**

```
{
  "developerName": "SampleAws",
  "masterLabel": "SampleAwsLabel",
  "authenticationProtocol": "AwsSv4",
  "authenticationProtocolVariant": "AwsSv4_STS",
  "parameters": [
    {
      "parameterName": "AwsService",
      "parameterType": "AuthParameter",
```

```

        "parameterValue": "dynamodb"
    },
    {
        "parameterName": "AwsRegion",
        "parameterType": "AuthParameter",
        "parameterValue": "us-west-2"
    },
    {
        "parameterName": "AwsAccountId",
        "parameterType": "AuthParameter",
        "parameterValue": "sampleAccountId"
    },
    {
        "parameterName": "AwsStsExternalId",
        "parameterType": "AuthProviderUrlQueryParameter",
        "parameterValue": "sampleExternalId"
    },
    {
        "parameterName": "AwsStsDuration",
        "parameterType": "AuthProviderUrlQueryParameter",
        "parameterValue": "1000"
    }
],
"principals": [
    {
        "principalName": "SamplePrincipal",
        "principalType": "NamedPrincipal",
        "sequenceNumber": 1
    }
],
"customHeaders": [
    {
        "headerName": "SampleHeader",
        "headerValue": "SampleHeaderValue",
        "sequenceNumber": 1
    }
]
}

```

#### JSON example for updating an external credential (PUT)

```

{
    "developerName": "SampleOAuth",
    "masterLabel": "SampleOAuthLabel",
    "authenticationProtocol": "OAuth",
    "authenticationProtocolVariant": "JwtBearer",
    "parameters": [
        {
            "id": "0puxxxxxxxxxxxxxxxxx",
            "parameterName": "SigningCertificate",
            "parameterType": "SigningCertificate",
            "parameterValue": "SampleCertificate"
        },
        {
            "parameterName": "AuthProviderUrl",

```

```
    "parameterType": "AuthProviderUrl",
    "parameterValue": "www.identityprovider.com"
  },
  {
    "parameterDescription": "Expiration Time",
    "parameterName": "exp",
    "parameterType": "JwtBodyClaim",
    "parameterValue": "{!Text(FLOOR((NOW() - DATETIMEVALUE( \"1970-01-01 00:00:00\"
)) * 86400 + 120))}"
  },
  {
    "parameterName": "Scope",
    "parameterType": "AuthParameter",
    "parameterValue": "SampleScope"
  }
],
"principals": [
  {
    "principalName": "SamplePerUserPrincipal",
    "principalType": "PerUserPrincipal",
    "sequenceNumber": 1,
    "parameters": [
      {
        "parameterName": "Scope",
        "parameterType": "AuthParameter",
        "parameterValue": "SamplePrincipalGroupScope"
      }
    ]
  }
],
"customHeaders": [
  {
    "headerName": "SampleHeader",
    "headerValue": "SampleHeaderValue",
    "sequenceNumber": 1
  }
]
}
```

Properties

| Name                    | Type   | Description                                                                                                                                                                             | Required or Optional | Available Version |

## Facetable Attributes Collection Input

Collection of facetable settings for search attributes.

### JSON example

```
{
  "facetableAttributeSettings" : [
    {
      "type" : "ProductCategory",
      "nameOrId" : "Id",
      "displayRank" : "1",
      "displayType" : "CategoryTree"
    },
    {
      "type" : "Standard",
      "nameOrId" : "Family",
      "displayRank" : "2",
      "displayType" : "MultiSelect"
    },
    {
      "type" : "Custom",
      "nameOrId" : "color__c",
      "displayRank" : "3",
      "displayType" : "MultiSelect"
    }
  ]
}
```

### Properties

| Name                       | Type                                      | Description                                | Required or Optional | Available Version |
|----------------------------|-------------------------------------------|--------------------------------------------|----------------------|-------------------|
| facetableAttributeSettings | <a href="#">Facetable Attribute Input</a> | Collection of up to 50 facetable settings. | Required             | 49.0              |

## Facetable Attribute Input

Facetable attribute for search.

JSON example

```
{
  "type" : "ProductCategory",
  "nameOrId" : "Id",
  "displayRank" : "1",
  "displayType" : "CategoryTree"
}
```

Properties

| Name        | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                       | Required or Optional | Available Version |
|-------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| displayRank | Integer | Display rank of the facet. Valid values are from 1 through 50. Values must be unique and sequential.                                                                                                                                                                                                                                                                                              | Required             | 49.0              |
| displayType | String  | Display type of the facet. Values are: <ul style="list-style-type: none"><li>CategoryTree</li><li>MultiSelect</li></ul>                                                                                                                                                                                                                                                                           | Required             | 49.0              |
| nameOrId    | String  | Developer name of the attribute. In version 49.0 and later, the ID of the attribute isn't supported.                                                                                                                                                                                                                                                                                              | Required             | 49.0              |
| type        | String  | Type of attribute. Values are: <ul style="list-style-type: none"><li>Custom</li><li>ProductAttribute</li><li>ProductCategory</li><li>Standard</li></ul> When updating facetable attributes, you must include a <code>ProductCategory</code> facet with <code>nameOrId</code> set to <code>Id</code> and <code>displayType</code> set to <code>categoryTree</code> , as shown in the JSON example. | Required             | 49.0              |

[Facetable Attributes Collection Input](#)

Feed Element Capabilities Input

A container for all capabilities that can be included when creating a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed

element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

XML example

```
<capabilities>
  <associatedActions>
    <actionLinkGroupIds>
      <actionLinkGroupId/>0Agxx00000000d1CAA<actionLinkGroupId/>
      <actionLinkGroupId/>0Agxx00000000d2DFY<actionLinkGroupId/>
    </actionLinkGroupIds>
  </associatedActions>
  <bookmarksCapability>
    <isBookmarkedByCurrentUser>>false</isBookmarkedByCurrentUser>
  </bookmarksCapability>
  <files>
    <items>
      <file>
        <id>069D00000001IOh</id>
      </file>
      <file>
        <id>069D00000002IOg</id>
      </file>
    </items>
  </files>
</capabilities>
```

JSON example

```
"capabilities": {
  "associatedActions": {
    "actionLinkGroupIds":["0Agxx00000000d1CAA", "0Agxx00000000d2DFY"]
  },
  "bookmarks": {
    "isBookmarkedByCurrentUser": false
  },
  "files": {
    "items": [
      {"id": "069D00000001IOh"},
      {"id": "069D00000002IOg"}
    ]
  }
}
```

Properties

## Feed Favorite Input

Feed favorite input.

### Root XML tag

```
<favorite>
```

### JSON for POST

```
{
  "searchText" : "release",
  "targetId" : "0TOD0000000099d"
}
```

### Properties for POST

| Name       | Type   | Description                                                         | Available Version |
|------------|--------|---------------------------------------------------------------------|-------------------|
| searchText | String | Text of the feed search. Use this parameter for feed searches only. | 24.0              |
| targetId   | String | Id of the topic. Use this parameter for topics only.                | 28.0              |

### JSON for PATCH

```
{
  "updateLastViewDate" : "true"
}
```

### Properties for PATCH

| Name               | Type    | Description                                                                                                        | Available Version |
|--------------------|---------|--------------------------------------------------------------------------------------------------------------------|-------------------|
| updateLastViewDate | Boolean | Sets the last view date of the specified feed favorite to the current system time. Default value is <i>false</i> . | 24.0              |

## Feed Item Input

Feed item input.

### Root XML tag

```
<feedItem>
```

### JSON

The following example attaches a poll to a feed item:

```
{
  "body": {
    "messageSegments": [
      {
        "type": "Text",
        "text": "When should we meet for release planning?"
      }
    ]
  },
  "capabilities": {
    "poll": {
      "choices": [
        "Monday",
        "Tuesday"
      ]
    }
  },
  "feedElementType": "FeedItem",
  "subjectId": "me"
}
```

## Properties

| Name       | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required or Optional                                                        | Available Version |

| attachment | Depends on type.                   | <p>You can specify only one of these values in the attachment parameter. Values are:</p> <ul style="list-style-type: none"> <li>Attachment Input: Canvas App (v29.0–31.0)</li> <li>Attachment Input: Existing Content (v23.0–31.0)</li> <li>Attachment Input: Feed Poll (v26.0–31.0)</li> <li>Attachment Input: Link (v23.0–31.0)</li> <li>Attachment Input: New File Upload (v23.0–31.0)</li> </ul> <p> <b>Important:</b> As of API version 32.0, use the <code>capabilities</code> property.</p>                                                                                                                                                                                                                         | Optional                                                                    |                   |
| body       | <a href="#">Message Body Input</a> | <p>Description of message body. Feed item and comment bodies have a 10,000 character limit. Because this limit can change, we recommend that clients make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object. To determine the maximum number of allowed characters, look at the length of the <code>Body</code> or <code>CommentBody</code> field. The body can contain up to 25 mentions.</p> <p>If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code> property to add the first comment to the feed item.</p> <p>To edit this property in a feed item, make a PATCH request to <code>/chatter/feed-elements / <b>feedElementId</b></code>. Editing feed posts is supported in version 34.0 and later.</p> | Required unless the feed item has a content capability or a link capability | 23.0              |

| Name                      | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional                                                                               | Available Version |

## Feed Item Topic Input

Feed item topic input.

### Root XML tag

```
<feedItemTopic>
```

### JSON

The following example attaches a new topic to a feed item:

```
{ "topicName": "W3C"
}
```

### Properties

| Name      | Type   | Description                                           | Required or Optional                                                                                  | Available Version |
|-----------|--------|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------|-------------------|
| topicId   | String | ID of an existing topic                               | Required for existing topics if the <code>topicName</code> property isn't used                        | 29.0              |
| topicName | String | Name of a new or existing topic, up to 150 characters | Required for new topics; required for existing topics if the <code>topicId</code> property isn't used | 29.0              |

## File ID Input

Attach a file that has already been uploaded or remove a file from a feed element.

### XML example

```
<file>
  <id>069D00000001IOh</id>
</file>
```

### JSON example

```
{
  "id": "069D00000001IOh",
  "operationType": "add"
}
```

### Properties

| Name | Type   | Description                                  | Required or Optional | Available Version |
|------|--------|----------------------------------------------|----------------------|-------------------|
| id   | String | ID of a file that has already been uploaded. | Required             | 36.0              |

| Name          | Type   | Description                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional                               | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------|
| operationType | String | <p>Operation to carry out on the file. Values are:</p> <ul style="list-style-type: none"><li>• Add—Adds the file to the feed element.</li><li>• Remove—Removes the file from the feed element.</li></ul> <p>Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.</p> | Optional<br><br>If not specified, defaults to Add. | 36.0              |

## File Input

A new file.

To upload a file, provide the binary file in a multipart/form-data body part where name="fileData". See [Uploading Binary Files](#).

**Root XML tag**  
<fileInput>

**JSON example for creating a file**

```
{
  "desc": "Employee Survey Results",
  "title": "emp_surv_results"
}
```

**JSON example for creating a reference to an external file**

```
{
  "repositoryId": "0XCB00000004CHJ",
  "repositoryFileId": "document:1AnPHWYq_j56yryuRbxiVp93rD2qGqNWx7yZHvidxDpQ"
}
```

**JSON example for a guest user creating a file**

```
{
  "contentBodyId": "05Txx00000004CH6EAM",
  "title": "Screenshot 2024-06-17 at 6.24.49 PM",
  "networkId": "0DBxx00000004CH6GAM",
  "pathOnClient": "Screenshot 2024-06-17 at 6.24.49 PM.png",
  "firstPublishLocationId": null,
  "fieldName": "Guest_Record_Main_fileupload__c",
  "fieldValue": "Version1"
}
```

## Properties

| Name                               | Type    | Description                                                                                                                                                                                                                                                                                                                                 | Required or Optional | Available Version |
|------------------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| contentBodyId                      | String  | ID of the content body.                                                                                                                                                                                                                                                                                                                     | Optional             | 62.0              |
| contentModifiedDate                | String  | File-specific last modified date that can be used to set a client-side modified date. Specify the date in ISO 8601 format.                                                                                                                                                                                                                  | Optional             | 32.0              |
| desc                               | String  | Description of the file to be uploaded.                                                                                                                                                                                                                                                                                                     | Optional             | 24.0              |
| fieldName                          | String  | Name of a custom field on the ContentVersion object. The API name of the customer field must end with <code>fileupload__c</code> .                                                                                                                                                                                                          | Optional             | 62.0              |
| fieldValue                         | String  | Value to store for the custom field specified in <code>fieldName</code> for the uploaded file.                                                                                                                                                                                                                                              | Optional             | 62.0              |
| firstPublishLocationId             | String  | ID of the location where the version was first published.                                                                                                                                                                                                                                                                                   | Optional             | 62.0              |
| includeExternalFilePermissionsInfo | Boolean | Specifies whether to include permission information, such as whether the file is shared and what are the available permission types, for external files.<br><br>This property can be used with POST requests to <code>/connect/files/users/<b>userId</b></code> , but not with POST requests to <code>/connect/files/<b>fileId</b></code> . | Optional             | 35.0              |
| isInMyFileSync                     | Boolean | <code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.<br><br> <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.                                                                                | Optional             | 31.0              |
| isMajorVersion                     | Boolean | <code>true</code> if the file is a major version; <code>false</code> if the file is a minor version. Major versions can't be replaced.                                                                                                                                                                                                      | Optional             | 31.0              |
| networkId                          | String  | ID of the Experience Cloud site where this file originated.                                                                                                                                                                                                                                                                                 | Optional             | 62.0              |
| parentFolderId                     | String  | ID of the containing folder.                                                                                                                                                                                                                                                                                                                | Optional             | 31.0              |
| pathOnClient                       | String  | Complete path of the file.                                                                                                                                                                                                                                                                                                                  | Optional             | 62.0              |

| Name                  | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                    | Required or Optional                                               | Available Version |
|-----------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-------------------|
| repository<br>FileId  | String  | <p>ID of the external file.</p> <p>This property can be used with POST requests to<br/>/connect/files/users/<b>userId</b><br/>but not with POST requests to<br/>/connect/files/<b>fileId</b>.</p> <p>If you specify repositoryFileId,<br/>don't specify repositoryFileUri.</p>                                                                                                                                                                 | Optional                                                           | 32.0              |
| repository<br>FileUri | String  | <p>URI of the external file, such as<br/><a href="https://drive.google.com/file/d/0B7a_ei8brT1TMx1CQ0o5NmZQNEE/view">https://drive.google.com/file/d/0B7a_ei8brT1TMx1CQ0o5NmZQNEE/view</a>.</p> <p>This property can be used with POST requests to<br/>/connect/files/users/<b>userId</b><br/>but not with POST requests to<br/>/connect/files/<b>fileId</b>.</p> <p>If you specify repositoryFileUri,<br/>don't specify repositoryFileId.</p> | Optional                                                           | 39.0              |
| repositoryId          | String  | <p>ID of the external data source.</p> <p>This property can be used with POST requests to<br/>/connect/files/users/<b>userId</b><br/>but not with POST requests to<br/>/connect/files/<b>fileId</b>.</p>                                                                                                                                                                                                                                       | Required if repositoryFileId is specified.<br>Otherwise, Optional. | 32.0              |
| reuseReference        | Boolean | <p>Specifies whether to reuse the latest version of a reference you own to an external file rather than creating a duplicate reference.</p> <p>This property can be used with POST requests to<br/>/connect/files/users/<b>userId</b><br/>but not with POST requests to<br/>/connect/files/<b>fileId</b>.</p>                                                                                                                                  | Optional                                                           | 36.0              |
| sharingOption         | String  | <p>Sharing option of the file. Values are:</p> <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>                                                                                                                                                                                                                                            | Optional                                                           | 35.0              |

| Name           | Type   | Description                                                                                                                                                                                                                  | Required or Optional | Available Version |
|----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| sharingPrivacy | String | Sharing privacy of a file. Values are: <ul style="list-style-type: none"><li>• <code>None</code>—File is visible to anyone with record access.</li><li>• <code>PrivateOnRecords</code>—File is private on records.</li></ul> | Optional             | 41.0              |
| title          | String | Title of the file.                                                                                                                                                                                                           | Optional             | 24.0              |

## File Share Link Input

File share link input.

### Root XML tag

```
<fileShareLink>
```

### JSON example

```
{
  "expirationDate": "2024-07-07T23:59:11.168Z",
  "isPasswordRequired": "true"
}
```

### Properties

| Name               | Type    | Description                                                                                                                                                               | Required or Optional | Available Version |
|--------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| expirationDate     | String  | Expiration date of the generated public link.                                                                                                                             | Optional             | 58.0              |
| isPasswordRequired | Boolean | Specifies whether a password is needed for the file's public link ( <code>true</code> ) or not ( <code>false</code> ). Specifying <code>true</code> generates a password. | Optional             | 58.0              |

## File Shares Input

File shares input.

### Root XML tag

```
<fileShares>
```

**JSON example**

```
{
  "message": "I shared a document with you.",
  "shares": [
    { "id": "005D00000001Az41", "sharingType": "V" },
    { "id": "005D00000001B2ny", "sharingType": "C" }
  ]
}
```

**Properties**

| Name    | Type                          | Description                                                                                                                           | Available Version |
|---------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| message | String                        | Private message body that's sent to the recipients. If digital experiences is enabled, an email is sent instead of a private message. | 30.0              |
| shares  | <a href="#">Share Input[]</a> | Collection of Share Input request bodies.                                                                                             | 30.0              |

## Files Capability Input

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

**XML example**

```
<files>
  <items>
    <file>
      <id>069D000000001IOh</id>
    </file>
    <file>

## Fulfillment Group Input

A list of `OrderItemSummaries` to be fulfilled together, and the fulfillment location to handle them. The fulfillment type is one of the values defined for the `Type` field on the `FulfillmentOrder` object, such as "Warehouse" or "Retail Store." The specified type is assigned to the `FulfillmentOrder` for this fulfillment group.

### Root XML tag

```
<fulfillmentGroup>
```

### JSON example

```
{
  "fulfilledFromLocationId": "131xx00000000W0001",
  "fulfillmentType": "warehouse",
  "orderItemSummaries": [
    {
      "orderItemSummaryId": "10uxx00000000W0001",
      "quantity": 3
    },
    {
      "orderItemSummaryId": "10uxx00000000W0002",
      "quantity": 1
    }
  ]
}
```

### Properties

| Name                                 | Type                                       | Description                                                                                                                                                                   | Required or Optional | Available Version |
|--------------------------------------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>fulfilledFromLocationId</code> | String                                     | ID of the fulfillment location.                                                                                                                                               | Required             | 48.0              |
| <code>fulfillmentType</code>         | String                                     | Fulfillment type. One of the <code>Type</code> field values defined for <code>FulfillmentOrders</code> .                                                                      | Required             | 48.0              |
| <code>orderItemSummaries</code>      | <a href="#">Order Item Summary Input[]</a> | List of <code>OrderItemSummaries</code> .                                                                                                                                     | Required             | 48.0              |
| <code>referenceId</code>             | String                                     | Reference to this input for use in troubleshooting failures. This value is only used by the APIs for creating fulfillment orders for multiple order delivery group summaries. | Optional             | 50.0              |

### SEE ALSO:

[Fulfillment Order Input](#)

## Fulfillment Order Input

An `OrderDeliveryGroupSummary` that defines a delivery method and recipient, and a list of fulfillment groups to assign to `FulfillmentOrders`. Each fulfillment group is a set of `OrderItemSummaries` that match the `OrderDeliveryGroupSummary` and share the same fulfillment location. The method creates a `FulfillmentOrder` for each fulfillment group and a `FulfillmentOrderLineItem` for each `OrderItemSummary`.

### Root XML tag

```
<fulfillmentOrderInput>
```

### JSON example

```
{
  "defaultActivationStatus": "Allocated",
  "orderSummaryId": "10sxx0000000000001",
  "orderDeliveryGroupSummaryId": "0ag7Q000000xPYgQAM",
  "fulfillmentGroups": [
    {
      "fulfilledFromLocationId": "131xx00000000W0001",
      "fulfillmentType": "warehouse",
      "orderItemSummaries": [
        {
          "orderItemSummaryId": "10uxx00000000W0001",
          "quantity": 3
        },
        {
          "orderItemSummaryId": "10uxx00000000W0002",
          "quantity": 1
        }
      ]
    }
  ]
}
```

### Properties

| Name                                     | Type                                      | Description                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|------------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>defaultActivationStatus</code>     | String                                    | Default activation status for a new fulfillment order. If you don't specify a value, the default value is <code>Allocated</code> , which belongs to the <code>Activated</code> status category. This default can be changed, but the replacement status must also have a status category of <code>Activated</code> . | Optional             | 58.0              |
| <code>fulfillmentGroups</code>           | <a href="#">Fulfillment Group Input[]</a> | List of fulfillment groups that specify the <code>OrderItemSummaries</code> and fulfillment locations.                                                                                                                                                                                                               | Required             | 48.0              |
| <code>orderDeliveryGroupSummaryId</code> | String                                    | ID of the <code>OrderDeliveryGroupSummary</code> .                                                                                                                                                                                                                                                                   | Required             | 48.0              |

| Name           | Type   | Description             | Required or Optional | Available Version |
|----------------|--------|-------------------------|----------------------|-------------------|
| orderSummaryId | String | ID of the OrderSummary. | Required             | 48.0              |

## Fulfillment Order Invoice Input

Use an empty request body for this input.

### Root XML tag

```
<fulfillmentOrderInvoiceInput>
```

### JSON example

```
{
}
```

### Properties

None.

## Fulfillment Order Line Item Input

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.

### Root XML tag

```
<fulfillmentOrderLineItem>
```

### JSON example

```
{
  "fulfillmentOrderLineItemId" : "0a4xx00000000W0001",
  "quantity":1
}
```

### Properties

| Name                       | Type   | Description                         | Required or Optional | Available Version |
|----------------------------|--------|-------------------------------------|----------------------|-------------------|
| fulfillmentOrderLineItemId | String | ID of the FulfillmentOrderLineItem. | Required             | 48.0              |

| Name     | Type   | Description         | Required or Optional | Available Version |
|----------|--------|---------------------|----------------------|-------------------|
| quantity | Double | Quantity to cancel. | Required             | 48.0              |

## Fulfillment Order Line Items To Cancel Input

A list of FulfillmentOrderLineItems and quantities to cancel.

### Root XML tag

```
<fulfillmentOrderLineItemsToCancelInput>
```

### JSON example

```
{
  "fulfillmentOrderLineItemsToCancel" : [
    {
      "fulfillmentOrderLineItemId" : "0a4xx00000000W0001",
      "quantity":1
    },
    {
      "fulfillmentOrderLineItemId" : "0a4xx00000000W0002",
      "quantity":2
    }
  ]
}
```

### Properties

| Name                              | Type                                                | Description                                       | Required or Optional | Available Version |
|-----------------------------------|-----------------------------------------------------|---------------------------------------------------|----------------------|-------------------|
| fulfillmentOrderLineItemsToCancel | <a href="#">Fulfillment Order Line Item Input[]</a> | List of FulfillmentOrderLineItems and quantities. | Required             | 48.0              |

|--------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <code>haltOnError</code> | Boolean | <p>Controls whether Salesforce stops processing subrequests if a subrequest fails. The default value is <code>false</code>.</p> <p>If the value is <code>false</code> and a subrequest in the batch does not complete, Salesforce attempts to execute subsequent subrequests in the batch.</p> <p>If the value is <code>true</code> and a subrequest in the batch doesn't complete due to an HTTP response in the 400 or 500 range, Salesforce halts execution. It doesn't attempt to execute subsequent subrequests in the batch. It returns an HTTP 412 status code and a <code>BATCH_PROCESSING_HALTED</code> error message for each subsequent subrequest indicating that a previous request was unsuccessful. The top-level request to <code>/connect/batch</code> returns HTTP 200, and the <code>hasErrors</code> property in the response is set to <code>true</code>.</p> <p> <b>Note:</b> Before subrequests are executed, Salesforce verifies that the entire request, including subrequests, is formed properly. If it isn't, Salesforce returns an HTTP 400 Bad Request and doesn't execute subrequests, regardless of the value of <code>haltOnError</code>. Examples of a bad request are a subrequest using the wrong method or having an error in its URL.</p> | 28.0              |

## Get FO Capacity Values Request Input

Locations to get fulfillment order capacity information for.

### Root XML tag

```
<getFOCapacityValuesRequestRequestInput>
```

### JSON example

```
{
  "locationIds": ["LOC-1", "LOC-2", "LOC-3", "LOC-5"]
}
```

### Properties

| Name        | Type     | Description                                                                     | Required or Optional | Available Version |
|-------------|----------|---------------------------------------------------------------------------------|----------------------|-------------------|
| locationIds | String[] | List of IDs of the locations to get fulfillment order capacity information for. | Required             | 55.0              |

# Global Product Import Input

Configuration for an asynchronous global product import job.

**Root XML tag**

```
<globalProductImportInput>
```

**JSON example**

```
{
  "importConfiguration": {
    "importSource": {
      "contentVersionId": "069RM0000008F4FYAU"
    },
    "importSettings": {

    "subject",
    "description"
  ]
}
```

Properties

| Name                           | Type     | Description                                                                                                                                                                        | Required or Optional | Available Version |
|--------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| endTime                        | String   | Latest end time for the group appointments to be retrieved.                                                                                                                        | Optional             | 61.0              |
| excludeAssociatedAppts         | Boolean  | Indicates whether the response excludes appointments where the current user is associated as an attendee or assigned resource ( <code>true</code> ) or not ( <code>false</code> ). | Optional             | 61.0              |
| extendedFieldsToQuery          | String[] | List of the extended custom fields to fetch in the output.                                                                                                                         | Optional             | 61.0              |
| filterByEngagementChannelTypes | String[] | ID of the engagement channel type record. Group appointments are filtered based on the selected engagement channel type.                                                           | Optional             | 61.0              |
| filterByParentRecords          | String[] | The ID of the associated parent record.                                                                                                                                            | Optional             | 61.0              |
| filterByResources              | String[] | List of the group appointments where all the given resources are present.                                                                                                          | Optional             | 61.0              |
| filterByTerritories            | String[] | List of IDs of the service territories where the requested work is performed.                                                                                                      | Optional             | 61.0              |

| Name                                | Type     | Description                                                                                                                          | Required or Optional | Available Version |
|-------------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| <code>filterByWorkTypeGroups</code> | String[] | IDs of the work type groups containing the work types that are being performed.                                                      | Optional             | 61.0              |
| <code>filterByWorkTypes</code>      | String[] | List of IDs of the work types to be performed.                                                                                       | Optional             | 61.0              |
| <code>limit</code>                  | Integer  | Maximum number of records to be fetched.                                                                                             | Optional             | 61.0              |
| <code>offset</code>                 | Integer  | Number of records to be skipped.                                                                                                     | Optional             | 61.0              |
| <code>startTime</code>              | String   | The earliest start time for the group appointments to be retrieved. If not provided, it defaults to the current time of the request. | Optional             | 61.0              |

## Group Chatter Settings Input

Group Chatter settings input.

### Root XML tag

```
<groupChatterSettings>
```

### Properties

A user's Chatter settings.

| Name                        | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Available Version |
|-----------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <code>emailFrequency</code> | String | <p>The frequency with which a group member receives email from a group. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>EachPost</code></li> <li>• <code>DailyDigest</code></li> <li>• <code>WeeklyDigest</code></li> <li>• <code>Never</code></li> </ul> <p>In communities, the <code>Email on every post</code> option is disabled after more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to <code>Daily digests</code>.</p> | 27.0              |

## Group Information Input

Chatter group information input.

## JSON

```
{
  "text" : "Post questions about the API.",
  "title" : "API Questions"
}
```

## Properties

| Name  | Type   | Description                                                                                                               | Available Version |
|-------|--------|---------------------------------------------------------------------------------------------------------------------------|-------------------|
| text  | String | The text in the "Information" section of the group. HTML is not supported. The maximum length is 4000 characters (bytes). | 28.0              |
| title | String | The title in the "Information" section of the group. The maximum length is 240 characters (bytes).                        | 28.0              |

|-----------------------|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| announcement          | String                                  | An announcement ID.<br><br>An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.                                                                                                                                                              | 31.0              |
| canHaveChatterGuests  | Boolean                                 | <code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .                                                                                                                                                                               | 29.0              |
| description           | String                                  | The "Description" section of the group                                                                                                                                                                                                                                                                                                                           | 29.0              |
| information           | <a href="#">Group Information Input</a> | The "Information" section of the group. If the group is private, the "Information" section is visible only to members. The "Description" section is visible to everyone.                                                                                                                                                                                         | 28.0              |
| isArchived            | Boolean                                 | <code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                                                                       | 29.0              |
| isAutoArchiveDisabled | Boolean                                 | <code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                                             | 29.0              |
| isBroadcast           | Boolean                                 | <code>true</code> if only group owners and managers can create posts in the group, <code>false</code> otherwise. Defaults to <code>false</code> .                                                                                                                                                                                                                | 36.0              |
| name                  | String                                  | The name of the group                                                                                                                                                                                                                                                                                                                                            | 29.0              |
| owner                 | String                                  | The ID of the group owner. This property is available for PATCH requests only.                                                                                                                                                                                                                                                                                   | 29.0              |
| visibility            | String                                  | Group visibility type. One of the following values: <ul style="list-style-type: none"> <li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li>• <code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li>• <code>Unlisted</code>—Reserved for future use.</li> </ul> | 29.0              |

|-------------------------|--------------------------------------------------|-------------------------------------------------------------------------------|----------------------|-------------------|
| holdFOCapacity Requests | <a href="#">Hold FO Capacity Request Input[]</a> | List of requests to hold fulfillment order capacity at one or more locations. | Required             | 55.0              |

# Hold FO Capacity Request Input

Request to hold fulfillment order capacity at one or more locations.

Root XML tag

```
<holdFOCapacityRequestInput>
```

JSON example

```
{
  "capacityRequests": [
    {
      "actionRequestId" : "FOCapacityInteractionId1",
      "locationId": "LOC-1"
    },
    {
      "actionRequestId" : "FOCapacityInteractionId2",
      "locationId": "LOC-1"
    },
    {
      "actionRequestId" : "FOCapacityInteractionId3",
      "locationId": "LOC-2"
    }
  ],
  "allOrNothing": false
}
```

**Properties**

| Name             | Type                                     | Description                                                                                                                                                                                               | Required or Optional | Available Version |
|------------------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| allOrNothing     | Boolean                                  | Controls whether a single failed request cancels all other requests in the list ( <i>true</i> ) or whether some requests can succeed if others fail ( <i>false</i> ). The default value is <i>false</i> . | Optional             | 55.0              |
| capacityRequests | <a href="#">Capacity Request Input[]</a> | List of requests to hold fulfillment order capacity. Each request is for one fulfillment order at one location.                                                                                           | Required             | 55.0              |

## Import Configuration Input

Configuration input for a product import operation.

**Root XML tag**

```
<importConfiguration>
```

**JSON example**

```
{
  "importConfiguration": {
    "importSource": {
      "contentVersionId": "069RM0000008F4FYAU"
    },
    "importSettings": {
      "category": {
        "productCatalogId": "0ZSRM00000004Fk4AI"
      },
      "media": {
        "cmsWorkspaceId": "0ZuRM00000000FcZ0AE"
      },
      "price": {
        "pricebookAliasToIdMapping": {
          "original": "01sRM000004aArJYAU",
          "sales": "01sRM000004aArIYAU",
          "wintersales": "01sRM000004aArKYAU"
        }
      },
      "entitlement": {
        "defaultEntitlementPolicyId": "1CeRM00000003o40AA"
      }
    }
  }
}
```

**Properties**

| Name           | Type                            | Description                                                            | Required or Optional                                                                                                              | Available Version |
|----------------|---------------------------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|-------------------|
| importSettings | <a href="#">Import Settings</a> | Settings applicable to all product rows in a product import .csv file. | Required if you specify media-related, entitlement-related, price-related, or category-related column headings in your .csv file. | 54.0              |
| importSource   | <a href="#">Import Source</a>   | Specifies a product import .csv file for a product import operation.   | Required                                                                                                                          | 54.0              |

      }
    },
    "entitlement": {
      "defaultEntitlementPolicyId": "1CeRM00000003o40AA"
    }
  }
}
```

```

    }
  }
}

```

**Properties**

| Name        | Type                                       | Description                                          | Required or Optional                                                                                                                                                                                                      | Available Version |
|-------------|--------------------------------------------|------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| category    | <a href="#">Category Settings Input</a>    | Category settings for a product import operation.    | Required for a global import if you specify one or more category-related column headings in your .csv file. For store imports, if you don't specify a category, import uses the default catalog for the store.            | 54.0              |
| entitlement | <a href="#">Entitlement Settings Input</a> | Entitlement settings for a product import operation. | Required for a global import if you specify one or more entitlement-related column headings in your .csv file. For store imports, if you don't specify an entitlement, import uses the default entitlement for the store. | 54.0              |
| media       | <a href="#">Media Settings Input</a>       | Media settings for a product import operation.       | Required for a global import if you specify one or more media-related column headings in your .csv file. For store imports, if you don't specify a CMS workspace, import uses the default CMS workspace for the store.    | 54.0              |
| price       | <a href="#">Price Settings Input</a>       | Price settings for a product import operation.       | Required for a global import if you specify one or more price-related column headings in                                                                                                                                  | 54.0              |

| Name     | Type                                    | Description                                                                                                                                                                                                    | Required or Optional                                                                                                | Available Version |
|----------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|-------------------|
|          |                                         |                                                                                                                                                                                                                | your .csv file. For store imports, if you don't specify a price, import uses the default price books for the store. |                   |
| webstore | <a href="#">Webstore Settings Input</a> | Webstore to associate with an asynchronous product import job. If no webstore is specified, the imported products are made globally available. If webstore is included, the import is for the specified store. | Optional; used only for asynchronous import jobs                                                                    | 57.0              |

## Import Source Input

Specify a product import .csv file for a product import operation.

