LOCATION

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see Location in the *Education Cloud Developer Guide*, *Energy and Utilities Cloud Developer Guide*, *Field Service Developer Guide*, *Life Sciences Cloud Developer Guide*, *Object Reference for the Salesforce Platform*, *Public Sector Solutions Developer Guide*, and *Work.com Developer Guide*.

NETWORKMODERATION

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see NetworkModeration in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
`CreatedById`	Created By ID	reference		18		
`CreatedDate`	Created Date	datetime				
`EntityId`	Entity ID	reference		18		
`Id`	Network Moderation ID	id		18		
`ModerationType`	Moderation Type	picklist		40		
`NetworkId`	Network ID	reference		18		
`Note`	Notes	textarea		1000		
`Visibility`	Visibility	picklist		40		

NETWORKPAGEOVERRIDE

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see NetworkPageOverride in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
`CreatedById`	Created By ID	reference		18		
`CreatedDate`	Created Date	datetime				
`Id`	Experience Page Override Id	id		18		
`IsDeleted`	Deleted	boolean				
`LastModifiedById`	Last Modified By ID	reference		18		
`LastModifiedDate`	Last Modified Date	datetime				
`NetworkId`	Network ID	reference		18		
`OverrideSetting`	Page Override Setting	picklist		255		
`OverrideType`	Page Override Type	picklist		255		
`SystemModstamp`	System Modstamp	datetime				

NETWORKREFERENCEDOBJECT

A junction object that associates the loyalty program with the Experience Cloud site.

For more information, see NetworkReferencedObject in the *Loyalty Management Developer Guide*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
CreatedById	Created By ID	reference		18		
CreatedDate	Created Date	datetime				
Id	Network Referenced Object ID	id		18		
IsDeleted	Deleted	boolean				
LastModifiedById	Last Modified By ID	reference		18		
LastModifiedDate	Last Modified Date	datetime				
LastReferencedDate	Last Referenced Date	datetime				
LastViewedDate	Last Viewed Date	datetime				
Name	Name	string		255		
NetworkId	Network ID	reference		18		
ReferencedObjectId	Referenced Object ID	reference		18		
SystemModstamp	System Modstamp	datetime				

NETWORKSELFREGISTRATION

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see NetworkSelfRegistration in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
AccountId	Account ID	reference		18

Language	Master Language	picklist		40		
LastModifiedById	Last Modified By ID	reference		18		
LastModifiedDate	Last Modified Date	datetime				
MasterLabel	Label	string		80		
NamespacePrefix	Namespace Prefix	string		15		
SystemModstamp	System Modstamp	datetime				

OAUTHCUSTOMSCOPEAPP

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see OauthCustomScopeApp in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
`CreatedById`	Created By ID	reference		18		
`CreatedDate`	Created Date	datetime				
`Id`	Oauth Custom Scope App ID	id		18		
`IsDeleted`	Deleted	boolean				
`LastModifiedById`	Last Modified By ID	reference		18		
`LastModifiedDate`	Last Modified Date	datetime				
`OauthCustomScopeId`	OAuth Custom Scope ID	reference		18		
`SystemModstamp`	System Modstamp	datetime				

OAUTHTOKEN

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see OauthToken in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
AccessToken	Access Token	string		255		
AppMenuItemId	AppMenuItem ID	reference		18		
AppName	Application Name	string		255		
CreatedDate	Created Date	datetime				
DeleteToken	Delete Token	string		255		
Id	Oauth Token ID	id		18		
LastUsedDate	Last Used Date	datetime				
RequestToken	Request Token	string		255		
UseCount	Use Count	int	9			
UserId	User ID	reference		18		

OAUTHTOKENEXCHHANDLERAPP

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see OauthTokenExchHandlerApp in the *Object Reference for the Salesforce Platform*.

Fields

Field Name	Field Label	Type	Digits	Length	Precision	Scale
ApexExecutionUserId	User ID	reference		18		
ConnectedApplicationId	Connected App ID	reference		18		
CreatedById	Created By ID	reference		18		
CreatedDate	Created Date	datetime				
ExternalClientApplicationId	External App ID	reference		18		
Id	Oauth Token Exchange Handler App ID	id		18		
IsDefault	Default	boolean				
IsDeleted	Deleted	boolean				
LastModifiedById	Last Modified By ID	reference		18		
LastModifiedDate	Last Modified Date	datetime				
OauthTokenExchangeHandlerId	Oauth Token Exchange Handler ID	reference		18		
SystemModstamp	System Modstamp	datetime				

OAUTHTOKENEXCHANGEHANDLER

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see OauthTokenExchangeHandler in the *Object Reference for the Salesforce Platform*.

PAYMENTSCHEDULE

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see PaymentSchedule in the *Billing Guide* and *Object Reference for the Salesforce Platform*.

PLATFORMEVENTUSAGEMETRIC

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, empApi Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

This guide only lists certain information for each object. For more information, including descriptions of the fields, see PlatformEventUsageMetric in the *Object Reference for the Salesforce Platform*.
