`RevenueTransactionErrLogId`	Revenue Transaction Error Log ID	reference		18		

RATEADJUSTMENTBYATTRIBUTE

Represents the adjustments that determine the rate of a resource based on its rate-impacting attributes. These attributes are linked to the usage product record. Rates are then influenced by conditions specified in the Attribute Based Adjustment Condition object. Finally, the charge rate is determined by using the Attribute Based Adjustment Rule object. This object is available in API version 62.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see RateAdjustmentByAttribute in the *Rate Management Guide*.

`Value`	Translation Text	textarea		32000		

RECORDSETFILTERCRITERIA

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see RecordsetFilterCriteria in the *Field Service Developer Guide* and *Object Reference for the Salesforce Platform*.

REDIRECTWHITELISTURL

Represents a trusted URL for external user redirections. Redirections to a different Salesforce org, including its publicly served pages and content, are allowed from your Salesforce org only when the URL is a RedirectWhitelistUrl. For non-Salesforce URLs, a session setting controls whether redirections from pages and components built in Salesforce Classic are restricted to RedirectWhitelistUrl objects. Except for cross-org redirections, you can't restrict redirections that originate from pages and components built with Lightning Experience. This object is available in API version 48.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see RedirectWhitelistUrl in the *Object Reference for the Salesforce Platform*.

SESSIONHIJACKINGEVENT

Tracks when unauthorized users gain ownership of a Salesforce user's session with a stolen session identifier. To detect such an event, Salesforce evaluates how significantly a user's current browser fingerprint diverges from the previously known fingerprint using a probabilistically inferred significance of change. This object is available in API version 49.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see SessionHijackingEvent in the *Platform Events Developer Guide*.

STNRYASSETCRBNFTPRNT

Represents the total carbon emissions and other environmental attributes from stationary assets. Carbon footprint quantifies the effect of atmospheric warming, which is represented in metric tonnes of carbon dioxide equivalent (tCO_2e). Additionally, it also quantifies various aspects of the energy performance of the asset.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see StnryAssetCrbnFtprnt in the *Net Zero Cloud Developer Guide*.

TAXENGINE

A tax engine represents both an instance of a tax engine provider as well as the merchant credentials for that specific instance. When Subscription Management calculates tax on an order item, it sends a request through Subscription Management Tax Calculation API to an external tax engine. The Salesforce tax engine record contains information passed to the external tax engine, such as This object is available in API version 55.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see TaxEngine in the *Billing Guide* and *Object Reference for the Salesforce Platform*.

TAXENGINEPROVIDER

Represents general information about a service that manages a tax engine, such as the ID of the tax adapter Apex class in Salesforce, and the engine's namespace prefix. Tax engine providers have a one-to-many relationship with tax engines, where the tax engine record represents a specific configuration of a tax engine that can be assigned to multiple order items. This object is available in API version 55.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see TaxEngineProvider in the *Billing Guide* and *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale

TAXPOLICY

A tax policy contains a group of tax treatments, where each treatment represents parameters to determine how a particular product is taxed for a transaction line item. Tax policies are related to products, which pass the policy on to the resulting order items. When you activate an order, Subscription Management assigns a tax treatment to each order item based on the tax policy's DefaultTaxTreatmentId, then uses the tax treatment to calculate tax. This object is available in API version 55.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see TaxPolicy in the *Billing Guide* and *Object Reference for the Salesforce Platform*.

TAXTREATMENT

A tax treatment contains details about how Salesforce and external engines calculate taxes, and the tax engine to use for tax calculation. The IsTaxable field determines whether tax is calculated for the product in the transaction. The tax code, tax engine, and product code are sent via API to the external tax calculation service. When you invoice an order item that has a tax treatment, the invoice line inherits the tax treatment from the order item's related billing schedule. The invoice line's TaxCode field is populated based on the code that the tax engine used for calculation. This object is available in API version 55.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see TaxTreatment in the *Billing Guide* and *Object Reference for the Salesforce Platform*.