### Root XML tag

```
<importSource>
```

### JSON example

```
{
  "importSource": {
    "contentVersionId": "069RM0000008F4FYAU"
  }
}
```

### Properties

| Name             | Type   | Description                                                                                                                                                                                                                                                                                                                           | Required or Optional                   | Available Version |
|------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|-------------------|
| contentVersionId | String | Upload the .csv file to <a href="#">Salesforce Files</a> . To get the content version ID, view the file details in the Salesforce Files UI. The second-to-last part of the URL is the content version ID. If you upload the file using the <a href="#">User Files Connect API</a> , the API response includes the content version ID. | Required if sampleData isn't specified | 54.0              |

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional                         | Available Version |
|------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|-------------------|
| sampleData | String | Sample .csv file to import. Values are: <ul style="list-style-type: none"> <li>• B2BSampleData—B2B sample data set.</li> <li>• Camera—Camera store sample data set.</li> <li>• Coffee—Coffee store sample data set.</li> <li>• Hardware—Hardware store sample data set.</li> <li>• NorthernTrail—Outdoor goods store sample data set.</li> <li>• NorthernTrailLarge—Larger outdoor goods store sample data set.</li> <li>• Simple—Two-product sample data set.</li> </ul> | Required if contentVersionId isn't specified | 54.0              |

## Include Search Rule Collection Input

Include search rules input collection information of a webstore.

### Root XML tag

```
<searchResultsRules>
```

### JSON example

```
{
  "searchResultsRules" : [
    {
      "type" : "Include",
      "ruleDefinition" : ["decaffeinated", "decaf"],
      "locales" : ["en_US"]
    },
    {
      "type" : "Include",
      "ruleDefinition" : ["dog", "puppy"],
      "locales" : ["en_US"]
    },
    {
      "type" : "Include",
      "ruleDefinition" : ["wintercoat", "jacket", "coat"],
      "locales" : ["en_US"]
    }
  ]
}
```

```
}
]
}
```

**Properties**

| Name               | Type                                        | Description                                 | Required or Optional | Available Version |
|--------------------|---------------------------------------------|---------------------------------------------|----------------------|-------------------|
| searchResultsRules | <a href="#">Include Search Rule Input[]</a> | A collection of include search rule inputs. | Required             | 58.0              |

## Include Search Rule Input

Include search rule input.

**Root XML tag**

```
<searchResultsRules>
```

**JSON example**

```
{
  "type" : "Include",
  "ruleDefinition" : ["decaffeinated", "decaf"],
  "locales" : ["en_US"]
}
```

**Properties**

| Name           | Type   | Description                                                                                                                                                                                                             | Required or Optional | Available Version |
|----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| type           | String | Type of search rule. Value is: <ul style="list-style-type: none"><li>• <b>Include</b>—When a term in a query matches any term in a ruleDefinition, Commerce Search returns results for all terms in the list.</li></ul> | Required             | 58.0              |
| ruleDefinition | String | Comma-separated list of terms that the include search rule applies to. Valid number of unique strings is from 2 through 5.                                                                                              | Required             | 58.0              |
| locales        | String | Comma-separated list of up to 10 locales that the include search rule applies to.                                                                                                                                       | Required             | 58.0              |

## Inner Ensure Funds Async Input

ID of an Invoice and ID of the associated OrderSummary.

**Root XML tag**

```
<innerEnsureFundsAsyncInput>
```

**JSON example**

```
[
  {
    "invoiceId" "3ttxx00000000001",
    "orderSummaryId": "10sxx00000000001"
  }
]
```

**Properties**

| Name               | Type    | Description                                                                                                                                                                                                                                         | Required or Optional | Available Version |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| invoiceId          | String  | ID of the Invoice to ensure funds for.                                                                                                                                                                                                              | Required             | 56.0              |
| isOrderSummaryUsed | Boolean | If true, the reserved balance amount is used for the Order Summary to fund the invoice. If not enough reserved balance amount, any available balance that isn't reserved by another Order Summary is used. If false, any available balance is used. | Optional             | 59.0              |
| orderSummaryId     | String  | ID of the OrderSummary associated with the Invoice.                                                                                                                                                                                                 | Required             | 56.0              |

**SEE ALSO:**

## Invite Collection Input

Invitation collection input.

**Root XML tag**

```
<inviteCollection>
```

**JSON example**

```
{
  "invitees" : {
    "emails": [
      "emailaddress1@internaldomain.com",
      "emailaddress2@externaldomain.com"
    ]
  },
  "message" : "Join this group to participate in the discussion about your favorite feature."
}
```

**Properties**

| Name     | Type     | Description                                        | Required or Optional | Available Version |
|----------|----------|----------------------------------------------------|----------------------|-------------------|
| invitees | String[] | List of email addresses to send the invitation to. | Required             | 39.0              |
| message  | String   | Message to include in the invitation.              | Optional             | 39.0              |

## Invoice Configuration Override Input

Input representation of the additional configuration settings to specify whether the generation of payment schedules and payment schedule items must be skipped.

**JSON example**

```
{
  "configurationOverrides": {
    "paymentExclusionReason": "Not applicable.",
    "shouldExcludePayment": true
  }
}
```

**Properties**

| Name                       | Type    | Description                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| payment<br>ExclusionReason | String  | The reason for the exclusion of the payment for the invoice.                                                                                                                                                                                         | Optional             | 63.0              |
| shouldExclude<br>Payment   | Boolean | Indicates whether to exclude the payment during invoice generation and skip creating the payment schedules and payment schedule items for the invoice ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> . | Optional             | 63.0              |

## Invoice Input

Input representation of the details of the billing schedule.

**JSON example**

```
{
  "accountId": "001SG00000mYtRWYA0",
  "action": "Posted",
  "billingScheduleIds": [
    "44bSG000000CVeMYAW"
  ],
  "billingTransactionId": "801SG00000mYtaXYAS",
}
```

```

"correlationId": null,
"invoiceDate": "2024-01-12",
"targetDate": "2024-01-12"
}

```

### Properties

| Name                   | Type                                                     | Description                                                                                                                                                               | Required or Optional                                                                                           | Available Version |
|------------------------|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|-------------------|
| accountId              | String                                                   | ID of the account record to create the invoices for.                                                                                                                      | Required if the <code>billingScheduleIds</code> or <code>billingTransactionId</code> property isn't specified. | 63.0              |
| action                 | String                                                   | Type of invoice to be created. Valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Posted</li> </ul>                                              | Required                                                                                                       | 62.0              |
| billingScheduleIds     | String[]                                                 | List of billing schedule IDs that's used to create the invoices. You can specify a maximum of 200 billing schedules.                                                      | Required if the <code>accountId</code> or <code>billingTransactionId</code> property isn't specified.          | 62.0              |
| billingTransactionId   | String                                                   | ID of the billing transaction record, which is the order ID, to create the invoices for.                                                                                  | Required if the <code>accountId</code> or <code>billingScheduleIds</code> property isn't specified.            | 63.0              |
| configurationOverrides | <a href="#">Invoice API Configuration Override Input</a> | Additional configuration details for generating an invoice. These details specify whether the generation of payment schedules and payment schedule items must be skipped. | Optional                                                                                                       | 63.0              |
| correlationId          | String                                                   | Property that's tagged against the published <code>InvoiceProcessedEvent</code> event, if specified.                                                                      | Optional                                                                                                       | 62.0              |
| invoiceDate            | String                                                   | Stamping date of the invoice in ISO 8601 format.                                                                                                                          | Required                                                                                                       | 62.0              |

| Name       | Type   | Description                                                                                      | Required or Optional | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------|----------------------|-------------------|
| targetDate | String | Date in ISO 8601 format used to decide the billing periods that are included to create invoices. | Required             | 62.0              |

## Invoice To Pay Input

Invoice for a fee.

### Root XML tag

```
<invoiceToPay>
```

### JSON example

```
{
  .."invoiceId": "inVR000000000JNIAY"
}
```

### Properties

| Name      | Type   | Description                  | Required or Optional | Available Version |
|-----------|--------|------------------------------|----------------------|-------------------|
| invoiceId | String | ID of the invoice for a fee. | Required             | 56.0              |

## Item Arrange Input

Instructions to arrange a cart item into a delivery group.

### Root XML tag

```
<cart>
```

### JSON example

```
{
  "arrangements": [
    {
      "deliveryGroupId": "0a7xx000000004rAAA",
      "cartItemId": "0a9xx000000004rAAA",
      "quantity": "5"
    }
  ]
},
```

**Properties**

| Name              | Type                                   | Description                                                      | Required or Optional | Available Version |
|-------------------|----------------------------------------|------------------------------------------------------------------|----------------------|-------------------|
| cartItemId        | String                                 | ID of the cart item.                                             | Optional             | 60.0              |
| deliveryAddress   | <a href="#">Checkout Address Input</a> | Address data used for the delivery address.                      | Optional             | 60.0              |
| deliveryAddressId | String                                 | ID of the contact pint address used to set the delivery address. | Optional             | 60.0              |
| deliveryGroupId   | String                                 | ID of the delivery group.                                        | Optional             | 60.0              |
| deliveryGroupName | String                                 | Name of the delivery group.                                      | Optional             | 60.0              |
| productId         | String                                 | ID of the product to create a new cart item for.                 | Optional             | 60.0              |
| quantity          | String                                 | Quantity of the cart item.                                       | Optional             | 60.0              |

## Item Arrangements Input

Arrangement of cart items into delivery groups. Includes instructions for one or more cart items.

**Root XML tag**

```
<cart>
```

**JSON example**

```
{
  "arrangements": [
    {
      "deliveryGroupId": "0a7xx000000004rAAA",
      "cartItemId": "0a9xx000000004rAAA",
      "quantity": "5"
    },
    {
      "deliveryGroupId": "0a7xx000000007dAAY",
      "cartItemId": "0a9xx000000005yAAY",
      "quantity": "0"
    }
  ]
}
```

**Properties**

| Name         | Type                               | Description                                                     | Required or Optional | Available Version |
|--------------|------------------------------------|-----------------------------------------------------------------|----------------------|-------------------|
| arrangements | <a href="#">Item Arrange Input</a> | Set of instructions to arrange cart items into delivery groups. | Optional             | 59.0              |

## Item Quantity Input

Input representation of an item and its quantity.

### Root XML tag

```
<itemQuantity>
```

### Properties

| Name           | Type   | Description                    | Required or Optional | Available Version |
|----------------|--------|--------------------------------|----------------------|-------------------|
| externalItemId | String | ID of the external item.       | Required             | 58.0              |
| quantity       | Double | Quantity of the external item. | Required             | 58.0              |

## Item Reference Input

Input representation of the item reference. Products and categories are supported for item reference by a promotion.

### JSON example

```
[
  {
    "id": "01tSB0000002p01YAA",
    "itemReferenceType": "Product",
    "name": "Alpine Energy Drink Chai Post 0.5L PET - 6 pack",
    "operatorType": "EQUALS_TO",
    "value": "EnergyDrink"
  }
]
```

### Properties

| Name                  | Type   | Description                                                                                                                                                                  | Required or Optional | Available Version |
|-----------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id                    | String | ID of the product or category.                                                                                                                                               | Required             | 62.0              |
| itemReference<br>Type | String | Item reference type. Possible values are: <ul style="list-style-type: none"><li>• Category</li><li>• Price</li><li>• Product</li><li>• StandardShippingRate</li></ul>        | Required             | 62.0              |
| name                  | String | Name of the product or category.                                                                                                                                             | Required             | 62.0              |
| operatorType          | String | Type of operator for the item reference. Possible values are: <ul style="list-style-type: none"><li>• EqualTo</li><li>• GreaterThan</li><li>• GreaterThanOrEqualTo</li></ul> | Required             | 62.0              |

| Name  | Type   | Description                                                                                                          | Required or Optional | Available Version |
|-------|--------|----------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|       |        | <ul style="list-style-type: none"><li>• LessThan</li><li>• LessThanOrEqualTo</li><li>• NotEqualTo</li></ul>          |                      |                   |
| value | String | Value of the item referenced. For example, for Price in the itemReferenceType property, this would be a price value. | Required             | 62.0              |

## Knowledge Article View Stat Input

Knowledge article view stat input.

### Root XML tag

```
<knowledgeArticleViewStat>
```

### JSON example

```
{
  "articleOrVersionId": "ka230000000PCiy"
}
```

### Properties

| Name               | Type   | Description                                                                                                                                                                                          | Required or Optional | Available Version |
|--------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| articleOrVersionId | String | ID of the knowledge article or knowledge article version to increase the view count by one.<br><br>If you provide the ID of a knowledge article version, the parent article view count is increased. | Required             | 48.0              |

## Lead Input

Lead input.

### Root XML tag

```
<lead>
```

### JSON example

```
{
  "lead": {
    "firstName": "Rachel",
    "lastName": "Adams",
    "phone": "012-345-6789",
  }
}
```

```
{
  "email": "rachel.adams@jpmc.com",
  "company": "Salesforce",
  "extendedFields": []
}
```

**Properties**

| Name           | Type                                    | Description           | Required or Optional | Available Version |
|----------------|-----------------------------------------|-----------------------|----------------------|-------------------|
| company        | String                                  | Lead's company.       | Optional             | 48.0              |
| email          | String                                  | Lead's email address. | Optional             | 48.0              |
| extendedFields | <a href="#">Extended Fields Input[]</a> | Custom fields.        | Optional             | 48.0              |
| firstName      | String                                  | Lead's first name.    | Optional             | 48.0              |
| lastName       | String                                  | Lead's last name.     | Required             | 48.0              |
| phone          | String                                  | Lead's phone number.  | Optional             | 48.0              |

## Lightning Model Editor Config Input

Input for lightning model type editor configuration.

**Properties**

| Name   | Type   | Description                                                                                               | Required or Optional | Available Version |
|--------|--------|-----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| target | String | Editor configuration target for lightning model type. Valid value is <code>LightningDesktopGenAi</code> . | Optional             | 64.0              |

## Lightning Model Renderer Config Input

Input for lightning model type renderer configuration.

**Properties**

| Name         | Type    | Description                                                                                                                   | Required or Optional | Available Version |
|--------------|---------|-------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| maxViewDepth | Integer | Maximum depth for sub-view definitions. Valid values are from 0 to 10. You can specify a value only when <code>subView</code> | Optional             | 64.0              |

| Name   | Type   | Description                                                                                                                                                                  | Required or Optional | Available Version |
|--------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|        |        | Definitions is set to <code>true</code> . If unspecified and <code>subView</code> Definitions is set to <code>true</code> , all view definitions are expanded without limit. |                      |                   |
| target | String | Renderer configuration target for lightning model types. Valid value is <code>LightningDesktopGenAi</code> .                                                                 | Optional             | 64.0              |

## Lightning Model Types Input

Input for lightning model types.

**JSON example**

```
{
  "language": "en_US",
  "typeConfigs": [
    {
      "descriptor": "lightningType/lightning__textType",
      "schemaConfig": {
        "subSchemaDefinitions": true
      },
      "editorConfig": {
        "target": "LightningDesktopGenAi"
      }
    }
  ]
}
```

```
    "rendererConfig": {
      "target": "LightningDesktopGenAi"
    },
    {
      "descriptor": "apexClassType/c__Hotel",
      "schemaConfig": {
        "subSchemaDefinitions": true
      },
      "editorConfig": {
        "target": "LightningDesktopGenAi"
      },
      "rendererConfig": {
        "target": "LightningDesktopGenAi"
      }
    },
    {
      "descriptor": "apexClassType/c__FlightBookingAgent$Flight",
      "schemaConfig": {
        "subSchemaDefinitions": true
      },
      "editorConfig": {
        "target": "LightningDesktopGenAi"
      },
      "rendererConfig": {
        "target": "LightningDesktopGenAi"
      }
    }
  ]
}
```

Properties

| Name        | Type                                           | Description                                                                                                                                                                                                              | Required or Optional | Available Version |
|-------------|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| language    | String                                         | Language or locale code, such as es or en_US, to retrieve the title and description of a type. If unspecified, the logged-in user's language is used. The fallback language is English in case translations don't exist. | Optional             | 64.0              |
| typeConfigs | <a href="#">Lightning Model Types Config[]</a> | List of lightning model types configurations.                                                                                                                                                                            | Required             | 64.0              |

# Line Adjustment Input

Line adjustment input.

**JSON example**

```
{
  "id": "0ahxx00000003UC",
  "type": "Promotional",
  "amount": "-5"
}
```

**Properties**

| Name   | Type   | Description                                                                                                                                                                     | Required or Optional | Available Version |
|--------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| amount | String | Adjustment amount.                                                                                                                                                              | Required             | 58.0              |
| id     | String | Adjustment ID.                                                                                                                                                                  | Required             | 58.0              |
| type   | String | Type of tax adjustment. Values are: <ul style="list-style-type: none"><li>Promotional – Promotional type tax adjustment.</li><li>Tiered – Tiered type tax adjustment.</li></ul> | Required             | 58.0              |

## Link Capability Input

Create or update a link attached to a feed element.

**Root XML tag**

```
<linkCapability>
  <url>https://www.example.com</url>
  <urlName>Example</urlName>
</linkCapability>
```

**JSON example**

```
{
  "url": "https://www.example.com",
  "urlName": "Example"
}
```

**Properties**

| Name    | Type   | Description       | Required or Optional | Available Version |
|---------|--------|-------------------|----------------------|-------------------|
| url     | String | URL of the link.  | Required             | 32.0              |
| urlName | String | Name of the link. | Optional             | 32.0              |

## List Current Share Collection Input

Shares to associate with a list.

### JSON example

```
{"currentListShares": ["00GD00000000izfKAA", "00GD00000000izfKAA", "00GD00000000izfKAA"]}
```

### Properties

| Name              | Type     | Description                                                                                           | Required or Optional | Available Version |
|-------------------|----------|-------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| currentListShares | String[] | List of API names or 15-character IDs that identify the groups or roles with which to share the list. | Required             | 44.0              |

## Location Availability Input

The available quantity of a product at an inventory location.

### Root XML tag

```
<locationAvailabilityInput>
```

### Properties

| Name                | Type   | Description                                          | Required or Optional | Available Version |
|---------------------|--------|------------------------------------------------------|----------------------|-------------------|
| externalReferenceId | String | The external reference ID of the inventory location. | Optional             | 51.0              |
| quantity            | Double | The available quantity of the product.               | Required             | 51.0              |
| stockKeepingUnit    | String | The Stock Keeping Unit of the product.               | Required             | 51.0              |

## Location Input

Inventory location data used to calculate shipping distance.

### Root XML tag

```
<locationInput>
```

### Properties

| Name               | Type   | Description                       | Required or Optional | Available Version |
|--------------------|--------|-----------------------------------|----------------------|-------------------|
| countryCode        | String | The country code of the location. | Required             | 51.0              |
| locationIdentifier | String | The identifier of the location.   | Required             | 51.0              |
| postalCode         | String | The postal code of the location.  | Required             | 51.0              |

## Long List Input

List of Long values.

### Properties

| Name   | Type   | Description                       | Required or Optional | Available Version |
|--------|--------|-----------------------------------|----------------------|-------------------|
| values | Long[] | List of Long values to filter on. | Optional             | 63.0              |

## Managed Content Body Input

Input representation for the body of a piece of managed content.

### JSON example

```
"nodeMap" : {
  "bannerImage": {
    "source": {
      "type": "imageReference",
      "ref": {
        "contentKey": "MCZOCY2AM5PFBADN5UDRB53TLXR4"
      }
    }
  },
  "featuredEvent": {
    "source": {
      "type": "imageReference",
      "ref": {
        "contentKey": "MCZOCY2AM5PFBADN5UDRB53TLXR4"
      }
    }
  },
  "excerpt": "this is test except",
  "body": "<p>Test body</p>"
}
```

### Properties

| Name    | Type   | Description                          | Required or Optional | Available Version |
|---------|--------|--------------------------------------|----------------------|-------------------|
| nodeMap | Object | Body of the managed content version. | Required             | 60.0              |

# Managed Content Channel Create

Input body to create a managed content channel.

## Root XML tag

```
<ManagedContentChannelCreateRepresentation>
```

## JSON example

```
{
  "name": "New Channel",
  "targetId": "0DBxx0000004ExEGAU",
  "type": "Community"
}
```

## Properties

| Name                       | Type    | Description                                                                                                                                                                                                                                                           | Required or Optional                                                | Available Version |
|----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|-------------------|
| cacheControlMaxAge         | Long    | Cache control max age value in seconds.                                                                                                                                                                                                                               | Optional                                                            | 62.0              |
| domain                     | String  | ID or name of the domain assigned to the public channel.                                                                                                                                                                                                              | Optional                                                            | 62.0              |
| isDedicatedContentDelivery | Boolean | Specifies whether the channel has off-core dedicated content delivery enabled ( <b>true</b> ) or not ( <b>false</b> ). Orgs hosted on Hyperforce use off-core dedicated content delivery to deliver content in public channels with high performance and low latency. | Optional                                                            | 63.0              |
| isDomainLocked             | Boolean | Specifies whether the domain is locked and can't be changed ( <b>true</b> ) or not ( <b>false</b> ).                                                                                                                                                                  | Optional                                                            | 62.0              |
| isSearchable               | Boolean | Specifies whether the text contents of the channel are searchable ( <b>true</b> ) or not ( <b>false</b> ).                                                                                                                                                            | Optional                                                            | 62.0              |
| mediaCacheControlMaxAge    | Long    | Media cache control max age value in seconds.                                                                                                                                                                                                                         | Optional                                                            | 62.0              |
| name                       | String  | Name of the managed content channel.                                                                                                                                                                                                                                  | Required                                                            | 62.0              |
| targetId                   | String  | ID of the target associated with the managed content channel.                                                                                                                                                                                                         | Required for all channel types except <b>Public Unauthenticated</b> | 62.0              |

| Name | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| type | String | Type of managed content channel. Values are: <ul style="list-style-type: none"><li>CloudToCloud—Cloud-to-Cloud integrated channel.</li><li>Community—Experience Cloud site channel.</li><li>ConnectedApp—Channel served by a connected app.</li><li>PublicUnauthenticated—Public channel. All published content is publicly available.</li><li>UserPermission—Channel backed by a system permission. All published content is available only to users with the permission.</li></ul> | Required             | 62.0              |

## Managed Content Channel Update

Input body to update a managed content channel.

### Root XML tag

```
<ManagedContentChannelUpdateRepresentation>
```

### JSON example

```
{
  "name": "New Channel Name"
}
```

### Properties

| Name                       | Type    | Description                                                                                                                                                                     | Required or Optional | Available Version |
|----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cacheControlMaxAge         | Long    | Cache control max age value in seconds.                                                                                                                                         | Optional             | 62.0              |
| domain                     | String  | ID or name of the domain assigned to the public channel.                                                                                                                        | Optional             | 62.0              |
| isDedicatedContentDelivery | Boolean | Specifies whether the channel has off-core dedicated content delivery enabled ( <b>true</b> ) or not ( <b>false</b> ). Orgs hosted on Hyperforce use off-core dedicated content | Optional             | 63.0              |

| Name                    | Type    | Description                                                                                                | Required or Optional                                         | Available Version |
|-------------------------|---------|------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|-------------------|
|                         |         | delivery to deliver content in public channels with high performance and low latency.                      |                                                              |                   |
| isDomainLocked          | Boolean | Specifies whether the domain is locked and can't be changed ( <b>true</b> ) or not ( <b>false</b> ).       | Optional                                                     | 62.0              |
| isSearchable            | Boolean | Specifies whether the text contents of the channel are searchable ( <b>true</b> ) or not ( <b>false</b> ). | Optional                                                     | 62.0              |
| mediaCacheControlMaxAge | Long    | Media cache control max age value in seconds.                                                              | Optional                                                     | 62.0              |
| name                    | String  | Name of the managed content channel.                                                                       | Required                                                     | 62.0              |
| targetId                | String  | ID of the target associated with the managed content channel.                                              | Required for all channel types except Public Unauthenticated | 62.0              |

## Managed Content Provider Instance Input

Create a managed content provider instance.

### Root XML tag

```
<ManagedContentProviderInput>
```

### JSON example

```
{
  "instanceKey" : "https://xxxxxx.com",
  "isDefault" : "true",
  "name" : "Bynder-Brand-1",
  "providerLightningComponentId" : "106xxxxxxxxxxxx"
}
```

### Properties

| Name                         | Type    | Description                                                                                                 | Required or Optional | Available Version |
|------------------------------|---------|-------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| instanceKey                  | String  | Provider instance key.                                                                                      | Required             | 65.0              |
| isDefault                    | Boolean | Specifies whether the instance is the default instance ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 65.0              |
| name                         | String  | Name of the provider instance.                                                                              | Required             | 65.0              |
| providerLightningComponentId | String  | ID of the provider lightning component.                                                                     | Required             | 65.0              |

## Managed Content Publish Input

Managed content publish.

### Root XML tag

```
<ManagedContentPublishInput>
```

**JSON example**

```
{
  "description": "Test Description",
  "contentIds": ["20YRM0000000CPi2AM"]
}
```

**Properties**

| Name                     | Type     | Description                                                                                                                                                                                                                                                                                    | Required or Optional                   | Available Version |
|--------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|-------------------|
| contentIds               | String[] | IDs of content to publish. All variants of the content are published.                                                                                                                                                                                                                          | Required if variantIds isn't specified | 55.0              |
| contextContentSpaceId    | String   | ID of the context workspace. If specified, content from other workspaces is published if it is shared to the specified workspace. If unspecified, the context workspace is derived from the content's origin workspace. All content in the request should belong to the same origin workspace. | Optional                               | 61.0              |
| description              | String   | Description for publish action.                                                                                                                                                                                                                                                                | Optional                               | 55.0              |
| includeContentReferences | Boolean  | Specifies whether to include content references ( <code>true</code> ) or not ( <code>false</code> ).                                                                                                                                                                                           | Optional                               | 57.0              |
| variantIds               | String[] | IDs of variants to publish. All variants must be from the same content space.                                                                                                                                                                                                                  | Required if contentIds isn't specified | 57.0              |

## Managed Content Space Channel Input

Channel to add or remove from a managed content space.

**Root XML tag**

```
<ManagedContentSpaceChannelInputRepresentation>
```

**JSON example**

```
{
  "channelId": "0ap0000000000001",
  "operation": "Add"
}
```

Properties

| Name      | Type   | Description                                                                                                                                                                                                                | Required or Optional | Available Version |
|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| channelId | String | ID of the channel to add or remove from the managed content space.                                                                                                                                                         | Required             | 62.0              |
| operation | String | Operation to perform on the channel and managed content space. <ul style="list-style-type: none"><li>Add—Add a channel to a managed content space.</li><li>Remove—Remove a channel from a managed content space.</li></ul> | Required             | 62.0              |

## Managed Content Space Input

Create a managed content space.

**Root XML tag**

```
<ManagedContentSpaceInputRepresentation>
```

**JSON example**

```
{
  "name": "ShoeStoreWorkspace",
  "description": "To serve shoe store content.",
  "defaultLanguage": "en_US",
  "spacetype": "Content",
  "apiName": "shoe_store_workspace"
}
```

**Properties**

| Name            | Type   | Description                                                                                                              | Required or Optional | Available Version |
|-----------------|--------|--------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| apiName         | String | API name of the managed content space.                                                                                   | Optional             | 64.0              |
| defaultLanguage | String | Default language of the managed content space.                                                                           | Optional             | 64.0              |
| description     | String | Description of the managed content space.                                                                                | Optional             | 64.0              |
| name            | String | Name of the managed content space.                                                                                       | Required             | 64.0              |
| spaceType       | String | Type of managed content space. Values are: <ul style="list-style-type: none"><li>• Content</li><li>• Marketing</li></ul> | Optional             | 64.0              |

## Managed Content Taxonomy Terms Input

Add or remove taxonomy term associations from managed content.

### Root XML tag

```
<taxonomyTermsUpdates>
```

### JSON example

```
{
  "termsToAdd" : [
    "15dxx000001X8UzBBJ",
    "15dxx000001X8UzBBJ",
    "15dxx000001X8UzDBK"
  ],
  "termsToRemove" : [
    "15dxx000001X8UzBCI"
  ]
}
```

### Properties

| Name       | Type     | Description                                                          | Required or Optional                      | Available Version |
|------------|----------|----------------------------------------------------------------------|-------------------------------------------|-------------------|
| termsToAdd | String[] | List of IDs of the taxonomy terms to associate with managed content. | Required if termsToRemove isn't specified | 63.0              |

| Name          | Type     | Description                                                                         | Required or Optional                                | Available Version |
|---------------|----------|-------------------------------------------------------------------------------------|-----------------------------------------------------|-------------------|
| termsToRemove | String[] | List of IDs of the taxonomy terms to remove their association with managed content. | Required if <code>termsToAdd</code> isn't specified | 63.0              |

## Managed Content Type Searchable Input

Update the searchable status of a managed content type.

### Root XML tag

```
<ManagedContentTypeSearchableInputRepresentation>
```

### JSON example

```
{
  "name": "Media",
  "isSearchable": "false"
}
```

### Properties

| Name         | Type    | Description                                                                                                                                           | Required or Optional | Available Version |
|--------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isSearchable | Boolean | Specifies whether to set the managed content type to searchable ( <code>true</code> ) or not ( <code>false</code> ).                                  | Required             | 49.0              |
| name         | String  | Developer name of the managed content type. In version 63.0 and later, specify the fully qualified name for content types that are package-installed. | Required             | 49.0              |

## Managed Content Unpublish Input

Managed content unpublish.

### Root XML tag

```
<ManagedContentUnPublishInput>
```

### JSON example

```
{
  "description": "Test Description",
  "contentIds": ["20YRM0000000CPi2AM"]
}
```

**Properties**

| Name                  | Type     | Description                                                                                                                                                                                                                                                                                      | Required or Optional                   | Available Version |
|-----------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|-------------------|
| contentIds            | String[] | IDs of content to unpublish. All variants of the content are unpublished.                                                                                                                                                                                                                        | Required if variantIds isn't specified | 55.0              |
| contextContentSpaceId | String   | ID of the context workspace. If specified, content from other workspaces is unpublished if it is shared to the specified workspace. If unspecified, the context workspace is derived from the content's origin workspace. All content in the request should belong to the same origin workspace. | Optional                               | 61.0              |
| description           | String   | Description for unpublish action.                                                                                                                                                                                                                                                                | Optional                               | 55.0              |
| variantIds            | String[] | IDs of variants to unpublish. All variants must be from the same content space.                                                                                                                                                                                                                  | Required if contentIds isn't specified | 57.0              |

## Managed Content Variant Input

Input used to create a managed content variant.

**JSON example**

```
{
  "managedContentKeyOrId": "MCWWQJDO2BUZAX7FITHQVAGIASAE",
  "language": "fr",
  "title": "French title",
  "urlName": "my_url_name",
  "contentBody" : {
    "excerpt": "French excerpt",
    "body": "French body"
  }
}
```

**Properties**

| Name                  | Type                | Description                                                                       | Required or Optional | Available Version |
|-----------------------|---------------------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| contentBody           | Map<String, Object> | Body of the managed content variant.                                              | Required             | 58.0              |
| language              | String              | Language of the managed content variant.                                          | Required             | 58.0              |
| managedContentKeyOrId | String              | Managed content key or ID of the content associated to the variant to be created. | Required             | 58.0              |

| Name    | Type   | Description                                             | Required or Optional | Available Version |
|---------|--------|---------------------------------------------------------|----------------------|-------------------|
| title   | String | Title of the managed content variant.                   | Optional             | 58.0              |
| urlName | String | URL name of the managed content variant within the org. | Optional             | 58.0              |

## Managed Content Variant Update Input

Managed content variant update.

### Root XML tag

```
<managedContentVariantUpdateInputRepresentation>
```

### JSON example for version 60.0 and later

```
{
  "title": "Title of Document",
  "urlName": "test-url",
  "contentBody" : {
    "bannerImage": {
      "source": {
        "type": "imageReference",
        "ref": {
          "contentKey": "MCZOCY2AM5PFBADN5UDRB53TLXR4"
        }
      }
    },
    "excerpt": "this is test excerpt",
    "body": "<p>Test body</p>"
  }
}
```

### JSON example for version 54.0–59.0

```
{
  "title": "My Updated Title",
  "urlName": "my_updated_url_name",
  "contentBody": {
    "bannerImage": "MCZOCY2AM5PFBADN5UDRB53TLXR4",
    "featuredEvent": "MCZOCY2AM5PFBADN5UDRB53TLXR4",
    "excerpt": "this is my updated excerpt",
    "body": "<p>Test updated body</p>"
  }
}
```

### Properties

| Name    | Type   | Description                              | Required or Optional | Available Version |
|---------|--------|------------------------------------------|----------------------|-------------------|
| apiName | String | API name of the managed content variant. | Optional             | 63.0              |

| Name        | Type                                                                                                             | Description                                             | Required or Optional | Available Version |
|-------------|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|----------------------|-------------------|
| contentBody | <a href="#">Managed Content Body Input</a> in version 60.0 and later<br>Map<String, Object> in version 54.0–59.0 | Body of the managed content variant.                    | Optional             | 54.0              |
| title       | String                                                                                                           | Title of the managed content variant.                   | Optional             | 54.0              |
| urlName     | String                                                                                                           | URL name of the managed content variant within the org. | Optional             | 54.0              |

## Managed Social Account Setup Input

Data required to create a managed social account.

### Root XML tag

```
<managedSocialAccountSetup>
```

### JSON example

```
{
  "managedAccountId" : "exampleSocialStudioId",
  "socialNetwork" : "Facebook",
  "parentProviderUserId" : "exampleFacebookUserId",
  "providerUserId" : "exampleFacebookFanpageId",
  "status" : "Running"
}
```

### Properties

| Name                     | Type   | Description                                                                                                               | Required or Optional                                                                                                                  | Available Version |
|--------------------------|--------|---------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| managedAccountId         | String | ID for this managed account in a third-party system (for example, Social Studio).                                         | Required                                                                                                                              | 44.0              |
| parentProvider<br>UserId | String | User ID of the user on the social network if the managed social account is a fan page (for example, a Facebook fan page). | Required when using Facebook for POST requests to /connect/social-engagement/setup/managed-social-accounts. Otherwise it is optional. | 44.0              |

| Name           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                                                                                                                                                                                      | Available Version |
|----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| providerUserId | String | User ID of the user on the social network, or the Page ID of the page if the managed social account is a fan page.                                                                                                                                                                                                                                                                                                                                                                      | Required for POST requests to <code>/connect/social-engagement/setup/managed-social-accounts</code> .<br>Optional for PATCH requests to <code>/connect/social-engagement/setup/managed-social-accounts/<i>id</i></code> . | 44.0              |
| socialNetwork  | String | Social network that this account belongs to. Values are: <ul style="list-style-type: none"> <li>Facebook</li> <li>Twitter</li> <li>Instagram (if your org supports it)</li> <li>YouTube (if your org supports it)</li> </ul> To see which networks are available on your org, check with your Salesforce representative.                                                                                                                                                                | Required for POST requests to <code>/connect/social-engagement/setup/managed-social-accounts</code> .<br>Optional for PATCH requests to <code>/connect/social-engagement/setup/managed-social-accounts/<i>id</i></code> . | 44.0              |
| status         | String | Status of this managed social account. Values are: <ul style="list-style-type: none"> <li>Running—Posts for this social account are being sent to your org.</li> <li>Stopped—Posts for this social account aren't being sent to your org.</li> </ul> Use this field to start and stop inbound activity for a given social account. Defaults to <code>Running</code> for a Social Customer Service Starter/Pro tenant; defaults to <code>Stopped</code> for a Full Social Studio tenant. | Optional                                                                                                                                                                                                                  | 44.0              |

## Managed Topic Input

A managed topic.

### Root XML tag

```
<managedTopic>
```

JSON example using `recordId`

This example creates a managed topic from an existing standard topic (using the `recordId` of the standard topic). It also creates a topic hierarchy by assigning a parent topic with the `parentId`.

```
{
  "managedTopicType": "Navigational",
  "parentId": "0mtR000000001KLIAY",
  "recordId": "0TOD000000000cwk"
}
```

JSON example using `name`

This example creates a new managed topic by name and creates a topic hierarchy by assigning a parent topic with the `parentId`.

```
{
  "name": "Child Topic",
  "managedTopicType": "Navigational",
  "parentId": "0mtR000000001KLIAY"
}
```

Properties

| Name             | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |

## Managed Topic Position Collection Input

A collection of relative positions of managed topics.

### Root XML tag

```
<managedTopicPositionCollection>
```

### JSON example

```
{
  "managedTopicPositions" : [
    {
      "managedTopicId" : "0mtD0000000001aIAA",
      "position" : "0"
    },
    {
      "managedTopicId" : "0mtD0000000002qIAA",
      "position" : "2"
    }
  ]
}
```

```

    ]
  }

```

**Properties**

| Name                  | Type                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required or Optional | Available Version |
|-----------------------|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| managedTopicPositions | <a href="#">Managed Topic Position Input[]</a> | <p>Collection of managed topic position request bodies. This collection can include Featured and Navigational managed topics and doesn't have to include all managed topics.</p> <p>If you don't include all managed topics in managedTopicPositions, the managed topics are reordered by respecting the positions indicated in managedTopicPositions. Any managed topics that aren't included in managedTopicPositions are pushed down to the next available position. See <a href="#">Reorder managed topics example</a>.</p> | Required             | 32.0              |

**Reorder managed topics example**

If you have these managed topics:

| Managed Topic | Position |
|---------------|----------|
| ManagedTopicA | 0        |
| ManagedTopicB | 1        |
| ManagedTopicC | 2        |
| ManagedTopicD | 3        |
| ManagedTopicE | 4        |

And you reorder managed topics by including this information in Managed Topic Position Collection Input:

| Managed Topic | Position |
|---------------|----------|
| ManagedTopicD | 0        |
| ManagedTopicE | 2        |

The result is:

| Managed Topic | Position |
|---------------|----------|
| ManagedTopicD | 0        |
| ManagedTopicA | 1        |
| ManagedTopicE | 2        |
| ManagedTopicB | 3        |
| ManagedTopicC | 4        |

## Managed Topic Position Input

The relative position of a managed topic.

### Root XML tag

```
<managedTopicPosition>
```

### JSON example

```
{
  "managedTopicId" : "0mtD0000000001aIAA",
  "position" : "0"
}
```

### Properties

| Name           | Type    | Description                                                                                 | Required or Optional | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------|----------------------|-------------------|
| managedTopicId | String  | ID of existing managed topic.                                                               | Required             | 32.0              |
| position       | Integer | Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers. | Required             | 32.0              |

## MCS Folder Share Collection Update Input

Update the targets that a managed content space folder is shared with.

### Root XML tag

```
<mcsFolderShareCollectionUpdateInputRepresentation>
```

### JSON example

```
{
  "shareWith" : [
    {
      "targetId" : "0Zu0000000000001"
    },
  ],
}
```

```
{
  "targetId" : "0Zu0000000000002"
},
"unshareWith" : ["0Zu0000000000003", "0Zu0000000000004"]
}
```

Properties

| Name        | Type                                      | Description                                                                                                                                                                                                             | Required or Optional                    | Available Version |
|-------------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|-------------------|
| shareWith   | <a href="#">MCS Folder Share Input</a> [] | List of target IDs to share the managed content space folder with.<br><br>Supported target IDs are the root folder IDs of workspaces. To get the root folder ID of a space, use the <a href="#">CMS Space</a> resource. | Required if unshareWith isn't specified | 63.0              |
| unshareWith | String[]                                  | Comma-separated list of target IDs to unshare the managed content space folder with.                                                                                                                                    | Required if shareWith isn't specified   | 63.0              |

## Media Settings Input

Media settings applicable to all product rows in a product import .csv file.

**Root XML tag**

```
<mediaSettings>
```

**JSON example**

```
{
  "media": {
    "cmsWorkspaceId": "0ZuRM0000000Fcz0AE"
  }
}
```

Properties

| Name           | Type   | Description                                                                             | Required or Optional                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Available Version |
|----------------|--------|-----------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| cmsWorkspaceId | String | ID of a CMS workspace to associate with each product row in a product import .csv file. | Required if you specify one or more media-related column headings in your .csv file. If you are using the <a href="#">/mc/asset/import/ids</a> resource, and you specify one or more media-related columns in your .csv file, you must either specify a cmsWorkspaceId or use the default CMS workspace assigned to the store by specifying a webstoreId in the <a href="#">Webstore Settings Input</a> . If you specify both a cmsWorkspaceId and a webstoreId, the cmsWorkspaceId is used for the import. | 54.0              |

## Message Segment Input: Text

Plain inline text input. Text that looks like a link and is surrounded by space is converted into a link segment. Text prefixed with a hash and surrounded by square brackets (`[]`) is converted into a hash tag segment. Multiple word hash tags are available in version 28.0 and higher.

| Name | Type   | Description                  | Available Version |
|------|--------|------------------------------|-------------------|
| text | String | Plain text for this segment. | 23.0              |

| Name | Type   | Description         | Available Version |
|------|--------|---------------------|-------------------|
| type | String | Only value is Text. | 23.0              |

## Messaging Channel Input

Data required to create a Messaging channel.

### Root XML tag

```
<messagingChannel>
```

### JSON example

```
{
  "messageType": "Facebook",
  "messagingPlatformKey": "234420552541404",
  "externalAccountId": "394847389739"
}
```

### Properties

| Name                     | Type   | Description                                                                                               | Required or Optional | Available Version |
|--------------------------|--------|-----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| external<br>AccountId    | String | ID of an account of the external channel specified in messageType.                                        |                      | 57.0              |
| messageType              | String | Type of channel. Values are: <ul style="list-style-type: none"><li>Facebook—A Facebook message.</li></ul> | Required             | 44.0              |
| messaging<br>PlatformKey | String | ID of the Messaging channel on the external service. This value can be found in the GET response.         | Required             | 44.0              |

## Microbatching Ingestion Input

Microbatching ingestion input.

### JSON example

```
{
  "requestBody":
    {"LastName":"Inc","Description":"Lead for xyz", "Status":"New"},
  "processType":"LEAD_MS",
}
```

```
"groupBy": "sampleGroupByValue"
}
```

**Properties**

| Name               | Type                | Description                                                                                                                                                                                                                                                 | Required or Optional                                  | Available Version |
|--------------------|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|-------------------|
| contentDocumentIds | String[]            | List of content document IDs to create content document links between files and records.                                                                                                                                                                    | Optional                                              | 56.0              |
| groupBy            | String              | Grouping of records for batch creation. The default behavior groups records by network ID. For example, if you specify account ID, records are grouped by network ID and account ID. You can specify one value, and there isn't validation of the property. | Optional                                              | 55.0              |
| keyPrefix          | String              | Object keyPrefix that a specified processType is tied to in the microbatching framework.                                                                                                                                                                    | Required for GENERIC process type, otherwise optional | 55.0              |
| processType        | String              | Logical name of the flow in the microbatching framework, for example, LEAD_MS or GENERIC.                                                                                                                                                                   | Required                                              | 55.0              |
| requestBody        | Map<String, Object> | Map of input fields in name value pairs.                                                                                                                                                                                                                    | Required                                              | 55.0              |

## Moderation Flag Input

Moderation flag input.

**Root XML tag**

```
<moderationFlag>
```

**JSON**

```
{
  "note" : "Flagged by moderator as spam on 6.6.16.",
  "type" : "FlagAsSpam",
  "visibility" : "ModeratorsOnly"
}
```

**Properties**

| Name | Type   | Description                                      | Required or Optional | Available Version |
|------|--------|--------------------------------------------------|----------------------|-------------------|
| note | String | A note of up to 4,000 characters about the flag. | Optional             | 38.0              |

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                                    | Available Version |
|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|-------------------|
| type       | String | Type of moderation flag. <ul style="list-style-type: none"> <li>FlagAsInappropriate—Flag for inappropriate content.</li> <li>FlagAsSpam—Flag for spam.</li> </ul>                                                                                                                                                                                                       | Optional<br>If not specified, FlagAsInappropriate is the default value. | 38.0              |
| visibility | String | Visibility behavior of a flag for various user types. <ul style="list-style-type: none"> <li>ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul> | Optional                                                                | 30.0              |

## Multiple Ensure Funds Async Input

List of Invoices and the associated OrderSummaries.

### Root XML tag

```
<multipleEnsureFundsAsyncInput>
```

### JSON example

```
{
  "asyncInputs": [
    {
      "orderSummaryId": "10sxx00000000001",
      "invoiceId": "3ttxx00000000001"
    },
    {
      "orderSummaryId": "10sxx00000000002",
      "invoiceId": "3ttxx00000000002"
    }
  ]
}
```

**Properties**

| Name        | Type                                              | Description                                                             | Required or Optional | Available Version |
|-------------|---------------------------------------------------|-------------------------------------------------------------------------|----------------------|-------------------|
| asyncInputs | <a href="#">Inner Ensure Funds Async Input</a> [] | List of Invoices to ensure funds for and the associated OrderSummaries. | Required             | 56.0              |

## Multiple Fulfillment Order Input

List of inputs for creating fulfillment orders.

**Root XML tag**

```
<multipleFulfillmentOrderInput>
```

**Properties**

| Name              | Type                                       | Description                                                     | Required or Optional | Available Version |
|-------------------|--------------------------------------------|-----------------------------------------------------------------|----------------------|-------------------|
| fulfillmentOrders | <a href="#">Fulfillment Order Input</a> [] | Each element contains the data to create one fulfillment order. | Required             | 50.0              |

## Multiple Fulfillment Order Invoices Input

The FulfillmentOrders to create Invoices for.

**Root XML tag**

```
<multipleFulfillmentOrderInvoicesInput>
```

**JSON example**

```
{
  "fulfillmentOrderIds": ["0a3xx00000000W1", "0a3xx00000000W2", "0a3xx00000000W3"]
}
```

**Properties**

| Name                | Type     | Description                                              | Required or Optional | Available Version |
|---------------------|----------|----------------------------------------------------------|----------------------|-------------------|
| fulfillmentOrderIds | String[] | List of IDs of FulfillmentOrders to create Invoices for. | Required             | 52.0              |

## Mute Capability Input

Mute or unmute a feed element.

**Root XML tag**

```
<mutedCapability>
```

**JSON example**

```
{
  "isMutedByMe": true
}
```

**Properties**

| Name        | Type    | Description                                                                                             | Required or Optional | Available Version |
|-------------|---------|---------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isMutedByMe | Boolean | Indicates whether the feed element is muted for the context user. Default value is <code>false</code> . | Required             | 35.0              |

## Named Credential Callout Options Input

Named credential callout options input.

**JSON example**

```
{
  "allowMergeFieldsInBody": false,
  "allowMergeFieldsInHeader": true,
  "generateAuthorizationHeader": true
}
```

**Properties**

| Name                        | Type    | Description                                                                                                     | Required or Optional | Available Version |
|-----------------------------|---------|-----------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| allowMergeFieldsInBody      | Boolean | Specifies whether to allow merge fields in the HTTP body ( <code>true</code> ) or not ( <code>false</code> ).   | Required             | 58.0              |
| allowMergeFieldsInHeader    | Boolean | Specifies whether to allow merge fields in the HTTP header ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 58.0              |
| generateAuthorizationHeader | Boolean | Specifies whether to generate an authorization header ( <code>true</code> ) or not ( <code>false</code> ).      | Required             | 58.0              |

| calloutUrl          | String                                                 | URL of the named credential in a callout.                                                                                            | Required                              | 58.0              |
| customHeaders       | <a href="#">Credential Custom Header Input[]</a>       | Custom HTTP headers.                                                                                                                 | Optional                              | 58.0              |
| description         | String                                                 | Description of the named credential.                                                                                                 | Optional                              | 64.0              |
| developerName       | String                                                 | Named credential developer name.                                                                                                     | Required for POST<br>Optional for PUT | 58.0              |
| externalCredentials | <a href="#">External Credential Input[]</a>            | External credentials used by the named credential. In version 58.0 and later, only one external credential is supported.             | Required                              | 58.0              |
| masterLabel         | String                                                 | Named credential label.                                                                                                              | Required                              | 58.0              |
| networkConnection   | <a href="#">Network Connection Input</a>               | PrivateConnect outbound network connection.                                                                                          | Optional depending on type            | 58.0              |
| parameters          | <a href="#">Named Credential Parameter Input[]</a>     | Named credential parameters.                                                                                                         | Optional                              | 58.0              |
| type                | String                                                 | Type of named credential. Values are: <ul style="list-style-type: none"> <li>• PrivateEndpoint</li> <li>• SecuredEndpoint</li> </ul> | Required                              | 58.0              |

## Named Credential Parameter Input

Named credential parameter input.

**JSON example**

```
{
  "parameterName": "NamespaceOne",
  "parameterType": "AllowedManagedPackageNamespaces",
  "parameterValue": "namespace1",
  "parameterDescription": "This is a description"
}
```

**Properties**

| Name                 | Type   | Description                                                                                                                                                                                 | Required or Optional | Available Version |
|----------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id                   | String | ID of the parameter.                                                                                                                                                                        | Optional             | 58.0              |
| parameterDescription | String | Description of the parameter.                                                                                                                                                               | Optional             | 58.0              |
| parameterName        | String | Name of the parameter.                                                                                                                                                                      | Required             | 58.0              |
| parameterType        | String | Type of named credential parameter.<br>Values are: <ul style="list-style-type: none"><li>• AllowedManagedPackageNamespaces</li><li>• ClientCertificate</li><li>• ConnectionStatus</li></ul> | Required             | 58.0              |
| parameterValue       | String | Value of the parameter.                                                                                                                                                                     | Required             | 58.0              |

## Network Connection Input

Network connection input.

**JSON example**

```
{
  "developerName": "SampleOutboundConnection"
}
```

**Properties**

| Name          | Type   | Description                               | Required or Optional | Available Version |
|---------------|--------|-------------------------------------------|----------------------|-------------------|
| developerName | String | Developer name of the network connection. | Required             | 58.0              |
| namespace     | String | Namespace of the network connection.      | Optional             | 58.0              |

## New User Audience Criteria Input

Criteria for the new members type of custom recommendation audience.

**Root XML tag**

```
<criteria>
```

**JSON example**

```
{
  "value": "30",
  "type": "MaxDaysInCommunity"
}
```

**Properties**

| Name  | Type   | Description                                                                                                                                                                                        | Required or Optional | Available Version |
|-------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| value | Double | The maximum number of days since a user became a site member. For example, if you specify <i>30</i> , anyone who became a site member in the last 30 days is included in the new members audience. | Required             | 36.0              |
| type  | String | Value must be <i>MaxDaysInCommunity</i> .                                                                                                                                                          | Required             | 36.0              |

## Next Best Action Strategy Input

A recommendation strategy.

**Root XML tag**

```
<nbaStrategyInput>
```

**JSON example**

```
{
  "strategyContext": {
    "key1": "val1",
    "key2": "val2"
  },
  "contextRecordId": "a01B0000001G2nFIAS",
  "maxResults": 5
}
```

**Properties**

| Name            | Type   | Description                                                                                                  | Required or Optional | Available Version |
|-----------------|--------|--------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| contextRecordId | String | ID of the context record. For example, if the next best action is on a case detail page, the ID of the case. | Optional             | 45.0              |

| Name            | Type                | Description                                                                                                                                                    | Required or Optional | Available Version |
|-----------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| maxResults      | Integer             | Maximum number of results. Valid values are from 1 to 25. The default is 3.                                                                                    | Optional             | 45.0              |
| strategyContext | Map<String, String> | Variable and value mappings for the strategy.                                                                                                                  | Optional             | 45.0              |
| debugTrace      | Boolean             | Specifies whether to return trace and debug information in the response ( <b>true</b> ) or not ( <b>false</b> ). If unspecified, the default is <b>false</b> . | Optional             | 45.0              |

## Notification App Setting Input

Notification app setting.

### Root XML tag

```
<notificationAppSetting>
```

### JSON example

```
{
  "enabled": "false"
}
```

### Properties

**Note:** Starting in API version 64.0, the Notification App Setting Input request body supports external client apps, in addition to connected apps. Mobile, push notification, and notification plugins for external client apps (beta) are available in API version 64.0.

| Name          | Type    | Description                                                                                                                                                                | Required or Optional | Available Version |
|---------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| applicationId | String  | ID of the connected app or external client app. If not specified and called from a connected app or external client app, defaults to the app information from the session. | Optional             | 47.0              |
| enabled       | Boolean | Specifies whether to enable delivery of the notification type for the connected app or external client app ( <b>true</b> ) or not ( <b>false</b> ).                        | Optional             | 47.0              |

## Notification Collection Input

Collection of notifications to update.

### Root XML tag

```
<notifications>
```

**JSON example**

```
{
  "before": "2019-06-25T18:24:31.000Z",
  "read" : "true"
}
```

**Properties**

| Name            | Type     | Description                                                                                                                                                                                                                                                                     | Required or Optional                          | Available Version |
|-----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|-------------------|
| before          | String   | Notifications occurring before this ISO 8601 formatted date string to mark as read, unread, seen, or unseen. If unspecified, the default is the current date and time.                                                                                                          | Optional                                      | 49.0              |
| notificationIds | String[] | List of up to 50 notification IDs to mark as read, unread, seen, or unseen.<br><br>This property can't be used with the <code>before</code> property.                                                                                                                           | Optional                                      | 49.0              |
| read            | Boolean  | Marks notifications as read ( <code>true</code> ) or unread ( <code>false</code> ).<br><br>If notifications are marked as read, they are also marked as seen. If you set <code>read</code> to <code>true</code> and <code>seen</code> to <code>false</code> , you get an error. | Required if <code>seen</code> isn't specified | 49.0              |
| seen            | Boolean  | Marks notifications as seen ( <code>true</code> ) or unseen ( <code>false</code> ).                                                                                                                                                                                             | Required if <code>read</code> isn't specified | 49.0              |

## Notification Input

Notification to update.

**Root XML tag**

```
<notification>
```

**JSON example**

```
{ "read" : "true" }
```

**Properties**

| Name | Type    | Description                                                                                                                                                                              | Required or Optional                          | Available Version |
|------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|-------------------|
| read | Boolean | Marks a notification as read ( <code>true</code> ) or unread ( <code>false</code> ).<br><br>If a notification is marked as read, it is also marked as seen. If you set <code>read</code> | Required if <code>seen</code> isn't specified | 49.0              |

| Name | Type    | Description                                                                          | Required or Optional                          | Available Version |
|------|---------|--------------------------------------------------------------------------------------|-----------------------------------------------|-------------------|
|      |         | to <code>true</code> and seen to <code>false</code> , you get an error.              |                                               |                   |
| seen | Boolean | Marks a notification as seen ( <code>true</code> ) or unseen ( <code>false</code> ). | Required if <code>read</code> isn't specified | 49.0              |

## Notification Member Input

Notification member input.

### Root XML tag

```
<notificationMember>
```

### JSON example

```
{
  "notificationFrequency": "EachPost"
}
```

### Properties

| Name                      | Type   | Description                                                                                                           | Required or Optional | Available Version |
|---------------------------|--------|-----------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| notification<br>Frequency | String | Frequency with which a user receives email. In version 38.0 and later, <code>EachPost</code> is the only valid value. | Required             | 38.0              |

## Notification Setting Input

Notification setting input.

### Root XML tag

```
<notificationTargetSetting>
```

### JSON example

```
{
  "desktopEnabled": "false"
}
```

### Properties

| Name           | Type    | Description                                                                                                                                                               | Required or Optional | Available Version |
|----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| desktopEnabled | Boolean | Specifies whether to enable desktop delivery for the notification type ( <code>true</code> ) or not ( <code>false</code> ). If not specified, the setting doesn't change. | Optional             | 47.0              |

| Name          | Type    | Description                                                                                                                                                              | Required or Optional | Available Version |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| emailEnabled  | Boolean | Specifies whether to enable email delivery for the notification type ( <code>true</code> ) or not ( <code>false</code> ). If not specified, the setting doesn't change.  | Optional             | 47.0              |
| mobileEnabled | Boolean | Specifies whether to enable mobile delivery for the notification type ( <code>true</code> ) or not ( <code>false</code> ). If not specified, the setting doesn't change. | Optional             | 47.0              |
| slackEnabled  | Boolean | Reserved for future use.                                                                                                                                                 | Optional             | 52.0              |

## OAuth Credential Auth URL Input

OAuth authentication flow input.

### Root XML tag

```
<OAuthCredentialAuthUrl>
```

### JSON example

```
{
  "externalCredential": "salesforceOAuthExternalCredential",
  "principalName": "defaultNamedPrincipal",
  "principalType": "NamedPrincipal",
  "returnUrl": "lightning/setup/SetupOneHome/home"
}
```

### Properties

| Name               | Type   | Description                                                                                                                                                                                            | Required or Optional                                                  | Available Version |
|--------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|-------------------|
| externalCredential | String | Fully qualified developer name of the external credential.                                                                                                                                             | Required                                                              | 56.0              |
| principalName      | String | Name of the external credential named principal.                                                                                                                                                       | Required if <code>principalType</code> is <code>NamedPrincipal</code> | 56.0              |
| principalType      | String | Type of credential principal. Values are: <ul style="list-style-type: none"><li>• <code>AwsStsPrincipal</code></li><li>• <code>NamedPrincipal</code></li><li>• <code>PerUserPrincipal</code></li></ul> | Required                                                              | 56.0              |
| returnUrl          | String | Return URL to apply to the authentication URL.                                                                                                                                                         | Optional                                                              | 56.0              |

## Object Input

A graph node.

### Root XML tag

<object>

### JSON example

```
{
  "attributes": {
    "attributes": {
      "type": "Account"
    },
    "RecordTypeId": "012xx0000005zmmAAA",
    "Name": "John Smith",
    "Phone": "(111)-111-1111"
  },
  "referenceId": "refAccount"
},
```

### Properties

| Name        | Type                | Description                      | Required or Optional | Available Version |
|-------------|---------------------|----------------------------------|----------------------|-------------------|
| attributes  | Map<String, Object> | The properties of the node body. | Required             | 57.0              |
| referenceId | String              | The reference ID of the node.    | Required             | 57.0              |

## OCI Attribute Set Input

An eligibility attribute set.

### Root XML tag

<attributeSet>

### JSON example

```
{
  "records": [
    {
      "externalRefId": "7282822-9823-aaa",
      "futureStock": [
        {
          "expectedDate": "2019-08-24T21:13:00Z",

```

```
      "quantity": 10.25
    }
  ],
  "attributeSet": {
    "groupEligibilityExclusion": [
      "GroupA",
      "GroupB"
    ]
  },
  "locationIdentifier": "warehouse5",
  "onHand": 1200.35,
  "safetyStockCount": 12.45,
  "stockKeepingUnit": "sku123",
  "actionRequestId": "82251928-8863-488e-840b-2aebd10b57ba",
  "effectiveDate": "2019-07-24T21:13:00Z"
}
]
```

Properties

| Name                        | Type     | Description                                                                | Required or Optional | Available Version |
|-----------------------------|----------|----------------------------------------------------------------------------|----------------------|-------------------|
| groupEligibility Exclusions | String[] | List of group IDs that are excluded from aggregating the location and SKU. | Optional             | 62.0              |

OCI Batch Update Input

Details of one or more inventory records to update in a batch.

Root XML tag

```
<ociBatchUpdateInput>
```

JSON example

```
{
  "records": [
    {
      "externalRefId": "7282822-9823-aaa",
      "futureStock": [
        {
          "expectedDate": "2019-08-24T21:13:00Z",
          "quantity": 10.25
        }
      ],
      "attributeSet": {
        "groupEligibilityExclusion": [
          "GroupA",
          "GroupB"
        ]
      },
      "locationIdentifier": "warehouse5",
      "onHand": 1200.35,
```

```
{
  "safetyStockCount": 12.45,
  "stockKeepingUnit": "sku123",
  "actionRequestId": "82251928-8863-488e-840b-2aebd10b57ba",
  "effectiveDate": "2019-07-24T21:13:00Z"
}
```

#### Properties

| Name    | Type                                          | Description                                        | Required or Optional | Available Version |
|---------|-----------------------------------------------|----------------------------------------------------|----------------------|-------------------|
| records | <a href="#">OCI Batch Update Single Input</a> | Data for one inventory record in a list to update. | Required             | 62.0              |

## OCI Batch Update Single Input

Details of one inventory record to update in a batch update.

#### Root XML tag

```
<ociBatchUpdateSingleInput>
```

#### JSON example

```
{
  "externalRefId": "7282822-9823-aaa",
  "futureStock": [
    {
      "expectedDate": "2019-08-24T21:13:00Z",
      "quantity": 10.25
    }
  ],
  "attributeSet": {
    "groupEligibilityExclusion": [
      "GroupA",
      "GroupB"
    ]
  },
  "locationIdentifier": "warehouse5",
  "onHand": 1200.35,
  "safetyStockCount": 12.45,
  "stockKeepingUnit": "sku123",
  "actionRequestId": "82251928-8863-488e-840b-2aebd10b57ba",
  "effectiveDate": "2019-07-24T21:13:00Z"
}
```

#### Properties

| Name         | Type                                    | Description                     | Required or Optional | Available Version |
|--------------|-----------------------------------------|---------------------------------|----------------------|-------------------|
| attributeSet | <a href="#">OCI Attribute Set Input</a> | Inventory record attribute set. | Optional             | 62.0              |

| Name               | Type                                            | Description                                                                                   | Required or Optional | Available Version |
|--------------------|-------------------------------------------------|-----------------------------------------------------------------------------------------------|----------------------|-------------------|
| effectiveDate      | String                                          | Effective date of the update.                                                                 | Optional             | 62.0              |
| externalRefId      | String                                          | Unique code, reference, or identifier for the record used by external systems.                | Optional             | 62.0              |
| futureStock        | <a href="#">OCI Future Stock Single Input[]</a> | Inventory that is expected soon. Included in Available To Order.                              | Optional             | 62.0              |
| actionRequestId    | String                                          | Idempotent ID that identifies this request.                                                   | Required             | 62.0              |
| locationIdentifier | String                                          | Identifier of the location where the inventory is reserved.                                   | Required             | 62.0              |
| onHand             | Double                                          | Physical inventory available, not including Future Quantity.                                  | Optional             | 62.0              |
| safetyStockCount   | Double                                          | Inventory held in reserve that isn't included in Available To Order and Available To Fulfill. | Optional             | 62.0              |
| stockKeepingUnit   | String                                          | SKU of the product to update.                                                                 | Required             | 62.0              |

## OCI Create Reservation Input

Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.

### Root XML tag

```
<ociCreateReservationInput>
```

### Properties

| Name                      | Type                                                  | Description                                                                                                                                                                                                                                                                                                            | Required or Optional             | Available Version |
|---------------------------|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| actionRequestId           | String                                                | A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed. If the <code>OmnichannelInventoryService</code> class's <code>createReservation</code> method is called, the <code>actionRequestId</code> is used for the <code>reservationId</code> . | Required                         | 51.0              |
| allowPartial Reservations | Boolean                                               | When true, if the system can't create the entire reservation, then it attempts to create a partial reservation.                                                                                                                                                                                                        | Optional                         | 51.0              |
| createRecords             | <a href="#">OCI Create Reservation Single Input[]</a> | A list of product quantities and locations or location groups. The list can include up to 100 elements.                                                                                                                                                                                                                | At least one element is required | 51.0              |

| Name              | Type    | Description                                                                                                                                                        | Required or Optional | Available Version |
|-------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| expirationSeconds | Integer | A length of time in seconds. If the reservation isn't fulfilled within this amount of time after the reservationTime, then it expires. The maximum value is 14400. | Optional             | 51.0              |
| externalRefId     | String  | External reference ID.                                                                                                                                             | Optional             | 51.0              |
| reservationTime   | String  | The time at which to record the reservation. Example: 2020-07-24T21:13:00Z                                                                                         | Optional             | 51.0              |

## OCI Create Reservation Single Input

A quantity of a product and an Omnichannel Inventory location or location group at which to reserve it.

### Root XML tag

```
<ociCreateReservationSingle>
```

### Properties

| Name                               | Type   | Description                                                     | Required or Optional                                                           | Available Version |
|------------------------------------|--------|-----------------------------------------------------------------|--------------------------------------------------------------------------------|-------------------|
| <del>locationGroupIdentifier</del> | String | Identifier of the location group at which to reserve inventory. | Either locationGroupIdentifier or locationIdentifier is required, but not both | 51.0              |
| <del>locationIdentifier</del>      | String | Identifier of the location at which to reserve inventory.       | Either locationGroupIdentifier or locationIdentifier is required, but not both | 51.0              |
| quantity                           | Double | The quantity of the product to reserve.                         | Required                                                                       | 51.0              |
| stockKeepingUnit                   | String | The SKU of the product to reserve.                              | Required                                                                       | 51.0              |

## OCI Fulfill Reservation Input

A list of inventory reservations to fulfill.

### Root XML tag

```
<ociFulfillReservationInput>
```

**Properties**

| Name               | Type                                                   | Description                                                                | Required or Optional              | Available Version |
|--------------------|--------------------------------------------------------|----------------------------------------------------------------------------|-----------------------------------|-------------------|
| fulfillmentRecords | <a href="#">OCI Fulfill Reservation Single Input[]</a> | A list of inventory reservations. The list can include up to 100 elements. | At least one element is required. | 51.0              |
| reservationId      | String                                                 | The ID of the inventory reservation.                                       | Optional                          | 58.0              |

## OCI Fulfill Reservation Single Input

An inventory reservation to fulfill.

**Root XML tag**

```
<ociFulfillReservationSingle>
```

**Properties**

| Name               | Type   | Description                                                                                                                     | Required or Optional | Available Version |
|--------------------|--------|---------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actionRequestId    | String | A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed. | Required             | 51.0              |
| externalRefId      | String | The external reference ID of the location that's fulfilling the reservation.                                                    | Optional             | 51.0              |
| locationIdentifier | String | The identifier of the location that's fulfilling the reservation.                                                               | Required             | 51.0              |
| quantity           | Double | The quantity being fulfilled.                                                                                                   | Required             | 51.0              |
| reservationId      | String | The ID of the inventory reservation.                                                                                            | Optional             | 58.0              |
| stockKeepingUnit   | String | The SKU of the product being fulfilled.                                                                                         | Required             | 51.0              |

## OCI Future Stock Single Input

An expected future inventory restock for one product.

**Root XML tag**

```
<futureStockSingle>
```

**JSON example**

```
{
  "records": [
    {
      "externalRefId": "7282822-9823-aaa",
      "futureStock": [
```

```

    {
      "expectedDate": "2019-08-24T21:13:00Z",
      "quantity": 10.25
    }
  ],
  "attributeSet": {
    "groupEligibilityExclusion": [
      "GroupA",
      "GroupB"
    ]
  },
  "locationIdentifier": "warehouse5",
  "onHand": 1200.35,
  "stockKeepingUnit": 12.45,
  "sku": "sku123",
  "actionRequestId": "82251928-8863-488e-840b-2aebd10b57ba",
  "effectiveDate": "2019-07-24T21:13:00Z"
}
]
}

```

#### Properties

| Name         | Type   | Description                                 | Required or Optional | Available Version |
|--------------|--------|---------------------------------------------|----------------------|-------------------|
| expectedDate | String | Date when the future inventory is expected. | Required             | 62.0              |
| quantity     | Double | Quantity of the future inventory.           | Required             | 62.0              |

## OCI Get Inventory Availability Input

Details of a request to retrieve inventory availability.

### Root Tag

#### Root XML tag

```
<ociGetInventoryInput>
```

### REQUIRED: Choose ONE of these (Location Criteria)

| Name                    | Type   | Description                                                                                                                            | Required or Optional                                                                            | Available Version |
|-------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-------------------|
| locationGroupIdentifier | String | The External Reference of a location group to retrieve inventory availability data for. Specifying this value retrieves inventory data | Conditional; combine with stockKeepingUnit only. Can't combine with locationGroupIdentifiers or | 51.0              |

| Name                     | Type     | Description                                                                                             | Required or Optional                                                                                                                         | Available Version |
|--------------------------|----------|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
|                          |          | for all locations belonging to this group.                                                              | locationIdentifiers or stockKeepingUnits.                                                                                                    |                   |
| locationGroupIdentifiers | String[] | A list of up to 100 External References of location groups to retrieve inventory availability data for. | Conditional; combine with stockKeepingUnits only. Can't combine with stockKeepingUnit, locationGroupIdentifier or locationIdentifiers.       | 51.0              |
| locationIdentifiers      | String[] | A list of up to 100 External References of locations to retrieve inventory availability data for.       | Conditional; combine with stockKeepingUnits only. Can't combine with locationGroupIdentifier, locationGroupIdentifiers or stockKeepingUnits. | 51.0              |

## REQUIRED: Choose ONE of these (Product SKU)

| Name              | Type     | Description                                                                                                                                                                                                                        | Required or Optional                              | Available Version |
|-------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-------------------|
| stockKeepingUnit  | String   | The SKU of a product to retrieve inventory availability data for. Specifying a SKU with no locations or location groups returns availability data for that SKU at all inventory locations that aren't assigned to location groups. | Conditional; can't combine with stockKeepingUnits | 51.0              |
| stockKeepingUnits | String[] | A list of up to 100 SKUs of products to retrieve inventory availability data for.                                                                                                                                                  | Conditional; can't combine with stockKeepingUnit  | 51.0              |

## Optional

| Name                   | Type    | Description                                                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |
|------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| includeRelatedProducts | Boolean | Specifies whether the returned inventory level includes variant products if the given product has variants. When set to <code>true</code> , only one product ID is accepted. There's a limit of 100 variant products. If the total of variants exceeds 100, no variants are included in the inventory level. | Optional             | 64.0              |
| useCache               | Boolean | Specifies whether to fetch the inventory data from the cache. The default value is <code>true</code> .                                                                                                                                                                                                       | Optional             | 51.0              |

## OCI Inventory Check Availability Input

Check inventory availability in either an individual location or group location. Check for available to fulfill, available to order, and on hand quantity information.

### Root XML tag

```
<InventoryCheckAvailabilityInput>
```

### JSON example - Locations

```
{
  "locations": [
    {
      "locationId": "131xx0000004FwPAAU",
      "includeInventoryLevel": false,
      "products": [
        {
          "product2Id": "01txx0000006i65AAA",
          "quantity": 10
        },
        {
          "product2Id": "01txx0000006i66AAA",
          "quantity": 11
        }
      ]
    },
    {
      "locationId": "131xx1234567FwSAAU",
      "includeInventoryLevel": false,
      "products": [
```

```

        {
          "product2Id": "01txx0000006i67AAA",
          "quantity": 100
        },
        {
          "product2Id": "01txx0000006i68AAA",
          "quantity": 400
        }
      ]
    },
    "inventoryDimension": "AvailableToOrder"
  }
}

```

### JSON example - Location Groups

```

{
  "locationGroups": [
    {
      "locationGroupId": "0ghxx000000001eAAA",
      "includeInventoryLevel": false,
      "products": [
        {
          "product2Id": "01txx0000006i65AAA",
          "quantity": 10
        },
        {
          "product2Id": "01txx0000006i66AAA",
          "quantity": 11
        }
      ]
    },
    {
      "locationGroupId": "0ghxx000000001dAAA",
      "includeInventoryLevel": false,
      "products": [
        {
          "product2Id": "01txx0000006i67AAA",
          "quantity": 100
        },
        {
          "product2Id": "01txx0000006i68AAA",
          "quantity": 400
        }
      ]
    }
  ],
  "inventoryDimension": "AvailableToOrder"
}

```

**Properties**

| Name               | Type                                                          | Description                                                                                                                                                                                                                                                                                                                                                       | Required or Optional                         | Available Version |

| inventoryDimension | String                                                        | Fulfillment option you want to check. <ul style="list-style-type: none"> <li>On Hand: Inventory available, not counting Future Inventory or Quantity Reserved.</li> <li>Available to Fulfill (ATF): Inventory that can be fulfilled now.</li> <li>Available to Order (ATO): Inventory that can be ordered. Default option if no dimension is selected.</li> </ul> | Optional                                     | 60.0              |
| locationGroups     | <a href="#">OCI Location Group Check Availability Input[]</a> | A list of inventory availability data for location groups.                                                                                                                                                                                                                                                                                                        | Required if locations isn't requested.       | 60.0              |
| locations          | <a href="#">OCI Location Check Availability Input[]</a>       | A list of inventory availability data for individual locations.                                                                                                                                                                                                                                                                                                   | Required if locationsGroups isn't requested. | 60.0              |

## OCI Location Check Availability Input

Information needed to check inventory availability at an individual location.

**Root XML tag**

```
<LocationCheckAvailabilityInput>
```

**JSON example**

```
{
  "locationId": "131xx0000004FwPAAU",
  "includeInventoryLevel": false,
  "products": [
    {
      "product2Id": "01txx0000006i65AAA",
      "quantity": 10
    },
    {
      "product2Id": "01txx0000006i66AAA",
      "quantity": 11
    }
  ]
}
```

**Properties**

| Name                             | Type                                                 | Description                    | Required or Optional | Available Version |
|----------------------------------|------------------------------------------------------|--------------------------------|----------------------|-------------------|
| <del>includeInventoryLevel</del> | Boolean                                              | Include inventory levels.      | Optional             | 60.0              |
| locationId                       | String                                               | Location ID.                   | Required             | 60.0              |
| products                         | <a href="#">OCI Product Check Availability Input</a> | List of products in inventory. | Required             | 60.0              |

## OCI Location Group Check Availability Input

Information needed to check inventory availability in a location group.

**Root XML tag**

```
<LocationGroupCheckAvailabilityInput>
```

**JSON example**

```
{
  "locationGroupId": "0ghxx000000001dAAA",
  "includeInventoryLevel": false,
  "products": [
    {
      "product2Id": "01txx00000006i67AAA",
      "quantity": 100
    },
    {
      "product2Id": "01txx00000006i68AAA",
      "quantity": 400
    }
  ]
}
```

**Properties**

| Name                             | Type                                                   | Description                    | Required or Optional | Available Version |
|----------------------------------|--------------------------------------------------------|--------------------------------|----------------------|-------------------|
| <del>includeInventoryLevel</del> | Boolean                                                | Include inventory levels.      | Optional             | 60.0              |
| locationGroupId                  | String                                                 | Location group ID.             | Required             | 60.0              |
| products                         | <a href="#">OCI Product Check Availability Input[]</a> | List of products in inventory. | Required             | 60.0              |

## OCI Product Check Availability Input

Information needed to check a product's availability.

**Root XML tag**

```
<ProductCheckAvailabilityInput>
```

**JSON example**

```
{
  "product2Id": "01txx0000006i67AAA",
  "quantity": 100
}
```

**Properties**

| Name       | Type   | Description         | Required or Optional | Available Version |
|------------|--------|---------------------|----------------------|-------------------|
| product2Id | String | Product ID.         | Required             | 60.0              |
| quantity   | Double | Number of products. | Required             | 60.0              |

## OCI Release Reservation Input

Details of one or more inventory reservations to release.

**Root XML tag**

```
<ociReleaseReservationInput>
```

**Properties**

| Name           | Type                                                   | Description                                                                         | Required or Optional              | Available Version |
|----------------|--------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------|-------------------|
| releaseRecords | <a href="#">OCI Release Reservation Single Input[]</a> | List of inventory reservations to release. The list can include up to 100 elements. | At least one element is required. | 51.0              |
| reservationId  | String                                                 | The ID of the inventory reservation.                                                | Optional                          | 58.0              |

## OCI Release Reservation Single Input

A single inventory reservation to release.

**Root XML tag**

```
<ociReleaseReservationSingle>
```

**Properties**

| Name            | Type   | Description                                                                                                                     | Required or Optional | Available Version |
|-----------------|--------|---------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| actionRequestId | String | A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed. | Required             | 51.0              |
| externalRefId   | String | The external reference ID of the location or location group that has the reservation.                                           | Optional             | 51.0              |

| Name                               | Type   | Description                                                    | Required or Optional                                                        | Available Version |
|------------------------------------|--------|----------------------------------------------------------------|-----------------------------------------------------------------------------|-------------------|
| <del>locationGroupIdentifier</del> | String | The identifier of the location group that has the reservation. | The identifier for a location or location group, but not both, is required. | 51.0              |
| locationIdentifier                 | String | The identifier of the location that has the reservation.       | The identifier for a location or location group, but not both, is required. | 51.0              |
| quantity                           | Double | The quantity of reserved inventory to release.                 | Required                                                                    | 51.0              |
| reservationId                      | String | The ID of the inventory reservation.                           | Optional                                                                    | 58.0              |
| stockKeepingUnit                   | String | The SKU of the product to release.                             | Required                                                                    | 51.0              |

## OCI Transfer Reservation Input

A list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

### Root XML tag

```
<ociTransferReservationInput>
```

### Properties

| Name                              | Type                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Required or Optional              | Available Version |

# OCI Transfer Reservation Single Input

An inventory reservation transfer.

## Root XML tag

```
<ociTransferReservationSingle>
```

## Properties

| Name                              | Type    | Description                                                                                                                         | Required or Optional                                                                 | Available Version |
|-----------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|-------------------|
| actionRequestId                   | String  | A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.     | Required                                                                             | 51.0              |
| externalRefId                     | String  | The external reference ID of the location receiving the transfer.                                                                   | Optional                                                                             | 51.0              |
| <del>fromLocationIdentifier</del> | String  | The identifier of the location group sending the reservation.                                                                       | The identifier for a sending location or location group, but not both, is required   | 51.0              |
| <del>fromLocationIdentifier</del> | String  | The identifier of the location sending the reservation.                                                                             | The identifier for a sending location or location group, but not both, is required   | 51.0              |
| ignoreAvailabilityCheck           | Boolean | If true, force the transfer even if the receiving location doesn't have sufficient available inventory. The default value is false. | Optional                                                                             | 52.0              |
| quantity                          | Double  | The quantity of inventory being transferred.                                                                                        | Required                                                                             | 51.0              |
| reservationId                     | String  | The ID of the inventory reservation.                                                                                                | Optional                                                                             | 58.0              |
| stockKeepingUnit                  | String  | The SKU of the product being transferred.                                                                                           | Required                                                                             | 51.0              |
| <del>toLocationIdentifier</del>   | String  | The identifier of the location group receiving the reservation.                                                                     | The identifier for a receiving location or location group, but not both, is required | 51.0              |
| <del>toLocationIdentifier</del>   | String  | The identifier of the location receiving the reservation.                                                                           | The identifier for a receiving location or location group, but not both, is required | 51.0              |

## OCI Update Reservation Input

Data to update one or more Omnichannel Inventory item reservations.

### Properties

| Name                     | Type                                                   | Description                                                                                                                                                                     | Required or Optional             | Available Version |
|--------------------------|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| actionRequestId          | String                                                 | Unique and idempotent action request ID. Use in response data to identify which requests succeeded or failed.                                                                   | Required                         | 61.0              |
| allowPartialReservations | Boolean                                                | When true, if the system can't update the entire reservation, then it attempts to update a partial reservation.                                                                 | Optional                         | 61.0              |
| externalRefId            | String                                                 | External reference ID.                                                                                                                                                          | Optional                         | 61.0              |
| reservationId            | String                                                 | The ID of the inventory reservation.                                                                                                                                            |                                  | 61.0              |
| reservationTime          | String                                                 | The time the reservation was updated. Example: 2020-07-24T21:13:00Z.                                                                                                            | Optional                         | 61.0              |
| updateAllOtherRecords    | Boolean                                                | Controls whether a single failed request updates all other requests in the list (true) or whether some requests can succeed if others fail (false). The default value is false. | Optional                         | 61.0              |
| updateRecords            | <a href="#">OCI Update Reservation Single Input []</a> | A list of product quantities and locations or location groups. The list can have up to 100 elements.                                                                            | At least one element is required | 61.0              |

## OCI Update Reservation Single Input

Data to update one Omnichannel Inventory reservation item.

### Root XML tag

```
<ociUpdateReservationSingle>
```

### Properties

| Name                    | Type   | Description                                                       | Required or Optional                                                            | Available Version |
|-------------------------|--------|-------------------------------------------------------------------|---------------------------------------------------------------------------------|-------------------|
| locationGroupIdentifier | String | Identifier of the location group where the inventory is reserved. | Either locationGroupIdentifier or locationIdentifier are required, but not both | 61.0              |

| Name               | Type   | Description                                                 | Required or Optional                                                            | Available Version |
|--------------------|--------|-------------------------------------------------------------|---------------------------------------------------------------------------------|-------------------|
| locationIdentifier | String | Identifier of the location where the inventory is reserved. | Either locationGroupIdentifier or locationIdentifier are required, but not both | 61.0              |
| quantity           | Double | The quantity of the product to update.                      | Required                                                                        | 61.0              |
| stockKeepingUnit   | String | The SKU of the product to update.                           | Required                                                                        | 61.0              |

## Order By Input

Sort order for the search results.

### JSON example

```
{
  "field": "LastModifiedDate",
  "order": "Ascending",
  "orderNulls": "Firsts"
}
```

### Properties

| Name       | Type   | Description                                                                                                                                                                                                                    | Required or Optional | Available Version |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| field      | String | Field to order the results by.                                                                                                                                                                                                 | Optional             | 63.0              |
| order      | String | Order direction. Values are: <ul style="list-style-type: none"><li>Ascending</li><li>Descending</li></ul> Default value is <code>Ascending</code> .                                                                            | Optional             | 63.0              |
| orderNulls | String | Null value order. Values are: <ul style="list-style-type: none"><li><code>Firsts</code>—Null values are sorted first.</li><li><code>Lasts</code>—Null values are sorted last.</li></ul> Default value is <code>Firsts</code> . | Optional             | 63.0              |

## Order Item Summary Adjustment Collection Input

Collection of order item summaries.

**Root XML tag**

```
<orderItemSummaryCollectionInput>
```

**JSON example**

```
{
  "orderItemSummaries": [{
    "orderItemSummaryId": "10uxx00000000W0001"
  },
  {
    "orderItemSummaryId": "10uxx00000000W0054"
  }
]
```

**Properties**

| Name               | Type                                                   | Description                   | Required or Optional | Available Version |
|--------------------|--------------------------------------------------------|-------------------------------|----------------------|-------------------|
| orderItemSummaries | <a href="#">Order Item Summary Adjustment Input</a> [] | List of order item summaries. | Required             | 53.0              |

## Order Item Summary Adjustment Input

Order item summary.

**Root XML tag**

```
<orderItemSummary>
```

**JSON example**

```
{
  "orderItemSummaryId": "10uxx00000000W0001"
}
```

**Properties**

| Name               | Type   | Description                   | Required or Optional | Available Version |
|--------------------|--------|-------------------------------|----------------------|-------------------|
| orderItemSummaryId | String | ID of the order item summary. | Required             | 53.0              |

## Order Summary Adjustment Aggregates Async Input

Order summary IDs for calculating adjustment aggregates.

**Root XML tag**

```
<orderSummaryAdjustmentAggregatesAsyncInput>
```

**JSON example**

```
{
  "orderSummaryIds": ["10sxx0000004CDsCAM", "10sxx0000004CH6CAM"]
}
```

**Properties**

| Name            | Type     | Description                | Required or Optional | Available Version |
|-----------------|----------|----------------------------|----------------------|-------------------|
| orderSummaryIds | String[] | List of order summary IDs. | Required             | 55.0              |

## Order Summary Authorization Input

Input representation to authorize guest access for the requested order summary record.

**Root XML tag**

```
orderSummaryAuthorizationInput
```

### JSON example

```
{
  "email": "Ma*****@vi*****.info",
  "lastName": "Strosin",
  "orderSummaryRefNumber": "GJA4C-MUVBN-6ZT4P-V6CSB",
  "phoneNumber": "*****7740"
}
```

### Properties

| Name                  | Type   | Description                                                     | Required or Optional | Available Version |
|-----------------------|--------|-----------------------------------------------------------------|----------------------|-------------------|
| email                 | String | An email address of the guest user.                             | Required             | 64.0              |
| lastName              | String | The last name of the guest user.                                | Optional             | 64.0              |
| orderSummaryRefNumber | String | The order summary reference number of the order summary record. | Required             | 64.0              |
| phoneNumber           | String | The phone number of the guest user.                             | Required             | 64.0              |

## Order Summary Input

An order from which to create an OrderSummary. Optionally, you can specify OrderSummary-specific information such as its Status and whether it is managed in Salesforce Order Management.

### Root XML tag

```
<orderSummaryInput>
```

### JSON example

```

{
  "orderId": "801xx000003GbTgAAK"
}

```

### Properties

| Name                | Type   | Description                                                                                                                         | Required or Optional | Available Version |
|---------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| businessModel       | String | The order's business model. It can have one of these values: <ul style="list-style-type: none"> <li>• B2B</li> <li>• B2C</li> </ul> | Optional             | 53.0              |
| externalReferenceId | String | Used internally to prevent duplicate records. This value is case-sensitive.                                                         | Optional             | 56.0              |

| Name               | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional | Available Version |
|--------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name               | String | Specifies an OrderNumber to assign to the order summary.                                                                                                                                                                                                                                                                                                                                                  | Optional             | 50.0              |
| orderId            | String | ID of the original order.                                                                                                                                                                                                                                                                                                                                                                                 | Required             | 48.0              |
| orderLifecycleType | String | <p>Specifies whether the order is managed in Salesforce Order Management or by an external system. It can have one of these values:</p> <ul style="list-style-type: none"> <li>• <b>MANAGED</b>—Managed in Salesforce Order Management.</li> <li>• <b>UNMANAGED</b>—Managed by an external system.</li> </ul> <p>If no value is specified, the default is <b>MANAGED</b>.</p>                             | Optional             | 49.0              |
| sourceProcess      | String | <p>Describes the order process creating the OrderSummary. It can have one of these values:</p> <ul style="list-style-type: none"> <li>• <b>Exchange</b>—An Exchange process.</li> <li>• <b>OrderOnBehalf</b>—An Order on Behalf Of process.</li> <li>• <b>Standard</b>—Any process other than Exchange or Order on Behalf Of.</li> </ul> <p>If no value is specified, the default is <b>Standard</b>.</p> | Optional             | 57.0              |
| status             | String | Specifies a status to assign to the order summary. The value must match one of the picklist values on the Status field of the OrderSummary object.                                                                                                                                                                                                                                                        | Optional             | 50.0              |

## Order Summary Lookup Input

Order summary lookup input.

**Root XML tag**

&lt;orderSummaryLookupInput&gt;

JSON example

Here's an example where the request for registered buers include the order summary ID:

```
{
  "orderSummaryIdOrRefNumber": "10sxx0000004DypCAE"
}
```

Here's an example where the request for guest shoppers includes the order summary reference number and verification details:

```
{
  "orderSummaryIdOrRefNumber": "GJA4C-MUVBN-6ZT4P-V6CSB",
  "verification": {
    "lastName": "Strosin",
    "email": "Ma*****@vi*****.info",
    "phoneNumber": "*****7740"
  }
}
```

Properties

| Name                      | Type                                             | Description                                                                                                       | Required or Optional                                                                                    | Available Version |

## Order to Cart Input

Input for action adding an order to a cart.

**Root XML tag**

```
<orderToCartInput>
```

**JSON example**

```
{
  "cartStateOrId": "0a6xx0000000cwXAAQ"
}
```

**Properties**

| Name          | Type   | Description                                                                                                | Required or Optional | Available Version |
|---------------|--------|------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| cartStateOrId | String | Cart state (active or current) or the ID of the cart to which the products from an order are to be copied. | Required             | 57.0              |

## Payment Group Input

Payment group details associated with the request. Users can either request creation of a new ID or pass an ID.

**JSON example**

```
"paymentGroup": {
  "createPaymentGroup": "true",
  "sourceObjectId": "",
  "currencyIsoCode": "USD"
}
```

JSON Example

```
"paymentGroup": {
  "id": "PaymentGroupId"
}
```

Properties

| Name                | Type    | Description                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|---------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| createPayment Group | Boolean | Flag to indicate if payment group needs to be created.                                                                                                                                                                                                                                                                | Optional             | 48.0              |
| currencyIsoCode     | String  | Three-letter ISO 4217 currency code associated with the payment group record.                                                                                                                                                                                                                                         | Optional             | 48.0              |
| id                  | String  | If ID has a value, the payment capture is using an active PaymentGroup. If ID is null and other parameters have values, the payment capture will create a new payment group. If a payment group ID exists, currencyIsoCode and sourceObjectId parameters must be null, and createPaymentGroup can be absent or false. | Optional             | 48.0              |
| sourceObjectId      | String  | Order object ID for linking an order to a payment group. Provide an existing OrderId.                                                                                                                                                                                                                                 | Optional             | 48.0              |

Payment Info

Payment information about additional funds required for an order.

### Properties

| Name                    | Type     | Description                                                               | Required or Optional | Available Version |
|-------------------------|----------|---------------------------------------------------------------------------|----------------------|-------------------|
| lastPaymentGatewayLogId | String   | Last payment gateway log ID for the new order payment summary.            | Optional             | 60.0              |
| name                    | String   | Overrides the default name of the order payment summary created.          | Optional             | 60.0              |
| paymentAuthorizationId  | String   | Payment authorization ID to be used if needed to fund the exchange order. | Optional             | 60.0              |
| paymentIds              | String[] | Payment IDs for the new order payment summary.                            | Optional             | 60.0              |
| paymentMethodId         | String   | Payment method ID for the new order payment summary.                      | Optional             | 60.0              |

## Payment Intents Input

Payment intents input consumed to initiate a payment.

### JSON examples

Here's an example without saved payment method information:

```

{
  "amount": 8.99,
  "currencyIsoCode": "USD",
  "sourceObjectIds": [
    "0a6xx0000000cuvAAA"
  ],
  "paymentGatewayId": "{{paymentGatewayId}}",
  "paymentMethodType": "card",
  "payerAccountId": "001xx000003GYwy"
}

```

Here's an example with saved payment method information:

```
{
  "amount": "250",
  "applyDomainValidations": true,
  "currencyIsoCode": "USD",
  "sourceObjectIds": [
    "001xx000003Gmk3AAC"
  ],
  "paymentGatewayId": "0b0xx00000000w5AAA",
  "paymentMethodType": "us_bank_account",
  "payerAccountId": "001xx000003GYwy",
  "paymentMethod": {
    "referenceOwnerId": "001xx000003Gmk3AAC",
    "usageType": "OffSession",
    "isDefault": true
  }
}
```

### Properties

| Name                    | Type                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |

|                   |                                           |                                                                                                                                                                                                                                                       |                      | 51.0              |
| ipAddress         | String                                    | IP address of the client that made the request.                                                                                                                                                                                                       | Optional             | 51.0              |
| macAddress        | String                                    | MAC address of the client that made the request.                                                                                                                                                                                                      | Optional             | 51.0              |
| paymentGatewayId  | String                                    | ID of the payment gateway.                                                                                                                                                                                                                            | Required             | 51.0              |
| phone             | String                                    | Phone number of the client that initiated the request.                                                                                                                                                                                                | Optional             | 51.0              |

## Payment Token Input

Input to tokenize a credit card payment method for a Commerce store checkout.

### Root XML tag

```
<paymentTokenRequest>
```

### JSON example

```

{
  "cardPaymentMethod":{
    "cardHolderName":"John Doe",

```

```
{
  "cardNumber": "4242424242424242",
  "expiryMonth": "12",
  "expiryYear": "24",
  "cvv": "141",
  "cardType": "Visa"
}
```

### Properties

| Name              | Type                                                                      | Description                             | Required or Optional | Available Version |
|-------------------|---------------------------------------------------------------------------|-----------------------------------------|----------------------|-------------------|
| cardPaymentMethod | <a href="#">Card Payment Method</a><br><a href="#">Tokenization Input</a> | Credit card payment method to tokenize. | Required             | 55.0              |

## Photo Input

Describes a photo input.

### Root XML tag

```
<photo>
```

### JSON example

```
{
  "cropSize" : "120",
  "cropX" : "0",
  "cropY" : "0",
  "fileId" : "069D00000001IOh"
}
```

### Properties

| Name     | Type    | Description                                                                                                             | Required or Optional                                   | Available Version |
|----------|---------|-------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|-------------------|
| cropSize | Integer | The length, in pixels, of any edge of the crop square.                                                                  | Required to crop an uploaded file or an existing file. | 29.0              |
| cropX    | Integer | The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0). | Required to crop an uploaded file or an existing file. | 29.0              |
| cropY    | Integer | The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).  | Required to crop an uploaded file or an existing file. | 29.0              |
| fileId   | String  | 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB. | Required to choose an existing file.                   | 25.0              |

| Name                                                                                                                                                                                                   | Type    | Description                                                                      | Required or Optional | Available Version |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----------------------------------------------------------------------------------|----------------------|-------------------|
|  <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used. |         |                                                                                  |                      |                   |
| versionNumber                                                                                                                                                                                          | Integer | Version number of an existing file. If not provided, the latest version is used. | Optional             | 25.0              |

## Pin Capability Input

Pin or unpin a feed element to a feed.

**Root XML tag**

```
<pinCapability>
```

**JSON example**

```
{
  "entityId": "0D5B000000TW7uh",
  "isPinned": "true"
}
```

**Properties**

| Name     | Type    | Description                                                                                                                                                                                                                                     | Required or Optional | Available Version |
|----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| entityId | String  | ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed. | Required             | 41.0              |
| isPinned | Boolean | Specifies whether to pin ( <code>true</code> ) or unpin ( <code>false</code> ) the entity.                                                                                                                                                      | Required             | 41.0              |

## Poll Capability Input

Create or vote on a poll feed element.

To create a poll, use the [Feed Elements, Post and Search](#) resource. See [Post a Poll](#) for an example.

To vote on a poll, use the [Feed Elements Capability, Poll](#) resource.

**XML example for creating a poll**

```
<pollCapability>
  <pollChoices>
    <choice>Monday</choice>
    <choice>Tuesday</choice>
  </pollChoices>
</pollCapability>
```

**JSON example for creating a poll**

```
{
  "choices" : [
    "Monday", "Tuesday"
  ]
}
```

**JSON example for voting on a poll**

```
{
  "myChoiceId" : "09ATC000000011h2AA"
}
```

**Properties**

| Name       | Type     | Description                                                                              | Required or Optional          | Available Version |
|------------|----------|------------------------------------------------------------------------------------------|-------------------------------|-------------------|
| choices    | String[] | The choices used to create a new poll. You must specify 2–10 poll choices for each poll. | Required for creating a poll  | 32.0              |
| myChoiceId | String   | ID of an existing choice on the feed poll. Used to vote on an existing poll.             | Required for voting on a poll | 32.0              |

## Post Auth Input

Payment post authorization input consumed by payment post authorization service.

**Properties**

| Name      | Type   | Description                                                   | Required or Optional | Available Version |
|-----------|--------|---------------------------------------------------------------|----------------------|-------------------|
| accountId | String | ID of the account of the customer for the authorized payment. | Required             | 54.0              |

| Name             | Type                                                        | Description                                                                                                                                 | Required or Optional | Available Version |
|------------------|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| additionalData   | Map<String, String>                                         | Additional data from a payment request. Supports up to five key-value pairs. Each key and each value can contain up to 255 characters.      | Optional             | 54.0              |
| amount           | Double                                                      | Amount of the post authorization.                                                                                                           | Required             | 54.0              |
| comments         | String                                                      | Comments for payment post authorization. Maximum of 1000 characters.                                                                        | Optional             | 54.0              |
| currencyIsoCode  | String                                                      | Three-letter ISO 4217 currency code associated with the payment group record.                                                               | Optional             | 54.0              |
| effectiveDate    | String                                                      | Date that the payment post authorization occurs.                                                                                            | Required             | 54.0              |
| email            | String                                                      | Email of the client that initiated the request.                                                                                             | Optional             | 54.0              |
| idempotencyKey   | String                                                      | Idempotency key used for the payment request. Can be provided in the payload or the header, but not in both places at once.                 | Optional             | 54.0              |
| ipAddress        | String                                                      | IP address of the client that made the request.                                                                                             | Optional             | 54.0              |
| macAddress       | String                                                      | MAC address of the client that made the request.                                                                                            | Optional             | 54.0              |
| paymentGatewayId | String                                                      | Payment gateway that evaluates the post authorization.                                                                                      | Required             | 54.0              |
| paymentGroup     | <a href="#">Payment Group Input</a>                         | Payment group associated with or to be created for the request. Request must contain either a paymentGroupId or paymentGroup, but not both. | Required             | 54.0              |
| paymentMethod    | <a href="#">Post Authorization API Payment Method Input</a> | Payment method sent for the post authorization.                                                                                             | Required             | 54.0              |
| phone            | String                                                      | Phone number of the client that initiated the request.                                                                                      | Optional             | 54.0              |

## Post Authorization API Payment Method Input

Payment method input for post authorization.

**Properties**

| Name                     | Type                                             | Description                                                                                     | Required or Optional | Available Version |
|--------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------|----------------------|-------------------|
| address                  | <a href="#">Address Input</a>                    | Payment method address.                                                                         | Required             | 54.0              |
| alternativePaymentMethod | <a href="#">Alternative Payment Method Input</a> | Alternative payment method.                                                                     | Required             | 54.0              |
| id                       | String                                           | ID of the payment method record.                                                                | Required             | 54.0              |
| cardPaymentMethod        | <a href="#">Card Payment Method Input</a>        | Card payment method.                                                                            | Required             | 54.0              |
| saveForFuture            | Boolean                                          | Defines whether Salesforce saves the payment method for future use. The default value is False. | Optional             | 54.0              |

## Preview Cart to Exchange Order Input

Information required to preview a cart to exchange order.

**Root XML tag**

```
<previewCartToExchangeOrderInput>
```

**JSON example**

```
{
  "orderSummaryId": "10sxx00000000000",
  "exchangeCartId": "0a6xx00000000000",
  "referenceId": "2oNxx00000000000"
}
```

**Properties**

| Name           | Type   | Description                                                 | Required or Optional | Available Version |
|----------------|--------|-------------------------------------------------------------|----------------------|-------------------|
| exchangeCartId | String | ID of the cart used for adding items to the exchange order. | Required             | 60.0              |
| orderSummaryId | String | Order summary ID.                                           | Required             | 60.0              |
| referenceId    | String | Return order ID.                                            | Required             | 60.0              |

## Price Settings Input

Price settings are applicable to all product rows in a product import .csv file.

**Root XML tag**

```
<priceSettings>
```

JSON example

```
{
  "price":{
    "pricebookAliasToIdMapping":{
      "original":"01sRM000004aArJYAU",
      "sales":"01sRM000004aArIYAU",
      "holidayspecials":"01sRM000004aArKYAU"
    }
  }
}
```

Properties

| Name                      | Type            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional                                                                | Available Version |
|---------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------|
| pricebookAliasToIdMapping | Map<String, ID> | Map of price book aliases and corresponding price book IDs. The aliases defined in the map are associated with each product row in a product import .csv file. The .csv file’s column headings can associate prices to price book aliases. By using alias names in the column headings instead of price book IDs, you improve the readability of the .csv files. By convention, the “original” alias refers to your store’s default strikethrough price book. And the “sales” alias refers to your store’s default price book. For global imports, you can specify other alias names of your choosing for other price books. For store imports, the only aliases allowed are “sales” and “original.” | Required if you specify one or more price-related column headings in your .csv file | 54.0              |

Pricing Input

Pricing for multiple products.

Root XML tag

```
<PricingInput>
```

JSON example

```
{
  "pricingLineItems":[
    {
      "productId":"01txx0000000000v"
    },
  ],
}
```

```
{
  {
    "productId": "01txx000000000W"
  },
  {
    "productId": "01txx000000000A"
  }
}
```

**Properties**

| Name             | Type                                      | Description                       | Required or Optional | Available Version |
|------------------|-------------------------------------------|-----------------------------------|----------------------|-------------------|
| pricingLineItems | <a href="#">Pricing Line Item Input[]</a> | Up to 500 line items for pricing. | Required             | 49.0              |

## Pricing Line Item Input

Pricing line item.

**Root XML tag**

```
<PricingLineItemInput>
```

**JSON example**

```
{
  "productId": "01txx000000000V"
}
```

**Properties**

| Name      | Type   | Description                 | Required or Optional | Available Version |
|-----------|--------|-----------------------------|----------------------|-------------------|
| productId | String | ID of the product to price. | Required             | 49.0              |

## Product Attribute Set Input

Input representation of attribute set details.

**Properties**

| Name       | Type     | Description                                                                       | Required or Optional | Available Version |
|------------|----------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| attributes | String[] | List of up to 5 attribute API names.<br>Required if creating a new attribute set. | Optional             | 62.0              |

| Name        | Type    | Description                                                                                          | Required or Optional | Available Version |
|-------------|---------|------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| id          | String  | If updating an attribute set, the ID of the existing attribute set for the variation parent product. | Optional             | 62.0              |
| isGroupedBy | Boolean | Indicates if variation products are grouped by a specific attribute.                                 | Optional             | 64.0              |
| name        | String  | Attribute set name for a new attribute set.                                                          | Optional             | 62.0              |

## Product Import Cancel Input

Cancel asynchronous product import job input.

### Root XML tag

```
<productImportCancelInput>
```

### JSON example

```
{
  "status": "Aborted"
}
```

### Properties

| Name   | Type   | Description                | Required or Optional | Available Version |
|--------|--------|----------------------------|----------------------|-------------------|
| status | String | The value must be Aborted. | Required             | 57.0              |

## Product Media Input

Input representation of product media details.

### JSON example

```
{
  "developerName": "ProductListImage",
  "mediaId": "mediaId1"
}
```

**Properties**

| Name          | Type   | Description                                                                                                                                                                         | Required or Optional | Available Version |
|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| developerName | String | The API name of the product media group.<br>Possible values are: <ul style="list-style-type: none"> <li>Attachment</li> <li>ProductDetailImage</li> <li>ProductListImage</li> </ul> | Optional             | 61.0              |
| mediaId       | String | The Salesforce ID of the managed content record associated with the product.                                                                                                        | Optional             | 61.0              |

## Product Pricing Input

Input representation of product pricing details.

**JSON example**

```
{
  "currencyIsoCode": "USD",
  "listPrice": 49.99,
  "salePrice": 59.99
}
```

**Properties**

| Name            | Type   | Description                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|-----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| currencyISOCODE | String | The three-letter ISO 4217 currency code associated with the product price.<br><br>Products are priced using the currency for the buyer account or guest buyer profile. If your store doesn't support the currency for the buyer account or guest buyer profile, products are priced using the default currency for your store. | Optional             | 61.0              |
| listPrice       | String | The list price of the product.                                                                                                                                                                                                                                                                                                 | Optional             | 61.0              |
| unitPrice       | String | The unit price of the product                                                                                                                                                                                                                                                                                                  | Optional             | 61.0              |

## Product Search Grouping Input

Grouping information for product search results.

**Root XML tag**

```
<grouping>
```

JSON example

```
{
  "groupingOption": "VariationParent"
}
```

Properties

| Name           | Type   | Description                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|----------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| groupingOption | String | Grouping option for search results. Values are: <ul style="list-style-type: none"><li>BestMatch—Search results are grouped by the best-match product of the variation group.</li><li>NoGrouping—Search results aren't grouped.</li><li>VariationParent—Search results are grouped by the variation parent.</li></ul> | Required             | 51.0              |
| topProductType | String | Type of the top product to return for each product group in search results. Value is: <ul style="list-style-type: none"><li>VariationParent</li></ul> If NoGrouping is specified for groupingOption, topProductType is ignored.                                                                                      | Optional             | 51.0—62.0         |

### Properties

| Name                 | Type                                          | Description                                                                                                                                                                                                                                                                                   | Required or Optional                                | Available Version |
|----------------------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|-------------------|
| categoryId           | String                                        | Category ID returns results for products in this category or its subcategories. If you omit <code>categoryId</code> from the request, all categories are searched. If you specify <code>categoryId</code> and <code>searchTerm</code> , only products in the specified category are searched. | Required if <code>searchTerm</code> isn't specified | 49.0              |
| fields               | String[]                                      | Product fields to return in search results. Search results include fields you have access to. If unspecified, returns the <code>Name</code> , <code>Description</code> , <code>StockKeepingUnit</code> , <code>ProductCode</code> , and <code>Family</code> fields.                           | Optional                                            | 49.0              |
| grouping             | <a href="#">Product Search Grouping Input</a> | Specifies whether to group products in search results and how to group them. If unspecified, the default is the value specified in <b>Search &gt; Results Display Settings &gt; Results Grouping</b> .                                                                                        | Optional                                            | 51.0              |
| includePrices        | Boolean                                       | Specifies whether to include prices for products in search results ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .                                                                                                                      | Optional                                            | 49.0              |
| includeQuantity Rule | Boolean                                       | Specifies whether to include purchase quantity rule information for products in search results ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .                                                                                          | Optional                                            | 52.0              |
| page                 | Integer                                       | Number of the page you want returned. Starts at 0. If you don't specify a value or if you specify 0, the first page is returned.                                                                                                                                                              | Optional                                            | 49.0              |

| Name                     | Type                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                         | Required or Optional                                | Available Version |
|--------------------------|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|-------------------|
|                          |                                                   | When multiplying the <code>page</code> and <code>pageSize</code> property values together, they can't exceed 5000. For example, for a <code>pageSize</code> of 20, you can specify a <code>page</code> value up to 250.                                                                                                                                                                                                             |                                                     |                   |
| <code>pageSize</code>    | Integer                                           | Specifies the number of items per page. Valid values are from 1 through 200. If unspecified, the default is the value specified in Results per Page in <b>Search &gt; Results Display Settings</b> .<br><br>When multiplying the <code>page</code> and <code>pageSize</code> property values together, they can't exceed 5000. For example, for a <code>pageSize</code> of 20, you can specify a <code>page</code> value up to 250. | Optional                                            | 49.0              |
| <code>refinements</code> | <a href="#">Distinct Value Refinement Input[]</a> | List up to nine refinements (facets) for search results. Buyers or shoppers can select up to 20 values for each refinement.                                                                                                                                                                                                                                                                                                         | Optional                                            | 49.0              |
| <code>searchTerm</code>  | String                                            | List of up to 32 space-separated search terms.                                                                                                                                                                                                                                                                                                                                                                                      | Required if <code>categoryId</code> isn't specified | 49.0              |
| <code>sortRuleId</code>  | String                                            | ID of the sort rule that specifies the order of products in the search results.                                                                                                                                                                                                                                                                                                                                                     | Optional                                            | 52.0              |

## Product Variation Input

Input representation of a variation product.

### Properties

| Name                             | Type                | Description                                                                       | Required or Optional | Available Version |
|----------------------------------|---------------------|-----------------------------------------------------------------------------------|----------------------|-------------------|
| <code>isGroupedBy</code>         | Boolean             | Indicates if product variations are grouped by a specific attribute.              | Optional             | 64.0              |
| <code>variationAttributes</code> | Map<String, String> | Mapping of variation attributes (API name and value) associated with the product. | Required             | 62.0              |

## Program Application File Input

Input representation of the files or attachment for a customer program application.

**Properties**

| Name              | Type   | Description                        | Required or Optional | Available Version |
|-------------------|--------|------------------------------------|----------------------|-------------------|
| contentDocumentId | String | A valid content document record ID | Required             | 58.0              |

## Program Application Input

Input representation of an application to a program.

**JSON example**

```
{
  "programId": "11Wxx0000004GkaEAE",
  "accountId": "001xx000003G1BHAA0",
  "description": "Individual Application created for Program EV Charger Rebate",
  "applicationItems": {
    "records": [
      {
        "programProductId": "11mxx0000004PROAA2"
      }
    ]
  },
  "files": {
    "records": [
      {
        "contentDocumentId": "069xx0000004DWWAA2"
      }
    ]
  }
}
```

**Properties**

| Name             | Type                                             | Description                                                   | Required or Optional | Available Version |
|------------------|--------------------------------------------------|---------------------------------------------------------------|----------------------|-------------------|
| accountId        | String                                           | A valid ID of an account.                                     | Required             | 58.0              |
| applicationItems | <a href="#">Program Application Item Input[]</a> | A list of application line items associated with the program. | Required             | 58.0              |
| description      | String                                           | Description of the application.                               | Optional             | 58.0              |
| files            | <a href="#">Program Application File Input[]</a> | A list of ContentDocument IDs.                                | Optional             | 58.0              |
| programId        | String                                           | A valid ID of a program.                                      | Required             | 58.0              |

## Program Application Item Input

Input representation of the item for a customer program application.

### Properties

| Name             | Type   | Description                                             | Required or Optional | Available Version |
|------------------|--------|---------------------------------------------------------|----------------------|-------------------|
| programProductId | String | A valid program product ID associated with the program. | Required             | 58.0              |
| status           | String | Status of the item.                                     | Optional             | 58.0              |

## Promotion Cart Adjustment Group Input

Cart adjustment group for a promotion.

### Root XML tag

```
<cartAdjustmentGroup>
```

### JSON example

```
{
  "id": "0m9xx0000006j3SAAQ",
  "cartId": "3z6xx000000001eAAA",
  "priceAdjustmentCauseId": "0c8xx0000000001AAA",
  "adjustmentDescription": "test",
  "priority": 2,
  "adjustmentType": "AdjustmentPercentage",
  "adjustmentValue": -10.0,
  "baseAmount": -1.8,
  "adjustmentBasisReference": null
}
```

### Properties

## Promotion Parent Products Input

IDs of a parent product and variation product.

### Root XML tag

```
<parentProductsPair>
```

### JSON example

```
{
  "childProductId" : "001xx000003GZ6NAAW",
  "parentProductId": "001xx000003GZ6NAAW"
}
```

### Properties

| Name            | Type   | Description                  | Required or Optional | Available Version |
|-----------------|--------|------------------------------|----------------------|-------------------|
| childProductId  | String | ID of the variation product. | Required             | 57.0              |
| parentProductId | String | ID of the parent product.    | Required             | 57.0              |

## Promotion Product Categories Input

IDs of a product and associated category.

### Root XML tag

```
<productCategoriesPair>
```

### JSON example

```
{
  "categoryId" : "001xx000003GZ6NAAW",
  "productId": "001xx000003GZ6NAAW"
}
```

**Properties**

| Name       | Type   | Description         | Required or Optional | Available Version |
|------------|--------|---------------------|----------------------|-------------------|
| categoryId | String | ID of the category. | Required             | 57.0              |
| productId  | String | ID of the product.  | Required             | 57.0              |

## Promotion Product Evaluation Input

Finds promotions that products are eligible for and computes the discounts. Supports domain dependent requests based on `webstoreId` and `effectiveAccountId`, or domain independent requests using an external dataset based on SKUs or product categories.

**JSON example (domain dependent evaluation)**

```
{
  "products": [
    {
      "productId": "01txx000000001dAAA",
      "salesPrice": "60"
    },
    {
      "productId": "01txx000000001dABB",
      "salesPrice": "50"
    }
  ],
  "effectiveAccountId": "3K0xx00000004CAeCAM",
  "webstoreId": "0ZExx000000001dGAA"
}
```

**JSON example (domain independent evaluation)**

```
{
  "products": [
    {
      "sku": "sku_1",
      "salesPrice": "60"
    },
    {
      "sku": "sku_2",
      "salesPrice": "50"
    }
  ],
  "productCategories": {
    "sku_1": ["category_1"],
    "sku_2": ["category_2"]
  },
  "segments": [ "segment1", "segment2" ]
}
```

**Properties**

| Name               | Type                                    | Description                                                                                                                                                                                                                                                                                                                                             | Required or Optional                       | Available Version |
|--------------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|-------------------|
| currencyIsoCode    | String                                  | Three-letter ISO 4217 currency code associated with the payment group record.                                                                                                                                                                                                                                                                           | Required when multi-currency is enabled    | 58.0              |
| effectiveAccountId | String                                  | For domain dependent evaluation, this is the ID of the account for which the request is made. For domain independent evaluation, this is a buyer ID from another system. No validation will be performed on this value.                                                                                                                                 | Optional                                   | 58.0              |
| productCategories  | Map<String, String>                     | For domain independent evaluation, this is the map of product IDs to their associated category IDs.                                                                                                                                                                                                                                                     | Optional                                   | 58.0              |
| products           | <a href="#">Promotion Product Input</a> | List of product objects.                                                                                                                                                                                                                                                                                                                                | Required                                   | 58.0              |
| segments           | String[]                                | All promotions associated with promotion segments specified in this list are active and can be evaluated against the products. Additionally, any segments associated with a store or buyer group are also still evaluated against the products. If this field is not present, only the promotions associated with a store or buyer group are evaluated. | Required for domain independent evaluation | 58.0              |
| webStoreId         | String                                  | ID of the store for which the request is made. If unspecified, defined segments must be used instead.                                                                                                                                                                                                                                                   | Optional                                   | 58.0              |

## Promotion Product Input

Products for promotion product evaluation. Supports domain dependent requests based on `productId` and domain independent requests based on `sku`.

**JSON example (domain dependent evaluation)**

```
"products": [
  {
    "productId": "01txx000000001dAAA",
    "salesPrice": "60"
  },
  {
    "productId": "01txx000000001dABB",
```

```

        "salesPrice": "50"
      }
    ]
  }
}

```

**JSON example (domain independent evaluation)**

```

"products": [
  {
    "sku": "sku_1",
    "salesPrice": "60"
  },
  {
    "sku": "sku_2",
    "salesPrice": "50"
  }
]

```

**Properties**

| Name       | Type   | Description                              | Required or Optional                       | Available Version |
|------------|--------|------------------------------------------|--------------------------------------------|-------------------|
| productId  | String | ID of the product.                       | Required for domain dependent evaluation   | 58.0              |
| salesPrice | String | Sales price of the product.              | Required                                   | 58.0              |
| sku        | String | Stock keeping unit (SKU) of the product. | Required for domain independent evaluation | 58.0              |

## Push Notification Input

A push notification.

**Root XML tag**

```
<pushNotification>
```

**JSON example**

```

{
  "appName" : "TestApp",
  "namespace" : "abc",
  "userIds" : ["005x00000013dPK", "005x00000013dPL"],
  "payload" : "{ 'aps': { 'alert': 'test', 'badge': 0, 'sound': 'default' } }"
}

```

**Properties**

| Name    | Type   | Description                                                              | Required or Optional | Available Version |
|---------|--------|--------------------------------------------------------------------------|----------------------|-------------------|
| appName | String | The API name of the connected app that the push notification is sent to. | Required             | 31.0              |

| Name      | Type     | Description                                                               | Required or Optional             | Available Version |
|-----------|----------|---------------------------------------------------------------------------|----------------------------------|-------------------|
| namespace | String   | The namespace of the connected app that the push notification is sent to. | Required if the namespace is set | 31.0              |
| payload   | String   | The push notification payload in JSON format.                             | Required                         | 31.0              |
| userIds   | String[] | The push notification recipient user ids.                                 | Required                         | 31.0              |

## Quantity With SKU Input

A quantity of a product.

### Root XML tag

```
<quantityWithSkuInput>
```

### Properties

| Name             | Type   | Description              | Required or Optional | Available Version |
|------------------|--------|--------------------------|----------------------|-------------------|
| quantity         | Double | Quantity of the product. | Required             | 51.0              |
| stockKeepingUnit | String | SKU of the product.      | Required             | 51.0              |

## Question and Answers Capability Input

Create or edit a question feed element or set the best answer of the existing question feed element.

### Root XML tag

```
<questionAndAnswersCapability>
  <bestAnswerId>0D7D000000001MAKAY</bestAnswerId>
</questionAndAnswersCapability>
```

### JSON example

```
{
  "bestAnswerId": "0D7D000000001MAKAY"
}
```

### Properties

| Name         | Type   | Description                                                                                                                                | Required or Optional                                                      | Available Version |
|--------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|-------------------|
| bestAnswerId | String | A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element. | Required to PATCH the best answer.<br><br>Not supported in POST requests. | 32.0              |

| Name          | Type   | Description                                                                                                                                                                                                               | Required or Optional                  | Available Version |
|---------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|-------------------|
| questionTitle | String | Title for a question feed element.<br>To edit the title of a question, make a PATCH request to <code>/chatter/feed-elements/<b>feedElementId</b></code> . Editing question titles is supported in version 34.0 and later. | Required to POST or PATCH a question. | 32.0              |

## Range Refinement Input

Attribute-based refinement with minimum or maximum numeric values for product search.

### Root XML tag

```
rangeRefinementInput
```

### Properties

| Name          | Type   | Description                                                                                                                                                    | Required or Optional            | Available Version |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|-------------------|
| attributeType | String | Type of search attribute for the refinement.<br>Values are: <ul style="list-style-type: none"> <li>Custom</li> <li>Standard</li> <li>PricebookEntry</li> </ul> | Required                        | 64.0              |
| max           | String | Maximum value for range refinement.                                                                                                                            | Required if min isn't specified | 64.0              |
| min           | String | Minimum value for range refinement.                                                                                                                            | Required if max isn't specified | 64.0              |
| nameOrId      | String | Developer name of the attribute for the refinement.                                                                                                            | Required                        | 64.0              |
| type          | String | Type of the refinement. Values is: <ul style="list-style-type: none"> <li>Range</li> </ul>                                                                     | Required                        | 64.0              |

## Rank Average Distance Input

An order recipient's geographic location and information about sets of inventory locations that can fulfill the order.

**Root XML tag**

```
<rankAverageDistanceInput>
```

**Properties**

| Name                | Type                                     | Description                                                                                                                        | Required or Optional             | Available Version |
|---------------------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-------------------|
| deliveryCountryCode | String                                   | The country code of the order recipient.                                                                                           | Required                         | 51.0              |
| deliveryPostalCode  | String                                   | The postal code of the order recipient.                                                                                            | Required                         | 51.0              |
| distanceUnit        | String                                   | Specify <i>mi</i> or <i>km</i> to return average distances in miles or kilometers, respectively.                                   |                                  | 51.0              |
| sortResult          | String                                   | Specify <i>ASC</i> or <i>DESC</i> to rank the results by average shipping distance in ascending or descending order, respectively. |                                  | 51.0              |
| targetLocations     | <a href="#">Target Location Input</a> [] | Each element is a set of inventory locations that can combine to fulfill the order.                                                | At least one element is required | 51.0              |

## Read By Capability Input

Mark feed elements as read by the context user.

**Root XML tag**

```
<readByCapability>
```

**JSON example**

```
{
  "isReadByMe": "true"
}
```

**Properties**

| Name             | Type    | Description                                                                                                                                                                                           | Required or Optional | Available Version |
|------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isReadByMe       | Boolean | Specifies to mark the feed element as read ( <i>true</i> ) for the context user.                                                                                                                      | Required             | 40.0              |
| lastReadDateByMe | String  | Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don't specify a date or you specify a future date, the current system date is used. | Optional             | 40.0              |

# Recommendation Reaction Input

A reaction to a recommendation produced by a recommendation strategy.

## Root XML tag

```
<reaction>
```

## JSON example

```
{
  "contextRecordId": "500xx000000Ylnv",
  "onBehalfOfId": "001xx000003DGQW",
  "reactionType": "Accepted",
  "strategyName": "AcmeSupport",
  "targetActionName": "UpgradeService",
  "targetId": "0prxx00000000M7AAI"
}
```

## Properties

| Name                 | Type   | Description                                                                                                                                                  | Required or Optional | Available Version |
|----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| aiModel              | String | Reserved for future use.                                                                                                                                     | Optional             | 47.0              |
| contextRecordId      | String | ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.                                                 | Optional             | 45.0              |
| executionId          | String | ID of the original recommendation strategy execution.                                                                                                        | Optional             | 45.0              |
| externalId           | String | External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system. | Optional             | 46.0              |
| onBehalfOfId         | String | ID of the user or entity for which the reaction took place.                                                                                                  | Optional             | 45.0              |
| reactionType         | String | Type of reaction to a recommendation.<br>Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Rejected</li> </ul>                            | Required             | 45.0              |
| recommendation Mode  | String | Reserved for future use.                                                                                                                                     | Optional             | 46.0              |
| recommendation Score | Double | Reserved for future use.                                                                                                                                     | Optional             | 46.0              |
| strategyName         | String | Name of the recommendation strategy.                                                                                                                         | Required             | 45.0              |
| targetActionId       | String | ID of the target action.                                                                                                                                     | Optional             | 45.0              |
| targetActionName     | String | Name of the target action.                                                                                                                                   | Required             | 45.0              |

| Name     | Type   | Description                                        | Required or Optional | Available Version |
|----------|--------|----------------------------------------------------|----------------------|-------------------|
| targetId | String | ID of the recommendation that is being reacted to. | Required             | 45.0              |

## Record Capability Input

Attach an existing knowledge article to a comment.

### Root XML tag

```
<recordCapability>
```

### JSON example

```
{
  "recordId": "kA7B000000487h5IAA"
}
```

### Properties

| Name     | Type   | Description                                     | Required or Optional | Available Version |
|----------|--------|-------------------------------------------------|----------------------|-------------------|
| recordId | String | ID of the existing knowledge article to attach. | Required             | 42.0              |

## Recordset Filter Criteria Input

A set of recordset filter criteria applied to records, such as service appointment records.

### Root XML tag

```
recordsetFilterCriteriaInput
```

### JSON example

```
{
  "filteredObjectName": "ServiceAppointment",
  "criteriaIds": [
    "0hrxx00000006obAAA"
  ],
  "recordIds": [
    "08pxx0000004Ge4AAE",
    "08pxx0000004GcSAAU"
  ]
}
```

### Properties

| Name        | Type     | Description                    | Required or Optional | Available Version |
|-------------|----------|--------------------------------|----------------------|-------------------|
| criteriaIds | String[] | Recordset filter criteria IDs. | Required             | 53.0              |

| Name               | Type     | Description                                                                                                                                  | Required or Optional | Available Version |
|--------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| enforceSharing     | Boolean  | Determines whether record sharing checks are enforced ( <code>true</code> ) or not ( <code>false</code> ) during the execution of this call. | Optional             | 53.0              |
| filteredObjectName | String   | Object that the filter is applied to.                                                                                                        | Required             | 53.0              |
| recordIds          | String[] | List of record IDs of the filtered object.                                                                                                   | Required             | 53.0              |

## Referenced Refund Input

Referenced refund input representation.

### JSON example (without idempotency)

```
{
  "accountId": "",
  "amount": 150,
  "comments": "refund request",
  "paymentGroup": {
    "createPaymentGroup": "true",
    "sourceObjectId": "",
    "currencyIsoCode": "USD"
  },
  "effectiveDate": "2019-10-18T11:32:27.000Z",
  "ipAddress": "202.95.77.70",
  "macAddress": "00-14-22-01-23-45",
  "phone": "100-456-67",
  "email": "test@ccs.org",
  "additionalData": {
    "key1": "value1",
    "key2": "value2",
    "key3": "value3",
    "key4": "value4",
    "key5": "value5"
  }
}
```

### JSON example (idempotency key in JSON payload)

```
{
  "accountId": "",
  "amount": 150,
  "idempotencyKey": "UniqueIdempotencyKey",
  "comments": "capture request",
  "paymentGroup": {
    "createPaymentGroup": "true",
    "sourceObjectId": "",
    "currencyIsoCode": "USD"
  },
  "effectiveDate": "2019-10-18T11:32:27.000Z",
}
```

```
"ipAddress": "202.95.77.70",
"macAddress": "00-14-22-01-23-45",
"phone": "100-456-67",
"email": "test@ccs.org",
"additionalData":{
    "key1":"value1",
    "key2":"value2",
    "key3":"value3",
    "key4":"value4",
    "key5":"value5"
}
}
```

### JSON example (idempotency key in header)

```
{
  "accountId":"",
  "amount": 150,
  "comments": "capture request",
  "paymentGroup":{
    "createPaymentGroup":"true",
    "sourceObjectId":"",
    "currencyIsoCode":"USD"
  },
  "effectiveDate":"2019-10-18T11:32:27.000Z",
  "ipAddress": "202.95.77.70",
  "macAddress": "00-14-22-01-23-45",
  "phone": "100-456-67",
  "email": "test@ccs.org",
  "additionalData":{
    "key1":"value1",
    "key2":"value2",
    "key3":"value3",
    "key4":"value4",
    "key5":"value5"
  }
}
```

### Header

Name: sfdc-Payments-Idempotency-Key

Data Type: String

Max Length: 255

Example:

```
Content-Type: application/json; charset=UTF-8
Accept: application/json
sfdc-Payments-Idempotency-Key: UniqueIdempotencyKey
```

**Properties**

| <b>Name</b>    | <b>Type</b>                         | <b>Description</b>                                                                                                                                                                                                                                           | <b>Required or Optional</b> | <b>Available Version</b> |
|----------------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|--------------------------|
| accountId      | String                              | ID of the account which must be linked to this referenced refund request.                                                                                                                                                                                    | Optional                    | 48.0                     |
| additionalData | Map<String, String>                 | Allows users to enter additional data, if needed a payment request.<br>The additionalData object consists of entries, each of which includes a key and value. Supports up to five key-value pairs. Each key and each value can contain up to 255 characters. | Optional                    | 48.0                     |
| amount         | Double                              | Amount that must be refunded.                                                                                                                                                                                                                                | Required                    | 48.0                     |
| clientContext  | String                              | Provides context for payment APIs. Used for a payment caller to reestablish context.                                                                                                                                                                         | Optional                    | 49.0                     |
| comments       | String                              | Comments for the refund.                                                                                                                                                                                                                                     | Optional                    | 48.0                     |
| effectiveDate  | String                              | Date that the refund becomes effective.                                                                                                                                                                                                                      | Optional                    | 48.0                     |
| email          | String                              | Email of the client that initiated the request.                                                                                                                                                                                                              | Optional                    | 48.0                     |
| idempotencyKey | String                              | Idempotency key used for the payment request. Can be provided in the payload or the header, but not in both places at once.                                                                                                                                  | Optional                    | 48.0                     |
| ipAddress      | String                              | IP address of the client that made the request.                                                                                                                                                                                                              | Optional                    | 48.0                     |
| macAddress     | String                              | MAC address of the client that made the request.                                                                                                                                                                                                             | Optional                    | 48.0                     |
| paymentGroup   | <a href="#">Payment Group Input</a> | Payment group details associated with the refund request.                                                                                                                                                                                                    | Optional                    | 48.0                     |
| phone          | String                              | Phone number of the client that initiated the request.                                                                                                                                                                                                       | Optional                    | 48.0                     |

## Release Held FO Capacity Input

Request to release held fulfillment order capacity at one or more locations. Can correspond to one action call.

**Root XML tag**

```
<releaseHeldFOCapacityInput>
```

JSON example

```
{
  "releaseHeldFOCapacityRequests": [
    {
      "capacityRequests": [
        {
          "actionRequestId" : "FOCapacityInteractionId1",
          "locationId": "LOC-1"
        },
        {
          "actionRequestId" : "FOCapacityInteractionId4",
          "locationId": "LOC-1"
        }
      ],
      "allOrNothing": false
    },
    {
      "capacityRequests": [
        {
          "actionRequestId" : "FOCapacityInteractionId2",
          "locationId": "LOC-2"
        },
        {
          "actionRequestId" : "FOCapacityInteractionId3",
          "locationId": "LOC-2"
        }
      ],
      "allOrNothing":false
    }
  ]
}
```

Properties

| Name                          | Type                                                     | Description                                                                           | Required or Optional | Available Version |

| releaseHeldFOCapacityRequests | <a href="#">Release Held FO Capacity Request Input[]</a> | List of requests to release held fulfillment order capacity at one or more locations. | Required             | 55.0              |

Release Held FO Capacity Request Input

Request to release held fulfillment order capacity at one or more locations.

Root XML tag

```
<releaseHeldFOCapacityRequestInput>
```

JSON example

```
{
  "capacityRequests": [
    {
```

```
    "actionRequestId" : "FOCapacityInteractionId1",
    "locationId": "LOC-1"
  },
  {
    "actionRequestId" : "FOCapacityInteractionId4",
    "locationId": "LOC-1"
  }
],
"allOrNothing": false
},
```

### Properties

| Name             | Type                                     | Description                                                                                                                                                                                               | Required or Optional | Available Version |
|------------------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| allOrNothing     | Boolean                                  | Controls whether a single failed request cancels all other requests in the list ( <i>true</i> ) or whether some requests can succeed if others fail ( <i>false</i> ). The default value is <i>false</i> . | Optional             | 55.0              |
| capacityRequests | <a href="#">Capacity Request Input[]</a> | List of requests to release held fulfillment order capacity. Each request is for capacity for one fulfillment order held at one location.                                                                 | Required             | 55.0              |

## Request Header Input

An HTTP request header name and value pair.

### JSON example

```
{
  "name": "Content-Type",
  "value": "application/json"
}
```

### Properties

| Name  | Type   | Description                      | Required or Optional | Available Version |
|-------|--------|----------------------------------|----------------------|-------------------|
| name  | String | The name of the request header.  | Required             | 33.0              |
| value | String | The value of the request header. | Required             | 33.0              |

## Return Items Input

Data about products and delivery charges to return, as well as associated return fees.

### Root XML tag

```
<returnItemsInput>
```

### JSON example

```
{
  "returnOrderItems": [
    {
      "returnOrderLineItemId": "10uxx0000004GKbAAM",
      "quantityReturned": "1",
      "quantityToCancel": "0",
      "quantityReceived": "1",
      "quantityRejected": "0",
      "reasonForRejection": "N/A"
    }
  ],
  "returnOrderItemDeliveryCharges": [
    {
      "returnOrderLineItemId": "10uxx0000004GKbAAP"
    }
  ],
  "returnOrderItemFees": [
    {
      "returnOrderLineItemId": "10uxx0000004GKbA23",
      "quantityReturned": "1",
      "quantityToCancel": "0"
    }
  ]
}
```

## Return Order Item Delivery Charge Input

ID of a ReturnOrderLineItem representing a delivery charge.

### Root XML tag

```
<returnOrderItemDeliveryCharge>
```

### JSON example

```
{
  "returnOrderLineItemId": "10uxx0000004GKbAAP"
}
```

### Properties

| Name                  | Type   | Description                            | Required or Optional | Available Version |
|-----------------------|--------|----------------------------------------|----------------------|-------------------|
| returnOrderLineItemId | String | ID of a ReturnOrderLineItem to return. | Required             | 52.0              |

## Return Order Item Fee Input

ID of a ReturnOrderLineItem representing a return fee, and instructions for updating it. After the update, the ReturnOrderLineItem is read-only. Any remaining quantity of the fee to be processed is added to a new ReturnOrderLineItem.

### Root XML tag

```
<returnOrderItemFeeInput>
```

### JSON example

```
{
  "returnOrderLineItemId": "10uxx0000004GKbA23",
  "quantityReturned": "1",
  "quantityToCancel": "0"
}
```

**Properties**

| Name                  | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Required or Optional | Available Version |
|-----------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| quantityReturned      | Double | Quantity of the ReturnOrderLineItem to process. When the fee is a fixed amount, the charge is determined by multiplying the total fee amount by this value divided by the expected quantity. For example, if the fee amount is \$10 and the expected quantity is 2, then if the quantityReturned is 1, \$5 is charged. This value normally equals the quantity returned of the ReturnOrderLineItem for the returned item that the fee applies to. The value must be greater than zero. If this value plus quantityToCancel is less than the expected quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem. | Required             | 56.0              |
| quantityToCancel      | Double | Quantity of the ReturnOrderLineItem to remove. This value normally equals the quantity canceled of the ReturnOrderLineItem for the returned item that the fee applies to. This value can also be used to cancel a portion of the fee. The value must be zero or greater. If this value plus quantityReturned is less than the expected quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.                                                                                                                                                                                                               | Required             | 56.0              |
| returnOrderLineItemId | String | ID of the ReturnOrderLineItem representing the return fee.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Required             | 56.0              |

## Return Order Item Input

ID of a ReturnOrderLineItem and instructions for updating it. After the update, the ReturnOrderLineItem is read-only. Any remaining quantity to be returned is added to a new ReturnOrderLineItem.

**Root XML tag**

```
<returnOrderItem>
```

**JSON example**

```
{  
  "returnOrderLineItemId": "10uxx0000004GKbAAM",  
}
```

```
"quantityReturned": "1",  
"quantityToCancel": "0",  
"quantityReceived": "1",  
"quantityRejected": "0",  
"reasonForRejection": "N/A"  
}
```

### Properties

| Name                  | Type   | Description                                                                                                                                                                                                                                                                            | Required or Optional | Available Version |
|-----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| quantityReceived      | Double | The quantity of the ReturnOrderLineItem that has been received. The value must be zero or greater. This value isn't used by any standard features, but is provided for use in customizations.                                                                                          | Required             | 52.0              |
| quantityRejected      | Double | The quantity of the ReturnOrderLineItem that has been rejected for return. The value must be zero or greater. This value isn't used by any standard features, but is provided for use in customizations.                                                                               | Required             | 52.0              |
| quantityReturned      | Double | The quantity of the ReturnOrderLineItem that has been returned. The value must be greater than zero. If this value plus quantityToCancel is less than the expected return quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.                  | Required             | 52.0              |
| quantityToCancel      | Double | The quantity of the ReturnOrderLineItem to remove because it's not being returned. The value must be zero or greater. If this value plus quantityReturned is less than the expected return quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem. | Required             | 52.0              |
| reasonForRejection    | String | The reason why the rejected quantity, if any, was rejected. This value isn't used by any standard features, but is provided for use in customizations.                                                                                                                                 | Optional             | 52.0              |
| returnOrderLineItemId | String | The ID of the ReturnOrderLineItem.                                                                                                                                                                                                                                                     | Required             | 52.0              |

## Return Order Line Item Fee Input

Data for creating a ReturnOrderLineItem that represents a return fee.

**Root XML tag**

```
<returnOrderLineItemFeeInput>
```

**JSON example**

```
{
  "amount": "10",
  "amountType": "AmountWithoutTax",
  "description": "Restocking Fee",
  "product2Id": "10uxx0000004GKbAAM",
  "reason": "Other"
}
```

**Properties**

| Name       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Required or Optional | Available Version |

| amount     | Double | Value used to calculate the fee amount, as described by the <code>amountType</code> . It must be a positive value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Required             | 56.0              |
| amountType | String | <p>Describes how the fee amount is calculated. It can have one of these values:</p> <ul style="list-style-type: none"><li>• <code>AmountTaxOnly</code>—Value of <code>amount</code> is the tax-only adjustment only. Available in version 65.0 and later.</li><li>• <code>AmountWithTax</code>—Value of <code>amount</code> is the fee amount, including tax.</li><li>• <code>AmountWithoutTax</code>—Value of <code>amount</code> is the fee amount, not including tax. Tax is calculated on the value and added.</li><li>• <code>Percentage</code>—Value of <code>amount</code> is a percentage. To determine the fee amount, <code>amount</code> is divided by 100, and then multiplied by the <code>TotalPrice</code> and <code>TotalTaxAmount</code> of the associated <code>OrderItemSummary</code>, prorated for the quantity being returned.</li><li>• <code>PercentageGross</code>—Value of <code>amount</code> is a percentage. To determine the fee amount, <code>amount</code> is divided by 100, and then multiplied by the <code>TotalLineAmountWithTax</code> of the associated <code>OrderItemSummary</code>, prorated for the quantity being returned.</li></ul> | Required             | 56.0              |

| Name        | Type   | Description                                                                                                                                           | Required or Optional | Available Version |
|-------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|             |        | <ul style="list-style-type: none"><li>ProductOnly—Value of amount is the product-only adjustment only. Available in version 65.0 and later.</li></ul> |                      |                   |
| description | String | Description of the fee.                                                                                                                               | Required             | 56.0              |
| product2Id  | String | ID of the product representing the fee.                                                                                                               | Required             | 56.0              |
| reason      | String | Reason for the fee. The value must match an entry in the ReturnOrderLineItem object's ReasonForReturn picklist.                                       | Required             | 56.0              |

## Return Order Line Item Input

Data for creating a ReturnOrderLineItem for an order item being returned, including data to create ReturnOrderLineItems representing any return fees associated with it.

**Root XML tag**

```
<returnOrderLineItem>
```

**JSON example**

```
{
  "quantityExpected": "1",
  "reasonForReturn": "Not Satisfied",
  "canReduceShipping": false,
  "orderItemSummaryId": "10uxx0000004GKbAAM",
  "quantityReceived": "0",
  "returnOrderLineItemFees": [
    {
      "amount": "10",
      "amountType": "AmountWithoutTax",
      "description": "Restocking Fee",
      "product2Id": "10uxx0000004GKbAAM",
      "reason": "Other"
    }
  ]
}
```

## Properties

| Name                                 | Type                                               | Description                                                                                                                                                                                                                                                                       | Required or Optional                                              | Available Version |
|--------------------------------------|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|-------------------|
| <code>canReduceShipping</code>       | Boolean                                            | Whether to refund any associated shipping charge.                                                                                                                                                                                                                                 | Required                                                          | 50.0              |
| <code>orderItemSummaryId</code>      | String                                             | ID of the associated <code>OrderItemSummary</code> . If the <code>OrderItemSummary</code> already has an associated <code>ReturnOrderLineItem</code> , then you must specify a different <code>reasonForReturn</code> . Duplicating the reason breaks the financial calculations. | Required                                                          | 50.0              |
| <code>quantityExpected</code>        | Double                                             | Quantity expected to be returned. This value also applies to any fees specified in <code>returnOrderLineItemFees</code> .                                                                                                                                                         | Required                                                          | 50.0              |
| <code>quantityReceived</code>        | Double                                             | Quantity already physically returned.                                                                                                                                                                                                                                             | Optional                                                          | 50.0              |
| <code>reasonForReturn</code>         | String                                             | Reason for the return. The value must match an entry in both the <code>OrderSummaryChange Reason</code> field and the <code>ReturnOrderLineItem</code> object's <code>ReasonForReturn</code> picklist.                                                                            | Required if the <code>returnOrderLifeCycleType</code> is MANAGED. | 50.0              |
| <code>returnOrderLineItemFees</code> | <a href="#">Return Order Line Item Fee Input[]</a> | List of input data for return fees associated with the order item being returned. A <code>ReturnOrderLineItem</code> of Type Fee is created to represent each fee.                                                                                                                | Optional                                                          | 56.0              |

## Sale API Payment Method Input

Represents a payment method to be used in a payment sale request.

JSON example with `cardPaymentMethod`

```
{
  "paymentMethod": {
    "address": {
      "city": "Lisieux",
      "companyName": "Entreprise Deux",
      "country": "France",
      "postalcode": "14100",
      "state": "Basse-Normandie",
      "street": "12 Rue de La Montagne"
    },
  },
}
```

```
    "saveForFuture": "true",
    "cardPaymentMethod": {
      "cardHolderName": "Yannick Martin",
      "expiryMonth": "08",
      "expiryYear": "2025",
      "cardNumber": "",
      "cvv": "737",
      "cardCategory": "CreditCard",
      "cardType": "MASTERCARD"
    }
  }
}
```

JSON example with ID of Payment Method Object

```
{
  "paymentMethod": {
    "id": "03OOG00000021402AA"
  }
}
```

|               |         |                                                                                                                                                                            | the paymentMethod object.                                                                                        |                   |
| saveForFuture | Boolean | Indicates whether to save the payment method for future use ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, the default value is <code>false</code> . | Optional. If you use an ID, don't use the <code>saveForFuture</code> property because a validation error occurs. | 54.0              |

## Sale Input

Payment Sale input consumed by the payment sale service.

### JSON example (without idempotency)

```
{
  "accountId": "",
  "amount": "5000",
  "comments": "Sale of 20 renewed licenses",
  "currencyIsoCode": "USD",
  "effectiveDate": "05-01-2020",
  "paymentGatewayId": "0000000",
  "paymentGroup": "",
  "paymentMethod": "SamplePaymentMethod"
}
```

### JSON example (idempotency key in JSON payload)

```
{
  "accountId": "",
  "amount": "5000",
  "idempotencyKey": "qw",
  "comments": "Sale of 20 renewed licenses",
  "currencyIsoCode": "USD",
  "effectiveDate": "05-01-2020",
  "paymentGatewayId": "0000000",
  "paymentGroup": "",
  "paymentMethod": "SamplePaymentMethod"
}
```

### JSON example (idempotency key in header)

```
{
  "accountId": "",
  "amount": "5000",
  "comments": "Sale of 20 renewed licenses",
  "currencyIsoCode": "USD",
  "effectiveDate": "05-01-2020",
}
```

```

"paymentGatewayId": "0000000",
"paymentGroup": "",
"paymentMethod": "SamplePaymentMethod"
}

```

**Header**

Name: sfdc-Payments-Idempotency-Key

Data Type: String

Max Length: 255

Example:

```

Content-Type: application/json; charset=UTF-8
Accept: application/json
sfdc-Payments-Idempotency-Key: UniqueIdempotencyKey

```

**Properties**

| Name             | Type                | Description                                                                                                                                                                         | Required or Optional                   | Available Version |
|------------------|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|-------------------|
| accountId        | String              | Salesforce account that contains the payment for the sale request.                                                                                                                  | Optional                               | 54.0              |
| additionalData   | Map<String, String> | Additional data that can be passed with a payment request. This property can include a maximum of five key-value pair entries. Each key and value can contain up to 255 characters. | Optional                               | 54.0              |
| amount           | Double              | The amount of the sale.                                                                                                                                                             | Required                               | 54.0              |
| comments         | String              | Optional comments for the payment sale request.                                                                                                                                     | Optional                               | 54.0              |
| currencyIsoCode  | String              | A three-letter ISO 4217 currency code associated with the payment group record.                                                                                                     | Required, if multi-currency is enabled | 54.0              |
| effectiveDate    | String              | The date that the sale request takes effect.                                                                                                                                        | Optional                               | 54.0              |
| email            | String              | Email of the client that initiated the request.                                                                                                                                     | Optional                               | 54.0              |
| idempotencyKey   | String              | Idempotency key used for the payment request. The key can be in the payload or the header but not both.                                                                             | Optional                               | 54.0              |
| ipAddress        | String              | IP address of the client that made the request.                                                                                                                                     | Optional                               | 54.0              |
| macAddress       | String              | MAC address of the client that made the request.                                                                                                                                    | Optional                               | 54.0              |
| paymentGatewayId | String              | The gateway that evaluates the payment sale request.                                                                                                                                | Required                               | 54.0              |

| Name          | Type                                          | Description                                                 | Required or Optional | Available Version |
|---------------|-----------------------------------------------|-------------------------------------------------------------|----------------------|-------------------|
| paymentGroup  | <a href="#">Payment Group Input</a>           | Represents a group of payment requests.                     | Optional             | 54.0              |
| paymentMethod | <a href="#">Sale API Payment Method Input</a> | Represents a payment method for a payment sale transaction. | Required             | 54.0              |
| phone         | String                                        | Phone number of the client that initiated the request.      | Optional             | 54.0              |

## Saved Payment Method Input

Input representation of the details of the shopper's saved payment method.

### JSON example

```
{
  "gatewayCustomerReference" : "cus_N9hYyZflb2ObdN",
  "gatewayInitiatorReference" : "seti_1Mm8s8LkdIwHu7ix00XBfTRG",
  "paymentGatewayId" : "0b0xx00000000w5AAA",
  "paymentMethodType" : "card",
  "referenceOwnerId" : "001xx000003Gmk3AAC" ,
  "usageType" : "OffSession"
}
```

### Properties

| Name                      | Type                | Description                                                                                                                                                    | Required or Optional | Available Version |
|---------------------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| additionalData            | Map<String, String> | Additional data you can pass in the request. This property can include a maximum of five key-value pairs. Each key and value can contain up to 255 characters. | Optional             | 59.0              |
| flowContext               | String              | Checkout or My Account flow for this payment method.                                                                                                           | Optional             | 59.0              |
| gatewayCustomerReference  | String              | Owner associated with the payment method to the payment gateway.                                                                                               | Required             | 60.0              |
| gatewayInitiatorReference | String              | Specifies the gateway initiator reference, such as setup intent ID for gateway Stripe.                                                                         | Required             | 60.0              |
| id                        | String              | Salesforce ID of the saved payment method record.                                                                                                              | Optional             | 58.0              |
| isDefault                 | Boolean             | Marks the saved payment method as the default method to use for transactions.                                                                                  | Optional             | 58.0              |
| paymentGatewayId          | String              | Salesforce ID of the Payment Gateway object record.                                                                                                            | Required             | 58.0              |

| Name              | Type   | Description                                                           | Required or Optional | Available Version |
|-------------------|--------|-----------------------------------------------------------------------|----------------------|-------------------|
| paymentMethodType | String | Payment method type, such as a credit card.                           | Required             | 59.0              |
| referenceOwnerId  | String | ID of the merchant account of the contact record.                     | Required             | 58.0              |
| usageType         | String | Specifies whether the payment method is used OnSession or OffSession. | Required             | 58.0              |

## Scheduled Custom Recommendation Input

A scheduled custom recommendation.

### Root XML tag

```
<scheduledRecommendation>
```

### JSON example for creating a new scheduled custom recommendation

```
{
  "rank" : "2",
  "recommendationDefinitionId" : "0RDD00000004CEhOAM"}
```

### JSON example for updating a scheduled custom recommendation

```
{
  "rank" : "2"}
```

### Properties

| Name    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional                                                                                                                                                   | Available Version |
|---------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| channel | String | <p>A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:</p> <ul style="list-style-type: none"> <li>CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.</li> <li>CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> </ul> | <p>Optional for creating a scheduled recommendation</p> <p>If not specified, defaults to DefaultChannel.</p> <p>Don't use when updating a scheduled recommendation</p> | 36.0              |

| Name                 | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |

| <code>recommendationAudienceId</code>   | String | <p>ID of the audience for this scheduled custom recommendation.</p> <p>When updating a scheduled custom recommendation, specify <code>ALL</code> to remove the association between a custom recommendation audience and a scheduled custom recommendation.</p>                                                                                                                                                                                                                     | Optional                                                                                                                                                                    | 35.0              |
| <code>recommendationDefinitionId</code> | String | ID of the custom recommendation definition that this scheduled recommendation schedules.                                                                                                                                                                                                                                                                                                                                                                                           | <p>Required for creating a scheduled recommendation</p> <p>You can't specify a <code>recommendationDefinitionId</code> when updating a scheduled custom recommendation.</p> | 33.0              |

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

| Scheduled Recommendations | Rank |
|---------------------------|------|
| ScheduledRecommendationA  | 1    |
| ScheduledRecommendationB  | 2    |
| ScheduledRecommendationC  | 3    |

And you include this information in the Scheduled Custom Recommendation Input:

| Scheduled Recommendation | Rank |
|--------------------------|------|
| ScheduledRecommendationD | 2    |

The result is:

| Scheduled Recommendation | Rank |
|--------------------------|------|
| ScheduledRecommendationA | 1    |
| ScheduledRecommendationD | 2    |
| ScheduledRecommendationB | 3    |
| ScheduledRecommendationC | 4    |

## Searchable Attribute Input

Searchable attribute.

### JSON example

```
{
  "type" : "Standard",
  "nameOrId" : "Description",
  "isSearchable" : true
}
```

### Properties

| Name         | Type    | Description                                                                                                                             | Required or Optional | Available Version |
|--------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isSearchable | Boolean | Specifies whether the attribute is searchable ( <code>true</code> ) or not ( <code>false</code> ). Default value is <code>true</code> . | Optional             | 49.0              |
| nameOrId     | String  | Developer name of the attribute. In version 49.0 and later, the ID of the attribute isn't supported.                                    | Required             | 49.0              |

| Name | Type   | Description                                                                                                                                                     | Required or Optional | Available Version |
|------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| type | String | Type of attribute. Values are: <ul style="list-style-type: none"><li>• Custom</li><li>• ProductAttribute</li><li>• ProductCategory</li><li>• Standard</li></ul> | Required             | 49.0              |

## Searchable Attributes Collection Input

Collection of searchable attributes.

### JSON example

```
{
  "searchableAttributeSettings" : [
    {
      "type" : "Standard",
      "nameOrId" : "Description",
      "isSearchable" : true
    },
    {
      "type" : "Custom",
      "nameOrId" : "brand__c"
    }
  ]
}
```

### Properties

| Name                                | Type                                         | Description                                   | Required or Optional | Available Version |
|-------------------------------------|----------------------------------------------|-----------------------------------------------|----------------------|-------------------|
| searchable<br>Attribute<br>Settings | <a href="#">Searchable Attribute Input[]</a> | Collection of up to 25 searchable attributes. | Required             | 49.0              |

## Search Data Category Input

Data category input for object search.

### JSON example

```
{
  "groupName": "Renewals",
  "operator": "Below",
  "categories": [
```

```
    "Deal_Progression_Stage"
  ]
}
```

**Properties**

| Name       | Type     | Description                                                                                                                                                                                                                                                                                                                                                                                                       | Required or Optional | Available Version |
|------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| groupName  | String   | Name of the data category group to filter.                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 63.0              |
| operator   | String   | Data category operator. Values are: <ul style="list-style-type: none"><li>• <b>Above</b>—Queries the data category and all of its parent categories.</li><li>• <b>AboveOrBelow</b>—Queries the data category, all of its parent categories, and all of its subcategories.</li><li>• <b>At</b>—Queries the data category.</li><li>• <b>Below</b>—Queries the data category and all of its subcategories.</li></ul> | Optional             | 63.0              |
| categories | String[] | List of the data category names to filter.                                                                                                                                                                                                                                                                                                                                                                        | Optional             | 63.0              |

## Sequence Order Payment Summary Input

Amount to apply to specified OrderPaymentSummary as part of a payment or refund.

### Root XML tag

```
<sequenceOrderPaymentSummary>
```

### JSON example

```
{
  "amount": "10",
  "orderPaymentSummaryId": "oPsR000000000JNIAIY"
}
```

### Properties

| Name                  | Type   | Description                                           | Required or Optional | Available Version |
|-----------------------|--------|-------------------------------------------------------|----------------------|-------------------|
| amount                | Double | Amount to apply to the OrderPaymentSummary.           | Required             | 56.0              |
| orderPaymentSummaryId | String | ID of the OrderPaymentSummary to apply the Amount to. | Required             | 56.0              |

| state                   | String                                  | State where the service appointment is completed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Optional             | 48.0              |
| street                  | String                                  | Street number and name where the service appointment is completed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Optional             | 48.0              |
| subject                 | String                                  | Short phrase describing the appointment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Optional             | 48.0              |

| Name       | Type   | Description                                                                                                     | Required or Optional | Available Version |
|------------|--------|-----------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| workTypeId | String | Work type associated with the service appointment. If specified, it is added to the service appointment record. | Optional             | 48.0              |

## Service Appointment Update Input

Input representation for updating a service appointment. Use to update the scheduled times, assigned resource(s), service territory or even work type for existing appointments.

### Limitations

You cannot use the resource to modify the following:

- Parent record ID (`parentRecordId`) and Service appointment ID (`serviceAppointmentId`)
- Canceled appointments.
- Past date appointments.
- lead details.
- When multi-resource scheduling is enabled, you can't add a new resource and make it as the primary resource in a single request. Add the new resource in one request and then make another request to add the resource as a primary resource.

### JSON example

```
{
  "serviceAppointmentId": "08pxx0000004C92AAE",
  "serviceAppointment": {
    "workTypeId": "08pxx0000004C92AAE",
    "serviceTerritoryId": "0Hh2xx0000004CAeCAM",
    "engagementChannelTypeId": "0eFRM0000004CC22AM",
    "schedStartTime": "2020-09-15T16:00:00+0000",
    "schedEndTime": "2020-09-15T17:00:00+0000",
    "street": "1 Market Street",
    "city": "San Francisco",
    "state": "CA",
    "postalCode": "94105",
    "country": "USA",
    "appointmentType": "In Person",
    "appointmentMode": "Group",
    "attendeeLimit": "20",
    "extendedFields": [
      {
        "name": "Email",
        "value": "rachel.adams@salesforce.com"
      },
      {
        "name": "Phone",
        "value": "1111111111"
      },
      {
        "name": "Description",
```

```
        "value": "Test Description"
      }
    ],
    "assignedResources": [
      {
        "serviceResourceId": "0Hnxx0000004CAeCAM",
        "isRequiredResource": true,
        "isPrimaryResource": false,
        "extendedFields": []
      },
    ]
  ]
}
```

Request example to update the scheduled time

 **Note:** The API updates the equivalent Salesforce calendar events and block times when the scheduled time is updated.

```
{
  "serviceAppointmentId": "08pxx0000004C92AAE",
  "serviceAppointment": {
    "schedStartTime": "2020-09-15T16:00:00+0000",
    "schedEndTime": "2020-09-15T17:00:00+0000",
  }
}
```

Request example to update the work type

```
{
  "serviceAppointmentId": "08pxx0000004C92AAE",
  "serviceAppointment": {
    "workTypeId": "08qxx0000004C92AAE",
  }
}
```

Request example to update the service territory

```
{
  "serviceAppointmentId": "08pxx0000004C92AAE",
  "serviceAppointment": {
    "serviceTerritoryId": "0Hhxx0000004CAeCAM"
  }
}
```

| assignedResources | <a href="#">Assigned Resource Input[]</a> | Service resource who is assigned to a service appointment.<br><br>When updating an appointment, pass the complete list of resources needed.<br><br>If you don't pass a resource that is assigned to a service appointment, the API deletes that assigned resource. For example, suppose that an existing service appointment has assigned resources: A | Optional             | 51.0              |

| Name                | Type                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|---------------------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                     |                                             | <p>and B and if you pass assigned resources: B and C. The API checks the resource availability of B and C for existing work type and service territory, and if both are available, the service appointment gets updated with:</p> <ul style="list-style-type: none"> <li>• Resource A—Deleted</li> <li>• Resource B—Updated</li> <li>• Resource C—Created</li> </ul> <p>However, if you don't pass any of the assigned resources, the API assumes there is no change.</p> <p> <b>Note:</b> When updating an appointment, you can use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>assignedResources</code> as long as you have edit access to those fields.</p> |                      |                   |
| scheduling PolicyId | String                                      | ID of the <code>AppointmentSchedulingPolicy</code> object. If no scheduling policy is passed in the request body, the default configurations are used. The only scheduling policy configuration that is used in determining time slots is the enforcement of account visiting hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Optional             | 51.0              |
| service Appointment | <a href="#">Service Appointment Input[]</a> | <p>Appointment to complete a service work for a customer.</p> <p>When updating an appointment, pass only the fields that need to be updated.</p> <p> <b>Note:</b> When updating an appointment, you can use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>serviceAppointment</code> as long as you have edit access to those fields.</p>                                                                                                                                                                                                                                                                                                                       | Required             | 51.0              |

| Name                 | Type   | Description                                            | Required or Optional | Available Version |
|----------------------|--------|--------------------------------------------------------|----------------------|-------------------|
| serviceAppointmentId | String | ID of the service appointment that you want to update. | Required             | 51.0              |

## Service Appointments Create Input

Input representation for creating a service appointment. You can create service appointments, assign resources, and generate leads with either `parentRecordId` or `lead` but not both.

### JSON example

```
{
  "serviceAppointment": {
    "parentRecordId": "0012w000004oZXgAAM",
    "workTypeId": "08q2w000000XmniAAC",
    "serviceTerritoryId": "0Hh2w000000XmoXCAS",
    "engagementChannelTypeId": "0eFRM00000000Bv2AI",
    "schedStartTime": "2020-02-26T15:00:00.000Z",
    "schedEndTime": "2020-02-26T16:00:00.000Z",
    "street": "1 Market Street",
    "city": "San Francisco",
    "state": "CA",
    "postalCode": "94105",
    "country": "USA",
    "appointmentType": "In Person",
    "appointmentMode": "Group",
    "attendeeLimit": "20",
    "extendedFields": [
      {
        "name": "Email",
        "value": "rachel.adams@salesforce.com"
      },
      {
        "name": "Phone",
        "value": "1111111111"
      },
      {
        "name": "Description",
        "value": "Test Description"
      }
    ]
  },
  "assignedResources": [
    {
      "serviceResourceId": "0Hn2w000000gDWdCA2",
      "isRequiredResource": true,
      "isPrimaryResource": true,
      "extendedFields": []
    },
    {
      "serviceResourceId": "0Hn2w000000gCqnCAE",
```

```
      "isRequiredResource": true,
      "isPrimaryResource": false,
      "extendedFields": []
    }
  ]
}
```

JSON example for unauthenticated user

```
{
  "serviceAppointment": {
    "workTypeId": "08q2w000000XmniAAC",

| schedulingPolicyId | String                                      | ID of the <code>AppointmentSchedulingPolicy</code> object. If no scheduling policy is passed in the request body, the default configurations are used. The only scheduling policy configuration that is used in determining time slots is the enforcement of account visiting hours.                                                                                                  | Optional                                                                                                                                                                                                                                      | 48.0              |
| serviceAppointment | <a href="#">Service Appointment Input[]</a> | Appointment to complete a service work for a customer.<br><br> <b>Note:</b> When creating an appointment, you can use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>serviceAppointment</code> as long as you have edit access to those fields. | Required if lead isn't provided                                                                                                                                                                                                               | 48.0              |

## Share Captured Activity Input

Defines who a captured email or event is shared with.

**JSON example**

```
{
  "groupsToShareWith":["0F9B00000004EVAKA2", "0F9B00000005YGHKA2", "0F9B00000008RTUKA2",],
  "sharingType":"MyGroups"
}
```

**Properties**

| Name              | Type     | Description                                                                                                                                                                                                                                                         | Required or Optional | Available Version |
|-------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| groupsToShareWith | String[] | List of IDs for the groups that you share the activity with. Valid only if sharingType is MyGroups.                                                                                                                                                                 | Optional             | 39.0              |
| sharingType       | String   | Type of sharing operation. <ul style="list-style-type: none"><li>• Everyone—The activity is shared with everyone.</li><li>• MyGroups—The activity is shared only with a selection of the context user's groups.</li><li>• OnlyMe—The activity is private.</li></ul> | Required             | 39.0              |

## Share Input

Share input.

**JSON example**

```
{
  "id": "005D00000001Az41",
  "sharingType": "V"
}
```

**Properties**

| Name        | Type   | Description                               | Available Version |
|-------------|--------|-------------------------------------------|-------------------|
| id          | String | User ID to share a file with              | 30.0              |
| sharingType | String | Either C for collaborator or V for viewer | 30.0              |

## Shared Order Payment Summary Sequence

Shared order payment summary sequence.

**Root XML tag**

&lt;sequence&gt;

**JSON example**

```
[
  {
    "orderPaymentSummaryId": "0bMxx0000000000",
    "reservedBalanceAmount": 10
  },
  {
    "orderPaymentSummaryId": "0bMxx0000000001",
    "reservedBalanceAmount": 20
  },
  {
    "orderPaymentSummaryId": "0bMxx0000000002",
    "reservedBalanceAmount": 15
  }
]
```

**Properties**

| Name                  | Type   | Description                      | Required or Optional | Available Version |
|-----------------------|--------|----------------------------------|----------------------|-------------------|
| orderPaymentSummaryId | String | Shared order payment summary ID. | Required             | 60.0              |
| reservedBalanceAmount | Double | Balance amount to be reserved.   | Required             | 60.0              |

## Shifts from Pattern Input

Shifts from a pattern.

**Root XML tag**

&lt;shiftsFromPattern&gt;

**JSON example**

```
{
  "schedulingStartDate": "2020-11-01"
  "schedulingEndDate": "2020-12-01"
}
```

**Properties**

| Name              | Type   | Description                                                             | Required or Optional                              | Available Version |
|-------------------|--------|-------------------------------------------------------------------------|---------------------------------------------------|-------------------|
| schedulingEndDate | String | Scheduling end date in YYYY-MM-DD format.                               | Required if scheduling Occurrences isn't provided | 51.0              |
| Date              |        | Provide schedulingEndDate or schedulingOccurrences. Don't provide both. |                                                   |                   |

| Name                  | Type     | Description                                                                                                                                                                          | Required or Optional                         | Available Version |
|-----------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|-------------------|
| schedulingOccurrences | Integer  | Number of scheduling occurrences.<br>Provide schedulingEndDate or schedulingOccurrences. Don't provide both.                                                                         | Required if schedulingEndDate isn't provided | 51.0              |
| schedulingStartDate   | String   | Scheduling start date in YYYY-MM-DD format.                                                                                                                                          | Required                                     | 51.0              |
| serviceResourceId     | String   | ID of the service resource to assign shifts to.<br><br>In version 53.0 and later, use serviceResourceIdList.                                                                         | Optional                                     | 51.0–52.0         |
| serviceResourceIdList | String[] | List of service resource IDs to assign shifts to.                                                                                                                                    | Optional                                     | 53.0              |
| serviceTerritoryId    | String   | ID of the service territory to assign shifts to.                                                                                                                                     | Optional                                     | 51.0              |
| shiftStatus           | String   | Status of the shifts. Default values are: <ul style="list-style-type: none"> <li>Confirmed</li> <li>Published</li> <li>Tentative</li> </ul> Additional status values can be created. | Optional                                     | 52.0              |

## Ship to Address Input

Ship to address input.

### JSON example

```
{
  "countryIsoCode": "US",
  "stateIsoCode": "CA"
}
```

### Properties

| Name           | Type   | Description                                                                                                                                                                                | Required or Optional | Available Version |
|----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| countryIsoCode | String | ISO code of the country. Must match one of the valid ISO codes defined within the org's State-Country picklist. If unspecified, the default value is the default country for the webstore. | Required             | 58.0              |

| Name         | Type   | Description                                                                                                   | Required or Optional | Available Version |
|--------------|--------|---------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| stateIsoCode | String | ISO code of the state. Must match one of the valid ISO codes defined within the org's State-Country picklist. | Required             | 58.0              |

## Shipping Carrier Input

Shipping carrier.

### Root XML tag

shippingCarrier

### JSON example

```
"shippingCarrier": {
  "externalReference": "UPS001",
  "shippingCarrierMethods": [
    {
      "externalReference": "UPSGround001"
    },
    {
      "externalReference": "UPSAIR001"
    }
  ]
},
```

### Properties

| Property               | Type                         | Description                                                                              | Required or Optional | Available Version |
|------------------------|------------------------------|------------------------------------------------------------------------------------------|----------------------|-------------------|
| externalReference      | String                       | Unique code, reference, or identifier for the shipping carrier used by external systems. | Optional             | 63.0              |
| shippingCarrierMethods | ArrayOfShippingCarrierMethod | List of shipping carrier methods.                                                        | Required             | 63.0              |

## Shipping Carrier Method

Shipping carrier method external references.

### Root XML tag

shippingCarrierMethod

### JSON example

```
"shippingCarrier": {
  "externalReference": "UPS001",
  "shippingCarrierMethods": [
    {
      "externalReference": "UPSGround001"
    }
  ],
}
```

```
{
  "externalReference": "UPSAIR001"
}
],
},
```

**Properties**

| Property          | Type   | Description                                                                                     | Required or Optional | Available Version |
|-------------------|--------|-------------------------------------------------------------------------------------------------|----------------------|-------------------|
| externalReference | String | Unique code, reference, or identifier for the shipping carrier method used by external systems. | Required             | 63.0              |

## Skill Requirement Input

Skill requirement.

**Properties**

| Name       | Type   | Description                  | Required or Optional | Available Version |
|------------|--------|------------------------------|----------------------|-------------------|
| skillId    | String | ID of the skill required.    | Required             | 49.0              |
| skillLevel | Double | Level of the skill required. | Optional             | 49.0              |

## sObject Attributes Input

Custom fields for an sObject.

**JSON example**

```
{
  "attributes": {
    "type": "WebCart"
  },
  "Id": "0a6xx00000000000",
  "MyCustomTextField__c": "Foo",
  "MyCustomNumberField__c": 12.34,
  "MyCustomPercentField__c": 0.2345,
  "MyCustomGeolocationField__c": {
    "latitude": 33.345,
    "longitude": 45.567
  }
}
```

**Properties**

| Name           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Required or Optional | Available Version |
|----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| attributes     | String | Type of sObject, specified in the form {"type": "<sobject_type>"}.<br><br>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required             | 60.0              |
| <custom_field> | String | <p>One or more custom fields, and the Id property of an sObject whose type is specified in the attributes property. For example, if you specified WebCart as the sObject type, you would specify a WebCart Id as the value of the Id property.</p> <p>If you specify an Id, you must set the Id value to the Id of the WebCart or a CartDeliveryGroup in the current checkout session.</p> <p>If you omit the Id property, custom fields are set on the current WebCart or the default CartDeliveryGroup.</p> <p>The custom fields can be of type Checkbox, Currency, Date, Email, LongTextArea, Number, Percent, Phone, Text, TextArea, Url, Address, or Location. Custom fields don't support updating the <code>country</code> and <code>state</code> fields of an Address. Instead, specify the <code>countryCode</code> and <code>stateCode</code>.</p> | Required             | 60.0              |

## Sort Rule Input

Sort rule input.

**Root XML tag**

```
<sortRule>
```

**JSON example**

```
{
  "type" : "ProductBased",
  "sortStandardField" : "Stock_Keeping_Unit",
  "direction" : "Ascending",
  "labelSuffix" : "Asc",
  "sortOrder" : "1"
}
```

## Properties

| Name              | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                              | Required or Optional                                                                 | Available Version |
|-------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|-------------------|
| type              | String | Type of sort rule. Values are: <ul style="list-style-type: none"> <li>ProductAttributeBased—Sorts by product attribute fields.</li> <li>ProductBased—Sorts by product field data.</li> <li>Relevancy—Sorts by product and catalog term frequency.</li> <li>SortByPricebook—Sorts by product prices defined in the specified pricebook (version 55.0 and later).</li> </ul>                               | Required                                                                             | 54.0              |
| sortStandardField | String | A standard field typically used for sorting (for example, Name, StockKeepingUnit, CreatedDate, Family, or ProductCode).                                                                                                                                                                                                                                                                                  | Required for ProductAttributeBased or ProductBased sort types.                       | 54.0              |
| customFieldId     | String | A custom field to use for sorting.                                                                                                                                                                                                                                                                                                                                                                       | Required. You must specify a custom field ID or a standard sort field, but not both. | 54.0              |
| direction         | String | Direction of the sort rule. Values are: <ul style="list-style-type: none"> <li>Ascending—Sorts in ascending alphanumeric order (A–Z, 0–9).</li> <li>Default—When no direction is defined, sorts by relevance.</li> <li>Descending—Sorts in descending alphanumeric order (Z–A, 9–0).</li> </ul>                                                                                                          | Optional                                                                             | 54.0              |
| labelSuffix       | String | Label suffix of the sort rule. Valid values: <ul style="list-style-type: none"> <li>Ascen—Label suffix for 'Asc'</li> <li>Ascending—Label suffix for 'Ascending'</li> <li>Az—Label suffix for 'A-Z'</li> <li>Descen—Label suffix for 'Desc'</li> <li>Descending—Label suffix for 'Descending'</li> <li>FewMany—Label suffix for 'Few-Many'</li> <li>HeavyLight—Label suffix for 'Heavy-Light'</li> </ul> | Optional                                                                             | 54.0              |

| Name      | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Required or Optional | Available Version |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|           |         | <ul style="list-style-type: none"> <li>HighLow—Label suffix for 'High-Low'</li> <li>HighestLowest—Label suffix for 'Highest-Lowest'</li> <li>LightHeavy—Label suffix for 'Light-Heavy'</li> <li>LowHigh—Label suffix for 'Low-High'</li> <li>LowestHighest—Label suffix for 'Lowest-Highest'</li> <li>ManyFew—Label suffix for 'Many-Few'</li> <li>NewOld—Label suffix for 'New-Old'</li> <li>Newest—Label suffix for 'Newest'</li> <li>NewestOldest—Label suffix for 'Newest-Oldest'</li> <li>NineZero—Label suffix for '9-0'</li> <li>OldNew—Label suffix for 'Old-New'</li> <li>Oldest—Label suffix for 'Oldest'</li> <li>OldestNewest—Label suffix for 'Oldest-Newest'</li> <li>PriceDecreasing—Label suffix for '\$-\$'</li> <li>PriceIncreasing—Label suffix for '\$-\$'</li> <li>ThickThin—Label suffix for 'Thick-Thin'</li> <li>ThinThick—Label suffix for 'Thin-Thick'</li> <li>Za—Label suffix for 'Z-A'</li> <li>ZeroNine—Label suffix for '0-9'</li> </ul> |                      |                   |
| sortOrder | Integer | Sort order for the rule. A lower number has higher precedence. The first sort option is called when no other option is selected.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Required             | 54.0              |

## Sort Rules Collection Input

Sort rules input collection information an admin can use to create sort rules for a webstore.

### Root XML tag

```
<sortRules>
```

**JSON example**

```
{
  "sortRules" : [
    {
      "type" : "ProductBased",
      "sortStandardField" : "Stock_Keeping_Unit",
      "direction" : "Ascending",
      "labelSuffix": "Asc",      "sortOrder" : "1"
    }
  ]
}
```

**Properties**

| Name      | Type                              | Description                        | Required or Optional | Available Version |
|-----------|-----------------------------------|------------------------------------|----------------------|-------------------|
| sortRules | <a href="#">Sort Rule Input[]</a> | A collection of sort rules inputs. | Required             | 54.0              |

## Staged Credentials Input

Request to rotate credentials with staged data.

**JSON example**

```
{
  "command": "rotate"
}
```

**Properties**

| Name    | Type   | Description                                                                     | Required or Optional | Available Version |
|---------|--------|---------------------------------------------------------------------------------|----------------------|-------------------|
| command | String | Staged credentials command. The only available command is <code>rotate</code> . | Required             | 65.0              |

## Status Capability Input

Change the status of a feed post or comment.

**Root XML tag**

```
statusCapability
```

**JSON example**

```
{
  "feedEntityStatus": "Published"
}
```

**Properties**

| Name             | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| feedEntityStatus | String | <p>Status of the feed post or comment. Values are:</p> <ul style="list-style-type: none"> <li><b>Draft</b>—The feed post isn't published but is visible to the author and users with Modify All Data or View All Data permission. Comments can't be drafts.</li> <li><b>Isolated</b>—The feed post or comment is isolated, and only admins can see it.</li> <li><b>PendingReview</b>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li><b>Published</b>—The feed post or comment is approved and visible.</li> </ul> <p>Posts that have a status of <b>PendingReview</b> or <b>Published</b> can't be changed to a status of <b>Draft</b> and vice versa. Only admins can change the status of a post or comment to or from <b>Isolated</b> status.</p> | Required             | 37.0              |

## Stream Subscription Input

An entity to subscribe to for a feed stream.

**Root XML tag**

&lt;streamSubscription&gt;

**JSON example**

```
{
  "entityId" : "0TOD0000000090r"
}
```

**Properties**

| Name     | Type   | Description                                                                                                                                                               | Required or Optional | Available Version |
|----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| entityId | String | The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity's feed is included in the feed stream. | Required             | 39.0              |

## Submit Cart to Exchange Order Input

Information required to submit an exchange order.

**Root XML tag**

&lt;submitCartToExchangeOrderInput&gt;

**JSON example**

```
{
  "orderSummaryId": "10sxx00000000000",
  "exchangeCartId": "0a6xx00000000000",
  "referenceId": "2oNxx00000000000",
  "orderNumber": "My exchange order",
  "paymentInfoList": {
    "paymentInfoItems": [
      {
        "paymentIds": [
          "0aQxx00000000000",
          "0aQxx00000000001"
        ],
        "name": "VISA-1234",
```

```

        "paymentMethodId": "0aaxx0000000001",
        "lastPaymentGatewayLogId": "0Xtxx0000000001"
    },
    {
        "paymentAuthorizationId": "0Xcxx0000000002",
        "name": "VISA-4567",
        "paymentMethodId": "0aaxx0000000002",
        "lastPaymentGatewayLogId": "0Xtxx0000000002"
    },
    {
        "paymentIds": [
            "0aQxx0000000003",
            "0aQxx0000000004"
        ],
        "paymentAuthorizationId": "0Xcxx0000000003",
        "name": "VISA-9123",
        "paymentMethodId": "0aaxx0000000003",
        "lastPaymentGatewayLogId": "0Xtxx0000000003"
    }
]
},
"sequences": {
    "sequences": [
        {
            "orderPaymentSummaryId": "0bMxx0000000000",
            "amount": 10
        },
        {
            "orderPaymentSummaryId": "0bMxx0000000001",
            "amount": 20
        },
        {
            "orderPaymentSummaryId": "0bMxx0000000002"
        }
    ]
}
}
}

```

### Properties

| Name            | Type                                 | Description                                                                                        | Required or Optional | Available Version |
|-----------------|--------------------------------------|----------------------------------------------------------------------------------------------------|----------------------|-------------------|
| exchangeCartId  | String                               | ID of the cart used for adding items to the exchange order.                                        | Required             | 60.0              |
| orderNumber     | String                               | Order number.                                                                                      | Optional             | 60.0              |
| orderSummaryId  | String                               | Order summary ID.                                                                                  | Required             | 60.0              |
| paymentInfoList | <a href="#">Payment Info Input[]</a> | List of payment information when additional funds are needed for the newly created exchange order. | Optional             | 60.0              |
| referenceId     | String                               | Return order ID.                                                                                   | Optional             | 60.0              |

| Name            | Type                                                          | Description                                                                                                                                                                     | Required or Optional | Available Version |
|-----------------|---------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| reservationType | String                                                        | The reservation that's created by the submit API. The possible values are Full, which means there's a reservation against the exchange cart, or None if there's no reservation. | Optional             | 61.0              |
| sequences       | <a href="#">Shared Order Payment Summary Sequence Input[]</a> | Ordered list of order payment summaries and reserved balance amounts to apply them to.                                                                                          | Optional             | 60.0              |

## Survey Description Input

Input representation of the details of the survey recipient and their engagement context, and the language, related records, and invitation settings of the survey.

### Properties

| Name                          | Type                                             | Description                                                                                                                                                                                                                                                  | Required or Optional | Available Version |
|-------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| invitationSettings            | <a href="#">Survey Invitation Settings Input</a> | Invitation settings of the survey.<br> <b>Note:</b> The Invitation ID API doesn't require the invitation configuration settings to be passed with the Survey Invitations. | Required             | 56.0              |
| languageCode                  | String                                           | Code of the language in which the survey is created.                                                                                                                                                                                                         | Optional             | 56.0              |
| recipientEngagementContext    | Map<String, String>                              | Engagement context settings for a recipient of the survey.                                                                                                                                                                                                   | Optional             | 56.0              |
| relatedRecordIds              | String[]                                         | IDs of the records that are related to the survey.                                                                                                                                                                                                           | Optional             | 56.0              |
| shouldLoadPartiallyCmplSurvey | Boolean                                          | Indicates whether to load partially completed surveys when a partially completed survey is selected ( <code>true</code> ), or to start a new survey ( <code>false</code> ). The default value is <code>false</code> .                                        | Optional             | 63.0              |
| staticMergeFields             | Map<String, String>                              | Map of static merge field values.                                                                                                                                                                                                                            | Optional             | 56.0              |

|                             |                                                             | and<br>{{{SurveyQuestion.QuestionHtmlContent}}}                                                                                                                                                                                                                     |                      |                   |
| collectAnonymousResponse    | Boolean                                                     | Specifies whether participants can respond anonymously ( <b>true</b> ) or not ( <b>false</b> ).                                                                                                                                                                     | Required             | 50.0              |
| communityId                 | String                                                      | ID of the site that's used to open the survey for users outside your org.                                                                                                                                                                                           | Optional             | 50.0              |
| emailTemplateId             | String                                                      | ID of the Lightning email template that's used to send the survey invitation. The template must contain the required merge fields that embed either the survey link or a question in the email. Only Lightning email templates are used to send survey invitations. | Optional             | 50.0              |
| fromEmailAddress            | String                                                      | Email ID of the user or the org-wide email address associated with the user's profile.                                                                                                                                                                              | Required             | 50.0              |
| invitationExpirationDate    | String                                                      | Date on which the survey invitation expires.                                                                                                                                                                                                                        | Optional             | 50.0              |
| invitationOwner             | String                                                      | ID of the owner of the survey invitation records.                                                                                                                                                                                                                   | Optional             | 50.0              |
| isPersonalInvitation        | Boolean                                                     | Specifies whether an unique invitation is created for each participant ( <b>true</b> ) or not ( <b>false</b> ). When a participant responds using a personal invitation, the response record is associated with the participant's Salesforce record.                | Required             | 50.0              |
| recipientEngagementContexts | <a href="#">Survey Recipient Engagement Context Input[]</a> | Maps each recipient with the context based on which the survey invitation is emailed.                                                                                                                                                                               | Optional             | 50.0              |
| recipients                  | String[]                                                    | List of up to 300 IDs of leads, contacts, or users to whom the survey invitation is emailed.                                                                                                                                                                        | Required             | 50.0              |
| shareInvitationsWith        | String[]                                                    | IDs of the users with whom the survey invitation records must be shared. The invitation records are shared with Read access.                                                                                                                                        | Optional             | 50.0              |
| subject                     | String                                                      | Subject of the email. Specify the subject in case you don't specify an email template.                                                                                                                                                                              | Optional             | 50.0              |

| Name              | Type     | Description                                                                                                                                                              | Required or Optional | Available Version |
|-------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| surveyQuestionIds | String[] | IDs of the questions that are embedded in the email. You can send an email invitation for questions of the following types: Net Promoter Score (NPS), rating, and score. | Optional             | 50.0              |

## Survey Integer Question Response Input

Input representation of the details of the response to an NPS question on the survey page.

### Properties

| Name          | Type    | Description                                             | Required or Optional | Available Version |
|---------------|---------|---------------------------------------------------------|----------------------|-------------------|
| name          | String  | The API name of survey question.                        | Required             | 56.0              |
| questionType  | String  | The type of survey question.                            | Required             | 56.0              |
| responseValue | Integer | The value of a response to an NPS question in a survey. | Required             | 56.0              |

## Survey Invitation Settings Input

Input representation of the settings of the survey invitation that define the participants who can respond to the survey, its expiration, and other related configurations.

### Properties

| Name                                 | Type    | Description                                                                                                                                                           | Required or Optional | Available Version |
|--------------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| allowGuestUserResponse               | Boolean | Indicates whether a guest user can respond to the survey ( <code>true</code> ) or not ( <code>false</code> ).                                                         | Required             | 56.0              |
| allowParticipantsAccessTheirResponse | Boolean | Indicates whether participants with Salesforce accounts can access their responses ( <code>true</code> ) or not ( <code>false</code> ).                               | Required             | 56.0              |
| collectAnonymousResponse             | Boolean | Indicates whether participants can take the survey without revealing their name or other identifying information ( <code>true</code> ) or not ( <code>false</code> ). | Required             | 56.0              |
| communityId                          | String  | The ID of the Experience Cloud site related to the survey.                                                                                                            | Optional             | 56.0              |
| invitationExpirationDate             | String  | The date when the survey invitation expires.                                                                                                                          | Optional             | 56.0              |

| Name            | Type   | Description                                                                                               | Required or Optional | Available Version |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| invitationOwner | String | The ID of the survey invitation's owner. The default value is the ID of the user running the API request. | Optional             | 56.0              |
| recipientId     | String | The ID of the survey recipient.                                                                           | Optional             | 56.0              |

## Survey Page Response Input

Input representation of the details of the response to a survey page.

### Properties

| Name              | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Required or Optional | Available Version |
|-------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name              | String  | The API name of the survey page.<br> <b>Note:</b> Reserved for future use.                                                                                                                                                                                                                                                                                                                   | Optional             | 56.0              |

## Survey Question Response Input

Input representation of the details of the response to a question on the survey page.

### Properties

| Name         | Type   | Description                      | Required or Optional | Available Version |
|--------------|--------|----------------------------------|----------------------|-------------------|
| name         | String | The API name of survey question. | Required             | 56.0              |
| questionType | String | The type of survey question.     | Required             | 56.0              |

## Survey Recipient Engagement Context Input

Context based on which the survey invitation is sent to a participant.

### Root XML tag

```
<SurveyRecipientEngagementContextInput>
```

### JSON example

```
{"recipientId" : "003x0000003j8CEAAY", "recipientEngagementContext": {"TestKey" : "TestValue"}}
```

### Properties

| Name                       | Type                | Description                                                                          | Required or Optional | Available Version |
|----------------------------|---------------------|--------------------------------------------------------------------------------------|----------------------|-------------------|
| recipientEngagementContext | Map<String, String> | Map each recipient with the context based on which the survey invitation is emailed. | Required             | 50.0              |
| recipientId                | String              | Participant ID with whom the engagement context should be associated.                | Required             | 50.0              |

## Survey Recipient Survey Subjects Input

Records associated with the survey invitation.

### Root XML tag

```
<SurveyRecipientSurveySubjectsInput>
```

### JSON example

```
{"recipientId": "003x0000003j8CEAAY", "associateRecordIds": ["001x0000004EWIZAA4"]}
```

### Properties

| Name               | Type     | Description                                                           | Required or Optional | Available Version |
|--------------------|----------|-----------------------------------------------------------------------|----------------------|-------------------|
| associateRecordIds | String[] | ID of the associated records.                                         | Required             | 50.0              |
| recipientId        | String   | Participant ID with whose invitation the record should be associated. | Required             | 50.0              |

|                      |                                            | <ul style="list-style-type: none"> <li><b>Next</b>—Navigate to the next survey page.</li> </ul> |                      |                   |
| surveyPage Responses | <a href="#">Survey Page Response Input</a> | Responses to the survey questions on a page.                                                    | Required             | 56.0              |

## Survey Selection Question Choice Input

The details of a boolean, rating, single selection, or a multiple selection question's choice on the survey page.

### Properties

| Name | Type   | Description                                                                                                         | Required or Optional | Available Version |
|------|--------|---------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name | String | The API name of selected choice to a Boolean, rating, single selection, or multiple selection question in a survey. | Required             | 56.0              |

## Survey Selection Question Response Input

Input representation of the details of the response to a boolean, rating, single selection, or a multiple selection question on the survey page.

### Properties

| Name         | Type                                                     | Description                                                                                       | Required or Optional | Available Version |
|--------------|----------------------------------------------------------|---------------------------------------------------------------------------------------------------|----------------------|-------------------|
| name         | String                                                   | The API name of survey question.                                                                  | Required             | 56.0              |
| questionType | String                                                   | The type of survey question.                                                                      | Required             | 56.0              |
| responses    | <a href="#">Survey Selection Question Choice Input[]</a> | The responses to a Boolean, rating, single selection, or multiple selection question in a survey. | Required             | 56.0              |

## Survey Text Question Response Input

The details of the response to a short-text or a long-text question on the survey page.

### Properties

| Name | Type   | Description                      | Required or Optional | Available Version |
|------|--------|----------------------------------|----------------------|-------------------|
| name | String | The API name of survey question. | Required             | 56.0              |

| Name          | Type   | Description                                                                | Required or Optional | Available Version |
|---------------|--------|----------------------------------------------------------------------------|----------------------|-------------------|
| questionType  | String | The type of survey question.                                               | Required             | 56.0              |
| responseValue | String | The value of a response to a short-text or long-text question in a survey. | Required             | 56.0              |

## Target Collection Input

Collection of targets to create.

### Root XML tag

```
<targetCollection>
```

### JSON example

```
{
  "targets": [{
    "audienceId": "6AuRM0000004D5w0AE",
    "groupName": "2b8bc305-d415-49f9-8e24-814455427324",
    "priority": 1,
    "publishStatus": "Draft",
    "targetType": "ExperienceVariation",
    "targetValue": "ContactSupport_ContactSupportForCalifornia_Page"
  }]
}
```

### Properties

| Name    | Type                           | Description                | Required or Optional | Available Version |
|---------|--------------------------------|----------------------------|----------------------|-------------------|
| targets | <a href="#">Target Input[]</a> | List of targets to create. | Required             | 47.0              |

## Target Collection Update Input

Collection of targets to update.

### Root XML tag

```
<targetCollection>
```

### JSON example

```
{
  "targets": [{
    "audienceId": "6AuRM0000004D5w0AE",
    "priority": 1,
    "targetId": "6AtRM0000000II30AM"
  }]
}
```

**Properties**

| Name    | Type                                   | Description                | Required or Optional | Available Version |
|---------|----------------------------------------|----------------------------|----------------------|-------------------|
| targets | <a href="#">Target Update Input</a> [] | List of targets to update. | Required             | 47.0              |

## Target Input

Target to create.

**Root XML tag**

<target>

**JSON example**

```
{
  "audienceId": "6AuRM0000004D5w0AE",
  "groupName": "2b8bc305-d415-49f9-8e24-814455427324",
  "priority": 1,
  "publishStatus": "Draft",
  "targetType": "ExperienceVariation",
  "targetValue": "ContactSupport_ContactSupportForCalifornia_Page"
}
```

**Properties**

| Name          | Type    | Description                                                                                                                                                                                                                                                                                                                                    | Required or Optional | Available Version |
|---------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| audienceId    | String  | ID of the audience to assign to the target.                                                                                                                                                                                                                                                                                                    | Required             | 47.0              |
| groupName     | String  | Group name of the target. Groups bundle related target and audience pairs. You can have up to 2,000 groups and 500 targets per group. To determine the group name for targets of type <code>ExperienceVariation</code> , see <a href="#">Personalization Target Developer and Group Names</a> in the <i>Experience Cloud Developer Guide</i> . | Required             | 47.0              |
| priority      | Integer | Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.                                                                                                                                                                                                               | Optional             | 47.0              |
| publishStatus | String  | Publish status of the target. Values are: <ul style="list-style-type: none"><li>• Draft</li><li>• Live</li></ul>                                                                                                                                                                                                                               | Optional             | 47.0              |

| Name                    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Required or Optional | Available Version |
|-------------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|                         |        | We recommend setting the publish status to <code>Draft</code> . If you specify <code>Live</code> , your changes revert after you publish the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      |                   |
| <code>targetType</code> | String | <p>Type of target, indicating the nature of the data being targeted. Supported values include:</p> <ul style="list-style-type: none"> <li>• <code>ExperienceVariation</code> (version 47.0 and later)</li> <li>• Custom object API names, such as <b><code>CustomObjectName__c</code></b> (version 47.0 and later)</li> <li>• <code>NavigationLinkSet</code> (version 49.0 and later)</li> <li>• <code>Topic</code> (version 49.0 and later)</li> <li>• <code>CollaborationGroup</code> (version 49.0 and later)</li> <li>• <code>KnowledgeArticle</code> (version 49.0 and later)</li> <li>• <code>ContentDocument</code> (version 49.0 and later)</li> <li>• <code>ManagedContent</code> (version 49.0 and later)</li> <li>• <code>Report</code> (version 49.0 and later)</li> <li>• <code>Dashboard</code> (version 49.0 and later)</li> </ul> <p>You can have up to 2,500 <code>ExperienceVariation</code> targets and 25,000 record targets.</p> | Required             | 47.0              |

| Name        | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                        | Required or Optional | Available Version |
|-------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| targetValue | String | Value of the target. If targetType is ExperienceVariation, targetValue is the developer name of the experience variation. If targetType is <b>CustomObjectName__c</b> , targetValue is the ID of the custom object. To determine the developer name for targets of type ExperienceVariation, see <a href="#">Personalization Target Developer and Group Names</a> in the <i>Experience Cloud Developer Guide</i> . | Required             | 47.0              |

## Target Location Input

A set of inventory locations that together can fulfill an order.

### Root XML tag

```
<targetLocationInput>
```

### Properties

| Name      | Type                              | Description                                                                | Required or Optional | Available Version |
|-----------|-----------------------------------|----------------------------------------------------------------------------|----------------------|-------------------|
| locations | <a href="#">Location Input</a> [] | A list of locations with information about their country and postal codes. | Required             | 51.0              |

## Target Update Input

Target to update.

### Root XML tag

```
<target>
```

### JSON example

```
{
  "audienceId": "6AuRM0000004D5w0AE",
  "priority": 1,
  "targetId": "6AtRM0000000II30AM"
}
```

**Properties**

| Name       | Type    | Description                                                                                                                      | Required or Optional                                        | Available Version |
|------------|---------|----------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|-------------------|
| audienceId | String  | ID of the audience to assign to the target.                                                                                      | Required if priority isn't specified. Otherwise, Optional   | 47.0              |
| priority   | Integer | Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience. | Required if audienceId isn't specified. Otherwise, Optional | 47.0              |
| targetId   | String  | ID of the target to update.                                                                                                      | Required                                                    | 47.0              |

## Text Classification Input

Input representation for text classifications request submission.

**JSON example**

```
{
  "textList": [
    "description not matching one aaa",
    "Runs big",
    "color is different",
    "color is different",
    "Didn't fit",
    "bad quality",
    "Wrong color",
    "Didn't like",
    "Didn't like"
  ],
  "classifiers": [
    "Runs big",
    "Runs small",
    "Defective",
    "Inaccurate Description",
    "Color does",
    "Item arrived late",
    "Other"
  ]
}
```

**Properties**

| Name        | Type     | Description                                                       | Required or Optional | Available Version |
|-------------|----------|-------------------------------------------------------------------|----------------------|-------------------|
| classifiers | String[] | List of classifiers according to which text has to be classified. | Required             | 59.0              |
| textList    | String[] | List of text to be classified.                                    | Required             | 59.0              |

## Topic Assignment Input

Represents a topic to assign to a feed item or record. Administrators must enable topics for objects before users can add topics to records of that object type.

**Root XML tag**

```
<topicAssignment>
```

**JSON**

The following example assigns a topic to a record:

```
{ "topicId": "0TOD0000000090r"
}
```

**Properties**

| Name      | Type   | Description                      | Required or Optional                                                                                   | Available Version |
|-----------|--------|----------------------------------|--------------------------------------------------------------------------------------------------------|-------------------|
| topicId   | String | ID of an existing topic.         | Required for existing topics if the <code>topicName</code> property isn't used.                        | 30.0              |
| topicName | String | Name of a new or existing topic. | Required for new topics; required for existing topics if the <code>topicId</code> property isn't used. | 30.0              |

## Topic Endorsement Input

Endorse a user who's knowledgeable about a topic.

**Root XML tag**

```
<topicEndorsement>
```

**JSON**

```
{
  "userId" : "005B00000000Ge16"
}
```

**Properties**

| Name   | Type   | Description                                            | Required or Optional | Available Version |
|--------|--------|--------------------------------------------------------|----------------------|-------------------|
| userId | String | ID of the user to be endorsed for the specified topic. | Required             | 30.0              |

## Topic Input

Topic input.

**Root XML tag**

<topic>

**JSON example**

```
{
  "description": "World Wide Web Consortium (W3C) is the main international standards organization for the web.",
  "name": "W3C"
}
```

**Properties**

| Name        | Type     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Available Version |
|-------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| description | String   | Text description of the topic                                                                                                                                                                                                                                                                                                                                                                                                                                | 28.0              |
| idsToMerge  | String[] | List of up to five secondary topic IDs to merge with the primary topic<br><br>If any of the secondary topics are navigational or featured topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic. If you merge a topic with a content topic, the content associations are preserved. If you merge a topic with an inactive endorsee, the endorsement isn't mapped to the primary topic. | 33.0              |

| Name | Type   | Description                                                                                                 | Available Version |
|------|--------|-------------------------------------------------------------------------------------------------------------|-------------------|
| name | String | Name of the topic<br><br>Use this property to change only the capitalization and spacing of the topic name. | 28.0              |

## Topic Names Input

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

### Root XML tag

```
<topicNamesCollection>
```

### JSON example

```
{ "topicNames": ["API", "Connect REST API", "ConnectApi"]
}
```

### Properties

| Name             | Type     | Description                                                                                        | Required or Optional | Available Version |
|------------------|----------|----------------------------------------------------------------------------------------------------|----------------------|-------------------|
| topicNames       | String[] | A list of up to 10 topic names for a feed item or 100 topic names for a record.                    | Required             | 35.0              |
| topicSuggestions | String[] | A list of suggested topics to assign to a record or feed item to improve future topic suggestions. | Optional             | 37.0              |

## Topics Capability Input

Assign topics to a feed element.

### Root XML tag

```
<topicsCapability>
```

### JSON example

```
{
  "contextTopicName": "Recreation",
  "topics": ["Hiking", "Backpacking", "Camping"]
}
```

**Properties**

| Name             | Type     | Description                                                             | Required or Optional | Available Version |
|------------------|----------|-------------------------------------------------------------------------|----------------------|-------------------|
| contextTopicName | String   | Name of the parent topic in the site to which the feed element belongs. | Optional             | 38.0              |
| topics           | String[] | List of topics to assign to the feed element.                           | Required             | 38.0              |

[Feed Element Capabilities Input](#)

## Up Down Vote Capability Input

Upvote or downvote a feed element or a comment.

**Root XML tag**`<upDownVoteCapability>`**JSON example**

```
{
  "vote": "Up"
}
```

**Properties**

| Name | Type   | Description                                                                                                                                | Required or Optional | Available Version |
|------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| vote | String | Type of vote for a feed element or comment. Values are: <ul style="list-style-type: none"><li>• Down</li><li>• None</li><li>• Up</li></ul> | Required             | 41.0              |

## User Chatter Settings Input

A user's global Chatter settings.

**Root XML tag**`<userChatterSettings>`

**Properties**

| Name                           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Available Version |
|--------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| defaultGroup<br>EmailFrequency | String | <p>The default frequency with which a user receives email from a group when they join. Valid values are:</p> <ul style="list-style-type: none"><li>• EachPost</li><li>• DailyDigest</li><li>• WeeklyDigest</li><li>• Never</li></ul> <p>In communities, the Email on every post option is disabled after more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to Daily digests.</p> | 27.0              |

## User ID Collection Input

A collection of user IDs.

**Root XML tag**

```
<userIds>
```

**JSON example**

```
{
  "userIds" : [
    "005B0000000Ge16",
    "005D00000001GpHp"
  ]
}
```

**Properties**

| Name    | Type     | Description         | Required or Optional | Available Version |
|---------|----------|---------------------|----------------------|-------------------|
| userIds | String[] | A list of user IDs. | Required             | 35.0              |

## User Input

User input.

**Root XML tag**`<user>`**JSON example**

```
{
  "aboutMe": "Staff Technical Writer responsible for the Connect API and Connect in
Apex documentation."
}
```

**Properties**

| Name    | Type   | Description                                                                                                                                                                                                                         | Available Version |
|---------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| aboutMe | String | The aboutMe property of a User Detail response body. The maximum length is 1000 characters. This property populates the “About Me” section of the user profile, which is visible to all members of an Experience Cloud site or org. | 29.0              |

## User Message

User message input.

**Root XML tag**`<message>`**Properties**

| Name       | Type                                      | Description                                                                                                                                                                                  | Available Version |
|------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| body       | String                                    | Text of the message body                                                                                                                                                                     | 23.0              |
| inReplyTo  | String                                    | ID of an existing message that identifies which conversation this message is part of. Specify either <code>recipients</code> or <code>inReplyTo</code> . Specify one or the other, not both. | 23.0              |
| recipients | <a href="#">User Recipient List Input</a> | List of users who are the intended message recipients, up to 9. Comma-separated list of user IDs. Specify either <code>recipients</code> or                                                  | 23.0              |

| Name | Type | Description                                    | Available Version |
|------|------|------------------------------------------------|-------------------|
|      |      | inReplyTo. Specify one or the other, not both. |                   |

Example XML format:

```
<message>
  <body>Text of the message</body>
  <recipients>
    <recipient>userID</recipient>
    <recipient>userID</recipient>
  </recipients>
  <inReplyTo>messageID</inReplyTo>
</message>
```

Example JSON format:

```
{
  "body": "Text of the message",
  "recipients": ["userID", "userID"],
  "inReplyTo": "messageID"
}
```

## User Mission Activity Input

Mission activity for a user.

**Root XML tag**

```
<missionActivity>
```

**JSON example**

```
{
  "activityCount": 24,
  "activityType": "FeedItemWriteAPost"
}
```

**Properties**

| Name          | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Required or Optional | Available Version |
|---------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| activityCount | Integer | Number of mission activities of the specified type for the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required             | 45.0              |
| activityType  | String  | Type of mission activity for a user. Values are: <ul style="list-style-type: none"><li>• <code>FeedItemAnswerAQuestion</code>—User answered a question.</li><li>• <code>FeedItemLikeSomething</code>—User liked a post or comment.</li><li>• <code>FeedItemMarkAnswerAsBest</code>—User marked an answer as the best answer.</li><li>• <code>FeedItemPostQuestion</code>—User posted a question.</li><li>• <code>FeedItemReceiveAComment</code>—User received a comment on a post.</li><li>• <code>FeedItemReceiveALike</code>—User received a like on a post or comment.</li><li>• <code>FeedItemReceiveAnAnswer</code>—User received an answer to a question.</li></ul> | Required             | 45.0              |

| Name | Type | Description                                                                                                                                                                                                                        | Required or Optional | Available Version |
|------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
|      |      | <ul style="list-style-type: none"> <li>FeedItemWriteAComment—User commented on a post.</li> <li>FeedItemWriteAPost—User made a post.</li> <li>FeedItemYourAnswerMarkedBest—User's answer was marked as the best answer.</li> </ul> |                      |                   |

## User Status Input

User status input.

**Note:** Setting a user status is no longer available as of version 25.0. Post feed items to the feed instead, using [Feed Item Input](#).

### Root XML tag

```
<userStatus>
```

### Properties

| Name | Type                               | Description                  | Available Version |
|------|------------------------------------|------------------------------|-------------------|
| body | <a href="#">Message Body Input</a> | Description of message body. | 23.0–24.0         |

## User Stream (Conversation) Input

User stream conversation input.

### Root XML tag

```
<conversation>
```

### Properties

| Name | Type    | Description                                                                                     | Available Version |
|------|---------|-------------------------------------------------------------------------------------------------|-------------------|
| read | Boolean | Changes the conversation status to unread ( <code>false</code> ) or read ( <code>true</code> ). | 24.0              |

## Verified Capability Input

Mark a comment as verified or unverified.

### Root XML tag

```
<verifiedCapability>
```

**JSON example**

```
{
  "isVerified": "true"
}
```

**Properties**

| Name                   | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Required or Optional | Available Version |
|------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------|
| isVerified             | Boolean | Specifies whether to mark the comment as verified ( <b>true</b> ) or unverified ( <b>false</b> ).<br><br>Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Required             | 41.0              |
| isVerifiedByAnonymized | Boolean | Specifies whether to mark the comment as verified by an anonymous user ( <b>true</b> ).<br><br>If a user previously verified a comment and then requested the activity to be deleted, use <code>isVerifiedByAnonymized</code> to maintain the verification and anonymize the value of <code>lastVerifiedByUser</code> .<br><br>You can't set <code>isVerified</code> and <code>isVerifiedByAnonymized</code> to <b>true</b> at the same time.<br><code>isVerifiedByAnonymized</code> can be set to <b>true</b> only if <code>isVerified</code> is already set to <b>true</b> .<br><br>You can't set <code>isVerifiedByAnonymized</code> to <b>false</b> . After <code>isVerifiedByAnonymized</code> is set to <b>true</b> , it can be undone only when another user marks the comment as unverified and then reverifies the comment. | Optional             | 43.0              |

## Voice Root Email Address Update Accept Input

Accept the email address change for the AWS root user that's associated with the Voice account. This request applies to the Service Cloud Voice with Amazon Connect partner telephony model.

**JSON example**

```
{
  "emailAddress": "awsrootuser@mycompany.com",
}
```

```
{
  "otp": "340146",
}
```

**Properties**

| Name         | Type   | Description                                                                             | Required or Optional | Available Version |
|--------------|--------|-----------------------------------------------------------------------------------------|----------------------|-------------------|
| emailAddress | String | New email address for the AWS account root user.                                        | Required             | 64.0              |
| otp          | String | Six-digit one-time password sent to the new email address of the AWS account root user. | Required             | 64.0              |

## Voice Root Email Address Update Start Input

Start the process to change the email address of the AWS root user that's associated with the Voice account. This request applies to the Service Cloud Voice with Amazon Connect partner telephony model.

**JSON example**

```
{
  "emailAddress": "awsrootuser@mycompany.com"
}
```

**Properties**

| Name         | Type   | Description                                      | Required or Optional | Available Version |
|--------------|--------|--------------------------------------------------|----------------------|-------------------|
| emailAddress | String | New email address for the AWS account root user. | Required             | 64.0              |

## Waitlist Check In Input

Input representation of the participant's waitlist check in request.

**Root XML tag**

```
<waitlistCheckIn>
```

**JSON example**

```
{
  "lead": {
    "firstName": "Tom",
    "lastName": "Scott",
    "phone": "012-345-6789",
    "email": "tom.scott@phoenix.com",
    "company": "Phoenix",
    "extendedFields": []
  },
  "participantId": "00Q5h00000JdQWzEAN",
}
```

```

    "waitlistId": "0D3B0000000S2SeNOP",
    "workTypeId": "08q5h000000UuEcAAK",
    "workTypeGroupId" : "0VSRM0000004MBk4AM",
    "serviceResourceId": "0Hn0000000S2SeNOP",
    "description": "Registration for a drop-in appointment.",
    "extendedFields": [
      {
        "name": "Source__c",
        "value": "Email"
      }
    ]
  }
}

```

### Properties

| Name               | Type                                   | Description                                                                                         | Required or Optional                                       | Available Version |
|--------------------|----------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------|-------------------|
| description        | String                                 | Description of the participant.                                                                     | Optional                                                   | 59.0              |
| extended Fields    | <a href="#">Extended Field Input[]</a> | Details of the extended custom fields.                                                              | Optional                                                   | 59.0              |
| lead               | <a href="#">Lead Input</a>             | Details of the prospect or lead.                                                                    | Required if the participantId parameter isn't specified.   | 59.0              |
| participantId      | String                                 | ID of the participant with an appointment. The participant can be an account, a contact, or a lead. | Required if the lead parameter isn't specified.            | 59.0              |
| service ResourceId | String                                 | ID of the service resource.                                                                         | Optional                                                   | 59.0              |
| waitlistId         | String                                 | ID of the waitlist that the participant is checked in.                                              | Required                                                   | 59.0              |
| workType GroupId   | String                                 | ID of the work type group.                                                                          | Required if the workTypeId parameter isn't specified.      | 59.0              |
| workTypeId         | String                                 | ID of the work type that represents the topic for the appointment.                                  | Required if the workTypeGroupId parameter isn't specified. | 59.0              |

## Webstore Settings Input

ID of a webstore to associate with an asynchronous product import job.

### Root XML tag

```
<webstoreSettings>
```

**JSON example**

```
{
  "webstoreId": "webstore_id"
}
```

**Properties**

| Name       | Type   | Description         | Required or Optional | Available Version |
|------------|--------|---------------------|----------------------|-------------------|
| webstoreId | String | ID of the webstore. | Required             | 57.0              |

## Wishlist Input

Wishlist to create.

**Root XML tag**

```
<wishlistInput>
```

**JSON example**

```
{
  "name": "My List",
  "products": [
    {
      "productId": "01tRM000000Os10YAC"
    },
    {
      "productId": "01tRM000000Oi92YAC"
    },
    {
      "productId": "01tRM000000NJCeYAO"
    }
  ]
}
```

**Properties**

| Name     | Type                                   | Description                              | Required or Optional | Available Version |
|----------|----------------------------------------|------------------------------------------|----------------------|-------------------|
| name     | String                                 | Name of the wishlist.                    | Required             | 49.0              |
| products | <a href="#">Wishlist Item Input</a> [] | List of products to add to the wishlist. | Optional             | 49.0              |

## Wishlist Item Input

Item to update or add to a wishlist.

### Root XML tag

```
<wishlistItemInput>
```

### JSON example

```
{
  "productId": "01tRM000000NJCeYAO"
}
```

### Properties

| Name      | Type   | Description                                         | Required or Optional | Available Version |
|-----------|--------|-----------------------------------------------------|----------------------|-------------------|
| productId | String | ID of the product to update or add to the wishlist. | Required             | 49.0              |

SEE ALSO:

## Wishlist Update Input

Wishlist name to update.

### Root XML tag

```
<wishlistUpdateInput>
```

### JSON example

```
{
  "name": "My List"
}
```

### Properties

| Name | Type   | Description             | Required or Optional | Available Version |
|------|--------|-------------------------|----------------------|-------------------|
| name | String | Update a wishlist name. | Required             | 50.0              |

## Work Type Input

Work type.

### JSON example

```
{
  "id" : "08qRM00000003fkYAA"
}
```

**Properties**

| Name                                | Type                                      | Description                                                                   | Required or Optional                                      | Available Version |
|-------------------------------------|-------------------------------------------|-------------------------------------------------------------------------------|-----------------------------------------------------------|-------------------|
| blockTimeAfterAppointmentInMinutes  | Integer                                   | Period after the appointment that is typically blocked for this work type.    | Optional                                                  | 49.0              |
| blockTimeBeforeAppointmentInMinutes | Integer                                   | Period before the appointment that is typically blocked for this work type.   | Optional                                                  | 49.0              |
| durationInMinutes                   | Integer                                   | Duration of the appointment in minutes.                                       | Required if <code>id</code> isn't provided                | 49.0              |
| id                                  | String                                    | ID of the work type.                                                          | Required if <code>durationInMinutes</code> isn't provided | 49.0              |
| operatingHoursId                    | String                                    | ID of the operating hours.                                                    | Optional                                                  | 49.0              |
| operatingHoursTimeZone              | String                                    | Time zone for the operating hours.                                            | Optional                                                  | 49.0              |
| skillRequirements                   | <a href="#">Skill Requirement Input[]</a> | List of skills required to complete the tasks associated with this work type. | Optional                                                  | 49.0              |
| timeFrameEndInMinutes               | Integer                                   | Ending of the appointment in minutes.                                         | Optional                                                  | 49.0              |
| timeFrameStartInMinutes             | Integer                                   | Beginning of the appointment in minutes.                                      | Optional                                                  | 49.0              |

## Wrapped Value

Value wrapped for use as an object.

**Properties**

| Name  | Type   | Description    | Required or Optional | Available Version |
|-------|--------|----------------|----------------------|-------------------|
| value | Object | Value to wrap. | Required             | 60.0              |

## Connect REST API Response Bodies

The successful execution of a request to a Connect REST API resource can return a response body in either JSON or XML format.

A request to a Connect REST API resource always returns an [HTTP response code](#), whether the request was successful or not.

## Action Info

Recommended action information.

| Property Name | Type   | Description                                                                                | Filter Group and Version | Available Version |
|---------------|--------|--------------------------------------------------------------------------------------------|--------------------------|-------------------|
| name          | String | Name of the Lightning web component used for dynamically rendering the recommended action. | Small, 60.0              | 60.0              |
| parameters    | String | Parameters required for processing and displaying the recommended action.                  | Small, 60.0              | 60.0              |

## Action Link Definition

The definition of an action link. To read this information, a request must use the same connected app that was used to create the action link definition.

| Property Name  | Type                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Filter Group and Version | Available Version |
|----------------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| actionUrl      | String                           | The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code> . | Small, 33.0              | 33.0              |
| createdDate    | String                           | ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z..                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Small, 33.0              | 33.0              |
| excludedUserId | String                           | ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code> , you can't specify a <code>userId</code> .                                                                                                                                                                                                                                                                                                                                                                                    | Small, 33.0              | 33.0              |
| groupDefault   | Boolean                          | <code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.                                                                                                                                                                                                                                                                                | Small, 33.0              | 33.0              |
| headers        | <a href="#">Request Header[]</a> | The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types.                                                                                                                                                                                                                                                                                                                                                                                                                                               | Big, 33.0                | 33.0              |
| id             | String                           | 18-character ID for the action link definition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Small, 33.0              | 33.0              |

| Property Name         | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Filter Group and Version | Available Version |
|-----------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------|
| <code>label</code>    | String | <p>A custom label to display on the action link button. A <code>label</code> value can be set only in an action link template.</p> <p>Action links have four statuses: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, and <code>FailedStatus</code>. These strings are appended to the label for each status:</p> <ul style="list-style-type: none"> <li>• <code>label</code></li> <li>• <code>label Pending</code></li> <li>• <code>label Success</code></li> <li>• <code>label Failed</code></li> </ul> <p>For example, if the value of <code>label</code> is “See Example,” the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed.</p> <p>An action link can use either <code>label</code> or <code>labelKey</code> to generate label names, it can’t use both. If <code>label</code> has a value, the value of <code>labelKey</code> is <code>None</code>. If <code>labelKey</code> has a value other than <code>None</code>, the value of <code>label</code> is <code>null</code>.</p> | Small, 34.0              | 34.0              |
| <code>labelKey</code> | String | <p>Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, <code>FailedStatus</code>. For example, if you use the <code>Approve</code> key, you get these labels: Approve, Pending, Approved, Failed.</p> <p>See <a href="#">Action Links Labels</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Small, 33.0              | 33.0              |
| <code>method</code>   | String | <p>The HTTP method. One of these values:</p> <ul style="list-style-type: none"> <li>• <code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li>• <code>HttpGet</code>—Returns HTTP 200 on success.</li> <li>• <code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> <li>• <code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Medium, 33.0             | 33.0              |

| Property Name                     | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Filter Group and Version | Available Version |
